The Etymology of Greek κώμη and Related Problems

BRENT VINE

University of California, Los Angeles

1. κώμη

1.1. The traditional etymology of Gk. κώμη '(unwalled) village, settlement; district, quarter (of a city)' [Hes. *Op.* 639, *Sc.* 18, fr. 43(a).62+] has been accepted virtually without question at least since its articulation by Bezzenberger (1902:168): κώμη would reflect a "dehnstufige Nebenform" (Frisk *s.v.* κώμη) related to a series of words for 'hamlet/countryside' and 'home/household', principally including Go. *haims* [pl. *haimos* 'τὰς κώμας' M. 9:35, 'τοὺς ἀγρούς' Mk. 5:14] (among other Gmc. material) and ORuss./RCS *sĕmija* (with its Baltic congeners). This is the account promulgated in the etymological dictionaries of Greek,[1] and in Pokorny (*IEW* 540, *s.v.* 1. *k̂ei-* 'liegen': "dehnstufig κώμη f. 'Dorf' (**k̂ō[i]mā*)"). The only disagreement concerns the choice of IE root with which to associate Gk. κώμη and its supposed cognates in Gmc. and BSl., the major contenders being **k̂ei-* 'lie' (Gk. κεῖμαι etc.), **tk̂ei-* 'dwell, settle' (Gk. κτίζω, Lat. *situs* etc.), and **k̂ei-* 'dear, intimate etc.' (Lat. *cīvis* etc.).[2] Chantraine inclines toward a fourth, namely a root **k̂ei-* 'split, divide', which Palmer on several occasions (most prominently 1963:186-9) sought to identify in κώμη on the basis of Gk. κεάζω 'split' and Hom. κείων 'cleaving'.

It is easy to dismiss Palmer's "**kei-*", since κεάζω and κείων in all probability belong with **keh₂u-/*keuh₂-* 'hew' (see, e.g., Schrijver 1991:286f, Hackstein 1995:54ff), and a root "**kei-*" in this meaning is supported by no other evidence; but the point is moot, since all of the postulated diphthongal sources of Gk. κώμη are simply unacceptable. No matter how seductive the apparent semantic convergence, the absence of even the slightest indication that any of these roots involved "long diphthongs" (in the current laryngealistic understanding of this concept) poses insuperable formal obstacles to any such connection. The correct assessment, then, is that of *LfgrE* (Lief. 14 [1991] 1604, J. G.-J. Abbenes), which declares the etymology of κώμη to be "unklar", with the observation: "die übliche Vbdg. m. germ. **haima-* 'Heim, Welt' usw... [ist] lautl. nicht haltbar".

1.2. A superior approach, certainly from a phonological point of view, was proposed by Persson (1912:159f), who aligned κώμη with IE **kem-* 'zusammendrücken, zusammenpressen' (*IEW* 555: MHG *hemmen/hamen*, Germ. *hemmen*, Eng. *hem*; Russ. *kom* 'lump', etc.).[3] Persson's account is all but forgotten today,

[1] Besides Frisk: also Chantraine and Boisacq, both *s.v.* κώμη.

[2] For discussion of this issue, see Chantraine (*loc. cit.*); also Lehmann-Feist 170 (*s.v.* **haims*) and 181f (*s.v.* **heiwa-frauja*).

[3] Perhaps rather **kemH-* (or with a set variant **kemH-*), see Klingenschmitt (1982:147) on Arm. *k'amel* 'squeeze, wring' (**kṃH-e(i̯e-)*).

probably for two reasons: first, he mainly addressed Gk. κώμῡς, -ῡθος 'bundle (of straw, etc.)' (a word which, because of its unusual suffix formant, is often thought to be borrowed, and is otherwise obscure), appending his brief comment on κώμη only at the end of his note on "κώμυς 'Bündel, Büschel' und Verwandtes";[4] and second, Persson ignored the morphology of both words (apart from pointing out the odd stem-formation of κώμυς), leaving the lengthened *ō*-grade—a critical *explanandum*—entirely unelucidated. Our first task, then, will be to determine whether sufficient morphological underpinning can be provided for Persson's etymology, which is phonologically impeccable and semantically quite attractive.[5]

2. κώμη *and Greek barytone feminines with lengthened ō-grade*

2.1. In morphological terms, a **kṓm(H)-eh₂* is not isolated in Greek; similar lengthened *ō*-grade forms (generally with barytone accent) include the following (several less transparent examples will be adduced in §§**2.3.** and **3.**):

(i) λώπη 'mantle' [Hom.+], more generally 'covering, husk' (: λέπω 'peel');

(ii) ὥρα 'care, concern, regard' [Hes. *Op.* 30+][6] (: ὁράω 'see; take heed of');[7]

(iii) ὕλη [ῡ] 'wood(s)' [Hom.+], which may continue, as I attempt to show elsewhere (1997), a **su̯ṓl-eh₂* 'kindling, burning-material' (: **swel-* 'burn');[8]

(iv) κώρα· ὑβρις Hsch. (cf κορέννυμι 'be glutted');[9]

[4] Persson's approach to κώμη is not cited *s.v.* κώμη in Boisacq, Frisk or Chantraine, although it is mentioned by Frisk *s.v.* κώμυς.

[5] From a root **kem(H)-* 'zusammendrücken etc.', a word meaning 'bundle' hardly requires semantic justification; for κώμη, Persson adduced semantic parallels like Russ. *gromada* 'heap, mass; *crowd*' (which belongs etymologically with Eng. *cram*), to which one could add Eng. *press* = 'throng'.

[6] Probably presupposed also by Hom. οὐδενόσωρος 'unworthy of notice, contemptible' (Θ 178, cf Schwyzer 1939:452 ["ὦ οὐδενὸς ὥρα scil. ἐστί"]) and (Ion./Att.) ὀλίγωρος 'contemptuous' (cf ὥρη γάρ τ' ὀλίγη πέλεται, Hes. *Op.* 30).

[7] The initial of ὁράω (traditionally **su̯-* or **u̯-*) now involves a degree of phonological uncertainty, introduced by Myc. *o-ro-me-no* (cf also Hom. ὄροντο γ 471, ὄρονται ξ 104); see, e.g., Lejeune (1972:175, §181, n. 3) on the general problem, and more recently, e.g., Leukart (1994:93f) and Hackstein (1995:262ff). Thus, although ὥρα is normally taken to derive from a *Ϝώρα, it may be necessary instead to operate on the basis of a **ser-*, in which case the "psilotic" treatment of ὥρα could be taken as decompositional to early forms of the type οὐδενόσωρος, ὀλίγωρος. (This would also conveniently disambiguate ὥρα from its near-homophones: in addition to non-psilotic Ion. ὥρη [also ὥρη] 'portion of a sacrificial victim', esp. ὥρα 'time, year, season, etc.'; cf West 1978:149 [Hes. *Op.* 30 *ad loc.*] on Troxler's attempt to deny the separate existence of ὥρα.)

[8] For ὕλη as originally 'Brennholz', see Wackernagel (1916:185, n. 1), followed recently by Leukart (1994:241, n. 282).

(v) λωγή [or λώγη, see next footnote]· καλάμη. καὶ συναγωγὴ σίτου Hsch. (: λέγω 'gather, collect').[10]

The above forms (apart from ὕλη) are merely listed by Schwyzer (1939:459f) among diverse feminine abstracts; Chantraine (1933:20) notes only the "place du ton anomale" of λώπη,[11] in connection with a brief discussion of short-vowel *o*-grades of the type κόμη 'hair' etc., with the same feature. Nevertheless, the formal and functional attributes of the above items seem consistent enough to recognize a small but identifiable class of feminine abstracts and/or collectives (in some cases concretized), characterized by lengthened *ō*-grade of the root and barytone accent. The type is not only rare, but clearly recessive: note the isolated and clearly old ὕλη (without base verb in Greek), as well as the preservation of some material in glosses only (accepting κώρα and/or λώγη as genuine instances of the type). Thus the isolated κώμη (without base verb, though cf §2.2.2. below on Myc. *ke-ke-me-na*) could continue an original **kṓm(H)-eh₂* *'compression, compaction', whence 'collection' or 'concentration' (of homes,

[9] Latte (1966:559, *ad loc.*) obelizes this form, commenting "h. e. κορος", evidently following Schmidt (1860:565, *ad loc.*: "Vulgo κόρος"), whose authority for κώρα/κόρος as a "nomen biforme" is Lobeck (1843:18, "κώρα ὕβρις Hes. id est κόρος", comparing forms like λοίμη, μύθη, ὄγκη "et plurima talia corrupta fortasse aut plebeja aut ludicre ficta"). But the distinctive root vocalism of κώρα (vis-à-vis κόρος) sets it apart from patently suspicious cases like λοίμη etc., most of which have since been eliminated (e.g. ὄγκη Hsch. is now read ὀγκίς, see Latte 1966:733 *ad loc.*), or can be otherwise explained (e.g. as dialectal variants: thus μύθα· φωνή. Κύπριοι Hsch.). Thus, apart from the fact that κώρα is glossed with a meaning otherwise appropriate also to κόρος (which is perhaps troubling, but not decisive), I can find no rationale for the judgment that a form κώρα (< **kṓrh₁-eh₂* or **kṓrh₃-eh₂*) must be a corruption for κόρος, especially in view of the existence of λώπη and ὥρα (cf also λώβη, χώρα, κώπη below); it therefore seems reasonable to regard κώρα as at least a potentially genuine form. (On the ambiguity in the root shape [**kerh₁-* vs. **kerh₃-*] see Schrijver 1991:124, with references.)

[10] This word, formerly cited (*LSJ* et al.) as barytone λώγη (thus Schmidt, 1861:59), is now printed as oxytone λωγή by Latte (1966:616; the correction is noted in *LSJ Supp.*[2] 200, *s.v.*). Nevertheless, one may doubt the validity of oxytone λωγή (on which Latte makes no comment). To begin with, the notation of accent in the codex Marcianus is notoriously unreliable (cf Latte 1953:xxvii), so that even if λωγή (as opposed to λώγη) is the correct reading, this need not foreclose interpreting the form as λώγη. Schmidt (ad loc.) adduces the poorly-attested λωγάω 'λέγω' (Theognost. *Can.* 149, cf [Dor.] ἐλώγη· ἔλεγεν Hsch.), and it seems possible that Latte considered λωγάω to justify the accentuation λωγή, perhaps comparing simple denominatives of the type τιμάω/τιμή. But λωγάω is clearly a lengthened-grade iterative of the type νωμάω, and these verbs neither derive from pendant *ā*-stem nouns, nor do they serve as a derivational base for such forms (thus νωμάω : **νωμή, etc.). A noun "λωγη", then, is best taken as an independent formation beside λέγω; and given λώπη : λέπω, "λωγη" could well stand for barytone λώγη. (I am greatly indebted to my colleagues Andrew Dyck and Michael Haslam for helpful discussion of the Hesychian material.)

[11] Similarly M. Weiss (1993:24, n. 20), on the accent of λώπη and λώγη.

people, etc.), i.e., 'settlement' or 'district'.[12] Here we may note that the meaning 'district, ward, quarter (of a city)' is attested relatively early (Isoc.+, and implied by κωμήτης 'fellow district-member' at Aristoph. *Nu.* 965), supporting independent derivation of both usages from a more basic sense like '(close-packed) concentration'. Otherwise, the meaning 'district (of a city)' is not easy to derive from a presumed original '(unwalled country) settlement', although this point does not seem to have been acknowledged.[13]

2.2. Before leaving κώμη, brief remarks may be added on (possibly) related forms.

2.2.1. As for κώμῡς, -ῡθος [Cratin.+]: this could in principle reflect the same formation proposed for κώμη, but with a secondary derivation via the obscure and surely non-IE suffix otherwise seen only in ἀγνῦθες 'loom weights' (a probable "Aegean" loanword, cf Barber 1991:271, 278f). It would not in itself be surprising for the original formation to survive in the "high culture" (or perhaps simply more general) term κώμη, while the same word for a 'collection, compression, etc.', but with semantic specifications involving agriculture and the natural world (κώμῡς refers to hay, bamboo, reeds, etc.), appears with a Mediterranean formant. As Persson saw (1912:160), κωμῡθ- would thus not essentially differ, in morphological terms, from ὀρνῑθ-/ὀρνῑχ- 'bird' (beside ὄρνεον), where ὀρ-ν- continues the IE *n*-stem of Hitt. *ḫāraš*, OHG *aro*, etc., followed in ὀρν-ῑθ-/ὀρν-ῑχ- by obscure suffix formants (the one in ὀρν-ῑθ- being strikingly similar to that in κωμ-ῡθ-) likewise assumed to be "Aegean".[14]

2.2.2. Though we have rejected Palmer's etymological approach to κώμη via a root **kei-* (§1.1.), it is worth reconsidering his attempt (*loc. cit.*) to associate κώμη with the Mycenaean land-tenure term *ke-ke-me-na*, in the repeated phrase *ko-to-na ke-ke-me-na* = plots of public land or communal land (*vel sim.*), as distinct from *ko-to-na ki-ti-me-na* (plots leased from individuals). It is intriguing, as Palmer notes (1963:189), that while the *ko-to-na ke-ke-me-na* are often described as *pa-ro da-mo* 'from the *damos*', κῶμαι was apparently used by Peloponnesians to refer to what Athenians called δῆμοι (according to a remark of Aristotle, *Pol.* iii.1448a36). It seems possible, then, that *ke-ke-me-na* could continue a perf. mid. ptcple. to a verb (e.g. **kém(H)-e-ti/-tor*, as if > Gk. *κέμει/ *κέμεται) belonging with IE **kem(H)-* and κώμη, such that *ko-to-na ke-ke-me-na* would mean (roughly) 'compressed/concentrated plots', i.e., a collection of small individual plots in a

[12] For IE **kem(H)-*, note the similar development in some Gmc. material referring to land, e.g., OE (= OFris. etc.) *ham(m)* 'plot of pasture-land, enclosure, fold, meadow, homestead' (and in place names: *Nottingham* etc.).

[13] The term is not discussed in Casevitz 1985.

[14] From a semantic point of view, it is also suggestive that pl. κώμῡθες can refer to an *area* characterized by a dense concentration of reeds, at least according to Theophrastus (*HP* 4.11.1): κώμυθας δὲ καλοῦσιν οὗ ἂν ᾖ συνηθροισμένος κάλαμος.

single district (owned or administered by the *damos*), perhaps something like modern "community garden" plots.[15]

2.2.3. Persson's original conception sought to associate also κῶμος 'celebratory (Dionysiac) procession; song of praise' with κώμυς and κώμη; but more recent approaches to the semantics of κῶμος (see especially Dunkel 1995:13ff, 16ff; Mayrhofer *EWAia* [Lief. 18 (1995) 600], with further references) favor an alternative etymology (cf Ved. *śáṃsa-* 'praise').

2.3. Granting the existence of the type described in §**2.1.**, it may be possible to add several items to the material cited above:

(i) χώρα 'place, area, etc.' [Hom.+] is often glossed '(empty) space' or the like (e.g. Frisk *s.v.*), because of its presumed association with χήρα 'widow', χῆρος 'bereft', χωρίς 'without, apart from' and similar material in Greek and elsewhere (i.e., the **ĝheh$_1$-* of Hom. κιχῆναι 'meet, reach', Ved. *jáhāti* 'leave', etc.). But χώρα essentially refers to any circumscribed location,[16] hence meanings like '(fixed) place, spot' [*Il.*+] and '(bounded) land, country' [*Od.*+]. Nor does a substantivized *o*-grade **ĝhoh$_1$-ro-* provide a morphologically transparent basis for χώρα (cf similar doubts voiced by Chantraine). One could thus consider (as does Chantraine) a connection with the **ĝher-* 'umfassen' (*IEW* 442) otherwise seen in χόρτος 'farmyard, pasturage' and perhaps also χορός 'place for dancing; dance (etc.)'; this would suggest, then, a concretized **ĝhŏr-eh$_2$* *'enclosure' (> '[circumscribed/bounded] area'; similarly Lat. *hara* '(animal) pen' < **ĝhr̥(r)-eh$_2$* [Weiss 1996:672]).

(ii) λώβη 'outrage, disgrace' and (iii) κώπη 'handle, haft, grip' (both Hom.+) present a somewhat different type of indeterminacy, and are discussed in §**3.** directly following.

3. λώβη, κώπη, ἐπιωγαί/ἰωγή

3.1. Hom.+ λώβη 'outrage, disgrace' (with pendant λωβάομαι 'insult', most likely denominative to λώβη)[17] has no clear IE root etymology, with probable cognates in Baltic only (in addition to Frisk and Chantraine *s.v.* λώβη, see *IEW*

[15] Morphologically, a full-grade renewal in such a participle (i.e., *ke-ke-me-na* < **ke-kem-méno-*) would not be surprising, since the predicted zero grade **ke-km̥-méno-* (> Pr.-Gk. **kekameno-*) might well have been adjusted after a pres. stem **kem-* (cf Chantraine 1958:433 on the type ἑρμένος : εἴρω 'fasten', etc.). (This sort of scenario is somewhat easier, to be sure, for aniṭ **kem-* than for seṭ **kemH-* [cf n. 3 above], given Hom. κεκμηώς 'wearied' [with zero-grade **km̥h$_2$-*] *et sim.*) For the many other attempts to etymologize *ke-ke-me-na*, see Aura Jorro *s.v.* (1985:337ff).

[16] See *LSJ s.v.* for χώρα as precisely '*partly occupied* space', vs. κενόν and τόπος (Zeno et al.); similarly Chantraine *s.v.* ("'espace' fini, propre à un usage, à une fonction, à une activité").

[17] Thus recently Tucker (1990:235, 484).

960).[18] It is therefore improper to posit an IE lengthened grade without further ado, since the vocalism of λώβη could in theory derive from pre-consonantal laryngeal lengthening. The situation is complicated by the Baltic comparanda, which include a primary verb, itself with lengthened *ē*-grade, together with equivocal evidence bearing on the intonation (Lith. *slĕgti* 'oppress, weigh down', pres. both *slĕgia* and *slẽgia*).[19] Nevertheless, the isolated status of λώβη in Greek, together with its accent, favors aligning this form with Hom. λώπη etc.; thus, even if Lith. *slĕgti* has its length via a plain *e*-grade **sleh$_1$g^{u}-* (as opposed to an IE lengthened-grade aniṭ **slēg^{u}-*, or even a secondary Baltic lengthening via Winter's Law), Gk. λώβη could still continue a **slŏ̄h$_1$g^{u}-eh$_2$*, with lengthened *ō*-grade. Pokorny actually reconstructs an IE "**slōg^{u}ā*", although the Baltic forms in question (Lith. *slogà* 'nuisance, scourge', Latv. *slāga* 'injury, complaint', etc., with Pr.-Baltic **ā*) cannot continue an IE *ō*-grade directly, and therefore do not make an actual word equation with Gk. λώβη. Since, however, Pr.-Baltic **ā* in such cases may replace IE **ō* (see, e.g., Stang 1966:39ff, including *slogà* : *slĕgti*), it remains possible that Lith. *slogà* etc. are in fact ultimately comparable with Gk. λώβη, in which case the formation in question (clearly moribund in Greek) would have some claim to Indo-European status on external grounds. (See §**4.1.** below for a similar configuration involving lengthened *ō*-grade in Greek and Balto-Slavic.) On purely internal grounds, the formation as such is essentially underivable within Greek: for lengthened *ō*-grade, one is practically restricted to derivation from a root noun (roughly **κλώπη 'theft' ← κλώψ 'thief'), for which there is virtually no evidence (ἐνωπῇ / κατ' ἐνῶπα, §**5.3.** below, affording little support).[20] Thus a deradical formation of this sort with lengthened *ō*-grade in Greek stands a reasonable chance of being inherited, quite apart from external evidence based on similar *ō*-grade forms.[21]

[18] The odd suggestion that λώβη belongs with λάζομαι/λαβεῖν (*LfgrE s.v.* λώβη, Lief. 14 [1991] 1730, H. W. Nordheider) has nothing to recommend it.

[19] Some lexica cite the form with generalized circumflex intonation, i.e., *slẽgti, slẽgia, slẽgė* (thus, e.g., Lyberis [1971:675], vs. Senn [1966:274]: *slĕgti, slẽgia, slẽgė*).

[20] Superficial appearances to the contrary, the root noun λώψ 'mantle' [PTeb. 894.6.9, ca. 114 BCE; cf λώψ· χλαμύς Hsch.] likewise provides no such evidence: cf Schindler 1972:90 ("λώψ ist wahrscheinlich Rückbildung zu λώπιον, nicht primäres W[urzel]N[omen]").

[21] Any number of items with lengthened *ō*-grade could be adduced in this connection, some more profitably than others. Thus, despite Petleva (1975:50), Lat. *fōmes* 'tinder, kindling' does not continue a lengthened *ō*-grade (rather **foui-*, see Schrijver 1991:277f), whereas SCr. dial. *dàgalj* 'paste made from bones'—if it indeed belongs with **dheg^{u}h-* 'burn'—could well continue a **dhōg^{u}h-*, the ultimate interpretation of which is unclear. A detailed treatment of such data is beyond the scope of this paper, but we may mention in passing the otherwise obscure and isolated formation(s) in Lat. *ōrō* 'speak, pray', *sōlor* 'console', and *cōnor* 'try', which hold out a certain promise. Thus, if *ōrō* (with inherited **-r-*, cf my remarks on ORAT[in the Corcolle Altar Fragments, 1991:227f) belongs with Gk. ἀράομαι 'pray' etc. and is denominative, it could point to an old **h$_2$ŏr-eh$_2$* of the type λώπη etc.; Schrijver (1991:126) has recently

3.2. E. Hamp (1984:51f) has incisively characterized the conundrum surrounding Gk. κώπη [Hom.+] 'handle, haft, grip', as follows. If, as is generally assumed, the form is a "[d]ehnstufiges Verbalnomen zu κάπτω" (thus Frisk *s.v.* κώπη), and if κάπτω 'wolf down' (< *'seize, grasp') itself continues IE *a*-vocalism (likewise widely assumed, cf Lat. *capiō*), the ablaut relationship **a* : **ō* is anomalous.[22] In this event, κώπη would seem to be a "fresh Greek formation with productive ablaut"; but this avenue is problematic in its own right, since κώπη fails to show the productive accent pattern of the "feminized thematic" deverbal type τομή , ῥοή, etc.[23] Hamp observes, then, that "the model within Greek for the formation of κώπη is not apparent, at least on IE lines as presently understood".

The formation sketched in §2.1., however, provides a suitable model for a (concretized) abstract ('gripping' > 'grip', based on a verb root meaning 'grasp'), under the assumption that κώπη is interpreted via a lengthened *ō*-grade **kṓh$_2$p-eh$_2$*, which nothing seems to prevent. Indeed, while not wishing to promote the "Leiden school" dogma affirming the complete absence of PIE **a* and its automatic replacement (in Leiden reconstructions) by **h$_2$*,[24] I would suggest that the analysis of Gk. κώπη just offered provides a solid argument in favor of **kh$_2$p-* for Gk. κάπτω and Lat. *capiō*, as opposed to the traditional **kap-*. Thus Schrijver's assumption of **kh$_2$p-* for this root (1991:96) may well be correct, although the plain *o*-grade **koh$_2$p-* he sets up for his misaccented "κωπή" would require further justification. One could claim, for example, that κώπη 'handle' is a concretization, with accent-retraction, of an original abstract *κωπή 'grasping' < **koh$_2$p-éh$_2$*; the latter, however, is entirely unattested, and it is thus eminently simpler to interpret κώπη directly as a form of the type λώπη.

---

interpreted *sōlor* as denominative to a root noun **sōlh$_2$-*, but a **sólh$_2$-eh$_2$* would provide a more direct source (*sōlor* as denominative also Pisani 1983:96, though his derivation via **sṓd-ā* *'settling down' [with "Sabine *-l-*"] is less attractive than connection with the **selh$_2$-* of ἱλάσκομαι 'appease'); *cōnor*, finally, is generally taken as a lengthened-grade iterative of the type πωτάομαι (cf n. 33 below), partly on the strength of Gk. ἐγκονέω 'be busy, active', assuming this to be an *o*-grade iterative—but ἐγκονέω could as well be denominative (cf Tucker 1990:78, 439), in which case *cōnor* could be denominative to a **kṓn-eh$_2$* *'freshness' *vel sim.* (cf **k(e)n-* 'new, fresh' in Gk. καινός, Lat. *recēns*) > '(fresh) attempt'. Despite the attractiveness of these denominative interpretations of *ōrō*, *sōlor* and *cōnor*, the absence of the putative nominal bases themselves is troubling (although perhaps not fatal). A final speculation on the derivational history of lengthened *ō*-grade nouns must be reserved for n. 44 below (*ad fin.*).

[22] Cf Ringe (1996:2): "I know of no *o*-grade forms to roots that indisputably contain **a*" (on καπ-/κωπ- similarly Sihler 1995:45). An alleged case of precisely this sort forms the subject of §3.3. directly below.

[23] Schrijver (1991:96, 597) incorrectly accents the form as "κωπή", thereby vitiating his analysis (on which further below).

[24] On the excesses of this approach see recently Ringe (1993:286) and Griepentrog (1995:230f, 347ff and *passim*).

3.3. The rare epic words ἐπιωγαί '(sheltered) roadsteads' (ε 404) and ἰωγή 'shelter, windbreak' (ξ 533) are generally thought to belong with the root of Gk. ϝάγνυμι 'break' and its cognates, including Gk. (Μελέ)[ϝ]αγρος and Ved. *vájra-* 'cudgel', so memorably discussed by Calvert Watkins (1986, 1995:411, 430f).[25] Watkins, however, has pointedly observed (1995:430, n. 1): "If the isolated Homeric noun ἰωγή 'shelter, windbreak' is from ϝιϝωγ- and related [scil. to the root of ϝάγνυμι etc.—add. BV], the ablaut is peculiar". The ablaut would be peculiar only under the assumption—favored by Watkins and others—that the root in question is to be reconstructed **u̯aĝ-*, with IE **a* (cf on κώπη, §3.2.). But there seem to be no clear arguments favoring **u̯aĝ-* over a "Leiden" version **u̯(e)h$_2$ĝ-*, since all other forms can be explained via the latter: thus, following Kimball 1988:245 (who argued, to be sure, on the basis of ἐπιωγαί and ἰωγή), Hitt. *wāgi* 'bites' can continue a full-grade **u̯eh$_2$ĝ-* directly,[26] while short-vowel forms elsewhere have possible secondary explanations (thus see Ringe 1996:120 on the analogical zero grade in Toch. B 3pl. *wokonträm* 'they disintegrate', and Lubotsky 1981:135 on Ved. *vájra-*, Av. *vazra-*, with shortening as in Ved. *pajrá-* 'firm' to **peh$_2$ĝ-* 'fasten'). It is simplest, then, to take *-(ϝ)ωγ-* from a plain *o*-grade **u̯oh$_2$ĝ-*, as does Kimball.[27] Nevertheless, the reduplicated **u̯i-u̯oh$_2$ĝ-éh$_2$* generally seen in ἰωγή and ἐπιωγαί (< *ἐπι-ϝιϝωγαί, with haplology)[28] gives one pause. No comparable reduplicated formation is found in Greek, despite Schwyzer's tentative comparison of ἰαχή 'cry, shout', ἰωή 'loud noise, roar', and ἰωκή 'pursuit' (1939:314, 423): ἰωή is almost certainly based on the interjection ἰώ, and ἰαχή is deverbative to ἰάχω 'cry out' (similarly διδαχή 'teaching', cf Schwyzer 1939: 423); nor is ἰωκή likely to be comparable (cf the corresponding verb in Corinth. ϝιōκE, as well as the consonant-stem variant ἰῶκα [acc. sg.] Λ 601). At least in terms of surface morphology, ἐπιωγαί belongs to the compound type "ἐπιτομή", which begins to assume a certain prominence only in the *Odyssey*, as discussed by Jacobsohn (1926:384f, citing ἐπαοιδή, ἐφορμή, ἀντολαί, in addition to ἐπιωγαί). There is likewise no reduplication in the second member of κυματωγή [Hdt.+] 'beach (i.e., place where waves break)', which Kimball assumes, perhaps correctly, to continue the same *-ϝωγ-* of ἐπιωγαί.[29] It thus seems preferable, on balance, to consider ἐπιωγαί as reflecting *ἐπι-(ϝ)ωγαί directly (thus already Bechtel, see Frisk

---

[25] See Frisk *s.vv.* ἐπιωγαί and ἄγνυμι, Chantraine *s.vv.* ἰωγή and ἄγνυμι, and *LfgrE s.v.* ἐπιωγ(ή) (Lief. 12 [1987] 653, W. Beck).

[26] Admitted as a possibility by Melchert (1994:69, 148; see also 81 on *wakkanzi* with secondary shortening).

[27] For a similar analysis of this material in terms of **u̯eh$_2$ĝ -/*u̯oh$_2$ĝ-*, see now also Hackstein 1995:130ff, who nevertheless (130, n. 77) too categorically rejects Watkins' connection with Ved. *vájra-*, Av. *vazra-*, which can be salvaged by "Lubotsky's Law" (1981), as noted above.

[28] Thus Kimball (following Saussure); similarly Risch (1974:10), cf also Watkins' comment, cited above.

[29] Similarly Hackstein (1995:130, n. 77); differently Frisk (*κυματο-ϝαγή), cf ἀγή 'breakage, fragment' [Aesch.+] and the phrase κύματος ἀγή 'breaking(-place) of the wave(s)' = 'beach' [A.R. 1.554, Numen. ap. Ath. 7.305a].

s.v.). In this event, ἰωγή (ξ 533 Βορέω ὑπ' ἰωγῇ#) could result from a false segmentation ἐπ-ιωγαί (cf Chantraine *s.v.* ἰωγή), probably with influence from ἰωή (partly the 'roar' of the wind, cf Δ 276 ὑπὸ Ζεφύροιο ἰωῆς#, Λ 308 ἐξ ἀνέμοιο πολυπλάγκτοιο ἰωῆς#). There is finally the possibility—unfortunately undemonstrable—that compounded-(Ϝ)ωγή conceals (or is ultimately derived from) a lengthened-grade *(Ϝ)ώγη < *$\underline{\mu}\bar{o}h_2\hat{g}$-$eh_2$ (of the type discussed above), as opposed to a plain *o*-grade action noun *$\underline{\mu}oh_2\hat{g}$-$éh_2$.

4. δρῶπαξ, νῶκαρ, λῶφαρ/λωφάω

4.1. Beside Hom. λώπη (**§2.1.**), the later-attested parallel formation (neut.) λῶπος [Hippon.+][30] must be taken as derivationally secondary. It is therefore probable that at least some Greek nouns with lengthened *ō*-grade indirectly continue *ō*-grade feminines of the type in question, even if the original feminine is itself, for whatever reason, unattested. Thus δρῶπαξ [Hippoc.+] '(depilatory) pitch-plaster' is evidently related to δρέπω 'pluck'; in view of the secondary "ακ-stems" of the type βῶλαξ 'clod of earth' (cf βῶλος 'id.'; Chantraine 1933:379f), δρῶπαξ could ultimately derive from an abstract or collective *δρώπη 'plucking, plucking-material' (: δρέπω 'pluck'), of the type λώπη 'mantle, husk, etc.' < *'peeling(s)' (: λέπω 'peel')—δρέπω and λέπω, after all, are rhyming near-synonyms. It is possible (but again not demonstrable, cf λώβη : Lith. *slogà* etc., **§3.1.**) that the lengthened *ō*-grade found also in Balto-Slavic (Russ. *drápat'* 'tear, scratch', Pol. *drapać* 'id.', etc., Latv. *druõpstala* 'morsel, crumb') derives from an inherited formation comparable to this *δρώπη.[31]

4.2. In his study of the ablaut of *r/n*-stems, J. Schindler (1975:8) provisionally rejected the idea of reconstructing a form of *r/n*-stem with lengthened *ō*-grade of the root, partly because this is found only in Gk. νῶκαρ 'lethargy, coma', attested relatively late [Nic. *Th.* 189+; Hsch., Hdn., Suid.]. Schindler went on to observe: "Peut-être νῶκαρ repose-t-il sur un verbe *νωκᾶν (cf λῶφαρ· λώφημα Hesych., dérivé de λωφᾶν 'se reposer')". While this derivation is possible, there is another that seems equally attractive, based on the existence of isolated byforms in -αρ which have the appearance, from the Greek point of view, of being denominal (Chantraine 1933:218, Schwyzer 1939:518f). Thus patterns of the sort ἄλκαρ [Hom./poet.] beside ἀλκή [Hom.+]/(dat.) ἀλκί [Hom.] 'bulwark; strength', μῆχαρ [Aesch.] 'means, contrivance' beside μῆχος [Hom.+; cf λῶπος, **§4.2.**] could have served as the model for a secondary denominal νῶκαρ, which could have its source in a lengthened *ō*-grade *νώκη (originally

[30] Also SEG 11.1112 (Arcad., 6th/5th c. = Buck no. 16 [1955:196]); a possible instance at Alc. 33c.2 (Voigt/Campbell λωπ . [) is conjectural (see Voigt 1971:186 for Hunt's λῶπο[ς).

[31] I am grateful to my colleague Henning Andersen for helpful discussion of Balto-Slavic material in this paper.

'destruction, death', whence 'deathlike state' = 'lethargy, coma').[32] The isolation of νῶκαρ, together with the absence of direct traces of *$ne\hat{k}$- as a verbal root in Greek, might suggest that such a *νώκη, if it existed, would be a form of some antiquity.

4.3. Essentially the same account could be applied to λῶφαρ (**§4.2.**), except that here we have the verb λωφάω 'rest' [Plato+], as already noted. The etymologically opaque λωφάω is generally assumed to be deverbative (i.e., an iterative of the type τρωχάω : τρέχω, νωμάω : νέμω, πωτάομαι : ποτέομαι : πέτομαι, etc.);[33] yet neither a verbal basis (**λέφω, **λοφέω, etc.) nor any derivatives therefrom (**λοφός, **λοφή, etc.) are attested in Greek. In principle, λωφάω could just as easily be a denominative of the type λωβάομαι : λώβη (**§2.1.**), based on a *λώφη 'rest'. If, moreover, one admits the possibility of lengthened *ō*-grade for roots with internal laryngeal (as perhaps in κώπη, cf **§3.2.**), one arrives at certain possibilities for a root etymology at least as attractive as any thus far proposed.[34] Given the existence of a series of parallel enlarged "roots" *$*(s)leh_1b$-* (Go. *slepan* 'sleep' etc.)/*$*(s)leh_1g$-* (Gk. λήγω 'abate, cease') and *$*(s)leh_2b$-* (Lat. *lābor* 'slip', OCS *slabŭ* 'weak', etc.)/*$*(s)leh_2g$-* (Gk. λαγαρός 'slack', among other λαγ- forms;[35] Lat. *langueō* 'languish, waste away', *laxus* 'loose'),[36] all with meanings like 'sleep', 'relax', '(be) slack', it is not difficult to admit a *$*(s)l\bar{o}h_1bh$-eh_2/*$(s)l\bar{o}h_2bh$-eh_2* or *$*(s)l\bar{o}h_1g^{\mu}h$-eh_2* /*$*(s)l\bar{o}h_2g^{\mu}h$-eh_2* 'rest' into this company.[37]

[32] It is immaterial that ἄλκαρ and μῆχαρ might themselves be relatively ancient formations (on which see recently Griepentrog 1995:50 and 349, n. 40, respectively).

[33] Thus, e.g., Frisk *s.v.* ("wohl Deverbativum"), following Schwyzer (1939:719), and similarly *LfrgE s.v.* (Lief. 14 [1991] 1734, G. C. Wakker); on the type πωτάομαι : ποτέομαι : πέτομαι see recently Weiss (1993:165, n. 38).

[34] See esp. Frisk and *LfrgE s.v.*; the possibilities there adumbrated inspire very little confidence, and at least one of them (Schwyzer's connection with a root *$*(s)leub(h)$-* 'schlaff herabhängen(d)', otherwise Gmc. and Ba. only; cf *IEW* 964f) must be abandoned as phonologically unworkable.

[35] For the necessity of the root-internal laryngeal, see Schrijver (1991:165), and more generally (for many of the forms assembled here) Nyman (1985:55f).

[36] Here also perhaps Toch. A *slakkär*, B *slakkare* 'schlaf, niedergeschlagen, traurig' (Krause-Thomas 1964: 158, 260; Nyman 1985:56), but see Thomas 1991:297f for discussion of semantic indeterminacies.

[37] For *$*(s)leh_2b$-*, the traditional reconstruction with *$*-b$-* (as opposed to *$*-bh$-*) rests only on Gmc. zero-grade forms of the sort OHG *slaf* 'schlaff', which are phonologically ambiguous in terms of the laryngeal. If, despite the semantics (cf Schrijver 1991:179), OHG *slaf* et al. are rather assigned to *$*sleh_1b$-* (well-attested in Gmc.), the Lat. and BSl. material could then continue the same *$*(s)leh_2bh$-* that may survive in Gk. λωφάω.

5. *The type* ἐδωδή, ἀκωκή, *etc.*

5.1. The formation seen in Hom. ἐδωδή 'nourishment', ἀκωκή 'point, edge', etc.,[38] merely filed loosely by Schwyzer under diverse "Onomatopöien und angeschlossene Reduplikationsbildungen" (1939:423), has been accorded a far more satisfactory and explicit treatment by Benveniste (1964:30ff). He begins from Chantraine's (1964:16) account of Hom. ἐδητύς 'food, nourishment' as a remodeling of the predicted action noun *ἐδ-τύς > *ἐστύς, the last form excessively divorced from the ἐδ- of ἔδομαι, εἶδαρ (*ἐδϝαρ) and other such forms. Benveniste goes on to compare the same process with the simplex agent noun *ἐδ-τής > *ἐστής (cf compounds like ὠμηστής 'eater of raw flesh'), replaced by ἐδεστής [Hdt.+], thereby restoring the relationship with ἔδομαι etc.: "Ce terme nouveau ἐδεστής 'mangeur' contient donc deux fois *ed- 'manger', mais à des niveaux linguistiques successifs. La langue a gagné ainsi un signe de plus, un dérivé indépendant et clair, qui prenait la place d'un terme de composition obscurci" (1964:28f). In much the same way, Benveniste sees in ἐδωδή "un réarrangement...d'un ancien dérivé simple", i.e., "un ancien *ὠδή renforcé et réinterprété par un rappel de ἐδ-" (1964:30, 32): in Benveniste's terms, *ὠδή was not derivationally "viable", and would have been subject to virtually automatic renewal along the same lines as *ἐστύς → ἐδητύς and *ἐστής → ἐδεστής.

5.2. To anticipate the conclusion of this section, I suggest that what underlies ἐδωδή is not oxytone *ὠδή, but rather a barytone *ὤδη, of the type discussed above (Hom. λώπη etc.). This requires further justification, which begins from Benveniste's analysis (1964:31f) of the subtype Hom. ὀπωπή 'view, sight' beside perf. ὄπωπα, where an association between the two forms is overt within the text of Homer (cf γ 93...ὄπωπας#, directly followed in the same speech by 97 ...ὀπωπῆς#). Benveniste is surely correct to claim that the post-Homeric (-)ὀκωχή 'hold, stay'[39] is a secondary creation based on a perf. *ὄκωχα, a variant (beside συνοχωκότε Β 218) indirectly attested by forms such as συνοκωχότε and ὀκωχεύειν· ἔχειν, συνέχειν (both Hsch.). The form of the reduplication itself, moreover, can hardly be taken as original from a root with this structure (i.e., *$seĝh$-), as pointed out already by Chantraine (1958:424). Benveniste is likewise inclined to view ὀδωδή 'smell, scent' [*AP*, Plu.+], beside Hom. perf. ὄδωδα, as a late creation modeled on ὀπωπή/ὄπωπα. While the late attestation of ὀδωδή certainly renders this a reasonable hypothesis, a word like ὀδωδή could well be a relatively old term that happens not to be attested before the Anthology, partly because of the more common ὀδμή [Hom.+]/ὀσμή [Aesch.+, esp. Att.] 'smell, stench', and partly because words for 'odor, aroma' in Greek are to some extent

[38] The material is conveniently surveyed by Chantraine (1933:20).

[39] Simplex only *EM*, but ἀνοκωχή 'cessation' [Thuc.+], κατοκωχή 'possession, inspiration' [Plato+], etc.

dispensable because of impersonal usages of ὄζω.[40] In any event, as Benveniste makes clear, no such correlation with a reduplicated perfect stem is available for ἐδωδή (Hom. ἐδήδώς, ἐδήδοται), or for ἀγωγή 'leading, guidance, conduct (etc.)' [Hdt.+], the antiquity of which Benveniste emphasizes by pointing out the profusion of derived and compounded forms (ἀγωγός, ἀγωγεύς, etc.; ἀπαγωγή, καταγωγή, ἱπαγωγός, etc.) already in use by Herodotus. The same derivational isolation (i.e., absence of parallel reduplicated perf. stem) is likewise evident for the sole early form not cited by Benveniste at all, namely Hom. ἀκωκή 'point, edge', which lacks pendant primary verb forms entirely.

It emerges from the above, then, that once (-)ὀκωχή is excluded, the potentially old forms of this type—i.e.,, ἐδωδή [Hom.+], ἀκωκή [Hom.+], ἀγωγή [Hdt.+], ὀπωπή [Hom.+], and ὀδωδή [*AP*+]—are all based on laryngeal-initial roots of the structure *HeC-, i.e., *h_1ed- 'eat', *$h_2eĝ$- 'sharp(en?)', *$h_2eĝ$- 'lead', *h_3ek^{μ}- 'see; eye', and *h_3ed- 'smell', respectively. Moreover, if Benveniste is correct in explaining ἐδωδή on the basis of an earlier form of the general type (Pr.-Gk.) *$ōdā$ (< *$h_1ōd$-eh_2) > "*ed-$ōdā$" (cf ἔδομαι etc.), one can likewise posit *$ōkā$ (< *$h_2ōk$-eh_2) > "*ak-$ōkā$" (for *ak-, cf ἄκρος, ἀκή, etc.),[41] *$ōgā$ (< *$h_2ōĝ$-eh_2) > "*ag-$ōgā$" (for *ag-, cf ἄγω, ἀγός, etc.),[42] *$ōk^{\mu}ā$ (< *$h_3ōk^{\mu}$-eh_2) > "*ok^{μ}-$ōk^{\mu}ā$" (for *ok^{μ}-, cf ὄπωπα, ὄψομαι, etc.),[43] and perhaps *$ōdā$ (< *$h_3ōd$-eh_2) > "*od-$ōdā$" (for *od-, cf ὄδωδα, ὄζω, etc.). Indeed, the antiquity of the last form could be supported by appealing to the potential "homonymie fâcheuse" between *$ōdā$ 'nourishment' and *$ōdā$ 'smell', which could well have played a role—even a pivotal one—in the renewal of these terms as "*ed-$ōdā$" vs. "*od-$ōdā$".

Formally (apart from the accent) and semantically, there is no essential difference between the laryngeal-initial type *$ōdā$ 'eating' (> 'nourishment, consumption, food') and the non-laryngeal-initial type *$lōpā$ 'peeling' (Hom. λώπη etc., as discussed above): indeed, the complete complementary distribution in root structure leads one to suspect that these are representatives of one and the same type, with an original barytone *$ōdā$ etc. identical to *$lōpā$ etc. (the former ending up as a small recessive class of forms with approximately the same profile, in this respect, as Hom. λώπη etc.). As for the oxytonesis of ἐδωδή etc.: the new

[40] Even if ὀδμή is inherited (cf Alb. *amë* 'id.'), this need not prevent ὀδωδή from being old as well; note the semantic specialization of ὀδμή, which in Homer (6x) seems to mean 'pungent odor' (4x = 'stench [of seals, etc.]', vs.'[powerful] aroma' in ε 59 [burning cedar] and ι 210 [strong wine], in the last passage with explicitly positive accompanying adjectives [ἠδεῖα, θεσπεσίη]).

[41] No other lengthened *ō*-grade forms in Greek; isolated *o*-grade only in ὄκρις 'jagged prominence' and derivatives (Hom. ὀκριόεις 'jagged' etc.). (On *h_2o > Gk. o in forms like ὄκρις and ὄγμος [next fn.] see recently Weiss 1996:671f, contra Sihler 1995:45f).

[42] No other lengthened *ō*-grade forms in Greek; isolated *o*-grade only in Hom. ὄγμος 'furrow'.

[43] Cf §5.3. below on other (-)ωπ- forms.

reduplicated (or, as it were, pseudo-reduplicated) stems of the type **ed-ōdā* (< **ŏdā*) could have developed secondary oxytone accentuation **ed-ōdā́*, perhaps with some influence from the perf. act. ptcple. (Hom. ἐδηδώς), but more importantly from the oxytonesis of the vast majority of feminine abstracts of the "τομή" and "ἐπιτομή" types. Indeed, the widespread pattern of accent-retraction in feminine concretized abstracts (vs. the oxytone abstracts themselves; see, e.g., Kuryłowicz 1958:115f on the type ἁρπάγη 'hook' vs. ἁρπαγή 'seizure, rapacity') might have made oxytone ἐδωδή, ἀγωγή etc. (with abstract meaning partly maintained: 'nourishment', 'leadership' etc.) almost inevitable.[44]

5.3. In view of the rarity of "ἐπιτομή" forms in the *Iliad* (cf on ἐπιωγαί, §**3.3.**), Jacobsohn (1926:385) ingeniously suggested that the archaic-looking form normally printed as ἐνωπῇ (E 374 = Φ 510, line-final; cf the root noun in Hom. κατ' ἐνῶπα, εἰς ὦπα), traditionally assumed to be used adverbially ('openly, in plain sight') with old instrumental ending (cf Chantraine 1958:249), could reflect a phrase "ἐν ὠπῇ". If so, we might thus have indirect testimony for the **ōk$^{\mu}$ā* that may underlie ὀπωπή, cf also Hom. περιωπή 'vantage point' (Ξ 8, Ψ 451, κ 146).[45] For ἀκωκή (7x Hom., all line-final), one could hypothesize that the most archaic-looking formula ...ἤλυθ' ἀκωκή# (4x, of which 3x *Il.*) recovers a primordial (Myc. or pre-Myc., in the sense of Ruijgh 1995) **...ēluthet ōkā#* (before the loss of word-final stops), later adjusted to **...ēluth'akōkā#*; this might be no more extreme, in its way, than the pre-Mycenaean syllabic **ɾ* often seen in Hom. ἀνδροτῆτα (Π 857 = X 363) and similar forms (see recently Watkins 1995:499, Ruijgh 1995:88ff). This hypothesis ultimately founders on the absence of formulaic parallels with similar developments involving word-final stops (cf ὑπόδρα [F]ιδών,

[44] It remains uncertain whether the lengthened *ō*-grade of **(ed-)ōdā* is to be compared directly with that in Arm. *utem* 'eat', as Benveniste believed (1964:32); insofar as *utem* belongs to the sphere of verbal derivation (specifically an iterative, somehow connected with the widely-acknowledged acrostatic present for this root), the *ō*-grade in **(ed-)ōdā* might just as easily be quite independent of that in *utem*, which need not in any case be of any great antiquity (cf Klingenschmitt 1982:157). These reservations remain in force, *mutatis mutandis*, even if acrostatic **h$_1$ĕd-* is itself secondary (e.g. based on an archaic lengthened-grade *s*-stem **h$_1$ēd-es-*, cf Griepentrog 1995:484, n. 45), and *a fortiori* if acrostatic inflection is not to be reconstructed for this root in PIE (cf Hackstein 1995:173, n. 11). Nevertheless, as pointed out to me by Joshua Katz (to whom I owe several important suggestions), the correlation between acrostatic **h$_1$ĕd-* and **h$_1$ŏd-eh$_2$* may be derivationally significant, in view of the possible existence of PIE acrostatic **lēĝ-* (cf preterite **lēĝ-* in Lat. *lēgī*, Toch. B *lyāka* / A *lyāk* 'saw', Alb. *(mb)lodha* 'collected'; Weiss 1993:24, 179 and 1996:674, Jasanoff 1996) beside **lŏ́ĝ-eh$_2$* (λώγη; similarly Weiss 1993:24, n. 20) and acrostatic **hḗĝ-* (Lat. *ēgī*, Jasanoff 1996) beside **h$_2$ŏ́ĝ-eh$_2$* (ἀγωγή), as well as **h$_2$ēr-* (CLuv. *ḫīrūn/ḫīrūt-* 'oath', Watkins 1993:469f) beside **h$_2$ŏr-eh$_2$* (Lat. *ōrā(re)*, cf n. 21 above). To these might be added **ḱérH-* (cf n. 9 above): **ḱórH-eh$_2$* in Li. *šérti* 'feed' (pres. *šėria*, pret. *šėrė*) beside κώρη, depending on one's interpretation of the Baltic intonation.

[45] The antiquity of simplex ὠπή 'view, sight' [A.R.+] is difficult to assess, since this could be a late decompositional form based on περιωπή *et sim.*

evidently constituted after the loss of the final stop in **-drak* < **-dɾ́k*, and not obviously remodeled from an earlier version with final stop). Nevertheless, it may be possible to find more direct evidence for forms of the type **ōdā*, **ōkā* etc., as discussed below.

6. *Myc.* o-ka

6.1. The well-known Mycenaean term *o-ka*, the presence of which in some five Pylian texts identifies the eponymous "*o-ka* tablets" (cf *Docs.*[2] 184ff), is generally agreed to mean '(military) detachment', 'command' or the like: it is always preceded by a gen. sg. anthroponym (presumably the squadron leader, thus 'the detachment/command of [commander] X'), and followed by a list of names in nom. sg. (taken to be subordinate commanders), often with an accompanying place name in loc. sg. directly following *o-ka*; thus, in the full form, e.g., *ma-re-wo o-ka o-wi-to-no / a-pe-ri-ta-wo o-re-ta e-te-wa ko-ki-jo* (PY An 657.1-2) 'Command of Maleus at *O-wi-to-no*: Ampelitawon, Orestas, Etewas, Kokkion' (*Docs.*[2] translation, p. 189). More doubt attaches, however, to the etymology of *o-ka*, the most popular interpretation being **ὀρχᾰ́= ἀρχή (comparing Hom. ὄρχαμος 'leader, commander', allegedly with Aeolic treatment of the syllabic **ɾ*).[46]

6.2. E. Risch, in what remains one of the most lucid discussions of these texts and of the word *o-ka* (1958, esp. sect. III. [353ff], "Que signifie le mot *o-ka*?"), comments (1958:354) that most of the various etymological suggestions "semblent possibles", adding (354, n. 47) that "[o]n pourrait ajouter comme possible **ὀγά dérivé de ἄγω"; nevertheless, "aucune ne s'impose", and in any case, "pour déterminer le sens de *o-ka*, la question étymologique n'est pas de grande importance". Under the circumstances, however, it seems admissible to offer another proposal, not unrelated to Risch's own offhand suggestion. To this, Ruipérez (1963:49, n. 49) properly remarked "más bien se esperaría ἀγωγά". Indeed, I suggest that Myc. *o-ka* = */ōgā/* could be the equivalent of alphabetic Greek ἀγωγή, in its conjectured form **ōgā* prior to being remodeled according to the pattern discussed above (§**5.2.**), whence (with secondary "reduplication" and oxytonesis) **ag-ōgā́*. From a semantic point of view, the development 'leadership, conduct, etc.' > 'command, detachment' is as plausible as the traditional understanding of *o-ka* in terms of ἀρχή, and superior to it in the following respect: despite Hom. ὄρχαμος (the connection of which with ἀρχή remains uncertain[47]), ἀρχή does not develop

[46] For the *communis opinio*, see Aura Jorro (1993:19, *s.v. o-ka*); in addition to the references he cites, see now also Carothers 1992:285 (*o-ka* = [coastguard] 'command units'; I am indebted to my colleague Sarah Morris for this reference), and similarly Leukart 1994:211 ("militärischer Abschnitt, Kommandosektor"), Ruijgh 1995:69, n. 241 ("détachement militaire").

[47] Janko's unqualified assertion ("ὄρχαμος...is cognate with *o-ka* (*/orkhā/*, = ἀρχή) in the Pylos An tablets", 1992:161) is unwarranted; for alternative conceptions, see in general Frisk *s.v.* ὄρχαμος, most recently Leukart (1994:175, n. 120, 211 ["kaum zu ἄρχω"]), and *in extenso* Bader (1978:136, 157ff, 173ff), where one may grant her

meanings like 'rule, sovereignty' *et sim.* until after Homer (Hom. ἀρχή always 'origin, beginning'), with something like a military sense[48] apparently attested only from the Septuagint on. In contrast, ἀγωγή has the exact meaning 'military detachment', attested already as a *terminus technicus* in Plato (*Lg.* 746d).[49] If this interpretation of Myc. *o-ka* is correct, we would then have direct testimony for the "pre-reduplicated" stage postulated by Benveniste (with additional arguments elaborated above) for the development of Hom. ἐδωδή and similar forms.[50]

analysis in terms of **sorgh-* (to the **sergh-* of Li. *sérgmi* 'protect', *sárgas* 'watchman', etc.) without accepting her further connection with *o-ka* and ἄρχω.

[48] Note *LSJ* (*s.v.* ἀρχή) **II 5** 'command, i.e., body of troops' corrected in *LSJ Supp.*[2] to 'company, band'.

[49] *LSJ*'s gloss for this passage ('*leading* of an army') is unsatisfactory (**II 2** *s.v.* ἀγωγή, with *Lg.* 746d miscited as 746e [uncorrected in both Supplements]); for the phrase in question (καὶ πρός γε τὰς πολεμικὰς τάξεις τε καὶ ἀγωγάς) compare rather R. G. Bury's "as well as the military companies and platoons" (Loeb ed.). The adj. πολεμικός, in this passage, evidently signals the relevant technical interpretations of τάξις and ἀγωγή.
