identical: the final *o* in *Δεινοδικηο* is short, and *-ηο* may well count as a diphthong, while in *αλησν* the *o* is very clearly long. Homeric δῶ (p. 199) certainly was not 'a form of the suffix –δε' as becomes clear from Mycenaean *do-de* (which also contrasts with *wo-(i)-ko-de*), reflecting the old word for 'house'.

It would be invidious and unjust to criticise every weakness or error in this book, which has many strengths. It is very well written and accessible, well set out and well produced. The views expounded for the most part represent the *communis opinio*, and the reader is frequently referred to further literature. When C. strays into matters Indo-European he is clearly on shakier ground, though for many students this will be less relevant.

As it stands, this is a fine book and it will no doubt quickly become a favourite item on reading lists on the topic. A revised and corrected edition with a paperback version more affordably priced could make a very good standard textbook, as Buck was for so many years.

PHILOLOGICAL PERSPECTIVES

GEORGE (C.), MCCULLAGH (M.), NIELSEN (B.), RUPPEL (A.), TRIBULATO (O.) (edd.) *Greek and Latin from an Indo-European Perspective*. (Proceedings of the Cambridge Philological Society, Supplementary Volume 32.) Pp. viii + 214. Cambridge: The Cambridge Philological Society, 2007. Cased. ISBN: 978-0-906014-31-8.

doi:10.1017/S0009840X09000031

The seventeen studies in this well-edited volume originated from a 2005 Cambridge conference, 'dedicated' (the Editors explain) 'to the light which the classical languages shed on Indo-European linguistics and, conversely, the way in which historical linguistics can improve our understanding of Greek and Latin'. The conference was intended 'primarily as an opportunity to bring together researchers in the early stages of their academic career', which renders all the more impressive the high quality of the fifteen papers by junior scholars collected here, along with papers by the keynote speakers, J.T. Katz (Princeton) and A. Willi (Oxford). (The roster is international, but all papers are in English, with few traces of non-native control; only 'the base of Tibur' [p. 54, for 'the Tibur pedestal'] may confuse non-specialists.) The papers are organised into six topic areas (Phonology; Verbal Morphology; Particles, Preverbs and Pronouns; Nominal Morphology; Etymologies; Poetics), followed by a comprehensive bibliography, but – regrettably – no word index.

The beneficiaries of the 'light' and 'understanding' are here almost exclusively Greek and Proto-Indo-European: only three papers address Latin topics; yet these are among the most accomplished. M. de Vaan, author of the impressive *Etymological Dictionary of Latin and the other Italic Languages* (Leiden/Boston, 2008), offers a clever solution to the etymology of Latin *adulari* 'fawn upon'. D. Haug, in 'The Prefix *co(m)-* with Motion Verbs in Plautus: Philological Study and Etymological Implications', shows convincingly (if surprisingly) that the core meaning is not 'together', but 'toward', also visible in other verbs (e.g. *colloquor* 'speak to', not

'converse with') and some substantival and participial expressions (e.g. *cognatus*, [*patres*] *conscripti*). Haug capably sketches the broader etymological implications; one only wishes that space had permitted discussion of isolated material: unmentioned, but potentially interesting, for example, are Lat. *coram* 'in person' ('[face] *to face*'?) and (assuming Szemerényi's famous etymology) *quaerere* 'ask' < **ko-aise/o-* (surely not 'ask together'). In the most broadly-conceived Latin paper, 'Iteratives and Causatives in Latin: a Unified Approach', D. Kölligan explains the distribution of iterative vs causative meaning in second-conjugation verbs as a predictable function of the lexical semantics of the verbal root. Many details remain open to discussion, and Kölligan's plea of 'lack of space' (p. 52, n. 9) is a recurring theme in the volume. (Kölligan does not address, for example, the difficult root vocalism of Lat. *ceuere* 'shake one's hips'; but this may be due to a misunderstanding: the verb is *cēuēre*, and not, as Kölligan repeatedly writes, *ceuēre* – despite the Juvenal passage he cites)

Of the papers addressing Greek and Indo-European topics, the most successful are those with a restricted focus. Some will inevitably appeal more to linguists, such as T. Olander's 'The Accentuation of Greek Monosyllabic Words', A. Hyllested and P.S. Cohen's 'Monophthong for Expected *υ*-diphthong in Greek', J.H. Larsson's account of the morphology of Greek *οἴκαδε* 'homewards' (in part based on comparative material from Baltic languages), or B. Miller's evaluation of a sub-part of the Glottalic Theory ('Ejectives to Plain Voiced Stops in PIE? Phonetics, Typology and Glottalic Theory'). Other studies cannot fail to interest Classicists, despite daunting technical material: U. Remmer, in 'Gamonyms, Internal Derivation and the Greek Suffix *-ώ*', is particularly careful to explain specialised concepts and terminology in her study of formations like *Λητώ* (a study containing, unfortunately, the book's most confusing typographical errors: the amphikinetic inflectional patterns [p. 122] should read 'strong *R(é)-S(o)-D(ø)*' [or *R(é)-S(ō)-D(ø)*] instead of 'strong *R(é)-S(o)-D(o)*', and 'weak *R(ø)-S(ø)-D(é)*' instead of 'weak *R(o)-S(o)-D(é)*'). W. Sowa offers new etymological perspectives on the Hesychian gloss *ἄλιζα*, while engaging with difficult questions surrounding ancient Macedonian and its possible Balkan substrate. There is no surprise, finally, in the prominence accorded to Homer. In 'Overlength and the System of Primary Comparatives in Homeric and Attic Greek', C. Vessella moves from patterns of overlength avoidance in Vedic and Homeric cadences to an explanation for the long vowel of comparatives like Att. *θᾶσσον* (cf. West's *θάσσον*). A. Nikolaev's 'The Name of Achilles' provides a novel and tightly-argued etymological conception of the hero's name, with an appendix on Mycenaean *a-ki-re-u*. J.T. Katz's 'The Epic Adventures of an Unknown Particle' is a *tour de force* of linguistics, poetics and Homeric exegesis concerning the particle printed by West as *ταρ* (though probably still known to many Classicists as *τ' ἄρ*).

Several more ambitious pieces prove highly stimulating but less satisfying overall. R. Litscher's '*Κρέας*, *kravíḥ* and the original nom.-acc. sg. of the IE *s*-stem neuters' attempts to overturn J. Schindler's reconstruction of suffixal zero grade in *s*-stem forms like **mén-s* (replaced by **mén-os*), through painstaking and often illuminating re-evaluations of the Indo-Iranian and Greek evidence, including attractive new proposals. But the argument ultimately fails to convince, in part because the presentation, for all its detail, leaves too many questions unanswered (what, for example, accounts for the accent of Ved. *jū́ryati*/*jū́ryati* [p. 119] if they 'contain the suffix *-ya-* used in denominative verbs', where root accent is unexpected?), and also because Litscher's conclusion (p. 120), positing **mén-os* as a replacement for ***mén-s*$_{\circ}$ (with syllabic /s/), bewilderingly circles around to a conception much like that of Schindler anyway. The 'lack of space' issue, noted above, is most apparent in

A. Willi's wide-ranging paper, 'Of Aspects, Augments, Aorists – or How to Say to Have Killed a Dragon', advancing a bold reanalysis of Indo-European verbal aspect, with radical claims involving the perfectivising value of the PIE perfect and the primordial status of the PIE reduplicated aorist. Again, many questions remain, even the basic one of whether Willi's archaic reduplicated aorist was thematic or athematic; cf. his equivocal notations (p. 43, e.g. *$g^{wh}e$-$g^{wh}n$-(e)t). Willi himself acknowledges the difficulty ('much more would need to be said in order to flesh out the theory', p. 48), and one hopes for an extended version. N. Puddu's study of reflexive markers in Greek, Latin and Indo-European distils her other research on the topic, better presented in broader compass (cf. her *Riflessivi e intensificatori: greco, latino e le altre lingue indoeuropee* [Pisa, 2005]). Least satisfying is G. Hinge's etymological study of Greek ὅσιος, ἔτυμος and related forms: much of the argument rests on unsupported assumptions, and then sometimes leads nowhere, as with Hinge's inability (p. 152) to explain the short /a/ of Proto-Greek *twawos (> σάως 'safe') via his reconstruction *h_1tuh_2-u̯o- (which can only yield *twāwos, even granting his new account of initial laryngeal loss and the operation of laryngeal 'breaking', a highly controversial notion).

Standing apart in the collection is A. Mahoney's 'The Feet of Greek and Sanskrit Verse', with metapoetic musings, based on passages of Greek and Sanskrit poetry, on what poets understood by concepts like metrical 'feet'.

Editorial oversights (besides '*cevere*', above) are rare and minor: even some Classicists might quail at an untranslated passage from Herodian (p. 132, n. 3); and though 'Walde-Hofmann' appears correctly in the bibliography, two authors cite 'Walde-Hoffmann' (pp. 51; 144, n. 3). Above all, one is heartened by the talent and erudition of the scholars whose work is highlighted here, and grateful to the Editors for presenting this research so effectively to what one hopes is a wide audience of linguists, Classicists, and (still thriving, as the volume attests) Classicists/linguists and linguists/Classicists.

ILIADIC HEROES

ACETI (C.), LEUZZI (D.), PAGANI (L.) (edd.) *Eroi nell'*Iliade. *Personaggi e strutture narrative.* With preface by F. Montanari. (Pleiadi 8.) Pp. xiv + 496. Rome: Edizioni di Storia e Letteratura, 2008. Paper, €64. ISBN: 978-88-8498-498-2.
doi:10.1017/S0009840X09000043

The three separate monographs which comprise this volume offer a well-rounded, synthetic approach to three topics pertaining to Iliadic heroism: Sarpedon; the use of narrative techniques in the encounter between Patroclus and Hector; and the detailed disentanglement of the complex relation between the heroic code and the behaviour of heroes in the face of death.

Aceti embarks on an exhaustive treatment (pp. 1–269) of Sarpedon, whose death at the hands of Patroclus sets in motion a series of events that lead to the death of Hector by Achilles and bring the *Iliad* to an end. In the first part (pp. 1–154), after a detailed presentation of all the passages where Sarpedon is mentioned, A. discusses the old problem concerning his leading position in the Lycian contingent, despite the
