Old Phrygian *iman*

Brent Vine

1. The limestone stele from Vezirhan—datable to about the end of the 5th c. BC, and preserving the longest extant text in the Phrygian corpus—has received three detailed treatments: Neumann's preliminary edition (1997) was followed by a comprehensive presentation by Brixhe (2004:42–67, assigning it text number B-05) in his second supplement to Brixhe and Lejeune 1984, and the monument has recently been the subject of a penetrating study by Gorbachov (2008).[1]

2. Among the more interesting features of this text are three (or perhaps four) attestations of the oblique stem *imen-* of the previously attested Old Phrygian noun *iman* (nom. sg.), cf. the adjectival derivative already attested in (fem.) *imeneia* (G-183b). Moreover, one of these new forms (dat. sg. *inmeney*, line 11) shows an orthographic variation vis-à-vis the other tokens, the import of which has yet to be taken into account in terms of the word's etymological background, which remains obscure. The Vezirhan attestations are as follows:

(i) line 1 (*ad init.*): *imenan*

(ii) line 1 (*ad fin.*): [. . .]*ṃenan*[.]*a* (Neumann),[2] [.]*ṃenan* (Gorbachov),[3] . . .]*ṃeạuṃiḍ* or . . .]*ṃeḍuṃiḍ* (Brixhe)[4]

(iii) line 8: *iṃenan*

(iv) line 11: *inmeney*

Nothing can be based on the form in (ii), given the uncertainty about its reading. In addition to the adjectival form *imeneia* already cited, seven previous occurrences of the noun in Old Phrygian[5] were restricted to nom. sg. *iman* (either alone, or in scriptio continua with preceding or following word) in texts as early as the 7th c. BC (e.g. P-03), according to Brixhe and Lejeune 1984. A few instances are fragmentary or

[1] See these works for full descriptions of the stone and its two texts. It is a quasi-bilingual: the seven-line Greek text at the end (with about 25 words) appears to summarize the longer Phrygian text (nearly 90 words in 13 lines), and is thus less illuminating than it might otherwise be.

[2] Interpreted as acc. sg. of a middle participle in *-meno-* (Neumann 1997:20).

[3] Favoring interpretation as acc. sg. [*i*]*ṃenan* (Gorbachov 2008:96).

[4] Brixhe 2004:46 (without interpretation).

[5] Listings by Orel (1997:433) and Gorbachov (2008:96 n. 10).

From Ronald Kim et al. (eds.), *Ex Anatolia Lux: Anatolian and Indo-European studies in honor of H. Craig Melchert on the occasion of his sixty-fifth birthday*. Copyright ©2010 Beech Stave Press, Inc. All rights reserved.

otherwise uncertain.[6] Partly on the basis of the Neo-Phrygian anthroponym (nom.) Ιμαν, (gen.) Ιμενος, (dat.) Ιμενι,[7] it seems probable (see Brixhe 2004:51) that some of the Old Phrygian instances of *iman* recover the same onomastic form, probably derived from the appellative *iman*.

3. As for the meaning of *iman* (apart from its onomastic use): the extended study by Brixhe (1974) mainly served to eliminate unacceptable early theories, and the consensus has been that the word referred to a stele or monument, or possibly the inscription engraved on such an object.[8] This has now been challenged by Gorbachov, but in my view his arguments, based on the Vezirhan text, are not decisive. He begins (2008:96f.) from that text's version of the Phrygian malediction formula (*yos niy art sin-t' imenan kaka* … 'whoever [does] bad things around/near this *iman*', line 8), observing that this should correspond to lines 3–4 of the Greek text: ὅστις | τὸ ἱερὸν κακουρ⟨γ⟩ετήσαι; in that case, he suggests, *iman* must be an equivalent of τὸ ἱερόν, and should therefore mean 'sanctuary, holy ground' or the like. But as we have noted (n. 1), the Greek text merely gives a précis of the Phrygian; and moreover, this argument could be turned on its head. The Vezirhan text begins with a reference to "this *iman*" (*sin-t' imenan*, acc. sg.), followed by the personal name *kaliya* as subject, which clearly corresponds to the beginning of the Greek text, an ordinary "ἀνέθηκεν" expression (Καλλίας … ἀνέθηκεν)—and these expressions normally refer to the erection of monuments. Gorbachov's other argument is likewise inconclusive: he observes (2008:98) that if Neumann's restoration of [*t*]*ẹḳmọ*[*r*] (in line 1) is correct (cf. OPhryg. *tekmor* [P-04a]), it is this word that is more likely to mean 'sign, boundary (mark)' (referring to an orthostat of some kind), rather than *iman*. But the reading is anything but certain (Brixhe reads *dekm*[---] here). Especially in view of the opening "ἀνέθηκεν" expression, there is good reason to maintain the traditional interpretation of *iman* as something like 'monument' or 'stele'.

4. The etymology of OPhryg. *iman/imen-* (cf. NPhryg. Ιμαν/Ιμεν-, §2) remains unclear; but the predesinential alternation (given PIE **ē* > Phryg. /a/) recalls PIE animate hysterokinetic formations like Gk. ποιμήν/ποιμέν- 'shepherd'—the only point about this word's historical morphology on which there is general agreement.[9] *Grosso modo*, this conception of the ablaut must be correct; and despite the elimination of this pattern in the later history of the language (Gorbachov 2008:99 n. 17), hysterokinetic inflection seems directly attested at least in NPhryg. (nom. sg.) ορουαν, (gen. sg.) ορουενος

[6] Orel and Gorbachov cite "*iman*" in G-274; but Brixhe and Lejeune (1984:211) read *iṃam* or *iṃan*, with a query about the directionality (they in fact prefer *maṃi*). The fragmentary]*ime*[(G-179) is unusable, and *imelan* (G-10, Brixhe 2002:31) may or may not belong here.

[7] See Zgusta 1964:195f. for details; alternative spellings are treated below (§5).

[8] Neumann 1997:20 ("bezeichnet den Träger der Inschrift, also etwa 'Stein' oder 'Anlage, Ehrenmal'; denkbar wohl auch 'Inschrift'"), similarly Brixhe 2004:51. Orel's gloss is treated in §4 below.

[9] Neumann 1997:20 ("Hier liegt Ablaut vor"), Brixhe 2004:51, Gorbachov 2008:99; see already Brixhe 1974:248, with reference to Haas 1969:83.

(of uncertain meaning, but perhaps 'protector' or the like; see Lubotsky 1997:127f., with earlier references).[10]

Only one serious etymological proposal concerning OPhryg. *iman* has been offered, namely an attempt by Bajun and Orel[11] to connect OPhryg. *iman* with Hitt. *ḫimma-* 'replica, ritual substitute' (traditionally derived from a thematic **h₂im-o-*, cf. Lat. *imāgō* 'likeness', *imitor* 'copy', and full grade **h₂eim-* in Lat. *aemulus* 'rival', and perhaps Ven. **a.i.mo.i.**).[12] This approach—whence Orel's tendentious gloss of *iman* as 'cultic substitute, imitation, image, model' (1997:432)—has little to recommend it. To be sure, the Vezirhan stele shows a series of images in relief, including personages (full description in Brixhe 2004:43). But these are conventional scenes, and there is no indication that they amount to 'cultic substitutes'; nor is there any prior association of the word *iman* with monuments containing figurative art: cf., for example, P-04 (with *iman* on face c), an unadorned block of stone, probably from an earlier period (see Brixhe and Lejeune 1984 *ad loc.*, with a 6th-c. dating).

From a morphological standpoint, and ignoring the problematic geminate in Hitt. *ḫimma-*, this theory would imply—given what is now clear about OPhryg. *iman/imen-*—that the hysterokinetic *n*-stem **h₂im-én* stands in a derivational relationship to thematic **h₂im-ó-* (cf. Hitt. *ḫimma-*?) or, conceivably, collective **h₂im-éh₂* (cf. Lat. *imāgō*).[13] But a hysterokinetic *n*-stem of this kind would fit neither the usual semantic profile of this category (see Balles 2002:2f.) nor its best-attested derivational background, which typically involves root nouns (and perhaps more specifically the loc. sg. of root nouns; see Nikolaev 2006:400 n. 13), a formation thus far lacking for the root in question, not just in Phrygian, but everywhere else.[14] Apparent support for the presumed derivation **h₂im-ó-* → **h₂im-én* would appear to be offered by NPhryg. ορουαν/ορουεν- (cited at the beginning of this section), which Lubotsky (1997:128)[15] interprets as related to Hom. οὖρος 'watcher, guardian', reflecting a **u̯oru̯o-* beside NPhryg. ορουαν < **u̯oru̯ēn*. Yet even if Lubotsky is correct in suggesting that **u̯-* disappears before **o* in New Phrygian (a necessary feature of his analysis), these forms can (and perhaps should) be interpreted differently. To begin with, despite the traditional derivation of οὖρος from a preform **u̯oru̯o-* (still retailed in Beekes 2010:1129f., inappropriately citing Myc. *wo-wo*),[16] the Homeric form is better analyzed via **sor-u̯o-*

[10] We return to this word below. Of little value in this regard is a series of controversial forms (attested in Greek texts) often alleged to be of Phrygian origin: ἀτιμήν 'servant', ἀζήν 'beard', βαλ(λ)ήν 'king', and others (see Haas 1966:163).

[11] Bajun and Orel 1989:32, Bajun 1992:134f., Orel 1997:432.

[12] On the Anatolian and Italic material, see Martzloff 2005:125. The source of the geminate in Hitt. *ḫimma-* is unclear (see e.g. Kloekhorst 2008:344).

[13] See Pinault 2002:96f. on collective **u̯ir-éh₂* and Lat. *virāgō* 'warrior maid' (followed by Martzloff, *loc. cit.*, for **h₂im-éh₂* : *imāgō*).

[14] Martzloff (2005) argues that SPi. **ímih** (AP 2) continues an *i*-stem **h₂im-i-*; but this would not support the Bajun/Orel account of *iman*, even if one grants Martzloff's analysis of the South Picene form. (I will offer an alternative account elsewhere.)

[15] See also Drew-Bear et al. 2008:115 (with n. 16), following Lubotsky.

[16] There is no reason to think that Myc. *wo-wo* means anything other than 'border, boundary'; the form thus belongs with Att. ὅρος (Ion. οὖρος) 'id.', unrelated to Hom. οὖρος 'guardian'. (Beekes properly cites Myc. *wo-wo* s.v. ὅρος [Beekes 2010:1109].)

(cf. Myc. *o-ro-me-no* 'watching over', Hom. *ὄρομαι*, YAv. *hara-*), with Aeolic or East Ionic psilosis and Aeol./"epic" barytonesis; see García Ramón 2004:146 n. 5. Now in Greek itself, there is a derivational process that produces "secondary *ḗn*-stems", in part built to *o*-stems: e.g. *κῶλον* 'limb' [Aesch.+] → *κωλήν* 'thigh, leg' [Eurip.+], *πυρός* 'grain (of wheat)' [Hom.+] → *πυρήν* 'stone (in fruit)' [Hdt.+]. The nature of this material, including also *ḗn*-stems built to *ā*-stems and even a few apparent deverbative forms,[17] makes clear that this is an inner-Greek matter, with no basis in anything old. It may therefore be preferable to view NPhryg. *ορουαν* in this light. If Hom. *οὖρος* derives from a **sor-u̯o-*, and since **s-* is preserved in New Phrygian, then *ορουαν* (granting Lubotsky's attractive interpretation 'protector') must be considered a Greek borrowing, from an (Aeol./E.Ion.) *ḗn*-stem pendant **oru̯ēn* that could have developed within Greek beside (pre-Hom.) **oru̯os* (> Hom. *οὖρος* 'guardian').[18] If this is so, then NPhryg. *ορουαν* beside Hom. *οὖρος* provides no support whatsoever for the derivation **h₂im-ó-* → **h₂im-ḗn* implied by the Bajun/Orel etymology of OPhryg. *iman*—unless *iman* itself is taken to be a borrowing from Greek, which nothing at all supports.

The only other proposal for *iman* is that of Yakubovich (apud Gorbachov 2008: 99), who raises the possibility of a connection with Urartean *imena-* 'foundation'. The phonetic similarity is indeed intriguing; but as Gorbachov rightly points out, the synchronic morphological alternation (nom. sg.) *iman* ~ (obl.) *imen-*, now so clearly documented (thanks to the Vezirhan material), would in that case have to be secondary, the result of the "assimilation of the loanword to the ablaut pattern of inherited hysterokinetic animate *men*-stems." Such a scenario would be highly unlikely, and so an Indo-European etymology for OPhryg. *iman* is surely to be preferred over a vague appeal to an unverifiable borrowing source or Wanderwort.

5. Of particular interest is the Vezirhan dat. sg. spelling *inmeney* (§2 (iv)), which invites reconsideration of the background of OPhryg. *iman*. The essential comparanda, all hitherto from Neo-Phrygian, have already been assembled by Neumann 1997:24, with reference to Calder 1956:xxiv, xxix: for NPhryg. Ιμαν (§2), cf. versions with Ινμ- and Ιμμ- (Ινμανη, Ινμουν, Ιμμους, Ιμμα, etc.; Zgusta 1964:196f., 203), as well as variants of the sort *κνουνμας*, *κνουνμανει* for the frequent NPhryg. *κνουμαν*(-) 'grave', as well as *κνουμναν* and (with gemination) *κνουμμανει*. For the latter word, Calder considered *κνουνμ-* to reflect the original sequence, whence *κνουμμ-* by assimilation and finally degeminated *κνουμ-*, the normal form. For *κνουμαν-*, this is surely incorrect: etymological and morphological considerations[19] favor Brixhe's interpretation of the spellings *κνουνμ-*/*κνουμν-*/*κνουμμ-* as hypercorrect (1999:296, 311). In his recent discussion of the Vezirhan text, Brixhe extends this analysis to *inmeney* (2004:62). Yet as Brixhe makes clear, hypercorrect spellings of this kind must be related to the loss of contrastive gemination in the language (Brixhe cites NPhryg. material like *αδδακετ* ~

[17] See Chantraine 1933:167 for details.

[18] Insofar as the Greco-Phrygian forms in *-ην* (n. 10) have any validity, they might also have played a role in the background of a "Greco-Phrygian" **oru̯ēn* (cf., in this semantic field, *βαλ(λ)ήν* 'king').

[19] See e.g. West 2003:79 n. 9 (**knu-mn̥* [: Gk. *κνύω* 'scratch'], with zero grade *men*-stem of the type Gk. *χύμα* 'outpouring', *πόμα* 'drink', etc.).

ⲁδⲁκⲉⲧ). Indeed, the Old Phrygian texts are already devoid of gemination (apart from <ii>),[20] and no gemination is found in the Vezirhan text (although /mn/ is evidently legal: *umniset* [line 7], cf. *omnisit* W-11, *umnotan* B-07). As Brixhe himself implies ("**mm* pour *m*", 2004:62), there is thus good reason to consider whether the <-m-> of *iman* might itself result from degemination (i.e., *iman* < **imman*), with the original geminate the result of assimilation (**imman* < **inman*). In that event, Vezirhan *inmeney* might reflect an etymological spelling,[21] as one of the "correct" phonological sources of later hypercorrect spellings of the type ⟨ⲕⲛⲟⲩⲛⲙ-⟩.

These considerations underlie the following proposal: I suggest that OPhryg. *iman* can be derived from a Wurzelkompositum (nom.) **en-mḗn*, (obl.) **en-mén-*, i.e. a typical two-way remodeling (as normally in Greek) of an "ideal" three-way ablaut (nom.) **en-mḗn*, (acc.) **en-mén-m̥*, (obl.) **en-mn-́*, in PIE terms. The inflection would be of the hysterokinetic type that is normal for Wurzelkomposita to *CEN*-roots, most famously Ved. (nom.) *vṛ́tra-hā́*, (acc.) *vṛtra-hánam*, (gen.) *vṛtra-ghnás*, etc.[22] The type as a whole is inherited from PIE (Scarlata 1999:6), including the subtype with preverb as first member (Scarlata 1999:735f., 739f., 768ff.; for *CEN*-roots, e.g. RV *ā-nám-*, 1999:280f.).[23]

6. Before addressing the semantics and the root etymology, two additional points of phonology call for brief comment.

6.1. In addition to nasal assimilation and degemination, the above hypothesis assumes pre-nasal raising of /e/ to /i/, perhaps in the order **enmḗn* > **inmḗn* > **immḗn* > *iman* (with the regular development PIE **ē* > Phryg. /a/).[24] Pre-nasal raising (as regularly in Armenian, and as in some Greek dialects,[25] to name two of the languages most closely related to Phrygian) is extremely common typologically, and is attested as a tendency in Old Phrygian itself: thus, although the preverb *en-*, appearing as such before vowel in the probable augmented form *eneparkes*,[26] is apparently stable in this environment, the compound *akenanogavos* (M-01a, W-01a [*bis*])[27] is also attested as *akinanogavan* (M-04). One could further speculate that such a raising process could have been favored in a "heavy nasal" context like /enm-/,[28] or about the possibility

[20] Thus, for example: the two *s*'s of *assu*[(G-213) may not belong to the same word (see Brixhe and Lejeune 1984 *ad loc.*); *bba* (M-02) probably stands for *b(a)ba*; *natimeyonna* (W-05a) is probably to be divided between <nn>, cf. *-eyon* (Wl-01c), as also *penniti* (W-11; Brixhe 2004:22 *ad loc.*).

[21] In part retained as a traditional orthography in NPhryg. onomastic ⟨Ινμ-⟩?

[22] On the inflection, see Scarlata 1999:695.

[23] Another Wurzelkompositum with **en-* probably appears in OIr. *eirr* (gen. sg. *errad*) 'warrior' (< **en-ret-s* or **en-r̥t-s*, to **ret-* 'run'; Wodtko 2008:577 n. 3, with references).

[24] The relative chronology of **ē* > /a/, vis-à-vis the other processes, cannot be determined; thus earlier application (even at the stage **enmḗn* > **inman*) is entirely possible, and of no consequence here.

[25] Arcado-Cypriote (*ἰν* = *ἐν*, Arc. *ἀπεχομινος*, etc.) and (interestingly for Phrygian) Pamphylian (*ἰς* < **ἰνς* = *ἐνς*, *εἰς*, cf. NPhryg. *ις*, whether native or borrowed).

[26] G-01c, G-125, M-01d, cf. NPhryg. *ενεπαρκες*.

[27] With first member presumably the same word as *akenan* (P-04a), *akenaṣ* (W-07).

[28] As opposed to */enst-/ (> /est-/), with /e/ maintained: *estatoiavun* (G-144), cf. NPhryg. *εσταες* (and, without *n*-loss, or with /n/ restored) *ενσταρνα*.

(unverifiable, in the present state of our knowledge about Phrygian) that raising might have been favored in unaccented or pretonic position.

6.2. Assuming PIE oxytone accent, one might wonder whether a truly old Wurzelkompositum built with **en-* 'in, on' and **mén-* should have rather come out **n̥-mén* (> OPhryg. *×aman*ʔ), with reduction to zero grade in the initial (unaccented) syllable. But bona fide zero grade forms of **en-* as first compound member are extremely rare, if they exist at all;[29] and in any event, full grade **en-* (the normal form of the preposition/preverb) could have been restored at any point. For those who prefer to operate with laryngeal-initial **h₁en-* (a problem that cannot be explored here): zero grade **h₁n̥-mén* could well have yielded pre-Phrygian **en-mén*, under the plausible assumption that Phrygian (like Greek, given comparable patterns of laryngeal vocalization in both languages) underwent Rix's Law. (I return briefly to **(h₁)n̥-mén* in §7.3 (iv) below.)

7. As for the root analysis of the proposed basis **en-mén/*en-mén-*: to some degree, one can argue for any of the three PIE **men-* roots registered by Rix (2001).[30] For two of these, one must be satisfied with a root etymology—often the maximum we can achieve, after all, with our limited understanding of Phrygian. The third option, however, may offer a more satisfying approach.

7.1. **men-* 'project, protrude' (Lat. *ēminēre* 'stand out', etc.; Rix 2001:*s.v.* 3. **men-*): An etymological meaning 'that which projects on(to)' might originally have referred to a tumulus or elevation (cf. Lat. *mōns* 'mountain' from this root), eventually designating a stele or other upright monument. Ideally, additional support would come from the existence of a root noun (e.g. **mén-/*mén-*) to this root, and from independent evidence favoring **en-* + **men-* specifically; but on these points there is not much to offer. There is very likely a root noun **mén-* (or **mén-/*mén-*) underlying Hitt. *mēni-/mēna-* 'face, cheek' and the first members of *mēnaḫḫanda* 'opposite, facing' and CLuv. *mānnaḫu(wa)nn(i)-* (a facial feature);[31] but **men-* 'project' (thus Melchert 1984:88 n. 17, tentatively followed by Nikolaev forthcoming) is only one possibility, as we will see below (§§7.2, 7.3 (v)). As for **en-* + **men-* 'project': nothing favors the antiquity of this collocation, which is not strongly supported by a probable einzelsprachlich construct like Lat. *imminēre* 'hang over, threaten'.

7.2. **men-* 'mente agitare'[32] (Lat. *monēre* 'advise', etc.; Rix 2001:*s.v.* 1. **men-*): The attraction of this solution (roughly **en-mén-* 'thinking on, calling (in)to mind' → 'remembrance, memorial', etc.) would be the parallel with other terms for 'tomb,

[29] See Beekes 2010:50 on Gk. *ἀκαρός* (*EM*) 'brain, head' ~ *ἔγκαρος, ἴγκρος*.

[30] For expository convenience, I refer to these as three separate roots, even though two of them are often thought to have been primordially the same at an early stage of the protolanguage; for details, see the lemmata in Rix 2001 referenced below.

[31] See Tischler 1977– :L–M 197, Kloekhorst 2008:577, and (for the Luvian form) Melchert 1994:237 (with reference).

[32] Meillet 1897.

monument' based on this root (or enlarged versions of it), such as Lat. *monumentum* or Gk. *μνῆμα*. It is not easy, however, to defend the existence of a root noun, for which there is no certain evidence. For the Anatolian forms meaning 'face' and the like (§7.1), Rieken (1999:56f.) considers identification with **men-* 'think' rather than **men-* 'project' (but see further §7.3 (v) below). One might also suggest that the Vedic f. *ā*-stem *manā́-* 'zeal, envy' (RV 4×, including instr. sg. *manā́* [10.6.3c]) was back-formed to an instr. sg. **mánā*, to a root noun **mán-*; cf. RV *tán-* 'extent' (Schindler 1972:22), with instr. sg. *tánā* used adverbially ('continuously'), and a parallel f. *ā*-stem *tánā-* 'Spross, Kind' (though this is usually, and no doubt correctly, taken to derive from the thematic adj. *tána-*, used substantivally to mean 'Nachkommenschaft, Kinder'). Nor is there support for a collocation **en-* + **men-* 'think'. At first glance, evidence of that kind appears to come from Hom. *ἐμμεμαώς* 'pressing eagerly on, ardent' (11× *Il.*, 1× *Od.*). But it is immediately disquieting that aside from this perfect active participle, only a single finite form—post-Homeric at that—is attested.[33] Indeed, Leumann has shown convincingly (1950:52f.) that *ἐμμεμαώς* is a "homerisches Wort", with no existence outside the Kunstsprache: the form was created artificially from the well-attested simplex participle *μεμαώς* (: perf. *μέμονα*), beginning from passages like X 143 *ὣς ἄρ' ὅ γε (μ)μεμαώς* (with non-etymological "resonant lengthening", reinterpreted as *ὣς ἄρ' ὅ γ' ἐμμεμαώς*). Hom. *ἐμμεμαώς* is thus of no value for our purposes, and the post-Homeric finite form (clearly a Sophoclean nonce-formation) is no less artificial. Finally, Arm. *imanam* 'understand' has been analyzed in terms of **en-* + **men-* 'think' (Brugmann, Meillet, and others); but this is unlikely to be correct.[34]

7.3. **men-* 'stand fast, remain' (Lat. *manēre* 'remain', etc.; Rix 2001:*s.v.* 2. **men-*): This approach (roughly **en-mén-* 'staying on (continually)', whence 'what remains or abides', e.g. as a memorial) seems attractive semantically, and may also be more appealing than the above two in formal terms, given the following considerations.

(i) To begin with, **en-* + **men-* 'remain' is well-documented in Greek: Hom. *ἐμμενές* 'continually' (discussed in (ii) below), post-Hom. *ἐμμένω* 'abide, remain fixed, be true to' [Aesch.+]; cf. also *ἐμμίμνω* 'abide' [Emped.+] and *ἔμμονος* 'abiding, steadfast' [Plato+]. The collocation is further supported by widely-attested onomastic forms, attested as early as the 6th century: note the Ἐμμενίδαι, a clan of Akragas celebrated by Pindar,[35] with the personal name Ἐμμενίδας/Ἐμμενίδης also attested inscriptionally from an early period (6th c.+) and well beyond Sicily (Athens, Corinth, Delos, Cos, Rhodes, Phocis, Euboea).[36] Note further Ἐμμένης (5th c.+: Athens, Delos, Macedon)[37] and Ἔμμονος, Ἐμμονίς (extremely common in Phocis).[38] The precise semantics of

[33] *ἐμμέμονε*, Soph. *Tr.* 982 (lyr.)—where, not surprisingly, the precise sense is disputed: see Jebb 1892 [2004]:144, Easterling 1982:198.

[34] For discussion and references, see Klingenschmitt 1982:125f.. Differently, via **men-* 'think', Holst 2009:255f. (but with *i-ma-nam* as secondarily derived from aor. *i-ma-cay*; *i-* < the augment **(h₁)e-*).

[35] *O.* 3.38, *P.* 6.5, fr. 270 (= Schol. *N.* 7.103).

[36] See Fraser and Matthews 1987:1.151, 2.142, 3a.141f., 3b.132f. (*s.v.*).

[37] Fraser and Matthews 1987:1.151, 2.142, 4.118.

[38] Fraser and Matthews 1987:3b.132f.

these names can be interpreted in various ways (e.g. 'Steadfast[ness]', '[Law-] abiding', etc.); the correlation with NPhryg. onomastic Ιμαν/Ιμεν- (and perhaps OPhryg. *iman*, cf. §2 above, *ad fin.*) is in any case striking.

(ii) Hom. *ἐμμενές*—a neglected form[39]—deserves further attention. The form is treated in lexica, naturally enough, as the neuter acc. sg. of an *s*-stem adj. *ἐμμενής*, standardly glossed 'abiding in'.[40] In Homer, *ἐμμενές* (used adverbially) is the only form that is found, and it is starkly formulaic, occurring five times in the line-end formula … *ἐμμενὲς αἰεί* # (Liddell and Scott 1996: 'unceasing ever').[41] A remarkable fact, however, is that after Homer, an adjective *ἐμμενής*—the purported basis of neut. *ἐμμενές*—is itself never attested, apart from onomastic Ἐμμένης ((i) above). Thus Hesiod likewise uses adverbial *ἐμμενές* 'continually' (*Th.* 610),[42] as well as *ἐμμενέως* (*Th.* 712),[43] a version of *ἐμμενές* fitted out with an overt adverbial ending, also attested in a late metrical inscription from Asia Minor (*IStraton*. 543.8 = Şahin 1982:32)[44] and nearly a dozen times in Oppian.[45] Aratus merely mimics the Homeric usage, twice using adverbial *ἐμμενές* on its own (83.339) and once the formula … *ἐμμενὲς αἰεί* # (891); and the hexameter fragments of the Skeptic philosopher Timon of Phlius (here citing Anaxarchus) may contain a substantivized *τὸ ἐμμενές* 'steadfastness' (fr. 58D = Lloyd-Jones and Parsons 1983:832), if the reading is correct.[46] Lexicographical sources (Hsch., Suda, *EM*) gloss only *ἐμμενέως* and *ἐμμενές* in adverbial meaning. Early Christian poetry continues to ape the Homeric formula,[47] and a form of *ἐμμενής* other than *ἐμμενές* does not appear until the *Chiliostichos theologia* of Choerosphactes (9th/10th c. AD).[48] Thus, de-

[39] It goes unrecorded in Frisk 1960–72, Chantraine 1999, Beekes 2010, and Schwyzer 1939; it is absent from Chantraine 1958, and Risch ignores it, beyond including it in his table of *s*-stem forms (1974:86).

[40] So Liddell and Scott 1996; similarly Autenrieth 1895 [1958], Bechtel 1914, Cunliffe 1924 [1963].

[41] K 361, 364, N 517, *ι* 386, *ϕ* 69. Some modern interpreters envisage a connection with *μένος*/*-μενής* 'strength, (fighting) spirit': cf. Lattimore's 'eagerly always' for K 361 (of hounds in pursuit), and Blanc's gloss 'avec force' for *ἐμμενές* (Blanc 2008:183). Indeed, such a folk-etymological contamination could have occurred at an early stage as well, and might also be involved in the Greek onomastic usage. Nevertheless, some of the Homeric instances can only mean 'continually' (e.g. *ϕ* 69: Penelope on the suitors' "incessant" [Lattimore] eating and drinking); that this was the essential meaning of the word is assumed by Janko (1992:111), *ad* N 516-17.

[42] *Ex coni.* (codd. *ἔμμεναι*), but the emendation is "almost certain" (West 1966:335, *ad loc.*]).

[43] See West 1966:355 *ad loc.* on Hes. *Sc.* 429 (*ἐμμενέως* codd., with certain correction to *ἐν μένεος* or *ἐμ μένεος*).

[44] In the pentameter line of an elegiac couplet: # *ἔλαχεν ἐμμενέως* ||.

[45] The generation of a variant in *-εως* for adverbial use in hexameter poetry is an established feature of the behavior of *s*-stems with this syllabic profile: see Blanc 2008:190f. on adverbs in *-έως* of the type *ἀσφαλέως*, *ἀφραδέως*, etc. as "palliatifs" for the metrically impossible cretics of corresponding nom. sg. forms (*ἀσφαλής*, *ἀφραδής*, etc.)—although *ἐμμενέως*, as a metrically convenient variant of *ἐμμενές*, need not imply the actual existence of a nom. sg. *ἐμμενής*.

[46] The passage is cited twice by Plutarch, who varies between *ἐμμενές* (*de Vit. Pud.* 529A) and *ἐμμανές* (*de Virt. Mor.* 446B). For textual and interpretive details, see, respectively, Lloyd-Jones and Parsons 1983:388 *ad loc.* and Di Marco 1989:244f. (On Gk. *ἐμμανής*, see now Perdicoyianni-Paléologou 2009:332f.)

[47] E.g. *Visio Dorothei* (P. Bodmer 29; 3rd/4th c. AD) 95, 149, 320; Stobaeus (5th c. AD), *Anthologium* I.25.9.71, IV.25.28.5; all … *ἐμμενὲς αἰεί* #.

[48] Gen. sg. *ἐμμενοῦς* (25.29).

spite the traditional conception, the adjective "*ἐμμενής*" is a fiction (nor does there exist a simplex *s*-stem ˣ*μένος* 'steadfastness', 'continuity', or the like, to **men-* 'remain, stand fast'): all that really exists, beginning from the Homeric line-end formula, is a frozen adverb *ἐμμενές*, whence the lightly adjusted variants *ἐμμενέως* in dactylic poetry, and, if it is real, Timon's substantivization *τὸ ἐμμενές*. Nor is an actual "*ἐμμενής*" required for the onomastic material, which can have various sources, including interference from *μένος*/*-μενής* (n. 41).

Thus Hom. *ἐμμενές* calls for another explanation; and the obvious comparanda are other frozen adverbial forms in **-es*, i.e. Ion. *σῆτες* (Att. *τῆτες*, Myc. *za-we-te*) 'this year', Dor. *αἰές* 'always'. As I argue elsewhere (2009), the first is to be understood as containing, in its second member, an archaic gen. sg. ("genitive of time") of the root noun **wet-* 'year'; and the second may also be a frozen gen. sg. (Vine 2009:220 n. 46). I suggest, then, that Hom. *ἐμμενές* is likewise an adverbially taken frozen gen. sg., to a root noun **en-mén-* 'remaining onward' = 'continuity, perpetuity' (i.e., gen. sg. 'of perpetuity' ~ 'perpetually, continually, continuously'), used in an asyndetic formula with *αἰεί*: *ἐμμενὲς αἰεί* 'continually (and) forever'. If this is so, Hom. *ἐμμενές*, as a reflex of an old root noun, would provide a direct morphological comparandum for OPhryg. *iman*, under the interpretation proposed here.

(iii) There is a reasonable possibility that *ē*-grade "intensives" of the type Lat. *cēlāre* 'hide' are to be thought of as fundamentally denominative to root nouns.[49] For **men-* 'remain', there is good evidence for such a formation in Gk. dial. 3 pl. perf. *ἐπιμεμηνακαντι* (Schwyzer 1923:91.11; Argos, mid-3rd c. BC), pointing to a present *μηνάω** < ***mēn-eh₂i̯e/o-*. As discussed by Klingenschmitt (1982:91f., cf. Schwyzer 1939:719, Beekes 2010:931), the same form is likely to underlie Arm. *mnam* 'remain' < pre-Arm. **mēnā-*, which Klingenschmitt explicitly interprets as denominative, though without identifying the source. A root noun *(*en-)mḗn-*, however, could supply the basis for this lengthened-grade intensive in Greek and Armenian (the two languages, other than Albanian, most closely related to Phrygian).

(iv) Yet another denominative token might appear in OIr. *ainmne*, W. *amynedd* 'patience', although this Celtic material, while usually placed with **men-* 'remain',[50] has not been so analyzed, to my knowledge. Given the dental inflection in at least part of Celtic (cf. OIr. gen. sg. *ainmnet,* pointing to a stem **an-men-ant-*),[51] we could be dealing with an old participle to a denominative in ***-men-ā(i̯e/o)-***, this time based on the weak stem **mén-* of the root noun in question. Although **an-* here is normally identified as the "intensive" prefix and compared to Gaul. *ande-* (see recently Zimmer 2000:228), Vendryes et al. (1959– :A 70, *s.v.*) may be correct in supposing that several elements contributed to the background of this formant. For Celt. **an-men-*: **an-* could

[49] On such a source (root noun **kél-*/**kél-*) for *cēlāre* itself, see de Vaan 2008:106 *s.v*, with references.

[50] Pokorny 1959:729, Vendryes et al. 1959– :A 37 *s.v. ainmne*, Matasović 2009:38 *s.v. *an-men-V-*.

[51] In addition to Matasović, see also Pedersen 1909:104 on the divergent formation in British Celtic (***an-men-i̯i̯ā-*** or possibly ***an-men-i̯i̯ant-***).

in theory even preserve the zero grade of **en-* or **h₁en-*, cf. §6.2 above on **(h₁)n̥-mén-*.

(v) As we have seen (§§7.1, 7.2), the root noun that underlies Hitt. *mēni-* 'face' etc. may belong to **men-* 'project' or **men-* 'think'. But Rieken's discussion of the problem (1999:56ff.) brings out the possibility of primordial overlap among the PIE **men-* roots (cf. n. 30 above); and indeed, she astutely observes (1999:58 n. 266) that an acrostatic root noun **mḗn-/*mén-* would recall the lengthened grade in Gk. (Arg.) *μηνάω** ((iii) above)—which brings us into the sphere of **men-* 'remain'.

8. It remains to point out an unanticipated benefit conferred by the above analysis of OPhryg. *iman*. With this parsing (vs. unanalyzable *men*-stem **(H)i-mḗn-*), one can immediately compare *iman* with NPhryg. *μανκα*,[52] a frequent form widely assumed to mean 'monument' or 'part of a monument', now apparently attested (as *manka*) in late Old Phrygian as well (W–11 [late 4th/early 3rd c.]; Brixhe 2004:13f.), and possibly still earlier in an unsyncopated form *manuka* (B–07 [early 5th c.?]; Brixhe 2004:81f.).[53] Previous approaches have tended to assume a basis in **men-* 'think, remember',[54] and this cannot be ruled out for a word with this meaning (cf. §7.2). Nevertheless, the *a*-vocalism is not easy to understand; *ad hoc* assumptions, such as those operating with a "reduced vowel" (so Haas 1966:204), have no merit without further justification.[55] In contrast, a root noun **mḗn* 'that which remains', which (as argued above) may underlie OPhryg. *iman* and which may also have independent support, can account directly for a derived feminine **mēn-kā* (> OPhryg. *manka*, NPhryg. *μανκα*) or (with different chronology) **mḗn* > pre-OPhryg. **mān* or **man,* whence **mānkā/manka*.[56] If, further, OPhryg. *manuka* is indeed the unsyncopated predecessor of *manka*, and/or if Plutarch's *μανικά* is taken seriously, one must posit an intermediate stage of derivation,[57] the details of which—like so much about Phrygian—must at present remain speculative.[58]

---

[52] Fem. *ā*-stem: acc. sg. *μανκαν*, dat. sg. *μανκαι*, etc.

[53] Plutarch's testimony about a Phrygian adjective (neut. pl.) "*μανικά*" (with reference to *ἔργα* = "*λαμπρὰ καὶ θαυμαστά*", *De Is. et Os.* 360B) is usually associated with NPhryg. *μανκα* (e.g. Haas 1966:67), but the nature of the connection, if it is valid, remains unclear.

[54] E.g. Orel 1997:443 and (asserting that the root "must be" this **men-*) West 2003:83 n. 19.

[55] Haas appealed to an OPhryg. *manakio*, interpreted morphologically as derived from a **manākā-* (cf. *μανκα*), ultimately to a form **mn̥-ē-*; but, even apart from other difficulties with these assumptions, a form *manakio* may never have existed. The fragmentary text in question (M-03) reads]*abasiṃaṇakio*[, for which Brixhe and Lejeune 1984 (see *ad loc.*) reasonably prefer to isolate an instance of OPhryg. *iman* followed by a word (or word-beginning) *akio*[.

[56] Hysterokinetic nom. sg. as the basis for a derived form: e.g. Gk. *θυηλ-ή* 'burnt-offering' (Vine 2008:15), *τεκμήρ-ιον* 'token'.

[57] Root noun as the basis for a secondary *u*-stem: so also for **men-* 'hand' (cf. **mn̥-tó-* in Gmc. [OIc. *mund* etc.], generalized prevocalic zero grade **mn̥(n)-(V-)* > Ital. *man-* in Lat. *mantēlum* 'hand-towel', *mandāre* 'hand over', etc.) → Ital. **man-u-* (Lat. *manus* etc.).

[58] I express warm thanks to colleagues and friends who offered expert assistance with various portions of this work: David Blank, Dieter Gunkel, and Anna Pagé (UCLA); José Luis García Ramón (Cologne); Michael Weiss (Cornell); and Alexander Nikolaev (Harvard). Above all, I thank Craig Melchert for many
