Latin *gemō* 'groan', Greek γέγωνε 'cry out', and Tocharian A *ken-* 'call'

Brent Vine
UCLA

1. The following two etymologies have remained all but unchallenged practically from the beginning of the study of the Indo-European verb:

(i) Lat. *gemere* 'groan, wail, sigh' (Enn.+) is equated with Gk. γέμω 'be full of' (Aesch.+), both said to derive from a primary thematic **gém-e/o-*.[1]

(ii) Gk. γέγωνε 'cry out' (Hom.+) allegedly belongs with **ĝneh₃-* 'know', a proposal (going back to Fick) that has recently been defended by Tremblay (1997:116f.) and Sauge (2000:237ff.).[2]

We now have, in addition, a new approach to the etymology of γέγωνε:

(iii) According to Hackstein (2002:187ff.), γέγωνε belongs with TA *ken-* 'call' (II pres.) under a root **gh₃en-* or **ĝh₃en-*, with the Greek form based on a desiderative **g/ĝh₃en-(h₁)se/o-*.

But I hope to show, despite (i), that the association of Lat. *gemere* with γέμω may be nothing more than a Scheingleichung, in which case *gemere* (though not γέμω) would lack a clear etymology. Likewise, despite (ii), I will argue that γέγωνε is unrelated to **ĝneh₃-* 'know', leaving Hackstein's theory for serious consideration. I suggest further that *gemere* can be supplied with an etymology—in fact, by aligning it with γέγωνε. In view of the immediately attractive semantic convergence ('groan' ~ 'cry out'), the primary obstacle is the formal mismatch between the **-m-* of the apparent pre-Latin root **Gem(H)-* and the **-n-* of pre-Gk. **-Gōn(H)-*.[3] Hackstein's adduction of TA *ken-* to Gk. γέγωνε—highly attractive, despite certain formal and morphological difficulties with his analysis—suggests that this conundrum should be solved in favor of a root in final **-n-*. I thus consider, finally, a revised formal and morphological account of Hackstein's comparison, which in turn may have interesting consequences (sketched only briefly here) for the problem of "lengthened-grade preterites" in Proto-Indo-European.

2. The comparison of Lat. *gemere* with Gk. γέμω rests on a semantic relationship of the most improbable sort. Lat. *gemere* (similarly *ingemere/ingemīscere*, *congemere*, etc., with verbal noun *gemitus*) had human vocalization as its earliest attested and primary

1. Meyer 1887:174, more recently e.g. Walde-Hofmann *LEW*, Frisk *GEW*, and Chantraine *DELG s.vv.*; *IEW* 368, *LIV s.v. *gem-* (with hesitation; cf. n. 4 below). The idea of Devoto and others that *gemere* belongs to the expressive vocabulary of the Mediterranean substrate (see Baldi 2001:101 n. 2, *sub* c) has no basis, and can be left aside here.

2. So also Schwyzer 1939:770 with earlier references, Frisk *GEW* (*s.v.* γιγνώσκω), *IEW* 376, Cowgill 1965:148.

3. Given the ambiguity attending a comparison between Lat. *g-* and Gk. *γ-* (as well as TA *k-*), I write (PIE) "**Gen(H)-*" here and below, for such comparisons, to stand for **gen(H)-* or **ĝen(H)-*.

denotation, as made clear by the *TLL* definition (VI.1760.7f.): "**sonum lamentabilem** animi corporisue dolore . . . expressum **mittere**" (emph. *TLL*). Later, the 'groaning' (and similar sounds) could also refer to animal vocalizations (e.g. lions, Lucr. 3.297), and finally to sounds made by inanimate objects (e.g. the creaking of a wheel, Virgil *G.* 3.183).

Gk. *γέμω*, in contrast, essentially meant 'be laden, freighted with', at first in a purely physical sense: cf. (with a specialized reference) *γέμειν· κύειν* (Hsch.), as well as the verbal noun *γόμος* 'cargo, freight, load', and derivatives like *γεμίζω* 'load'. Secondarily within Greek, the sense 'be laden with' developed to 'be full of' more generally, as with metaphorical usages with abstracts, well-attested in tragedy and in philosophical writing: A. *Ag.* 613 *τῆς ἀληθείας γέμων*, Pl. *Gorg.* 525a *ἀσυμμετρίας καὶ αἰσχρότητος γέμουσα ψυχή*, etc. The traditional claim for Lat. *gemere*, then, arises from these secondary extensions within Greek: *gemere* is said to show a "Bedeutungsübertragung auf das seelische Gebiet" (Frisk), i.e. "be laden, freighted (with woe)' → 'groan, moan, wail, sigh'.[4]

Several objections to this scenario can be raised. To begin with, the metaphorical extension in Greek itself, as just seen, was relatively slight, and never attained even a specialization toward negative experience, to say nothing of vocalizations arising from it.[5] For *gemere*, there is not the slightest trace in Latin of the alleged earlier sense 'be burdened/overwhelmed (emotionally)', much less 'be loaded' (physically). At best, U. **kumiaf**/*gomia* 'pregnant (of sows)' (cf. *γέμειν· κύειν* above), which according to Untermann (2000:310 *s.v.*) shows an earlier meaning of the root "vor dem B[e]d[eutungs]-Wandel in lat. *gemere*," merely points to a physical sense like that of Gk. *γέμω*.[6] Nor is it easy to find typological support for a semantic change 'be loaded down' (physically) > 'be overwhelmed emotionally', whence a verb of vocalization meaning 'groan, moan' or the like.[7] Still more damaging, in a way, is the other material said to go with *γέμω* (e.g. *LIV s.v.* **gem-* 'drücken, zusammenpressen; fassen'), i.e. Hom. *γέντο* 'grasped' (an evident relic), S-CS *žĭmǫ* (*žęti*) 'press', and TB *kam-*, TA *kām-* (suppletive to AB *pär-* 'carry'). Verbs of "manual activity" like these seem, if anything, even less promising as a source of senses like 'moan, groan'—though verbs meaning 'grasp', 'press', 'carry' could credibly belong with forms (like Gk. *γέμω*, U. **kumiaf**/*gomia*) having a physical sense like 'be laden', a connection that could be readily supported by other gloss material in Greek (cf. *ἀπόγεμε· ἄφελκε. Κύπριοι, ὕγγεμος· συλλαβή.* Σαλαμίνιοι Hsch.). Even if one fills out PIE **gem-* with the Middle Parthian material plausibly adduced by Szemerényi (1951:219), which shows

4. Cf. *IEW* 368: "seelisch gedrückt sein, das Herz voll haben". Somewhat differently *LIV* (following Meiser), n. 5 *s.v.* **gem-*: "Bedeutungsentwicklung nicht klar, urspr. *'(den Atem) herauspressen'?" (See now Meiser 2003:229 n. 37).

5. Thus, negative objects of *γέμω* are purely episodic and contextual, as in tragedy (e.g. Eur. *HF* 1245 *γέμω κακῶν δή*) and elsewhere (e.g. Mt. 23.25 *γέμουσιν ἐξ ἁρπαγῆς καὶ ἀκρασίας*), as are positive ones: in addition to A. *Ag.* 613 (cited above), also e.g. Xen. *An.* 4.6.27 *κώμας πολλῶν καὶ ἀγαθῶν γεμούσας*, Posidon. 54 (2 Jac.) *ὄνους . . . γέμοντας οἴνου καὶ βρωμάτων παντοδαπῶν.*

6. Nothing useful can be extracted from Lat. *gumia* (Lucil.) 'glutton, gourmand', which is probably a borrowing from the Umbrian word (see Untermann loc. cit.).

7. Two parallels from Yiddish—a language well stocked with expressive vocabulary in this semantic field—are only partial: *farklempt* (literally 'clamped') 'choked up, distraught, grieving' (though not 'crying out'), and, somewhat better, *kvetshn* 'to complain' (cf. Eng. *kvetch*) < MHG *quetzen/quetschen* 'to squeeze'. (I thank Martin Schwartz and Hans Hock, respectively, for these examples.) Contrast the more common development seen, for example, in Lat. *queror* 'complain', TB *kwäs-* 'lament', from PIE **kʷes-* 'blow, pant' (RV *śvasiti*, Eng. *wheeze*), where the possibility of "vocalization" already inheres in the meaning of the root.

meanings like 'torment' < 'press, oppress',[8] this hardly authorizes a meaning like 'moan' for Lat. *gemere* as a reflex of this root.

There is, then, no good reason to associate Lat. *gemere* and Gk. *γέμω*, apart from their purely formal resemblance, and there is perfectly good reason to associate a verb like *γέμω* (as well as U. **kumiaf**/*gomia*) with a series of forms referring to manual activity. Lat. *gemere* thereby becomes etymologically "stranded," and in need of a more viable comparandum.[9]

3. The equation "Lat. *gemere* : Gk. *γέμω*," to be sure, is formally impeccable, as questionable as it may be semantically. In contrast, Gk. *γέγωνε* as a descendant of PIE **ĝneh₃-* 'know' is problematic in terms of both form (§3.1.) and meaning (§3.2.).

3.1. Leaving aside for now the lengthened *ō*-grade, the basic formal requirement is a Schwebeablaut version of **ĝneh₃-* 'know', i.e. "**ĝenh₃-*."[10] On this point, note Tremblay's comment (1997:115f.): "Il n'est aucune raison, sinon le déni par principe du Schwebeablaut dans le verbe, de ne pas reconnaître en got. vha. *kann*, *kunnun* . . . 'savoir' < **(ĝe-)ĝónh₃h₂e*, *ĝé-ĝn̥h₃-n̥ti* son [viz. of **ĝneh₃-*] parfait originel."[11] But the Germanic vocalism is readily explainable via the nasal present (stem **ĝn̥-n-h₃-* or **ĝn̥h₃-n-* > Go. etc. *kunn-*, whence *kann* secondarily) that is securely reconstructable on the basis of forms like Ved. *jānā́ti*, TA *knāna-*, Li. *žìnóti*, etc.[12]

This approach to Gmc. *kunn-* is emphatically not motivated by a "déni par principe du Schwebeablaut dans le verbe." Descriptive Schwebeablaut is in my view undeniable; but its existence in a given case can be defended only on a principled basis, as with "state II" *s*-enlarged forms (**h₂u̯eg-s-* 'increase' vs. basic "state I" **h₂eug-*),[13] or "wrong" full grades built to zero grades (Anttila 1969 passim). No justification of that (or any other) sort has been offered for *γέγωνε*. Nor do other forms—not mentioned by Tremblay, but sometimes cited in this connection—require a variant "**ĝenh₃-*," despite their superficial Schwebeablauting appearance: thus Arm. aor. *caneay* (to *čanačʿem* 'know') may be remodeled after a zero grade, such as the pre-Arm. pres. **canačʿe-* (an original zero-grade *ske/o*-present);[14] and the Younger Avestan verbal adjective *-zaṇta-* can be based on the stem seen in pres. subj. *zanāṯ*, at least partly as a homophony-avoidance strategy (i.e. *-zaṇta-* for predicted **zāta-* = *zāta-* 'born'), comparable to full-grade substitutes like Ved. *jñātá-* (for **jātá-* = **jātá-* 'born') or Lat. *(g)nōtus* (for **(g)nātus* = *(g)nātus* 'born').[15] Perhaps the most difficult form of this sort is Li. *žénklas* 'sign', with the same

8. OIran. **abi-gāma-*/**abi-jāma-* in MParth. *'bg'm /abžām/* 'torment, agony', *'bj'm'dn /abžāmādan/* 'torture, agonize', *'bj'mysn /abžāmišn/* 'agony'.

9. It seems encouraging that the lone skeptical voice concerning the connection of *gemere* with *γέμω* (apart from the hesitation in *LIV*, cf. n. 4) is that of Meillet (in Ernout-Meillet, *DELL s.v. gemō*).

10. Cowgill's proposal of a pre-Gk. **ĝe-gnō-e* to which a metathesis has applied, whence **ĝe-gōn-e* (1965:148), is viewed favorably by Anttila (1969:130), given Cowgill's parallel with *μέμηλε* 'is a concern' < (metathesized) **μέμ(β)ληε*. But *μέμηλε* is better explained in an entirely different way (Hackstein 2002:222ff.), and the possibility that *γέγωνε* reflects a metathesis of the kind envisaged by Cowgill is vanishingly remote (see Hackstein 2002:187f.).

11. So also de Lamberterie (2001–02:443), apparently following E. Seebold and R. Lühr.

12. So *LIV* and many others; recently e.g. Rasmussen 1996 [1999]:612 (cf. Cavoto 2004:383 n. 218), Lindeman 1997:83, Jasanoff 2002–03:160 n. 59.

13. See Schindler 1970–72:152.

14. On the phonological treatment of **ĝn̥h₃-ske/o-* in Armenian, see Clackson 1994:37ff.

15. See Mayrhofer, *EWAia* 1.601, and earlier Anttila 1969:132.

full grade shown by OPr. *ebsentliuns* 'bezeichnet' (pret. act. ptcpl.) = **ebzentlīvuns*, to a denominative verb built on an instrument noun **zentlan* ≈ Li. *žénklas*.[16] As argued, however, by Anttila (1969:132), there is little chance that a "state I" full grade is old in this formation (cf. expected **ĝnélh₃-tl/ro-* in OHG *beknuodilen, einknuadil* 'insignis', Ved. *jñātra-* 'intellectual faculty'), especially given the existence of the by-form Li. *žìnklas* beside the zero-grade nasal pres. *žinóti*, and the general lack of full-grade *kla*-forms to zero-grade infinitives. Even if the precise source of the full grade in Li. *žénklas* (and OPr. **zentlan*) remains somewhat unclear,[17] this isolated and partly equivocal evidence in Baltic—where secondary adjustments of root ablaut are legion—hardly suffices to establish a PIE Schwebeablaut variant "**ĝenh₃-*." The derivation of γέγωνε from **ĝneh₃-* 'know' is therefore highly unattractive at least from the formal point of view.[18]

3.2. As an accessory to the formal claim that γέγωνε continues a Schwebeablauting variant of **ĝneh₃-* 'know', Tremblay offers a semantic interpretation of γέγωνε as 'faire entendre', via analysis of the Homeric attestations and alleged survivals of this sense in Attic prose and in inscriptions (1997:116f.).[19] More recently, an extended semantic analysis has been undertaken by Sauge (2000:237–59), without reference to Tremblay but arriving at much the same conception about the meaning of γέγωνε. Neither treatment is satisfactory: both suffer from tendentious application of the presumed etymological basis in PIE **ĝneh₃-* 'know' (cf. §1.ii). An exhaustive refutation is neither possible nor necessary here; it will suffice to outline the difficulties these treatments face, as a preliminary to a closer look at the semantics of γέγωνε and its possible relationship with Lat. *gemere*.

3.2.1. Tremblay begins with the following specious argument: The frequent collocations of γέγωνε in Homer with other verbs meaning 'shout' or the like (e.g. θ 305 *σμερδαλέον δ' ἐβόησε, γέγωνέ τε πᾶσι θεοῖσι*) "excluent que γέγωνε signifie 'crier'," since "'crier en criant' aurait peu de sens" (1997:116). But this is a *reductio ad absurdum*, and one which Tremblay himself undermines when he observes, à propos X 34 *μέγα δ' οἰμώξας ἐγεγώνει* (referring to Priam), followed shortly (X 38) by *ἐλεεινὰ προσηύδα*, that "*ἐγεγώνει* ne redouble pas *οἰμώξας*, mais annonce *προσηύδα* . . . étant ainsi, par un procédé d'insistance fréquent dans l'épopée orale . . . , synonymes" (1997:116 n. 14). And such "synonyms," of course, need not recover exactly the same meaning or usage, as is evident from passages like the first one cited above, where the two *verba clamandi* appear with different complements (*ἐβόησε* + adv. *σμερδαλέον*, *γέγωνε* + dat. *πᾶσι θεοῖσι*); more on this point below.

Tremblay accuses Aristarchus and Wackernagel (1916:156f.), two illustrious propo-

16. See Mažiulis 1988:245 *s.v.*, with derivation of this full grade from IE "**ĝenH-*" [sic]. (I am grateful to Aurelijus Vijūnas for providing me with the Mažiulis reference, and for helpful discussion of the Baltic material.)

17. Aurelijus Vijūnas points out to me that Li. *žìnklas* (the non-standard form) could in theory result from a secondary vowel-raising process, vis-à-vis standard *žénklas*, in which case *žénklas* remains a form to be reckoned with.

18. Apart from Hackstein, who does not discuss the Schwebeablaut approach, the lone skeptic about this etymology (and on similar grounds) is Chantraine (*DELG s.v. γέγωνα*).

19. Indeed, this meaning seems, at first glance, not far removed from the sense assigned to the verb in standard lexica such as LSJ, i.e. 'shout so as to make oneself heard', ultimately derived from Aristarchus and the Homeric scholia (see further §3.2.1., with n. 20). The difference—and it is significant—is that Tremblay, given his etymological assumptions, pointedly exploits the ambiguity of Fr. *entendre* (both 'hear' and 'understand', with the latter sense primary in Tremblay's glossing of *γέγωνε*).

nents of a meaning 'shout' for γέγωνε,[20] of confusing the contextual behavior of the word with its actual meaning. But he is open to the same charge, as when he asserts that the sense 'faire entendre' is alive and well in the following passage from the 5th-century market regulations in Chios (Schwyzer, *DGE* 688, B.5–16): *τὸς δὲ κήρυκας διαπέμψαντες ἐς τὰς χώρας κη[ρ]υσσόντων καὶ διὰ τῆς πολέως ἀδηνέως γεγωνέοντες, ἀποδεκνύντες τὴν ἡμέρην ἣν ἂν λάβωισιν*. Tremblay translates: "ayant envoyé des crieurs dans les villages et fait assez de publicité à travers la ville, ils crieront et annonceront le jour qu'ils auront choisi" (1997:116–17). But there is no reason to think that *ἀδηνέως γεγωνέοντες* refers to anything other than the prototypical behavior of *κήρυκες*, when they engage in the activity indicated by *κη[ρ]υσσόντων*—i.e., "they shall make a proclamation, *crying out* sufficiently (loudly or clearly) throughout the city." To be sure, the intent is to attract attention and convey information; but that is a matter of context, and not assignable to a Hauptbedeutung of *γεγωνέοντες*. Nor does "l'usage attique courant" justify a translation like "il m'a tout révélé [sic], pour que je sache qui tu es" for *γέγωνέ μοι πᾶν τοῦθ', ὅπως εἰδῶ τίς εἶ* (Soph. *Phil.* 238): this is spoken by Philoctetes at the end of a passage addressing Neoptolemus, whom Philoctetes has just heard speak, eliciting from Philoctetes his initial exclamation *ὦ φίλτατον φώνημα· φεῦ τὸ καὶ λαβεῖν / πρόσφθεγμα* (234–5). With *γέγωνε*,[21] Philoctetes simply urges Neoptolemus to *continue speaking* to him—to 'tell, proclaim' everything to him (aloud, audibly), cf. the derived adj. *γεγωνός* 'loud, audible' (Aesch.+), which Tremblay inexplicably adduces to support his claim that the root meaning of the verb, still visible in "l'usage attique courant," incorporates an idea like 'se faire comprendre par la parole, indiquer'.

3.2.2. Sauge begins his lengthy semantic study of *γέγωνα*, *γεγωνέω* and *γεγωνίσκω* (2000:237–59) with the same specious argument as in Tremblay's analysis: "si *γέγωνα* comporte dans sa notion l'idée de 'à voix haute', son association quasi systématique avec un verbe comportant le même trait sémantique est immotivée" (2000:243). Preliminary counterarguments to this point were provided above, and others will be presented in the next section. Beyond this, Sauge is concerned to demonstrate—largely via post-Homeric attestations—that the verb does not always imply the emission of sound, and especially that "[l]es contextes . . . invitent à considérer que dans l'emploi de *γέγωνε* l'idée de 'faire reconnaître' ce que l'on dit joue un rôle déterminant" (2000:248). But the operative word is again "les contextes": These are *contextual* interpretations (generally of passages where vocalization is in fact clearly present), and they in no way prove that the verb's original sense was 'faire reconnaître' or the like. Towards the end of his discussion, Sauge makes heavy weather of several instances of *γεγωνέω* in Aristotle, in particular—following up an observation of Chantraine (*DELG s.v. γέγωνα*)—a passage in which the verb is opposed to *φωνέω* (*Aud.* 804b). I return to this material in the next section, which explores the meaning of *γέγωνε* in more detail. We can at any rate conclude provisionally that there is no compelling basis, either formally or semantically, for assuming that *γέγωνε* has anything to do with **ĝneh₃-* 'know'.

20. Likewise the Homeric scholiasts (see the survey by Sauge, 2000:242), and the gloss *γεγωνεῖν· μεγαλοφωνεῖν* (Hsch.).

21. Despite Tremblay, *γέγωνε* here is imperative (a well-attested usage in tragedy: see LSJ *s.v. γέγωνα*, including this passage).

4. To pursue the question of the meaning of *γέγωνε*, note first the striking semantic compatibility of *gemere* and *γέγωνε*. This can be underscored by the profile of *γέγωνε* in Homer, where the verb typically occurs in extreme emotional states, including grief (cf. §2 above on the Hauptbedeutung of *gemere*: "**sonum lamentabilem** animi corporisue dolore ... expressum **mittere**"). This includes one of the quintessential moments of Iliadic grief, i.e. grief over the death of Hector, as expressed by both Priam (X 33 *ὣμωξεν δ' ὁ γέρων ... / ... μέγα δ' οἰμώξας ἐγεγώνει*) and, as she views Hector's body, Cassandra (Ω 698/703 *... οἰμώγῃ τε στοναχῇ τε / ... / κώκυσέν τ' ἄρ' ἔπειτα γέγωνέ τε πᾶν κατὰ ἄστυ*). Note the collocation with verbs like *οἰμώζω* 'wail' and *κωκύω* 'shriek'.[22] Nor is *γέγωνε* restricted to grief, any more than is *gemere*: cf. collocations involving fear (Ψ 425 *Ἀτρεΐδης δ' ἔδεισε καὶ Ἀντιλόχῳ ἐγεγώνει*) and anger (*φ* 368 *Τηλέμαχος δ' ἐτέρωθεν ἀπειλήσας ἐγεγώνει*).[23]

There is, it must be said, an important particle of truth in Tremblay's analysis, concerning X 34 (cited just above) and the direct address by Priam that follows it (X 38 *τὸν δ' ὁ γέρων ἐλεεινὰ προσηύδα ...*): to repeat Tremblay's observation (§3.2.1., ad init.), "*ἐγεγώνει* ne redouble pas *οἰμώξας*, mais annonce *προσηύδα*." Indeed, the salient fact about the behavior of *γέγωνε* in Homer—noted neither by Tremblay nor Sauge, nor anyone else, as far as I know—is that the verb (which occurs 22× in all) *virtually always introduces direct speech*. This includes the oldest-looking formulaic material (6× *Iliad*, with line-final *γεγωνώς*), *ἤυσεν δὲ διαπρύσιον Δαναοῖσι* [4×][24]/*Τρώεσσι* [2×][25] *γεγωνώς*. Thus, despite Sauge (2000:248), the use of *γεγωνώς* here beside *ἤυσεν* is not at all "un pléonasme," under an interpretation of *γεγωνώς* as a verb of vocalization: Rather, the *verbum clamandi* *ἤυσεν* is just that, while *γεγωνώς* indicates that the subject cries out *so as to engage in direct speech*, with the addressees, in this formula, clearly indicated as a dative complement. Likewise preceding direct speech, and with addressee in the dative: Ξ 469, Ψ 425, *θ* 305 (*γέγωνέ τε πᾶσι θεοῖσι* ~ Ω 703 *γέγωνέ τε πᾶν κατὰ ἄστυ*, cf. *διὰ τῆς πολέως ... γεγωνέοντες* in the Chian passage cited above), similarly *μ* 370 (*θεοῖσι μετ' ἀθανάτοισι γεγώνευν*) and Θ 223 (*γεγωνέμεν ἀμφοτέρωσε*).[26] Without complement but preceding direct speech: X 34, *φ* 368.

Only four Homeric instances of *γέγωνε* lack an immediately following direct speech; yet in each one, direct speech is referred to or otherwise implied. Thus the thrust of M 337 (*... ἀλλ' οὔ πώς οἱ ἔην βώσαντι γεγωνεῖν*) involves Menestheus' *inability to communicate* with Ajax and Teucer, because of the din. At *ρ* 161 (*ἐφρασάμην καὶ Τηλεμάχῳ ἐγεγώνευν*, again with dative addressee), Theoclymenus recounts how he interpreted an omen and *told it* (in direct speech) to Telemachus. It is evident that by this stage (viz. in the *Odyssey*, and there only), the verb has essentially become a *verbum dicendi*, as at *ι* 47 (*Κίκονες Κικόνεσσι γεγώνευν*), yet again with dative complement referring to the addressee (Lattimore: "the Kikonians ... summoned the other Kikonians"). Finally, an Odyssean

22. So also (with reference to Odysseus) *μ* 370 *οἰμώξας ... γεγώνευν*.
23. Anger likewise *θ* 305 (cited in §3.2.1 above), cf. 304 *χόλος*. On *gemere* and 'fear': see §5 below (with n. 40) on collocations with *tremere*. Contexts involving 'anger' are less frequent, but citable: e.g. Livy 30.20.1 (*frendens gemensque* 'gnashing his teeth and groaning'; Hannibal's reaction to his recall), Porphyrio *ad* Hor. *Ep.* 1.15.5 (*gemit et irascitur*).
24. Θ 227, Λ 275, 586, P 247.
25. M 439, N 149.
26. Actually part of an extended introduction to direct speech that concludes with Θ 227 (n. 24).

formula[27]—as already seen by the scholiasts (cf. n. 20)—refers to *audibility*,[28] and not, despite Sauge's tendentious translation, understanding or recognition.[29]

The behavior of the verb in Pindar is readily interpretable in terms of the Homeric usage just described: thus *γεγωνητέον* (*O.* 2.6) and *γεγωνεῖν* (*P.* 9.3) are both *ode-initial*, and mean, in effect, 'cry out (in praise of so-and-so)', *as follows*. In Attic drama, as we have already seen in the passage from Sophocles (§3.2.1), *γέγωνε* has undergone a natural bleaching, in view of the semantic starting point sketched above: It has become a simple verb of speaking ('cry out [so as to engage in speech]' > 'speak'), or refers more generally to audibility, senses already prefigured in the *Odyssey*; and this usage is well-developed in Attic prose.[30] Thus, to return to Aristotle's usage of *γεγωνέω* (cf. §3.2.2 *ad fin.*): at *Aud.* 804b, he refers to people who can emit sounds (*φθέγγονται*) but who are nevertheless unable to *speak* (*ἀλλ' οὐ δύνανται γεγωνεῖν*), such that they can only produce vocalizations (*μόνον φωνοῦσιν*). Despite Sauge (2000:257), Aristotle's contextual sense 'speak (intelligibly)' does not authorize an otiose etymological interpretation "permettre à l'auditeur de 'faire une opération de discernement'." Similarly, in discussing the effect of space on audition (*De An.* 419b), Aristotle observes that as a result of certain spatial configurations, *audibility is impaired* (*οὐ γεγωνεῖ*; Sauge "ne permet pas une perception distincte"); and, finally, the improper construction of trumpets (*Aud.* 802a–b, bis) means that they cannot *emit tones* as they should (802b *οὐ δύναται δὲ γεγωνεῖν ὁμοίως*)—here Sauge translates not just tendentiously, according to his etymological agenda, but also nonsensically ("ne permet pas une perception aussi distincte"): While auditory "perception" is certainly at issue, one's "understanding" or "knowledge" or "recognition" of a trumpet's tone is clearly not the point; cf. again (§3.2.1 ad fin.) *γεγωνός* 'audible' (not 'interpretable, recognizable', etc.).

Thus *γέγωνε*, in conclusion (and to return to the comparison with *gemere*), does not mean 'faire entendre', as a kind of causative or factitive to 'know', but rather 'cry out *so as to address someone* [dat./acc.]' (and eventually 'tell, speak, be audible'), vs. intransitive *gemere* 'cry out (esp.: moan, etc.)', without addressee.[31] The two verbs, in other words, share essentially the same meaning, but with a difference in "valence" ("±addressee/direct address"), in terms of the discourse contexts in which they occur.[32]

5. If we are to entertain an etymological connection between these two verbs, we must next address the formal problem noted at the outset concerning the mismatch in consonantism between Lat. *gemere* and Gk. *γέγωνε*. Given well-known generalization patterns of the sort PIE **g"em-* 'come' > Lat. *uen-*/Osc. *ben-*, Gk. *βαιν-*, one could in principle begin with a root **Gem(H)-* (with *-m-* surviving in Latin) and propose an *-m-* > *-n-*

27. *ε* 400 *ἀλλ' ὅτε τόσσον ἀπῆν ὅσσον τε γέγωνε βοήσας* = *ι* 473 = *μ* 181 ~ *ζ* 294 (*τόσσον ἀπὸ πτόλιος ὅσσον τε γέγωνε βοήσας*). On *γέγωνε* + *βοάω* as a possible archaism, see n. 37 below.
28. Lattimore (for *ε* 400/*ι* 473/*μ* 181): "But when he was as far away as a voice can carry," i.e. "as far as, having shouted (for attention), he can call out (so as to engage in direct address)."
29. "à la distance où quelqu'un qui a lancé un appel [le] fait reconnaître" (2000:247).
30. On 'sagen' as a "jüngere Bedeutung" (vis-à-vis the bulk of the Homeric usage), see already Wackernagel 1916:156, with particular reference to the frequency of this meaning in Attic drama.
31. The transitive use of *gemere* as 'bewail' (with acc. direct object) is an innovation, first attested in Turpilius (*com.* 177; see *TLL* 6.1761.18ff.).
32. See Zaitseva (1995), Ch. 4 ("Verbs of Speech Production and Speech Perception as Lexicalization of Aspects of the Discourse Situation").

account that would explain Gk. γων-. Nor would this be especially difficult: a straightforward method of explaining the generalization of root-final *-n-* in Greek for a verb with root-final **-m-* could appeal to the regular neutralization of **-m-* and **-n-* as *-n-* before dental stops (cf. various verbal desinences beginning with dental stops), as in Hom. γέντο itself (§2), to a (different) root **gem-*. Since this is a matter of exceptionless behavior governing surface alternations, sequences like ˣ/-mt-/ or ˣ/-mtʰ-/—which might be expected to have been part of the pre- and Proto-Greek background of a perfect like γέγωνε (e.g. 2 sg. **gegōmtʰa*, 2 pl. **gegōmte*, 2/3 du. **gegōmton*)—would be disallowed and non-occurring surface strings in Greek, whence a generalized /gōn/ replacing /gōm/. In support of such a scenario, one might observe that apart from the isolated relic Hom. γέντο, Greek *m*-final verbs are exclusively thematic (thereby neatly avoiding collisions of root-final **-m-* with dental stop),[33] and use "inserted *-η-*" in perfect forms (where perfects are attested for such verbs).[34] Expressed differently: apart from γέμω/γέντο (if this comparison is valid), Greek *m*-final verbs show *-m-* ~ *-n-* alternations only derivationally: thus βρέμω (with consistent /-m-/) vs. βροντή 'thunder'.[35]

Nevertheless, as workable as such a hypothesis may be, Hackstein's attractive comparison of TA *ken-* 'call' with Gk. γέγωνε (§1.iii) renders this approach effectively moot.[36] Apart from infin. *kemtsi*, such a class-II (i.e. thematic) present affords little basis for a generalized *-n-* from earlier root-final **-m-*, and no support of that kind is available from the rest of the *averbo*, which is supplied by a different root altogether (*kāk-*).[37] If, then, Lat. *gemere* is to be connected with the Greek and Tocharian forms, we should instead consider whether *gemere* could have been remodeled from a verb with root-final **-n-*.

As a first approach (with further considerations added in §7), one could suppose that an original Lat. **genere* 'groan' (with perf. **genuī*, ptcple./verbal noun **genitus*) might well have been disfavored on account of *homonymie fâcheuse* with (OLat.) *genere* (*genuī/genitus*) 'beget'. Pressure favoring a development **gen- >> gem-* could have come from *fremere* (*fremuī/fremitus*) 'roar, growl, mumble', as well as from other verbs with a similar shape and some degree of semantic overlap, especially *tremere* (*tremuī*) 'tremble', *uomere* (*uomuī/uomitus*) 'vomit',[38] and perhaps *premere* 'press, oppress'. Along similar lines, and lending support to this claim, is the likelihood that *gemebundus* 'groaning' (Ovid+) owes its origin to *fremebundus* 'roaring' (Accius+) and *tremebundus* 'trembling'

33. Besides γέμω 'be loaded', also βρέμω 'roar' (like γέμω occurring in present-stem forms only), δέμω 'build', νέμω 'distribute', redup. aor. τετμεῖν 'find', τρέμω 'tremble'.

34. τετρέμηκα (: τρέμω), -νενέμηκα/-ημαι (: νέμω), δέδμημαι (: δέμω) (see Nikolaev 2006 on the interrelationships between the latter two, and the secondary origins of their perfect stems).

35. Indeed, although Lat. *nen-*/Osc. *-ben-* are normally ascribed to a generalization arising from a sound change **-mi̯-* > *-ni̯-* in the present stem **gʷm-ie/o-* (e.g. Meiser 1998:120), this outcome may also (or may instead) involve a generalized *-n-* resulting from **-mt-* (here based on the root aorist, 3 sg. **gʷém-t*; cf. OLat. *aduenat*, Osc. **kúmbened**), as argued by Hock (forthcoming).

36. Although Hackstein does not justify the semantic side of the comparison, the behavior and value of TA *ken-* (in its active forms; middle = 'invite') is quite comparable to γέγωνε: e.g. YQ 1.24, b8 (Xianlin et al. 1998:164f., text III.5) *lāmtsäm keneñc* 'they call out to the queen' (fragment-final, but surely preceding direct address).

37. Although, as Hackstein admits, various details remain to be worked out, his etymological comparison of *kāk-* with Gk. βοάω (2002:192f.) is highly suggestive, especially (as he points out) in view of the collocation of βοάω with γέγωνε in Homer (including the Odyssean formula discussed above, §4 with n. 27).

38. Still **uemere* at a relatively recent stage, cf. DVENO- (> DVONO-/*bono-*) 'good'. (On the formulation of the *e* > *o* rule in such forms: Nussbaum 2003.)

(Lucr.+). Connections of this sort were in fact part and parcel of Roman grammatical thought,[39] and are prominent in the texts themselves.[40]

Indeed, cross-influence among these forms has been suggested before: in addition to the vague observation in Ernout-Meillet,[41] note Meiser's approach to the perfect *gemuī* (2003:125, 157 n. 18), according to which an original "strong perfect" **gēmī* was adjusted to *gemuī*, after *tremuī* and *uomuī* (similarly **frempsī* >> *fremuī*). Further consideration of the perfect of *gemere* will in fact be called for, once TA *ken-* and Gk. γέγωνε have been placed in their historical context as regards their root vocalism.

6. Hackstein's *synchronic* analysis of TA *ken-* (2002:189) is extremely attractive. Taken at face value, TA *e*-vocalism points to a diphthongal source, which would seem to exclude comparison with a form like γέγωνε. According to Hackstein, however, the *e*-vocalism has been extended to the present stem by analogy from the imperfect stem (cf. 3 sg. imperf. *keñā*), where pre-E. Toch. **kaʾñ-*, with *i*-epenthesis before palatal nasal, monophthongized to *keñ-*, whence a generalized present stem *ken-*.[42] Thus the pre-E. Toch. **kan-* underlying this verb (cf. **kaʾñ-*) goes back to a form with PIE *o*-vocalism, authorizing comparison with a non-diphthongal form like γέγωνε.[43]

How best to account for pre-Toch. **gon-* (admitting the connection with γέγωνε), as well as the **gōn-* of γέγωνε, is another matter. Hackstein's solution is to posit a PIE root **gʰ₃en-* or **gʰ₃en-*, which would certainly yield a pre-Toch. **gon-*. But such a solution comes at a cost: it is far from clear that verbal roots of the structure CHEC- had any real existence in PIE—thus *LIV* records only ?**kʰ₂ed-* '(zer)quetschen' (IIr. only), ?**kʰ₂eĝ-* 'verzehren' (Iran. and Arm. only), ?**kʰ₂ei̯d-* 'schlagen' (Lat. *caedere* only, unless one includes a questionable Albanian form), all of them problematic, of limited distribution, and susceptible of alternative interpretations. Such material does not favor setting up a root of the shape **Gʰ₃en-* without further ado, indeed without extraordinarily good justification. Though not mentioned by Hackstein, one type of support might come from an enlargement analysis, if it could be shown that "**Gʰ₃en-*" is in fact a state II **Gʰ₃-en-* related to a basic root **Geh₃-* with the same or similar meaning. Here one might even think of **geH-(i-)* 'sing' (RV *gā́yati* etc.); but this approach is ultimately unsatisfying. There is nothing to indicate that **geH-* must be interpreted as **geh₃-*,[44] or that the root otherwise displayed enlargement structures (apart from its "long-diphthong" *i*-appendage), much less an "*n*-enlargement"—an extremely rare (or nonexistent?) type of

39. E.g. Varro: "fremere, gemere, clamare, crepare ab similitudine uocis sonitus dicta" (*L.L.* 6.67).

40. E.g. Ter. *Eun.* 336 (*tremulus, labiis demissis, gemens*), Acc. *trag.* 550 (*eiulatu questu gemitu fremitibus*), Lucr. 3.297 (*pectora fremitu rumpunt plerumque gementes*), Sen. *Oed.* 961 (*gemuit et dirum fremens*), Apul. *Met.* 4.31 (*gemens ac fremens*), etc., not to mention frequent confusions in the manuscripts (e.g. Ovid *Tr.* 3.11.54 *ore gemente*, vv.ll. *trem-, frem-*).

41. "Pour la forme, cf. *fremō, premō, tremō*" (*DELL s.v. gemō*).

42. Hackstein appropriately compares TA subj. VII *weñäṣ* 'will say', pret. I *weñā-ñi* 'said to me', to PIE **u̯ek*-*.

43. Similarly Adams 1988:70, taking TA *ken-* to reflect a simple thematic present "with PIE *o*-grade." The only competing etymology (van Windekens 1941:36) takes TA *ken-* as cognate with RCS *zvĭnju* 'ring, intone' (< PIE **gʰu̯en-*, see *LIV s.v.*), and thus with TA *kaṃ*, TB *kene* 'tune, melody', at least according to the traditional etymology of those forms (in addition to *LIV* n. 1 *ad loc.*, e.g. Adams 1988:27, 37). But this comparison is semantically unappealing, and eliminates the attractive connection of TA *ken-* with γέγωνε (see Hackstein 2002:188, as well as 188 n. 34 for a different source for TA *kaṃ*, TB *kene*).

44. ORu. *gaju/gajati* 'croak, caw' is consistent with either **geh₂-* or **geh₃-*.

enlargement.[45] Nor does TA *ken-*, for its part, encourage resorting to the extreme gambit of an appeal to a root **Gh₃en-*: it is surely preferable to begin with a simpler conception, i.e. that the form is precisely what it appears to be, namely an *o*-grade thematic present—a securely-attested type of formation, and one that has received considerable scrutiny in recent years, most importantly from Jay Jasanoff (2003).[46]

As for γέγωνε, Hackstein sets up an original desiderative **Gh₃en-(h₁)se/o-* 'sich laut vernehmbar machen wollen', which would have led to a present stem **γωνε/o-* and a synchronic root *γων-*; this, in turn, would have served as the basis for a secondarily derived perfect γέγωνε. But even if one grants the existence of an old desiderative **Gh₃en-(h₁)se/o-* (or even **Gon-(h₁)se/o-*, ignoring the anomalous *o*-grade), for which no other evidence exists, and further that **-ons- > -ων-* is the phonologically regular development (a serious problem in its own right, see Hackstein's discussion, 2002:190f.), Hackstein's suggested parallel pres. βούλομαι 'wish' (< **gʷol-s-e/o-*) → Hom. perf. προβέβουλα 'prefer' (A 113) is not especially supportive. The stem **gʷol-s-e/o-* —whether it is an *s*-aorist subjunctive with secondary *o*-vocalism (the traditional analysis Hackstein adopts) or an *o*-grade thematic *s*-present (Jasanoff 2003:75 with n. 28)—is not a desiderative (except, in some sense, in terms of synchronic semantics), and there is no other evidence favoring a derivational path "desiderative present → stative 'neo-perfect'."[47]

A far simpler and more attractive analysis of γέγωνε—which has all the earmarks of an archaic stative perfect (Jasanoff 2003:169 n. 44)—is the one that has become traditional (apart from the "**ge-gnō-e* + metathesis" theory, n. 10 above) since Beekes' pioneering analysis of the "proterodynamic perfect" (1973),[48] i.e. that γέγωνε is a perfect with lengthened-grade root vocalism, as, indeed, Tremblay also assumes (though in terms of a **ĝe-ĝṓnh₃-e* to **ĝneh₃-* 'know'). Thanks to Hackstein's comparison of TA *ken-* (< **Gón-e/o-*), and with the possible addition of Lat. *gemere* (← **Gén-e/o-*) and the rejection of the etymology via **ĝneh₃-* 'know', γέγωνε can simply reflect a lengthened-grade perfect **Ge-Gṓn-e*, to a PIE root **Gen-* (or conceivably **GenH-*).

We can now conclude with brief remarks on the interest of this material for the problem of lengthened-grade perfects, and "lengthened-grade preterites" more generally.

7. Not every "long-vowel perfect" is a "lengthened-grade perfect": thus, as Hackstein points out (2002:189), the vocalism of ἔρρωγε 'breaks' results from laryngeal lengthening (**-u̯roh₃ĝ-*), and the length of ἄνωγε 'orders' can in principle be explained via vowel contraction (**-h₂e-h₂oĝ-*).[49] But *-ωγ-* in the latter verb is equally susceptible of interpretation as a lengthened grade, and this is unambiguous in at least one other case. Touted since Beekes' original treatment of the "proterodynamic perfect" (1973:92) is εἴωθε 'is accustomed' (< **se-su̯ōdʰ-*), already compared by Beekes to the acrostatic *s*-stem reflected in the

45. Although the point cannot be pursued here, I doubt that a single one of the fourteen *n*-enlarged roots proposed by Persson (1891:70ff.) would survive even the most benevolent sifting by current standards.
46. See also Kümmel 2004.
47. I repeat this point from an earlier treatment (2006:114), where, however, the skepticism expressed about other aspects of Hackstein's etymology was somewhat overstated.
48. On γέγωνε itself, see 1973:93f., where no stand is taken on the root etymology, though original **-gōn(H)-* is assumed. Similarly on γέγωνε Schindler 1994:398 (following Beekes), Jasanoff 2003:31.
49. So, apparently, Hackstein, and raised as a possibility by Beekes (1973:94). For a comprehensive theory of "long-vowel perfects" that does not appeal to lengthened grades at all, see now Schumacher 2005.

pair ἦθος/ἔθος 'habit'.[50] On the basis of this form, Jasanoff observes that "[t]he 'ō-perfect', whatever its absolute antiquity, was probably originally associated with **ē* : **e* ('Narten') ablaut in related nominal and verbal forms" (2003:31).[51] In a similar way, recent studies have pointed to acrostatic imperfects as a source of certain "lengthened-grade preterites": thus Jasanoff 2005 on Lat. *lēgī* 'I gathered', *ēdī* 'I ate', *ēmī* 'I bought', *ēgī* 'I led', TA impf. *pārat* 'I bore' and other forms,[52] Pike 2007 on Lat. *clēpī* 'I stole', Nikolaev 2005 on a series of Tocharian forms with long vowel in preterite or imperfect (only some of which, however, go back to PIE lengthened grades as such).[53]

Exactly how γέγωνε should be integrated into this emerging picture is difficult to assess, given the dearth of comparative material beside it. But at least one possibility suggests itself. If Hackstein's primary comparandum TA *ken-* is best taken (as I have suggested) at face value, i.e. as a thematic present with *o*-vocalism, and if, moreover, Lat. *gemere* ultimately points to a thematic present **genere* with *e*-vocalism, then the lengthened-grade perfect γέγωνε correlates with what appears to be a classic *o*-grade present (or "*molō* present" in the familiar terminology associated with Jasanoff's discussions of this type, as in 1979, 2003, and other works). Moreover, the possible association between a present **Gón(H)-/*Gén(H)-* and a lengthened-grade perfect **-Gṓn(H)-* immediately calls to mind two further points. First is Jasanoff's observation, *à propos* lengthened-grade perfects like ἄνωγε, γέγωνε, and εἴωθε, that such forms belong with "a handful of preterites in **-ō-* in other languages," such as OIr. 3 sg. *ráith* 'ran' (: pres. *rethid*) and *táich* 'fled' (: pres. *techid*), and conceivably also with Lat. *fōdī* (: *fodiō* 'I dig') and with the Germanic preterite type **mōl* (: **malan* 'grind') (2003:31 with n. 3). For the latter two, Jasanoff properly notes that since "these forms simply lengthen the vowel of the corresponding *o*-grade presents, they could easily be analogical." Yet the correlation with *o*-grade presents is striking: as Jasanoff has shown, Gmc. **malan* and other members of its class go back to *o*-grade presents,[54] as does Lat. *fodiō* and its congeners.[55] Thus a **Gón(H)-/*Gén(H)-* beside **-Gṓn(H)-* suggests that this descriptive correlation should perhaps be taken seriously, and might even call for the reexamination of certain forms, earlier posited as *molō* presents but no longer so interpreted by Jasanoff.[56] A correlation of this kind, moreover, may better explain the background of Lat. *gemere*, if the form does indeed result from an adjustment to an original **genere* continuing the *e*-grade (i.e. weak) stem-form of a *molō* present. Within the Latin perfectum, an inherited **genō/*gēnī* (cf. §5 above on Meiser's proposed **gēmī*) might not have been destined for remodeling, given archaic parallels of the type *emō/ēmī* 'buy', *ueniō/uēnī* 'come', however the original

50. See Schindler 1975 on this *s*-stem type.
51. So also Tremblay (1996, 1997), correlating archaic acrostatic perfects in *ó/é* with 'Narten' presents in *é/é*. Beekes himself conceived of the "proterodynamic perfect" with a different ablaut pattern (**ō* : **e*).
52. In part following Weiss 1996:674 on *lēgī*, cf. earlier Jasanoff 1998:306f., 2003:193, 224.
53. For a different perspective on some Tocharian lengthened-grade material, see Peters 2004:434 n. 24, following Rasmussen 1978 [1999]:65f. (original "acrostatic aorists").
54. In addition to **mólh₂-/*mélh₂-* (see 2003 passim), also e.g. **gʰrébʰ-/*gʰrébʰ-* 'dig' (: Go. *grabun*, 2003:75, cf. Kümmel 2004:151), **pór-/(*pér-)* 'go forth' (: Go. *faran*, 2003:76, cf. Kümmel 2004:155).
55. **bʰódʰ(h₁)-/*bʰédʰ(h₁)-* (in addition to *fodiō*, also OCS *bodǫ/basti* 'stab', Lith. *bedù/bèsti* 'implant'; 2003:74, cf. Kümmel 2004:151).
56. OIr. *guidid* 'prays' (: pret. *gáid*), OIr. *scochid* 'departs, ends' (pret. *scáich*), both recanted as *molō* presents at Jasanoff 2003:74 n. 17; **rót-/*rét-* (Jasanoff 1977) on the strength of Lat. **rotor* 'roll' beside OIr. *rethid* 'runs' (cf. the relic participle Lat. *rotundus* 'rolling, round', where the *o*-vocalism is normally attributed to the influence of *rota* 'wheel'), no longer listed as a *molō* present in Jasanoff 1979 or 2003.

long-vowel formations underlying the perfectum are to be explained.[57] In contrast, an inherited opposition **genō/*(ge)gōnī* would be entirely anomalous, and ripe for virtually automatic replacement in the form **genō/*genuī*, which nevertheless would have conflicted dangerously, in *both* infectum and perfectum, with *genō/genuī* 'beget'. Thus it is precisely **(ge)gōnī* that may help account for the Latin development /gen-/ >> /gem-/ (this adjustment involving influence from verbs like *fremere*, as discussed above [§5]).

A second comparison, beyond *molō* presents, involves the background of the "classical" PIE perfect itself. According to an attractive analysis again due to Jasanoff (1979:89 n. 31, 1997:127f., 2003:42), the PIE perfect (with *o/zero* ablaut) originally goes back to a category with acrostatic *ó/é*-ablaut—exactly comparable to *molō* presents. If, as is often thought, the lengthened-grade perfects of *verba dicendi et sonandi*[58] reflect an "intensive" perfect formation of some kind (note the intensive reduplication in forms like Ved. *nónāva* 'roars'),[59] one can imagine that an archaic core of such intensive forms, possibly including **Ge-Gón(H)-*, could have been formed by a kind of "vr̥ddhi" process of the sort (perf.) **ó/*é* → (intens. perf.) **ṓ(/*ḗ)*.

This is the point, however, at which these speculative remarks must come to an end, and not entirely for reasons of space. To paraphrase Livy's praise of Cicero,[60] the resolution of such complex questions arising from Jasanoff's theory of the Indo-European verb calls for the skill and ingenuity of—well, of a Jasanoff. My great good fortune in having had Jay Jasanoff as one of my teachers does not, alas, change the fact that some things cannot be taught.[61]

DGE = Schwyzer, Eduard, ed. 1923. *Dialectorum Graecarum Exempla Epigraphica Potiora*. G. Olms. [Reprinted 1960.]

EWAia = Mayrhofer, Manfred. 1986–2001. *Etymologisches Wörterbuch des Altindoarischen*. Carl Winter.

GEW = Frisk, Hjalmar. 1960–72. *Griechisches etymologisches Wörterbuch*. Carl Winter.

IEW = Pokorny, Julius. 1959. *Indogermanisches etymologisches Wörterbuch*. Francke. [Reprinted 1994.]

57. On *ēmī* see Jasanoff 2005 (original 'Narten' imperfect, cf. above), and on *uēnī*, Kim 2001:134ff. (long root vocalism generalized from a Szemerényi's Law treatment in some forms of an original root aorist; further discussion, and application of the same analysis to TA *śamantär* 'they grow', in Nikolaev 2005).

58. In addition to *γέγωνε* and *ἄνωγε*, also Ved. *āha* 'says' and other forms: see Jasanoff 2003:30, as well as Tichy 1983 passim.

59. Somewhat similarly Tremblay 1997:139f. on the "intensive," "telic," and "terminative" value of the **ó/*é* perfect.

60. "in cuius laudes persequendas Cicerone laudatore opus fuerit" (*fr.* 120.50 = Sen. *Suas.* 6.17).

61. An earlier version of this material was presented at the 24th East Coast Indo-European Conference (University of California, Berkeley; June 2005). I am deeply grateful to the participants for their helpful comments and suggestions, in particular Hans Hock, Gary Holland, Stanley Insler, Alan Nussbaum, Martin Schwartz, and Michael Weiss.
