AN UMBRIAN-LATIN CORRESPONDENCE

BRENT VINE

I

ALMOST as soon as Aeneas and his men take shelter in the Strophades (*Aeneid* 3.209 ff.), the foul and ravenous Harpies swoop down and defile the banquet that had been set up. There is a second attempt to eat (*instruimus mensas, Aen.* 3.231), again frustrated by the attacking Harpies, followed by a hopeless counterattack led by Aeneas: the filthy birds are apparently invulnerable to the Trojans' flailings and merely fly off. The Harpy seeress Celaeno, as spokesperson of her vile sisterhood, remains behind perched on a crag and utters a chilling prophecy: the Trojans will indeed reach Italy, but they will not settle their city until a frightful famine (or famishment)—in recompense for injury done to the Harpies—forces them to consume their very tables:

> Italiam cursu petitis ventisque vocatis:
> ibitis Italiam portusque intrare licebit.
> Sed non ante datam cingetis moenibus urbem
> quam vos dira fames nostraeque iniuria caedis
> ambesas subigat malis absumere mensas.
> (*Aen.* 3.253–257)

Aeneas' men panic, and Anchises dramatically invokes the gods, begging them to avert such a horrible threat. As often, the prophecy turns out to be correct, but with a twist. Having landed in Italy, Aeneas and his men set up a ritual feast, consisting of sacrificial spelt cakes (*adorea liba*), which serve as platters for various fruits:

> Instituuntque dapes et adorea liba per herbam
> subiciunt epulis (sic Iuppiter ipse monebat)
> et Cereale solum pomis agrestibus augent.
> (*Aen.* 7.109–111)

This content downloaded from 139.184.14.159 on Tue, 27 Oct 2015 17:04:06 UTC
All use subject to JSTOR Terms and Conditions

But the fruit fails to satisfy their hunger, and so they devour the sacrificial cakes themselves. At this, young Iulus quips: *Heus, etiam mensas consumimus?* (7.116), which leads Aeneas to recall Celaeno's prophecy.

As the ancients knew, there was more to the prophecy and its *dénouement* than the circumstance of using *liba* somewhat in the manner of tables: Celaeno's central term *mensa* was in fact a *double entendre*, since the word originally designated precisely a round sacrificial cake on which offerings were heaped.[1] Confirmation of a most interesting sort comes from the ancient Umbrian ritual texts, in which sacrificial cakes of various sorts figure prominently. Here one finds the well-attested term **mefa** / *mefa*, which is the exact etymological equivalent of Latin *mensa*, and which designates a (probably broad, flat) sacrificial cake. A similar Umbrian-Latin correspondence has recently been discovered by C. Sandoz, in his analysis of U. (**mefa**) **vestiçia** / (*mefa*) *uestisia*, cf. Lat. (*panis*) *depsticius* (Cato *R.R.* 74).[2] The following study addresses just such a correspondence between Latin and Umbrian terms for sacrificial cakes.

Let me begin by citing Poultney's comments on the Umbrian sacrificial *ficla* cake, in his comprehensive edition of the Iguvine Tables:

> *ficla*: this type of cake, the exact nature of which is unknown, is added to the *prosecta* in the sacrifices before and behind the three gates and at the other stops during the purification of the Mount, and also in the lustration of the people . . . It may have been similar to the L. *fertum*, since *fertum* and *strues* are associated together in Cato *R.R.* 134, the former as an offering to Jupiter, the latter to Janus, while *ficla* and *strùsla*, the equivalent of L. *strues*, are associated in several Iguvine passages.[3]

[1] Cf. Servius *ad Aen.* 3.257: *Maiores enim nostri has mensas habebant in honore deorum, paniceas scilicet* and the formulaic oath preserved in Paulus *ex Festo* 112.6L: *Mensa frugibusque iurato significat per mensam et fruges.* See further A. Ernout and A. Meillet, *Dictionnaire étymologique de la langue latine*[4] (Paris 1967) 397.

[2] "Le nom d'une offrande à Iguvium: ombr. **vestiçia**," *BSL* 74 (1979) 339–346.

[3] J. W. Poultney, *The Bronze Tables of Iguvium* (Baltimore 1959) 249.

This content downloaded from 139.184.14.159 on Tue, 27 Oct 2015 17:04:06 UTC
All use subject to JSTOR Terms and Conditions

Thus Poultney tentatively correlates U. *ficla* and Lat. *fertum* based on the fact that both are associated with the cognate terms U. *strùsla* / Lat. *strues*. This penetrating and important observation has never been pursued to its logical conclusion in terms of Common Italic ritual practice.[4] One must begin with more precise accounts of the parallel associations Lat. *strues* / *fertum* and U. *strùsla* / *ficla*.

II

The association between the Latin terms *strues* and *fertum*, both designating sacrificial cakes, extends far beyond Poultney's reference to a single passage in Cato. Although most of the evidence has been assembled, the extent and significance of this association have perhaps not been adequately appreciated; for this reason alone, the following survey may be of some use.

1. Paulus *ex Festo* 75.17L.[5] *Ferctum genus libi dictum, quod crebrius ad sacra ferebatur, nec sine strue, altero genere libi, quae qui adferebant struferctarii appellabantur.*[6] Note in particular the phrase *nec sine strue*, as well as the compound *struferctarius*, which appears elsewhere in Paulus' extracts from Festus, in a slightly altered form:

2. Paulus *ex Festo* 377.2L (corrected from *Gloss. Lat.* 4.394): *Scrufertarios dicebant, qui quaedam sacrificia ad arbores fulguritas faciebant, a ferto scilicet quodam sacrificii genere.*[7] As already seen by Stolz,[8] *strufertarius* is a dvandva compound similar in formation to the archaic sacrificial term *suovitaurilia*, both motivated by patterns of ritual co-occurrence. (See also below on *strues* / *fertum* in the *suovitaurilia*

[4] For the general comparison, see already J. Savelsberg, *KZ* 20 (1872) 443–444.

[5] Citations from Festus (and Paulus Diaconus *ex Festo*) after *Sexti Pompei Festi de verborum significatu quae supersunt*, ed. W. M. Lindsay (Leipzig [Teubner] 1913), supplemented by Lindsay's annotations in his later edition, *Glossaria Latina* 4 (Paris 1930) 71–467.

[6] On the spelling *firctum* of nearly all manuscripts (also *firectum* T), see O. Müller, *Sexti Festi de verborum significatu quae supersunt* (Leipzig 1839) 85, and esp. A. Ernout, *Les éléments dialectaux du vocabulaire latin* (Paris 1928) 60, 165, who takes the form to be dialectal. The spelling with *-c-* is discussed below. On the *strues* cake, cf. Festus 408.21L: *Strues genera liborum sunt, digitorum coniunctorum non dissimilia, qui superiecta panicula in transversum continentur.*

[7] See Lindsay (*Gloss. Lat.* 4.394) for the confusion involving *scrufertarii* Gloss. Abol. SC 38 and a conflation with a gloss *scrutarii*, and for a possible restoration of Festus' mutilated entry for *strufertarios*.

[8] F. Stolz, *IF* 1 (1892) 332.

ceremony itself.)

3. Fabius Pictor (*apud* Aul. Gell. 10.15.14). In a list of detailed regulations concerning the Flamen Dialis (10.15.1–25), including injunctions concerning priestly garb and other paraphernalia he was to have on or about him at all times, we find the statement: *apud eius lecti fulcrum capsulam esse cum strue atque ferto oportet.* Although these regulations, including the injunction concerning the two sacred cakes *strues* and *fertum*, have on occasion been listed without comment in standard treatments of Roman religion,[9] Dumézil has observed that the *intent* of the rules concerning the appurtenances of the Flamen Dialis is to make of him "l'être pur et sacré par excellence, une incarnation du sacré."[10]

4. Cato *RR* 134.2–4. The archaic pre-harvest *porca praecidanea* sacrifice involves a complex double ceremony for Janus and Jupiter, in which ritual *strues* offerings directed toward Janus are then repeated for Jupiter with the *fertum.* Note the parallel phrasing—always with the sequence *strues* (for Janus) followed by *fer(c)tum* (for Jupiter)—both in Cato's instructions and in the prayers themselves:

> 2. **Iano struem** ommoveto sic: "**Iane pater, te hac strue** ommovenda bonas preces precor, uti sies volens propitius mihi liberisque meis domo familiaeque meae." **Fertum Iovi** ommoveto et mactato sic "**Iupiter, te hoc fercto** obmovendo bonas preces precor, uti sis volens propitius mihi liberisque meis domo familiaequae meae mactus hoc fercto." 3. Postea Iano vinum dato sic: "**Iane pater,** uti te **strue** ommovenda bonas preces bene precatus sum, eiusdem rei ergo macte vino inferio esto." Postea Iovi sic: "**Iupiter,** macte **isto fercto** esto, macte vino inferio esto." Postea porcam praecidaneam immolato. 4. Ubi exta prosecta erunt, **Iano struem** ommoveto mactatoque item, uti prius obmoveris; **Iovi ferctum** obmoveto mactatoque item, uti prius feceris. Item Iano vinum dato et Iovi vinum dato, item uti prius datum ob **struem** obmovendam **et fertum** libandum. Postea

[9] E.g., G. Wissowa, *Religion und Kultus der Römer* (Munich 1912) 506–507.

[10] G. Dumézil, *La religion romaine archaïque* (Paris 1966) 159. Cf. also H. Le Bonniec, *Le culte de Cérès à Rome* (Paris 1958) 153, who emphasizes the antiquity of this particular tradition: "Il n'y a pas d'offrande plus ancienne que les deux sortes de gâteaux sacrés (*strues* et *fertum*) qui sont ici [i.e., at Cato *RR* 134] présentés à Janus et Jupiter: le plus archaïque des prêtres romains, le flamine de Jupiter, devait en avoir toujours à sa disposition dans un coffret auprès de son lit."

Cereri exta et vinum dato.[11]

5. Cato *RR* 141.4. The *suovitaurilia* ceremony and sacrifice accompanying the *lustratio agri* begins with an invocation to Janus and Jupiter and continues with a prayer to Mars (*Mars pater, te precor quaesoque, uti sies volens propitius mihi domo familiaeque nostrae*, etc.; cf. the prayers to Janus and Jupiter, 134.2, just cited). Directly after the prayer, Cato enjoins the sacrificer to have the *strues* and *fertum* available, and then to offer them: *item cultro facito* ***struem et fertum*** *uti adsiet: inde obmoveto.*

6. *Acta fratrum Arvalium.*[12] Various expiatory sacrifices (*piacula*) described in the *Acta fratrum Arvalium* are accompanied with cake offerings, including *strues* and *fertum*. The typically incomplete references in the handbooks[13] to *strues* and *fertum* as used in the *Acta fratrum Arvalium* give a very imperfect impression of the frequency of this collocation and of its formulaic appearance in virtually all of the extant descriptions of *piacula* in these texts. It occurs no less than sixteen times in Henzen's corpus, always in *piacula*. In *piacula* performed *ob ferri inlationem* or *ob ferri elationem*,[14] the most frequent version (6x) is PIACULUM FACTUM . . . PORCIS ET AGNIS STRUIBUS FERTISQUE;[15] otherwise, the paired victims are singular: PIACULUM FACTUM . . . PORCA ET AGNA STRUIBUS FERTISQUE (3x),[16] PIACULUM FACTUM . . . PORCAM PIACULAR STRUIBUS FERTIS ET AGNAM QUORUM [*sic*] EXTAE REDDITAE SUNT,[17] PIAC[ULUM FACTU]M . . . STRUIB E[T] FERT PORCILIAM ALB[AM] PIACULAR,[18] and P.F. . . . PORCAM ET AGNAM STRUIB EFFERTIS [*sic*] ET EXTAS REDDID AD

[11] Citations from Cato after *M. Porci Catonis de agri cultura*, ed. A. Mazzarino (Leipzig [Teubner] 1962).

[12] References to the *Acta fratrum Arvalium* (*AFA*) will be given after W. Henzen, *Acta fratrum Arvalium quae supersunt* (Berlin 1874), by year, page, and line; in the case of material discovered after 1874 and before 1945, reference will be made to E. Pasoli, *Acta fratrum Arvalium quae post annum MDCCCLXXIV reperta sunt* (Bologna 1950), by page, number, and line.

[13] In addition to *OLD* and *ThLL*, see, e.g., Pauly-Wissowa 2099 (Orth) and Wissowa (above, n. 9) 412 n. 4.

[14] These instances are catalogued by Henzen 135.

[15] With minor variations in abbreviation and state of preservation: PI]AC FACT, [P]ORCIS ET AGNIS, STRUIB FERTI[SQUE, etc.; *AFA* a. 119, p. 155, lines 65–70 (*bis*, including the certain restoration STRUIBUS F]ERT[ISQUE); a. 121, p. 160, lines 57–61 (*bis*); a. 130, p. 165, lines 2–7 (*bis*).

[16] *Ibid.*, a. 156, p. 171, lines 70–75 (*bis*); a. 184, p. 189, lines 23–24.

[17] *Ibid.*, a. 221, p. 210, lines 7–13.

[18] *Ibid.*, a. 222, p. 212, lines 5–8.

This content downloaded from 139.184.14.159 on Tue, 27 Oct 2015 17:04:06 UTC

ARAM.[19] Similarly, in other *piacula* (for trees that have fallen either *ob vetustatem* or *tempestatibus*),[20] one finds (3x) PIACULUM FACTUM . . . PORCIS ET AGNIS STRUIBUS FERTISQUE,[21] and [PIACULUM FACT]UM . . . [PORCA]M ET AGNAM STRUIBUS FERCTISQ.[22]

Pasoli's additions to Henzen's corpus yield still another instance:

> ET LUCUM
> ASCENDER ET PROMAG ET FLAM STRUIB ET FER FECER ET IMMOL AGNA OP ALBA AD LITATIONE EXTA INSPEXERUNT ET REDDIDERANT[23]

Although the phrasing is somewhat different from that of previously known texts (note also the abbreviation STRUIB ET FER, otherwise unexampled in Henzen's material), this description does form part of a complex and detailed *piaculum*.[24] Note in this connection that in terms of Roman religious practice, the *porca praecidanea* sacrifice, even in Cato's purely agrarian version (as distinct from funerary versions), is essentially expiatory in character, that is, a form of *piaculum*, as Le Bonniec has discussed at some length.[25] Le Bonniec has also noted[26] the apotropaic character of the invocation to Mars in Cato's version of the ceremony. But one can observe more

[19] *Ibid.*, a. 225, p. 215, lines 21–23.

[20] These instances are catalogued by Henzen 139–140.

[21] *AFA* a. 101, p. 143, lines 1–2; a. 105, p. 146, lines 38–40; a. 118, p. 152, lines 41–43.

[22] *Ibid.*, a. 155, p. 171, lines 59–60.

[23] Pasoli 47, no. 100, lines 14–17 (a. 225).

[24] The fragments of the *Acta* published since Pasoli's edition have nothing more to offer: even though several new *piacula* have been discovered, the parts which probably contained phrases like *struibus fertisque* are broken off; thus the text reported by A. Ferrua, "Nuovi frammenti degli atti degli Arvali," *Bulletino della commissione archeologica comunale di Roma* 78 (1961–62 [1964]) 116–129, contains several *piacula*, one of which Ferrua restores (in part) as follows (118, lines 22–23 of the tablet):

> IN LUCO DEAE DI]AE PIACULUM FACTUM OB FERRUM INLA[TUM
> FERTISQUE PER KAL]ATOREM ET PUBLICOS FRATRUM ARVALIUM

Similarly the fragment in J. Scheid, "Un nouveau fragment des actes arvales de l'année 186/7," *ZPE* 43 (1981) 343–352, restored in part (345) as follows:

> STRUIBUS FERTISQUE] PER T. FLAVIU[M

[25] H. Le Bonniec (above, n. 10) 93 ff., 150, 154 ff. On *piacula*, see in general S. P. C. Tromp, *De Romanorum piaculis* (Amsterdam 1921).

[26] 148, with n. 5.

This content downloaded from 139.184.14.159 on Tue, 27 Oct 2015 17:04:06 UTC
All use subject to JSTOR Terms and Conditions

specifically that the ceremony is a "potential" *piaculum operis faciendi*[27] comparable to the *porca praecidanea* offering: if favorable omens are not received, the offering becomes an explicit *piaculum*: *Mars pater, . . . te hisce suovitaurilibus piaculo . . . te hoc porco piaculo* (141.4).[28]

7. Ovid *Fasti* 1.275–276. Janus describes the establishment of his altar, and the ritual offerings appropriate to him:

> ara mihi posita est parvo coniuncta sacello:
> haec adolet flammis cum strue farra suis.

Since Neapolis,[29] commentators have traditionally cited one or more of the relevant passages from Festus, Cato (134, but not 141), and the *Acta fratrum Arvalium*, to explain *strues* in its rare usage here as "(heap of) sacrificial cakes," and not "heap, pile" in general. Among twentieth-century editions, Frazer's fairly full discussion is noteworthy—and yet he omits all reference to the *fertum* cake.[30] Neapolis, in contrast, had commented explicitly on the association of *strues* and *fertum*, as seen in Festus and the ritual phraseology of the *Acta fratrum Arvalium*: "*Strues* libi genus, de quo vide Festum. Solita haec in sacrificiis misceri cum fercto; immo fere numquam hoc sine illa. Idem: *Ferctum genus libi dictum, quod crebrius ad sacra ferebantur, nec sine strue, altero genere libi, quae qui adferebant struferctarii appellabantur.* Inde in veteri lapide: PORCAM ET AGNAM STRUIBUS ET FERTIS."[31] It was Burman, the compiler of the great eighteenth-century variorum edition of Ovid,[32] who first drew a further inference: on the basis of Neapolis' comments (which he cites) and some

[27] *Ibid.*, 156 and Tromp (above, n. 25) 90 ff.

[28] See also Henzen 143 ff. on the expiatory *suovitaurilia* in the *Acta fratrum Arvalium.*

[29] C. Neapolis (Carlo di Neapoli), *Anaptyxis ad Fastos P. Ovidii Nasonis* (Antwerp 1639), in J. F. Palesius, *Caroli Neapolis Anaptyxis ad Fastos Ovidianos cum additamentis Jo. Felicis Palesii* (Palermo 1735) 101.

[30] *Publii Ovidii Nasonis Fastorum libri sex: The Fasti of Ovid*, ed. J. G. Frazer (London 1929) 2.129–130. F. Bömer, *P. Ovidius Naso: Die Fasten* (Heidelberg 1957) is silent at this point.

[31] Echoing Neapolis, also M. Bayeux, in the notes to his *Traduction des Fastes d'Ovide* (Rouen and Paris 1783) 1.173: "Le *Strues* étoit une espèce de gâteau que l'on n'offroit guères qu'avec un gâteau d'une autre espèce, appellé *Ferctum.* Une ancienne inscription rapportée par Neapolis, est ainsi conçue: *Porcam & agnam Struibus & Ferctis.*"

[32] P. Burman, *Publii Ovidii Nasonis Fastorum libri VI* (vol. 3 of *Opera omnia* [Amsterdam 1727]) 27.

This content downloaded from 139.184.14.159 on Tue, 27 Oct 2015 17:04:06 UTC
All use subject to JSTOR Terms and Conditions

variation in the manuscript tradition for *Fasti* 1.276 (especially the variant *cum strue tura* for *cum strue farra*), Burman wrote: "dubito an ex iis, quae affert Neapolis, legendum sit, *Haec adolet flammis cum strue fercta suis.*" Merkel, apparently independently of Burman, proposed virtually the same emendation in his pioneering critical edition of the *Fasti*: "*cum strue ferta suis*; ita enim legendum esse existimo, quamquam mutavi nihil."[33]

Burman's conjecture deserves more careful scrutiny.[34] Whether or not it is correct (in the narrow sense of producing a more accurate text), the association on which it is based is an important one; indeed, to the extent that the Burman/Merkel emendation *cum strue fer(c)ta* is motivated by this association, the weight of the evidence, as it appears above, is considerably stronger than either Burman or Merkel supposed.

Manuscript support for this conjecture is admittedly not strong, although certain points are suggestive, and in any event, the mixed manuscript tradition of the *Fasti* allows for a certain latitude: long before Peeters' extended treatment,[35] it was clear that the "best" manuscripts are often seriously corrupt and that the numerous *codices recentiores* not infrequently preserve important readings.[36]

Apart from *haec adolet* (for which some manuscripts read *hanc* or *adolent*), manuscript variation for the remainder of the line is not indicated in any modern edition and must be sought in Merkel's critical apparatus of 1841; some of this material is also available, in less precise form, in the editions of Krebs (1826) and Burman (1727, citing material from Heinsius' edition of 1652).

The second half of the pentameter in *Fasti* 1.276 (*cum strue farra suis*) has the following variants:

[33] R. Merkel, *P. Ovidii Nasonis Fastorum libri sex* (Berlin 1841) xcvi. Merkel's insistence on the *fert-* variants in Festus may imply knowledge of Burman's discussion, since Burman quoted only the *ferct-* variants throughout. The conjecture, in any case, had been correctly attributed to Burman by J. P. Krebs, *P. Ovidii Nasonis Fastorum libri sex* (Wiesbaden 1826) 16.

[34] The last edition of the *Fasti* to take note of it was that of F. A. Paley, *P. Ovidii Nasonis Fastorum libri sex* (London 1864) 23, who attributed it to Merkel. It has been accepted only by *ThLL* 6.1.589 (s.v. *fertum*), again with attribution to Merkel.

[35] F. Peeters, *Les Fastes d'Ovide* (Brussels 1939); see also G. Luck, *Untersuchungen zur Textgeschichte Ovids* (Heidelberg 1969) 49–53.

[36] For an early appreciation of this state of affairs, see H. Peter, *P. Ovidi Nasonis Fastorum libri sex*[3] (Leipzig 1889) vii–viii. Similarly Le Bonniec, *P. Ovidius Naso: Fastorum liber primus* (Paris 1961) 14–15.

This content downloaded from 139.184.14.159 on Tue, 27 Oct 2015 17:04:06 UTC
All use subject to JSTOR Terms and Conditions

cum sale farra suis: Merkel's *codices recentiores* s and g.[37] According to Heinsius (see Burman, *loc. cit.*), "Pro *cum strue* duo Vaticani, *cum sale*, ut molam salsam intelligit."[38]

cum strue thura / turra suis: *thura* Merkel's 3 (along with an unnamed second manuscript), *turra* P.[39] Cf. Burman, who notes "*cum strue tura* Excerpt. Vossii et duo alii."[40]

cum strue farta suis: Merkel's *codex recentior* r (*ma. pr.*).[41]

None of these *codices recentiores deterioresque* figures in the recent Teubner edition of Alton *et al.*,[42] but the testimony of P, at least, is frequently useful.[43] Without presenting formal arguments in favor of Burman's emendation, let me simply raise certain textual parallels.

Janus had already, in fact, referred to his own ritual offerings:

> Inde vocor Ianus; cui cum Ceriale sacerdos
> imponit libum farraque mixta sale
> (*Fasti* 1.127–128)

[37] Merkel's s (see his description, cclxxxii) is the Codex Petri Servii, Bodl. Auct. F. 4.28 (received from Petrus Servius by Heinsius); see further Peeters 167, and E. H. Alton *et al. BICS* 24 (1977) 53 (no. 108); Merkel's g is the so-called "Gallicus Mazarinianus" (or "Mazarinianus alter") of Heinsius (Bodl. Auct. F. 4.24, Alton *et al.* 53 no. 105), which is not, as both Merkel and Frazer supposed, Paris. 7992 (Heinsius' "Codex Sarravianus"); on this confusion, see Peeters 155, 158, 179 n. 7 and esp. Alton *et al.* 53 and D. E. W. Wormell, *Hermathena* 93 (1959) 38.

[38] Krebs (above, n. 33) records *cum sale* in two of the 58 manuscripts he examined, without specifying which ones.

[39] For the closely related 3 ("Excerpta Douzae") and P (= Peeters's "Pa," Paris. 8239, the so-called "Puteanus primus" of Heinsius), see Merkel cclxxx and cclxxxiii, Peeters 156 and 202 n. 1, and Alton *et al.* 54 (no. 117). On the "Excerpta Douzae," see M. D. Reeve, *RhM* 117 (1974) 165 and 119 (1976) 75.

[40] On the varied sources of the "Excerpta Vossii" of Heinsius, see Peeters 153, 165, Merkel ccxciii, and Reeve, *RhM* 117, 164, and 119, 74. Krebs (above, n. 33) again records *tura* from a single unspecified source.

[41] The so-called "Codex Relandinus" (Berol. Diez B. Sant. 25, Peeters's "Berol. 2"); see Merkel's description (cclxxxii), Peeters 157, and Alton *et al.* 39 (no. 5).

[42] *P. Ovidi Nasonis Fastorum libri sex*, ed. E. H. Alton, D. E. W. Wormell, and E. Courtney (Leipzig [Teubner] 1978).

[43] On the affiliations of P with both AUD and G, see Peeters 343 ff.

Here the priest sets out the offering cake (*Ceriale libum*), together with *far* and the archaic offering of *mola salsa*. These last two items are again coupled later in Book 1:

> Ante, deos homini quod conciliare valeret,
> far erat et puri lucida mica salis.
> (*Fasti* 1.337–338)

In 1.276, then, the *farra* of the best manuscripts is a clear *lectio facilior*: *strues* plus *farra* is equivalent to *libum* plus *farra* in 1.128. Moreover, the variant *cum sale farra* need not have any bearing on the status of *farra* in the text: it may simply show that the unfamiliar meaning of *strues* has led to the word's displacement, with correction to *sale* after 1.128 and 1.338, where *far* and *sal* appear together.

But if, then, *farra* seems secure, how are we to explain *cum strue turra*, the reading of P? At first glance, *turra* looks like a trivial misreading of *farra*; but for *tura / thura* "incense," P otherwise (e.g., at 1.172, 1.341, 1.719) never spells *turra* (which in any case is an unusual, if not unique, spelling). One wonders whether *turra* is a corrected (or garbled) version not of *farra* (which would have been eminently transparent, to judge from the above parallels), but of something unintelligible, for which the rare sacrificial term *ferta* would indeed be a good candidate. If so, correction to (or inadvertent replacement by) *turra / thura* could have been suggested by 1.341 and 1.343, with line-initial *tura* and *Ara*, respectively (cf. *Ara* . . . , 1.275); by 1.172 *Iane, tibi primum* ***tura*** *merumque* ***fero***; and by 1.719 **Tura**, *sacerdotes, pacalibus addite* ***flammis***, cf. 1.276 *haec adolet flammis*. As for *farta*: the Codex Relandinus (which is of very mixed provenance) is not otherwise known to preserve precious readings; it is therefore unlikely (although perhaps not impossible) that *farta* continues an ancient reading *ferta*.

In the final analysis, Burman's conjecture cannot be accepted without a great deal of reservation. But the pervasive association of *strues* and *fertum* in archaic Roman liturgy—which is a fact of Roman ritual practice whether or not one believes in Burman's emendation—has surely been insufficiently appreciated by commentators on the *Fasti*,[44] and it is worth considering whether Ovid may have had such an association in mind; for this reason, the emendation ought not have been treated with the neglect it has received.

[44] This despite the fact that virtually all of the material cited above had been assembled by Savelsberg ([above, n. 4] 443) as early as 1872.

Before examining some consequences of the association *strues / fertum* for Umbrian and Italic ritual, I offer some remarks on the etymology of *fertum*.

Meillet (in Ernout-Meillet) seems to favor the etymology from *fero* implied by Festus (75.17L, cited above: *Ferctum genus libi dictum, quod crebrius ad sacra ferebatur*) and attested in other ancient commentators.[45] But he admits that "l'explication par *fero* n'est peut-être qu'une étymologie populaire," partly because "cette étymologie ne rend pas compte de la graphie *ferctum*, qui est aussi fréquente que *fertum*." Meillet's intuition was correct: indeed, the traditional etymology presented by Walde-Hofmann[46] accounts perfectly for the spelling *ferctum* and should be retained. The crucial point, as Walde-Hofmann notice, is not that the spelling *ferctum* is "as frequent" as *fertum* but that it is restricted to (and attested with certainty in) archaic and archaizing contexts (Cato, Festus, *Acta fratrum Arvalium*). The velar is real, and the chronology of its disappearance within Latin is regular and has good parallels.[47] *Fer(c)tum* is thus a substantivized **bhérĝ-to-* to a *to*-participle **bhr̥ĝ-tó-* "cooked, roasted," cf. Rig-Vedic *bhr̥jjáti* "he roasts" (**bhr̥ĝ-ské/ó-*).[48] It is significant (and this has not been pointed out before in this connection) that the Rig-Vedic hapax *bhr̥jjáti* (3 sg. pres. subj. *bhr̥jjáti* 4.24.7b) occurs in a ritual context, referring to the roasting of barleycorns for Indra as an adjunct offering in the soma ritual:

yá indrāya sunávat sómam adyá
pácāt paktír utá bhr̥jjáti dhānáḥ
(RV 4.24.7ab)
He who will press soma for Indra today,
cook cookings and roast barleycorns . . .

[45] E.g., schol. *ad* Pers. 2.48: *Genus panis vel libi, quod diis infertur a pontificibus in sacrificio; dictum autem fertum a ferendo*; Isidore *Orig.* 6.19.24: *fertum enim dicitur oblatio quae altari offertur et sacrificatur a pontificibus, a quo offertorium nominatur quasi propter fertum.* See Ernout-Meillet (above, n. 1) 230 and also Lindsay, *Gloss. Lat.* 4 (above, n. 5) for Isidore's probable dependence on Festus.

[46] A. Walde and J. B. Hofmann, *Lateinisches etymologisches Wörterbuch* (Heidelberg 1938–54) 486–487, with earlier references.

[47] See M. Leumann, *Lateinische Laut- und Formenlehre* (Munich 1977) 217.

[48] In later Sanskrit, *bhr̥j-* and its derivatives continue to apply most characteristically to the roasting or parching of grain, e.g., *bhr̥jjyati* (Epic), causat. *bharjayati* (Suśruta, Āpastamba Śrautasūtra; grammarians also *bhrajjayati*), *bahubhr̥j-* "roasting much" (Vopadeva), *bharjana-* adj. "roasting" or n. "(the act of) roasting" (Bhāgavata Purāṇa, Kātyāyana Śrautasūtra), etc.

The recent etymological *non liquet* accorded *fertum* by the *Oxford Latin Dictionary* ("[dub.]") is therefore quite unwarranted.[49]

III

As with *strues* and *fertum*, the behavior of U. *strùsla* and *ficla* can also be described more accurately. In point of fact, these two terms are associated with each other not in "several Iguvine passages," but no less than nine times in the text of the Iguvine Tables.[50] In eight of these nine passages (i.e., all but VIb 5), they occur in an asyndetic sequence *strùsla ficla*. Moreover, seven of the nine occurrences of juxtaposed *strùsla* and *ficla* appear in seven different sacrificial ceremonies, in the ritual formula **prusektu struhçla fikla arveitu** / *prosesetir strùsla ficla arsueitu*, "add the *strùsla* (and) *ficla* to the cut-off (parts)."[51]

The two instances of juxtaposed *strùsla* and *ficla* that do not appear in this formula are themselves instructive of the intimacy and antiquity of this juxtaposition. They both appear, together with **prusektu struhçla fikla arveitu** IIa 28–29, in the ceremony describing the sacrifice of a dog to Hondus Jovius, one of the oldest and most detailed portions of the Tables (IIa 15–44). After designating the proper time for the festival of the Hondia, the instructions list various paraphernalia the *adfertor* is to have at hand:

> **huntia fertu**
> **katlu arvia struhçla fikla pune vinu salu maletu**
> **mantrahklu veskla snata asnata umen fertu.**
>
> (IIa 17–19)

> He shall bring the things pertaining to the Hondia; he shall bring the dog, grain, a *strùsla* cake, a *ficla* cake, mead, wine, ground salt, a maniple, wet and dry vessels, and unguent.[52]

[49] The more distant etymological relationship of *fer(c)tum* with Lat. *frīgō*, Greek *φρῦγω*, Umbrian **frehtef** / **frehtu** is not excluded, but awaits clarification of the differing root vocalisms of these forms. Oscan *fertalis* is discussed below.

[50] IIa 18, IIa 28–29, IIa 41, VIa 59, VIb 5, VIb 23, VIIa 8, VIIa 42, VIIa 54. *Strùsla* otherwise occurs only three times, while *ficla* otherwise occurs six times.

[51] Variations: *arueitu* in VIb 23, *ficlam* in VIIa 42, order *strùsla ficla prosesetir arsueitu* in VIIa 54 and *prosesetir ficla strùsla arsueitu* in VIb 5.

[52] Poultney's translation (178). The meanings of some of these items are controversial; see Poultney's notes *ad loc.*

Here we find that the only sacrificial cakes to be offered are the *strùsla* cake and the *ficla* cake, listed in that order. The slaughter and sacrifice of the victim at the altar follows directly, during which the *strùsla* cake and the *ficla* cake are added to the cut-off parts as part of a burnt offering (IIa 28–29, cited above). After some ceremonies performed away from the altar, the *adfertor* returns to the altar and concludes the ceremony; before extinguishing the fire, he is to grind (a portion of) the *strùsla* cake and the *ficla* cake: **struhçlas fiklas** . . . **kumaltu** (IIa 41).

IV

Both religious traditions, then, show a well-attested double cake offering, of which the first member involves the cognate terms Lat. *strues*/ U. *strùsla*. In both traditions, moreover, the double cake offering is associated not only with animal sacrifice in general but more specifically with ceremonies involving the *exta*: with the Umbrian formula *prosesetir strùsla ficla arsueitu*, cf. Cato *RR* 134.4 *ubi exta prosecta erunt, Iano struem ommoveto . . . Iovi fertum obmoveto*, as well as the specific mention of *exta* in several of the sacrificial passages from the *Acta fratrum Arvalium* cited above. We find a similar association in the only other literary attestation of *fertum* in Latin beyond those already cited, in Persius' sarcastic description of a religious hypocrite: *et tamen hic extis et opimo vincere ferto / intendit* (2.48–49).

One can also observe that in both traditions, these offerings are primarily associated with expiatory or purificatory ceremonies. As already noted, the Umbrian collocation *strùsla ficla* occurs in three major contexts: the dog sacrifice to Hondus Jovius, the purification of the citadel, and the *lustratio populi*. The purificatory nature of the dog sacrifice has been discussed in some detail by I. Rosenzweig,[53] and the purification of the citadel is explicitly styled a *pihaclu* (= Lat. *piaculum*). Note also that the central deity of the Umbrian *lustratio populi* is Mars, in his guise as the divinity "who presides over the well-being and increase of fields and cattle and men" (Rosenzweig 87); he is thus to be compared (cf. Rosenzweig 88) precisely with the Mars of Cato's *lustratio agri* in *RR* 141, where the ceremony again involves the cake offering of *strues* and *fertum*.[54]

[53] *Ritual and Cults of Pre-Roman Iguvium* (London 1937) 50 ff.

[54] That the collocation *strùsla ficla*, in these latter two ceremonies, occurs only in the later Tables VI and VII (and not in the earlier accounts of these same ceremonies in Table I) does not argue against the antiquity of this ritual phrase, since (1) it appears in the dog sacrifice in IIa (on Table II as the oldest

In view of the above facts, I suggest not only that the *ficla* cake may be similar to the Latin *fertum* (as Poultney had surmised) but, more important, that the cultic associations *strues* + *fertum* and *struśla* + *ficla* are ritually cognate, reflecting a two-member phrase assignable to Common Italic ritual practice.[55] For sacrificial cake vocabulary in particular, the correspondence U. *struśla* / *ficla*: Lat. *strues* / *fertum* is thus comparable to the correspondences U. **mefa** / *mefa*: Lat. *mensa* and U. (**mefa**) **vestiçia** / (*mefa*) *uestisia*: Lat. (*panis*) *depsticius* with which we began.

The question as to which of the two second terms—Lat. *fertum* or U. *ficla*—is the innovation cannot be answered with certainty; there are nevertheless reasons to believe that Lat. *strues* / *fertum* preserves the older form of this formulaic phrase, with *ficla* a purely Umbrian replacement.

Umbrian **fikla** / *ficla* (< **fig-klā* < **fig-tlā*) is formally almost identical to Latin *fitilla*, "sacrificial cake." But it would be difficult to claim that within Latin, *fertum* has replaced *fitilla* in an original phrase **strues (et) fitilla*: although rare, *fertum* clearly belongs to an early stage of Roman religious practice (witness Cato, *AFA*, Fabius Pictor), and its association with *strues* is undeniably ancient (as shown, in particular, by the dvandva compound *strufertarius*). In contrast, the still more rare *fitilla* (attested twice in glosses, once in Seneca, once in Pliny the Elder, twice in Arnobius) is not in fact native Latin, but

---

of the Tables, see Poultney 22–23); (2) numerous differences of detail between Tables I and VI/VII in the instructions for the same ceremonies need not be interpreted chronologically, including (3) the general fact that details of *any* cake offerings are systematically absent from the somewhat more laconic Table I (with a single exception, see Poultney 158), and (4) the fact that VI and VII occasionally show more archaic forms than corresponding portions of I. On the relationship between I and VI–VII, which no doubt involves an archetype on which they both depend, see further A. Nussbaum, "*Benuso, couortuso,* and the Archetype of *Tab. Ig.* I and VI–VIIa," *JIES* 1 (1973) 356–369.

[55] On important correspondences between the ancient ritual of the Atiedian Brethren and Roman religious practice, see Rosenzweig (above, n. 53) *passim*, esp. chap. 4 (102 ff.), with specific discussion of correspondences with the Fratres Arvales (110–111), and A. J. Pfiffig, *Religio Iguvina* (Vienna 1964) esp. 113–115 on parallels in Roman and Umbrian prayer language. From the standpoint of comparative methodology, note R. Bloch's important essay "Parenté entre religion de Rome et religion d'Ombrie: Thèmes de recherches," *REL* 41 (1963) 115–122, esp. 118 on similarities in ritual practice and 120–122 for arguments in favor of Common Italic ancestry—as opposed to borrowing from Etruscan or intercultural (Umbrian-Roman) contact—as the preferred explanation for Umbrian-Latin ritual correspondences.

precisely a dialectal form (for **fictilla*) that may well be, as Ernout thinks, "un mot dialectal introduit à Rome en même temps qu'un culte italique, et dont les Romains ignoraient eux-mêmes l'emploi et le sens exacts."[56]

Bréal, in an important early discussion of U. *ficla* and Lat. *fitilla*,[57] adduced certain important facts about *fingo* and its derivative *fictor*: in archaic Latin, *fingo* was regularly applied to the preparation of sacrificial cakes (cf. *fingito* in Cato *RR* 74, 76.3, 77, 82);[58] its derivative *fictor*, moreover, could refer specifically to priestly assistants responsible for baking sacrificial cakes (cf. Varro *LL* 7.43: *Apud Ennium— 'Mensas constituit idemque ancilia; . . . libaque fictores Argeos et tutulatos'* [= *Ann.* 120–121 V^2, 114–115 S] . . . *fictores dicti a fingendis libis.*).[59]

Given this pan-Italic use of IE **dheiĝh-*, "fashion," as a baking term (in this usage already specialized, in Italic, toward sacrificial contexts—unlike, e.g., Germanic: cf. Eng. *dough*), it would be quite plausible to claim that in Umbrian, an opaque, or obsolete, or otherwise unstable **ferhtu* or the like could have been replaced by a "generic" cake term *ficla*.[60] Indeed, a secondary development may also be indicated by the suffixal rhyme in the pair *struhla ficla*, which otherwise appears in the similar (and similarly frequent) rhyming cake

[56] Ernout (above, n. 6) 165–166.

[57] M. Bréal, *Les tables eugubines* (Paris 1875) 101, building on Savelsberg (above, n. 4) 443.

[58] Despite Poultney (161) and others, U. **fiktu** and **afiktu** in the phrases **vestiçam** . . . **fiktu** (Ia 28) and **vestiça afiktu** (Ia 31) belong with *fingo* rather than *figo*, and are thus directly comparable to Cato's *panem depsticium* . . . *defingito, RR* 74, as Sandoz has observed (above, n. 2) 343.

[59] Note also Cicero *De domo* 139 (*sacerdos* . . . *sine fictore*), FICTORES PONTIFICUM (*CIL* 5.3352), FICTORES V(IRGINUM) V(ESTALIUM) (*CIL* 6.2134), and other references cited by Savelsberg and Bréal, as well as Wissowa (above, n. 9) 519 n. 1 and Sandoz 343–344.

[60] Part of the motivation for replacing an original **ferhtu* may have involved avoidance of near-homonymy and confusion with the frequent ritual imperative *fertu* (cf. **struhçla fikla** . . . **fertu** IIa 18–19 above, in the dog sacrifice) and/or the controversial (participle?) **frehtu** (IV 31, cf. **frehtef** IIa 26, precisely in the phrase **frehtef fertu**, also in the dog sacrifice), which may well be related to Lat. *fertum*, but which seems to mean "boiled" rather than "roasted" or "baked" in Umbrian; see Poultney *ad loc.*, 183 and 217, and for an entirely different explanation of **frehtu**, see W. Borgeaud, *Fasti Umbrici: Etudes sur le vocabulaire et le rituel des Tables eugubines* (Ottawa 1982) 126–130.

phrase *mefa spefa*.[61] The tendency of Umbrian ritual language toward marked effects based on rhyme, alliteration, and rhythm is well documented and may also be thought of as a contributing factor, together with the high frequency of ritual terms based on **-tlo/ā-* (< U. **-klu** *-clu -clo* / **-kla** *-cla*: **ehvelklu**, **naraklum**, **muneklu**, *pihaclu*, *mandraclo*, etc.), and on a number of other formations with suffixal *-l-*.[62]

Although a cake term related to Lat. *fertum* does not survive in Umbrian, there is some evidence for just such a term in Oscan *fertalis*, found on one of the archaic *iovilae* inscriptions.[63] Since the time of von Planta's first analysis of this inscription,[64] and in spite of continuing controversy over the nature of these somewhat enigmatic documents, scholars have generally assumed that *fertalis* refers, in one way or another, to ceremonies or offerings involving sacred cakes comparable to Lat. *fertum*.[65] Heurgon, moreover, has convincingly analyzed the double figuration on these inscriptions (pigs and various circular figures) as representations of the sacrificial animal *par*

[61] The association between *mefa* and *struśla* (and their rhyming doublets *mefa spefa* and *struśla ficla*) is in fact quite intimate and involves a number of parallels and significant oppositions, only some of which have been noted before. Thus Pfiffig (above, n. 55) 75 observes that while the *mefa* cake is regularly offered to the great celestial deities, the *struśla* cake is typically offered to chthonic or quasi-chthonic divinities. A particularly close correspondence appears in the phrase *mefa spefa ficla* (VIa 56, VIb 20, VIIa 4), which is always followed by a contrasting *struśla ficla* offering. Although I cannot pursue detailed argumentation here, the close association between the phrases *mefa spefa* + *ficla* and *struśla* + *ficla* may help explain the replacement of a hypothetical **struśla* + *ferhtu* with *struśla* + *ficla*.

[62] See Poultney 90. Lat. *fingo* itself is known to have exerted pressure of a similar sort, in generating the rhyming pair *fingo* / *pingo* (for **pinco*), in an association that may be of Indo-European date, as W. Schulze has discussed with reference to Tocharian A *tsekeṣi pekeṣi*, *Kleine Schriften* (Göttingen 1934) 257–261.

[63] Despite F. Ribezzo, *RIGI* 14 (1930) 81, Paelignian *frata* and *fertlid* probably have nothing to do with Lat. *fertum*, especially since the inscription in which they occur (E. Vetter, *Handbuch der italischen Dialekte* [Heidelberg 1953] 145, no. 213) is almost certainly funerary and not a votive offering, as Ribezzo thought. (In addition to Vetter 146 ["... kann kein Zweifel darüber sein ... dass wir eine poetische Grabschrift vor uns haben"] see G. Bottiglioni, *Manuale dei dialetti italici* [Bologna 1954] 333.)

[64] R. von Planta, *IF* 4 (1894) 255–264, esp. 261–262 and 264; for the inscription, see C. D. Buck, *A Grammar of Oscan and Umbrian* (Boston 1928) 249 (no. 26), Vetter 75 (no. 81), Bottiglioni 218 (no. 37), and most recently A. Franchi de Bellis, *Le iovile capuane* (Florence 1981) 179–185 (no. 24).

[65] See Franchi de Bellis 184 for a review of earlier literature on *fertalis*.

excellence in ancient Italy, accompanied by its associated ritual offering *par excellence*, that is, sacred cakes.[66] Whether *fertalis* is a sacrificial term or (as Franchi de Bellis has recently argued[67]) a calendrical term, reference to sacred cakes remains an attractive possibility.

A final point favoring a reconstructed Common Italic collocation of reflexes of IE **stru-* and **bherĝ-* (as opposed to **stru-* and **dhiĝh-*) is that the ritual usage of IE **dheiĝh-* (in Lat. *fingo*, *fictor*, dial. Lat. *fitilla*, U. **fiktu** and *ficla*) appears to be an Italic innovation, whereas **bherĝ-* may already have had this sense in Indo-European, to judge from the ritual contexts of both Lat. *fertum* and Rig-Vedic *bhṛjjáti*.[68]
