Jakobson in My Life: An Excerpt from *The Blue Beast* (translated from Russian by Michael Henry Heim) 603

B. Vine, O. T. Yokoyama

PIE **(h₁)euh₁-dh-* 'excrete liquid' and Russian Dialectal *udut* (3 pl.)

1. It is well-established that the Proto-Indo-European word for 'udder' — attested in Indic, Greek, Italic, Germanic, and Balto-Slavic[1] — originally inflected as a neuter acrostatic *r/n*-stem of the *ó/é* type, with nom.-acc. sg. **(h₁)óuh₁dh-r̥*, original oblique **(h₁)éuh₁dh-n-* (and secondary oblique stem **(h₁)uh₁dh-n-*, cf. loc. sg. **(h₁)uh₁dh-én*)[2]. Like many terms for body parts, as well as other archaic *r/n*-stems, the word is often considered to be (or at least presented as) a nominal prime[3]. Yet an attractive root etymology has been proposed by H. C. Melchert [1986: 111, 114], based on his interpretation of Hitt. *uwa-* as 'nurse': that word is plausibly analyzed as an agent noun **(h₁)ouh₁/₃-ó-* to a verbal root **(h₁)euh₁/₃-* 'give milk, suckle' (or more generally 'excrete liquid'), visible not only in the word for 'udder' (**(h₁)euh₁/₃-dh-,* with root-enlargement)[4], but also in the archaic word for 'water' and 'milk' continued in Cuneiform Luvian *wa-a-ar* 'water', Ved. *vā́r* (2x *váar*) 'water, milk (of the dawn cows)', Av. *vār* 'rain', OIr. *fír* '(cow's) milk', these forms reflecting a «state II» root variant **(h₁)weh₁-* (whence **(h₁)wóh₁-r/*(h₁)wéh₁-r-* 'water, milk')[5]. This root etymology has recently been endorsed by C. Watkins [Watkins 2009: 225n3], in a detailed study of the Indic and Celtic material. As Watkins points out, moreover, Melchert's analysis finds an attractive parallel in the other archaic PIE word for 'water', an archaic neuter *r/n*-stem **wód-r/*wéd-n-* (Hitt. *wa-a-tar* etc.) belonging to the same acrostatic type and corresponding to a verbal root attested not only in the nasal-infixed stem **u-né-d-* (Ved. *unátti* 'wets', see LIV s. v. **wed-* 'quellen') but also in a state II version **(h₁)eud-* (Ved. *ódatī-* 'moistening, moist', *ódman-* 'floods, moisture', etc., see *EWAia* I.279 s. v. *OD*).

2. As Watkins also points out, Melchert's «cogent» root etymology remains unrecognized by LIV. Yet this is not surprising, since there is no certain trace of a primary verb: most of the scanty verbal remains belonging to the 'udder' word display the earmarks of secondary formations, as Melchert himself has already discussed [1986: 111f.], or in one

---

[1] IEW 347, [Gamkrelidze, Ivanov 1984: (2.)569n4, 1995: 1.486n41] (Ved. *ū́dhar-*, Gk. *oûthar,* Lat. *ūber*, OSax. *ieder*, etc.).

[2] On the reconstruction, see [Schindler 1975: 7f.] and more recently [Nussbaum 1997: 198f.; Lamberterie 2004].

[3] In addition to the sources cited in n. 1: e. g. [Mallory, Adams 2006: 179, 181].

[4] Similarly [Mallory, Adams 1997: 82], on 'udder': «From **h₁euh₂dh-* 'swell (with fluid)'».

[5] For a somewhat different conception of the original root shape, see [Ivanov 1997].

case is ambiguous between primary and secondary derivation. Thus, to summarize the material treated by Melchert:

(i) Lith. *ūdróti* 'be pregnant (of swine)', *paūdróti* 'have a distended udder (of swine, dogs)', and similar Baltic material based on a stem *ūdr-*, are transparently secondary to the *r/n*-stem noun 'udder'.

(ii) The hydronym in Latium that is variously spelled *Oufens/Ofens/Ufens* in Latin sources (cf. modern *Uffente*) and which may also underlie the Roman tribal name *Ufentina* (OLat. *Oufentina*) is generally thought to belong with the Apulian hydronym *Aufidus*[6]. The intervocalic *-f-* guarantees a non-Latin (i.e. Sabellic, perhaps specifically Volscian) source, if this material belongs with Lat. *ūber.* For that reason, certain phonological and morphological details remain uncertain (on which see [Nussbaum 1997: 199n90]). Nevertheless, as Melchert and others have discussed, the unmarked interpretation of a pair *Oufens/Aufidus* would involve a stative verbal formation in *-ēre* (in Latin terms) beside parallel adjective in *-idus* (of the type Lat. *turgēns* 'swell, be swollen' ~ *turgidus* 'swollen', etc.)[7]. Italic stative formations in *-ēre* are descriptively either denominative or deverbative; yet, as Melchert observes, both are ultimately denominative in origin, strictly speaking (see now [Jasanoff 2002/3: 127, 147f.]). Still, it should be noted that the relationship between *Aufidus* and *Oufens* is far from certain (cf.: [Hamp 1970: 144]). On its own, then, (non-)Lat. *Oufent(o?)-* could in principle continue a participial stem based either on a primary thematic verb in *-ĕre* or an iterative in *-ēre*[8].

(iii) The Russian verb *údit'* 'to ripen (of grain), fill/swell up with liquid' is attested dialectally in the Novosibirsk area[9]. Morphologically, such a form must be either denominative, or (perhaps more likely) an old iterative-causative (presumably iterative, in view of the semantics). Neither would reflect a primary verb.

3. There is, however, a recently-discovered Russian dialectal form that deserves to be considered in this connection. A 3 pl. present tense form *udut* 'they are ripening' is now attested twice, in a newly-published archive of 19th-century Russian peasant letters

---

[6] For details, including references to the pioneering work of Krahe and others on these hydronyms, see: [Szemerényi 1955: 285]. More recently, see [Silvestri 2009: 70], [Stok 2009: 553, 555ff.].

[7] Cf.: Watkins' identification of the enlargement **-dh-,* in **(h$_1$)euh$_{1/3}$-dh-,* as the «stative suffix» (on which see [Benveniste 1935: 188ff.]).

[8] Given the development of **-eu-* to /-ou-/ in Italic, the root vocalism is ambiguous between *e*-grade (as in the plain thematic interpretation) and *o*-grade (as would be appropriate for an old iterative in **-éye/o-*). The Faliscan personal name **Ofetio** (Ve 243 = LF 3) may well be derived from the hydronym under consideration, as is often assumed (see e. g. [Vetter 1953: 287], ad loc., and [Bakkum 2009: (1.)219]), but this is no more than a possibility.

[9] See now [Derksen 2008: 507] (s.v. **ùditi**), citing only Dal' (i. e. [Dal' 1880—1882: 4.473]); see further [Fasmer 1964—1973: 4.149] (with earlier references), [Fedorova 1979: 552], and note also the adjective *údnoe (zernó)* 'ripe (grain)' [Fasmer, loc. cit.]. For the liquid association, cf. *zerno nalivaetsja* 'the grain is filling up' (lit. 'is being poured into') = *zreet* 'is ripening'.

from the southern Vyatka region [Yokoyama 2008: 1.179, 282, at 73ob.15 and 142.14][10]. The following background information may be helpful (see [Yokoyama 2008] for additional detail).

These letters were written by five members of a single family during the period 1881—1896. The family lived in the now liquidated village of Pazdery, in the eastern part of European Russia. In terms of dialect: given certain non-normative morphological features and on the basis of an analysis of phonetic spellings, the writers can be identified as speakers of a North Russian dialect, and one which preserves some phonological and morphological features more archaic than those observed in the local dialect in this region today.

The two occurrences of 3 pl. *udut* appear in the writing of two of the sons (born in the same village in 1867 and 1872), in letters dated 1892 and 1894, respectively. In the first attestation (73ob.15), the verb occurs with pl. subject *xlebá* 'grain' ('the grain [lit. pl.] is ripening'). In the second (142.14), the usage is figurative, with pl. subject *delá* 'business' ('business is ripening', i. e. 'prospering'), comparable to synonymous figurative usages of *tekut* 'flow' (97.14) and *katjatsja* 'roll along' (109.11) elsewhere in the corpus, with the same subject.

4. The morphological difficulty in aligning a Russian 3 pl. pres. *udut* with the previously-documented infinitive *údit'* (with presumed 3 pl. *údjat*) has already been signaled by Yokoyama [2008: 1.179n53]. There is, however, a suggestive parallel, pointed out to us — with characteristic erudition and generosity — by our esteemed colleague Vyacheslav Vsevolodovich Ivanov[11]. Russ. dial. 3 pl. *udut* (beside the attested infinitive *údit'*) is reminiscent of the 3 pl. form *gudút* (cf. infin. *gudét'* 'to hum, drone' and *gudít'* 'to play a stringed instrument'), an obsolescent substandard variant of 3 pl. *gudját.* Yet 3 pl. *gudút* is found beside 3 sg. *gudët* (both forms are well-attested), suggesting a basis in a plain thematic verb (as if with infin. *gustí*), beside the standard stative verb (infin. *gudét'*). Whether an infinitive *gustí* actually exists in Contemporary Russian beside 3 sg. *gudët* and 3 pl. *gudút*, as the dictionaries claim[12], such a form is clearly attested in earlier periods of the language (RCS *gusti*, cf. [Sreznevskij 1893—1906: 611]) and elsewhere in Slavic (e. g. Ukr. *gusty* and dial. *husti,* SCr. *gústi,* Sloven. *gôsti,* cf. OCS *gǫsti*), in part with specialized semantics ('make a sound on a musical instrument', cf. Russ. *gúsli* 'zither')[13]. Thus, while 3 pl. *gudút* might appear, from the standpoint of Contemporary Russian, to be merely a substandard variant of 3 pl. *gudját* (to infin. *gudét'*), the reality is more complex, and points to an archaic primary thematic verb *gustí* (perhaps originally 'produce a [singing, humming, etc.] sound') beside a pendant stative *gudét'* ('give off a sound'), and perhaps an iterative in *gudít'*. Moreover, Slav. **gǫsti* (with nasal infix) is to be compared with Lith. *gaũsti* (1 sg. *gaudžiù*) 'make a sound, hum', likewise a primary verb (though with a differ-

[10] Given the nature of these documents, the position of the accent is of course unknown.

[11] Personal communication (May 4th, 2006).

[12] So e. g. the four-volume Academy Dictionary (SRJa 1.358 s.v. *gustí*), and more recently [Derksen 2008: 183] (citing also Russ. dial. *gust'*).

[13] See [Fasmer 1964—1973: 1.470] (s. v. *gudét'*), ESSJa VII.85f., [Derksen 2008: 183] (s. v. ***gǫsti**).

ent formation)[14]. There is at any rate little reason to believe that 3 pl. *gudút* (much less RCS *gusti* etc.) has somehow been secondarily created beside *gudét'* or *gudít'*.

These considerations strongly suggest that 3 pl. *udut* — which, whatever its accent, is equally difficult to interpret as a secondary creation — should likewise be taken at face value, in which case the form is potentially of great morphological interest: as with *gudút/gustí,* it may well reflect a genuine primary verb, i.e. a simple thematic 3 pl. (as if beside infin. **ustí,* cf. e.g. Russ. *vedú/vestí,* 3 pl. *vedút* 'lead' < PIE **wédh-e/o-*, etc.) with PIE Transponat **(h$_1$)éuh$_1$dh-o-nti* — and thus, as such, the sole surviving direct trace of a primary verb (meaning 'excrete liquid') underlying the PIE word for 'udder' (cf.: § 2**.** above)[15]. If this is so, the parallel North Russian dialectal form *údit'* could continue the old iterative (**(h$_1$)ouh$_1$dh-éye/o-*)[16], which eventually ousted the primary plain thematic form, possibly after a period of suppletive behavior in the North Russian dialect area, given 3 pl. *udut* (attested in the southern Vyatka peasant letters) beside infin. *údit'* (Novosibirsk); cf. the synchronic appearance of *gudët/gudút* beside *gudét'* and *gudít'.* The southern Vyatka peasant letters, after all, preserve a number of other archaisms, from the point of view of East Slavic linguistic history[17]; nor is it unthinkable for such texts to contain a linguistic archaism of Indo-European age, as in the celebrated North Russian lexical (and partly verbal) material treated by Watkins, in a pathbreaking study of Indo-European lexis and mythopoetics ([Watkins 1975/1994: 533f.], cf. [Watkins 1995: 47n20]).

5. A final form to be noted here is Tocharian AB *pyutk-* 'come about, occur' (causative 'establish, create'). The background of this verb is often considered to be obscure (so e. g. [Saito 2006: 409]), and indeed, earlier attempts are problematic in various ways: the most popular approach, based on PIE **bhuH-* 'grow, become', is obviously attractive semantically,[18] but is distinctly unsatisfactory in formal terms, given its inability to explain directly either the dental stem or the attested facts of palatalization. D. Q. Adams has tentatively suggested an etymological analysis in terms of a preform **p(ä)-yutk-* 'come about' < *'ripen, swell', i. e. with prefixed particle **p(ä)-* followed by a «putative PIE **h$_1$eud-ske/o-*» [sic] comparable (with respect to the root) to Russ. *údit'* [Adams 1999: 409]. There is as yet, however, little evidence in support of Adams' prefix **p(ä)-,* which

[14] See [IEW: 403]. At a deep level, we probably have to do with an old suffixed formation (roughly **gou[H]-dhh$_1$-e/o-* 'make a sound') built from **geuH-* 'call, cry out' (Gk. *goaô* 'wail' etc., see LIV s.v. **geuh$_2$-*) and **dheh$_1$-* 'set, make', comparable to a number of other such primary formations (cf. [Vine 2006: 504f.], with further references).

[15] The same thematic stem might appear in (non-)Lat. *Oufent-*, although the form is multiply ambiguous, as already discussed (§ 2. (ii)).

[16] Recall, again, that an iterative form might also be reflected in (non-)Lat. *Oufent-*.

[17] These archaic features can be observed at all levels of grammar, including phonology (e.g. palatalized liquids in *TьRT* forms; [Yokoyama 2008: 1.382f.]), morphology (e. g. the plural forms in nominal paradigms; [Yokoyama 2008: 1.390]), morphosyntax (e. g. prepositionless oblique case usages: *perešel drugomu xozjainu* [12.5], *prošlom godu* [81.5], etc.; [Yokoyama 2008: 1.403f.]), and syntax (e. g. asyndetic constructions; [Ibid.: 1.409f.]).

[18] See [Melchert 1977: 121] (following Lane and Pedersen).

renders his proposal, as interesting and attractive as it is in some respects, highly uncertain, as S. Neri has recently observed [2007: 70n184][19]. For the present, then, the best candidate for a primary verb based on the root of PIE **(h₁)óuh₁dh-r̥* 'udder' may be found in the recently-discovered North Russian dialectal verb form *udut*. At the very least, this new form now enters the dossier of verbal material belonging to the PIE word for 'udder'.
