CONTENTS

Tabula Gratulatoria vii
Editor's Preface ix

A Personal Portrait xi
Pierluigi Cuzzolin

The Professional History and Publications of Philip Baldi (through 2010) xv
Aaron D. Rubin

1. A Few Words for Springs in Aeschylus 1
Daniel W. Berman

2. How to Move Towards Somebody in Plautus' Comedies: Some Remarks on the Adverb *obuiam* 7
Pierluigi Cuzzolin

3. Baltic Palaeocomparativism and the Idea that Lithuanian is a Neo-Latin Language 21
Pietro U. Dini

4. Blight and Bugs: The Semantics of Latin Plant Diseases and the Perils of Latin Translations of the OT book of Psalms 31
Paul B. Harvey, Jr.

5. On Latin *(s)tritavus* 43
Brian D. Joseph

6. On Complex Syllable Onsets in Latin 47
Christian Lehmann

7. Having Something that You Don't Own: *Apud* Possessive Constructions in Latin and a Comparison with Locative Possessive Sentences in Irish 57
Andrea Nuti

8. Gender Assignment of Latin Loanwords in Early Germanic: A Case Study of Latin *vinum* 75
B. Richard Page

9. The Use of *quia* and *quoniam* in Cicero, Seneca, and Tertullian . . . 81
Harm Pinkster

10. *Dum loquimur, fugerit inuida aetas*: On Tense and Actionality of Latin verba dicendi . . . 97
Hannah Rosén

11. Thoughts on the Origin of the Latin and Indo-European Nominal Declension . . . 115
William R. Schmalstieg

12. Latin *aliās* 'at another time' . . . 123
Brent Vine

13. Etruscan *mlak[* and the Interpretation of the Inscription on the Santa Teresa kyathos . . . 141
Rex Wallace

LATIN *ALIĀS* 'AT ANOTHER TIME'*

Brent Vine
University of California, Los Angeles

1.

There are two traditional explanations for the form and meaning of Latin *aliās* 'at another time' [Pl(au)t(us)+], which cannot be separated from *alterās* 'id.' [Plt., Cato, P(aulus ex) F(esto)] and *utrāsque* 'on both occasions' [Caecil., Hem.[1]]. According to one school of thought, the form is a first-declension gen. sg. of the archaic *(pater) familias* type, and thus a "genitive of time".[2] Another theory holds that this is a fem. acc. pl., in an elliptical expression with an omitted noun like *uices* (cf. *in uicem / in uices / per uices* 'alternately, in turn', *uicibus* 'in return', etc.).[3] Neither approach is attractive.[4]

* Earlier versions of this paper were presented before audiences at Harvard University (April 2008), the University of Salzburg (October 2008), and UCLA (January 2009). I warmly thank the auditors on all three occasions for their helpful comments, as well as Benjamin Fortson and George Dunkel, both of whom provided valuable criticism and suggestions. Above all, it is a great pleasure to offer this token of admiration to my esteemed colleague Phil Baldi, who has done so much for Latin and Italic linguistics.

[1] L. Cassius Hemina (prose historian), flor. mid-2nd c. bc (Santini 1995).

[2] So, e.g., Sihler 1995: 269, Gerschner 2002: 38.

[3] E.g., Ernout and Thomas 1959: 453, Leumann 1977: 419 (the latter also admitting the possibility of the gen. sg. interpretation); similarly Kühner and Holzweissig 1966: 70 for *alterās* ("*alteras* (sc. *uices*)"), cf. Wölfflin 1885: 235 ("*alteras (uices)*").

[4] As often in matters of etymology and historical morphology, the OLD presents a muddled picture, offering both explanations more or less simultaneously: s.v. *-ās*[2], glossed as an "adv[erbial] suff[ix]", we find "Orig[inally] acc. fem. pl. of adj., sc. *uices* (*alias, alteras, utrasque*)"; but the reader who checks s.v. *utrāsque* will be told that this form is "old gen. sg. of vter que; cf. *alias*, etc." Lewis and Short (1879) s.v. *alius* (sub 2.C.) cite both possibilities.

2.

The account via a fem. acc. pl. ellipsis has little to recommend it, and the assumption of an elliptical *uices* is especially weak. There is no indication that *aliās* ever had such a source: it is nowhere correlated, in this meaning, with *uices*, or with any other fem. acc. pl. noun—unlike other elliptical usages in Latin, where both the full and the reduced version are attested: *breui* (= *breui tempore*) 'in a short [time]', *ad Dianae* (= *ad aedem / fanum Dianae*) 'to the [temple / shrine] of Diana', etc. Nor is it encouraging that adverbial expressions involving *uices* (i.e., *in uices, per uices* 'alternately, in turn') are almost restricted to post-Augustan writers (*in uices* also occurs in Augustan poetry)—a profile that holds generally, in fact, for all other usages of the word as a noun (abl. *uice*, acc. *uices*, etc.) in its meaning 'change, alternation', for which Classical usage preferred *uicissitudo*.

There is, most damagingly, no evidence that the original reference of *aliās* involved a plural; and indeed, the reverse is true—the early usages unequivocally point to singular reference, as in three of the four clear attestations of the adverb in Plautus and Terence:

> *alias me poscit pro illa triginta minas,*
> *alias talentum magnum; …* (Plt., *Curc.* 63–64)
>
> "at one time he asks me for thirty minae for her, at another time a large talent"
>
> *… si non quaeret, nullus dixeris,*
> *alias ut uti possim causa hac integra.* (Ter., *Hec.* 79–80)
>
> "if he doesn't ask, don't say a word, so that I can use this excuse afresh some other time"
>
> *… si impetro,*
> *quid alias malim quam hodie has fieri nuptias?* (Ter., *Andr.* 528–529)
>
> "if I get what I want, what other time than today could I prefer for the wedding?"

Even the fourth attestation, though usually translated as plural, can be given a singular interpretation:

> *… date benigne operam mihi*
> *ut uos, ut alias, pariter nunc Mars adiuuet.* (Plt., *Asin.* 14–15)
>
> "kindly give me your attention, so that Mars may help you now, just as he has done at other times"—or: "at any other time"[5]

[5] Cf. Ernout (1959: 86): "aujourd'hui comme hier". The attestation at *Mil.* 1269,

Singular meaning is also to be expected for *alterās* 'at another time', essentially *per definitionem* (cf. *alter* 'another [of two]').[6] "Dual" meaning, of course, is intrinsic to *utrāsque* 'on both occasions'; but there is no indication that this form, scarcely attested as it is, served as the source of *aliās* and *alterās*, and every reason to believe, rather, that it is a secondary creation based on these two.[7]

Nor, finally, would *alias [uices]* be attractive either semantically or syntactically: one would need to assume, in the first instance, a prepositional expression similar to *per uices* or *in uices*, e.g., *per alias [uices]* 'through other alternations / steads'; and then one would have to motivate the conversion of this expression to temporal usage (hence with plain acc.), 'at other times'—this to be followed by a development that would allow the temporal meaning to refer to single instances (the usage best attested in our earliest texts), the whole process capped by a total elimination of *uices*, nowhere actually attested with *aliās*. None of this inspires confidence, and the acc. pl. ellipsis theory is best abandoned.

3.

Gerschner (cf. n. 2) asserts that the genitive of time theory is "more plausible" than the account via an elliptical accusative plural; but even this theory is distinctly unattractive.

In a discussion of the genitive of time in the Latin of Greek speakers, J.N. Adams observes that "[i]n ordinary Latin there is no trace of a genitive expressing time, other than in a few old usages (such as *nox* in the Twelve Tables and *trinum nundinum*), the interpretation of which is controversial".[8] It will suffice here to expand briefly on Adams' comment, which already provides the essentials of the argument. The possible instances of a genitive of time in Latin, the details of which need not be rehearsed here, belong to two restricted sets of forms. First, there is a series of forms based on the words for 'day' and 'night' (in addition to *nox* [XII Tab.] 'at night',[9] also OLat. *dius* [Plt., Titin.] 'by day', *interdius*

though sometimes taken as adverbial, is more likely fem. acc. pl.; see Lodge (1904 / 1933) 1.89 s.v. *alias*, with query.

[6] But see further §**5.1**. below on the attested meaning of *alterās*.

[7] See further §**5.2**. below for more on *utrāsque*.

[8] Adams 2003: 509 f., citing Hofmann and Szantyr 1965: 85. See also Ernout and Thomas 1959: 60 f. (*nox*, *dius*).

[9] Cf. Hitt. *nekuz* 'night' (gen. sg.) and the remarks of Schindler on this comparison (1967: 302).

[Cato, Plt., Varro] 'id.'), comparable to other archaic material of this sort elsewhere (e.g., Gk. νυκτός 'by night', Ved. *sadyás* 'on the same day'), and to be aligned with similar constructs traceable to PIE, as often assumed in the formation of the word for 'yesterday', if this continues something like **ĝʰd̯ʰi̯és* < ***ĝʰh₁-di̯-és* (with gen. sg. **di̯-és* = *- *di̯-és* in Ved. *sa-dyás*).[10] Lat. *aliās* clearly has nothing to do with this limited set of fossilized PIE time-expressions. Secondly, fixed phrases like tr invm novndinvm [SCdeBacch+] 'three market-days' have been interpreted as "genitives of time", whether genuinely archaic or influenced by Greek. But again, material of this sort has little connection with an isolated form like *aliās*, which itself is not a time expression; therefore, even under this interpretation, *aliās* must be interpreted as elliptical.[11] Yet ellipsis, as we have seen, is an unattractive construct for *aliās* in general; and more specifically, if one chooses to operate with elliptical *uic-*: gen. sg. *uicis* is hardly used in Republican Latin (cf. §**2**.). The approach to *aliās* based on a genitive of time (with an elliptical fem. gen. sg.) is thus hardly more appealing than that based on an elliptical fem. acc. pl.; one can only agree with the judgment of Hofmann and Szantyr (loc. cit., n. 8), that "[o]b daraus [scil. on the basis of *nox, dius, trinum nundinum*] auf eine weitere Verbreitung des Gen. temporis im Lat. in vorhistorischer Zeit zu schliessen ist, bleibt ungewiss."

4.

Gerschner himself raised the possibility of a third approach: "Drittens könnte man *ās* in diesen Wörtern überhaupt als unabhängiges Adverbialsuffix zu interpretieren".[12] This is a far more promising hypothesis, which can be elaborated in an attractive way. The essential components of a fully-articulated account of this kind would be (1) the nature of the implied base form *aliā* (§**4.1**.), (2) the nature of the "adverbial suffix *-s*"

[10] Vine 2008, with references. Note further that the above survey does not necessarily endorse a genitive interpretation for all such forms: e.g., *nox* has been taken as nom. sg. (Watkins 1965) or loc. sg. (de Vaan 2008: 416, tentatively).

[11] Cf. Courtney's elliptical interpretation *[spatium] trinum nundinum* (1999: 99, with further references).

[12] Gerschner 2002: 39, with reference, for "adverbial *-s*", to Russell 1988: 149–153 (who is mainly concerned, however, with *s*-variants of preverbs / prepositional particles, without mention of *aliās* or anything like it). On "adverbial *-s*", see more recently Dunkel 2000.

in question (§**4.2.**), and (3) the rationale behind the derivational process leading to the formation of (adverbial) *aliā-s* in its attested meaning (§**4.3.**).

4.1.

A theory assuming an "adverbial *-s*" must operate with a basic adverbial form *aliā*, and such a form is well-attested (TLL I.1652.55 ff., s.v. *alius*). This form, traditionally glossed '(in / by) another way, otherwise, in another direction', belongs with an extensive set of pronominal adverbs with the same desinence and similar meaning: *hāc* 'this way', *istāc, illāc, eā* 'that way', *aliquā* 'some way', *quā* 'what way' (and in *nēquāquam* 'in no way').[13] Some of these forms, moreover, have directional counterparts in *-ō*: thus *aliō* 'to another place' [Plt.+], like *eō* 'to that place', *quō* 'to what place', etc.

To be sure, the forms in *-ā* are traditionally said to be fem. abl. sg. with elliptical *uiā* (or *parte*);[14] and indeed, surface phrases of this sort are well-attested (e.g., *aliā uiā*: Ter. *Andr.* 670, *Haut.* 789, Cic. *Att.* 1.20.4, Livy 1.21.6, etc.). But there is good reason to believe that this does not reflect the origin of these forms, and that the association with surface *uiā* (as in passages like the above) is to be interpreted differently. A more satisfying approach has been developed by J.L. García Ramón (1997a: 131 ff., 1997b), who argues, building on an insight of Delbrück, that these forms are in origin instrumentals in **-éh$_2$-eh$_1$*.[15] An important component of this theory is its ability to explain the frequent directional

[13] See Ernout 1953: 94 on the set, and further Leumann 1977: 483. Here also belong univerbated expressions with prepositional adverbs (*anteā* 'before', *intereā* 'meanwhile', etc., cf. ar vorsvm ead SCdeBacch) and with postpositions (e.g., *quātenus* 'to what extent', *quāpropter* 'therefore'), and also (despite its neglect in the handbooks) the adverb *ūnā* 'as one, one-wise' = 'together'.

[14] E.g., TLL loc. cit.: "adv. ex abl. fem. *aliā*, i.q. 'alia uia' uel 'alia parte' (cf. iunctura *aliā uiā*)"; similarly Ernout and Leumann (n. 13), the latter distinguishing between an instrumental ablative with elliptical *uiā* for "manner" adverbs of the type *quā*, and an ablative of separation for temporal forms like *posteā, posthāc*, etc. See recently also de Vaan 2008: 284 ("*[abl.sg.f.]").

[15] We need not pass judgment here as to whether such forms are better conceived of as having "feminine" or "collective" derivational bases. At any rate, as García Ramón notes (1997a: 133, with n. 52), the occasional appearance of *-d* forms in Old Latin (e.g., ead, SCdeBacch [n. 13 above]) is of no consequence for such a theory. Cf. already Hofmann and Szantyr 1965: 131 on *eā, hāc, quā* etc. as "erstarrte Instrumentale", and further Meiser 1998: 132 on the possible instrumental origin of first-declension abl. sg. *-ā* (with OLat. secondary *-d*) generally.

and "perlative" force (traversal of space / time) of such adverbs—semantic behavior that coheres closely with the PIE instrumental, as abundantly documented in Vedic usage.[16] Adverbial *aliā* is itself not treated by García Ramón, but fits well with the other pronominal adverbs in *-ā* he analyzes: for "perlative" usage, note, e.g., Plt. *Rud.* 10 (*is* [sc. *Iuppiter*] *nos per gentis alios alia disparat* "he disperses us in various directions among different nations"); similarly Livy 2.53.1 (*dum dispersi alii alia manipulatim excurrunt* "while some, distributed in small companies, were making sorties in various directions"), among other such passages. And, although the point is not essential and cannot, in any case, be pursued here, it is even possible that an adverbial Lat. *aliā* is a relatively old form: in theory, a comparable formation could underlie Go. *alja* ('but', J. 6.22; 'other than', Mk. 12.32), and even Gk. ἀλλά 'but' (note the accent, vs. that of its alleged source neut. pl. ἄλλα) and Arm. *ail* 'id.'.[17]

The further details of García Ramón's theory address the distribution of meanings among forms with and without parallel adverbs in *-ō* (also, in his view, to be thought of as instrumental in origin, although the PIE "directive" case may also be involved),[18] and need not concern us here. The essential points for present purposes are first of all the existence of adverbial (originally instrumental) *aliā* 'otherwise, elsewhere' [OLat.+], and secondly its idiomatic use (as with all forms of *alius*) in paired expressions of the type just illustrated from Plautus and Livy (*alios alia, alii alia*).

4.2.

I suggest, then, that adverbial *aliā* 'otherwise, in another way, in another direction (in space)' served as the basis for a parallel expression *aliā-s* '(at) another time', derived by addition of the formant **-s* seen in so-called "multiplicative" adverbs of the type Lat. *bis* 'two times' (< **dṷi-s*),

[16] On the Vedic material, extensively treated in García Ramón 1997a, see also Hettrich 2002, especially on the "prosekutive Instrumental" as "ein Begriff des Weges oder Zeit" (54 f., with earlier references), and on the instrumental as goal of motion or transport (52, 59 f.) and in relationship with certain acc. and loc. usages (60 f.). Further detail is available in Hettrich 2007.

[17] To this material should be added the possible loc. sg. **aliai* 'elsewhere' in Lat. *aliēnus* 'of another, foreign', on which see Nussbaum ap. Livingston 2004: 53 and de Vaan 2008: 34. (I am grateful to George Dunkel [p.c.] for bringing Go. *alja* to my attention.)

[18] In addition to *aliā / aliō, eā / eō, quā / quō*, etc. (as above), note also the extensive series of adverbial forms built with **-t(e)ro-* (*citrā / citrō* 'this side', *extrā / extrō-* 'outside' [with secondary *-d*: OLat. exstrad, O. **ehtrad**], *dextrā / dextrō-* 'on the right', etc.).

ter ‘three times’ (< **tri-s*), possibly among other such forms in Latin and Italic, to be discussed briefly below.[19] At a relatively recent period in the prehistory of Latin (i.e., before **dṷ* - > *b-*[20] and before **tri-s* > **tr̥s*,[21] whence *ter*), the inherited formant **-s* ‘X times’ would still have been formally and functionally transparent to speakers, given the surface contrast between **dṷi-s* ‘two times’ and **tri-s* ‘three times’ on the one hand, and on the other a series of parallel forms with bare **dṷi-* ‘two-X’ and **tri-* ‘three-X’ as first members of compounds, including many cases in which both number forms were contrasted: cf. Lat. *biceps / triceps* ‘two- / three-headed’, *bipēs / tripēs* ‘two- / three-footed’, *biennium / triennium* ‘period of two / three years’, *bīmus / trīmus* ‘of two / three years (literally winters)’, *bimēstris / trimēstris* ‘lasting two / three months’, *bessis / tressis* ‘two / three as-pieces’, *bifāriam / trifāriam* ‘in two / three parts’, and other such forms,[22] not to mention individual forms with **dṷi-* or **tri-* as first compound member.[23] It is in fact widely assumed that Lat. *semel* ‘one time’ is itself based on a formation with “multiplicative *-s*”: thus, one version of this approach (Meiser 1998: 176) begins from a (neut.) **sem-li*, which results, after loss of the final vowel, in a form **sem̥l* (as in **esmi* > **esm̥*, cf. OLat. esom ‘sum’), to which “multiplicative **-s*” was added; this **sem̥l-s* then results regularly in *semel*.[24] It has likewise been suggested that the extension of this *s*-formant (or its variant “*-is*”, extracted from **dṷis* and possibly also **tris*) was still more widespread, appearing in the backgrounds of Lat. *quater* ‘four times’ (a form in which **-s* may

---

[19] This usage of “adverbial **-s*” is an inherited feature: cf., among other such forms, the familiar cognate sets Gk. δίς, Ved. *dvíḥ*, YAv. *biš*, MHG *zwis* < **dṷi-s* ‘two times’; Gk. τρίς, Ved. *tríḥ*, YAv. *θriš*, ON *þris(-var)* < **tri-s* ‘three times’; Ved. *catúḥ* (replacing **catrúḥ*), YAv. *caθruš* < **kᵘetru-s* < ***kᵘetṷr̥-s* ‘four times’ (and see below on Lat. *quater*).

[20] Cf. OLat. dvenos ‘bonus’, dat. dvenoi (CIL I² 4, ca. 600–550 bc; Hartmann 2005: 433 f.), and even OLat. *duis* = Class. Lat. *bis* (Cic. *Or.* 153, P.F. 58.17L), *dui-* = Class. Lat. *bi-* (P.F. 58.16, 19L).

[21] Cf. O. **trístaamentud** ‘will’ (Ve 11 = ST Po 3), **trstus** ‘witnesses’ (probably for “**tristus**”; Ve 5 C 10 = ST Cm 14); see Untermann s.vv. (2000: 768–770), and further n. 23 below.

[22] See the convenient survey, with various further details, by Coleman (1992: 421 ff.).

[23] Among relatively archaic instances note Lat. *triplex* and *triplus* ‘threefold, triple’ beside U. **tribřiçu**/*tribrisine* ‘three-part (offering vel sim.)’, *tripler* ‘in threes’ (Lat. *duplus* ‘twofold’ has secondary *du-* for **dṷi-*; Leumann 1977: 488), or Lat. *testis* ‘witness’ beside O. **trstus** and **trístaamentud** (if this is at least in part an independent formation and not simply a borrowing from Latin); for the latter set, see Katz 1998: 184 ff.

[24] Somewhat differently, but along similar lines, e.g., Leumann (1977: 494; **semal-is*, with **-is* after **dṷis*); see further Coleman 1992: 415 f. for still other variants of this approach, as well as other methods of accounting for *semel*. (Without **-s*: e.g., Sihler 1995: 437, Neri 2007: 76n199.)

also be inherited, cf. n. 19 above), O. *pomtis* 'five times', U. **nuvis** 'nine times'.[25] Under these circumstances, then, nothing seems more natural (apart from a slight semantic wrinkle, to be addressed in the next section) than an extension of the *-*s* of (at least) **dṷi-s* 'two times', **tri-s* 'three times', and quite possibly also **semḷ-s* 'one time' (or a similar form), to an adverb (seen in Lat. *aliā*) based on that pronominal stem most closely connected semantically with the system of numerals, i.e. **alio-* 'another': adv. *aliā* 'otherwise, elsewhere' + *-*s* 'X times' → *aliā-s* 'another time, at another time'.

4.3.

There is, as I have just hinted, a semantic question raised by this hypothesis. If *aliās* contains "multiplicative *-*s*", its "etymological" meaning ought simply to be 'another time' (rather than, as usually translated, locatival 'at another time')—visible, one might expect, in usages coordinated with *semel*: thus 'once, (and then) another time', 'once, (and then) again', 'once, (and then) a second time'. Yet *aliās* does not behave in this way—nor, I believe, is this really to be expected. The normal adverbial expression for such a meaning is *iterum* 'again, a second time', as in *semel atque iterum* 'once, and (then) again', or *iterum atque iterum* 'again and again'. This is readily understandable, as *iterum*[26] (< **(H)i-tero-*, cf. Skt. *ítara-* 'other') is built with the PIE "contrastive" suffix *-*tero-*, as in words for 'left' and 'right' (e.g., Lat. *sinister, dexter*), the productive Greek and Sanskrit comparative formations (-τερο- and *-tara-*, respectively), and (most germane for present purposes) other pronominal forms like Lat. *alter* 'another (of two)', *uter* 'which (of two)'. Thus, while *semel atque iterum* predictably means 'one time, and (then) a second time', *aliās* should in fact have a different sense, in accord with the basic meaning of *alius* 'another': i.e., 'another time' in the sense of 'some other time' or 'some other instance' out of any conceivable or unspecified number of other times / instances. Moreover, adverbial *aliās* can be expected to incorporate an important functional attribute of its own—namely, the ability to participate in paired expressions like *aliās* … *aliās* 'one time … another time', in keeping with the idiomatic behavior of all forms of this pronoun:

[25] In addition to Coleman 1992: 417, see Untermann 2000: 604, 505 f. for the Oscan and Umbrian forms.

[26] Evidently an item of some antiquity: note the denominative *iterāre* 'to repeat' already in Plautus.

thus *alius … alius* ‘one … another’, *alibi … alibi* ‘in one place … in another place’, and so on (cf. §**4.1**. above, ad fin., on paired *aliā*), possibly reflecting an inherited feature.[27] This is in fact one of the earliest recorded usages of *aliās*, as in the first Plautine passage cited above (§**2**.):

> ***alias*** *me poscit pro illa triginta minas,*
> ***alias*** *talentum magnum; …* (Plt., *Curc.* 63–64)
>
> “at one time he asks me for thirty minae for her, at another time a large talent”

Indeed, “double-*aliās*” usages are well-attested both before Cicero and in later phases of Republican Latin; and it is this paired format, together with other “correlative” usages of *aliās* clearly extended from it,[28] that is best attested for adverbial *aliās* in Republican Latin generally. Functionally, then, *aliās* can reflect a creation designed to provide an adverbial time-expression (using the morphological means found in numerals with meanings like ‘two times’, ‘three times’, and perhaps ‘one time’) that would be usable in paired expressions similar to *aliōs … aliā, aliī … aliā* and the like (cf. the passages cited above [§**4.1**.] from Plautus and Livy), whence *alius … aliās*,[29] *aliās … aliās* ‘one time … another time’, as well as singly (*aliā* ‘another way, some other way’ → *aliās* ‘another time, some other time’).

The remaining issue to be addressed, before turning briefly to several related problems by way of conclusion, is the attested temporal/“locatival” sense of *aliās* (generally ‘**at** another time’, ‘**on** another occasion’), versus the “true multiplicative” sense one might have expected (simply ‘another time’, e.g., in answer to a question with *quotiens* ‘how many times?’), if the above etymological suggestion about the source of its *-s* is correct. Yet this is essentially a non-issue. If “multiplicative **-s*” with numerals expresses an iteration of some action X number of times (‘once’, ‘twice’, etc.), its use with **alio-* ‘another, some other’ and (in idiomatic paired expressions) ‘one … another’ would express ‘another’ or ‘some other’ iteration of an action, which in effect places the action *at some other point in time*: thus at Ter. *Hec.* 79–80 (cited and translated above, §**2**.), there is virtually no difference in meaning between an “etymological”

---

[27] See Krisch 1999: 286 ff. on Ved. *anyó anyám* and Gk. ἀλλήλους; note also Jamison 1997 on the syntax of Ved. *anyá- … anyá-* (also with important analysis of Ved. *ítara-* [1997: 116–117], cf. above on Lat. *iterum*/Ved. *ítara-*).

[28] E.g., *nunc … alias, tum … alias, alias … plerumque, interdum … alias, nonnumquam … alias* (see Wölfflin 1885: 235 ff., Kühner and Holzweissig 1966: 73).

[29] Common in Cicero: *alii … alias* (*Att.* 16.11.7), *alias alios* (*Red. in sen.* 30), etc.

translation ("so that I can use this excuse afresh some other time" = "so that I can engage in this excuse-using action a second time") and the standard "locatival" translation ("… **at** some other time"). So also for paired usages, as at Plt. *Curc*. 63–64 (cf. §**2**., repeated above in this section): *alias me poscit … alias [me poscit]* "he engages in one instance of asking, (and) he does it another time" = "**at** one time he asks …, **at** another time … [he asks]". The fact that *aliās* developed the "locative of time" meaning ('**at** another time') to the eventual exclusion of a literal meaning referring to pure iteration ('a second time') can be accounted for first by the existence of the (probably inherited) adverb *iterum* in the latter meaning, as already discussed, and secondly by the idiomatic (and, again, possibly inherited) paired usages so prominent in the behavior of all forms of *alius*. Thus the predominant "locatival" sense of *aliās* is entirely to be expected, and does not constitute a problem for an analysis based on "multiplicative *-s*".

5.

The conception of Lat. *aliās* developed here may shed some light on certain issues surrounding a series of other Latin adverbial forms in *-ās* often placed with it: in addition to *alterās* (§**5.1**.) and *utrāsque* (§**5.2**.), already mentioned above (§§**1**., **2**.), also *interutrāsque* (§**5.3**.), *interuiās* (§**5.4**.), and *interpugnās* (§**5.5**.). The section concludes with a brief comment on *crās* (§**5.6**.).

5.1.

It is precisely a scenario of the type provided above that helps explain why adverbial *alterās* (scantily attested, and restricted to Old Latin) gives the appearance of being the next logical extension of adv. *aliās*; indeed, the absence of an adverbial †*alterā* corresponding to *aliā* makes clear the secondary nature of *alterās*. More specifically, its earliest attestation shows a doubled (in fact, tripled) usage (cf. §**4.3**. above on *aliās … aliās*);[30] and in that instance, as well as in the sole other early textual attestation,[31] the meaning of the form is actually identical to *aliās*. There

[30] Cato, *Orig*. fr. 136 Peter: *In his duobus bellis alteras stipendio agrique parte multati, alteras oppidum ui captum, alteras primo pedatu et secundo, ut Maximus notat*.

[31] Plt. *Mos*. 270: *non uideor uidisse lenam callidiorem ullam alteras*.

is no surprise, then, in the gloss notice of the form in Paulus ex Festo: "*Alteras ponebant pro eo, quod est aduerbium alias*" (P.F. 24.22L). Wölfflin (1885: 235) registers surprise at the usage in Cato, "ein *ἅπαξ εἰρημένον* der ganzen Latinität". But he himself goes on to document (1885: 235 ff.) not only the widespread usage of *aliās … aliās* in conservative and archaizing Latin prose (Varro, Cicero, Caesar, Gellius), but also the fact that this usage regularly extends, in earlier prose, to more than two members (thus, e.g., Varro *LL* 8.76, *RR* 2.1.15 with three). As for the synonymy with *alius*: apart from the influence of *aliās* itself, this is a feature of *alter* that is otherwise attested in early Latin (see, e.g., Zwierlein 1991: 41 f. on Plt. *Mil.* 646, 648); and the reverse behavior (*alius* = *alter*, again documentable for early and archaizing Latin) may also have played a role.[32]

5.2.

Another spin-off of *aliās*—and, like *alterās*, barely attested and restricted to early Latin—is *utrāsque* 'both times, on both occasions', in this meaning apparently at Hem. (cf. n. 1) fr. 34 Peter/36 Santini:[33] *In Hispania pugnatum bis, utrasque nostri loco moti*.[34] The source of the quotation, however, is Nonius (269.23L), who claims "*utrasque* pro *utrimque* uel *utrobique*", an interpretation still followed by Santini (see 1995: 184 ad loc., as well as his translation of the second phrase [1995: 101]: "I nostri furono allontanati da entrambi i luoghi"). Nonius offers the identical claim about the meaning of *utrāsque* in the only other attestation of the form, from a fragment of Caecilius: *atque hercle / utrasque te, cum ad nos uenis, subfarcinatam uidi* (183.25L = 224–225 Ribb.). If Nonius is to be believed, the most probable assumption would be that the word originally meant 'both times' (cf. *aliās* and *alterās*), but developed a spatial sense ('on both sides, in both directions'), perhaps on the basis of ambiguous usages like that in Hemina, where the reference to 'both occasions' could have been interpreted (with support from *loco*) as referring to two different locations (on which see Santini ad loc.). But the problem is inseparable from the difficulties surrounding *interutrāsque* (§**5.3.**).

---

[32] See OLD *alius*[1] 8, *alius*[2] 5. Thus, even if al ter vm … alivm in CIL I[2] 1211.5–6 is to be accounted for on the basis of meter (Courtney 1995: 235 ad loc.), note Plt. *Capt.* arg. 2, 9 (*alium … alium*, referring to two sons), Livy 1.25.5 (*duo Romani super alium alius*), etc.

[33] So explicitly Buecheler (1866: 32, 1879: 63) for this passage: "beide Male".

[34] Santini punctuates as two sentences, with period after *bis*.

5.3.

The adverb *interutrāsque* 'in between' is attested seven times in Lucretius, and nowhere else.[35] Particularly difficult is 3.306, where *interutrāsque* has prepositional force (governing an accusative object); as Kenney notes (ad loc.), "This is very unusual Latin …":

> *interutrasque sitast ceruos saeuosque leones*
>
> "it [i.e., the nature of cows] is located [on a continuum] in between deer and savage lions"

Predictably, editors have attempted to remove the problem by emendation, such as Arancius' conjecture *inter utrosque*; but Kenney properly cautions that "L[ucretius] is a daring writer, and an editor should hesitate before accepting Arancius' easy correction". For his part, Lachmann preferred to emend to *interutrāque* (with adverbial meaning and function), not only at 3.306 but everywhere else as well, comparing adverbs of the type *intereā* 'meanwhile', and more appositely *utrāque* 'on both sides' [Lucr.+].[36] But as Bailey notes (1947: 887, ad 2.518), "such repeated corruption is improbable"; and even worse is the fact that 3.306 would require further emendation even beyond this (e.g., Lachmann: *secus*, in its rare prepositional usage, for transmitted *sitas⟨t⟩*). Moreover, only Lachmann notes the connection with the Nonius passages (Hem., Caecil.) treated in §**5.2.**, and here he also assumes *utrāque* (for transmitted *utrāsque*)—a still more improbable "repeated corruption".

The problem is not easily remedied, and deserves a separate study. For the moment, the following remarks can be offered. One possibility is that the actual meaning of the rare word *utrāsque* was no longer properly understood by Nonius, as Warmington implies (1967: 542–543 = Caecil. 212–213 Warm.). This in itself, however, would not explain the spatial reference of Lucr. *interutrāsque*. If, on the other hand, Nonius' idea about the spatial sense of *utrāsque* is to be believed, this—as well as the development of Lucr. *interutrāsque*—might be accounted for along the following lines. First, (OLat.) *utrāsque* would originally have meant 'both times', as expected (i.e., *aliās* → *alterās, utrāsque*). The form would then have developed secondarily (or was interpreted to have) a spatial sense

[35] See especially Bailey 1947: 887 (ad 2.518), 1043 (ad 3.307) and Kenney 1971: 116 (ad 3.306).

[36] See Lachmann 1855: 104, 155 (ad 2.517, 3.306). For adverbial *utrā-*, note also *utrālibet* 'on either side' (Plin. *Nat.*).

('on both sides'), perhaps from ambiguous usages like that in Hemina (§**5.2**). In Lucretius, we find not only the adverb *utrāque* 'on both sides', but also, neologistically (in part as a metrically convenient alternative), adverbial *interutrāsque* (with spatial meaning extrapolated from OLat. *utrāsque* 'id.' ← 'both times'). As for the apparent *prepositional* usage *interutrāsque sitast* (+ acc.) in 3.306: this could perhaps be viewed, in part, as "tmetic" (i.e. *#inter utrāsque sitast* . . .); in *De rerum natura* (*DRN*) 3 itself, for example, compare 860 *#inter enim iectast* . . . , 262 *#inter enim cursant* . . . (just two examples among many one could supply to illustrate Lucretius' well-known fondness for tmetic patterning).

5.4.

According to Buecheler (1866: 32, 1879: 63), followed by others,[37] Lat. *interuiās* 'along the way'[38] is another instance of an archaic gen. sg. (whence adverb) in *-ās*, to which Buecheler compares (for the genitive) NHG *unterwegs* (adv.) 'on the way'. But this is not likely to be the correct interpretation of *interuiās*, as emerged already from Jordan's extended critique of Buecheler (1879: 271 ff., with earlier references[39]). Gerschner, in defense of Buecheler, reasonably observes that the singular meaning of *interuiās* at least favors an adverbial interpretation, rather than a simple prepositional phrase *inter uias*, which, on the face of it, should have plural reference. But Jordan pointedly noted that *inter* never shows genitive government. Gerschner's rejoinder, to the effect that *inter* may have had this behavior prehistorically (whence adv. *interuiās*), is not persuasive: there is no reason to think that the ancestor of Lat. *inter* may have done this (cf. O. **anter** with acc. and abl.; Ved. *antár* with loc., abl., or acc.), as stressed already by Delbrück in his own critique of Buecheler's position (1893: 638). Likewise unconvincing is Gerschner's renewed citation of NHG *unterwegs*, despite Jordan's sensible strictures about the limited probative value of this form (1879: 271).

Certain pockets of Classical scholarship misguidedly continue to favor the prepositional interpretation: it is still standard, for example, in Terentian scholarship.[40] Similarly, Löfstedt (1956: 59) pointed to *inter uiās*

[37] E.g., Stolz 1905 / 6: 453, IEW 313; most recently Gerschner 2002: 38 f.

[38] Rare attestations in Plautus (*Aul.* 379, *Poen.* 1162), Terence (*Eun.* 629), and Turpilius (196 Ribb.); see further below for other attestations.

[39] Among these, note especially the critique of Buecheler by Corssen (1868: 234, 769).

[40] See, e.g., McGlynn 1963: 296 (s.v. *inter*), Barsby 1999: 206 ad *Eun.* 629 (with reference to OLD *uia* sub ic), Karakasis 2005: 225.

(word division sic) in Tertullian and in the Vulgar Latin inscription CIL VIII 2728.11–12 (Numidia, mid-2nd c. ad: profect vs.svm.et.in / ter.vi as.l at tr ones.svm / passvs), which he explained as a prepositional usage of the Umgangssprache comparable to *in somnis* 'in sleep'. González-Haba (1964: 200ff.) accepts the spoken register of *inter uiās*, but convincingly rejects Löfstedt's comparison with *in somnis* (though without substituting a cogent "plural for singular" account). As discussed above, however, the bulk of the evidence favors an adverbial interpretation, especially given the singular reference; and so it is worth considering another possibility.

In principle, *interuiās* could reflect an old adverbial expression **inter-uiā* of essentially the type *inter-eā* (cf. §**4.1**.), built with instrumental singular **uiā* (later inevitably subsumed, in the paradigm, under abl. *uiā*; cf. n. 15), as a perlative "instrumental of the path": cf. RV I.41.5ab *yáṃ yajñáṃ náyatha … ṛjúnā* ***pathā́*** "Das Opfer, das ihr Herren Aditya's auf richtigem Wege leitet", I.183.6c *éhá yātam* ***pathíbhir*** *devayā́nair* "Kommt auf den gottbegangenen Wege hierher!" (transl. Geldner).[41] The archaic expression **interuiā* would then have been remodeled to *interuiās*/*inter uiās* (as if with *inter* + acc., cf. inter.vi as above). If this is so, *-uiā* in *interuiā(+s)* would belong with the idiomatic use of *uiā* to express the road "along which",[42] often judged to continue the PIE perlative instrumental as in *eā, hāc*, etc.[43] In that event, the association of *uiā* with adverbial *eā, hāc*, etc. (§**4.1**.)[44] might not reflect a secondary development based on a synchronic ablative usage of *uia* (cf. the traditional conception of the "ablative of the way by which" for such usages of *uia*, still standard in school grammar), but rather an inherited use of the instrumental.

---

[41] The construction is also found in Avestan, and is frequent in Vedic prose; see García Ramón 1997a: 119n14.

[42] So also regularly in Umbrian: Tab. Ig. Ib **vea aviekla** … **etu** "he shall go along the Augural Way" (~ VIb 52 *uia auiecla … etuto*), etc.

[43] See Hofmann and Szantyr 1965: 131, García Ramón 1997a: 119n14 (citing parallel behavior in Slavic, in addition to the Indo-Iranian evidence [n. 41 above]).

[44] E.g., Plt. *Stich*. 484–485: *quoniam nihil processi sat ego* ***hac***, *iuero / apertiore magi*' ***uia***; *ita plane loquar* "but, since I haven't made any progress at all in this direction, I'll approach (him) by (way of) a more direct route, and so I'll speak plainly".

5.5.

An adverb in *-ās* comparable to *interuiās* is sometimes seen in “*inter-pugnās*” (or *inter pugnās*) ‘during the battle’ at Enn. *Ann*. 286Sk.[45] But there is little reason to believe that this phrase is actually a fixed adverbial collocation;[46] Skutsch is probably correct in seeing this as “an occasional collocation, not a set adverb comparable to *interuiās*” (1985: 462, ad loc.).

5.6.

Finally for these forms, it may be mentioned that Lat. *crās* ‘tomorrow’ (cf. Fal. **cra**) is sometimes considered to belong with adverbs in *-ās* of the type *aliās*.[47] But the form is etymologically obscure, and poses complex problems that must be reserved for treatment elsewhere.

6.

It is worth considering, finally, whether a derivational process like “adv. *aliā* → adv. *aliā-s*” has taken place anywhere else in Indo-European. In fact, a possible parallel may be found in the Greek formant -κις (as in Hom. τετρά̓κις ‘four times’, εἰνά̓κις ‘nine times’, etc.).[48] The starting point involves PIE near-deictic **k̂i* (used as an emphatic particle), in forms like Hom. πόλλακι ‘often’, ὅσσακι ‘as often’, τόσσακι ‘so often’. On the basis of such forms, -κι was then naturally reinterpreted as a multiplicative adverbial formant, and remodeled to -κι-ς (after δίς, τρίς), whence τετρά̓κις etc. Finally, πόλλακι itself (11× Hom.) was secondarily remodeled as πόλλακις (3× Hom.). Thus, “multiplicative **-s*” has been extended to a non-numeral adverb (-κι → -κι-ς) in much the same way as I have argued in the case of “*aliā → aliā-s*”.[49]

---

[45] Buecheler 1866: 32, 1879: 63 (as another instance of archaic gen. sg.) and others, see more recently, e.g., Leumann 1977: 419.

[46] See the discussion by Skutsch (1968: 101n17), contra Buecheler; similarly already Jordan 1879: 273.

[47] So, e.g., Walde-Hofmann s.v. (“Ausgang vl. nach *alterās* u. dgl.”), following Muller 1926: 109.

[48] The conception of the Greek material presented here is essentially that of Dunkel (LIPP s.v. **k̂e*).

[49] As pointed out to me by Craig Melchert (p.c.), a similar analysis might be applicable to Hittite multiplicatives in *-anki ~ -ankiš* (see Hoffner and Melchert 2008: 168, with n. 50).
