Pre-publication version. Citation should be made to the published version, in "Usque ad Radices: Indo-European Studies in honour of Birgit Anette Olsen", ed. Bjarne S. S. Hansen et al., pp. 767-781 (Copenhagen: Museum Tusculanum Press)

Armenian *lsem* 'to hear'

Brent Vine
University of California, Los Angeles

Armenian *lsem* 'to hear' (aor. *lua-*) descends from PIE **ĥleu̯-* 'hear' via a proximate **lus-e-*; but the background of the medial *-s-* remains uncertain. The most popular approach involves a "*k*-present", of a type attested in Greek; but there is no basis for assuming such a formation in *lsem*. Following a critique of previous analyses, the paper proposes a new solution, involving a univerbated and "verbalized" imperative phrase with 2 sg. root aorist injunctive followed by near-deictic **ĥe*, i.e. **ĥl(e)u̯ *ĥe* 'listen here!' (cf. Lat. *cedo* 'give it here!' and especially Gk. *κέκλυθι*, *κέκλυτε* 'listen here!') → *ĥlu-ĥe/o-* > *lsem*.[1]

Classical Armenian *lsem* (aor. *lua-*) 'to hear' (Bible+) goes back to a proximate thematic present stem **lus-e-*.[2] On this, and on the presumed basis in PIE **ĥleu̯-* 'hear', all are agreed; and since original intervocalic **-s-* disappears in Armenian, the **-s-* of **lus-e-* must have some other source.[3] But the precise background of this **-s-*, for which many theories have been proposed, has remained uncertain. Following a survey and critique of previous approaches, I add one more proposal to the collection. Whether correct or not, it may have some theoretical and comparative interest.

1 This article expands on a suggestion presented as a "personal communication" apud Dunkel 2004: 45 n. 41 and *LIPP* 2.401 n. 18. I am delighted to be able to help honor Birgit Olsen's exemplary scholarship and to thank her for her warm friendship and support over many years.

2 For *lu-*: in addition to the aorist stem, note also imperative *lur* and related nominal and adjectival forms, such as *lu* 'hearing; heard', *lur* 'hearing, fame, report', and *luŕ* 'silent'. More on this material below.

3 PIE **ĥl-* > Arm. *l-* is regular.

1 Previous approaches

Earlier attempts at a solution have been catalogued by Martirosyan (*EDAIL* 314, with references), and subsequent to his treatment another proposal was offered by Kölligan (2010).[4]

1.1 **ĵ̊klu(-)s-* (Meillet, Ačaŕyan)[5]

According to Meillet's original conception (1908–09: 338), later abandoned (see **1.3**), Armenian *lsem* belongs with the root variant **ĵ̊kleu̯s-* (vs. plain **ĵ̊kleu̯-*), otherwise attested in Indo-Iranian, Balto-Slavic, and elsewhere (*LIV* 336 s.v.). It was already clear to Meillet that this PIE root[6] had been abstracted from a suffixed version of plain **ĵ̊kleu̯-*, such as a desiderative stem; cf. *LIV* 335 (n. 14 s.v. **ĵ̊kleu̯-*) and 336 (n. 1 s.v. **ĵ̊kleu̯s-*). Late PIE **ĵ̊klus-e-* or **ĵ̊klūs-e-*, however, cannot yield pre-Arm. **luse-*, since (as already noted) intervocalic **-s-* should delete. Meillet's solution was to invoke the distant assimilation seen in the background of Arm. *skesur* 'husband's mother' < proximate **śu̯eśurā*, showing an assimilation **s … ś*[7] > **ś … ś*, essentially as in Ved. *śvaśrū́-* for expected †*svaśrū́-*. Thus PIE **ĵ̊klus-e-* or **ĵ̊klūs-e-* > **śluse-* and then (with the same assimilation, but in the other direction) **śluśe-*, whence regularly pre-Arm. **luse-* and Arm. *lsem.* Finally, in support of the basis in PIE **ĵ̊kleu̯s-*, Meillet pointed to Arm. *lurr* 'silent' (< **'listening, attentive'), with a basis in **ĵ̊klus-ro-* or **ĵ̊klus-ri-*.[8]

If one is willing to accept its premises – principally the background in PIE **ĵ̊kleu̯s-* and the distant assimilation – this account seems difficult to rule out. Still, it can be observed, first of all, that an isolated nominal form like Arm. *lurr* does not of itself support the existence of a primary present based on PIE **ĵ̊kleu̯s-* in the prehistory of Armenian. Moreover, as for the morphology of that present stem: Meillet assumed either a zero-grade present ("*tudáti*-present") **ĵ̊klus-e/o-* or a desiderative "**ĵ̊klūs-e/o-*", comparing for the latter Ved. *śúśrūṣate* (RV: ptcple. *śúśrūṣamāṇa-* 'seeking fame'). But both are prob-

4 Bibliographical details for work listed here by scholar's name only can be retrieved in Martirosyan's entry on *lsem* (*EDAIL*, loc. cit.).

5 Among others not mentioned by Martirosyan, note especially Solta (1960: 95).

6 Cf. primary-looking derivatives like Ved. *śrúṣṭi-/śruṣṭí-* 'obedience', OSax. *hlust* 'hearing'.

7 Cf. Gk. *ἑκυρά*, Lat. *socrus*, OHG *swehar* 'id.' for the initial **s-*.

8 Still the standard etymology; see *EDAIL* 317 s.v., with references.

lematic. There is no reason to believe that a desiderative of the Vedic type was inherited; and insofar as the *averbo* of PIE **ĥleu̯s-* can be reconstructed,[9] what seems clearest are forms pointing (at least descriptively) to a full-grade present stem **ĥléu̯s-e/o-*, e.g. Ved. ptcple. *śróṣamāṇa-* 'obeying', 3 pl. imperf. *śróṣan*, and perhaps Messap. *klaohi*.[10] As for a *tudáti*-present, this could have been built to a root aorist: cf., for *s*-less **ĥleu̯-*, Gk. pres. *κλύω* 'hear' derived from the thematic aorist *ἔκλυον*, itself based on a root aorist, as in Ved. *áśrot*. But this does not help, since **ĥleu̯s-* may have formed an *s*-aorist (cf. Toch. B *klyauṣa*, A *klyoṣā*, and perhaps, again, Messap. *klaohi*), not a root aorist. In sum, while Meillet's account based on PIE **ĥleu̯s-* seems possible, it cannot be accepted without question.

1.2 **ĥlu-sḱ-* (Hübschmann)[11]

This approach is correctly described by Martirosyan as "untenable" (*EDAIL* 314),[12] since such a preform should yield †*luc'-* (pres. †*lc'em*), not *lus-* (pres. *lsem*).

1.3 **ĥlu-k-* (Meillet, Schmitt, Klingenschmitt, J̌ahukyan, *LIV*)[13]

The most popular approach to Arm. *lsem* operates with a "*k*-enlargement" (or "*ĥ*-enlargement"), sometimes specified as a "*k*-present" (or "*ĥ*-present").[14] The essential point has been well expressed by Kortlandt (1987: 50 = 1993:

9 See Jasanoff 1987: 98 on the "heterogeneous" character of the verbal material belonging to **ĥleu̯s-*.

10 See *LIV* s.v. **ĥleu̯s-* for other verbal material; more on the Messapic form below (**2.2**). Jasanoff has argued (1987: 98–101, 104 n. 28) that what appears to be a "thematic present" **ĥléu̯s-e/o-* should rather be conceived of, in origin, as an athematic subjunctive built to an *s*-present or *s*-aorist; but this does not affect the point at issue here.

11 Among others; also e.g. Brugmann 1916: 351, Pokorny (*IEW* 606, mistakenly cited by Martirosyan in the preceding category), and Tumanjan 1978: 207, 325.

12 Similarly Kölligan (2010: 121 n. 2).

13 Despite the impression given by Martirosyan (*EDAIL* 314), Godel (1975: 78, 114, 122) does not explicitly adhere to this view; he does not actually say anything about the background of (pres.) *lsem*. For *LIV*: note, however, **1.4** below on *LIV Add.*

14 The choice between velar and palatal is moot, since PIE velars regularly become palatal in Armenian after **u̯*. For convenience, I use "*k*-present" in what follows to include velar or palatal.

80): "The assumption of a *k*-present in this root … is arbitrary". Meillet (1925: 3–4) sought to justify this analysis as a Greek-Armenian isogloss, comparing several "*k*-present" formations in Greek, such as *ἐρύκω* 'hold back' (cf. *ἐρύω* 'guard'), *ὀλέκω* 'destroy' (cf. nasal present *ὄλλυμι* beside aor. stem *ὀλε(σ)-* 'id.'). But Clackson (1994: 86) has rightly called this alleged isogloss into question, on the grounds that the background of *lsem* is open to many other interpretations, and that (as often mentioned) the only similar form in Armenian is *busanim* 'grow, sprout' (with *bu-* continuing the inherited root **b^{h}uH-* 'be(come); grow') – but this verb has aor. *busay*, with the velar/palatal element evidently not "present-forming".[15] With appropriate hesitation, Klingenschmitt noted that an original **k̂lu-k̂e/o-* beside the inherited nasal present **k̂l̥-né-u̯-ti* is descriptively similar to *ὀλέκω* beside *ὄλλυμι*. But there is no reason to think that the pairing "*k*-present beside *nu*-present" reflects a morphological alternation that is either archaic or systematic. Nor is the adduction of Ved. *ślóka-* 'sound, fame' probative (given the range of explanations available for the velar in that form), and Klingenschmitt is appropriately tentative about this, too (1982: 159).

Kölligan (2010: 121–2) offers a more elaborate counterargument to the idea of a present-forming **-k(e/o)-* in *lsem*, based on the alleged parallel with *busanim* and its background in the root **b^{h}uH-* (or, for him, **b^{h}u̯eh$_2$-*). In short,[16] if *busanim* had a *k*-present, its aorist (with stem *busa-*) must reflect a replacement of the inherited root aorist with the imperfect stem. But *lsem* likewise has an inherited root aorist (cf. Ved. *áśrot*), which was not replaced in the same way. It thus becomes questionable whether *lsem* was built with a *k*-present.

1.4 **k̂lu-n-s-* (Kortlandt)[17]

In a series of publications,[18] Kortlandt has proposed, first, that the *-s-* of *lsem* suggests that aor. *luay* goes back to a sigmatic aorist, and also that *lsem* con-

15 Similarly Klingenschmitt (1982: 157–9), who concluded (158) that for *lsem*, a determination between enlargement and present-forming suffix is not possible.

16 See Kölligan for further details, as well as Klingenschmitt (1982: 205) for discussion of the background of *busanim*.

17 To judge from his phrasing in *LIV Add.* (s.v. **k̂leu̯s-*, with n. 11), Kümmel (citing Kortlandt) seems inclined to accept the idea that *lsem* continues a secondary nasal infix present, and inclined also (s.v. **k̂leu̯-*, under "Neubildungen") to reject the idea of a *k*-present.

18 1987: 50 (= 2003: 80), 1996: 40–1 (= 2003: 114–15), 1999: 48 (= 2003: 130).

tinues a "sigmatic stem with a secondary nasal infix **kluns-*". As a parallel, he cites Arm. *əmpem* 'drink', with "analogical nasal infix **pimb-*".[19]

The phonology is impeccable: pre-Arm. **-ns-* is a viable source for surface intervocalic *-s-*.[20] But as Kölligan points out (2010: 121 n. 2), there is no actual evidence that *luay* (ambiguous between root aorist and *s*-aorist) goes back to an *s*-aorist. Nor, one might add, is it legitimate to seek confirmation of an old *s*-aorist in the ambiguous and obscure *-s-* of (present!) *lsem*.

As for the alleged parallel: this can bear very little weight. The background of Arm. *əmpem* is itself notoriously controversial, and need not involve a nasal infixation at all: perfectly plausible is Praust's analysis (1996) in terms of a prefixed **en-pibe/o-*, in the manner of Lat. *imbibō* 'drink in'. And even if a medial nasal is involved, an infixed stem **pimb-* is not the only possibility – thus others (e.g. Schmitt 2007: 58) operate with pre-Arm. **pōmbe-* (> **umpem*, cf. *ump* 'drink, drinking'), imagining a contamination of the original **pibe/o-* with **pōn-* forms of the 'drink' root (cf. Gk. *πώνω* 'drink', *εὔπωνος* 'pleasant to drink', Ved. *pā́nam* 'drinking, drink'), among still other proposals for this verb.[21]

If one does grant a starting point **pi-m-b-*, with "analogical nasal infix" (still, admittedly, the most popular approach): this at least has *i*-vocalism in its favor, since this is part of the format for at least one other documentable case of secondary nasal infixation, i.e. *erknč'im* 'be afraid' (< **du̯i-n-sḱe/o-*); and the same pattern may appear in *kornč'im* 'perish' (< **kori-n-č'-*) and *martnč'im* 'fight' (< **marti-n-č'-*), despite etymological uncertainties about these forms. Compare also (here with *a*-vocalism, perhaps from a vocalized laryngeal, but again with secondary nasal before **-sḱe/o-*) *mełanč'em* 'sin, transgress'.[22] None of this is much like Kortlandt's **klu-n-s-*, which thus lacks real support. Equally ad hoc (as Kölligan notes, 2010: 121 n. 2) is the assump-

19 The quotations are from 1987: 50 (= 2003: 80), and almost identical phrasing is found at 1996: 41 (= 2003: 114).

20 Schmitt 2007: 66, with examples.

21 See in detail *EDAIL* 277–9, s.v.

22 On *erknč'im*, *kornč'im*, and *martnč'im*, see in detail Klingenschmitt 1982: 78–81 (cf. Clackson 1994: 115–16); on *mełanč'em*: Klingenschmitt 1982: 81–3. Apart from *erknč'im* (a handbook staple), the other three verbs are nowhere mentioned in *EDAIL* (the last one not even s.v. *meł(-k')* 'sin, crime', 463), even though Indo-European connections have been suggested for them all. On omissions of this kind in *EDAIL*, see Olsen 2011: 15–19.

tion of a secondarily infixed **klu-n-s-* based on an *s*-present rather than an *s*-aorist (cf. **1.1**).[23]

1.5 **ĥlu-h₂ĥ-e-i̯e/o-* (Kölligan)

A new solution has been suggested by Kölligan (2010), who proposes that *lsem* derives from a denominative verb **ĥlu-h₂ĥ-e-i̯e/o-*, based on an original compound, either a verbal governing compound **ĥlu-h₂(e)ĥ-* 'die Ohren spitzend, das Gehör schärfend' or a possessive compound **ĥlu-h₂ĥ-ó-* 'Schärfe des Gehörs/scharfes Gehör habend'. For the first, Kölligan notes that a root noun **ĥleu̯-/ĥlu-* 'Gehör/Hören' could be supported by Ved. *su-śrú-t-* 'gutes Hören/Gehör habend' (although agentive interpretation is also possible), along with attested verbal behavior for **h₂eĥ-*, such as MW *hogi* (3 sg. *yc*) 'whet, sharpen' (causative **h₂oĥ-éi̯e/o-*) or Lat. *acēre* 'be sour' (stative **h₂ĥ-eh₁-*). And as Kölligan points out, both of the roots in question otherwise appear in Armenian: thus, apart from *lsem* itself, also Arm. *lu* 'hearing; heard' (< **ĥlu-to-*) and *lur* 'hearing, fame' (< **ĥlu-tro-* or **ĥlu-ti-*);[24] and for **h₂eĥ-*, Arm. *aseł(n)* 'needle' (< **h₂eĥ-el-*).

This is exceedingly clever, and certainly works phonologically. But one can register certain reservations. First, there is no other trace of any such compound, nor does Kölligan cite any support involving comparable phraseological collocations; this renders the juxtaposition of these two roots potentially ad hoc. To be sure, Kölligan offers a series of "parallels" (2010: 123–4); but these are only partial, involving either usages of **h₂eĥ-* forms that have something to do with 'hearing' (e.g. Gk. *ἀκή* 'quiet, silence' < *'listening attentively'), or compounds of 'ear' and 'sharp', as in Gk. *ἀκούω*, Go. *hausjan* 'hear' as denominative to a compound **h₂ĥ-(H)oṷs-* 'having a sharp ear' and, similarly (but based on 'ear' and the *ro*-adjective *ἄκρος*), *ἀκροάομαι* 'hearken, listen to' (Lamberterie 2009: 102–9). This is suggestive, but hardly probative. One could even add Lat. *auscultāre* 'to lend an ear, listen to', under the widely accepted interpretation involving a compound of 'ear' and a form

23 This version is mooted by Martirosyan (*EDAIL* 314). Kortlandt (1999: 48 = 2003: 130) similarly hypothesizes a secondarily infixed *s*-present **bu-n-s-* underlying Arm. *busanim* (cf. **1.3**), supported by no particular evidence other than a supposed parallel with his **klu-n-s-* for *lsem*.

24 For **ĥlu-tro-* (vs. traditional **ĥlu-ro-*, with "somewhat unmotivated **-ro-*"), see Olsen 1999: 35, also 1999: 782 for the possibility of **ĥlu-ti-*.

based on the root **ĥleu̯-* (itself entirely absent from Kölligan's parallels),[25] e.g. 'hear with (one's own?) ears'. But this would not replicate Kölligan's "**ĥlu-* 'hear' plus **h₂(e)ĥ-* 'sharp(en)'" very closely. Kölligan himself notes, finally, that a denominative verb of the type he envisions should have produced an aorist †*lsecʻi*. He suggests that the loss of the inherited nasal present to **ĥleu̯-* alongside the development of the new denominative verb in a suppletive paradigm with aor. *luay* could have favored the blockage of a form like †*lsecʻi*. Still, the complete absence of any trace of such an aorist beside such a regular denominative formation as **luse/o-* (< **ĥlu-h₂ĥ-e-i̯e/o-*) gives one pause.

2 A new approach

One or another of the above theories about the background of Arm. *lsem* may well be correct; and some are more attractive than others. Yet it cannot be said that the source of the *-s-* in this item of basic vocabulary has been established beyond doubt. There seems no harm, and possibly some interest, in offering a new approach.

2.1 I suggest that Arm. *lsem* is indeed, in origin, a "*k*-form", but a "*k*-present" only secondarily. The starting point would have been a 2 sg. root imperative followed by the near-deictic particle **ĥe*, i.e. **ĥleu̯ ĥe* or **ĥlu ĥe* (more on the formal details, with comparative material, below), with a meaning like 'listen here!'. The imperative expression itself was eventually ousted by the competing inherited (unemphatic) imperative *lur* (< **ĥlu-dʰí* = Ved. *śrudhî*);[26] but with the loss of the inherited nasal present to this root, the (univerbated) imperative phrase was "verbalized" (i.e., filled out with a present-system paradigm) as a replacement – and this in an essentially inevitable way, as a thematic verb: **ĥlu-ĥe* 'listen!' (congruent with 2 sg. thematic imperative) → **ĥlu-ĥe/o-* 'to hear' > *lsem* directly.

25 See *LEW* s.v. *auscultō* and *EDLIL* s.v. *auris*, with references.

26 On *lur* < **ĥlu-dʰí*: most recently Martzloff 2015–16: 138 (with discussion of the problem of the development of intervocalic **dʰ* in Armenian).

2.2 The pattern with deictic particle **ǩe* and imperative hardly requires comment: cf., for example, Lat. *cedo*, pl. *cette* 'give [it] here!'.[27] Very striking, however, is the fact that Greek offers a close parallel in the Homeric imperative forms *κέκλυθι*, *κέκλυτε* 'listen!' (beside *κλῦθι*, *κλῦτε*). These have sometimes been interpreted as reduplicated forms, whether as reduplicated aorists[28] or as analogical to reduplicated imperatives of the type Hom. *τέτλαθι* 'bear up!'.[29] But it has long been recognized, and is now widely accepted (I think correctly), that these forms may instead be unreduplicated imperatives with preceding deictic particle **ǩe*.[30]

Another possible comparandum is too uncertain to be used as evidence, but deserves to be cited, namely the famous Messapic inscription-initial phrase *klaohi zis*.[31] This has long been interpreted as "Listen, Zeus!", comparing the Roman ritual utterance "Audi, Iuppiter!" and because of the testimony of a Greek comic fragment,[32] referring to a theonym *Δίς*, possibly a Tarentine version of "Zeus".[33] Dunkel has argued in some detail against this interpretation;[34] he favors the popular account of *klaohi* as a "*si*-imperative", cognate with Ved. *śróṣi* 'hear!' (RV 6.4.7b),[35] with *zis* as a following deictic particle, i.e. **ǩi-s* (the suppletive variant of near-deictic **ǩe*, plus "adverbial **-s*"[36]), and with Messapic-internal palatalization (cf. *dazimas* 'Decimus'). But Dunkel's arguments against *zis* 'Zeus' – while cogent from the perspective of native Messapic phonology – do not take into account the likelihood that the Messapic form is a borrowing from South Oscan (Rix 2004: 492, 495). Dunkel was right, however, to question *zis* as a vocative form; but Matzinger (2005: 42) has provided a plausible alternative interpretation of

27 That is, **ǩe* plus 2 sg. **deh₃* and 2 pl. **dh₃-te* (root aor. injunctives; Meiser 1998: 185, Weiss 2011: 422).

28 Especially in the older literature; see the references at Schulze 1892: 391 n. 1.

29 So *GEW* 878 (s.v. *κλύω*) and *DELG* 541 (s.v. *κλέος*), still followed (somewhat tentatively) by Beekes, *EDG* 1.719 (s.v. *κλύω*).

30 Schulze 1892: 395, followed by Schwyzer 1939: 804, Rix 1992: 216, Harðarson 1993: 188; see more recently Dunkel 2004: 45–6 and *LIPP* 2.401. (I return below to the matter of preceding vs. following **ǩe*.)

31 This spelling 3x (*MLM* 1 Br, 3 Car, 1 Mo); also *klauhi* (4 Ro, 5 Ro) and *klohi* (I Bas, I Ga, 3 OI).

32 By Rhinthon (Hellenistic period), fr. 11 K-A.

33 For bibliography, see *MLM* 2.206 (s.v. *klaohi*) and 2.155 (s.v. *zis*); more recently e.g. Matzinger 2005: 39, 42 and Fortson 2010: 468.

34 *LIPP* 2.401 n. 17, earlier also Dunkel 2004: 47.

35 On *klaohi* in these terms, see e.g. Jasanoff 1987: 105–6.

36 Cf. Lat. *cis* 'on this side', *LIPP* 2.410, s.v. 2. **ǩí-s*.

klaohi as a 3 sg. optative (based on the *s*-aorist stem) < **ĵleu̯-s-ih₁-t* 'er soll hören',[37] in which case nom. sg. *zis* is no longer problematic. Thus we cannot use this phrase to support a sequence **ĵleu̯(s)-* plus near-deictic **ĵe/*ĵi*.

As for the "verbalization" of an imperative: this is easily supported by Greek *ἐσθίω* 'eat', the suppletive present to fut. *ἔδομαι*, based on an athematic imperative Pr.-Gk. **és-tʰi* (= Ved. *addhí*, i.e. a form of the type Ved. *śrudhí* = Arm. *lur*).[38] Within Armenian itself, a similar occurrence (though involving a new aorist) may well have taken place with *taray* (suppletive aorist to *tanim* 'carry'), built on the imperative *tar*.[39]

2.3 It remains to comment on some formal issues and on a remarkable parallel in PIE itself.

2.3.1 For a 2 sg. root aorist imperative, full grade **ĵléu̯* would be expected, at least in the first instance: cf. Lat. *-do* in *cedo* (**2.2**).[40] But the development of an original **ĵléu̯* (*ĵe*) to a zero grade **ĵlu* can be conceived of in several ways. Perhaps simplest would be to assume an analogical adjustment after (the ancestor of) inherited *lur*, i.e. (using Transponaten, but with hyphenation indicating already-univerbated format) **ĵléu̯-ĵe* → **ĵlu-ĵé* after **ĵlu-dʰí*.[41] Or, if the univerbation of **ĵléu̯* and **ĵé* is taken back to a very early period, with both forms underlyingly accented, the zero grade could have developed as a consequence of the univerbation, in two respects. In general, univerbation is trivially associated with phonological reductions;[42] under the right circumstances at an early period, e.g. with accentually dominant **ĵé* ("Listen *here*!"), the predictable reduction of full grade **ĵléu̯-* would be zero grade **ĵlu-*.[43] From a purely phonological perspective, a sequence like **ĵléu̯ ĵé* exhibits a standard input for the phenomenon known as "stress

37 Viewed favorably in *LIV Add.* (s.v. **ĵleu̯s-*): *klaohi* "besser zum Aorist".

38 In addition to the handbooks, see recently on *ἐσθίω* Kölligan 2007: 77, 466.

39 Klingenschmitt 1982: 201, followed by Kortlandt 1996: 41 = 2003: 115.

40 OLat. FU 'be(come)!' (Carmen Arvale) is surely a form of this type, but the zero grade is expected, based on the behavior of this root otherwise (cf. Ved. *ábhūt*, Gk. *ἔφῡ*, and Jasanoff 1997).

41 Similarly in Greek, cf. 2 pl. *κλῦτε* (replacing **κλεῦτε* = Ved. *śróta*), with full grade adjusted after the (metrically lengthened) zero grade in 2 sg. *κλῦθι*. A variant of this analogical account of **ĵlu-ĵé* will be presented below (**2.3.4**).

42 In an Indo-European context, see Hackstein 2014, with examples.

43 Compare the descriptively similar relationship between simplex *κλῦτε* (for original **κλεῦτε*, n. 41) vs. recessively-accented *κέκλυτε*.

clash", voluminously discussed in the phonological literature since the influential treatment by Liberman and Prince (1977: 309–33): adjacent accented syllables – disfavored in many languages (including English) – are repaired, typically by destressing or stress shift, which in turn can bring concomitant reductions of other kinds.[44] Finally, full-grade **ĥléu̯-ĥe*, once grammaticalized to thematic **ĥléu̯-ĥe/o-* (> Arm. †*lusem*), could have come into conflict (by "homonymie fâcheuse") with the expected primary thematic verb belonging to Arm. *loys* 'light', i.e. **léu̯k-e/o-* (: Ved. *rócate* 'shines') > Arm. †*lusem*; this was replaced at some point by *lucʻanem*,[45] while **ĥléu̯-ĥe/o-* was adjusted to **ĥlu-ĥe/o-* (cf. again imperative *lur*, as well as primary derivatives with zero grade: *lu, lur, lurə̄*, etc.).

2.3.2 Note further that according to the hypothesis on offer, the verb in question was never an ordinary denominative verb; it was rather a univerbated phrasal sequence that ended up, at a relatively late stage, being pressed into service (in grammaticalized form) as a substitute for the lost original nasal present **ĥl̥-né-u̯-ti*, in a suppletive system with aor. *luay.* Under these circumstances, it may be easier to justify the otherwise surprising absence of aorist forms like †*lsecʻi* (cf. **1.5**).

2.3.3 A further point concerns the order **ĥl(e)u̯* + **ĥe*, with following particle, vs. *κέκλυθι*, *κέκλυτε* (and Lat. *cedo*). In general, as Dunkel has discussed, Indo-European particles can in principle "precede or follow any morpheme-sequence containing a root and an ending".[46] For **ĥe* specifically,[47] note e.g. Hitt. *ki-nun* 'now' vs. Lat. *nun-c* and – particularly interesting for *κέκλυθι*, *κέκλυτε* vs. **ĥl(e)u̯* + **ĥe* – Lat. *ce-do* beside the Gaulish connective *duci*, if this goes back to a sequence **déh₃* plus **ĥe/*ĥi* (*LIPP* 2.133, 401).

Worth mentioning here is the morphological hapax *κέκλυκε*, an imperative with the meaning of *κέκλυθι*, in a fragment of Epicharmus (188 K–A). The form is attributed to Epicharmus by Herodian,[48] describing a morphological pattern whereby perfect stems serve as a derivational basis for the-

44 See DeLisi 2015: 74–5, arguing for a constraint against stress clash in a later prestage of Armenian.

45 With controversial stem-formation, see *EDAIL* 311–12, s.v. **loycʻ-*.

47 Dunkel 2004: 45–6, *LIPP* 2.403.

48 The full passage is provided, with translation and discussion, by Willi (2008: 144).

matic presents: Herodian cites an imperative form *εὕρηκε* (based on pres. *εὑρήκω*), attributed to the comic poet Nausicrates, and likens this to Epicharmus's *κέκλυκε* (based on pres. *κεκλύκω*), citing also perf. *ὄλωλα*, *δέδοικα* → pres. *ὀλώλω*, *δεδοίκω*. Schulze (1892: 391–3) argued that *κέκλυκε* must have been meant as a parody of Hom. *κέκλυτε*: the comic effect would have arisen from supplying the grand Homeric imperative with the neologistic morphology described by Herodian. Willi (2008: 144 n. 79) dismisses this as unnecessary; but I am inclined to agree with Schulze, and would point out that, despite Herodian, the alleged parallel with Nausicrates's *εὕρηκε*/*εὑρήκω* is faulty: the neologistic present *εὑρήκω* is based on the existing perfect *εὕρηκα* (like Herodian's other examples, also with bona fide perfects); but *κλύω* itself never made a *k*-perfect (or, indeed, a perfect of any kind).[49] In a sense, then, Dunkel (citing Schulze) may be right to say that in *κέκλυκε*, "[d]eictic **k̂e* seems to be simultaneously pre- and postposed" (2004: 49 n. 51).

2.3.4 Most striking, in connection with the ordering **k̂l(e)u̯* + **k̂e* in an imperative expression, is Oettinger's theory of the origin of the PIE thematic suffix **-sk̂e/o-* (2013). The idea that this suffix is morphologically complex is not new, and indeed, Oettinger takes as his starting point the observation by Jasanoff (2003: 133) that in theory, an "obsolete thematic suffix **-k̂e/o-*" could have been added to *s*-presents. In Oettinger's conception, the source was precisely the near-deictic particle **k̂é* ('here, now') following root imperatives based on *s*-present stems: e.g. **péh₂s* 'schütze!' (Hitt. *paḫš-*) + **k̂é* 'jetzt' → **ph₂sk̂é* 'schütze jetzt (und weiterhin)! beginne zu schützen!' (whence analogical 2 pl. **ph₂sk̂é-te* and ultimately, with reanalysis based on *s*-less **p(e)h₂-*, thematic "**-sk̂e/o-*", cf. Lat. *pāscō* 'feed'). As for the ablaut: Oettinger suggests that in this function, **k̂é* would naturally have shown the same property as the imperatival particle **-dʰí*, which likewise (and also with athematic root imperatives) calls for zero grade of the root. There is no obvious reason why this pattern should have been restricted to *s*-presents; thus our proposed **k̂léu̯* 'listen!' → **k̂lu-k̂é* 'listen here!' (→ **k̂lu-k̂é/ó-* > Arm. *lsem*) would provide a welcome *s*-less parallel to Oettinger's system, and others could be sought among so-called "*k*-presents".[50] Finally, given the possible existence

49 Chantraine's identification of *κέκλυκε* as a perfect (*DELG* 541, s.v. *κλύω*) is a lapsus.

50 A good candidate might be *ἐρύκω* (**1.3**), with formulaic behavior in Hom. imperatives *ἔρυκε* (*#μὴ δέ μ' ἔρυκε* … Σ 126, … *μὴ δή με* … *ἔρυκε#* δ 594) and *κατέρυκε* (*#μή μ' ἔτι νῦν κατέρυκε* … α 315). Cf. also Dunkel 2004: 46–7 on perf. *ἠρύκακε*.

of an archaic *s*-present **ĥleu̯-s-* (cf. n. 10 above), one might wonder whether this could have served as the basis for a **ĥlus-ké* → thematic **ĥlusḱé/ó-*. But the early development of a thematic (or thematic-looking, if originally subjunctive) **ĥléu̯s-e/o-* would militate against the generation and survival of a **ĥlusḱé/ó-*, and so it is perhaps not surprising that traces of such a form may be found only in Albanian and Tocharian.[51]
