On the Vedic Denominative Type *putrīyánt-*

sms§§§

denominatives in *-áyati* with causative accent, e.g. *ártha-* 'goal' → *arthấya-* 'seeks as goal', *mántra-* 'spell' → *mantráya-* 'recites spells', and a number of others. Thus apart from such special developments, thematic denominatives in particular show the following pattern: the thematic stem, with the thematic vowel normally in its *e*-grade form, is followed by accented **-i̯é/ó-*, as in verbs of the type Gk. κοσμέω 'arrange' (cf. κόσμος 'order'), Arm. *gorcem* 'work, do' (cf. *gorc* 'work'), and Ved. *amitrayáti* 'be hostile' (cf. *amítra-* 'enemy').

2 The problem of Ved. *putrīyánt-* etc.

The descriptive anomaly of the thematic denominatives in *-īyá-* (and also *-iyá-*) based on Indic *a*-stems (Indo-European *o*-stems) is therefore apparent, and remains unexplained: a denominative based on Ved. *putrá-* 'son' should have the form †*putrayá-* or (with lengthening) †*putrāyá-* (neither of which is attested), and not (as in the Rig-Veda) *putrīyá-* 'desiring sons'. The thematic denominative formation in *-īyá-* is duly noted in the handbooks, but the treatments are superficial and little attention has been devoted to the problem otherwise. What can be said, to begin with, about the extent of the phenomenon? A judgment on this point is compromised by the existence of ambiguous forms. Thus according to Whitney and Macdonell, Ved. *taviṣīyá-* 'be strong' is a denominative of the type in question, based on the thematic adjective *taviṣá-* 'strong'; but already Grassmann (s.v.) saw that *taviṣīyá-* might rather be based on the noun *táviṣī-* 'strength', in which case it would have nothing to do with the thematic type under consideration. For unambiguous forms, however, there is even a question as to whether the pattern is restricted to thematic stems. Such a restriction is claimed by Renou, in his treatment of the Vedic material; yet (as we will see) there are post-Vedic *-īya-* denominatives based on consonant stems and feminine *ā*-stems. Further, Morgenroth (:) has claimed that the formation is restricted to the active; yet some middle forms are attested. Finally for the formal side, how should we understand the alternation between *-īya-* and *-iya-*? Thus *putrīyá-* in the Saṃhitā text of the Rig-Veda contrasts with *putriyá-* in both the pada-text and the Atharva-Veda; and in the Rig-Veda, *ánniyant-* 'seeking food'—clearly a formation of this type (cf. *ánna-* 'food')—shows short /i/ even in the Saṃhitā text. Turning to semantics: what can be said about the meaning of these forms, especially the prominent appearance of a desiderative sense, as in *putrīyá-* itself? This issue has been dis-

---

See on these forms Jamison : (*arthấya-*), (*mantráya-*), and *in extenso* Ch. IV (–) on a series of intransitive cases (*ṛtáya-* 'acts according to the truth', *kulāyáya-* 'nests', and a number of others).

On *o*-stem denominatives in Anatolian, see Melchert : – . I return later to the lengthening of the thematic vowel seen in some of the Indic material. Left aside here (apart from a brief mention) is the "truncation" type (without thematic vowel), the PIE status of which is unclear; see Tucker : – (di erently Tremblay : –) for Old Iranian, Scha ner and Barber : – for Greek.

See e.g. Whitney : , Sütterlin : – , Macdonell : , Brugmann : – , Renou : and :§ , Thumb-Hauschild : ; note also Pāṇ. . . .

Favoring *táviṣī-* → *taviṣīyá-*: also Sütterlin : , Renou : , Burrow : , Scha ner .

cussed more generally in connection with other denominatives (see especially Tucker and Fortson), and will concern us further below. Finally, for now: how should this formation be viewed from a historical/comparative perspective? There is no consensus on the matter, as readily seen from the hodgepodge of proposals cited in Thumb-Hauschild (:) and occasionally found in other literature, to be reviewed below.

3 Survey of the *a*-stem data

It will be helpful to begin with a survey of the data, presented more systematically than one finds in the handbooks. Whitney (:) observes that "Not fifty stems of this form are quotable," and this agrees, more or less, with Sütterlin's estimate (:) that there are between and such forms. But particular interest attaches to the fact that there are barely six or eight forms of this type in the Vedas and Brāhmaṇas, as follows:

( ) a. (*adhvará-* →) RV *adhvarīyá-* 'perform the sacrifice': *adhvarīyási* ×, *adhvarīyatā́m* ×
b. (*ánna-* →) RV *ánniya-* 'seek food' : *ánniyate* . . a
c. (*cáraṇa-* →) RV *caraṇīyá-* 'follow a course': *caraṇīyámānā* . . c
d. (? *taviṣá-* →) RV *taviṣīyá-* 'be strong': *taviṣīyáse* . . a, *taviṣīyántas* . . d, *taviṣīyámāṇam* . . c
e. (*putrá-* →) RV *putrīyá-* 'desire a son/sons': *putrīyántas* . . b; AV *putriyá-*: *putriyánti* AV-Ś . . b, *putriyantu* AV-P . . b
f. (*māṃsá-* →) Br.+ *māṃsīyá-* 'long for flesh': ŚB, GB, ĀpŚrS
g. (? *rátha-* →) RV *rathīyá-* 'drive': *rathīyántī* . . d
h. (*śapátha-* →) AV *śapathīyá-* 'utter a curse': *śapathīyaté* AV-Ś ×, AV-P ×

As already noted (§), *taviṣīyá-* (d) should probably be eliminated, and similar doubts apply to *rathīyá-* ((g), cf. *rathī́-* 'driving; driver').

The Indian grammatical tradition cites a great many such forms; the following provides a generous selection:

( ) a. (*áśana-* [ŚB+] →) *aśanīya-* 'be greedy for food'
b. (*áśva-* [RV+] →) *aśvīya-* 'desire a horse'
c. (*udaká-* [RV+] →) *udakīya-* 'wish for water'

In fact, as Sütterlin notes, there are more *-īya-* forms of this type than *-īya-* denominatives based on *i*-stems, for which he gives a count of between and tokens.

Here and below, abbreviations of literary texts mainly follow those used by Monier-Williams.

This is the traditional gloss; see, however, Albino on possible alternative conceptions of the meaning.

See especially Pāṇ. . . , . . – .

d. (*eḍaka-* [Mbh+] →) *upeḍakīya-* 'behave as a sheep towards'
e. (*oṃkāra-* [Manu+] →) *oṃkārīya-* 'utter/be the sacred syllable *om*'
f. (*odaná-* [RV+] →) *odanīya-* 'wish for boiled rice'
g. (*kurkurá-* [AV+] →) *kurkurīya-* 'behave like a dog'
h. (*kṣīrá-* [RV+] →) *kṣīrīya-* 'desire milk'
i. (*dráviṇa-* [RV+] → *draviṇīya-* 'desire goods'
j. (*dhána-* [RV+] →) *dhanīya-* 'desire wealth'
k. (*prāvāra-* [Mbh+] →) *prāvārīya-* 'use as a cloak' (Pāṇ. . .)
l. (*prāsāda-* [Sū+] →) *prāsādīya-* 'imagine oneself to be in a palace'
m. (*yóga-* [RV+] →) *yogīya-* 'treat as yoga'
n. (*lavaṇá-* [ŚBr+] →) *lavaṇīya-* 'desire salt'

For this material, the preponderance of vocabulary involving everyday concerns (food, animals, clothing, etc.) seems striking.

What is most interesting about the data from sūtra literature and from epic Sanskrit is that there is so little of it. For the sūtras, I have found only the single form (*ghaná-* 'bane, destroyer', also adj. 'solid, compact' [RV+] →) *ghanīya-* 'long for solid food' (ĀpDhS, KātyŚS schol.), where we may note again the reference to food. For the epics, the single form (*sajja-* 'prepared' [Mbh, Kāvya] →) *sajjīyate* 'prepare oneself' (Mbh), allegedly deadjectival, is widely cited in the handbooks as an example of this kind (so e.g. Whitney : and Renou :). But apart from *ghanīya-* (directly above), and the possibility of (*taviṣá-* →) *taviṣīyá-* (d), there are virtually no other cases of deadjectival denominatives in this category; and indeed Oberlies (:) has provided an entirely di erent (and I think more credible) account of the form.

In contrast, the type is well-represented in Classical Sanskrit, including Kāvya and other poetry, fable literature, romances, and treatises on topics such as poetics, medicine, and religion. A generous selection of this material includes the following:

( ) a. (*kairava-* [Mbh+], *koraka-* [R+] →) *kairavakorakīya-* 'resemble a lotus bud' (ŚārṅgP.)
b. (*kṣīroda-* [Mbh+] →) *kṣīrodīya-* 'behave like the ocean of milk' [Sāh.]
c. (*kṣétra-* [RV+] →) *kṣetrīya-* 'desire s.o.'s wife' (Śāntiś.)
d. (*gehá-* [VS+] →) *gehīya-* 'take s.th. for a house' (VarYogay)
e. (*candrakānta-* 'moon-stone' [Suśr., Megh. etc.] →) *candrakāntīya-* 'be moonstone-like' (Śārṅgadhara)
f. (*citrá-* [RV+] →) *citrīya-* 'be surprised' (Hcar. etc.)
g. (*jñāna-* [ŚāṅkhŚS+] →) *jñānīya-* 'wish for knowledge' (Vop.)

I.e., *sajja-* → denominative *sajjayati/-te* 'make s.th. ready' (Mbh, R), with causative *sajjayate* 'get ready' (Mbh) and its passives *sajjyate/sajjīyate* 'be made ready' (Mbh).

Evidently based on the derived meaning ('fertile soil' →) 'fertile womb' or 'wife' (Epic etc.) of *kṣétra-* 'field'.

h. (*duḥkhá-* [ŚB+] →) *duḥkhīya-* 'feel pain' (Hit.)
i. (*mahānīla-* [Mhb+], *abhrá-* [RV+], *jāla-* [AV+] →) *mahānīlābhra-jālīya-* 'resemble a dense mass of black clouds' (Vās.)
j. (*mitrá-* [RV+] →) *mitrīya-* 'make s.o. a friend, treat as a friend' (Kāvya, also RV Anukr.)
k. (*śivá-* [RV+] →) *śivīya-* 'treat s.o. like Śiva' (Vop.)
l. (*śṛṅgāra-* [Kāvya] →) *śṛṅgārīya-* 'long for love' (Śāntiś.)
m. (*śaivāla-* [Mhb+] →) *śaivālīya-* 'resemble the ś. plant' (Vās.)
n. (*śvábhra-* [RV+] →) *śvabhrīya-* 'regard as a hole' (VarYogay)
o. (*saroja-* n. [Kāvya] →) *sarojīya-* 'be like a lotus' (Kāvya)
p. (*sahasrāyudha-* [Sāh., Kathās.] →) *sahasrāyudhīya-* 'resemble one who has , weapons' [Sāh., Kpr.]
q. (*suta-* [Manu+] →) *sutīya-* 'treat like a son' (Sāh.)
r. (*sthala-* [TS+] →) *sthalīya-* 'regard as dry land' (VarYogay)

Not surprisingly for Classical texts, the formation can readily be based on compounds, as in *kairavakorakīya-* 'resemble a lotus bud' (a), from Śārṅgadhara's treatise on horticulture (a th-century production compiled from earlier sources). So also (e), again from Śārṅgadhara, (i) from Subandhu's *Vāsavadattā* (th c.), and others. This feature reinforces the impression that, as Renou notes for the post-Vedic period (:§), the formation achieved a degree of productivity, perhaps by a relatively early stage.

4 Preliminary descriptive remarks

It is this productivity that probably accounts for the rare examples—either late or from grammatical sources—based on consonant stems ( ) and feminine *ā*-stems ( ), including not only forms based on compounds, but even one (c) based on a personal name:

( ) a. (*kartár-* →) *kartrīya-* 'act as agent' (Vop.)
b. (*mātar-* →) *mātrīyati* 'treat as a mother' (VarYogay, Pāṇ.), mid. 'desire a mother' (Pāṇ.)
c. (*rājan-* →) *rājīya-* 'treats like a king'? (Pāṇ. . .)

( ) a. (*aśnītapibatā-* →) *aśnītapibatīya-* 'intend to invite to eat and drink' (Bhaṭṭ.)
b. (*khaṭvā-* →) *khaṭvīya-* 'treat as a bedstead' (Pat. etc.)
c. (*tilottamā-* →) *tilottamīya-* 'represent the Apsaras T.' (Bhām.)
d. (*priyā-* →) *priyīya-* 'think s.o. to be another's mistress' (HYog.)

See Sütterlin : – on the secondary nature of this material.

But the claim (by Morgenroth, cited in §) that the formation is restricted to the active appears to be mistaken. Even if we discount the forms belonging to *taviṣīyá-* (d) as well as the epic form *sajjīyate* (§ with n.), we still find other forms inflected as middles (*kairavakorakīyate* (a), *citrīyate* (f)), including RV *caraṇīyámānā* (c). There is thus no problem with assuming the existence of old (or relatively old) middle forms of this type. Nevertheless, the fact that the Rig-Vedic form is a participle and not a finite form may be of some interest, as we will see later.

For the alternation between long and short /i/ (§), the variation between the Saṃhitā text of the Rig-Veda and the pada-pātha is superficially similar to the variation seen with actual *i*-stem denominatives: thus Saṃhitā (*kaví-* 'seer' →) *kavīyá-* 'be wise', but pada-pātha *kaviyá-*, like Saṃhitā *adhvarīyá-* (a), *putrīyá-* (e), *rathīyá-* (g) but pada-pātha *adhvariyá-*, *putriyá-*, *rathiyá-* (vs. invariable *caraṇīyá-* (c), *taviṣīyá-* (d)). But, as we have seen, even the Saṃhitā text of the Rig-Veda has a short vowel in *ánniya-* (b); and for the Atharva-Vedic short-vowel forms *putriyá-* and also (*i*-stem-based) *janiyá-* 'seek a wife', corresponding to long-vowel forms in the Rig-Veda, Whitney (: *ad* AVŚ . .) commented that these denominatives "have a right to their short *i*," citing the explicit mention of this in the Atharva-Veda *prātiśākhya* (iii. = CA . . , Deshpande :). There is, then, a need to provide an explanation for such short-vowel *-iya-* forms in both the Rig-Veda and Atharva-Veda.

For the semantics: Renou noted, for the Vedic material, a "légère insistance du sens 'désidératif'" (:). But this does not account for the totality of the data, even in Vedic: a more ordinary denominative sense 'do X' (arising from the meaning of the base word) is clearly found in RV *adhvarīyá-* (a) and AV *śapathīyá-* (h); and a meaning 'treat like X' (thus *putrīyá-* in part 'treat like a son') is authorized by Pāṇini (. .) and otherwise documented for a number of post-Vedic forms (e.g. (j), (k), (q)), beside still other senses, such as 'resemble X, behave like X' (e.g. (a), (b), (e), (i), (m), (o)).

5 Earlier approaches (part 1): inherited (or via inherited patterns)

5.1. Let us turn to the historical/comparative analysis. The most widespread assumption is the one reflected in the assertion by Thumb-Hauschild (:): "Die Bildung ist sicherlich alt, vgl. lat. *equīre* 'rossen' : *equus*, *catulīre* 'brünstig sein' : *catulus*." One cannot deny the superficial attractiveness of this comparison, given the fact that

Among *i*-stem-based forms, cf. similarly (*árāti-* 'malignity' →) RV *arātīyá-* vs. AV *arātiyá-* 'be malevolent'.

Similarly for the RV hapax *rathīyá-* (g): traditionally 'fahren wollen' (so Grassmann, s.v.); but there is nothing in the context of . . d that favors this (*rathīyántīva prá jihīta óṣadhiḥ* "every plant bends forward as if driving a chariot"; Jamison and Brereton :).

This conception follows Bezzenberger (: –); cf. more recently Nussbaum (: n.): "the parallelism of Skt. *putra-* 'son' : *putrīyant-* 'desirous of o spring' [scil. with Lat. *catulus* 'cub, pup, whelp' : *catulīre* 'be in heat'—BV] is striking."

thematic denominatives in Italic display *i*-conjugation (i.e., they belong to the fourth conjugation, in Latin terms), which resembles the "*i*-conjugation" in *putrīyánt-* (as opposed to the expected "*a*-conjugation" in *-ayá-* or *-āyá-*). But this connection is at best a case of *obscurum per obscurius* (the *i*-conjugation of thematic denominatives being a notorious problem of Italic historical grammar) and I think is ultimately to be rejected. First of all, the *i*-conjugation of thematic denominatives is general in Italic (e.g. Lat. *servus* 'slave' → *servīre* 'be a slave', *saevus* 'cruel' → *saevīre* 'be cruel'; in Sabellic, e.g. U. **seritu**/*seritu* 'observato, servato', belonging formally with Lat. *servīre*) and is not restricted to a few animal-husbandry terms like *equīre*. The arguably desiderative semantics shown by a few such terms may thus be secondary, in which case the proper comparison—if a comparison is to be made in the first place—is with the entire category of Italic thematic denominatives, and not just these few forms (a point already clear to Bezzenberger). For this difficult problem of Italic morphology, earlier proposals have attempted to justify actual *i*-stem sources for the Italic *i*-conjugated denominatives. But as I have discussed elsewhere (: –), this approach is fundamentally flawed, and the Italic forms with *i*-conjugation, despite appearances, may actually go back to ordinary thematic denominatives of the familiar *κοσμέω* type (§). If that is so, then forms like Lat. *equīre*, *servīre*, *saevīre*, U. **seritu**, etc. would not actually continue an inherited *i*-formation of any kind. Yet forms of the type Ved. *putrīyá-*/*putriyá-* necessarily go back to a prototype with earlier long or short /i/ preceding the *-i̯e/o- suffix, suggesting that the comparison between the *putrīyá-*/*putriyá-* type and Latin forms like *equīre*, *servīre* etc. has little chance of being valid.

5.2. According to a more recent (and avowedly tentative) proposal by Birgit Olsen (: n.), the basis of the Sanskrit type is indeed an *i*-stem form (**putl-i-*), which is then extended by the zero grade of the athematic optative suffix (**-ih*$_1$-), followed by the denominative suffix (**-i̯é/ó-*): thus *putrīyá-* < **putl-i-ih*$_1$*-i̯é/ó-*. *Ceteris verbis*, the athematic optative suffix is "infixed" between the noun stem and the thematic denominative suffix. Brief notice of this theory was taken by Martzloff, who commented (:) that "l'hypothèse … nous semble échapper à la démonstration"—an evaluation with which one must agree. Indeed, the matter can be put more strongly. The proposed formation, unexampled elsewhere, is highly improbable morphologically; and the reconstruction with the optative suffix, designed to account for the desiderative meaning, carries its own problems: as we have seen, non-desiderative meanings are also found, and (as we will see later) the desiderative meaning itself may even be indicative of a late syndrome, with no basis in anything inherited.

Nevertheless, the idea that the Indic thematic denominatives in *-īyá-* have their

---

In addition to *equīre* and *catulīre*, also *surīre* 'be sexually excited (of males)' (Apul. *Apol.* , cf. Festus . L *ex. coni.* for transmitted *subire*), cf. perhaps *surus* 'post, stake', *surculus* 'shoot, sprout'. (None of these verbs is to be found in de Vaan , despite their prominence in historical/comparative treatments of the Skt. *putrīyá-* type.)

origin in actual *i*-stems like **putl-i-* is itself not inconceivable, in at least two respects (§§ . – .).

5.3. The first of these involves the well-known category of so-called *cvi* formations, in which thematic forms alternate with forms in long *ī* (*i*-stem instrumental singulars in origin), in constructions with auxiliary verbs, especially *kṛ* and *bhū* (see e.g. Whitney : –). Thus, in yet another suggestion about the background of forms like *putrīyánt-*, Thumb-Hauschild (:) note the relationship between thematic stems and the /ī/ of *cvi* formations, and considers it probable that there is a connection between *cvi* formations and thematic denominatives in *-īya-*. Now *cvi* behavior (rather predictably) is certainly attested for some of the Classical material, as in forms like the following:

( ) a. *kṣetrīya-* (c): *kṣetrī-kṛ-* (Kād., AgP.)
b. *citrīya-* (f): *citrī-kāra-* (Lalit.), *citrī-kṛta-* (Śak.)
c. *mitrīya-* (j): *mitrī-kṛ-* (RAnukr., Kām. etc.), *mitrī-kṛta-*, *mitrī-bhū-* (Kathās.)
d. *sutīya-* (q): *sutī-bhūta-* (Kathās.)
e. *sthalīya-* (r): *sthalī-bhū-* (Naiṣ.)

Some of this material is quite late: thus *kṣetrī-kṛ-* (: *kṣetrīya-* (a)) in Bāṇabaṭṭa's prose romance *Kādambarī* (th cent.) and in the Agni-Purāṇa, or *sutī-bhūta-* (: *sutīya-* (d)) in the *Kathāsaritsāgara* (th cent.), and so on. Still, one can cite, for the sūtra form *ghanīya-* (§), a *cvi* form *ghanī-bhūta-*, attested as early as the *Rāmāyaṇa* and the *Harivaṃśa* (also in Suśruta), alongside later material like *ghanī-kṛ-* (Daśar.) and *ghanī-kṛta-* (Bhpr.). But for the forms from Veda and Brāhmaṇa, there is virtually nothing of this kind: to the best of my knowledge, there is only a form *putrī-bhū-* in the Bhāgavata-Purāṇa, and *putrī-kṛta-* in the *Raghuvaṃśa* of Kālidāsa and in the much later historical poem *Rājataraṃginī* (perhaps a th-century composition). This makes it tolerably clear that despite the position taken by Thumb-Hauschild, the denominative type *putrīyá-* likely has no connection historically with the synchronic Sanskrit *cvi* formation. There is little surprise, then, that this denominative type goes entirely unmentioned in the comprehensive study of the *cvi* formation by Balles ( ).

5.4. But there is another sense in which an *i*-stem basis is conceivable: this concerns the historical background of the *cvi* formation itself, as elucidated in a celebrated paper by Jochem Schindler ( ). According to Schindler's theory, subsequently developed by many others, the alternation between *o*-stems and *i*-stems is an inherited feature of Proto-Indo-European, only one manifestation of which is the Indic *cvi* formation. In principle, then, it is worth considering whether the *putrīyánt-* type goes back to such

"Zudem darf nicht außer acht gelassen werden, daß nominale *a*-Stämme auch in der Verbalkomposition den Ausgang *ī* zeigen, z.B. *svī-kar-* . . . zu *sva-* u.ä. . . . : ein Zusammenhang dieser Formen und der Denominativa auf *-īyati* ist daher wahrscheinlich."

i-stem variants of *o*-stems. There may in fact be some limited (if suggestive) evidence for old *i*-stem bases of this type, as in Ved. *caráṇi-* 'movable, active' (RV . . c only) beside *caraṇīyá-* (c.); similarly, RV+ *putrín-* 'possessing children' beside *putrīyá-*, can be interpreted (like other such *n*-stem adjectives) to have had a plain *i*-stem basis originally. There is, however, no trace of *i*-stem forms for the other Vedic material (there is no †*adhvari-*, no †*anni-*, etc.); thus, if we are to operate with a form like [*]*putri-* as the basis for *putrīyánt-*, we must explain not only why the *i*-stem form was favored for the denominative formation related to *putrá-* (that is, why there is instead no †*putrayáti*, the predicted form), but we must also explain how this pattern of making *i*-denominatives out of thematic stems spread to other thematic nouns like *adhvará-*, *ánna-*, and others.

Conceptually, these problems are reminiscent of those posed by the Italic thematic *i*-denominatives, as already indicated ($.). Yet this similarity does not authorize an assumption that the two formations reflect something inherited; and a truly old formation is in any event disfavored by the lack of an Iranian counterpart to the *putrīyá-* type, although this fact by itself cannot be conclusive.

6 Earlier approaches (part 2): via inner-Indic developments

We are led, then, to consider the possibility of inner-Indic development, and several theories of this kind have already been proposed.

6.1. Following on a brief discussion of denominatives based on resonant stems, Barber (:) observes that the *putrīyá-* type "could perhaps represent some secondary extension of Sievers' Law," but is not likely to represent "the direct outcome of Sievers' Law." The assumption here, presumably, is that these are at bottom truncated denominatives (cf. n. above), with a Sievers-like alternation between *-yá-* (for light roots) and *-iyá-* (for heavy roots). But this raises more questions than it answers. One would need to account not only for the generalization of the heavy-root version *-iyá-*, but also its appearance mainly in the form *-īyá-* (e.g. after the pattern of *i*-stem denominatives, where *-iyá-* and *-īyá-* alternate). There is, in any case, no reason to think that the formation has anything to do with truncated thematic denominatives.

6.2. According to Sütterlin (: –), the *putrīyá-* type is nothing other than the *i*-stem denominative pattern itself, which has spread beyond the *i*-stems to other stem types, on the basis of parallel formations—that is, cases in which *i*-stems had synonymous variants that were thematic or belonged to still other stem classes. This

---

Less probative, but perhaps of some interest, are some relatively early forms with *putri-* as a derivational base or as the first member of compounds: *putrikā-* 'daughter' (Manu, Mbh+), *putriputra-* 'daughter's son' (ŚāṅkhŚr), *aputriya-* 'childless' (ŚāṅkhGr̥+).

On form and meaning, see especially Tucker : – on Ved. *vr̥ṣāyáte* 'act like a bull' beside *vr̥ṣaṇyáti* 'be lustful'.

Oddly identified as "the Classical Sanskrit *putrīyati* type" by Barber, perhaps thinking of its productivity in the classical language (cf. ( ) above).

would be plausible if there were a su cient number of instances that would help account for the earlier material in particular; but this does not seem to be the case. The closest that Sütterlin can come to illustrating the kind of pattern his theory requires is a set like *dúṣṭi-* 'corruption' (AV+) beside its denominative *duṣṭīyá-* 'become corrupted' (Pāṇini), along with thematic *duṣṭa-* 'corrupted' (first in the Śrauta-Sūtras) and the feminine *ā*-stem abstract *duṣṭā-* (in epic Sanskrit). The pattern is reminiscent of what we saw in connection with the possibility of an *i*-stem *putri-* (§ . , with n.); but the explanatory value of such relatively late material, especially for the older forms, is very limited.

6.3. In a similar way, Sütterlin called attention to striking semantic convergences ("Bedeutungsanklänge") among the thematic-based *-īya-* verbs: he notes (: –) that there is an abundance of terms that fall within certain semantic categories, such as words relating to the family, to food and drink, and so on. But this observation, as we have seen, is more germane for the later material than the early forms, and thus is not helpful for interpreting the background of the formation.

6.4. We cannot omit mention of the often-noted co-occurrence of *putrīyá-* (RV . . b) with *janīyá-* (RV . . a), in a parallel construction (semantically, morphologically, and syntactically) in consecutive pādas of the same stanza:

( ) *janīyánto nv ágravaḥ*
putrīyántaḥ sudā́navaḥ
sárasvantaṃ havāmahe
"As bachelors in search of wives, in search of sons, possessing lovely gifts, we call upon Sarasvant." (trans. Jamison and Brereton :)

Yet this juxtaposition, in and of itself, does not prove much: it does not show, for example, that the form of *putrīyá-* must be due to *janīyá-*, even though this assumption is commonly held. In fact, the only other Rig-Vedic occurrence of *janīyá-* (. . c) also involves parallel denominatives with desiderative meaning:

( ) *gavyánta . . .*
aśvāyánto . . . vājáyantaḥ
janīyánto . . .
"Seeking cows, seeking horses, seeking prizes . . . ; seeking wives . . . " (trans. Jamison and Brereton : –)

E.g. Bloomfield and Edgerton : . , still followed by Albino (: with n.).

Or *vājayántaḥ*, with denominative accent? See next note.

I.e. as if *vājayántaḥ*, denominative participle to *vā́ja-* 'strength; booty'; similarly e.g. Geldner ("den Siegerpreis begehrend"), Tucker ("seeking booty", :), Elizarenkova ("желая добычи," :), Witzel, Goto, and Scarlata : ("nach dem Siegespreis strebend") but di erently Thieme ("Kraft zeigend", :), as causative to *vaj* 'be strong'.

At least in this case, *janīyá-* did not induce a thematic denominative †*aśvīyá-*, like *putrīyá-*.

6.5. If we look more closely at the attestations of these forms in the texts, it is the prevalence of participial forms (cf. § on RV *caraṇīyámānā*), together with the prominent desiderative sense, that is particularly striking; and indeed, as Fortson has shown (: –), these two features are intimately linked, since denominatives with desiderative meaning are primarily attested as participles. In the context of Sanskrit denominative verbs, these features have both been studied by Elizabeth Tucker, who convincingly argues, in her paper on innovations in the system of Indic denominatives, that they are indicative of late developments (see especially : –). She has also made the interesting suggestion (: n.) that the "morphologically marked" denominatives in *-īya-* and *-asya-* "may be closer to the realities of the Old Indic used in everyday speech during the Vedic period." For the *-īya-* denominatives, this suggestion may be supported not only by the prominence of these forms in the grammatical tradition and their scarcity in Vedic language (the two points Tucker mentions), but also by the overall post-Vedic profile these forms display, such as their general absence from sūtra-literature and from epic language, and the concentration of vocabulary in certain everyday semantic fields, as already described.

6.6. As for the vowel-length alternation (§): despite Sütterlin (:), who aligns this alternation with the similar one seen in *i*-stem denominatives (§§ , .), this surely has nothing to do with nominal *i*-stem alternations like *pátī-* ∼ *pátnī*. Rather, the alternation is probably best considered in terms of the prosodic patterning that governs thematic denominatives in *-aya-* and (with lengthened thematic vowel) *-āya-*, as elucidated by Insler ( ). Note further that for nearly all of the forms in Vedic poetry, the length of the /i/ is metrically predictable: thus the forms with /ī/ occupy positions in the cadence of dimeter and trimeter verse where long vowel is required:

( ) . . . *adhvarīyási* # (Jagatī cadence: RV . . c, . . d)
. . . *caraṇīyámānā* # (Triṣṭubh cadence: RV . . c)
. . . *adhvarīyatā́m* # (-syllable cadence: RV . . b, . . a)
. . . *śapathīyaté* # (-syllable cadence: AV-Ś . .b, . . b)

and in contrast, *ánniyate* (RV . . a) occurs in the early-caesura break of a Triṣṭubh line (# × × × × || *ánniyate* || × × × #), where short /i/ in that syllable is all but required. The only form that may actually be unpredictable metrically is pāda-initial

It is unclear how much weight to assign the *aśvīyá-* attested exclusively in grammatical literature ((b) above).

See also Insler and for brief notice of *-iya-*/*-īya-* and *-uya-*/*-ūya-* in these terms.

Hence Albino's suggestion (:) that the short /i/ in *ánniyant-* results from an actual metrical shortening. See also Albino (ibid., with references) on the unexpected root accent, evidently based on the Grundwort *ánna-*, which follows almost directly in the cadence of the same pāda.

putrīyántaḥ ( ), where we have variation between long and short vowel between Rig-Veda and Atharva-Veda (cf. *# putriyánti* AV-Ś . . b). As pointed out to me by Dieter Gunkel, prosodic lengthening in thematic denominatives is ultimately related to the avoidance of three consecutive light syllables. Viewed in this light, *ánniyate* in # × × × × || *ánniyate* || × × × # (RV . . a) recovers essentially the pattern of "unlengthened" *-aya-* denominative stems with heavy first syllable, cf. *devayá-* in

( ) # × × × × || *devayaté* || × × × # (RV . . d)
× × × × || *devayávo* || × × × # (RV . . b, . . b)

and in that case, one could say that—just as the underlying length of the (first) /a/ in *deva(yá)-* is e ectively indeterminate—the underlying length of the /i/ in a form like *ánniyate* is equally so, a point that should be taken into account in evaluating the historical background of the entire formation.

7 Conclusions

The results of the "house cleaning" operation promised at the outset, with attendant updating and problematizing, are predictably modest. Still, the following points may contribute to an eventual solution to the problems posed by the Vedic thematic denominatives in *-īyá-* (∼ *-iyá-*):

( ) a. The traditional comparison with Latin *o*-stem denominatives like *equīre* (and, more generally, Italic *o*-stem denominatives with *i*-conjugation) is probably specious, and an inherited formation of any kind is unlikely.
b. The type is probably not directly related to the synchronic *cvi* formation, though archaic *i*-stem alternants of thematic stems could have played a role (even if various details remain obscure).
c. The overall morphological and semantic profile suggests a recent development, similar in kind to the innovatory denominatives discussed by Tucker ( ); and the formation may be proper, as she suggested, to the spoken language.
d. The length alternation is probably related to the widespread "rhythm rule" identified by Insler; thus the historical source of *-īyá-* for these forms is as likely **-iyá-* as **-īyá-*.
