There was much more in the full week of lectures, questions, and discussion, including a review of other scholars of Albanian and their various contributions to scholarship, the identification of the location and divergences in the Albanian dialects of Italy and Greece, a presentation of various sound changes in Albanian, and a consideration of the relationship between Romanian and Albanian.

An edited version of notes from his lectures is currently being compiled and will be published later this year as a special issue in the Kenneth E. Naylor Memorial Lecture Series, established by the Naylor Professorship in 1999. This booklet will be available at a nominal cost still to be determined. For information on this booklet, expected to be fifty-plus pages in length, or to place an advance order, please contact Brian Joseph at Ohio State University, preferably via electronic mail (at joseph.1@osu.edu).

Book Reviews

***Estudios de Lingüística Latina. Actas del IX Coloquio Internacional de Lingüística Latina (Universidad Autónoma de Madrid, 14–18 de abril de 1997).* Edited by Benjamín García-Hernández, with the collaboration of R. López Gregoris, E. Nieto Ballester, and M. Esperanza Torrego. Madrid: Ediciones Clásicas, 1998.**

This magisterial two-volume collection of papers on Latin linguistics, beautifully edited by Benjamín García-Hernández and handsomely produced by Ediciones Clásicas, reflects about 70 percent of the material presented at the 1997 colloquium on Latin linguistics held in Madrid. The seventy-eight papers are mostly in French (twenty-nine) or Spanish (twenty-seven) (otherwise: eighteen in English, three in German, one in Italian), but all sport handy English summaries. Like its predecessor volumes (beginning with Pinkster 1983; most recently Rosén 1996, Bammesberger and Heberlein 1996), by far the most prominent topic area is "Syntax and Pragmatics," here represented by forty-six of the contributions. There are, however, a half-dozen or so papers that address (or include prominent discussion of) historical-linguistic issues of direct or indirect relevance to Indo-European studies.

Most of these are concentrated, predictably, in the section on "Phonetics and Morphology."

In "Proto-Indo-European Root Structure and the Development of Voiced Aspirates in Italic" (13–23), P. Baldi recants the pro-glottalic-theory stance of Baldi and Johnson-Staver (1989), mainly on the strength of arguments presented by Joseph and Wallace (1994).

A. Christol, in "Autour de l'infinitif passif" (37–50), treats the Indo-European background, in terms of both morphology and syntax ("diathesis"), of the Latin passive infinitive. Christol makes adept use of comparative material from Indo-Iranian, and offers an attractive account of the origin of the Lat. passive infin. formant *-rī* (as in *uidērī*), via original sequences of the sort **uidē-ier* (regularly > **uidēr,* re-characterized both with *-ier* [---> *uidērier*] and *-ī* [---> *uidērī*]).

In his "Reflexión sobre los nominativos fem. del sg. en *-ai* de la necropolis de Preneste" (65–74), R. Jiménez Zamudio argues, in my view not altogether convincingly, that the forms in question arise from Etruscan influence, specifically from the feminizing suffix *-i* vis-à-vis masculine names (Etr. *larth,* f. *larthi* etc., including *tarna,* f. *tarnai* et sim.). This comparandum would be more attractive if the Latin material had something directly to do with feminized forms of masculine *a*-stems, which is not the case. The traditional interpretation of these Praenestine forms as genitives (see recently Wachter 1987:202f.) seems preferable, although one can be grateful for Jiménez Zamudio's interesting discussion of the problem.

In an equally interesting and richly documented presentation, E. Nieto Ballester reconsiders the source of Lat. acc. *mē(d)* and dat. *mihi/mī* ("Latín *med* (ac.

sing.) y *mihi*," 89–105). Following the old account of Lindsay and others, Nieto Ballester sees acc. *mē(d)* as having arisen secondarily from orthographic/phonetic factors related to abl. *mēd* ~ *mē*, in its turn comparable to nominal alternations abl. *-V̄d* ~ *V̄*, where *-d* has clearly spread from inherited **-ōd* in *o*-stems. But even if this spread is pan-Italic and includes original instrumental forms (cf. 95n14 on Osc. πεhεδ and similar forms), this merely shifts the problem farther back in time: in texts that pre-date the regular *d*-loss familiar from abl. sg. forms (approximately mid-third century B.C.), OLat. acc. MED does not alternate with ME any more than does abl. MED. One thus inclines toward the competing explanation of OLat. acc. *mēd* in terms of the inherited orthotonic acc. **mĕ́* + enclitic particle **-ed* or the like (thus recently Sihler 1995:379, Eska and Weiss 1996:290n5), structurally comparable to Paleo-Umbr. acc. **míom** and similar forms. (See now also Meiser 1998:158 for an entirely different account based on functional overlap in acc. and abl., starting from the reflexive pronoun.) For the dative pronoun, similarly, Nieto Ballester offers ingenious arguments, largely based on orthographic and phonetic facts surrounding *<H>*, that Lat. *mihi* (as also Umbr. *mehe*) reflects a secondary distracted version of *mī*, which continues the inherited orthotonic **meį* or **moį* (i.e., exactly the reverse of what is traditionally assumed: *mihi* < **meĝʰeį*, cf. Skt. *máhya(m)*; *mī* contracted from *mi(h)i* or from the **meheį* immediately resulting from **meĝʰeį*). Nevertheless, there is little reason to doubt the existence of a "dativizing" enclitic element **-ĝʰ(e)i* perhaps originally restricted to first-person forms (see Katz 1998:40f., 191n40), an element which certainly appears in Arm. 1 sg. dat. *inj* (among other Armenian pronominal forms, see Katz 1998:191ff.) even if it can be explained away in Skt. *máhya(m)* (see Sihler 1995:378, but note Wakhi obl. 1 sg. *maž*, on which see Katz [1998:40n69]). It thus becomes a question of assessing the positive evidence in favor of Nieto Ballester's scenario; judgments will differ, but Nieto Ballester's discussion is important and stimulating.

C. Padilla Carmona's "La entidad fonética y fonológica de **H* y su integración en el sistema de oclusivas y fricativas indoeuropeas: Revisión etimológica de algunos términos latinos" (107–123) is an embarrassing exercise in dilettantism that operates with a bizarre variant of the glottalic theory, whereby IE laryngeals freely alternate with velars (in ways that go far beyond alleged cases of "laryngeal hardening"); whence a host of absurd etymologies of the sort Hitt. *ḫwis-* 'live' : Hitt. (rel./interrog. pron.) *kwiš, kwit* ("hit. *huis-* significa más exactamente 'estar [presente/vivo]' y una forma interrogativa como *kuis, kuit* tendría el significado originario de '¿[quién] está [presente]?'," 120).

Of most obvious interest in the section on "Syntax and Pragmatics," for the readership of the *Bulletin*, is a contribution by the late and much-lamented H. B. Rosén: in "*Quam quisque norit artem, in hac se exerceat* and the Typology of Relative Clauses" (705–721), he provides a characteristically penetrating analysis, debunking standard assumptions about the semantic and syntactic interpretation of double-relative constructions of the type exemplified in his title. Rosén demonstrates that we have here a type of "bi-focused" ("doppelzielige") relative clause in which the second relative is not indefinite (as is usually assumed) but simply coordinate, comparable to relative constructions well-established in Indo-Iranian and attested with certainty in Hittite.

Finally, among studies in "Lexicology and Semantics," O. Panagl addresses "Die Etymologie von lat. *tempto* vs. *tento*: Eine tentative Studie" (1033–1041). Standard assumptions are again overturned: Panagl argues, in a discussion with no little methodological interest, that the two forms, although traditionally associated with each other etymologically, may have quite distinct sources.

This does not, of course, exhaust the value of these two volumes for the history of Latin: many papers allude to points of historical linguistic interest more glancingly, or in mainly theoretical terms (e.g., M. Fruyt on grammaticalization in Latin, S. Van Laer on the semantics of the preverb *ob-*, R. Coleman on the Latin Saturnian, to name a few). The collection sets a high standard for subsequent volumes emanating from the Latin Linguistics Colloquia, an enterprise that continues to enrich this important area of Indo-European studies.

Historical Linguistics: An Introduction. **By Lyle Campbell. Cambridge, MA: MIT Press, 1999.**

Why a new textbook of historical linguistics? With a number of serviceable texts still in print (e.g., Arlotto 1972, Bynon 1977), newly revised (e.g., Crowley 1997), or recently published (e.g., Hock and Joseph 1996), it would seem difficult to justify another entry into the field. But Campbell's book (originally published in 1998 by the Edinburgh University Press, which presumably accounts for the pervasive British orthography, an odd feature for an MIT Press volume) is welcome indeed: this is historical linguistics with a difference, namely a practical emphasis (as Campbell writes in the preface) on the "hands-on" procedures of actually *doing* historical linguistics—learning how to apply techniques to data—rather than just talking about it. It is too soon to pass judgment on the book's performance as a course text (I have not yet had an opportunity to evaluate it in this context), but considered on its own terms this is likely to be a valuable addition to the available textbook options for introductory courses on historical linguistics.

The book is pitched slightly higher than Arlotto 1972 (Campbell assumes that users will have taken an introductory course in linguistics) and is considerably more compendious; but the theoretical discussions are not as technical as in higher-level texts like Anttila 1989 or Hock 1991. One of the hallmarks of this book, in fact, is Campbell's appealingly direct and simple prose style, which tends to the colloquial (the reader is often addressed in the second person). While Campbell does not shy away from technical notations and terminology (there is a helpful introductory section on "Phonetic Symbols and Conventions" and an IPA-based "Phonetic Symbols Chart," as well as a full bibliography, and thorough indexes of languages, names, and subjects), jargon for jargon's sake is eschewed, and most of the theoretical discussions should be highly accessible to students with relatively little linguistic background.

The coverage of the book is itself somewhat unusual. In addition to chapters on standard topic areas like "Sound Change," "Borrowing," "Analogical Change," "The Comparative Method and Linguistic Reconstruction," there are chapters on subjects less commonly treated in any depth in such texts, such as "Syntactic Change," "Areal Linguistics," "Distant Genetic Relationship" (a particularly rich and worthwhile treatment), "Philology: The role of written records," and "Linguistic Prehistory." The coverage is thus both relatively deep and extremely broad, a feature that is distinctly enhanced by Campbell's effective use of linguistic data. Campbell's discussions provide a wealth of carefully selected examples (nine of the fifteen chapters offer exercises based on real-language data), intentionally chosen both from familiar European languages (mainly English and other Germanic languages, Latin and the Romance languages) and from non-Indo-European languages (mainly, but far from exclusively, Amerindian and Uralic languages, based on Campbell's own work).

It may be helpful to profile a typical chapter in detail. Chapter 8, "Internal Reconstruction," begins with a one-paragraph "Introduction" that character-
