TABLE OF CONTENTS

SYMBOLS v

ABBREVIATIONS: General Abbreviations vi

Language Abbreviations ix

Source Abbreviations xi

CHAPTER 1. INTRODUCTION 1

1.1 Verbal Nouns in the Secondary Literature 3

1.2 Target Period and Source Texts 6

1.3 Towards a Definition of the Old Irish Verbal Noun 13

1.4 The Question of Raising 37

1.5 Other Preliminaries 45

CHAPTER 2. FORMATION OF VERBS AND VERBAL NOUNS 58

2.1 Formation of Verbs 58

2.2 Formation of Verbal Nouns 77

CHAPTER 3. VERBAL NOUNS OF PRIMARY VERBS AND NON-DENOMINATIVE SECONDARY VERBS 139

3.1 Types 1 and 2: Deradical and Deverbtive Formations 140

3.2 Type 5: Suppletive Verbal Nouns 323

CHAPTER 4. VERBAL NOUNS OF DENOMINATIVE VERBS 330

4.1 Type 2: Deverbative Formations 331

4.2 Unclear Formations 433

4.3 Type 3: Source Nouns 442

4.4 Type 4: Deadjectival/Denominative Formations 483

4.5 Type 5: Suppletive Verbal Nouns 495

CHAPTER 5. QUESTIONS OF DIACHRONY: THE CELTIC VERBAL NOUN AND PROTO-INDO-EUROPEAN 500

5.1 Verbal Nouns in Celtic 500

5.2 Infinitival Formations in Proto-Indo-European? 503

5.3 The Celtic Evidence 513

5.4 The Implications for Proto-Indo-European 521

BIBLIOGRAPHY 532

ACKNOWLEDGMENTS

Writing a dissertation is a long journey that cannot be accomplished alone; I am pleased to recognize so many who have helped me to arrive successfully at this point.

Special thanks go to my advisor, Joseph Nagy, whose guidance, friendship, and unfailing expressions of confidence — not only through the dissertation process, but over the course of my entire graduate career — have led me at last to this achievement. I am also greatly indebted to the other members of my committee: Cal Watkins, Brent Vine, and Pam Munro, whose keen suggestions and criticisms have steered me safely away from numerous pitfalls, and whose encouragement and praise have been just as valuable.

It has been an honor to study under all of my professors. In addition to those just mentioned, many other eminent scholars, each in his or her own unique way, have left their indelible mark on my development as a student of language: Raimo Anttila, Jesse Byock, Bruce Hayes, Vyacheslav Ivanov, Stephanie Jamison, Donka Minkova, and Chris Stevens, to name a few. I also salute Craig Melchert, whose capable leadership has raised the already highly esteemed UCLA IES program to even greater heights, always going out of his way to make sure we students are well supplied both academically and financially. I only regret that I never had the opportunity to take any of his classes.

Finally, I would be negligent if I did not thank my family and friends outside of the university for always being there. Above all, I offer my deepest gratitude to my wife, Wendy, and my stepson, Ariel, who for so many years — and always with the utmost graciousness and good cheer — have tiptoed around my books and papers, listened politely as a captive audience to my frequent soliloquies on all matters linguistic, and put up with a husband and father who was too often absent even while present. Their support and belief in me have meant more than I can express.

ABSTRACT OF THE DISSERTATION

Derivational Morphology
of the Early Irish Verbal Noun

by

Randall Clark Gordon

Doctor of Philosophy in Indo-European Studies

University of California, Los Angeles, 2012

Professor Joseph F. Nagy, Chair

As is well known, the Insular Celtic languages (Irish, Scots Gaelic, Welsh, Breton and the now-extinct Manx and Cornish) utilize a class of verbal abstracts known as "verbal nouns" to perform the functions that are fulfilled in other Indo-European languages by infinitives and supines. Yet in many ways the Celtic verbal noun remains somewhat of an enigma. The purpose of the present study is to examine the historical morphology of the verbal noun in the earliest Celtic language for which we have a meaningful literature, namely Old Irish, in order (1) to distinguish the derivational patterns that lie behind their multifarious formations, and (2) to clarify the place of the Celtic verbal noun within the development of Indo-European. Twenty-six early Old Irish texts were perused for their verbal nouns, dating from the seventh century through the first half of the eighth (some in contemporary manuscripts, others existing only in later copies) and covering a range of genres including textual glosses, prose, poetry, and law. The almost

650 tokens of verbal nouns that emerged from this search were used as the basis for the analysis and conclusions of the study.

In addressing the problem of defining the Old Irish verbal noun, a multifaceted approach is advocated in order to capture the systemic character of the verbal noun, taking into consideration the interplay of morphological, semantic, and syntactic factors. It is concluded that the verbal noun, while possessing limited verbal features, is not infinitival in Old Irish; it is primarily and fundamentally a substantive, distinguishable from an ordinary abstract only in certain aspects that depend on the special associative relationship it has with its verb.

The body of the study concentrates on morphological concerns. An overview of the rather complicated system of Old Irish verbal compounding is presented first, as this is also reflected in the verbal nouns; and a discussion of verbal-noun formation follows. Five types of verbal nouns can be discerned in Old Irish, based on the derivational relationship each bears to its verb: 1. deradical formations corresponding to primary verbs; 2. deverbative formations, mostly from secondary verbs; 3. source nouns of denominative verbs; 4. deadjectival formations to cognate factitive verbs (also denominative formations to cognate denominative verbs); and 5. suppletive verbal nouns. The more than two dozen formative suffixes that characterize the derived verbal nouns have unmistakable Indo-European origins; each of these is examined briefly.

In the exposition of the data, the morphological details of all the verbal nouns that make up this study, organized according to the verbal root with which they are associated, are systematically analyzed in accordance with the above framework. The accompanying commentary covers sundry issues of etymology, historical phonology, morphology, semantics, and any other details of interest elicited by the material.

The concluding chapter considers the placement of the Celtic verbal noun within

the wider Indo-European context in the light of these findings. While some previous studies have posited the existence of infinitival formations in the Indo-European proto-language and have concluded that the verbal noun of the Insular Celtic languages must be an innovation, it is argued here that the broad alignment of primary verbal nouns with primary verbs and secondary verbal nouns with secondary verbs, which is systematic in Old Irish, is best explained in terms of inheritance. This implies that Proto-Indo-European itself possessed only verbal nouns, and that the infinitival formations of the daughter languages must have arisen independently.

CHAPTER 1.

INTRODUCTION.

The Insular Celtic languages display a number of linguistic features that are, from an Indo-European point of view, rather extraordinary. Some of these, such as VSO word order and the dichotomy between absolute and conjunct verbal endings, have been, and continue to be, examined extensively in the literature. But others, such as the verbal-noun system, have received far less attention. It may be taken as axiomatic that the comparative method is a reliable tool only insofar as the languages and features being compared are accurately understood. The purpose of the present study, therefore, is to further our understanding of the Celtic verbal noun by documenting and analyzing the derivational patterns that underlie this entity in the earliest Celtic language for which we have a sizable enough literature to construct a relatively complete picture. That language is, of course, Old Irish.

Verbal nouns are not, in and of themselves, unusual in the world's languages. Many languages make widespread use of verbal nominalizations to express the content of a verb phrase in non-verbal syntactic constructions such as the nominal complement of a verb.[1] What makes the Celtic verbal noun remarkable is its unique situation in Indo-European. Whereas all the other known Indo-European languages have developed specialized non-finite verbals — infinitives, supines, and gerunds — to fulfill such roles,

[1] For example, in the English sentence *The destruction of the city by an earthquake occurred at midnight*, the noun phrase *the destruction of the city by an earthquake* expresses the same idea as the clause "an earthquake destroyed the city" but functions syntactically as subject of the verb *occurred*. For a typological survey of such constructions in the world's languages, see Koptjevskaja-Tamm (2011), where they are termed "action nominal constructions."

the Celtic languages[2] exclusively employ abstract nouns. Only early Indo-Iranian, best exemplified by Vedic, displays anything even remotely similar, with its wide assortment of infinitives, some of which are hard to distinguish from case forms of ordinary verbal abstracts; but even this system is decidedly more verbal in nature than that of Celtic. We shall have more to say on this matter in Chapter 5.

The first order of business in the examination of our subject will be to define exactly what constitutes a "verbal noun." This rather vexed question has been addressed in various ways in the literature, but most approaches, by considering only one or two chief characteristics, have failed to embrace the scope of its character. We will take a more inclusive approach in this study, weighing the range of morphological, semantic, and syntactic factors that bear upon the issue and setting forth a series of criteria by which it may be gauged whether a given *nomen actionis* or other abstract noun is capable of fulfilling the special role of a verbal noun. We will close this introductory chapter with a brief description of the early Old Irish texts that make up our corpus and, finally, some comments on Old Irish phonology and orthography.

The second chapter will lay out the morphological background of our subject, starting with a sketch of the structure of the Insular Celtic verbal complex, followed by a description of the verbal-noun formations attested in our Old Irish corpus, and finishing with a classification of the derivational relationships that exist between the verbal nouns and their verbs.

Chapters 3 and 4 comprise the body of the work. In them we will examine the morphological properties of all the verbal nouns that occur in our representative corpus; Chapter 3 treats the verbal nouns of primary verbs, Chapter 4 the verbal nouns of

---

[2] With the possible exception of Celtiberian; see § 5.1.

secondary verbs.

Finally, Chapter 5 will discuss certain important implications of our findings for the reconstruction of the Proto-Indo-European system and the development of the Indo-European infinitives, as a foundation for future investigation.

1.1. Verbal Nouns in the Secondary Literature.

The earliest systematic descriptions of the Celtic verbal noun are presented in the relevant sections of Zeuss' groundbreaking *Grammatica Celtica* (1853: I, 458–63, 518–22, 527f., 550; II, 896f., 910; 1871: 483–87, 534–38, 923f., 934, 539f.) and Jolly (1873: 70f., 91–94). The standard grammars and handbooks provide brief but useful summaries. Pedersen's *Vergleichende Grammatik der keltischen Sprachen* (*VKG* II, 411–18 §§ 633–35) and Lewis and Pedersen's *Concise Comparative Celtic Grammar* (*CCCG* 312–17 §§ 473–75) record the range of verbal-noun formations in the Insular Celtic languages along with an outline of their main syntactic configurations, and cite the individual verbal nouns in the list of verbs (*VKG* II, 450–658 §§ 650–854; *CCCG* 334–403 §§ 490–647). Thurneysen's *Grammar of Old Irish* (*GOI* 444–55 §§ 720–37), after the briefest of syntactic descriptions, presents a concise factual exposition of the verbal-noun formations of Old Irish. Windisch (1878), the first journal article devoted expressly to the verbal noun, provides a general description of both morphology and syntax. None of these descriptions delve deeper into the origins and historical development of the verbal noun.

The entire body of published works on the Celtic verbal noun is remarkably limited, consisting of a mere handful of books and some few dozen articles. The majority of these deal with Irish, and are heavily weighted towards questions of syntax. The single most discussed topic is the distinctive N *do* VN construction in Old Irish (of the type *is bés leo-som* ***in daim do thúarcuin*** 'it is a custom with them **the oxen for threshing**' = 'for the oxen to thresh' or 'that the oxen thresh'), which been examined

from diverse angles, much of the discussion focused on the question of whether or not it is infinitival or purely substantival in nature. Fraser (1912b) suggests that this construction represents a kind of typological precursor to the accusative plus infinitive construction of Greek and Latin; Vendryes (1954) sees an archaism with parallels elsewhere in Indo-European; Disterheft (1980: 133–59; 1981; 1982; 1984; 1997; 1997b) argues that it exhibits argument raising and other theoretical features of infinitival syntax, and considers it to be an Irish innovation; Gippert (1997), critiquing Disterheft's analyses, endeavors to situate it within the context of comparative Indo-European syntax; and Genee (1994; 1998: 104f., 440f.), examining pragmatic factors in its distribution, explains the matter in terms of fronting rather than raising. We will have more to say on this construction below (§ 1.3.3.5).

Rather rarer are studies on other issues of verbal noun syntax. Baudiš (1913) gives an extensive collection of Old Irish verbal nouns catalogued according to syntactic context; Vendryes (1917–1919) discusses the use of the verbal noun as a genitive of destination or purpose (of the type *scian* ***bearrtha*** 'knife **of shaving**' = 'knife for shaving, razor'); Ó hUiginn (1983) clarifies certain questions about the underlying syntax of the *figura etymologica*; and K. H. Schmidt (1967) examines the verbal noun plus possessive pronoun employed in the sense of a passive imperative.

To date only three monographs have been published that treat the Old Irish verbal noun as their primary subject, and all three deal with syntax: Gagnepain (1963), a detailed diachronic study of verbal-noun syntax, traces its development through Old, Middle, and Modern Irish; Genee (1988) examines Irish sentential complementation from a modern theoretical framework, also using a diachronic approach; and finally, in the most recent return to the distinctive N *do* VN construction, Stüber (2009) once more endeavors to establish its status as the "altirish *do*-Infinitiv."

The morphology of the Old Irish verbal nouns has received even less systematic analysis. Apart from a small number of articles with a focus on verbal nouns — Hamp (1963; 1972; 1976b; 1987); Lindeman (1985); McCone (1994–1995) — most of the existing data on Old Irish verbal-noun formation must be gleaned from the numerous studies on Celtic nominal morphology more broadly construed, which treat Old Irish verbal nouns unevenly and more or less incidentally. These include scores of varia, etymological notes, and other assorted articles that lie scattered throughout the Celtic and Indo-European journals, and several monographs. Among the latter are Stüber (1998) on the PIE *n*-stems in Celtic; de Bernardo Stempel (1999) on the patterns of Old Irish nominal derivation; Irslinger (2002) on the Old Irish dental stems; and Schumacher (2000), which, while focusing on the historical Welsh verbal noun, is most useful for its frequent and incisive comparisons with Old Irish. Other indispensable sources of etymological information include McCone (1991; 2006) and Schumacher (2004 = *Die keltischen Primärverben*, abbreviated *KPV*) on the Celtic verb; Schrijver (1995) on British historical phonology, also useful for its insights into Irish; and McCone (1996) on the historical phonology of the Celtic languages as a group. Mention must also be made of other Old Irish reference works, all of which contribute to the subject in their separate ways: in particular, the monumental *Dictionary of the Irish Language* (*DIL*), the *Lexique étymologique de l'irlandais ancien* (*LÉIA*) which regrettably remains unfinished, and the recent *Etymological Dictionary of Proto-Celtic* (*EDPC* = Matasović 2009) of the Leiden Indo-European Etymological Dictionary Series.

This unevenness in the scholarly treatment of the Old Irish verbal noun is no doubt due to the nature of the entity itself. Being historically a substantive, and still fundamentally so, it is for the most part omitted from studies on the verb, while in studies of nominal morphology it tends to be subsumed piecemeal under the individual

stem formations. Yet because of its close relationship with the verb, the verbal noun plays a special role among the categories of substantives. The present study aims to rectify the deficiency by providing a careful and orderly account of the Old Irish verbal noun as an object of investigation in its own right.

1.2. Target Period and Source Texts. The target period of this study consists of the earliest stratum of Irish literature for which we have a substantial body of texts. These include a small amount of archaic Old Irish material from the seventh century and other texts of early Classical Old Irish from the eighth century, up to and including the Würzburg glosses on the Latin Epistles of St. Paul from roughly the middle of that century.

The corpus I have chosen takes representative texts from a variety of genres: textual glosses, narrative prose, poetry, and law (including both prose and poetry). Where possible I have selected texts that were recorded in contemporary or near-contemporary manuscripts. These consist of the following:

1. ***Cambrai Homily*** [Cambr.] (*Thes.* II, 244–47).[3] The *Cambrai Homily* is one of the most important sources of archaic Old Irish prose that we possess. It is a fragment of an Irish homily composed in the second half of the seventh century or the beginning of the eighth, and copied some 50–100 years later by a continental scribe who clearly did not understand the language he was copying. Because of this, there are many clerical errors and wrongly divided words — "every misreading which the Irish script could suggest" (*GOI* 9 § 10.2) — but at the same time, the scribe's ignorance of Irish prevented him from modernizing the archaic language of his exemplar.

---

[3] Described at *Thes.* II, xxvi.

2. ***Book of Armagh*** [Arm.] (*Thes.* I, 494–98; II, 238–43).[4] The manuscript itself dates from c. 807 but contains a transcript of older documents. Two portions were consulted, both dating from the early eighth century: Irish glosses on the New Testament, and Irish additions to the notes of Bishop Tírechán on the life of St. Patrick.

3. **Würzburg Glosses** [Wb.] (*Thes.* I, 499–714).[5] These Old Irish glosses on a Latin manuscript of the Epistles of St. Paul were probably copied into the present manuscript from earlier sources. The two main hands, judging from the linguistic evidence, date to the middle of the eighth century. A number of glosses interspersed throughout show another, evidently more archaic hand, the so-called *prima manus*, which probably dates to c. 700.

4. A few other minor sources of archaic Irish listed by *GOI* (9 § 10, items 3 and 4), which consist of glosses on excerpts from Philargyrius's scholia on Vergil's *Eclogae* (*Thes.* II, 46–48, 360–62) and on the second Epistle of St. Peter written on a single palimpsest folio of a manuscript in Turin (*Thes.* II, 713f.). They contain few verbal nouns.

The above four texts constitute essentially all of the verbal-noun material to be found in contemporary manuscripts from our target period. For the remainder of my corpus I have settled on texts that, while only preserved in later manuscripts, are recognized on linguistic grounds to have been copied from compositions of the seventh and eighth centuries.

5. ***Apgitir Chrábaid*** [AC] 'The Alphabet of Piety' (Hull 1968). This is an early prose piece of Irish monastic wisdom literature; the title has also been translated 'Alphabet of Devotion' or 'Primer of Piety'. *Apgitir Chrábaid* was originally thought to

---

[4] Described at *Thes.* II, xiii–xvii.

[5] Described at *Thes.* I, xxiii–xxv.

have been composed c. 600 from its attribution to Colmán moccu Béognae († 611) and on the weight of a few archaic word forms;[6] but a more cautious reanalysis of the language led to a subsequent revision of its date to either the first half of the eighth century (but possibly based on an earlier nucleus) or the late seventh century.[7]

The next three texts are from a seventeenth-century manuscript that contains very old materials unknown from any other surviving source:

6. ***Gospel of Thomas*** [GT] (Carney 1964: 89–105). A version of the apocryphal *Gospel of Thomas* in Old Irish meter, probably to be dated to c. 700 on linguistic grounds.

7. **A Poem on the Virgin Mary** [PVM] (Carney 1964: 107–11). Only eight quatrains survive of this anonymous poem, which is probably from the same period as the previous.

8. **Poems of Blathmac** [Bl.] (Carney 1964: 1–88). These two poems to the Blessed Virgin[8] are ascribed to Blathmac son of Cú Brettán son of Congus of the Fir Roiss, whose life spanned the middle of the eighth century. (His father's death is recorded in 740 and a brother's death in 759.) The language of the poems is entirely consistent with this date, being comparable to that of the Würzburg glosses.

9. ***Cín Dromma Snechtai.*** The *Book of Druim Snechtae* contained an early collection of stories and poems. The original has been lost, but many copies of its contents exist in later manuscripts. Thurneysen (1912: 30; 1921: I, 15–18) dated the language of the original stories to the eighth century, but based on the duplication of a

[7] Hull 1968: 51f.; McCone 1996b: 34f.; but cp. Greene 1977: 14f. for linguistic counterarguments in support of the original dating.

[8] "The second poem refers to the first, being in fact a continuation of it: hence the original whole was an ambitious composition divided into sections" (Carney 1964: xiii).

number of early Middle Irish forms in the extant copies suggested the existence of a tenth- or eleventh-century intermediary as the predecessor of the existing versions. While some challenges to Thurneysen's early dating have been raised,[9] none have proven convincing enough to overturn the general consensus of a probable eighth-century date for the original written version of this collection.[10] The following 14 CDS stories and poems are included in the present study:[11]

(1) ***Audacht Morainn*** [AM] 'The Testament of Morann' (Kelly 1976).

(2) ***Baile Chuinn Cétchathaig*** [BCC] 'The Frenzy of Conn of the Hundred Battles' (Bhreathnach & Murray 2005).

(3) ***Compert Con Chulainn*** [CCC¹] 'The Conception of Cú Chulainn', Rec. 1 (Thurneysen 1912: 31–41).

(4) ***Compert Conchobuir*** [CC] 'The Conception of Conchobor' (Hull 1934).

(5) ***Echtrae Chonnlai*** [EC] 'The Expedition of Connlae' (McCone 2000).

(6) ***Imram Brain*** [IB] 'The Voyage of Bran' (Meyer 1895).

(7)–(8) Two colloquy texts relating to the origins of Lough Foyle (Carey 2002): (7) ***Immacallam Choluim Chille ⁊ ind Óclaig*** [ICC] 'The Conversation of Colum Cille and the Youth'; and (8) ***Immacallam in Druad Brain ⁊ inna Banḟátho Febuil*** [IDB] 'The Conversation of Bran's Druid and Febul's

---

[9] Including one by Thurneysen himself, 1936: 217f.; also Ó Concheanainn 1988; Mac Mathúna 1985: 412–18.

[10] See, e.g., Ó Cathasaigh 1990; McCone 2000: 29–47; Carey 2002: 55f.; White 2006: 25–35; cp. also Murphy 1952. Advocating a seventh-century date, Carney 1976: 181 fn.19; cp. also Byrne 1967: 166 and Ahlqvist 1984: 152 on *Audacht Morainn*.

[11] Four additional texts have been excluded: *Echtrae Macha*, included in the list by Thurneysen but excluded by Carey (1995: 71 fn.4) on linguistic grounds; *Fil and grian Glindi hÁi*, a poem in obscure language that remains untranslated; *Forfess Fer Fálgai*, which contains an introductory prose section in which no verbal nouns appear, followed by another obscure and untranslated poem; and *Tochmarc Étáine*, the CDS version of which is mentioned in the sources but apparently has not survived.

Prophetess'.

(9)–(12) Four stories concerning Mongán (White 2006): (9) ***Compert Mongáin*** [CM] 'The Conception of Mongán'; (10) ***Scél as-a·mberar combad hé Find mac Cumaill Mongán*** [SFM] 'A Story from Which It Is Inferred that Mongán Was Find mac Cumaill'; (11) ***Scél Mongáin*** [SM] 'A story of Mongán'; and (12) ***Tucait Baile Mongáin*** [TBM] 'The Cause of Mongán's Frenzy'.

(13) ***Togail Bruidne Da Derga*** [TBDD[1]] 'The Destruction of Da Derga's Hostel', Rec. 1 (Thurneysen 1912: 27–28).

(14) ***Verba Scáthaige*** [VS] 'The Words of Scáthach' (Henry 1990).

The above works are generally agreed to have been first written down, in more or less the form that has been preserved, in the seventh and eighth centuries. There may be other works that date from this period — certainly with regard to the annals, which have not been consulted in this study, the original entries must have been contemporary — but too often, owing to the state of transmission, the date of a given text can be specified with no more precision than that it belongs to the Old Irish period; in many cases, a ninth-century date would seem the most plausible on linguistic grounds.

The state of early poetry in particular is fraught with complications, and the dating prone to sometimes drastic revision. Some archaic poems may in fact date from as early as the sixth century — most notably, *Amrae Choluimb Chille* 'The Eulogy of Colum Cille' (Saint Columba), attributed to the chief *ollam* Dallán Forgaill (c. 530–598) — but much uncertainty remains. Of themselves, traditional attributions are notoriously unreliable, and Breatnach's (1984) demonstration that portions of the archaic-looking poetry of the law text *Bretha Nemed* were modeled on the eighth-century Latin of the *Collectio Canonum Hibernensis* has called into question the previously assumed archaic character of some of the early poetry; Breatnach (1989b: 20–23) has shown further that

Amra Senáin 'The Eulogy of Senán', another poem that had previously been attributed to Dallán Forgaill, was in fact composed in the late ninth century. It is therefore impossible to tell, given the current state of knowledge and in the absence of more secure external criteria for dating specific works, how much of the early poetry is genuinely archaic.[12]

Finally, there are the Medieval Irish laws, a vast body of texts that present unique challenges. Much of the legal corpus remains in some disarray, while scholarly progress in its investigation and analysis continues slowly. The basic body of laws was written down during the Old Irish period from the seventh century on, but multiple strata of glossing and commentary have been added to the core texts over the centuries, as the laws were copied and recopied and later juristic comments and interpretations incorporated into the manuscripts.[13] Only the basic law texts that make up the earliest stratum concern us in the present study. I have selected four early law tracts to illustrate the usage of verbal nouns in the early legal language; while these texts make up only a portion of all that is extant, they constitute a suitable representation of the broader corpus:

10. ***Bechbretha*** [BB] 'Bee-Judgments' (Charles-Edwards & Kelly 1983), from the *Senchas Már* 'Great Traditional Law', second half of the seventh century.

---

[12] The uncertainty in the dating of this poetry has prompted some scholars (e.g., McCone 1996b: 18–21) to reject any genuine archaism in the complex and highly stylized language of the Old Irish *rosc* and *retoiric* poetry, but such denial is too pessimistic. The stylistic and linguistic features still alive in the Old Irish poetic tradition show too many striking similarities to widespread and undeniably old Indo-European patterns to be plausibly attributed to the sole influence of learned Medieval Latin; see Watkins (1995: 255–64, esp. 264).

[13] See Breatnach 2005 for an extraordinarily useful overview of the Old Irish legal corpus; of particular value for our purposes are ch. 8 on the dating and authorship, insofar as they can be determined, of the various legal texts, and ch. 7 on the glossing and commentary.

11. ***Cáin Adomnáin*** [CA] 'Law of Adomnán' (Meyer 1905).[14] The early stratum of the Law, datable to c. 697,[15] is found in §§ 28–53 of the transmitted text; §§ 1–27 constitute a later introduction,[16] and is therefore excluded from the present study.

12. ***Críth Gablach*** [CG] 'Branched Purchase' (Binchy 1941), first quarter of the eighth century. At the end of this text is a poem in archaic diction (*roscad*) which Binchy, considering it to be a separate text, omitted from his edition[17] and published separately as "An Archaic Legal Poem" (1971) [CG-ALP]; Breatnach (2005: 242f.), however, argues convincingly that it does belong to *Críth Gablach*, and it is accordingly incorporated here.

13. ***Bretha Nemed (Toísech)*** [BNT$^{1-2}$] 'Judgments of Privileged Ones (First)', second quarter of the eighth century. To date only the first third of the law tract (Breatnach 1989) and portions of the second third (Breatnach 1987: 20–42) have been edited.

The above materials yielded almost 650 distinct verbal nouns in approximately 3,500 instances of usage. (See the following section on the criteria used for determining which nouns to include in the collection.)

When citing an example from a primary source in this study, I generally reproduce the text as printed in the critical edition, except when the reading of an individual manuscript is more germane to the point under discussion. Expansions are indicated by underlined superscript type.

1.3. Towards a Definition of the Old Irish Verbal Noun.

As has been noted by others,[18] the problem of defining the verbal noun in the Celtic languages is notoriously troublesome.

In its broadest sense, the term "verbal noun" may include any nominal formation that identifies the action, condition, state, or event expressed by a verb. This broad definition embraces the general category of verbal abstracts as well as the non-finite verbal forms that serve this purpose in specialized ways: infinitives, supines, and gerunds. In a narrower sense, however, the category of "verbal noun" may be taken to represent a kind of middle ground between ordinary verbal abstracts and non-finite verbals, distinct from the latter in not taking part in the verbal paradigm, and distinct from the former in bearing a close semantic and syntactic affiliation with the verb, most notably in its ability to take logical arguments and its role as substitute for the finite verb in syntactic contexts that are appropriate to nouns. This is the verbal noun that Rosén (1981) investigates in her study of early Latin; she defines it as "the nominal expression of verbally expressible content" (13), and registers its central uses in the *Wiederaufnahme* of a preceding verb (17), manifested by its employment with verbal adjuncts and in circumlocutory constructions including periphrasis and the *figura etymologica.*

A similar approach proves fruitful in the quest to delineate the boundaries of the verbal noun in Old Irish. Separate grammatical categories of infinitive, supine, and gerund do not exist in Irish; there is only the single lexical unit of the verbal noun, which embraces a range of grammatical roles. All verbal nouns are abstracts, but not all abstracts are employed as verbal nouns. Most verbal nouns are etymologically related to the verb, but a few are suppletive. Verbal nouns are closely aligned semantically and

---

[18] E.g., Genee 1998: 100; Schumacher 2000: 13.

syntactically with the verbal system, so that there is, for the most part, a one-to-one correspondence between verb and verbal noun; and the verbal noun possesses certain properties, such as the ability to take logical arguments, that enable it to substitute for a finite verb in various contexts. Yet it has not become a component of the verbal paradigm. The verbal noun is still essentially a noun, in many contexts impossible to distinguish from an ordinary abstract.

Because of the difficulties in demarcating the categorical boundaries of the verbal noun, treatments in the literature have generally either left the definition vague, or have tended to construe it narrowly by focusing on only one chief characteristic. For example, Thurneysen (*GOI* 445–55 §§ 721–737) reveals no explicit criteria for his determination of which forms belong to the category of verbal noun, and, as the translators point out (683 note 157), several of the forms that he cites do not participate in the characteristic *do-* construction: ***gal*** 'warlike ardor, fury, valor', ***serc(c)*** 'love', ***cumac(c)*** (and ***cumang***) 'power, ability', ***torbae*** 'benefit, profit', ***tóbae*** 'excision', ***tuile*** 'abundance', ***rath*** 'bestowal, grace', ***bás*** 'death', ***dliged*** 'right; due', ***fius(s)*** 'knowledge', ***létiu*** 'audacity', ***dás(s)acht*** 'madness, insanity', and ***céim(m)*** 'step'. (We will return to these forms below.) In the *Verbalverzeichnis* of his *Vergleichende Grammatik*, Pedersen (*VKG* II, 450–658 §§ 650–854) lists the verbal noun of each verb as either an "Infinitiv" or an "Abstraktum," a distinction that he makes on semantic and syntactic grounds:

> Nicht jedes Verbalabstraktum ist ein Infinitiv; nur solche Abstrakta, die in der Bedeutung den zugehörigen Verben genau entsprechen (die einfach die Handlung des Verbums ausdrücken), dürfen als Infinitive bezeichnet werden; man darf also u. a. niemals ein Substantiv, das nicht mit einem objektiven Genitiv verbunden werden kann, als Infinitiv eines transitiven Verbums betrachten. Es kann indessen aus Mangel an Belegen oft schwer zu entscheiden sein, ob ein gegebenes Verbalabstraktum als Inf. anzuerkennen ist oder nicht. (411 § 633 Anm.)

Other statements that attempt to define the scope of the verbal noun employ syntactic

criteria exclusively. For example, Bergin on ***dliged*** states dogmatically: "*Dligid* has ... no verbal noun. The abstract *dliged, dligeth* (< **digeton*) is formed from the same root, but it has no verbal function. One can say in OIr. *ní do dénum* and *oc dénum neich*, but not *ní do dligiud* or *oc dligiud neich*" (1949: 188f.). Gagnepain (1963: 17–21) takes the *do*-construction, which he considers to be an infinitive, as the only accurate gauge of a verbal noun. Genee (1998: 100f.), sensitive to the variance between "morphological VNs" and "syntacto-semantic VNs," defines the latter, which is the subject of her study, in terms of usage rather than form (103).

A closer inspection of the verbal noun's role in the language, however, reveals the inadequacy of these narrower definitions in encompassing the character of the verbal noun in all of its aspects. There are too many forms that, like ***dliged***, do not happen to appear in certain of the most typical syntactic contexts but nevertheless still possess obvious semantic and functional links with the related verb. In the present study therefore a more inclusive approach will be adopted, one that is more in keeping with the formulation of Rosén (1981: 13) in regard to early Latin.

The first point to emphasize in our explication of the verbal noun is that it is, fundamentally and prevailingly, a substantive. Its substantival nature is borne out by a range of morphosyntactic properties.

- It is fully inflected according to syntactic role: for example, nominative as the subject of a sentence, IB 62.3–4, *Is fochen do* ***thichtu*** (nom.) 'your **coming** is welcome'; accusative as the object of a verb, Wb. 15a20, *nifoí‹l›sitis* ***deícsin*** (acc.) *agnúsa* 'they would not have endured **beholding** his face'; dative as the object of a preposition, TBDD[1] 11–12, *Do·lotar i nAlbain do* ***chur*** (dat.) *a ndib*$^{\underline{er}}$*ge a*$^{\underline{n}}$*t* ... 'they came to Alba to **carry out** their marauding there ...'; and genitive as an

adnominal modifier, Wb. 11c11, *isairde* ***néelutha*** (gen.) *máma* 'it is a sign **of evading** the (marriage-)bond'.

- Usage with the definite article is not infrequent: for example, Bl. § 239bcd, *sifais int aingel dagthob; / ata-resat frisa* ***seinm*** */ cach marb* 'the angel will sound a good trumpet; / there will arise at **the sounding** / every dead person'.
- Plural forms also occur: for example, Arm. 78a2 = *Thes.* II, 495.5, *tri* ***tuimthea*** *gléso in letraim* 'three **dippings** of the instrument to the page'. As this example illustrates, the usage refers to multiple instances of the involved action.
- Verbal nouns are modified by adjectives rather than by adverbs: for example, Bl. § 87cd, *ba reimib gabais crephel / nathracha for* ***dianteiched*** 'it was before them that terror seized / the serpents on **swift-fleeing**' = 'terror seized the serpents fleeing swiftly before them'; Wb. 25d26, *ut non cito moueamini a uestro sensu* **:** *níarmad maith lesso*^{m} *in****cumscugud mall*** *act isarnabæ étir* 'it is not that he liked the **slow movement** [= that they should be moved slowly], but that it may not be at all'.[19]
- Negation is expressed by the preposition *cen* 'without' (e.g., Wb. 9c20, *cid atobaich* ***cendílgud*** *cech ancridi dognethe frib* 'what compels you **without forgiving** [= not to forgive] every injury that may have been done to you?'), or by adding the prefix *neb-, neph-* 'non-' (e.g., Wb. 5d23, *ní lour dano in****nebmaldachad*** *manibendachae* 'not

---

[19] There is, after our period, one Old Irish example of an adverb being used to modify a verbal noun: Ml. 14d3, *cidecen* ***áisndís*** *doneuch as doruid* ***coleir*** ... 'though it is a necessity, **explaining** anything that is difficult **diligently ...**'; but this is very unusual for Old Irish. The position of the adverb appears to be the key factor here. For one thing, writing the adjective *léir* 'careful, zealous' immediately after *doraid* 'difficult' would have led to serious ambiguity: because the latter can also have the substantivized meaning 'difficulty', *léir* would most readily have been construed with it instead of with the distant *aisndís*, yielding the nonsensical reading *aisndís do neuch as doraid léir* 'an explanation of anything that is a careful difficulty'. Furthermore, the modifier's placement at the end of the phrase tends to assign it the role of modifying the entire phrase instead of just the verbal noun, a fact that may have facilitated its alteration to suit the verbal semantics in violation of the strict nominal syntax. One wonders if the adverb has been added as an afterthought, since ***aisndís léir*** *do neuch as doraid* '**a careful explanation** of anything that is difficult' would seem to be the most direct way of wording the idea.

enough moreover is the **non-cursing** [= it is not enough not to curse] if you do not bless'). Both strategies are strictly nominal; the verbal negators *nĭ, năd, nach-* 'not' are never used with a verbal noun.

- The verbal noun is indifferent to tense, mood, or voice: for example, Cambr. 38a = *Thes.* II, 274.13, ... *am[ai]l tondechomnuchuir dundaib abstolaib oc* ***ingrimmim*** *innacloen ocuis oc****forcetul*** *recto dee* '... as has happened to the apostles in the **persecuting** of the wicked and in **teaching** the law of God', where the first verbal noun, *oc ingrimmim,* is passive in sense ('at being persecuted') but the second, *oc forcetul,* is active ('at teaching').

1.3.1. Morphology. Of the more than two dozen verbal-noun suffixes of Old Irish, most are deverbative abstract suffixes of obvious Proto-Indo-European provenance (§ 2.2.3). There is very little in the formal character of these words to distinguish them from ordinary abstracts. Only the historical suffix **-mu-* (§ 2.2.3.10), added to monosyllabic roots ending in a long vowel, belongs exclusively to verbal nouns. Even secondary **-tu-* (§ 2.2.3.17(3)), which attaches to the verbal noun of most weak verbs in Old Irish and becomes the principal verbal-noun suffix in Middle Irish, is not entirely limited to verbal nouns. It can also be used to form denominative abstracts such as OIr. *aimser****ad*** [m. *-u*] 'period, duration' ← *aimser* 'time', *bés****ad*** [m. *-u*] 'customary action, behavior' ← *bés* 'manner, custom', *litr****ed*** [m. *-u*] 'expression in letters' ← *liter* 'letter of the alphabet', *slóg****ad****, slúag****ad*** [m. *-u*] 'military expedition' ← *slog, slúag* 'host, army', etc., to which no corresponding verbs exist.

Verbal compounding (i.e., the addition of a verbal preposition to an existing verbal stem in order to modify its meaning, §§ 2.1.2–2.1.4) is directly reflected in the verbal nouns, which consistently mirror the preverb chain of the related verb; for example, next to the simplex **gar-* → *gairid, ·gair* 'calls, cries out' ↔ vn. ***gairm*** [n.] 'call,

cry, act of calling, crying out', there is a whole series of compounds: **ad-* + **gar-* → *ad·gair, ·acair* 'brings legal action against' ↔ vn. ***acrae*** [n.] 'lawsuit, act of suing'; **t(u)-ad-* + **gar-* → *do·acair, ·tacair* 'disputes' ↔ vn. ***tacrae*** [n.] 'dispute, act of disputing'; **ari-* + **gar-* → *ar·gair, ·argair* 'forbids' ↔ vn. ***airgaire*** [n.] 'prohibition, act of forbidding'; **t(u)-ari-en-* + **gar-* → *do·airngir, ·tairngir* 'promises' ↔ vn. ***tairngire*** [n.] 'promise; act of promising'; **u̯or-kom-* + **gar-* > *for·congair, ·forngair* 'commands' ↔ vn. ***forngaire*** [n.] 'command, act of commanding'; **u̯o-uss-* + **gar-* → *fo·ocair, ·fócair* 'announces' ↔ vn. ***fócrae*** [n.] 'announcement, act of announcing'; **ari-u̯o-uss-* + **gar-* → *ar·fócair, ·airḟócair* 'proclaims' ↔ vn. ***airḟócrae*** [n.] 'proclamation, act of proclaiming'; **u̯rit(s)-* + **gar-* → *fris·gair, ·frecair* 'answers' ↔ vn. ***frecrae*** [n.] 'answer, act of answering'. Preverbal compounding is therefore an obvious morphological indicator of a systemic verbal noun, especially when supported by other compounds from the same base. However, the preverbs *com-* and *imm-* have achieved such productivity in Old Irish that they may be freely attached to a verbal noun without the benefit of a corresponding verb; examples in our corpus include, *inter alia*, ***comairbert*** [f.] 'way of life' < *com-* + ***airbert*** 'usage, behavior', ***imṡénae*** [f.] 'mutual denial' < *imm-*ˁ + ***sénae*** 'denial, rejection', etc. *Com-* has further spread beyond the realm of verbs and verbal nouns, and may even be used to form new compound abstracts from existing nouns that are not directly related to a verb; for example, OIr. *com-ardae* 'equal height, same level', *com-ḟiadnaise* 'joint testimony', *com-maín* 'equal wealth, equal means', etc.

One other formal indicator of a verbal noun is the sporadic influence that the verb may have on its stem shape. This is most obvious in cases where *-n-* has spread from the nasal-present verb stem to the verbal noun which did not have it historically; for example, OIr. ***fulang*** 'endurance, act of enduring', earlier ***folog, folach*** ↔ vb. *fo·loing, ·fulaing* (§ 3.1.77(1)). It probably also explains the shape of certain verbal nouns derived

from original *seṭ* roots that no longer show a reflex of the root-final laryngeal; e.g., OIr. ***seinm*** 'musical sound, act of playing a musical instrument' instead of expected **senam* < PCelt. **su̯ena-man* < **su̯énh₂-mn̥* (§ 3.1.113(1)). This sort of reshaping by analogy with the verbal stem is only likely if there was a meaningfully close association with the verb.

1.3.2. Semantics. The verbal noun has close semantic ties with the verb. At any given point in the history of the language, practically every verb can be shown to have a verbal noun — or in rare instances two — systematically associated with it. In some instances the forms are not etymologically related, but connected only by their semantics. Thus verbal nouns are often characterized by an overtly verbal type of meaning. However, they very frequently retain additional senses, including those of ordinary abstracts and concrete nouns.

(1) A **verbal meaning** implies some sort of immediate and overt participation (either actual or potential) in the verbal process, i.e., a doing of the action, experiencing of the sensation or event, being in the state or condition, etc. This can be illustrated by the use of ***accaldam*** meaning 'act of addressing, conversing with' in IB 61.3–4, *Doecitís uili Bran ocus a muintir, ocus ní antís fria n-**accaldaim*** 'They (i.e., the inhabitants of the island) were all watching Bran and his company but would not stay **to converse** with them'.

(2) An **abstract meaning** focuses on the verbal process as a mere fact or concept, with no direct or immediate involvement in the action, event, condition, or state implied. Thus, in contrast to the above usage, ***accaldam*** in CM § 8 is simply a 'conversation' that is now a fact of the past: *as·bert friss **accaldaim** a mná a llaa riam* 'he told him the **conversation** of his wife the day before'. Abstract meanings may be extended to include metaphorical and other specialized usages (e.g., ***gním*** 'action' → 'the active voice'; ***clúas*** 'act of hearing' → 'sense of hearing').

(3) A **concrete meaning** results when the verbal process is transferred to a concrete object that bears some relationship to it. The specific relationship can vary. The most common concretization process involves the patient of the action and produces a noun with the meaning 'that which is or has been Xed'; for example, ***díre*** 'that which is paid out' = 'a penalty, honor-price', ***idbart*** 'that which is offered' = 'an offering, sacrifice'. Agentive concretization, representing 'that which Xes', is also common, such as ***sás(s)ad*** 'that which satisfies' = 'food', ***tugae*** 'that which covers' = 'a cover, roof', etc. In a relatively small number of instances, the concrete noun bears an oblique relationship to the action; examples include ***adnacul*** 'that in which one is buried' (locatival) = 'a grave' and ***clúas*** 'that with which one hears' (instrumental) = 'an ear'. Other types of concretization may be occasionally encountered (e.g., resultative ***rann*** 'that which results from dividing' = 'a part, division').

Some verbal nouns contain the range of possible semantic categories; for example, ***suide*** can signify an abstract 'situation, position' (e.g., BNT² VI.7, *co suad* ***suige*** *sluind* 'to the designated **position** of sage'), a verbal 'act of sitting' (e.g., CG § 17, *ll.*233–34, *Díles ┐indles i n-imm̲id: díles* ***suide*** *┐ḟreslige [n-]indi* '[There is] exempt and unexempt in the case of a bed: it is exempt **to sit** and lie down in it'), or a concrete 'seat' (e.g., Arm. 187b1 = *Thes.* 498.17, *tribunal* **:** ***suide*** *bri(th)emon* 'judge's **seat**').

In most cases the abstract sense may be taken to be the basic one, with the verbal and concrete meanings stemming from it through specialized applications.

Verbal-noun semantics has received very little attention in the literature to date.[20] As the dividing line between these various semantic classes is often blurry and prone to the pitfalls of subjective interpretation, a careful and disciplined study of the subject is a

---

[20] Dillon (1968) on ***gal*** 'valor' and Charles-Edwards (2003) on ***dliged*** 'right; due' treat two abstracts that typically do not show verbal-noun semantics; but see below, § 1.3.4.

desideratum.

1.3.3. Syntax. Syntactic clues are often reliable indicators for identifying a verbal noun. One syntactic construction in particular, the N *do* VN construction discussed below (§ 1.3.3.5), is virtually unique to verbal nouns, while the *figura etymologica* and the genitive of destination are also characteristic; and other constructions exist that are typical, though not exclusive, of verbal nouns.[21] A large number of examples, however, remain ambiguous. Excluded from consideration in the analysis here are the numerous occurrences of verbal nouns without logical arguments, because in these contexts there is no perceptible difference between a verbal noun and an ordinary abstract.

1.3.3.1. Verbal Nouns with Verbal Arguments. As the substitute for a verb, the verbal noun is frequently accompanied by verbal arguments which are adapted to the nominal syntax of the verbal-noun phrase. The basic scheme is well-known.

(1) The subject of an intransitive verb may be rendered by a genitive noun or possessive pronoun (e.g., IB § 16a–b, *Dofeith la* ***turcbáil n-gréne*** */ fer find forosna réde* 'Comes with the **rising of the sun** / a fair man who illuminates level (places)'; Arm. 107b1 = *Thes.* I, 495.18, *Is cáin di*$^{\underline{diu}}$ ***anessimthe***$^{\underline{cht}}$ 'Fair then is **their going forth**'), or by a prepositional phrase usually introduced by *do* 'to, for'[22] (e.g., Wb. 15a6, *dob*$^{\underline{eir}}$ *teist dínni* ***crete***$^{\underline{m}}$ ***dúibsi*** '**believing by you** [= that you believe] bears witness of us').

(2) With transitive verbs, the accusative object regularly assumes the genitive case in the verbal-noun phrase. This is true whether the object is semantically the patient of the action (e.g., CG § 9, *l.*69, *Cia beith cen* ***gabáil n-orbai*** 'Though he be without

---

[21] The complication presented by "quasi verbal nouns" will be discussed below in § 1.3.5.

[22] Additional possibilities are mentioned by Gagnepain (1963: 18) including *la* 'with', *ó* 'from', and others, but these are more usual in Middle Irish than Old Irish, and no unambiguous examples are found in our corpus.

taking of an inheritance') or the accusative goal of a verb of motion (e.g., Wb. 4b21, *ammi irlaim hicachláo do* ***dul martre*** 'we are ready every day to **go to martyrdom**' [lit. 'to going of martyrdom', corresponding to *téit martrai* [acc.] 'goes (to) martyrdom']). The subject is then assigned to the prepositional phrase (e.g., TBM 2, *Bliadain ...* ***gabálae*** *rígi* ***do Díarmait*** 'Year ... of the **taking** of the kingship **by Díarmait**').[23]

A *do* plus animate noun phrase that accompanies a verbal noun can be ambiguous, however. It is not only a strategy for expressing the logical subject, but is also the usual way of expressing a dative relationship (e.g., CCC[1] 3.6–7, *Con·accatar talmidu dorus cuile friu in tan ba mithig* ***tabert*** *biid* ***doib*** 'And they suddenly saw a pantry door in front of them when it was time (for) **bringing** of food **to them**'), and can also denote possession when the verbal noun carries an abstract sense (e.g., Wb. 12c46, *etenim si incertam uocem det tuba quis praeparabit sé ad bellum* **:** *.i. cosmuilius tuib arataat* ***ilsenman dosuidiu*** *'i.e.,* similarity of a trumpet, for there are **many sounds to it**' = 'it has many sounds'; here ***seinm,*** verbal noun of *seinnid* 'plays (a musical instrument)', means 'sound' rather than 'act of playing').

There are several plausible avenues by which the *do*-subject may have arisen. Stüber (2009b) considers it to be a dative of personal agent, an entity that is known in other languages — compare the Greek use of the dative as an agent with a passive participle — although it is typologically uncommon. In Old Irish, however, this

---

[23] There are rare examples in Old Irish in which a possessive subject occurs together with a genktive object: e.g., BNT[1] § 10, *Echtrann ainm / n-ecalso airdairc / dia* ***fírinne frestal*** *fria gnímu* '"Foreign" is the name / of the church renowned / from **its providing of truth** with its actions'. There are also examples of a genitive subject in use with a transitive verbal noun when the logical object does not appear in the phrase: e.g., Cambr. 38a = *Thes.* II, 274.13, ... *am*[*ai*]*l tondechomnuchuir dundaib abstolaib oc* ***ingrimmim innacloen*** *ocuis ocforcetul recto dee* '... as has happened to the apostles in the **persecuting of the wicked** (= the persecuting [of them] by the wicked) and in teaching the law of God'. For an account of these phenomena and their syntactic implications, with additional observations on the syntactic issues surrounding verbal arguments in the verbal-noun phrase, see Gordon 2011.

construction does not convey a specifically agentive sense, but designates the logical subject of the verbal noun whatever its semantic role (e.g., *buith dó* 'being by him'). Comparing the "double dative" construction of Vedic, where a dative infinitive is accompanied by its subject or object also in the dative (e.g., RV 9.24.3ab, *prá pavamāna dhanvasi sóméndrāya pā́tave* 'you flow forth, o Soma Pavamāna, **for Indra for drinking**' = 'for Indra to drink'; 8.12.22ab, *índraṁ vṛtrā́ya hántave devā́so dadhire puráḥ* 'the gods set Indra at the forefront **for Vṛtra for slaying**' = 'to slay Vṛtra'; cp. Hettrich 1984: 55f.), Stüber suggests a development out of sentences in which the *do*-phrase originally belonged with a verb of the semantic class of "do, make" in the matrix clause, such as Wb. 9d8, ***imfolngi*** *corp* ***dosso***$^{\underline{m}}$ '**he makes** a body **for him**'. If the object noun was a verbal noun, the *do*-phrase could then be reanalyzed as belonging to the verbal noun; e.g., Ml. 94b3, *imfolṅgai son legad* ***doibsom*** 'that causes perishing **to them**' → 'that causes perishing **by them**'.

This is not the only possibility. There are also semantically ambiguous constructions with *do* that could have led to its subjective usage; e.g., Wb. 3a14, *nifil* ***taidchur do*** *dochum inchoirpsin ... nabíd* ***taidchur dúnni*** *dano donchorp marbdu peccati* 'there is not **a return for him** to that body ... let there not be **a return for us** then to the mortal body of *peccatum*'. These examples most probably contain a dative of reference ('a return with respect to him/us'), but it is only a small shift from that to an agentive 'returning by him/us'.

Gagnepain (1963: 17), on the other hand, assumes that the Old Irish *do*-subject represents an underlying possessive, analogous to the French possessive with *à* 'to, at' (*la foi à vous = votre foi*). Systemic considerations might somewhat favor this suggestion, since a possessive *do*-subject would be a semantic double of the genitive/possessive pronoun subject (*a buith* 'his being' = *buith dó* 'being to him'). Examples such as *toimtiu*

dó 'his thinking' can illustrate the point of crossover at which the originally possessive 'an opinion that he has' came to be understood secondarily as agentive 'thinking by him'. Once the usage had been established, this periphrastic possessive would have been available to signify the logical subject of transitive verbal nouns when the genitive position was already occupied by the logical object.

1.3.3.2. *(Atá) oc* VN. It is common in Old Irish to use the verbal noun after the preposition *oc* 'at', especially in conjunction with the substantive verb, in order to express the present and continuing involvement of the logical subject in the action of the verbal noun. It is essentially equivalent to the progressive tense of English, and continues in Modern Irish, e.g., *tá sé ag teacht* 'he is coming'.[24] In this specialized usage the (*atá*) *oc* VN construction obviously conveys a verbal-type meaning. However, *oc* 'at' can also be used with other nouns, both abstract and concrete, in literal (locatival) and figurative (circumstantial) senses, so this construction cannot be taken to be diagnostic. An example with a non-verbal abstract noun is found at Wb. 6a18, *ideo necessitate [potestati sublimiori] subditi estote ... propter conscientiam* **:** *hore rofitis* ***is occ maid*** *atáa ...* '*i.e.*, because you know that it is **at** [= engaged in] **good** that he is'.

1.3.3.3. The *figura etymologica*. In this frequent idiom, the verbal noun occurs in close construction with its affiliated verb. (Despite its name, the etymological figure also includes pairings in which, as a result of suppletion, the verb and verbal noun do not happen to be actually related etymologically.) The verbal noun may directly follow the verb, but more typically it appears in a cleft construction and the verb follows in a relative clause. Syntactically the verbal noun may function as the object of the verb (e.g.,

---

[24] In Scottish Gaelic this construction has taken over as the standard present tense of every verb except 'to be', and the historical simple present has been relegated to the role of a habitual present and future tense.

CG § 43, *ll.*554–55, *Fer* ***fororggaib forggab*** *fora chomlonn* 'A man **who can thrust a thrust** upon his adversary'), the subject of a passive verb (BNT[1] § 15, ***sámaighther sámugud*** *airech échto co tri séotu deac* '**let the establishment** of an *aire échto* **be established** up to 13 *séts*'), or in an oblique relationship with the verb (e.g., EC 9, *Nall* ***suide / saides*** *Connle* 'A great **sitting / with which** Connlae **sits**'; Wb. 21b1, ***deirchóintea derochóinet*** *anícc* '**of despair with which they despair** their redemption']).[25] Similar constructions may occur that use other nouns (e.g., Wb. 13d25, *ubi est mors aculeus tuus* : *cote* ***inrinnd diaruba*** *uitam omnis hominis* 'where is the **sting** wherewith thou hast **struck** *vitam omnis hominis*?'), but the etymological figure generally differs from them in two respects: firstly, it is the associated verbal noun that is construed with the verb, and, secondly, the verbal noun bears no clear lexical load apart from the verb, but functions either as an internal object (e.g., BB § 33, *is sí* ***breth*** *inso* ***brethae*** *la Ultu ⁊ Féniu imbi* 'this is the **judgment that was judged** [= that which was judged, the judgment that was made] by the Ulstermen and Féni about it'; Wb. 13a34, *nisi frustra credidistis* : *act massu made* ***inchretem rochret‹s›i‹d›*** 'except if **the belief that you have believed** is useless' = 'unless you have believed in vain')[26] or as a means of marking the verbal process (e.g., EC 9, *Nall* ***suide / saides*** *Connle* '[It is] a great **sitting / with which** Connlae **sits**' = 'grandly does Connlae sit'; Wb. 19a6, ***nilegend rollegusa*** *lapetor act iscúrsagad* ***rondcúrsa***$^{\underline{gusa}}$ 'it is not a **studying that I studied** with Peter but it is a **reprimanding with which I reprimanded** him' = 'I did not study with Peter, but rather I reprimanded him').[27]

1.3.3.4. The Genitive of Destination or Purpose. Vendryes (1910–1911: 249f.; 1917–

---

[25] Elucidated by Ó hUiginn 1983.

[26] Cp. Quin 1967: 92: "There is hardly any room for doubt that the verbal noun in this construction is simply a kind of particle, and is not to be translated literally."

[27] Gagnepain 1963: 91; McCone 1979: 15 fn.52.

1919) describes the locution in which a verbal noun in the genitive modifies a concrete noun — usually animate or instrumental — for the sake of identifying its purpose or function; e.g., CG § 13, *l.*158, *capal[l]* ***fognama*** *¬ ech* ***immrimme*** 'a horse **of** [= for] **serving** & a steed **of** [= for] **riding**'; CG § 14, *l.*177, *scena* ***búana*** *aíne* 'knives **of** [= for] **the cutting** of rushes'; Wb. 25d3, *fer* ***brithe*** *lésboiri* 'man **of the carrying** of a taper' = 'who carries a taper'. This constitutes the special application of an attributive adnominal genitive. Adnominal genitives are not limited to verbal nouns, of course (cp. Wb. 7b13, *óis* ***teglig*** 'folk **of the household**'; Wb. 16d7, *archuit indóissa* ***gráid*** 'as regards the folk **of rank** (i.e., the clergy)', but as Vendryes notes: "Dans le cas particulier où le génitif marque la destination, il appartient toujours à un substantif verbal ou infinitif; et ce sens de destination est essentiellement lié au caractère verbal du substantif" (1917–1919: 331).

1.3.3.5. N *do* VN. In this, the most distinctive of Old Irish verbal-noun constructions, one of the verbal arguments — logical subject or logical object is equally possible — appears in front of the verbal noun, which then follows in a prepositional phrase headed by *do* 'to, for'. This construction is, for practical purposes, diagnostic of the verbal noun; no other type of noun can serve in the VN position of an N *do* VN phrase, with the exception of isolated instances (§ 1.3.5) in which an ordinary noun is specially appropriated to assume a one-time role as verbal noun.

This is Gagnepain's (1963: 18) "type 3" construction, which he considers to be the litmus test of a true verbal noun; he consequently discounts any noun that is not found in this type of phrase. Thus, for him a single example of ***fius(s)*** 'knowledge, act of knowing' in this construction in Wb. 16d12, *.i. ansu liumsa* ***indoís anechtir diafius*** *'i.e.*, it is more grievous to me, **the outland folk to its knowing**' = 'that the outsiders should know it' is sufficient to guarantee its inclusion among the verbal nouns in Old Irish; whereas other abstracts such as ***serc(c)*** 'love', not being found in such a construction in

the glosses, are excluded from the class.

One must always be cautious, however, in relying on such arguments from silence. We may justifiably conclude in this case that ***fius***(***s***) — which is otherwise only attested in the abstract sense of 'knowledge' — qualifies as a verbal noun in Old Irish because of its single occurrence in a *do*-phrase; but how can we be sure that ***serc***(***c***), for example, must be disqualified because it has just one less attestation? Since the N *do* VN construction is confined to verbal-noun usage, it is methodologically sound to use it as a positive test for inclusion in the set, but the inverse does not necessarily follow. The absence of an example cannot be taken to imply automatic exclusion from the set, since the silence could perhaps be accidental.

The N *do* VN construction has been the subject of a long-standing debate over whether Old Irish possesses an infinitive. Of the verbal noun in general, Thurneysen states that "syntactically it is a substantive," but notes that in the *do*-construction it "approximates to that of the infinitive in other languages" (*GOI* 445 § 720). Dillon (1955: 111–13) takes a stronger position, arguing for a purely nominal analysis of the verbal noun in every context. On the other side of the issue, Fraser (1912b: 219), based on the intuitions of native speakers of Scottish Gaelic,[28] equates *do* + VN with a true infinitive and finds a direct correlation with the accusative and infinitive construction of Latin and Greek. Vendryes (1910–1911: 249) makes a case in support of its infinitival status on the basis of three considerations: (1) as a noun expressing action it falls within the semantic domain of verbal formations, (2) every verb has a corresponding verbal noun, and (3) the verbal noun plays most of the same roles as the infinitive in other languages. Gagnepain's view (1963: 24, 31, and esp. 338–40) echoes that of Vendryes, finding the

---

[28] He presumes (*loc. cit.* fn.2) that the same would be true for a speaker of Modern Irish.

difference between the verbal noun and the infinitive to be essentially a "simple affaire de mot," as they fulfill the same function in the sentence.

However, for a theoretically defensible position, neither a mere semantic affiliation between the verb and verbal noun nor a certain resemblance between the Irish N *do* VN phrase and the infinitive of other languages is sufficient to establish the verbal noun as an infinitive in fact. There is no reason in principle to assume that a single grammatical function cannot be fulfilled by more than one strategy within a language and across languages, and, as we will see, several of the quintessentially nominal properties that characterize the general verbal noun are also present in the N *do* VN phrase. Nor are native intuitions about the modern language dependable as a guide to the language as it was spoken some 1,200–1,300 years ago, as many changes have taken place over the intervening centuries. Two requisites are needed before a consensus on the matter can be reached: (1) clarity on the properties of the N *do* VN phrase in Old Irish, and (2) agreement on what defines an infinitive.

Modern theories of syntax have provided new tools for analyzing the properties of this construction, and the issue has been examined anew in recent decades. Yet full clarity remains elusive. Some generative syntacticians have argued that the *do*-construction in Modern Irish is diagnostically an infinitive;[29] nonetheless, it still retains distinct elements of nominal rection in its genitival objects and prepositional subjects.[30] In Old Irish, the situation is more difficult to ascertain, as we have only a

---

[29] McCloskey 1984; Stowell 1989.

[30] The same is true of modern Scottish Gaelic. Remarkably, in colloquial Scottish Gaelic speech the so-called 'participial' construction *a(g)* VN 'Xing' (the descendant of the locution discussed in § 1.3.3.2) frequently takes the absolute form of an object noun instead of the genitive case; so *a' cosnadh* ***airgead*** (abs. = acc.) 'earning money' would be acceptable in informal contexts where "correct" and formal speech would call for *a' cosnadh* ***airgid*** (gen.) (Watson 2001: ix).

finite corpus to examine and no native speakers to consult.

The most recent study, Stüber (2009), has concluded that there is justification for viewing the *do*-construction as an infinitive in Old Irish too. The crucial issue here lies in just how one defines the infinitive. Stüber discusses this point in some detail (25–55). She finds problems with the criteria advanced by earlier scholars including Jeffers (1975), Gippert (1978), García Ramón (1997), and Disterheft (1980; 1981),[31] and opts instead for a formulation based on that of Haspelmath (1997: 62), somewhat revised:

> Ein Infinitiv ist eine nicht-finite Verbalform, die entweder aus einer finalen Kasusform bzw. Präpositionalphrase oder aus einem Objektsakkusativ eines Verbalabstraktums grammatikalisiert worden ist und die als Prädikat von Komplementsätzen dienen kann. (Stüber 2009: 46, 149.)

The Old Irish N *do* VN phrase, she argues, fulfills all the essentials of this definition. Yet one cannot share the confidence of her assessment of the first part of the definition:

> Darüber, dass es sich beim *do*-Infinitiv um eine nicht-finite Verbalform handelt, kann kein Zweifel bestehen. Trotz seiner nicht vorhersagbaren Morphologie ist das Verbalnomen integrativer Bestandteil des verbalen Paradigmas. Somit ist auch die Verbindung der Präposition *do* mit dem Dativ des Verbalnomens eine zumindest theoretisch zu jedem altirischen Verbum bildbare Kategorie. (149.)

In fact, there are good reasons to conclude that the N *do* VN phrase is not an integral part of the verbal paradigm.

With regard to the broad nominal morphosyntactic attributes of the verbal noun outlined above in § 1.3, two decidedly non-verbal characteristics likewise apply in the *do*-phrase:

- the logical object, if not preposed, appears as an adnominal genitive (Wb. 13a19, *arisinsæ inball dothinchos‹c› **neich** asberad cenn* 'for it is difficult, the limb to

[31] Disterheft's claims will be considered further below (§ 1.4), and an evaluation of Jeffers 1975, Gippert 1978, and García Ramón 1994 will be given in Chapter 5.

correcting **of anything** that the head might say' = 'that the limb should correct anything...'; 16d12, *ansu liumsa indoís anechtir diafius* '[it is] harder with me, the outside folk to **its** knowing' = 'that the outsiders should know it'), never in the accusative; and

- negation is expressed by the nominal prefix *neb-* 'non-' (Wb. 5c23, *cach réit ararogartsom donebdénum* 'every thing that he has forbidden to **non-doing**' = 'not to do anything that he has forbidden'), and perhaps also with the preposition *cen* 'without',[32] but never with a verbal negator *nī, năd, nach-*.

It also appears significant that, as noted above in § 1.3, a number of verbal nouns never occur in any Old Irish text in an N *do* VN construction. One never finds, for example, **ní do* ***dliged*** 'to be entitled to something', **nech do* ***gal*** 'to fight someone', **nech do* ***serc*** 'to love someone', etc. While the impossibility of such constructions cannot be absolutely taken for granted absent the confirmation of a native speaker, their non-appearance in the extant literature would be hard to explain, given the frequency of the words in question, if the *do*-construction were indeed implicit in the verbal paradigm. If, on the other hand, as suggested below (§ 1.4), the N *do* VN construction originates in a transformation of the ordinary verbal-noun phrase, then the absence or near-absence of a few verbal nouns in this construction must be due simply to their abstract sense having become so dominant as to render them relatively unsuitable to assuming the

---

[32] Negation with *cen* cannot be proven for our period, as the only example, Bl. § 116c, ***cen fert do dol*** *inna lecht* '**without a tumulus for going** in his grave', is ambiguous as to whether it expresses mere absence of the action (i.e., 'without a tumulus being placed on his grave') or actual negation of the action (i.e., with the editor of the text, 'that a tumulus should not be placed on his grave'). One unambiguous example of negation can be found in later Old Irish, at Ml. 90c27, *.i. is fresmacht inmrechtraid innan ule ṅ doine* ***cen soinmigi ⁊ doinm‹i›gi do tecmung*** *ducech óin díib* '*i.e.*, it is a counter-rule of the variety of all people **without prosperity & adversity for happening** [= that prosperity and adversity should not happen] to every one of them', and it is commonplace in Middle Irish (see Stüber 2009: 131f. w. refs.).

resolutely verbal sense implied in the *do*-phrase.[33] The distribution is therefore determined by a semantic property of the nouns. This sort of restriction is incomprehensible if the *do* + VN syntagm is actually a formal category belonging to the verb.

Nevertheless, the N *do* VN phrase does show signs of at least limited grammaticalization. For instance, *do* in this construction no longer carries its literal meaning 'to, for' followed by a purposive (or other dative) meaning, but has become essentially a particle indicating that the verbal noun follows one of its logical arguments. The phrase has also evidently become more fixed in its structure, since, as far as I am aware, no examples exist in any period of Irish of either an articular verbal noun or a plural verbal noun in this construction, nor of adjectival modifiers. Semantic generalization and loss of syntagmatic flexibility are well-known manifestations of the increase of cohesion and decrease of weight and variability that accompany grammaticalization.[34]

Balancing these two simultaneous dynamics — the retention of some strong nominal characteristics coupled with the loss of others in a trend towards greater internal rigidity — one is rather inclined to agree with Haspelmath's estimation that the Old Irish *do*-construction has "entered the path of grammaticization but has not grammaticized strongly enough to be considered a separate isolated form called 'infinitive'" (1989: 293). This is also the opinion of Genee (1988: 451): "the VN ... never reaches the type of full verbal valency that would warrant considering it an infinitive of the type known from languages like Modern English."

---

[33] But not necessarily absolutely excluded, as the unique instance of *ind oís anechtir* ***dia fius*** 'the outsiders **to its knowing**' in Wb. 16d12 shows in the case of ***fius*****(s)**.

[34] See C. Lehmann 2002: 108–59; Haspelmath 1989: 295–301; Stüber 2009: 36, 149–55.

There are some 70 clear occurrences of N *do* VN in our corpus, enough to draw some valuable conclusions regarding its early usage, but too few to define its boundaries with absolute certainty. Nevertheless, it is clear that this is a relatively minor construction in early Irish up through the period of the Würzburg glosses in the mid-eighth century. By the time of the Milan and St. Gall glosses approximately a century later, however, visible changes in its distribution have begun to take place. Its prominence and importance in the language already show a significant increase, and it begins to take on a wider range of uses that draw it further towards the realm of the verb.[35] The process continues through Middle Irish and into Modern Irish.[36]

Based on the relative rarity of this construction in early Old Irish and its remarkable expansion thereafter, Disterheft (1997: 132) infers that it must have arisen in Primitive Irish not long before the sixth century. This assumption is almost certainly incorrect. As she herself notes elsewhere: "Rarity of a specific syntactic pattern in a given language does not necessarily indicate that it is new: a pattern may exist for centuries as a less popular or seldom-used device, then later expand its use to become more central" (1985: 116). Indeed, an identical construction is also found in early British,[37] so it seems warranted to posit a date at least as far back as Proto-Insular Celtic,

---

[35] Specific syntactic developments between earlier and later Old Irish are documented by Gagnepain 1963: 125; Disterheft 1981: 24; 1982: 45f.; and Genee 1994: 43f., 49.

[36] For two very different approaches to the verbal noun's syntactic development through the history of Irish, see Gagnepain 1963 and Genee 1998, esp. 435–52.

[37] For Welsh, *GMW* (162f.) cites *Canu Aneirin* 3.73, *dadyl dieu* ***angheu y eu treidaw*** '(it is) a certain fact, **death to their visiting** [= that death visited them]'; and *Cyfreithiau Hywel Dda yn ôl Llyfr Blegywryd* 45.19, *Pwy bynhac a uo gwell gantaw* ***arall y dadleu drostaw*** *yn llys noc e hunan* 'whoever may prefer **another to pleading for him** [= that another plead for him] in court rather than he himself'. In Breton one finds, for example, *Le Mirouer de la Mort* 2079, *euyt* ***y da goelaff*** *... d-o drem ne-d-eux remet* 'though **they to weeping** [= though they weep] ... for their faces [= for them] there is no remission'; and *An Diaoul-Pôtr* p. 7, *hen, daoust d'****ar re-all da ganan****, na oa nag evit kanan nag evit c'houitellat* 'he, in spite of **the others to singing** [= though the others were singing], was neither for singing nor for whistling'

but perhaps no earlier. Parallels in Lith. ***šulinys kasti*** *nelengva* '**a well** (masc.nom.sg.) **to dig** (is) not easy (neut.nom.sg.)' = 'it is not easy to dig a well' and Latv. *man ir atļauts* ***rieksti ēst*** 'to me is permitted (masc.nom.sg. = neut.) **nuts** (masc.nom.pl.) **to eat**' = 'it is permitted for me to eat nuts' led Lewis and Pedersen (*CCCG* 315 § 475(2)(b) Note 1) to conclude that this is an old Indo-European construction; however, Gippert (1997: 162–64) notes a parallel in Classical Sanskrit (e.g., *Vyākaraṇa-Mahābhāṣya* 1.1.51, *śakyaṃ cānena śva-māṃsādibhir api* ***kṣut pratihantum*** 'and possible (neut.nom.sg.) even with dog's meat etc. (is) **hunger** (fem.nom.sg.) **to appease**' = 'it is possible to appease hunger ...') that is entirely missing from Vedic, and is more inclined therefore to see these as independent typological developments.

1.3.4. Diagnostic Characteristics of Verbal Nouns. The traits that distinguish verbal nouns from ordinary abstracts in Old Irish arise from its close systematic ties to the verb. As we have seen, the relationship between a verbal noun and its verb may be manifested in numerous ways. Therefore the most complete method of determining the identity of a verbal noun is to consider all the clues that may be relevant to the matter. Applying these broader criteria to the forms questioned above — i.e., ***gal*** 'warlike ardor, fury, valor', ***serc(c)*** 'love', ***cumac(c)*** (***cumang***) 'power, ability', ***torbae*** 'benefit, profit', ***tóbae*** 'excision', ***tuile*** 'abundance', ***rath*** 'bestowal, grace', ***bás*** 'death', ***dliged*** 'right, due', ***fius(s)*** 'knowledge', ***létiu*** 'audacity', ***dás(s)acht*** 'madness, insanity', and ***céim(m)*** 'step', § 1.3 — we find that most of them in one way or another exhibit clear verbal-noun characteristics in Old Irish.

Firstly, ***fius(s)*** 'knowledge' does not belong with the others in this group, since,

---

(Hemon 1975: 319f.). In Cornish, *Passio Domini Nostri Jhesu Christi* 1615, *leuereugh* ***my thy thanfon*** 'say **I to his sending** [= that I sent him]'; and *Pascon agan Arluth* (*Mount Calvary*) 251, *mur a ioy a-s kemeras* ***y de deank*** *yn della* 'great joy took them, **they to escaping** [= that they escaped] thus' (*CCCG* 315 § 475(2)(b)). Schumacher (2000: 29 fn.11) does not mention the Breton, but expresses skepticism that the Cornish examples are comparable to the Welsh and Irish.

as noted above (§ 1.3.3.5), it occurs in an N *do* VN construction at Wb. 16d12.

Where multiple compound forms are related through a single base, all of these may be assumed to belong to the morphological system of verbal nouns, even if some are not attested in strict verbal-noun usage or meaning. Therefore, OIr. ***gal*** 'warlike ardor, fury, valor' is undoubtedly the verbal noun of OIr. *fichid* 'fights' by reason of its numerous related compounds (***airgal*** 'act of fighting' ↔ vb. *ar·fich* 'fights'; ***dígal*** 'act of taking vengeance, punishing' ↔ vb. *do·fich* 'takes vengeance, punishes'; ***togal*** 'act of destroying' ↔ vb. *do·fich* 'destroys'; ***fogal*** 'act of plundering' ↔ vn. *fo·fich* 'does injury'; ***imdegal*** 'act of defending' ↔ vn. *imm·dích* 'defends'; see § 3.2.1(1)). Closely related compounds may be cited in regard to ***cumac(c)*** (***cumang***) 'power, ability' ↔ vb. *con·ic(c)* 'can, is able' (***airec(c)*** 'act of finding' ↔ vb. *ar·ic(c)* 'finds'; ***comrac(c)*** 'a meeting, encounter' ↔ vb. *con·ric(c)* 'meets, encounters'; ***imchomrac(c)*** 'id.' ↔ vb. *imm·comraic(c)* 'id.'; ***terchomrac(c)*** 'assembly' ↔ vb. *do·airchomraic(c)i* 'assembles', etc.; § 3.1.66(1)), and, similarly, in regard to ***tóbae*** 'excision' ↔ vb. *do·fuiben* 'cuts out or off' and ***torbae*** 'benefit' ↔ vb. *do·roban* 'benefits' (***fubae*** 'act of harming' ↔ vb. *fo·ben* 'harms'; ***imdibe*** 'act of circumcising' ↔ vb. *imm·díben* 'circumcises'; ***cumbae*** 'act of cutting' ↔ vb. *con·ben* 'cuts off'; ***aithchumbae*** 'act of mutilating' ↔ vb. *ad·cuimben* 'mutilates', etc.; § 3.1.12(3)).

Also, the fact that ***cumang*** comes to replace earlier ***cumac(c)*** by (re-)inserting *-n-* analogically from the prototonic verb *·cumaing* (§ 3.1.66(1) comment C) is further evidence that it was perceived by the speakers of Old Irish to be the corresponding verbal noun.

Verbal-type semantics is often hard to determine with certainty, especially without the aid of syntactic clues, but occasionally a particular usage is encountered that can only be understood in this way. A case in point is ***dliged*** at CG § 23, *l.*320, where the ordinary abstract meaning 'right, due' is not easily understandable, but a verbal-type

meaning 'condition of being entitled' with an objective genitive renders good sense without the need for emendation (see § 3.1.33(1) comment A).

In the case of ***tuile*** 'abundance', a genitive of destination implying a verbal 'act of flowing' is substantiated in Old Irish, at Fél. Prol. 250, *Íssu úas tuinn* ***tuili*** 'Jesus above the wave **of flowing**' = 'swelling wave'.

Others appear in *figurae etymologicae* in Old Irish: ***céim(m)*** 'step' is so found at Fél. Mar. 20, *Estecht Policroni ...* ***cechaing céim*** *as dírgu* 'The departure of Polycronius ... **he stepped a step** that is straighter', and is well attested in Middle Irish in the sense 'act of stepping'. Also ***serc(c)*** 'love' appears in a *figura etymologica* at Ml. 65d5, *frisin***seirc** ***rocar*** *crist innęclais* 'to the **love wherewith** Christ **loved** the Church', and in other places as the restatement of the verbal idea (see § 4.5.1(1) comment C).

Thus only four of the forms remain questionable: ***bás*** 'death', ***dás(s)acht*** 'madness, insanity', ***létiu*** 'audacity', and ***rath*** 'bestowal, grace'. Of these, ***létiu*** (which does not appear in our corpus) is too sparsely attested to draw any firm conclusions. The others are better attested, so the lack of clear verbal-type usage may be significant. No rival candidates exist in the case of ***dás(s)acht*** and ***rath***, leaving these as the default verbal nouns of *dáistir* (*imm*) 'goes mad' (§ 4.4.4) and *ernaid* 'grants, bestows' (§ 3.1.39) respectively, if one assumes that every verb must have a verbal noun. But in the case of ***bás***, the general word for 'death', there is a less common synonym ***bath*** that may have a better claim to being the rightful verbal noun of *baïd* 'dies': although ***bath*** too is only found in the abstract sense 'death', it has a closely related compound ***díbad*** 'extinction, act of dying out' ↔ vb. *do·bá* 'dies out, becomes extinct' that situates it within the morphological system of verbal nouns (see § 3.1.9(2) with comment C).

1.3.5. The "Quasi Verbal Noun." A further complication enters the picture with the so-called "quasi verbal noun." This term is employed by *DIL* to describe a fairly

common usage, documented from Old Irish onward, in which an ordinary noun takes on the identity of a verbal noun, appearing in a typical verbal-noun construction with evident verbal-type meaning as if it were a *bona fide* verbal noun. There is no clear system to this phenomenon: the quasi verbal noun may be unconnected with any contemporary verb, or it may be formally related to a verb but never otherwise used as the verbal noun, or it may be a nonce formation created directly from another noun by adding *-ad* or *-ed*. The following examples are typical:

- Wb. 29a4, *otiosae discunt circuire domus non solum otiosae* : *.i.* ***celide*** *et buith cendenum neich* '*i.e.*, **visiting** *and* being without doing anything'. Ordinarily *céilide* [m. *-io*] is 'a visit', an abstract formation from *céile* [m. *-io*] 'companion, neighbor' with no associated verb, but here, occurring as it does in parallel with the verbal nouns ***buith*** 'condition of being' and ***dénum*** 'act of doing', it means 'act of visiting'.
- Wb. 31d17, *discant autem et nostri bonis operibus praeesse ad ussus necessarios ut non sint infructuosi* : *.i. am*$^{\underline{al}}$ *astoisc fribiathad naforcitlaide* ~~*t.*~~ *am*$^{\underline{al}}$ *astoisc fri****foirbthetid*** *caingnime naforcitlaide fadesine* 'i.e., as is necessary for supporting the teachers, or as is necessary for **perfecting** the good deeds of the teachers themselves'. In this context *foirbthetu* [m. *-t*] 'perfection' occurs in parallel with ***bíathad*** [m. *-u*] 'act of feeding, maintaining' (↔ vb. *bíathaid* 'feeds, maintains') and thus appears to be equivalent to ***foirbthiugud*** [m. *-u*] 'act of making perfect' (↔ vb. *foirbthigid* 'makes perfect').
- Wb. 31b3, *ut ea quae desunt corrigas et constituas per ciuitates presbiteros* : *.i.* ***ordad*** *tabarte gráid* '*i.e.*, **arranging** the conferring of rank'. *Ordad* [m. *-u*] 'act of arranging' is a denominative formation in *-ad* from *ord* [m. *-o*] 'order, arrangement', and has no corresponding verb; it occurs only here.

- An example of a quasi-verbal-noun *do*-construction is found at Wb. 28d24, *fedb asuisse dogoiri inæclis* 'a widow whom it is fitting to maintain in the church'; this is a relative transformation of *is uisse* ***fedb do goiri*** *i n-eclais* 'it is fitting **a widow to maintaining** [= to maintain a widow] in the church'. The ordinary abstract *goire* [f. *-iā*] ← *gor* [adj. *-o/ā*] 'warm' → 'dutiful, filial', means 'dutifulness, filial maintenance' and is used specifically of children's obligation to care for their elderly parents. It often occurs in conjunction with *gniïd* 'does, performs' (BNT[1] § 21, *díamb* ***goire gnether*** 'if **maintenance be performed**') or *do·gní* 'id.' (Wb. 28d19, ***dénadsi goiri*** *doibsem* '**let her perform maintenance** for them'), or with the corresponding verbal noun (BNT[1] § 21, *céin gníther gorthrenaib* ***goire gním*** 'as long as the **performance of maintenance** is done in maintenance-thirds').

In these cases there is no question of conversion, as no new verb has been created and no other parts of a verbal paradigm emerge; rather, it is a matter of an ordinary abstract being pressed into exceptional usage as a verbal noun. This blurring of the lines between verbal noun and ordinary abstract is further confirmation of the substantival identity of the verbal noun: its being in essence a specialized abstract, in many contexts indistinguishable from an abstract in ordinary usage, opens the possibility for other abstracts, sporadically and exceptionally at least, to assume its special role. In most cases, the lack of a corresponding verb and related compounds, or the *hapax* usage of a form other than the one that customarily fulfills the verbal-noun function, is sufficient to mark a particular example as a quasi verbal noun.

1.4. The Question of Raising.

Disterheft has argued repeatedly for the presence of raising phenomena in the N *do* VN construction, starting with a chapter devoted to the Old Irish verbal noun in Disterheft

(1980: 133–59) and following up in five subsequent articles (1981: 23f., 32f.; 1982 *passim*; 1984: 94–101; 1997 *passim*; 1997b: 110f.). In terms of generative syntax, "raising" is a transformation by which a semantic argument of the verb in an embedded clause is realized as a syntactic argument of the matrix clause. The argument is considered to have moved from its underlying position in the embedded clause into its surface position in the main clause. The semantic role of the argument, however, remains connected with the embedded rather than the matrix verb.

In English, *appear* is an example of a verb that supports raising to its subject position. A sentence such as *It appears that no one is at home* may also be expressed as *No one appears to be at home*, where *no one* has been raised to grammatical subject of the main verb *appears*:

[*No one*] *appears* [[~~*no one*~~] *to be at home*].

Semantically, however, *no one* remains the subject of the infinitive *to be*; that is, despite the surface order, the sentence is not altered to mean *no one appears* ..., but continues to mean that the proposition *no one is at home* appears to be true.

The verb *expect* is an object-raising verb in English. In the sentence *Suzy expected John to be there, John* is analyzed as having been raised from subject of *to be* to object of *expected*, but is not the semantic theme of *expected*:[38]

Suzy expected [*John*] [[~~*John*~~] *to be there*].

The question of raising bears directly on the issue of whether or not the Old Irish

---

[38] In Government and Binding Theory, this sentence is analyzed as an "exceptional case marking" (ECM) structure, where the subject of the infinitive remains in the lower clause but exceptionally receives accusative case marking from the main clause, i.e., [*She expected* [***him*** *to be there*]]. This will not be the place to go into the theoretical arguments behind these conflicting representations, but recent years have tended to see a return to the raising-to-object model (e.g., Carnie 2007: 266).

do-construction is an infinitive, because raising is a conspicuous feature of infinitival syntax. Disterheft's claims have therefore received a good deal of attention, and bear careful examination. As an example of "raising to object," she cites (1980: 147), *inter alia*:

ma[ni]fessed ***comdidnad*** ***duthiarmoracht*** *induilc*
if-[NEG-]know:3.SG.IPF consolation:ACC to-follow:VN.DAT ART-evil:GEN

'if it did not know **that consolation follows** the evil' (Ml. 87d4)

Although the verbal noun's logical object is in the genitive (*ind uilc* 'of the evil'), Disterheft argues that the construction N + *do* + VN otherwise approximates to an accusative plus infinitive, and thereby reveals the existence of verbal properties. In the equivalent finite verb clause, the normal VSO order would be:

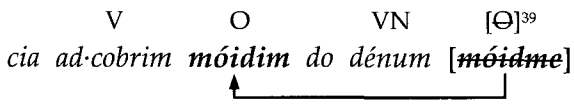
V S O
do·íarmórat *comdidnad* *a* *n-olc*
follow:3SG consolation:NOM ART evil:ACC

'consolation follows the evil'

When subordinated to *·fessed* 'it knew', however, the verb is replaced by *do* + the verbal noun ***tíarmóracht***, and the logical subject of the verbal noun, *comdídnad* 'consolation', is moved in front of the verbal noun. Since this is the regular object position of the main verb, *comdídnad* appears to have undergone raising to object of *·fessed*:

V O VN [~~S~~] O
ma ni·fessed ***comdidnad*** *du thiarmoracht* [~~***comdidnad***~~] *ind uilc*

This illustration, taken from the Milan glosses, postdates our target period by about a century, but similar examples may be found in our corpus. One such example is Wb. 17d17, *ciadcobrinn* ***móidim dodénum*** 'though I should desire **boasting to doing**' = '**to do boasting**':



As an example of "raising to subject," Disterheft (154) cites the famous gloss at Wb. 10d6:

arisbés	*leoso^{m}*	***indaim***	***dothúarcuin***[40]
for-COP:3SG-custom	with+them-EMPH	ART-OX:NOM.PL	to-thresh:VN.DAT

'it is a custom with them **that the oxen thresh**'

Here, she claims, *in daim* 'the oxen'[41] has been raised from subject of the infinitive *do thúarcuin* 'to thresh' to subject of the copula *is* 'it is'. Gippert (1997: 148) objects that if raising had occurred, one should have expected the singular main verb *is* 'it is' to agree in number with the plural raised subject *in daim* 'the oxen', but this objection overlooks the fact that the Old Irish copula regularly agrees in number with a predicate nominative that immediately follows it and need not agree with the subject.[42] Since *bés* 'custom' is a singular noun, the copula will be singular in any event.

However, Gippert's point is effectively established by his second example (148f.), in which a predicate adjective appears:

---

[39] The construction is not precisely parallel. In Disterheft's illustration, it is the logical subject of the verbal noun that is thought to be raised, whereas in our example it is the logical object. In fact, no exact correlates of Disterheft's "subject-to-object raising" can be cited from our materials. Nevertheless, since the target position is the same, the point made here will be unaffected.

[40] *Thes.* (followed by Disterheft) cites this gloss as *arisbés leoso^{m} indaim dothúarcuin* ***indarbe***, 'for it is a custom among them (for) the oxen to tread out **the corn**' but adds a footnote: "*indarbe* a prima manus." The *prima manus* of the Würzburg glosses is a somewhat earlier hand than that of the main glossator, and thus, as Gippert (*loc. cit.*) stresses, *indarbe* belongs to an older stratum of glossing and is not rightly part of the sentence. The arrangement in the manuscript is consistent with this observation: *indarbe* appears directly above the Latin *trituranti*, and *.i. dofuairec .i. arisbés leoso^{m} indaim dothúarcuin* is squeezed into the space above it. It is accordingly left out of the citation by both Thurneysen (*GOI* 445 § 720) and Lewis-Pedersen (*CCCG* 315 § 475(2)(b)).

[41] Disterheft (*loc. cit.*) incorrectly translates this as singular 'the ox'.

[42] *GOI* 493 § 815; cp. also Genee 1994: 69 n.9; Stüber 2009: 19.

uisse ***inboill*** ***dóass*** *ónchiunn*
fitting:NOM.SG ART-limb:NOM.PL to-grow:VN.DAT from+ART-head:DAT

'[it is] fitting **that the limbs grow** from the head' (Wb. 22a17)

If the plural noun *in boill* 'the limbs' were the subject of the matrix clause, then the predicate adjective 'fitting' should be the plural *uissi*, yet in fact it is the singular *uisse* that appears. The disagreement in number demonstrates that raising has not occurred, and that *in boill* is not the grammatical subject of the sentence. It is the entire N *do* VN phrase, construed as a single syntactic unit, that functions as the subject of the copula.

Another example to illustrate this point occurs at Wb. 10a18, *obseruatio mandatorum Dei* : ... *istaschide* ***timne dée dochomalnad*** *and* '... it is necessary (sg.) **the commandments** (pl.) **of God to fulfilling** [= to fulfill the commandments of God] therein'. While it is true that the form *timne* can represent either the singular or the plural, the Latin *mandatorum* shows that plural 'commandments' is the correct reading, and again there is number disagreement with the singular copula and predicate adjective *is taschide* 'it is necessary'.

Further evidence of the integral nature of N *do* VN is found in a quatrain from the first of Blathmac's two poems to the Blessed Virgin:

Is cian do·rairngred in se, / no mbíthe int áugaire /
COP:3SG long prophesy:PF.SG.PASS this PT strike:COND.3.SG.PASS ART shepherd:NOM

ocus essreud fiad doínib / do buith fora glanchaírib
and scattering:VN.NOM before person:DAT.PL to be:VN.DAT upon+his pure-sheep:DAT.PL

'Long has this been prophesied, / that the shepherd would be struck down /

and a scattering among the people / to be upon his pure sheep' (Bl. § 127)

Disterheft (1997 and 1997b) regards this as another example of raising, but it is difficult to understand her analysis of the sentence structure. She cites this as an illustration of "Subject-to-Object Raising," realized on the surface as subject-to-subject: "in fact, INF

subject (*int áugaire*) has been promoted to subject of the main verb (*do-rairngred*) because the latter is passive" (1997: 130).[43] Yet this cannot possibly be correct, for two reasons: (1) *in se* 'this, the following' is already the subject of the main verb *do·rairngred;* and (2) *int áugaire* 'the shepherd' is not a candidate for raising because it is the subject of another finite verb, *no bíthe* 'would be struck'. Some contradictory details emerge in the second article, where *essreud* 'scattering' rather than *int áugaire* 'the shepherd' is claimed to have undergone the raising: "the main clause verb is passive and thus the raised NP (*essreud,* itself a verbal noun) must be nominative, since the argument of a passive verb is always so marked" (1997b: 111). In both articles, however, the citation highlights both *int áugaire* and *essreud,* apparently implying that both constituents have been raised.

In reality, no raising has occurred in this passage. The structure of the sentence is as follows: [*is cian do·rairngred* [*in se*]$_i$: [[*no mbíthe int áugaire*] *ocus* [*essreud fiad doínib do buith fora glanchaírib*]]$_i$]. That is, the basic sentence is a cleft construct: *is cian do·rairngred in se* 'it is long that this has been prophesied', followed by two propositions that together stand in apposition to *in se* 'this, the following': a dependent clause *no mbíthe int áugaire* 'that the shepherd would be struck' and, coordinated with it, a verbal-noun phrase *essreud fiad doínib do buith fora glanchaírib* 'a scattering before the people (to) being upon his pure sheep'. The N *do* VN phrase is here shown to be a discrete constituent syntactically parallel to a clausal phrase; *essreud* has not been raised out of it.

Let us examine one further example:

V	O		S(VNP)	
ardofórmai[c]h	*fochricc*	*doso^{m}*	***sochude***	***doc‹h›reittim***
for-increase:3SG	reward:ACC	to+him-EMPH	multitude:NOM	to-believe:VN.DAT

[43] That is, raising is assumed to precede passivization: the embedded subject is first raised to object of the main verb, then passivization subsequently transforms it to grammatical subject.

triap^{re}*cept*
through+his-preach:VN.ACC

'for it increases the reward for him **that a multitude believes** through his preaching' (Wb. 1b5)

The VOS order of the constituents is anomalous for a non-copula verb. It is the result of extraposition, or heavy NP shift, which has moved the long subject phrase from its usual position immediately following the verb to the end of the sentence:[44]

V [S] O S
do·fórmaich [~~***sochude do chreittim ...***~~] *fochricc dō-som* [***sochude do chreittim*** ...]

Since it is the entire N *do* VN phrase that has moved, all its elements comprise a discrete syntagm that functions in its entirety as subject of the verb.

This treatment of the N *do* VN phrase as a single constituent is consistent in Old Irish grammar. There can therefore be no question of raising. Yet if this construction is not the outcome of a raising mechanism, how is it to be explained?

The cogent analysis of the Old Irish verbal noun given by Genee (1994; 1998: 104f., 440f.) provides an insightful solution.[45] She approaches the problem from the theoretical perspective of Functional Grammar as presented by Dik (1989) and Siewierska (1991), which takes syntax to be fundamentally driven by semantics, which

---

[44] See Mac Giolla Easpaig 1980: 29f.

[45] Genee's work appears to have received little attention in Old Irish scholarship, although, as we shall see, her solution affords some unique insights into the *do*-construction. The relative obscurity of her studies may be due in part to the theoretical framework on which they are based. Functional Grammar stands as a decided outlier from the mainstream of Chomskyan syntactic theories popular today, and may therefore seem relatively abstruse to many modern theoretical syntacticians as well as to Indo-Europeanists. Furthermore, Genee's conclusions run counter to the position — not universally held but certainly prominent — that the Old Irish *do*-construction must be in some way infinitival. The present discussion, it is hoped, will illustrate the value of considering other theoretical viewpoints for the clarification that they may offer. Even if one is not convinced by the arguments, it is useful to recognize the existence of other solutions that can potentially challenge one's own critical assumptions.

in turn is guided by pragmatic functions of discourse and communication. Genee argues that the N *do* VN phrase results from a fronting device, which she calls "Displacement," that moves one of the nominal arguments to the head of the verbal-noun phrase in order to mark a pragmatic function in the discourse, in particular focus (i.e., the most salient information in the utterance) and topic (i.e., the entity about which information is given). The verbal noun is subordinated to the fronted element by means of the preposition *do* 'to, for'.[46] This construction thus represents a kind of non-finite cleft construction that precisely parallels the finite copula sentence.

Genee (1994) examines the 38 governed occurrences of N *do* VN in the Würzburg glosses[47] and concludes that the pragmatic reason for the fronting can be determined from the context in practically every case — a rather impressive outcome that lends credibility to her conclusions. Genee's explanation provides a rather elegant solution to the problem of the N *do* VN phrase. Instead of being somehow detached from the other constructions in which a verbal noun may occur, it is shown to be systematically related as a marked variant of the normal phrase, the output of a clefting device that has a direct parallel, both structurally and functionally, in the copula sentence. This provides a

---

[46] The selection of this preposition may be due in part to its frequent usage in other verbal-noun phrases such as purposive datives and dative complements of adjectives. The structural ambiguity of the latter type is particularly common, and may be illustrated by Wb. 10b25:

baferr	*mochomairle*	*dodénu*^{m}
COP:SUBJ.3SG-better	my-counsel:NOM	to-do:VN.DAT

Here *do dénum* 'to doing' = 'to follow' can be taken to depend either on *ferr* 'better': *ba {ferr ..} mo chomairle {.. do dénum}* '[my counsel would be [better to follow]]' or on *mo chomairle* 'my counsel': *ba ferr [mo chomairle do dénum]* '[it would be better [to follow my counsel]]'. This syntactic and semantic ambiguity may have encouraged the choice of *do* as the subordinator in these constructions. (See Genee 1998: 47f., 52).

[47] She excludes twelve further examples that have no governing predicate to establish the syntactic context, or are otherwise unclear (1994: 68 n.7).

rationale for when and why the *do*-construction might be used in place of a normal verbal-noun phrase. The consistent treatment of "N *do* VN" as a single syntactic constituent follows from its being the product of fronting within the verbal-noun phrase rather than raising out of it.

Other peculiarities also receive ready explanations. For example, Stüber cites the following restriction on the *do*-phrase:

> Der *do*-Infinitiv unterliegt dagegen einer syntaktischen Restriktion: da ihm zwingend entweder Subjekt oder Objekt vorangeht, sind kontrollierte oder unspezifizierte Subjekte nur bei transitiven Verben erlaubt, bei denen in solchen Fällen das Objekt vorangestellt wird. (2007/2008: 160.)

This is a rather curious restriction for an infinitive. But if the *do*-phrase is taken to be the outcome of a fronting mechanism, then the requirement that either subject or object must precede the verbal noun ceases to be a constraint and becomes a simple function of how the phrase is formed: if no noun has been moved to the front of the phrase, then no opportunity arises for a *do* + VN construction to materialize.

1.5. Other Preliminaries.

1.5.1. Notes on Old Irish Phonology and Orthography. To the uninitiated, Old Irish orthography may appear utterly baffling. Even to those familiar with it, it poses numerous challenges. Because much of the analysis in the following chapters revolves around details of Old Irish morphophonology and its historical development, it will be useful in this introductory chapter to review the phonological system of the language and the orthographical conventions adopted by the Medieval Irish scribes to represent it. The following synopsis highlights a number of important points that will be encountered repeatedly in the pages ahead; for more complete descriptions, the reader is referred to *GOI* (18–153 §§ 23–244), and McCone's (2005: 12–19) useful summary.

1.5.1.1. Phonology. Most of the vagaries of Old Irish spelling may be attributed to the challenge of representing a language with a rather high phoneme inventory — McCone (1996: 26f.) catalogs some 45 consonants and 21 vowels — using an alphabet of far fewer symbols. The burgeoning of phonemes was a relatively recent phenomenon, traceable to major phonological changes that occurred in the centuries immediately preceding the emergence of Old Irish as a literary language. Three processes stand out in particular for their central roles in transforming Proto-Celtic into the unique language we know as Old Irish: lenition, apocope, and syncope.

(1) The earliest of these processes was lenition,[48] a term used to describe the lax articulation of consonants in intervocalic position. All single consonants, most clusters of **CR*, and *r*, *l*, *n* plus a non-homorganic consonant were affected by lenition, both internally and across word boundaries. The process began in Insular Celtic at the latest, and may be rather older than that. All Insular Celtic languages exhibit lenition, and some suggestive indications point to the possibility of this phenomenon in the Continental Celtic languages. Since lenition would have been only allophonic at first, it would not have been generally discernible in spelling. Only a few tantalizing clues exist that might point to its early presence, and the evidence that these provide is somewhat controversial.[49] The picture is complicated somewhat by the fact that the lenition of voiceless stops did not produce a uniform outcome in the later Insular Celtic languages;

---

[48] The analysis here follows that of McCone (1996: 81–98), who provides a far more detailed discussion of the issues, with further literature.

[49] See Watkins 1955: 16–19; D. E. Evans 1967: 400–3; McCone 1996: 84–87, w. additional lit. Items include the variation of *c* and *g* in Gaulish (but this is unsystematic and probably rather reflects spelling confusion arising from differences in pronunciation between Latin and Gaulish); the tendency for intervocalic *-g-* to disappear in Gaulish and in the Celtiberian word for 'daughter', *TuaTeros* and *TuaTe[r]es* < PCelt. **dugater-*; and the appearance of a new phoneme in Celtiberian, probably /z/ or /ð/, representing *-d-* and possibly *-s-* in lenited position. But for cautions, see Sims-Williams 2007: 325f.

they became voiceless fricatives in Irish but voiced stops in British. Of the diverse attempts to solve this discrepancy, the least problematic is probably the proposal that lenition in Celtic occurred in multiple stages.[50] From the witness of such divergent languages as Younger Avestan, Modern Greek, and Modern Spanish, all of which show the parallel change of voiced stops to voiced fricatives without the analogous development in the voiceless stops, there is no reason to assume that lenition must have affected all stops simultaneously; and when only one class of stops is involved, it appears to be the voiced series that is most susceptible. It is not implausible, then, to suggest that the voiced stops underwent an early lenition in Proto-(Insular) Celtic, with *-*s*- and the resonants following later within Insular Celtic,[51] and voiceless stops becoming lenited only after the split of Brittonic and Goidelic.

(2) The second notable transformative process was apocope, which probably occurred at the end of the fifth century, independently in both Irish and British. In Irish, it brought about the wholesale loss of final syllables, with the exception of original long vowels protected by final *-*h*,[52] which were reduced to a final short vowel.

(3) Finally, the sixth-century syncope eliminated all fully unstressed non-final syllables. Primitive Irish had regular heavy stress on the first syllable of a word and secondary stress on every odd syllable thereafter; syncope resulted in the loss of the second syllable in three- and four-syllable words, the loss of the second and fourth

---

[50] Espoused by McCone, *loc. cit.*; cp. also Koch 1990: 198; Sims-Williams 1990: 233; and others cited by Sims-Williams 2007: 324 fn.79.

[51] McCone (1996: 82) suggests that the opposition between unlenited /*R, L, N*/ and lenited /*r, l, n*/ may in fact have arisen by strengthening of the former in certain environments rather than by weakening of the latter.

[52] This sound was the reflex of earlier final *-*d*, *-*t*, *-*k* (via *-*δ*, *-*θ*, *-*x* respectively), *-*s*, and any consonant group containing *s, except *-*rs* and *-*ls* (see *GOI* 110 § 177).

syllables in five- and six-syllable words, and so on.[53]

These last two changes were responsible for the rise of phonemic palatalization in Irish. The rather complex development of this feature has been brilliantly disentangled by Greene (1973), with some additional clarifications by McCone (1997c). Initially, palatalization was purely phonetic and allophonic, brought about through the interplay of three partially competing influences: (1) the nature of the following front vowel, which represents the conditioning factor (the higher and further front, the more likely to trigger palatalization); balanced against (2) the nature of the preceding vowel (the lower and further back, the more likely to block palatalization) and (3) the nature of the consonant itself (labials and gutturals more resistant to palatalization than other consonants, and clusters unaffected). With the loss of word-final front vowels to apocope, the conditioning factor was removed and palatalization of a preceding consonant become phonemic. When internal vowels were lost to syncope, the remaining consonants almost always acquired the nature of the lost vowel: *a, o, u* left behind neutral consonants, while *i, e* left behind palatalized consonants. In this way clusters too became palatalized.

Subsequent processes brought about the rise of new intervocalic stops in Irish, when certain consonant combinations coalesced. All Primitive Irish combinations of nasal plus voiceless stop produced the corresponding voiced stop in Old Irish, with compensatory lengthening of a preceding non-high vowel. Homorganic obstruents that had come together through syncope combined in the corresponding stop, voiced if both original consonants were voiced, otherwise voiceless. (The only exception is /-$\beta^{\dagger}$*f*-/ which yielded /-*f*-/ instead of */-*p*-/, a probable indication that /*p*/, which had been lost in

---

[53] The morphological repercussions of apocope and syncope were enormous; see § 2.1.2 for some of its effects on the verbal system, and § 2.2.3.25 for some consequences in the nominal system.

Proto-Celtic and occurs in Old Irish primarily in Latin loanwords, did not exist as the unlenited counterpart of /f/ at the time of syncope.) The same assimilation usually occurred in compound words, but here the second consonant regularly determined the voicing outcome.

Unlenited continuants between vowels are also the result of consonant combinations. Inherited *-*st*-, *-*ts*-, *-*ks*-, *-*ps*- (the last two via *-*xs*-), *-*ns*-, and any combination of dental plus dental yielded OIr. /s/; inherited *-*sn*- and *-*ndn*- yielded OIr. /N/; *-*sm*- yielded OIr. /M/, as did also -*m*- + -*m*- brought together by syncope; inherited *-*nl*-, *-*sl*-, *-*lp*-, *-*ls*- (including from *-*lxs*-), and *-*ln*- (when not from syncope) all yielded OIr. /L/; inherited *-*nr*-, *-*rp*-, and *-*sr*- yielded OIr. /R/, as did also -*r*- + -*ṡ*- (= [h]) from syncope. On the other hand, the clusters -*nd*-, -*mb*-, and -*ld*- are still retained as such through our period except when proclitic (e.g., the fem.gen.sg. article ***inna*** < **sindās* and the preverb ***imm***- < **ambi*-), but become regularly assimilated to -*nn*-, -*mm*-, -*ll*- in later Old Irish.

Other assimilations of note:

D + **g* > /*g*/	*G* + **d* > /*d*/
D + **k* > /*k*/	**s* + **d* > **/zd/* > /*d*/
**g* + *ṡ* ([h]) > /*k*/	*D*/*G* + **b* > /*b*/

EOIr. [θ] > [ð] after an unstressed vowel, probably in the early eighth century.[54]

The accomplishment of syncope marks the transition point into the language we know as Old Irish. The language now possessed the rather high consonantal phonemic inventory mentioned above, since virtually every Proto-Celtic consonant had developed

---

[54] McCone 1981: 35 fn.29, 41f., 43f.

a fourfold outcome of a lenited/non-lenited pair combined with a palatalized/neutral pair. The Primitive Irish loss of *-i̯- and intervocalic *-u̯- reduced this count only slightly.

1.5.1.2. Orthography. Christianity had been introduced to Ireland from Britain approximately a century before the emergence of Old Irish, and with it came the Latin alphabet. Following the phonological transformations outlined above, a series of orthographical conventions and compromises came to be gradually adopted by the Irish *literati* in order to represent their language more precisely with the established alphabet, which, being short on symbols for fricatives and having no device for representing palatalization, was not well suited to the contemporary phonemics of their language. The resulting standard known from Classical Old Irish texts still tolerated a fair degree of ambiguity, but was suitably functional for its purpose. Modern normalization of Old Irish spelling follows this system.

In citation forms — i.e., ignoring the grammatical mutations of initial consonants that occur in various syntactic contexts — the stops and resonants (*p, t, c, b, d, g, m, n, l, r*) maintain their unlenited values word-initially and at the start of the tonic syllable following a proclitic element, but represent other values word-internally (except after certain consonants)[55] and word-finally: the letters ⟨*p*⟩, ⟨*t*⟩, ⟨*c*⟩ represent alternately voiceless stops /*p*/, /*t*/, /*k*/ and their voiced counterparts /*b*/, /*d*/, /*g*/;[56] the letters ⟨*b*⟩, ⟨*d*⟩, ⟨*g*⟩ represent voiced stops /*b*/, /*d*/, /*g*/ and the corresponding voiced fricatives /*β*/, /*ð*/, /*γ*/; the letter ⟨*m*⟩ represents a nasal stop /*m*/ and a nasal fricative /*μ*/; and ⟨*n*⟩, ⟨*l*⟩, ⟨*r*⟩

---

[55] See *GOI* 22–24 §§ 31–32.

[56] The latter values betray the British roots of the orthographical system, since the voicing of voiceless stops is a distinct feature of British lenition. When the Irish adopted the Latin alphabet, they naturally adopted the sound-values of the letters as pronounced by the British (Greene 1956: 286).

represent fortis resonants /N/, /L/, /R/ and lenis resonants /n/, /l/, /r/.[57] The voiceless fricatives are written *ph, th, ch*,[58] following the Latin convention for representing the corresponding Greek sounds. When an unlenited sound occurs in internal or final position, it can optionally be specified by means of doubling the letter,[59] but this practice is rather haphazardly followed. The ambiguities that arise can in many cases be clarified by consulting Modern Irish.

Historical *$\underset{\sim}{\mu}$ became Old Irish *f* word-initially, but had already disappeared intervocalically before the earliest manuscript writings. The word-initial alternation *f-* : ø still survives synchronically as a rule of initial consonant mutations, but is not always indicated in writing; especially in early manuscripts, ⟨*f*⟩ stands for both initial /*f*-/ and its silent lenited counterpart. In later Old Irish it becomes customary to write the lenited variant as ⟨*ḟ*⟩, with a Latin *punctum delens* to indicate that it is silent. Historical **s* was treated similarly. The lenited sound was phonetic [h] which also disappeared intervocalically before the time of Old Irish. The word-initial alternation /*s*-/ : /*h*-/ still survives in the system of grammatical mutations. It is not differentiated in writing in the earliest manuscripts, but comes to be distinguished as ⟨*s*⟩ : ⟨*ṡ*⟩ by late Old Irish. Graphic ⟨*h*⟩, on the other hand, has no phonetic value, but is often prefixed before initial vowels, especially in short words.

---

[57] The actual phonetics cannot be determined with certainty. It is assumed for the sake of the examples below that /*m*/ = [m], /*μ*/ = [$\tilde{v}$], /*N*/ = [n:], /*n*/ = [n], /*R*/ = [r], /*r*/ = [ɾ], /*L*/ = [l:], and /*l*/ = [l].

[58] But the combination *cht* (/*xt*/) is frequently written ⟨*ct*⟩.

[59] Thurneysen (*GOI* 150 § 240) considered gemination to be a contemporary phonemic reality in Old Irish. Greene (1956) shows that the only continuing opposition in Old Irish was between lenited and unlenited consonants, with no place in the system for a single unlenited consonant to contrast with a geminated consonant, thus confirming the earlier position of Pedersen (1912: 22f.) — and indeed Zeuss (1871: 59, 337) — that the writing of doubled consonants merely serves to indicate non-lenition of the consonant.

The graphic representation of palatalized and non-palatalized consonants is achieved through the use of additional vowel symbols. When a consonant of one quality stands next to a vowel of differing quality, an extra vowel symbol may be inserted in writing to signal the consonant's quality. This is an orthographical convention that does not imply a phonemic diphthong (although an incidental on-glide or off-glide may have been audibly discernible in some phonetic contexts). The spelling rule in Modern Irish is known as *caol le caol agus leathan le leathan* 'slender with slender and broad with broad', meaning that a "slender" (i.e., front) vowel must appear on both sides of a "slender" (i.e., palatalized) consonant, and a "broad" (non-front) vowel must appear on both sides of a "broad" (non-palatalized, or neutral) consonant. The practice is rather more reliably observed in Middle Irish than in Old Irish, and the earliest manuscripts are the least dependable. The basic system operates as follows.

(1) A palatalized consonant has ⟨*-i-*⟩ inserted before it when it follows a stressed vowel other than *-ĭ-* or the diphthongs *-aí-/-áe-*, *-oí-/-óe-*. This rule is more consistently observed when the consonant closes the stressed syllable than when it begins the following syllable. By contrast, when a neutral (non-palatalized) consonant follows a stressed front vowel, there is no corresponding convention of inserting a non-front vowel before it until Middle Irish.

(2) Final vowels still maintain their distinct values in Old Irish. A front vowel is sometimes inserted in writing before a final non-front vowel that follows a palatalized consonant: ⟨*-e-*⟩ before *-a* and *-o*, ⟨*-i-*⟩ before *-u*. Final *-e* and *-i* following a neutral consonant occasionally acquire an analogous preceding ⟨*-a-*⟩ as early as Würzburg, but this practice is not common until later Old Irish.

(3) From archaic spellings such as *at·rubert* (: *at·rubart*), *fugell* (: *fugall*), *fresdel* (: *frestal*), *tu·thēgot* (: *do·thíagat*), *tu·esmot* (: *do·eismet*), *saīthor* (: *saíthar*), etc.,[60] it is evident that unstressed vowels still maintain their distinctive character in the seventh century. By the eighth century, however, all unstressed vowels in internal syllables have been reduced to two short vowels, one unrounded ([ə]) and one rounded ([ɵ]). Rounded [ɵ] has arisen either from the phonetic influence of flanking consonants (especially between a labial or guttural and *r*, *l*, or *n*)[61] or as the result of velar umlaut owing to the apocope of **-u*; it is spelled *-o-*, *-u-*, and (after a palatalized consonant) *-iu-*.[62] Unrounded [ə] occurs everywhere else, its orthographic representation determined almost entirely by the quality of the flanking consonants:[63]

-i- / *C′__C′*

-a- / *C__C*

-e- / *C′__C*

-(a)i- / *C__C′*

There is a marked tendency for [ɵ] to become [ə] as time progresses, ultimately erasing any distinction between them, so that spellings tend to fluctuate in the manuscripts.[64]

Thurneysen (*GOI* 55–57 §§ 85–88) operates on the assumption of an additional series of "*u*-quality" consonants in Old Irish to explain the appearance of ⟨*-u-*⟩ or ⟨*-o-*⟩ in analogous positions as ⟨*-i-*⟩, ⟨*-e-*⟩, and ⟨*-a-*⟩ in the above rules. As this third series of

---

[60] See Thurneysen 1897: 347–49; 1901: 48f. for a complete list.

[61] *GOI* 108f. § 173.

[62] Greene 1962: 623f.

[63] *GOI* 63–66 §§ 101–103.

[64] *GOI* 107f. § 172.

consonants would add another 22 sounds to the language's already substantial phonemic inventory and create a typologically unusual system without a clear semantic load on the velarized series, Greene (1962) argues instead that the spellings designate actual *u*-diphthongs in stressed syllables and short [ə] in unstressed.

Because of the inconsistency in the early texts of writing graphic ⟨*-a-*⟩ next to a neutral consonant, a sequence such as *-ăCi-* is ambiguous as to whether the consonant is to be taken as palatalized (*-ăiCi-*) or a neutral (*-ăCai-*), and similarly, *mutatis mutandis,* with *-ŏCi-* and *-ŭCi-*. Corroboration from later texts may often clarify the situation, provided a secondary change of quality has not occurred.

There are five short vowels in Old Irish (/*a*/, /*e*/, /*i*/, /*o*/, /*u*/), which in unstressed position fall together as [ə] and [ɵ], and five long vowels (/*ā*/, /*ē*/, /*ī*/, /*ō*/, /*ū*/). Length may be indicated by a long mark placed over the vowel (⟨*á*⟩, ⟨*é*⟩, ⟨*í*⟩, ⟨*ó*⟩, ⟨*ú*⟩), but this sign is frequently omitted in the manuscripts. Where a vowel is long but not so marked in a manuscript source, it is the convention in critical texts to indicate the unmarked length with a macron (*ā, ē, ī, ō, ū*).

The development of diphthongs from Primitive to Old Irish has been carefully traced by Greene (1976) with characteristic acuity and attention to the phonetic implications of the written spellings. Early (probably pre-fifth century) Primitive Irish appears to have possessed only two diphthongs, /*ai*/ and /*oi*/, to judge from the Ogham evidence. Apocope and syncope had profound effects on the vocalic system as well as the consonantal, producing four short diphthongs /*au*/, /*eu*/, /*iu*/, /*ou*/,[65] seven long diphthongs /*āu*/, /*ēu*/, /*īu*/, /*ōu*/, /*āi*/, /*ōi*/, /*ūi*/, and one triphthong /*āui*/ by the beginnings of Old Irish. In normalized Old Irish the long diphthongs in /*V̄i*/ are written with the

---

[65] This assumes that these represent true diphthongs and not merely graphic indications of following "*u*-quality" consonants; see above and Greene (1962).

accent over the ⟨*í*⟩ in order to distinguish them from a long vowel followed by a palatalized consonant — i.e., *aíC /āiC/*, *oíC /ōiC/*, etc. vs. *áiC /āC'/*, *óiC /ōC'/*, etc. This is a modern convention that is not observed at all in the manuscripts, where great freedom reigns in the choice of whether or not to include the long mark, and, when included, where to place it. Over the course of our target period further changes occur, including a shift in the existing diphthongs from a falling to a rising pronunciation, and the roughly contemporary emergence of two new falling diphthongs from the breaking of *é* (< PCelt. **ē* < PIE **e̯i*) to *ía* before neutral consonants, and *ó* (< PCelt. **au, *eu, *ou* < PIE **a̯u, e̯u, o̯u*,) to *úa*. Because of these changes, forms such as *fēda* 'lord, master', *ón* 'act of lending, a loan', etc. are found in our early manuscripts where the later forms are *fíada, úan*, etc. Early Old Irish */āi/* and */ōi/*, which are variously spelled ⟨*áe*⟩, ⟨*aí*⟩, ⟨*óe*⟩, ⟨*oí*⟩ (the spellings with ⟨*e*⟩ probably modeled on Latin),[66] become utterly confused in late Old Irish and Middle Irish. By Modern Irish they have become a monophthong spelled ⟨*ao*⟩ and pronounced [iː], [eː], or [ɯː], depending on the dialect.

1.5.1.3. Examples. To conclude, it may be useful to provide some examples, drawn from the verbal nouns that appear in this study, for purposes of illustration. The phonetic representations provided here are approximate and somewhat idealized, as the exact pronunciation can only be surmised.

accomol (*acomol, accumul*) = ['a.kə.ṽəl] 'union, act of uniting'.

aisndís = ['asʲ.nʲʤʲiːs] 'declaration, act of declaring'.

apud (*abud*)= ['a.bəð], later ***apad*** (*abad*) = ['a.bəð] 'proclamation, act of proclaiming'.

áram = ['aː.ɾəṽ], also ***áirem*** = ['aː.ɾʲəṽ] 'amount, act of counting'.

arrae = ['a.re] 'compensation, act of compensating'; contrast ***díre*** = [ʤʲiː.ɾʲe] 'honor-price'.

---

[66] *GOI* 42 § 66.

att (*at*) = [at] 'act of swelling, a swelling'; contrast ***brat*** = [bɾad] 'plunder', ***gat*** [gad] 'removal, act of taking away'.

attlugud (*atlugud, atlogud*) = ['at.lə.ɣəð] 'thanksgiving, act of giving thanks', cp. ***airiugud*** (*airigud, arigud*) = ['a.ʲə.ɣəð] 'perception, act of perceiving', ***dánaigiud*** = ['da:.nə.ɣʲəð] 'act of giving', ***deimnigiud*** (*demnigud, deimnigud, demnigiud*) = ['ɗʲeṽʲ.nʲə.ɣʲəð] 'confirmation, act of confirming'.

bíathad = ['bʲia.θəð] 'food provision, act of feeding' → ***airbiathad*** = ['aʲ.vʲia.θəð] 'act of nourishing'.

cétul = ['kʲe:.dəl], also ***cétal*** = ['kʲe:.dəl] 'song, act of singing' → ***coicetul*** = ['ko.gʲə.dəl], also ***coicetal*** = ['ko.gʲə.dəl] 'harmony'.

cloüd = ['klo.əð], later ***clód*** = [klo:ð] 'act of turning back' → ***coímchlód*** = [koɪm.xlo:ð] 'reversal, act of reversing'.

coíniud (*caínıud*) = ['koɪ.nʲəð] 'act of weeping' → ***derchoíniud*** = ['ɗeɾ.xoɪ.nʲəð] 'despair, act of despairing', ***écoíniud*** = ['e:.goɪ.nʲəð] 'lamentation, act of lamenting'.

commus (*comus*) = ['ko.məs] 'control, act of controlling'; contrast ***tomus*** = ['to.ṽəs] 'measure, act of measuring'.

cosoít (*cossoít, cosaít*) = ['ko.soɪɗʲ] 'accusation, act of accusing'.

cubus = ['ku.vəs] 'conscience' → ***cocubus*** = ['ko.gə.vəs] 'id.'

ellug = ['e.l:əɣ], ***elluch*** = ['e.l:əx] 'unity, act of uniting'; cp. ***folog*** = ['fo.ləɣ], later ***folach*** = ['fo.ləx] 'endurance, act of enduring'.

fócrae (*fócre*) = ['fo:.gɾe] 'announcement, act of announcing' → ***airḟócrae*** (*airócre*) ['a.ʲo:.gɾe] 'proclamation, act of proclaiming'.

forgob (*forggub*) = ['foɾ.gəv], also ***forgab*** (*forggab*) = ['foɾ.gəv] 'a blow, thrust'.

frepaid (*frebaid*) = ['fɾʲe.bəðʲ], arch. ***fribuith*** = ['fɾʲi.buθʲ] 'cure, act of healing'.

frecmarc = ['fɾʲek.vəɾk], inquiry, act of inquiring'; contrast ***frecrae*** (*frecre*) = ['fɾʲe.gɾe]

'answer, act of answering'.

gabál = [ˈga.vaːl], also ***gabáil*** = [ˈga.vaːlʲ] 'act of taking'.

gal = [gal] 'warlike ardor' → ***dígal*** = [ˈdʲiː.ɣəl] 'vengeance, act of avenging' → ***imdegal*** = [ˈimʲ.ðʲə.ɣəl] 'protection, act of protecting'.

íc (*ícc*) = [iːk] 'redemption, act of redeeming'; contrast ***airec*** (*airecc*) = [ˈa.ɾʲəg] 'act of finding', ***comrac*** (*comracc*) = [ˈkoṽ.ɾəg] 'encounter, act of encountering'.

impide = [ˈimʲ.pʲə.ðʲe] 'entreaty'; contrast ***impuide*** = [ˈim.pɵ.ðʲe] 'encompassment, act of surrounding'.

lugae = [ˈlːu.ɣe], also ***luige*** = [ˈlːu.ɣʲe] 'oath, act of swearing'.

maidm = [ˈmaðʲmʲ] 'act of breaking', ***naidm*** = [ˈnːaðʲmʲ] 'bond, act of binding'.

pennait (*pennit*) = [ˈpʲe.nːəðʲ] 'penitence, act of doing penance'.

precept = [ˈpʲɾʲe.gʲəpt] 'doctrine, act of preaching'.

rám = [raːṽ] 'act of rowing' → ***imram*** (*ımmram*) = [ˈim.ɾəṽ] '(sea-)travel, act of traveling (by boat)'.

réim (*réımm, rém, rémm*) = [rʲeːmʲ] 'movement, act of advancing' → ***imrim*** (*imrimm*) = [ˈimʲ.ɾʲəmʲ] 'journey, act of traveling'.

scríbend (*scríbent*) = [ˈsʲkʲɾʲiː.vʲənd] 'act of writing'.

sénae = [ˈsʲeː.ne] 'denial, act of denying' → ***imṡénae*** = [ˈimʲ.hʲeː.ne] 'mutual denial'.

taurchrec (*taurchrecc*) = [ˈtaʊɾ.xʲɾʲək] (also *turchrec, turchrecc* = [ˈtuɾ-]) 'fore-purchase, fief'.

tocad = [ˈto.gəð], arch. ***toceth*** = [ˈto.geθ] 'fortune, condition of being destined'.

CHAPTER 2.

FORMATION OF VERBS AND VERBAL NOUNS.

The set of formal relationships that exist between verbs and verbal nouns in Old Irish is complex and far from uniform. The morphology of a verbal noun is not directly governed by the shape of the verb, yet neither is it wholly independent of it. Thus, for example, while verbal nouns of strong verbs display a wide variety of stem formations, the range of possibilities is generally different from that associated with weak verbs; and the preverbal elements that are added to verbs to form compounds are regularly mirrored by the verbal nouns, whatever their stem class. It will be useful therefore, before we turn to the verbal nouns themselves, to devote some space to a brief overview of the morphological structure of the Old Irish verb.[1]

2.1. Formation of Verbs. The form a verb takes varies depending on whether it is "independent" or "dependent," a distinction tied closely to whether the verb is part of an independent or a dependent clause. Dependent verbs are preceded by a subordinating conjunction or other subordinating particle, collectively referred to as "conjunct particles." Conjunct particles include negatives (*nĭ*[*con*], *nă*[*d*], etc.), interrogatives (*in* [interrog. pcl.], *ce, ci, cía* 'what', etc.), prepositional relatives and related conjunctions (*ara* 'for which' also 'so that', *dia* 'to/from which' also 'if, when', *co* 'so that, until', etc.). Independent verbs have no preceding particle, but may be preceded by coordinating conjunctions — *ocus* 'and', *acht* 'but', etc. — which do not subordinate the following clause. (In this respect *ma* 'if' also functions like a non-subordinating

---

[1] What follows is intended merely as a brief review of selected aspects of the verbal complex. For a detailed discussion of this highly complicated subject, the reader is referred especially to McCone (1997 and 2006).

conjunction.) Particles and conjunctions that stand before the verb are always proclitic.

2.1.1. Simple verbs in Old Irish are composed of the basic verbal stem plus the personal endings. Dependent and independent forms of the simple verb are distinguished by the personal endings: independent forms take a set of fuller "absolute" endings while dependent forms take shorter "conjunct" endings; for example, abs. 3.sg.pres. *beir-id* 'carries', *nert-aid* 'strengthens' (with 3.sg.abs. ending -[*a*]*id*) vs. conj. *ní beir* 'does not carry' (with palatalized *-r* and zero ending), *ní nert-a* 'does not strengthen' (with conjunct ending *-a*).

2.1.2. Far outnumbering the simple verbs in Old Irish are compound verbs, which are formed by adding preverbs to the verbal root in order to modify its meaning. This is a very widespread Indo-European phenomenon; compare Ved. *tanóti* 'stretches' : *vi tanóti* 'spreads out', Gr. βάλλω 'throw' : κατα-βάλλω 'cast down, overthrow, kill', Lat. *vertō, -ere* 'turn' : *con-vertō, -ere* 'convert', Lith. *dúoti* 'to give' : *pér-duoti* 'to hand over, transmit', MoE *go* : *under-go*, etc. However, Insular Celtic has taken this process to an extreme, tolerating compounds of up to three, four, and even (rarely) five preverbs in Old Irish. The way in which a preverb modifies the meaning is sometimes predictable; for example, **u̯or-* < PIE **uper* often adds the sense 'over' or 'above' to the basic meaning (e.g., *ad·cí* 'sees' : *for·aicci* 'surveys, overlooks'); **imm-* < PIE **n̥bʰi* may mean 'around, in many directions' (*téit* 'goes' : *imm·tét* 'goes about, travels') or imply reciprocity (*ad·gládathar* 'addresses, speaks to' : *imm·acaldathar* 'converses together'), etc. But more often than not the preverb supplies a merely perfective aspect to the verbal action, or an idiomatic sense that cannot easily be traced to its literal meaning; for example, *as·beir* from **exs-* < **eks-* 'out of' + *·beir* 'carries' does not mean *'carries out' but rather 'says'.

Prosodically the first preverb of a compound behaves much like a conjunct particle, a fact that has several important implications. Firstly, compound verbs always

take conjunct personal endings. Secondly, in the independent form of the verb, the first preverb is not as closely tied to the verb morphologically as any that follow; it is regularly proclitic, and the stress falls on the second element (whether that happens to be the root or another preverb). And thirdly, the dependent form of a compound verb is distinguished by a shift of the stress onto the first preverb, since the pretonic position is now filled by the conjunct particle. In Old Irish grammar, the independent form of a compound verb is termed "deuterotonic," i.e., having the stress on the second element, while the dependent form is called "prototonic," i.e., with the stress on the first preverb.

In the prehistory of Irish, before the disappearance of internal unstressed syllables, this alternation in stress would not have caused significant changes in the verbal forms. However, the Primitive Irish apocope of roughly 500 A.D. and the syncope of some 50 years later (see § 1.5.1.1 above) had far-reaching consequences for the verbal paradigm, the long-term effects of which can hardly be overstated. For compound verbs, this meant that the shift from deuterotonic to prototonic stress in the different moods and tenses produced alternating patterns of syncope. No simple vowel was exempt from deletion, not even the vowel of the root, if the shift in stress placed it in a position that was vulnerable to syncopation. With the concomitant effects of assimilation on the remaining consonants, the variation can be considerable:

Deuterotonic	**Prototonic**	
*for·**ber**-at* |*for-ˈ**ber**-ad*|	*·foir-**b**†**r**-et* |ˈ*for-**ber**-ad*|	'they grow'
*ass·ind-**et*** |*ess-ˈind-**fēd***|	*·ais-†nd-**et*** |ˈ*ess-ind-**fēd***|	'expounds'
*con·os-†**n**-a* |*com-ˈuss-**an**-a*|	*·cum-†s-**an**-a* |ˈ*com-uss-ˌ**an**-a*|	'rests'
*do·ró-**sc**†(**c**)-ai* |*de-ˈ**ro**-uss-**scuch**-i*|	*·de-r†-**scaig**-i* |ˈ*de-**ro**-uss-ˌ**scuch**-i*|	'excels'

(**root in bold** ˈ primary stress ˌ secondary stress † syncopated vowel.)

2.1.3. Preverbs in Old Irish undergo various phonological modifications owing to their attenuated articulation, most notably the depalatalization of consonants, the voicing of dentals, the shortening of vowels in general and the alteration in quality of

some of them, and the change of *com-* to *con-*.[2] The preverbs therefore often have two forms, depending on whether they are pretonic or (post-)tonic, and some of the unstressed forms fall together: *ad-, aith-* > *ad·*; *de-, dí-, tu-* > *do·*; *ess-, uss-* > *as·*.

Pretonic / Tonic	**PrIr.**	**PCelt.**	**PIE**	**Basic Meaning**
ad· / ad-	< *ad-		< *ad	at, to(wards)
ar· / air-‘	< *ari-	< *(ϕ)ari	< *$p\underset{\circ}{r}h_2i$	before, for
ad· / aith-‘	< *ati-		< *ati	back, again, re-
ceta· / cét-	< *kanta-		< *$k\underset{\circ}{m}ta$	down
con· / com-	< *kom-		< *kom	with, together
do· / de-‘, dí-‘	< *de-, *dī-		< *de, *dē	away from
as· / ess-	< *exs-	< *eks	< ?*$e\hat{g}^hs$	out of
eter· / eter-	< *enter-		< *enter	between
fo· / fo-	< *$\hat{u}o$-	< *u(ϕ)o	< *upo	under
for· / for-	< *$\hat{u}or$-		< *uper	on, over
fris· / frith-, fre(s)-	< *$\hat{u}rit$-, *$\hat{u}riss$-	< *$\hat{u}riti$, *$\hat{u}rits$	← √*uert-	towards, against
íarmi· / íarm-	< *$\hat{e}rm$-	< ?*e(ϕ)$\hat{i}$-ro-m[3]	← *epi	after, behind
imm· / imm-‘	< *imbi-	< PICelt. *ambi-	< *$\underset{\circ}{m}b^hi$ < *$h_2\underset{\circ}{n}t$-bhi	around
[ad·, as·] / en-(‘)	< *en(i)-		< *en, *eni	in(to)
in· / in(d)-‘	< *inde-	< PICelt. *ande-	< *$\underset{\circ}{n}$ (< *en) + *-de[4] or *-d^hi[5]	in(to)
— / ne-	< *ni-		< *ni	down
remi· / rem-‘	⇐ *$ri\underset{\circ}{i}an$	< ?*(ϕ)$ri\underset{\circ}{i}$-o-m	< ?*priHom	before, pre-
ro· / ro-	< *$\hat{r}o$-	< *(ϕ)$\hat{r}o$	< *pro	forth, before
do· / to-, tu-	< *tu-[6] (or *to-?)		< *tu (or *to?)	perfective[7]
tremi· / tre(m)-‘	⇐ *tri-	< *trei	< *$treh_1$-i ← √*$terh_1$- ?	across, through
as· / uss-[8]	< *uxs-		< *up-s	up, out
	< *uss-	< *uts	< *ud-s	up(wards)

---

[2] McCone 1997: 4f.

[3] *EDPC* 113 s.v. ***efirom**: "PCelt. *efirom presupposes, first, a nominalized PIE *$h_1$epi-ro-m 'behind', which then became a relational noun, and finally a preposition."

[4] *KPV* 83.

[5] *$h_1\underset{\circ}{n}d^hi$ (Skt. *adhi*), McCone 1994: 177; 1996: 70.

[6] For the reconstruction of this preverb as **tu-* instead of the more traditional **to-*, see § 2.1.3.4.

[7] The ventive sense that appears in a few pairs (e.g., *beirid* 'carries' : *do·beir* 'brings') is apparently secondary; see Holmer 1933; Dillon 1962: 121f.

[8] See Russell 1988: 116–25. The cover form **uss-* will be used everywhere in this study, as the preforms can no longer be distinguished.

Ambiguous deuterotonic forms resulting from the unstressed preverbs that have fallen together are clarified by the prototonic forms where the preverb falls under the stress, for example, *do·ben* 'cuts away' (< **dī-ben-*), prot. (1.sg.perf.) ***·dību*** vs. *do·ben* 'attacks' (< **tu-ben-*), prot. (3.pl.fut.) ***·tubat***. The verbal nouns, also being stressed on the first syllable, likewise preserve the distinction: ***díbe*** vs. ***tubae***.

A full investigation of the Celtic preverbs will not be undertaken here, but further comment on a few of them is warranted.

2.1.3.1. It is recognized that the preverb *frith-/fris(s)-* and the corresponding preposition *fri*^{h} 'towards, against' derive ultimately from **u̯r̥t-*, zero grade of the PIE root √**u̯ert-* 'turn', and the standard reference literature generally cites the underlying form as *frith-* or **u̯rit-*. This is merely a convention, however, as the actual Old Irish forms evince a variety that is difficult to unify. They are summarized by *GOI* (514 § 839): under the stress *frith-* and occasionally *fres-* appear before vowels, while *fri-/fre-* ("geminating"),[9] *fris-/fres-*, and (late) *frith-*^{c} may all be found before consonants; pretonically the form is always *fris(s)·*. Russell (1988: 120–23) proposes the existence of two variants to account for this diversity, asigmatic *frith-* < **u̯rit-* alongside sigmatic *fris(s)-* < **u̯rits-* (cp. Lat. *ab-/abs-*, Gr. ἐκ-/ἐξ-, etc.). From the distribution he concludes that the preverb without *-s-* was originally employed in "close compounds," i.e., prototonic verbal forms and nominal compounds, while the preverb with *-s-* occurred in "loose compounds," i.e., deuterotonic verbal forms (123).

Concerning the morphology of the preverb, Schrijver (1994: 151f.) argues that *frith-* cannot be traced back to a PIE bare root **u̯r̥t*, because: (1) the use of an endingless

---

[9] That is, phonetically, preventing lenition of an initial consonant in the following word (Greene 1956); this is often indicated in spelling by doubling the consonant (§ 1.5.1.2). If a vowel follows, phonetic */h-/* is prefixed (although this sound is not indicated in the orthography before Modern Irish).

verbal root or root-noun as a preposition is unparalleled in Indo-European; (2) final dentals were neutralized in word auslaut, probably as voiced *-d*, already in Proto-Indo-European; and (3) even if this had become PCelt. **u̯rit*, the final **-t* would have regularly been lost at a very early date, resulting in OIr. ⁂*fri*'. Moreover, he objects (152–55) to Russell's postulate of an alternate form with **-s* because: (1) its distribution differs from that of the other sigmatic preverbs *ess-* and *uss-*; (2) some forms of the conjugated preposition lack *-s(s)-*; and (3) the British forms show no final *-s*. Instead, Schrijver argues for a locatival PIE **u̯r̥t-i* as the preform of both *frith-* and *fris(s)-*, with the early loss of final **-i* predating the main apocope in Irish[10] and a putative subsequent development **-t* > **-ts* > **-ss* > **-s* > **-h* > *-ø* (166); the existing variants in *-th-* and *-s(s)-* would then have resulted from the different stages at which the preposition fused with a following verb or pronoun.

Schrijver's objections to a bare root **u̯r̥t* behind the asigmatic form *frith-* are cogent, and his proposal of reconstructing PIE **u̯r̥ti* > PCelt. **u̯rit(i)* > OIr. *frith-* and *fri*^{h} has much to recommend it both semantically and formally. On the other hand, his arguments against a sigmatic alternate **u̯r̥t-s* > **u̯rit-s* > *fris(s)-* are not entirely persuasive. The assumption that *fris(s)-* must behave identically to *ess-* and *uss-* is not necessarily warranted, and in fact Russell (*loc. cit.*) assumes the opposite, suggesting that *ess-* and *uss-* became more rigidly fixed than *fris(s)-* because of the "formal ineptness" of the variants without *-s-*; or put another way, **u̯rit(s)-*, being more characterized by nature, could tolerate a higher degree of variation without ambiguity or loss of identity than could **ex(s)-*, **ux(s)-*, and **ut(s)-*. In regard to the prepositional pronouns, it does not seem possible to account for the existing variation in without recourse to some sort of

---

[10] For other accounts of the early apocope of **-i*, see Cowgill 1975: 56f.; McCone 1978: 35–38.

reanalysis and analogy, and Schrijver's solution fares no better in this respect than others. Also, the lack of final *-*s* in British could simply be due to a generalization of the asigmatic forms in Proto-British, and need not have any implications for Irish.

Moreover, the phonological development of final *-*t* > *-*ts* > *-*ss* that Schrijver proposes to accommodate the Old Irish forms with -*s*(*s*)- is not without its own difficulties, being uncomfortably *ad hoc* and by no means obvious. Indeed, it is quite out of keeping with the consistent pattern of phonetic weakening in auslaut that Irish exhibited prehistorically in the early loss of final *-*i*, the subsequent merger of final *-*t* and *-*s* as *-*h*, and the main Irish apocope that followed. It is far more probable therefore that historic final *-*t* merged directly with *-*s* in Primitive Irish without an intermediate stage of intensification, or that both underwent parallel weakening to merge into a sound something like the non-sibilant coronal fricative [θ] heard today in the final /-*t*/ of some versions of Hiberno-English, before weakening further and finally disappearing.

On the whole, then, a historical etymon *$\underset{\frown}{u}$*rits* would seem to be the most straightforward explanation for the variant *fris*(*s*)-, and there is no *a priori* reason to reject the possibility that two forms, *$\underset{\frown}{u}$*riti* < PIE *$\underset{\frown}{u}\underset{\circ}{r}$*t-i* and *$\underset{\frown}{u}$*rits* < PIE *$\underset{\frown}{u}\underset{\circ}{r}$*t-s*, existed side by side in Proto-Celtic. Traces of such sigmatic and asigmatic pairs are, in fact, rather common among the preverbs, prepositions, and adverbs of Indo-European, as Russell discusses in a related article (1988b). He concludes (166) that the *s*-variant most likely originates in a fossilized case form of a root-noun, parallel with other preverbs and prepositions that show traces of old case forms.[11] In accordance with this, just as PCelt. *$\underset{\frown}{u}$*rit-i* has its source in an old locative in -*i* of the PIE root-noun *$\underset{\frown}{u}$*ert-*, so PCelt. *$\underset{\frown}{u}$*rit-s* would continue another case form, either genitive/ablative or nominative, of the same

[11] For which cp. Beekes 1995: 218f.

noun. Whatever the original differences in meaning or usage between the two forms, by the time of our sources they have become almost completely obscured. Only distributional traces remain: the sigmatic form occurs in the free preposition and in loose compounds, while the asigmatic form is limited to close compounds.

The lowering of stressed *-*i*- to -*e*- is triggered regularly by a following non-high non-front vowel,[12] as in ***frecmarc*** 'inquiry; act of inquiring about' < *u̯rit-kom-ark-o- (§ 3.1.8(1)), ***frecrae*** 'answer, act of answering' < *u̯rit(s)-gar-io- (§ 3.1.52(2)), ***fresc(i)siu*** 'expectation, act of looking forward to' < *u̯riss-ad-k^{w}is-tion- (§ 3.1.21(1)), etc. But the stressed variants with lowered -*e*- tend to spread at the expense of those with -*i*-, for example in ***frepaid*** 'cure, remedy, act of healing' beside one example of historically regular ***fribuith*** < *u̯rit(s)-bu-ti- (§ 3.1.14(2)), and ***freslige*** 'juxtaposition, act of lying beside' in addition to the rare ***frislige*** < *u̯riss-leg-io- (§ 3.1.69(1)), etc.

A late formation can also be distinguished where invariable *frith-*‘ appears before consonants which are lenited by analogy with *aith-*.[13]

2.1.3.2. *en-*‘(ʻ) and *in(d)-*‘ represent another mixture of what were earlier separate forms, **en*, **eni*, and **ande*. The basic meaning is 'in, into'; whatever differences of nuance may have existed in earlier times have been completely obscured by the time of Old Irish. Blurring of the forms has also occurred.[14] In tonic position *in-*‘ and *ind-*‘ are usually still distinct before vowels, *r*, and *s*, but otherwise the cluster *indC(h)*- tends to lose the -*d*-[15] and thereby becomes indistinguishable from *inC(h)*-. Before consonants *en-*

---

[12] *GOI* 46 § 73.

[13] *GOI* 514 § 893.A.

[14] See *GOI* 518–22 § 842.

[15] *GOI* 112 § 180.(1).

is frequent. In pretonic position *in·* is usual, but *ad·* and *as·* sometimes substitute in its place.[16]

Stressed **en-c* and **en-t* regularly become *é-c* (/ēg/) and *é-t* (/ēd/) with voicing of the consonant, loss of the nasal and compensatory lengthening of the vowel. But examples with short *e* before voiced *c* also exist: ***tecmallad*** 'collection, act of gathering' (MoIr. *teaglamhadh*, with metathesis of *-mh-* and *-l-*) ↔ vb. *do·**ecmalla*** 'gathers' appears in our corpus (§ 3.1.37(2)), and elsewhere in Old Irish are found the verbal nouns ***tecmang*** 'chance, happening' (MoIr. *teagmháil*, with a different suffix) ↔ vb. *do·**ecmaing*** 'happens to', ***tecosc*** (MoIr. *teagasc*) 'instruction, act of teaching' (cp. ***tinchosc*** with a different variant of the preverb, § 3.1.110(1)), and ***ecor*** 'arrangement, act of arranging' (MoIr. ***eagar***) ↔ vb. *in·cuirethar* 'brings in, imposes'. Thurneysen (*GOI* 518f. § 842.A) takes these forms to reflect a variant **in-*, with **-i-* lowered to *-e-* by the following *-o-* (thus ***tecmallad*** < **tinkomellătu-*, etc.), on the supposition (126 § 208) that **-i-* does not undergo the same compensatory lengthening as **-a-* and **-e-* when the nasal is lost. However, the only supporting example he cites is *ro·**ic**(c)*, *ric(c)* 'reachs, comes to', the origin of which is disputed but in any event was not PCelt. **ink-* (see § 3.1.66 comment A). There are, furthermore, counterexamples that show PCelt. **in-k* > OIr. *é-c* (/ēg/) and PCelt. **in-t* > OIr. *é-t* (/ēd/): ***léicid*** 'leaves' < **l**i-n-k**^{w}-et(i)*[17] and ***téit*** 'goes', if from **t**i-n-g**-t(i)*.[18] McCone (1996: 108) cautiously suggests that the following *-o-* (perhaps in conjunction with *-m-* or *-r-*?) might have conditioned the short-vowel outcome in these forms. There is no

---

[16] For which see *GOI* 520 § 842.B(1).

[17] See McCone 1991: 47–52; 1996: 64f.; Schrijver 1991b: 20 fn.8; 1993: 42–45, 48f.

[18] Following the formulation of Schrijver 1993: 44. Since pre-Celt. 3.sg. **tingti* should have regularly yielded PCelt. **tinxti* > OIr. ‡*tícht*, the Proto-Celtic form must be assumed to have reverted analogically to **tingti* on the basis of 1.sg. **tingmi*, 3.pl. *tingenti* to yield the attested OIr. *téit*. See also *KPV* 639 n.(a) s.v. ****ti-n-g-***.

separate variant **in-* in McCone's schema, which posits that historical **enC* and **inC* fell together as **ɪnC* in Proto-Celtic (55f.). The question must be regarded as unresolved, as substantial uncertainty remains surrounding the development of **VnC* sequences in Primitive Irish.

2.1.3.3. Chronological layers can also be detected in some other preverbs based on assimilatory patterns.

(1) In earlier formations **exs-* shows assimilation of the final sibilant with a following consonant. The outcome is *é-* before a resonant (e.g., ***éilned*** 'pollution' < **exs-linătus*, § 3.1.72(3); ***éirge*** 'act of rising' < **exs-regiom*, § 3.1.98(2)) and *ĕ-* before a stop which remains unlenited (e.g., ***epert*** 'utterance, act of saying' < **exs-bertā*, § 3.1.13(2); ***teclaim(m)*** 'selection, act of selecting' < **t(u)-exs-gle/andsman*, § 3.1.57(1)). In later formations, however, the sibilant of the preverb and initial of the following element are preserved (e.g., ***tesbuith*** 'absence' < **t(u)-ess-* + ***buith***, § 3.1.14(2); ***estecht*** 'departure, act of departing' < **ess-* + ***techt*** 'act of going', § 3.1.128(1)).

(2) Similarly, in earlier formations **kom-* assimilates to a following consonant: the *-m-* is preserved before *b-* (e.g., ***combach*** 'act of breaking' < **kom-bougom*, § 3.1.16(2)), but is assimilated to *-n-* before *d-* and to [ŋ] (also spelled *-n-*) before *g-* (e.g., ***coindelg*** 'comparison, act of comparing' < **kom-delgom*, § 4.3.17(1); ***congnam*** < **kom-gnīmus* 'help, act of helping', § 3.1.58(1)); it voices a following **t-* and **k-* before disappearing (e.g., ***cotach*** [kodəx] < **kom-tougom* 'pact, alliance', § 3.1.131(2); ***coicetul*** [kogʲədəl] 'harmony' < **kom-kantlom*, § 3.1.18(1)); and it coalesces with a following *s-* to become *-s(s)-*, i.e., unlenited [s] (e.g., ***cos(s)ar*** 'arrangement, act of spreading out' < **kom-sarā*, § 3.1.115(2)). In general, historical **-m-* also merged with **u̯-*, which then disappeared intervocalically in Irish but remained in Welsh (e.g., OIr. *coäir*, later *cóir*, MW *cyweir* 'proper, fitting' < **kom-u̯aris*), but there are no verbal nouns that show this development; instead, the

existing verbal nouns show *-b-* (/-β-/), the outcome of a Primitive Irish combination **-mf-* which arose after initial **u̯-* had become spirantized (e.g., ***cobdail*** 'equal division' < **kom-* + ***fodail*** 'share' < ***u̯o-dālis*, § 4.3.16(2)).

In the most recent formations, *com-* (/koμ-/) remains invariable and lenites a following consonant by analogy with the other preverbs ending in *m* (*imm-*ʿ, *rem-*ʿ, *trem-*ʿ).[19] These are often calques on Latin words, with *com-*ʿ added directly to an existing verbal noun, frequently without the creation of a corresponding verb (e.g., ***comthogairm*** 'convocation' < *com-*ʿ + ***togairm*** 'a calling, vocation, act of calling', a calque on Lat. *con-vocātiō*, § 3.1.52(1)).

2.1.3.4. Schrijver (1995: 17 fn.2) reconstructs PICelt. **tu-* for the preverb that is generally presented as **to-* in the literature, and this is also accepted by *KPV*. Not all of the reasons that Schrijver presents bear equal import. Thus, while the comparison with PGmc. **du* > Go. *du*(-)[20] is suggestive, of itself it is no more than an interesting possibility. Furthermore, it is unclear how much weight should be placed on the seeming preference for *tu-* in archaic Old Irish,[21] since the amount of material from this period is too scanty to permit any broad generalizations; moreover, *GOI* (63 § 101) notes a marked tendency for (short) *-o-* to become *-u-* in unstressed position as early as Würzburg, and the possibility that this tendency existed earlier cannot be excluded. One of Schrijver's arguments that may be significant is the regular elision of the vowel of the preverb in prototonic forms before another vowel (e.g., *·t-**e**sta* 'is lacking' < **t(u)-exs-tā-*, *·**tu**islither* 'falls' < **t(u)-uss-sel-*), a property shared by *su-* 'good' in the case of *s-**a**idbir* 'rich' (< **s(u)-*

---

[19] *GOI* 503 § 830.A(2).

[20] H. Wagner 1972: 39f.

[21] The examples are ***tu**·thēgot* 'which come' (Cambr. 38b = *Thes.* II, 247.17) and ***tu**·ercomlassat* 'they have gathered' (Wb. 7a7, *a prima manu*).

+ ***adbar*** 'matter, material' < **ad-u̯er-o-*, § 4.2.2(2)).[22] This contrasts with **u̯o-*, for example, where the two vowels regularly coalesce (e.g., *·fácaib* 'leaves' < **u̯o-ad-gab-*, *fócrae* 'proclamation' < **u̯o-uss-gar-*). A small caution is in order, however, as in all other quotable examples *su-* remains intact, with hiatus before a following vowel (e.g., *su-accubuir* 'desirable' < *su-* + *accobor* 'desire'),[23] so one must make a reasonable assumption that the exceptional *s-aidbir* is an archaism. The most consequential piece of evidence is the witness of Welsh words beginning with *ty-* < **tu-*: MW ***tywysawc*** 'lord' < *****tu****-wissāko-* instead of ******te****wyssawc* < *****to****-wissāko-* and MW ***tyle*** 'lair, bed' < *****tu****-leg-(i̯)ā* or *****tu****-leg-i̯om*.[24] There is thus some indication that the Proto-Insular Celtic form was **tu-*, and this is the preform adopted in the present study.[25]

At all events, it is evident from forms such as ***togu*** 'choice, act of choosing' (§ 3.1.60(1)), ***tothaim(m)*** 'act of falling' < **tu-tud-smen-* (§ 3.1.132(1)), and ***toichned*** 'act of fasting' < **tu-kin-V-tu-* (§ 4.1.21(1)), where **tu-* would be expected (whether original or from raising by a following high vowel), that **to-* begins to spread at its expense early in Old Irish.

---

[22] The palatalized *-db-* of ***saidbir*** [adj. *-i*] 'rich' and its antonym ***daidbir*** [adj. *-i*] 'poor' is unexpected, as the historically regular outcome would be **sadbair*, **dadbair* < **(su-/du-)ad-u̯er-i-*. The palatalization may perhaps be explained by back-formation from the plural ***saidbri***, ***daidbri***, or through influence of the *iā*-abstracts ***saidbre*** 'wealth', ***daidbre*** 'poverty' < **(su-/du-)ad-u̯er-iā-*, where the palatalization of the cluster *-dbr-* is regular from the syncopation of **-e-*.

[23] Cp. *GOI* 231 § 365.1; this is confirmed by a perusal of the entries in *DIL*.

[24] The second example is offered by Schumacher 2000: 33f.

[25] Gaulish, it may be noted, spells the preverb ⟨*to-*⟩; cp. TOMEDECLAI (Voltino, *CIL* V, 4883), probably *to=me=de-ek-la-* 'set me up', with 1.sg.ifx.pron. *-me-* (Eska & Weiss 1996); TOBERTE 'has given' (Lezoux, Dottin 1920: 165, No. 43; Schrijver 2007: 364, 366); and ***To***ṣ***oKoT***ę (Vercelli, *RIG* II/1, *E-2), probably *to=so=kon-de* 'has given' ≈ Lat. *DEDIT* (see de Bernardo Stempel 1993: 52 w. refs.). Schrijver (365) suggests that the vowel of this preverb in Gaulish was neither [o] nor [u], but a mid-high back vowel which could be spelled ⟨*o*⟩ in Gaulish but merged with [u] in Insular Celtic; he appeals to evidence of a parallel front vowel [ɪ] in final position, spelled unsystematically with ⟨*e*⟩ or ⟨*i*⟩ in Gaulish but merging with [i] in Insular Celtic.

2.1.4. The practice of combining adverbs with verbs in order to modify their meaning, widespread throughout Indo-European, clearly has its roots in Proto-Indo-European itself. Originally the adverbial element was associated semantically with the verb but remained a separate word. This is still the pattern in Hittite (with the exception of *u-* 'here' and *pe-* 'there' which have become inseparable prefixes); it is also very frequent in Vedic, and common in Avestan: for example, in Old Hittite, KBo 22.2 rev. 14 (Story of Zalpa, Otten 1973: 12), *š=aš* ***šarā*** URU-*ya* ***pait*** 'and he **went up** to the city'; in Vedic, RV 7.75.1ac, ***vy*** *ùṣā́* ***āvo*** *divijā́* ... ***ápa*** *drúhas táma* ***āvar*** *ájuṣṭam* 'Dawn **has shone forth**, born in heaven ... **she has uncovered** deceits and unpleasant darkness'; in Old Avestan, Yasna 50.9, *tāiš vå yasnāiš* ***paitī*** *stauuas* ***aiienī*** 'With those sacrifices **I shall come before** you praising'. In the other branches the adverb has regularly become united with the verb as a prefixed element, but traces of the earlier separability are still evident in the survival of tmesis in archaic Greek, Latin, and Old Irish: for example, in Homeric Greek, Il. Δ.161, **ἔχ** τε καὶ ὀψὲ **τελεῖ** 'and **he will accomplish** (it) late'; in Latin, *Aeneid* 1.412, *et multō nebulae* ***circum*** *dea* ***fūdit*** *amictū* 'and with a great cloak of mist the goddess **surrounded** (them)'; and in Old Irish, AM § 15, ***ath·*** *(mór)cathu fri crícha comnámat* ***·cuirethar*** '**he dispatches** (great) battalions to the borders of hostile neighbors'.[26] The loose compounding of Old Irish deuterotonic verb forms is also a relic of the earlier situation. While no longer completely separable in normal usage, the (first) preverb in such constructions behaves in other respects just like a subordinating conjunction or other conjunct particle (§ 2.1): it is regularly proclitic, and an object pronoun is placed

---

[26] Certain inherited nouns and adjectives derived from adverb + verb combinations, such as PIE **ni-sd-ó-* 'seat' ← **ni* 'down' + √**sed-* 'sit' and **h₂ŋ̍bʰi-kʷolh₁-o-* 'bustling about' ← **h₂ŋ̍bʰi* 'around' + √**kʷelh₁-* 'turn, go round' mentioned above (§ 2.2.3.1(1)), show no evidence of separability in any surviving dialect. The compounding of such formations appears to have begun already in the proto-language.

between it and the stressed verb.[27]

In a recent reexamination of the topic, McCone (2006: 54–61, 177–90) concludes that a combination of two or more different preverbs with the verb did not exist in Proto-Indo-European, examples in the daughter languages resulting from independent productive processes. Compounds of three preverbs are fairly common in both British and Irish, and even more are sometimes found — for example, four preverbs in Welsh *ymðyrchafael* 'to rise' < **ambi-tu-ro-ud-* + **gab-*,[28] and five in Irish *fo·indarban* 'subjects' < **u̯o-ande-ad-ro-uss-* + **ben-*[29] etc. But exact correspondences between the two branches are surprisingly few, especially in verbs with more than one or two preverbs (184–88). Thus McCone surmises that, on the whole, compounds of three or more preverbs are probably not even as old as Proto-Insular Celtic, but products of later composition in the separate histories of these languages.[30] This impression is further supported by an unpublished study on Old Irish verbal composition by Rossiter (2004 *apud* McCone, *loc. cit.*) which finds that when the first preverb of a multi-preverb compound is removed, the remaining compound is a valid Old Irish verb in about two-thirds of the cases. As McCone (2006: 180) summarizes: "On the whole, then, it looks as though the normal

---

[27] These pronouns are considered "infixed" in Old Irish grammar (*GOI* 255–70 §§ 409–27; *EIV* 11–14), but were historically independent clitics that occurred in Wackernagel (second) position in the clausal syntax. Parallels are to be found in Gothic (*frah ina ga-**u-hva**-sehvi* 'he asked him **whether** he saw **anything**') and in Lithuanian reflexives (*aš ne-**si**-lenkiu* 'I do not bend **myself** [= bow]', *su-**si**-pa-žinti* 'to acquaint **oneself** [= become acquainted] with').

[28] *KPV* 321.

[29] *KPV* 228. Sec.fut.pass. *ní foindarpaide* (Ml. 26a1), a *hapax* calquing Lat. *subjecta* which it glosses. The erstwhile presence of **-uss-* is indicated only by the unlenited *-b-* which is shown in the spelling *-p-* in the exemplar; **-ad-ro-* rather than **-ari-* is shown by the long *-á-* in spellings of *ind·árban* 'casts away, expels' (e.g., 1.sg.pres. *inárbenim*, Sg. 146b10) on which *fo·indarban* is based.

[30] However, a Gaulish example of three preverbs may be found in TOMEDECLAI, if Eska and Weiss (1996) are correct in analyzing this as *to-de-ek-la-* 'set up' with infixed *-me-* 'to me'.

method of forming new compound verbs throughout the prehistory of Old Irish was by a process of step by step accretion entailing the prefixing of a single extra preverb to an already existing simple or compound verbal form." One of the more impressive examples of such a derivational chain is *imm·tacmaing* 'encompasses' (< **ambi-t(u)-ad-kom-ink-*) ← *do·acmaing* 'reaches' (< **tu-ad-kom-ink-*) ← *ad·cumaing* 'extends to' (< **ad-kom-ink-*) ← *con·ic(c)* '(attains →) can, is able' (< **kom-ink-*); the simplex of *·ic(c)* is not attested.

There are several implications that follow from this scenario. The extremely limited distribution of **ni-* and **uss-*, which are restricted to the position immediately preceding the root and rarely appear as the sole preverb (never in the case of **ni-* which is confined to composition with three roots only), can be explained by their having ceased to be productive early in the history of pre-Irish. By contrast the profusion of **tu-*, which stands overwhelmingly in first position, is a consequence of a relativity late productivity in the language. Where it falls in second place in the chain, it is almost always preceded by one of the preverbs that enjoy continued productivity in historical Old Irish, particularly *com-*, *fo-*, *fris(s)-*, and *imm-*, which are frequently used to create calques on Latin compound verbs: e.g., *con·toí* 'converts' < *com-* + *·toí* (: *do·soí*) 'turns' = Lat. *con-vertit*; *imm·tabair* 'surrounds' < *imm-* + *·tabair* (: *do·beir*) 'gives' = Lat. *circum-dat*.[31] New coinings like these, then, are simply historical examples of a prehistoric process that has been continuing for centuries. It also follows that long preverbal chains signify that the corresponding verbal base belongs to a relatively old stratum of the language. (The converse, of course, is not necessarily true; verbal roots with few or no compounds may also be old.)

---

[31] Cp. Dillon 1962: 125f.

The systematic correlation of verbal nouns with their verbs is especially evident in the area of compounding. The complicated relationship between verbal stem formations and verbal-noun formations will be examined in detail below, but two generalities can be stated here: (1) compound verbal nouns are almost always built from the same base as the simplex; and (2) no matter what configurations of root and suffix a set of related verbal nouns may select, the chain of preverbs will in almost every case reflect that of the corresponding verb. These patterns hold true even in cases of suppletion, where the verbal noun is historically unrelated to the verb, as in the compounds of *fichid* 'fights' ↔ vn. ***gal*** 'warlike ardor, fury, valor' (§ 3.2.1(1)): *fo·fich* 'attacks' (< **u̯o-u̯ik-*) ↔ vn. ***fogal*** 'attack, act of attacking' (< **u̯o-gal-*); *do·fich* 'avenges' (< **dī-u̯ik-*) ↔ vn. ***dígal*** 'vengeance, act of avenging' (< **dī-gal-*); *imm·dích* 'protects' (< **ambi-dī-u̯ik-*) ↔ vn. ***imdegal*** 'protection, act of protecting' (< **ambi-dī-gal-*).

This systematic correlation enables us to fill in missing links in some derivational chains with gaps of attestation in the sequence. So, for example, the existence of *con·dieig* 'seeks' < **kom-de-sag-* (↔ vn. ***cuin(d)gid*** [f. *-i*] 'request, act of seeking', § 3.1.105(1)) presupposes an unattested verb **de·saig*; the survival of the verbal noun ***degaid*** [f. *-i*] in the fixed expression *i ndegaid* '(in quest of →) after, in order following' provides the confirmation that it did at one time exist. Similarly, while neither the verb *as·gleinn* 'examines' nor its verbal noun ***eclaim(m)*** [n. *-men*] 'examination; act of examining' (< **exs-gle/and-*) is attested before Milan, the occurrence of the verbal noun ***teclaim(m)*** [n. *-men*] 'selection, act of selecting' → 'partiality' (< **t(u)-exs-gle/and-*, § 3.1.57(1)) at Wb. 1d1 testifies to the reality of its earlier existence.

2.1.5. Old Irish verbs are divided into strong, weak, and hiatus conjugations[32] based on their morphological behavior and the alignment of the five principal tense stems, of which the present-tense stem is the most important for our investigation. In synchronic terms, the most noticeable difference between strong verbs and weak verbs in the present tense is the shape of the third-person singular active conjunct: in weak verbs this form ends in a vocalic suffix *-a* or *-i* (e.g., *legaid*, conj. *·lega* 'melts', cpd. *do·lega* 'destroys'; *léicid*, conj. *·léici* 'leaves', cpd. *do·léici* 'lets go'), whereas in strong verbs it ends in a consonant (e.g., *beirid*, conj. *·beir* 'carries', cpd. *do·beir* 'brings'). Hiatus verbs end in a vowel throughout the present tense, which is part of the root rather than a suffix (e.g., *gniïd*, conj. *·gní* 'does', conj. *do·gní* 'does'). This threefold division has its origins in the history of the verbal system.

(a) **The strong verbs** are all primary verbs, which is to say, they are inherited. In the present tense they show the Celtic reflexes of various Indo-European characterized presents. The largest class displays an alternation between palatalized and neutral stem-final consonantism which is the vestige of the *e* : *o* alternation of the historical thematic stem vowel; for example 3.sg. *beirid* 'carries' (palatalized *-r-* < PIE **bʰer-e-ti*) : 3.pl. *berait* 'they carry' (neutral *-r-* < PIE **bʰer-o-nti*). This is Thurneysen's BI class, corresponding to McCone's S1, which I represent schematically as [s. -$^{e}/_{o}$]. Included in this group are the rather rare *sk*$^{e}/_{o}$-presents such as OIr. *naiscid* 'binds' (< **nad-sk*$^{e}/_{o}$-). Another numerous class, Thurneysen's BII = McCone's S2, represented here as [s. -$\underset{\sim}{i}^{e}/_{o}$], have palatalized final throughout the paradigm from the old verbal suffix -$\underset{\sim}{i}^{e}/_{o}$-. Most of the remaining Old

---

[32] Thurneysen (*GOI* 352–57 §§ 546–552) designates weak verbs under the notation AI–II, hiatus verbs under AIII, and strong verbs under BI–V. As chance would have it, Strachan's system (*OIPG* 34) uses the reverse notation, A (1–3) for strong verbs and B (1–2) for weak; hiatus verbs are treated individually. McCone's sensible remedy (*EIV* 23–25) is to adopt mnemonic designations, W(eak)1–2, H(iatus)1–3, and S(trong)1–3. The present study follows McCone's approach in principle, but identifies the subdivisions by stem suffix rather than less self-explanatory numbers.

Irish strong verbs ultimately descend from Proto-Indo-European nasal-infixed presents, which show a variety of outcomes depending on the original shape of the root. In Thurneysen's class BIII, the nasal appears before a stem-final *-d-* or *-g-*. These descend from the PIE forms like **b^{h}u-né-d^h-* / **b^{h}u-n-d^h-´* (: √**b^{h}eu̯d^h-* 'awaken, be aware'); Celtic has generalized the zero grade throughout the paradigm, thus PCelt. **bu-n-d-* > OIr. *(ad·)boind* 'gives notice'. The Old Irish verbs of this class have the same alternating palatalization as the first class, indicating a secondary thematization at some point in their history, and McCone accordingly includes them as a subclass under his S1. I designate them as [s. *-n..$^e/_o$*]. The remaining *n*-present verbs, Thurneysen's BIV and BV and McCone's S3, appear in Old Irish with the nasal in stem-final position. These come from original nasal-infix presents to laryngeal-final roots, for example, PIE **k^{w}ri-né-h$_2$-* / **k^{w}ri-n-h$_2$-´* (: √**k^{w}rei̯h$_2$-* 'buy') > PCelt. **k^{w}ri-na-* > OIr. *crenaid* 'buys', and are labeled here as [s. *-na*] (or *-ni* or *-nu* depending on the nature of the laryngeal).[33]

(b) **The hiatus verbs** (Thurneysen's AIII = McCone's H1–3) consist of inherited roots that synchronically end in a vowel through the loss of an original root-final consonant (PIE **-H-*, **-s-*, **-i̯-*, **-u̯-*); for example, *baïd* 'dies' < PCelt. **bă̆-(i̯)$^e/_o$-* ← PIE √**g^{w}eh$_2$-* 'go'; *ad·cí* 'sees' < PrIr. **-k^{w}ih-* < PCelt. **k^{w}is-$^e/_o$-* ← PIE √**k^{w}ei̯s-* 'perceive'; *con·oí* 'protects' < PCelt. **-au̯-$^e/_o$-* ← PIE √**h$_2$eu̯H-* 'help, protect'.

(c) **The weak verbs** are more diverse in origin. Most are secondary formations derived from nouns and adjectives, but some weak verbs are primary, continuing inherited Proto-Indo-European verbal formations.

The weak *ā*-class (Thurneysen's AI = McCone's W1) was formed with an

---

[33] Through generalization of the quality of the full-grade vowel as explained by McCone 1986: 226–29; 1991: 12–15, 22f.; 1991b: 2f.: PIE **g^{w}l̥-**né-h$_1$-*** > **g^{w}l̥**nē-*** > PCelt. ****balnī-***; PIE **ĝn̥-**né-h$_3$-*** > **ĝn̥-**nō-*** ⇒ PCelt. ****gninū-*** (with **-ō-* > **-ū-* in a final syllable), from which new suffixes **-ni-* and **-nu-* were extracted by reanalysis.

invariable suffix *-ā- that can be traced back to three sources: (1) the factitive suffix *-eh_2- added to adjectives to form transitive verbs;[34] e.g., *dergaid, ·derga* 'reddens, makes red' ← *derg* 'red' (§ 4.1.41); (2) a suffix *-eh_2-$i^e/_o$-, originally from denominative -$i^e/_o$- added to nouns in -eh_2-[35] but later taken as an independent suffix that could be added to any noun to create a denominative verb, e.g., *foclaid, ·focla* 'declares' ← *focul* [n. -*o*] 'word' (§ 4.3.20); and (3) old athematic primary verbs of roots ending in *°*RH*-, in which the reflex *-*a* of the laryngeal became reanalyzed as a suffix analogous to those above, e.g., *scaraid, ·scara* 'separates' < **skar-ā-ti* ⇐ PCelt. **skara-ti* ← PIE √*(*s*)*kerH*- 'split, divide' (§ 3.1.106).[36]

Weak ī-verbs (Thurneysen's AII = McCone's W2) have at least six sources: (1) denominatives in *-*e*-$i^e/_o$-, a combination of the denominative suffix *-$i^e/_o$- added to nouns in thematic *-*e*-,[37] e.g., perhaps *áilid, ·áili* 'requests' ← *ál* [n.(?) -*o*] 'request' (§ 4.3.3); (2) a more recent stratum of factitives and denominatives, many deponent, formed with a suffix -(*a*)*ig*- < *-*sag*-$\breve{i}$- which is still productive in Old Irish,[38] e.g., *foirbthigid*(*ir*) 'completes, makes perfect' ← *foirbthe* [adj.] 'complete, perfect' (§ 4.1.58);[39] (3) old causative-iterative formations with *-$\acute{e}i^e/_o$- added to the *o*-grade root, e.g., *ad·suidi* 'makes

---

[34] Equated with Hittite factitive suffix -*aḫḫ*- in, for example, *new-aḫḫ-i* 'renews' ← *new-a*- 'new'. Beekes (1994: 13 fn.4) considers the suffix to have been *-oh_2-, *-eh_3-, or *-oh_3-, all of which would also produce PrIr. *-ā-.

[35] The formation may originate in denominatives based on old collectives, of the sort *doh_3neh_2-$i^{\acute{e}}/_o$- 'make gifts (coll.)' ← *doh_3neh_2, collective of *doh_3nom [n.] 'gift'; see Klingenschmitt 1982: 90f., and Steinbauer 1989: 88f.

[36] Watkins 1962: 185–90; McCone 1991: 110f.

[37] McCone 1986: 230; Schumacher 1995b: 55 fn.4. Conceivable too would be *-*i*-$i^e/_o$- from denominatives to *i*-stem nouns; cp. Schumacher 2000: 76, citing an as yet unpublished proposal by Peter Schrijver.

[38] *GOI* 337f. § 524. At the base of these denominatives are compounds with the root-noun *sag*- 'seeking, following' as second member with the meaning 'having the seeking of' the first member (Joseph 1987, esp. 154–58; for this class of compound in Celtic, cp. Joseph 1982).

[39] From *uor-u-$ti^0/_{\bar{a}}$-, past participle of *for·fen* 'completes'.

to sit, establishes, detains' < *-*sod-ī-* < PIE **sod-éi̯e/o-* ← √**sed-* 'sit' (§ 3.1.124; cp. *saidid, ·said* 'sits' < **sed-e/o-*, § 3.1.112); (4) one stative formation, *ruidid, ·ruidi* 'turns red' < *rud-ī-* < PIE **(h₁)rud^h-éh₁-i̯e/o-* 'be red' (cp. Lat. *rubeō, -ēre*) ← √**(h₁)reu̯d^h-* 'red' (§ 3.1.104); (5) primary verbs that originally ended in non-derived *-*ī-*, e.g., *creitid, ·creiti* 'believes' < **kredd-ī-* ⇐ **kred-dī-* < PIE **k̂red-* + √**d^heh₁-* 'place credence' (§ 3.1.28; cp. Ved. *śrad-dhā-*, Lat. *credō*); and (6) primary verbs that have secondarily moved over to the *ī*-conjugation, e.g., *léicid, ·léici* < **lēg-ī-* < **li-n-k^w-ī-* ⇐ **li-n-k^w-e/o-* (§ 3.1.68).[40]

2.2. Formation of Verbal Nouns.

2.2.1. Five basic derivational categories can be distinguished among the Old Irish verbal nouns, based on the relationship each bears with its verb.

Type 1. Deradical Formations: the verbal noun was derived directly from the PIE root, independent of and parallel with the verb. Rubric: **V ← √ → VN**.

Type 2. Deverbative Formations: the verbal noun was derived from the verbal stem. Rubric: **V → VN**.

Type 3. Source Nouns: the noun from which the denominative verb was derived functions as its verbal noun. Rubric: **(V)N → V**.

Type 4. Deadjectival/Denominative Formations: the verbal noun was derived separately from the source adjective (or, in a few instances, source noun) of the verb. Rubric: **V ← Adj/N → VN**.

Type 5. Suppletive Verbal Nouns: the verbal noun is not etymologically related to its verb. Rubric: **V // VN**.

The first type is by far the most numerous, accounting for approximately 55% of

---

[40] For the phonological development of PCelt. **link^w-* > **lēg^w-*, see McCone 1991: 47–52; 1996: 64f.; Schrijver 1991b: 20 fn.8; 1993: 43f., 48f.

all the verbal nouns in our corpus. The second type comprises over 31% of our verbal nouns, with five out of every six of them formed by addition of the reflex of PIE *-*tu*- to the stem. The third type is far less numerous, accounting for only 9% of our total. Fewer than 3% belong to the fourth type, and 2% to the fifth.

It is not unknown for a verb to have more than one verbal noun in contemporaneous usage. Often they serve to distinguish different meanings of the verb; for example, ***án*** (< **ag-nā-*) 'act of driving' generally (§ 3.1.2(2)) : ***aige*** (< **ag-iā-*) 'act of racing (horses)' (§ 3.1.2(1)) ↔ vb. *aigid* 'drives; races'. Sometimes, however, the two verbal nouns are, from what we can tell, virtually synonymous. In rare cases such doublets consist of two inherited formations (Type 1) side by side; for example, ***fognam*** 'service, act of serving' (<**u̯o-gnī-mu-*, § 3.1.58(1)) : ***fognad*** 'id.' (<**u̯o-gnī-tu-*, § 3.1.58(2)) ↔ vb. *fo·gní* [h.] 'serves', the only example in our corpus. Inherited formations (Type 1) may also be found alongside suppletive forms (Type 5); for example, ***techt*** 'act of going' (deradical *tā*-stem formation, § 3.1.128(1)) : ***dul*** 'id.' (suppletive noun, § 3.2.3(1)) ↔ vb. *téit* [s. *-n..$^{e}/_{o}$*] 'goes'.[41] More commonly, however, a secondary *tu*-stem formation (Type 2) is paired with another type; for example, ***labrad*** 'speech, act of speaking' (deverbative *tu*-stem, § 4.1.64(1)) : ***labrae*** 'id.' (Type 4, deadjectival *iā*-stem, derived mutually with the verb from *labar* [adj.] 'talkative, eloquent' § 4.4.7(1)) ↔ vb. *labraithir* [w. *-ā*] 'speaks'; etc.

When one of the synonymous pairs is a *tu*-formation, this noun is ordinarily the encroaching entity. For example, the usual later verbal noun of *gellaid* [w. *-ā*] 'pledges' is ***gellad*** [m. *-tu*] 'act of pledging', but this is not attested until well after our target period (see *DIL* s.v. **gellaid**). In our corpus, the ordinary substantive ***gell*** [n. *-o*] 'pledge, act of pledging' (§ 4.3.23(1)), from which *gellaid* was formed, appears three times in the early

---

[41] A difference in distribution, however, exists between ***techt*** and ***dul***, as noted by Gagnepain (1963: 23): both occur as simple verbal nouns, but only ***techt*** appears the compounds.

law text *Críth Gablach* in the characteristic N *do* VN construction (§ 1.3.3.5): CG § 36, *ll.*505–6, § 37, *ll.*509–10, § 38, *ll.*521–22, *slogad/rechtgai ata chórai do ríg do* ***giull*** *fora thúatha* 'hostings/laws that are proper for a king to **pledging** upon his people'. No other comparable examples are given in *DIL*'s sizable entry s.v. **gell**, although it is noted that the Irish Grammatical Tracts of Early Modern Irish still allow for verbal-noun usage.[42, 43]

The use of a *tu*-stem verbal noun had the advantage of distinguishing it from the ordinary substantive, and this increase in clarity no doubt helped to promote the expansion of this formation as time progressed. The trend towards more clearly distinguishing the verbal noun morphologically may be seen as one facet of the wider process at work in the history of Irish which tended to draw the verbal noun closer to the realm of the verb, a process that, on the semantic side, also encouraged the ascendancy of the N *do* VN construction. In Old Irish, however, as was shown (§ 1.3), the verbal noun in most respects is still very much a part of the nominal system.

One somewhat ambiguous group of verbal nouns consists of *o*-stem nouns with original *o*-grade of the root which are paired with weak *ī*-verbs that also have historical *o*-grade; for example, ***cor*** [m.] 'cast, act of putting, casting' < **kor-o-* ↔ vb. *·cuirethar* 'puts, casts' < **kor-ī-* (§ 3.1.30). The Proto-Indo-European causative-iterative suffix **-éi̯e/o-* and the denominative **-e-i̯e/o-* fell together in the weak *ī*-class (see § 2.1.5(c) above), so it is difficult to know if these verbs go back to old causative-iterative formations of the stem shape *R(*o*)-*éi̯e/o-* (as argued by Pokorny 1920), or if they are more recent denominative formations from the thematic nouns (as per *GOI* 338 § 525(c), 446 § 722) — or, what is

---

[42] *IGT Decl.* §§ 65, 95.

[43] Examples "as quasi vn." in the sense of 'promising' are also given by *DIL* for Middle Irish and Early Modern Irish: MIr. *ag geall* 'promising', *a gheall* 'promising it' (DD XXV.2), EMI *gá gheall* 'promising it' (*IGT Decl.* ex. 1662).

most probable, a mixture of the two. Because they share several common features that are arguably proper to causative-iteratives (see § 2.2.3.1(2) below), these will be treated here uniformly as Type 1 primary formations, with the proviso that some of them might in reality belong to Type 3.

Borrowings may in principle fall into any of the above categories. For example, corresponding to Type 1 is ***scríbend*** [n. *-o*] 'act of writing' ↔ vb. *scríbaid* [w. *-ā*] 'writes', where the Latin gerund *scrībendum* was borrowed in parallel with the verb *scrībō, -ere* to serve as its verbal noun (§ 3.1.107). Corresponding to Type 2: ***damnad*** [m.] 'condemnation, act of condemning', the reflex of a *tu*-stem formation **damn-ā-tu-* ↔ vb. *damnaid* [w. *-ā*] 'condemns' < Lat. *damnō, -āre* (§ 4.1.36). Corresponding to Type 3: ***pennait*** [f.] 'penitence', ultimately from Lat. *paeniteō, -ēre* 'regret, repent', which forms the basis of the verb *pennaid* [w. *-ā*] 'does penance' and also assumes the role of its verbal noun (§ 4.3.28). Corresponding to Type 4: ***-cert*** 'correction, act of correcting', a feminine *ā*-stem substantivization of the Primitive Irish adjective **kert$^{o}/_{ā}$-* (> OIr. *cert*) [adj.] 'right' < Lat. *certus* 'firm, certain', from which the verb *·certa* [w. *-ā*] 'puts right' was also derived (§ 4.4.1). And corresponding to Type 5: ***precept*** [f.] 'teaching, act of preaching' < Lat. *praeceptum* 'teaching, precept' ↔ vb. *pridchaid* [w. *-ā*] 'preaches' < Lat. *praedicō, -āre* 'proclaim, declare' (§ 4.5.2).

2.2.2. In Types 1 and 2, which together make up over 86% of all the verbal nouns in our corpus, the verbal nouns have been formed by means of suffixation to a verbal base (either root or stem). While the two types share some of the same suffixes, there is an overarching distinction between them that aligns roughly with the division between the strong verbs and weak verbs.

2.2.2.1. Type 1: Deradical Formations (V ← √ → VN). Most verbal nouns of strong verbs belong to Type 1, which constitutes the oldest stratum of verbal nouns. They are

derived directly from the PIE verbal root and show a wide variety of suffixes and stem formations. For example, the *sk*-present verb *naiscid* 'binds' < **nad-sk$^{e}/_{o}$-* < PIE **nHd-sk̂$^{é}/_{ó}$-* has the verbal noun ***naidm*** [n.] 'bond, act of binding' < **nad-men-* (§ 3.1.87(1)), a formation with **-men-* suffixed to the zero-grade root **nHd-*; the *n*-present verb *ad·boind* 'gives notice' < **ad-bu-n-d-$^{e}/_{o}$-* ← PIE **b^{h}u-n-d-* has the verbal noun ***apud*** [n.] 'proclamation, act of proclaiming' < **ad-boud-o-* (§ 3.1.15(1)), a thematic noun built to the full-grade root **b^{h}eu̯d^{h}-*; another *n*-present verb, *marnaid* 'betrays' < **mar-na-* < PIE **mr̥-n-H-*, has the verbal noun ***mrath*** [n.] 'betrayal, act of betraying' < **mra-to-* (§ 3.1.82(1)), a *to*-stem formation from **mr̥h$_{2}$-tó-*;[44] and so forth. One example can be cited in which the verb is derived from an unenlarged root form, while the verbal noun is apparently formed from an enlarged variant of the same root: *·cluinethar* 'hears (of)', remodeled from PIE **k̂l̥-n-u-*, *n*-present of the root √**k̂leu̯-* 'hear' ↔ vn. ***clúas*** [f.] 'hearing' < PCelt. **klous-stā-*, built from *s*-enlarged **k̂leu̯-s-* (§ 3.1.25(1) with comment B). In only a relatively few instances has the verbal noun adopted the verb's present-stem formation, and some of these remodelings can be shown to have occurred very late, even within the historical period. For example, ***fulang*** 'endurance, act of enduring' ↔ vb. *fo·loing, ·fulaing* < **u̯o-lu-n-g-$^{e}/_{o}$-* replaces the form that appears in archaic texts as ***folog, folach,*** etc. < **u̯o-loug-om* (§ 3.1.77(1)), having acquired the *-n-* of the present stem within historic times. Such analogical alterations are not consistently applied, as shown by the sister verbal noun ***ellach*** 'unity, act of uniting' < **en-loug-om* which never acquires the *-n-* of *in·loing, ·ellaing* [s. *-n..$^{e}/_{o}$*] 'joins, unites'. Thus most Old Irish verbal nouns of strong verbs still retain their morphological identity as nominal formations that were inherited

---

[44] It is disputed whether the short vowel of ***mrath*** and similar words shows the regular Celtic reflex of PIE **CR̥HT-* sequences (Schrijver 1995: 168–91; *KPV* 136–38), or results from the analogical leveling of "morphological zero-grade" (Kuryłowicz 1956: 166–74; Watkins 1962: 188f.; cp. § 3.1.106 comment A). See fn. 121 *infra* with further references.

alongside their verbs. This, of course, contrasts starkly with the infinitival formations of almost all other Indo-European languages, which are regularly derived from the verbal stem.[45]

While there are no ironclad rules for which verbal-noun suffixes are paired with which verbs, some broad patterns emerge.

One long-recognized pattern is the tendency for compound verbal nouns to take less complex suffixes than the corresponding simplex. A few examples will suffice to illustrate this point:

béim(m) 'act of striking' < **bei-**smen-*** (earlier ***bíth*** < **bī-**tV-***)
: ***fubae*** 'act of injuring' < **u̯o-* + **bei̯(i̯)-**o-***[46]
gairm 'act of calling' < **gar-**smen-***
: ***acrae*** 'act of prosecuting' < **ad-* + **gar-**io-***
sreth 'act of strewing' < **sri-**tā-***
: ***cos(s)ar*** 'act of spreading out, strewing (together)' < **kom-* + **sar-**ā-***
teiched 'act of fleeing' < **tekʷ-**eto-***
: ***attach*** 'act of fleeing to' → 'entreating' < **ad-* + **tekʷ-**o-***

These alternations have been taken to reflect an old system of alternation in stem classes, going back to Proto-Indo-European itself, between simple nouns and compounds.[47]

Not all Old Irish verbal nouns follow this pattern, however. Certain suffixes appear to resist alternation; if they appear in the simplex, they also occur as a rule (but not without the occasional exception) in the compounds: **-iā-*, **-mu-*, **-nā-*, **-tion-*, **-tlo-*, and **-tu-*.[48] Furthermore, several roots of the shape *CeR-* (**ber-*, **gel-*, **kel-*, and **mel-*) that

---

[45] The significance of this derivational relationship in regard to chronology will be discussed in a later chapter (§ 5.3).

[46] A zero-grade **bi(i̯)o-* would also unproblematically produce the Irish forms, but the Welsh evidence is easier to reconcile with full grade. See Schumacher 2000: 174f., and § 2.2.3.6 below.

[47] Marstrander 1924: 67; Watkins 1962c: 116; Gagnepain 1963: 23; Hamp 1976b: 11; 1987: 113; Schumacher 2000: 167.

[48] The inverse is not necessarily true; many examples can be found where these suffixes are used with compound forms but not with the simplex.

take the suffix *-*tā*- throughout show an alternation between zero grade in the simplex and full grade in compounds. This alternation may have started with the root **bri-/ber-* (***breth*** < **bri-tā*- [< **bṛ*-] : ***epert*** < **exs*- + **ber-tā*- etc., § 3.1.13) and subsequently spread to other roots in a final liquid.[49]

Other discernible patterns will be discussed in the relevant sections below.

2.2.2.2. Type 2: Deverbative Formations (V → VN). Verbal nouns of weak verbs are usually derived from the verbal stem, and thus constitute a secondary layer in the history of the verbal nouns. As explained above (§ 2.1.5(c)), Celtic weak verbs encompass both post-PIE denominative formations and certain PIE inheritances that regularly produced non-thematic vowel-final stems in Celtic. The overwhelming majority of the Type 2 verbal nouns in Old Irish were created by the addition of the masculine suffix *-*tu*- (or after the apocope, its reflex *-th/-d*), to the verbal stem. Examples are ***scarad*** 'separation, act of separating', ***astud*** 'act of detaining, establishing', ***léiciud*** 'act of leaving', etc. This type of secondary formation in *-*tu*- is not traceable to Proto-Indo-European itself, but nonetheless must be quite ancient, being found in most of the Western Indo-European languages; it occurs in Greek (especially epic poetry, and in the Ionian and Cretan dialects), Latin, Germanic, Balto-Slavic, and Celtic.[50] It is attested in Gaulish (e.g., MOLA**TU**S on the plate of Lezoux, probably meaning 'praise', § 4.1.76 comment A), although there is not enough evidence to determine its level of productivity in Continental Celtic; it is common enough in all the Insular Celtic languages, and especially productive in Irish from before the earliest Old Irish writings. The *tu*-formation makes up some 75% of all the verbal nouns of weak

---

[49] Based on evidence from Welsh, Schumacher (2000: 71f.) suggests that the earliest alternation in this root was between **bri-ti*- (< **bṛ-ti*-) and *-*ber-tā*-.

[50] See Schumacher 2000: 77f. with further literature.

verbs in our early corpus, and continues to expand its reach to become, in Gagnepain's words, "pratiquement ... l'expression régulière du Nom Verbal" (1963: 22).

In a small minority of cases, Old Irish secondary verbs take verbal nouns in other suffixes. The *-*mā*- suffix (§ 2.2.3.9) is associated with weak *ī*-verbs ending in a stem-final dental or guttural; two isolated compounds take *o*-stem verbal nouns (§ 2.2.3.1(3)); there are two examples of *to*-stems (§ 2.2.3.14); and one each of *-*tā*- (§ 2.2.3.15) and *-*tion*- (§ 2.2.3.22). Finally, a series of weak *ī*-verbs in root-final -*s*(*s*)- have verbal nouns in *-*axtā*- (§ 2.2.3.24); this is probably a denominative rather than deverbative suffix, hence these verbal nouns belong to Type 4.

Some of the verbal nouns of inherited causatives and iteratives are typical Type 2 *tu*-stem formations (§ 2.2.3.17(3)), but more frequently they are *o*-grade thematic nouns derived separately from the PIE root (§ 2.2.3.1(2)). These are the only weak verbs that have verbal nouns belonging to Type 1. There is a good deal of ambiguity as to whether these latter pairings really involve inherited causative-iteratives, or whether they are later *ī*-stem denominatives created from the *o*-stem verbal noun (i.e., derivational Type 3), although it seems unlikely that they could all be secondary.

2.2.3. The Verbal-Noun Suffixes. The verbal-noun formatives that characterize the majority of derivational Types 1 and 2 constitute nearly a score of historical noun suffixes: *-*o*- [n.], *-*io*- [n.], *-*to*- [n.,m.], *-*tlo*- [n.], *-*ā*- [f.], *-*iā*- [f.], *-*mā*- [f.], *-*nā*- [f.], *-*tā*- [f.], *-*aglā*- [f.], *-*axtā*- [f.], *-*i*- [n., also f.?], *-*ni*- [f.], *-*ti*- [f.], *-*tion*- [f.], *-*u*- [m.], *-*mu*- [m.], *-*tu*- [m.], and *-*(s)men*- [n.]; plus several others that have only one or two verbal-noun attestations: *-*en*- [n.], *-*lo*- [n.], *-*tlā*- [f.], *-*tro*- [n.], *-*sto*- [n.], and *-*stā*- [f.]. The Indo-European origin of most of these is unmistakable. In historical terms they consist of both primary and secondary suffixes encompassing a variety of functional categories: basic nouns and adjectives, both concrete and abstract (e.g., *-*o*-, *-*ā*-, *-*i*-, *-*u*-), *nomina*

actionis (e.g., **-o-*, **-ā-*, **-i-*, **-ni-*, **-ti-*, **-tu-*, **-(s)men-*), substantivized verbal adjectives (e.g., **-o-*, **-ā-*, **-i̯o-*, **-i̯ā-*, **-mā-*, **-nā-*, **-to-*, **-tā-*), etc. For obvious reasons, abstracts and *nomina actionis* dominate the list, but even decidedly concrete suffixes such as the neuter 'tool'-suffix **-tlo-* and its feminine counterpart **-tlā-* appear. It is noteworthy that a number of the stem types that function as verbal nouns in Old Irish serve as the basis of infinitives and supines in other Indo-European languages: **-ti-* (Indo-Iranian, Balto-Slavic), **-tu-* (Vedic, Latin, Balto-Slavic), **-men-* (Indo-Iranian, Greek), **-i-* (Indo-Iranian), **-o-* (Sabellic), and **-lo-* (Armenian).

There are other Indo-European abstract suffixes used for infinitives that are not found among the Old Irish verbal nouns. Most notable are heteroclitic stems in **-se$^{r}/_{n}$-* (Vedic, Greek); heteroclitic stems in **-u̯e$^{r}/_{n}$-* (Anatolian, Indo-Iranian, Greek), which might be seen in Celtiberian *-un-ei*, unless this is from a positional variant of **-mn-ei* (see § 5.1); and neuter *s*-stems (Indo-Iranian, Latin), traces of which may perhaps survive in Old Irish in the plurals of a limited group of neuter *o*-stems (see § 2.2.3.1(1) *ad fin.*). Old Irish also possesses a possible parallel to the Germanic infinitival suffix **-ana-* < PIE **-ono-*, see § 2.2.3.11.

The tendency of thematic nouns, particularly neuters and their feminine counterparts, to cluster together is evident in the Old Irish verbal-noun system. Some such pairs may be traced back to old thematic adjectival formations in **-o-*/**-ā-*, **-i̯o*/**-i̯ā-*, **-mo-*/**-mā-*, **-no-*/**-nā-*, and **-to-*/**-tā-* from which substantivized abstracts were formed. As Brugmann (1906: 156, 159) points out, neuters and feminines from adjectives are particularly characteristic of such abstract formations. This observation is fully borne out by the Old Irish evidence, where individual verbal nouns in **-ā-*, **-iā-*, and **-tā-* are fairly frequently found among groups of the more common neuter *o-*, *io-*, and *to*-stems.

However, it cannot be concluded that all such pairs go back to old adjectives. For

example, in the case of feminine "tool" suffix *-*tlā*- next to neuter *-*tlo*-, there was never any question of an old adjective. Here the late PIE feminine *-eh_2 continues what was a collective form (meaning essentially "toolage") at a more primitive stage of the proto-language.[51]

Only a few of the Old Irish verbal-noun suffixes are demonstrably post-PIE formations. The complex suffix *-*tion*- is often regarded as a later creation, but Stüber (1998: 120–23) makes the case for a Proto-Indo-European origin (§ 2.2.3.22). Suffixes in *-*stV*-, probably originating in the resegmentation of an *s*-final stem with a *-*tV*- suffix, appear to be primarily a Germanic and Celtic phenomenon (§ 2.2.3.21). The suffix *-*mu*- was very productive in Celtic, but there is some evidence of a wider Indo-European distribution (§ 2.2.3.10). And, finally, *-*aglā*- (§ 2.2.3.18) and *-*axtā*- (§ 2.2.3.24) are certainly inner-Celtic formations.

Needless to say, it cannot be assumed that a given Old Irish word, even if it bears a quintessentially Indo-European suffix, must itself possess a pedigree that goes all the way back to the proto-language. Where not directly inherited, such formations are the product of ongoing derivational processes that enabled the creation of new formations from the inherited elements. Further possible Celtic innovations will be explored in the conclusion (§ 5.4.2).

* * *

2.2.3.1. ***-o-*** Masculine and neuter *o*-stem nouns comprise a very large group in the Indo-European languages. The thematic vowel was evidently a productive primary suffix in the proto-language and continued to enjoy remarkable productivity in the daughter languages, being freely used to form new nouns of all types. Verbal-noun

---

[51] See the discussions in §§ 2.2.3.2 and 2.2.3.23.

usage was not restricted to Celtic, as it is also to be found in the Sabellic infinitive *-om, -um*, which continues an *o*-stem accusative case form.

(1) The majority of Old Irish *o*-stem verbal nouns are neuter, with full grade or zero grade of the root. There are 15 or 16 formations in this group with evident full grade:[52] ***-ber-o-*** 'act of carrying' (§ 3.1.13(3), beside **-ber-tā-*, **bri-tā-*), ***-boud-o-*** 'act of proclaiming' (§ 3.1.15(1)), ***-boug-o-*** 'act of breaking' (§ 3.1.16(2), beside **b(o)ug-ni-*), ***-ell-o-*** 'act of approaching' (§ 3.1.37(1), beside **-ell-ă̆-tu-*), ***-k^{w}ell-o-*** 'act of going around' (§ 3.1.20(1)), ***-loug-o-*** 'act of putting' (§ 3.1.77(1)), perhaps ***-nes-o-*** 'act of cooking' (but **-nes-io-* is also a possibility, § 3.1.91(1)), ***-reg-o-*** 'act of straightening' (§ 3.1.98(1), beside **reg-io-*, possibly **reg-iā-*, and **-reg-ĭ̄/e-tu-*), ***-rēg-o-*** 'act of binding' (§ 3.1.101(1)), ***-rek-o-*** 'act of arranging' (§ 3.1.96(1), beside **-rek-iā-*), ***-ret-o-*** 'act of running' (§ 3.1.100(2), beside **[-]ret-u-*, **-ret-tu-*, and analogical ***-rext-ā-*), ***-sed-o-*** 'act of sitting' (§ 3.1.112(3), beside **-sed-iā-* and **[-]sod-io-*), ***-slēg-o-*** 'act of striking' (§ 3.1.119(2)), ***-tek^{w}-o-*** 'act of fleeing' (§ 3.1.127(2), beside **tek^{w}-eto-*), ***-toug-o-*** 'act of swearing' (§ 3.1.131(2), beside **lug-io-*), and probably ***-u̯er-o-*** 'act of preparing' (§ 4.2.2(2)). Clear zero grade is found with another seven: ***1*-ank-o-*** 'act of reaching' (§ 3.1.66(1), beside **-ink-tion-* and **-ink-ĭ̄-tu-*), ***-ark-o-*** 'act of asking' (§ 3.1.8(1)), ***-gus-o-*** 'act of choosing' (§ 3.1.60(1)), ***-l-o-*** 'act of putting' (§ 3.1.67(1)), ***-mak-o-*** 'act of increasing' (§ 3.1.81(1)), ***-sk^{w}-o-*** 'act of saying' (§ 3.1.110(1), beside **-sek^{w}-ĭ̄/e-tu-*), and

---

[52] PCelt. **-ou-* could in theory continue either PIE **-eu̯-* or **-ou̯-*. Since, however, all the other nouns in this category that are not zero-grade show unequivocal *e*-grade (PCelt. *-e-* < PIE **-e-* and PCelt. *-ē-* < PIE **-ei̯-*), it must be assumed that these verbal nouns in *-ou-* also continue *e*-grade **-eu̯-* rather than *o*-grade **-ou̯-*. The unattractive alternative would be to assume that *o*-grade occurs only in those forms that also happen to be ambiguous as to root grade.

-su̯idd-o- 'act of blowing' (§ 3.1.43(1)).[53] Three others are indeterminate as to root grade: ***-dēg-o-/*-dig-o-*** 'act of pressing' (§ 3.1.32(2)), ***-dloug-o-/*-dlug-o-*** 'act of splitting' (§ 3.1.34(2)), and ***-nēg-o-/*-nig-o-*** 'act of washing' (§ 3.1.89(2)).

These *o*-stem verbal nouns occur exclusively in compound formations, a fact that is consistent with the tendency noted above (§ 2.2.2.1) for the compounds to take a less complex suffix than the corresponding simplex. The converse relationship is also striking. Nearly half of these 26 *o*-stem formations belong to verbs that lack any simplex in Irish, and the dozen forms that make up this group constitute more than a third of all primary formations in our data that are exclusively compound; the remainder are divided among eleven other stem types. This distribution points to an extraordinarily strong correlation between compound verbal nouns and the neuter suffix *-*o*-.

There is a well-known Indo-European penchant for primary thematic nouns to appear as the second member of a compound; commonly cited examples include (compounding an object noun with a deverbal base): Ved. *go-ghn-**á**-ḥ* 'cattle slayer' < PIE *$g^{w}o\underset{\sim}{u}$-* 'cow' + *$g^{wh}n$-**o**-* ← √*$g^{wh}en$-* 'slay'; Myc. (pl.) *du-ru-to-**mo*** = Gr. δρυ-τόμο-ι 'wood-cutters' < PIE **dru-* ← **doru-* 'tree, wood' + **tomh$_1$-**o-* ← √**temh$_1$-* 'cut'; and (compounding an adverb with a deverbal base): Ved. *nīḍ**á**-ḥ*, Lat. *nīd**u**-s*, OHG, OE, MoE *nest* < PIE **ni-sd-ó-* 'seat' ← 'sitting down' ← **ni* 'down' + √**sed-* 'sit'; Myc. *a-pi-qo-**ro*** = Gr. ἀμφί-πολο-ς, Lat. *an-cul**u**-s*, Skt. *abhi-car**a**-ḥ*[54] 'servant' < PIE **h$_2$ṃb^{h}i-k^{w}olh$_1$-**o-* 'bustling about' ← **h$_2$ṃb^{h}i* 'around' + √**k^{w}elh$_1$-* 'turn, go round'. Yet the Celtic compound verbal nouns are not strictly parallel. Practically all of them are neuters, where Old Irish

---

[53] One remaining *o*-stem verbal noun, ***dílgend*** 'extermination, act of exterminating', to the root ****leg-a-*** 'melt, dissolve' (§ 3.1.70(2)), is a late analogical formation modeled on borrowings from Latin in *-endum*.

[54] A glossary word; the palatalized *c-* is probably analogical to the root form √*car-* (< PIE √**k^{w}elh$_1$-*) rather than from an *e*-grade preform **h$_2$ṃb^{h}i-k^{w}elh$_1$-o-s*.

gender can be determined, and all have either *e*-grade or zero grade of the root; *o*-grade seems not to occur. This last point is especially remarkable, as it is precisely the opposite of the normal pattern for inherited deverbative *o*-stems, where *o*-grade is usual, zero grade less common, and *e*-grade especially rare.

The Celtic usage of these nouns as verbal nouns is also noteworthy. While thematic verbal abstracts are very common throughout Indo-European, there is little evidence that such formations date back to Proto-Indo-European in the function of verbal nouns, since, outside of Celtic, the only reflexes to be found are in the Sabellic infinitives. Vedic, which has the largest number of infinitival formations of any surviving Indo-European language, possesses numerous thematic verbal abstracts but no thematic infinitives. Significantly, however, there is one type of Vedic infinitive that corresponds quite closely, in terms of distribution, to the neuter *o*-stem class of Celtic verbal nouns, namely the root infinitive. Like these Old Irish verbal nouns, the Vedic root infinitives are closely correlated with compound verbs, and display both full-grade and zero-grade roots; *o*-grade, while also theoretically possible, is not distinguishable in these Vedic forms, and may be expected to be less numerous at any rate. From these similarities, together with the fact that several direct cognates exist between Vedic root infinitives and Old Irish neuter *o*-stem verbal nouns, it will be suggested in Chapter 5 (§ 5.4.2) that this class of thematic verbal nouns in fact originates in PIE root verbal nouns that were secondarily thematized, perhaps in Italo-Celtic.[55]

A peculiarity of some Old Irish neuter *o*-stems in final *-ch* (from **-g-* or **-k-*), both concrete and abstract, including verbal nouns, exists in their ability to form plurals like

---

[55] I consider an Italo-Celtic reality to be more likely than not. While most of the common features, taken individually, might be explained adequately by parallel innovation or prolonged areal contact, taken together they make the case for an early post-PIE unity rather plausible, in my opinion.

the *s*-stems, i.e., with palatalized stem-final *-g-* plus nom./acc./gen.pl. *-e*, dat.pl. *-ib* (see *GOI* 178 § 280.3). The verbal nouns in our corpus that show such plurals are ***aurthach*** 'oath of guarantee', nom.pl. *aurthaige*; ***fortach*** 'oath assigning liability', dat.pl. *fortaigib* (both to ****-toug-o-***, § 3.1.131(2)); ***aitherrach*** 'repetition, change, act of repeating, changing', acc.pl. *aitherraige* (: ****-rek-o-***, § 3.1.96(1)); ***aslach*** 'temptation, act of tempting', acc.pl. *aslaige*, dat.pl. *aslaigib* (: ****-slēg-o-***, § 3.1.119(2)); ***cuimrech*** 'bondage, act of binding', dat.pl. *cuimrigib* (: ****-rēg-o-***, § 3.1.101(1)); ***cumtach*** 'construction, act of building', acc.pl. *cumtaige*, *cumdaige*, dat.pl. *cumtaigib* (: ****-dēg-o-/*-dig-o-***, § 3.1.32(2)), ***étach*** 'covering, clothing', nom./acc.pl. *étaige*, dat.pl. *étaigib* (: ****-tog-o-***, § 3.1.133(2)); ***folach*** 'endurance, act of enduring', nom.pl. *foilge* (: ****-loug-o-***, § 3.1.77(1)); ***indlach*** 'division, act of cleaving', nom.pl. *innlaigi* = **indlaige* (: ****-dloug-o-/*-dlug-o-***, § 3.1.34(2)). Others may well have behaved similarly, especially other compounds belonging to the same roots as those above, but plural forms happen not to be attested to bear this out.

In the case of ***étach*** 'covering, clothing', nom.pl. *étaige*, Thurneysen (*GOI, loc. cit.*) suggests influence from *tech* 'house', pl. *tige*. This is surely correct, since the *o*-grade root of *étach* (< **en-tog-o-*) is unsuitable for an *s*-stem, and the attestation of gen.pl. *étach* (LL 238b40 = TT 1627), while relatively late (tenth century), shows the expected form of an *o*-stem. Analogy does not provide a good source for the anomalous plurals in the other words, however, so it is legitimate to consider whether they might be inherited. Unfortunately, specific correspondences are hard to come by. Of the non-verbal nouns listed by *GOI* (*loc. cit.*), none have corresponding *s*-stems elsewhere in Indo-European. With respect to the verbal nouns, no correspondences are to be found among the Vedic infinitives in *-(a)se*, and of course the ubiquitous Latin *s*-stem infinitive is of no use in establishing a Proto-Indo-European date for any individual form. Only OIr. ***(cum-)tach*** 'construction' has any sort of *s*-stem cognate elsewhere, in the otherwise isolated Greek

noun τεῖχος, -εος 'wall' < PIE *d^heig^h-*es*-. The latter is not documented in an abstract sense but clearly exhibits the common patientive type of concretization from an earlier *nomen actionis* meaning 'construction' to 'that which is/has been constructed' (cp. § 1.3.2(3)). More direct evidence would be welcome linking Old Irish verbal nouns directly with PIE *s*-stem verbal nouns, but this single correspondence with a Greek *s*-stem may constitute the one precious clue needed to advance the suggestion from a mere possibility into the realm of plausibility.

(2) Distinct from the verbal nouns just discussed are a group of *o*-stem nouns with *o*-grade of the root. These belong to the large class of Proto-Indo-European primary thematic abstracts, exemplified by PIE *$\hat{g}$*ón-o-* > Ved. *jā́n-a-m* 'birth, origin', Gr. γόν-ο-ς 'offspring, produce', with accented *o*-grade root. Unlike the previous group of verbal nouns, these are not limited to compounds, but encompass both simple and compound forms. As far as can be determined, these verbal nouns are, in Old Irish, always masculine in the simplex and either masculine or neuter in the compounds. What distinguishes them above all is the fact that, in both Irish and Welsh, they correspond to causative-iterative verbs with the historical stem shape R(*o*)-*éi̯*$^e/_o$-.

These *o*-stem nouns are: ***cor*** 'a throw, act of throwing' etc. < ****(-)kor-o-*** < PIE **kór-o-* ↔ vb. *cuirithir* 'puts, throws', etc. < **kor-ī-* < PIE **korH-éi̯*$^e/_o$- (§ 3.1.30(1)), ***lúad*** 'movement, act of setting in motion' < ****loud-o-*** < PIE **ploud-o-* ↔ vb. *lúaidid* 'moves, sets in motion' < **loud-ī-* < PIE **ploud-éi̯*$^e/_o$- (§ 3.1.76(1)), ***rád*** 'speech, act of saying, speaking' < ****rād-o-*** < PIE **róh$_1$d^h-o-* ↔ vb. *ráidid* 'says, speaks' < **rād-ī-* < PIE **roh$_1$d^h-éi̯*$^e/_o$- (§ 3.1.95(1), beside **-rād-e-tu-*), ***scor*** 'act of unyoking', etc. < ****(-)skor-o-*** < **skorH-o-* ↔ vb. *scuirid* 'unyokes' < **skor-ī-* < PIE **skorH-éi̯*$^e/_o$- (§ 3.1.109(1)), and three compounds of *-tach* 'act of covering' < ****-tog-o-*** < PIE **tóg-o-* ↔ vb. *·tuigethar* 'covers' < **tog-ī-* < PIE **(s)tog-éi̯*$^e/_o$- (§ 3.1.133(2), beside **[-]tog-iā-*); plus two others that happen not to appear in our corpus:

folach 'act of hiding' < *$\underset{\frown}{u}o$- + ***-log-o-***[56] < PIE **lóg-o-* ↔ vb. *fo·luigi* 'hides' < *$\underset{\frown}{u}o$- + **log-ī-* < PIE **log^{h}-éi$^{e}/_{o}$-*, and ***slond*** 'declaration, act of declaring' < **slond-o-* ↔ vb. *sluindid* 'declares' < **slond-ī-* < PIE **splond$^{(h)}$-éi$^{e}/_{o}$-* (cp. § 3.1.120(1), beside **[-]slond-e-tu-*). A further possibility is *folc* 'heavy rain' (presumably ← 'act of washing, pouring') < ****$\underset{\frown}{u}$olk-o-***, cp. vb. *folcaid* 'washes (the head)' < **$\underset{\frown}{u}$olk-ī-* < PIE **$\underset{\frown}{u}$olk-éi$^{e}/_{o}$-*, although only the *tu*-stem ***folcud*** < **$\underset{\frown}{u}$olk-$\breve{\text{ī}}$/e-tu-* 'act of washing (the head)' is actually attested in verbal-noun usage (§ 4.1.56(1)). Most of these words, and others not attested in Irish, are discussed at some length by Schumacher (2000: 157–65).[57]

As mentioned earlier (§ 2.2.1), it is not always possible to tell if the verb is an old causative or iterative in origin or if it is a more recent denominative derived from the *o*-stem noun, since weak *ī*-verbs can go back to either formation. Whatever the etymological reality in the individual cases, it is well known[58] that all these verbs display an inflectional peculiarity typical of causatives: that is, in the *ā*-subjunctive and *s*-preterite, the stem-final consonant is neutral in quality when the suffix vowel is retained, but palatalized when the vowel is lost to syncope or apocope; and where the indicative has *-u-* (raised from earlier **-o-* by the following **-ī-*), the subjunctive and preterite retain the original *-o-*. For example, causative 3.sg.pres.ind. *ad·**suidi*** 'holds fast'

---

[56] The palatalization in the plural ***foilge*** (Rawl. B. 502, 111b33) might imply **$\underset{\frown}{u}$o-leg-o-*, against the expected *o*-grade, but this could also be secondary as palatalization tends to spread in Middle Irish. At any rate, the Welsh cognate *golo* 'cover, hide, bury' reliably shows the expected *o*-grade.

[57] Ten additional Welsh verbal nouns (and their compounds) are put forward there for which Old Irish either no longer has an *o*-stem verbal noun (it having been replaced by a *tu*-stem formation) or retains no cognate forms at all: MW *annoc* 'incite' etc.; MW *annot* 'delay' etc.; MW *bwrw* 'throw' etc.; MW *deffro* 'waken, rouse'; MW *diwat* 'deny' etc.; MW *ethol* 'choose' etc.; MW *gwahawð* 'invite, ask' (cp. OIr. *sádud* [*-tu-] ↔ vb. *sáidid* [w. -ī] 'plants, erects' etc.); MW *kynneu* 'kindle' etc. (cp. OIr. *doüd* [*-tu-] ↔ vb. *doïd* [h.] 'kindles, burns'); and MW *ysgoc* 'move, stir' (cp. OIr. *scuchad* [*-tu-] ↔ vb. *scuchaid* [w. -ā] 'moves, starts' etc.). This more than doubles the likely number of words historically belonging to this category.

[58] Pokorny 1920; *GOI* 385 § 607, 419 § 677; Schumacher 2000: 160f.

(stem vowel *-u-*, palatalized *-d-*) : 2.sg.pres.subj. *ad·**sode*** (stem vowel *-o-*, neutral *-d-*) : 3.sg.perf. *at·ro-**soid*** (stem vowel *-o-*, palatalized *-d-*). By contrast, typical weak *ī*-verbs have the same palatalization in the subjunctive and preterite as in the indicative: 3.sg.pres.ind. *·**léici*** 'leaves' : 3.sg.pres.subj. *·**léicea*** : 3.sg.pret. *·**léic*** (with palatalized *-c-* throughout). The cause of this peculiar causative-type patterning was an earlier **-e-* at the end of the stem which neither raised the **-o-* in the preceding syllable[59] nor produced palatalization of the consonant following **-o-* at first;[60] but when later syncopated, it left behind palatalization of the flanking consonants. It seems likely that this **-e-* is related, directly or indirectly, to the causative-iterative suffix **-éi̯$^{e}/_{o}$-*.[61] And especially where corresponding causative-iterative formations can be observed in cognate languages, there seems to be no reason to assume that these Celtic verbs are not of the same origin.

Although both causative-iterative verbal formations and **ĝón-o-* abstracts are of Proto-Indo-European date, Schumacher (2000: 96f., 164f.) insists that no actual genetic relationship could have existed in Proto-Indo-European;[62] he suggests instead that a secondary association that may have arisen at some point between an existing abstract

---

[59] Cp. *GOI* 47f. § 75.

[60] Greene's palatalization rule 5(d), Greene 1973: 131.

[61] Schumacher 2000: 96f.

[62] Specifically, he denies that causative-iterative verbs can be segmented as **CoC-é-i̯$^{e}/_{o}$-* and analyzed as denominatives of *o*-grade thematic agent nouns and action nouns (Cowgill 1979: 39), but instead advocates a subdivision **-éi̯-$^{e}/_{o}$-* on the weight of two arguments: (1) secondary formations in *i/i̯* replace thematic stems instead of being added to the stem vowel (citing Schindler 1976: 351 and Hajnal 1993: 138, esp. fn.50; although, strictly speaking, Schindler's formulation does not make such replacement a requirement: "In IE secondary formations, the thematic vowel of the *o*-stems can be replaced only by **-i-*; otherwise it is preserved"), and (2) Klingenschmitt's (1978: 12f.) acrostatic causative-iterative type **CōC-i̯$^{e}/_{o}$-* implies a segmentation **-i̯-$^{e}/_{o}$-* next to 'normal' causative-iterative suffix **-éi̯-$^{e}/_{o}$-*. It may not be advisable to insist too strongly on either point, however, as the case is not entirely clear-cut; see now Vine (forthc.), with further references, for a cautionary evaluation of the assumptions and foundations that underlie both of these points.

like **logos* 'lying' and the similar-looking verb **logīt(i)* 'lies'; or, alternatively, that such verbal nouns may have been back-formed on the model of denominative *ī*-verbs to which the source noun also serves as the verbal noun. Influence of old causative-iterative verbs on the vocalism of related nouns of various formations is not unknown elsewhere in Indo-European; for example, Gr. δόξα [f.] 'opinion, fame', δόγμα [n.] 'opinion, decision' next to δοκέω 'seem, be of the opinion' (fut. δόξω, aor.inf. δόξαι) < PIE **dok̂-éi̯e/o-*;[63] Lat. *mōnstrum* 'sign, portent' (⇐ **mōstro-*) < **mon(e)-stro-* (cp. SPic. **múfqlúm** 'monument(?)', probably from **mon(e)-stlo-*) next to *moneō, -ēre* 'to remind, tell (of)' < PIE **mon-éi̯e/o-*;[64] Lat. *noxa* 'injurious behavior, harm', based on a desiderative stem but with the vocalism from *noceō, -ēre* 'to hurt, damage' < PIE **nok̂-éi̯e/o-*;[65] etc. A more exact explanation of the date and source of this correspondence in the Insular Celtic verbal-noun system will have to remain unresolved for the present, in the absence of more complete and decisive data from early Celtic.

(3) In rare instances weak verbs have neuter *o*-stem verbal nouns that, apparently, have been derived from the verbal stem. The examples that occur in our corpus are: ***attrab*** [n. *-o*] 'residence, act of dwelling, residing in; a dwelling, house' < **ad-treb-o-m* ← vb. **ad-treb-ā-* (> OIr. *ad·treba*) [w. *-ā*] 'dwells in, possesses', derived from **treb-ā* (> OIr. *treb*) [f. *-ā*] 'settlement, dwelling' (§ 4.1.103(2), beside **treb-ă̄-tu-*); and ***tórand*** [n. *-o*] 'act of marking out, delimiting' → 'division, share' < **tu-u̯o-rend-o-m* ← vb. **tu-u̯o-rend-ā-* (> OIr. *do·foirndea*) [w. *-ā*] 'marks out, delimits', derived from **rend-i-s* (> OIr. *rind*) [m. *-i*] 'point' (§ 4.1.89(2)). There are, in addition, two *o*-stem compounds

---

[64] De Vaan 2008: 387 s.v. **moneō**.

[65] De Vaan 2008: 411 s.v. **noceō**.

belonging to a recently remodeled strong verb: ***daithfenn*** [n. *-o*] 'act of driving back, repulsing' < **de-ati-su̯ann-o-m* and ***tofonn*** [n. *-o*] 'act of chasing, hunting' < **tu-su̯ann-o-m*, both evidently derived from the new verb stem of *seinnid* [s. *-e/o*] 'brings, takes (sth./sb. swh.)' < PrIr. **su̯ann-e/o-* ⇐ PCelt. **sann-e/o-*, which replaced inherited **san-na-* < PIE **sn̥-n-h₂-* ← √**senh₂-* 'reach, attain' (§ 3.1.114(1)). All these neuter *o*-stems, it may be noted, are aligned with verbal compounds.

2.2.3.2. **-ā-* In the late PIE proto-language, the suffix **-eh₂-* > **-ā-* functioned as the feminine counterpart to the thematic suffix **-o/e-* of masculine and neuter nouns and adjectives, as well as being a very productive suffix for creating feminine abstract nouns from verbal roots. It is frequently taken to represent a complex suffix **-e-h₂-* composed of feminizing **-h₂-* added to thematic **-e-*.[66] However, due to the formal resemblance between the PIE feminizing element **-h₂-* and the neuter plural ending **-h₂*, many scholars now believe that the two were originally identical, both descended from an early PIE collective suffix,[67] and that **-eh₂* initially represented the full grade of collective **-(e)h₂*. Yet the precise relationship between these morphological elements and the details surrounding their development remain poorly understood and subject to ongoing debate.[68] Whatever their prehistory, it is clear that by the time of late PIE, the

---

[66] E.g., Meier-Brügger 2003: 199, 285; Ringe 2006: 46; Fortson 2010: 132 (as one of two possibilities).

[67] E.g., explicitly, Ringe 2006: 46, 60; more cautiously, Sihler 1995: 245; Meier-Brügger 2003: 188–90; Fortson 2010: 132. See Clackson 2007: 104–12, with further references, for a rather detailed discussion of the whole issue.

[68] A fairly detailed sketch of the possible development from neuter collective ending to feminine suffix is presented by Matasović (2004: 165–81). Luraghi (2009; 2009b) takes a different approach, arguing that the earliest function of **-(e)h₂* was in fact that of an abstract derivational suffix, becoming reinterpreted subsequently as a collective suffix on the one hand, which eventually became grammaticalized as the neuter nominative/accusative plural case ending, and as the marker of a feminine noun class on the other. Melchert too believes that the feminine does not derive from the neuter collective; he argues (2011; forthc.) that the two categories are in fact unrelated, the later PIE

two entities were wholly distinct.

In Old Irish, simple *ā*-stems are of rather limited occurrence among the verbal nouns, notwithstanding their widespread occurrence among other classes of nouns. As a primary formative, **-ā-* occurs securely only in ****-sar-ā-*** 'act of strewing' (§ 3.1.115(2), beside analogical ***sri-tā-*, ***-sreḭ-V-tu-*) and possibly also in ****-t-ā-*** 'act of standing' (§ 3.1.125(1)). Both have zero grade of the root.

The remaining *ā*-stems that occur in our data either belong to derivational Types 3 or 5, or are later analogical remodelings of other verbal nouns. These secondary remodelings include the simplex ***creic(c)*** 'purchase, act of buying' (not attested in our corpus),[69] which replaces older ***críth*** (< PCelt. **kʷrī-tV-*[70] < PIE **kʷrih₂-tV-*), along with three compounds ending in *-chraic(c)* instead of historically expected **-chrae* (< PCelt. **-kʷreḭ(i̯)-o-* < PIE **kʷreḭh₁-o-*) (§ 3.1.27(2)), and the simplex ***reic(c)*** 'act of selling', replacing expected **ríth* (< PCelt. **rī-tV-* < PIE **h₂riH-tV-*), along with one compound ***éraic(c)*** 'act of paying out' instead of expected **érae* (< PCelt. **exs-reḭ(i̯)-o-* < PIE **h₂reḭH-o-*) (§ 3.1.99(1)). Thurneysen (1899: 82; *GOI* 454 § 737) suggests that this last word was the starting point for the others, altered from regular **érae* in order to disambiguate it from its homonym *érae* 'refusal' and reshaped based on the near-synonym ***íc(c)*** [f. *-ā*] 'payment, redemption' (§ 4.3.26(1)). Secondary replacement is also found with three compounds of *rethid* 'runs' that end in *-racht* as if from ***-rext-ā-* (§ 3.1.100(4)), probably through confusion with compounds of ***techt*** 'act of going' (§ 3.1.128(1)).

---

feminine developing out of an earlier class of animate stems in **-(e)h₂* that was always distinct from the inanimate collectives (which were pluralia tantum rather than singular).

[69] But securely attested elsewhere in Old Irish, for example in the early law text *Gúbretha Caratniad* (Thurneysen 1925: 311 § 7 = *CIH* VI, 2193.5) which dates from before the middle of the eighth century (Breatnach 2005: 262 in comparison with 338–44, esp. 344).

[70] Probably **kʷrī-tā-* or **kʷrī-tu-*, but possibly also **kʷrī-to-*; see § 3.1.27(1) comment A.

2.2.3.3. *-i-* The simple suffix *-*i*- is found on a variety of nouns and adjectives in the Indo-European languages. Many are basic nouns with concrete meaning, such as Ved. *áv-i-ḥ* [m. f.], Gr. ὄ-ι-ς [m. f.], Lat. *ou-i-s* [m. f.], Lith. *av-ì-s* [f.], OIr. (poet. and arch.) *oí* [m.], etc. 'sheep' (< PIE *$h_2$óu̯-i-s*); but there are also verbal abstracts such as Ved. *dhvan-í-ḥ* [m.] 'sound', PGmc. **dun-i-z* > OE *dyne* [m.] 'noise, din' (← PIE √**d^{h}u̯en-* 'make a noise'), OCS *lъžь* [f.] 'lie', PGmc. **lug-i-z* > OHG *lug*, OE *lyge* [m.] 'id.' (← PIE √**leu̯g^h-* 'tell a lie'), etc., and these form the basis of one Indo-Iranian infinitive formation, Ved. *-áye*. There is one clear *i*-stem among the Old Irish verbal nouns, namely (-)***guin*** 'act of smiting' most likely reflecting PCelt. *(-)*g^{w}an-i-* < PIE **g^{wh}n̥-i-*[71] (§ 3.1.61(1)).

It is uncertain, due to lack of decisive evidence, whether ***fochlaid*** [f.] 'act of burrowing' (§ 3.1.23(2)) and ***esnaid*** [f.(?)] 'insertion, act of inserting' (§ 3.1.121(3)) are *i*-stems.

2.2.3.4. *-u-* Proto-Indo-European *-*u*- is associated with basic nouns of concrete meaning and with adjectives; for example, Gr. δόρ-υ [n.] 'wood, spear', γόν-υ [n.] 'knee', Ved. *gur-ú-ḥ*, Gr. βαρ-ύ-ς, Go. *kaur-u-s* [adj.] 'heavy'; and in Old Irish, *bith* [m.] 'world', *daur* [f.] 'oak', *guth* [n.] 'voice'. Its usage in Old Irish has been extended to abstracts and verbal nouns in a very limited fashion. The *u*-stem verbal nouns in Old Irish are *(-)***ret-u-** 'act of running' (§ 3.1.100(1), beside **-ret-o-*, **-ret-tu-*, and remodeled ***-rext-ā-*) and ***-gab-u-*** 'act of taking' (§ 3.1.50(2), only in the compound ***forgub, forgab*** [m. *-u*] 'blow, thrust', next to *[-]*gab-aglā-*).

2.2.3.5. *-en-* Neuters in simple *-*en*- are only scantily attested in Indo-European, and it has sometimes been doubted whether, from the few examples that exist, a class of

---

[71] Cowgill 1980: 61.

such nouns can be reconstructed for the proto-language.[72] Some of them no doubt are better explained through other means, such as derivation from existing locative nouns in *-*en*- which were reinterpreted as *n*-stem bases; for example, PIE **ĝʰe̯im-en-* 'winter' (> Gr. χεῖμα, -ατος [n.] 'id.', reinterpreted as a *men*-stem), back-formed from *en*-loc. **ĝʰe̯im-en* 'in winter' (> Ved. *héman* 'id.') ⇐ **ĝʰiĕm-* / **ĝʰim-* 'winter' (> Av. *zim-* [m.] 'id.', etc.); PIE **(dʰ)ĝʰém-ŏn-* 'he who is on the earth' → 'human' (> Lat. *hemō/homō* [m.], Lith. *žmuõ* [m.] 'id.', etc.) ← *en*-loc. **(dʰ)ĝʰ-m-én* 'on the earth' (> Ved. *jmán* [loc.] 'id.') : **dʰéĝʰ-om-* / **dʰĝʰ-m-* 'earth' (> Hitt. *tēkan* [n.], Gr. χθών [f.] 'id.', etc.); and so on.[73] From the wide distribution of the attestations, this type of formation clearly belongs to late PIE. There are, however, a few other forms in *-*en*- that do not lend themselves as easily to this classification, which is found chiefly in words expressing temporal and spatial concepts; the only uncontroversial ones are Lat. *ungu-en* [n.], Umbr. **um-en** 'ointment', OIr. *imb* [n.] 'butter' < **h₂engʷ-en-*[74] ← PIE √**h₂engʷ-* 'smear, anoint' (cp. also OHG *anch-o* [m.] 'butter' < **h₂engʷ-ōn*), and a small class of verbal abstracts in Hittite, including *ḫenk-an* [n.] 'death, plague', *kušš-an* [n.] 'wage, fee', and others. Melchert (2007/2008: 185–87), while acknowledging the theoretical possibility of an early PIE deverbative action-noun suffix *-*en*-, argues rather for a phonetic solution based on the regular

---

[72] E.g., Nussbaum 1986: 51f. w. fn.10; Beekes 1987: 5; Melchert 2007/2008: 183.

[73] The origin of certain *r*-stems in earlier *r*-locatives was recognized as early as Persson 1886: 109f.; the pattern was extended by Johansson 1889: 165f. to include *n*-stems from *n*-locatives. More recent discussions are provided by Nussbaum 1986: 187–94 and Rau 2007: 289f.

[74] This word has been generally reconstructed with a proterokinetic accent pattern **h₃éngʷ-n̥* / **h₃n̥gʷ-én-* (cp. Klingenschmitt 1982: 180f.; Nussbaum 1986: 52 fn.10; Schrijver 1991: 62). Stüber (1998: 59f.), however, argues for original acrostatic: **h₂óngʷ-n̥* / **h₂éngʷ-n̥-*, with later remodeling of the weak stem to **h₂n̥gʷ-én-*; the reconstruction with **h₂-* here is based on the derivation of Gr. -αμβος from this root (Janda 2000: 282–87; cp. *LIV*² 267 n.0 s.v. ****h₃engʷ-***). If the laryngeal was **h₃-*, then PCelt. **amban* (> OIr. *imb*, MBret. *aman-en*, MW *ymen-yn*, OCo. *amen-en* gl. *butyrum*) can only reflect **h₃n̥gʷ-én-*; if **h₂-*, it could continue either **h₂éngʷ-n̥-* or **h₂n̥gʷ-én-*.

"Schmidt's Law" deletion of *-*m*- between an obstruent, including a laryngeal, and non-syllabic *-*n*- following a stressed vowel.[75] Thus, using 'ointment, salve' as an example, he starts from PIE *$h_{2/3}$óng^{w}-mn̥ / *$h_{2/3}$éng^{w}-mn- (accepting Stüber's 1998: 59 proposal of an acrostatic paradigm) and assumes that the regular loss of *-*m*- in the weak stem before endings in an initial vowel (*$h_{2/3}$éng^{w}-mn-V- > *$h_{2/3}$éng^{w}-n-V-) was generalized throughout the paradigm, yielding the *$h_{2/3}$óng^{w}-n̥ / *$h_{2/3}$éng^{w}-n- implied by the attested forms.[76]

Still, the possibility cannot be ruled out that an actual class of neuter *nomina actionis* in *-*en*- did exist in early Proto-Indo-European. The surviving distribution is compatible with a scenario in which the formation, in general decline, was still productive enough at the separation of Anatolian to preserve a small class of *en*-stems in that branch, but elsewhere became essentially obsolete, apart from a few relics, by late PIE. From a systemic point of view, the one-time existence of a deverbative neuter abstract formation in *-*en*- is reasonable enough: it would have corresponded to animate hysterokinetic *-*en*- (e.g., PIE *h_2u̯r̥s-én- 'male' > Ved. *vr̥ṣ-an-* [m.] 'male; bull', Gr. ἄρσ-ην [m.] 'male' < *ϝαρσ-ην)[77, 78] and amphikinetic *-*on*- (e.g., PIE *g^{w}réh$_2$u̯-on- 'heavy stone' > Ved. *grā́v-aṇ-* [m.] 'pressing stone', PCelt. *brāu̯-on- > OIr. *braö*, MW *breuan*, OCo., MBret. *brou* [f.] 'hand-mill, quern') in much the same way as neuter *-*men*- corresponds to animate hysterokinetic *-*men*- (e.g., PIE *b^{h}ud^{h}-mén- 'bottom' > Gr. πυθ-μήν [m.] 'id.')[79]

---

[76] Melchert is unpersuaded by Stüber's (1998: 53–59) reconstruction of an acrostatic *en*-stem *$h_1$nóm-n̥ / *$h_1$ném-n- (⇒ *h_1n̥m-én-) behind the Indo-European word for 'name', and accepts the more commonly reconstructed proterokinetic *men*-stem *$h_1$néh$_3$-mn̥ / *h_1n̥h$_3$-mén- (184).

[77] Peters 1993; Vine 2005: 262–66.

[78] Cp. Lat. *verr-ēs* [m.] 'boar' (Schrijver 1991: 377; de Vaan 2008: 666 s.v. **verrēs, -is**).

[79] Cp. also Ved. *budh-ná-* [m.] 'bottom' < *b^{h}ud^{h}-nó-, Lat. *fundus* [m.] 'id.', MIr. *bond* [m.] 'sole, basis' < metathesized *b^{h}und^{h}o-, all probably from *b^{h}ud^{h}-mn-ó- ← gen.sg. *b^{h}udh-mn-ós* (Rasmussen 1989: 189;

and amphikinetic *-*mon*- (e.g., PIE *h_2é$\hat{k}$-*mon*- 'stone' > Ved. *áś-man*- [m.], Gr. ἄκ-μων [m.], Lith. *ak-muõ* [m.] 'id.').[80]

The only verbal noun in Old Irish bearing the suffix *-*en*- is OIr. ***gein*** [n.] 'birth, act of giving birth; an infant' < PCelt. **gen-an* < PIE *$\hat{g}$*enh$_1$-n̥* ← √*$\hat{g}$*enh$_1$*- 'give birth' (§ 3.1.51(1)). This form is completely isolated in Irish; no cognates are attested elsewhere in Celtic, and the corresponding abstracts elsewhere in Indo-European are *men*-stems (Ved. *jáni-man*- [n.] 'birth', Lat. *ger-men* [n.] 'sprout, bud, germ' [⇐ **gen-men*][81] < PIE *$\hat{g}$*enh$_1$-men*-). Stüber (1998: 60) assumes that the *en*-stem must have secondarily replaced one of the other formations, probably in Proto-Celtic, although the rationale for this inference is not entirely clear. As far as can be discerned, *en*-stems were no more productive in Celtic than they were in late Proto-Indo-European, and no other Proto-Celtic formation is in evidence that could have served as an analogical model. Thus, in the absence of any productive or analogical basis to account for Celtic **genan*, an inheritance appears more likely.

The ultimate source of the suffix *-*en*- in this form remains to be accounted for. Melchert's phonetic solution is not workable here, because the proterokinetic pattern **CéRH-mn̥* / **CR̥H-mén*- yields no case form with the necessary cluster *-*Hmn-V*- to trigger the loss of *-*m*-, and there is no evidence for an acrostatic PIE *$\hat{g}$*ónh$_1$-mn̥*- / *$\hat{g}$*énh$_1$-mn*-. On the other hand, the delocatival solution, taking PIE *$\hat{g}$*enh$_1$-en*- 'birth' from

[80] Compare Hamp 1988b. A full account of the complex formal, derivational, and semantic relationships that exist between these formations and the accent classes to which they belong lies beyond the scope of the present study. Much useful information is to be found in the relevant sections of Stüber (1998), which also provide extensive references to further literature.

[81] With syncopation of the second syllable of expected **genamen* (see Schrijver 1991: 330), if the form is inherited.

a reinterpretation of *$\hat{g}enh_1$-*en* 'at birth', is viable both morphologically and semantically, and is probably the most plausible approach absent a class of inherited PIE neuter *en*-stems. If, on the other hand, such a class of abstracts did exist at some point in Proto-Indo-European, PCelt. **genan* could be considered an authentic archaism that preserves an ancient verbal abstract *$\hat{g}enh_1$-*en*- 'birth'.[82] In either case, the source of the Celtic word must be at least as old as late Proto-Indo-European, and must have coexisted with the *men*-stem formation that appears in Vedic and Latin.

2.2.3.6. ***-io-*** Indo-European *-(*i*)*i̯o*-, found with a large assortment of derived adjectives and nouns, is probably an amalgamation of several different suffix formations. Meier-Brügger (2003: 281–83 with references) cites at least three possible sources, all of them resulting from the addition of the thematic vowel to an existing noun with *-*i*- in the stem or ending: (1) *i*-stem noun + *-*o*- > *-*i̯o*-; (2) feminine ih_2-stem noun + *-*o*- > *-ih_2o-; and (3) locative in *-*i* + *-*o*- > *-*io*-, phonetically realized as *-*i̯i̯o*-. With the loss of laryngeals *-ih_2o- fell together with *-*i̯i̯o*-, and Sievers-type phenomena in different dialects led to further confusion between originally monosyllabic *-*i̯o*- and disyllabic *-*i̯i̯o*-. In Old Irish unstressed *-*i̯o*- and *-*i̯i̯o*- fell together in *-*i̯i̯o*- > *-*i̯i̯a*- > *-*e*(*i*)*a*- > -*e*.[83] The cover symbol *-*io*- is used here to represent this heterogeneous stem type.

The verbal nouns in *-*io*- are as a rule neuters, usually with full grade of the root where it can be determined:[84] ***-gar-io-*** 'act of calling, crying out' (§ 3.1.52(2), beside *[-]*gar-smen*-), ***leg-io-*** 'act of lying' (§ 3.1.69(1)), perhaps ***-nes-io-*** 'act of cooking' (§ 3.1.91(1), but *-*nes-o*- is also possible), ***-nou̯-io-*** 'act of assenting to' (§ 3.1.90(1)), and

---

[82] In agreement with Hamp 1988b: 189: "This noun, an *n*-stem, is surely one of the most archaic and interesting of its type known to us."

[83] *GOI* 121 § 197; Cullen 1972.

[84] Cp. Schumacher 2000: 179f.

-reg-io- 'act of rising' (§ 3.1.98(2), beside *-*reg-o-*, possibly *-*reg-iā-*, and *-*reg-ī̆/e-tu-*). One stem has zero grade of the root: ****lug-io-*** 'act of swearing' (§ 3.1.131(1), beside *-*toug-o-*); and one has *o*-grade: ****(-)sod-io-*** 'act of sitting' (§ 3.1.112(1), beside *-*sed-iā-* and *-*sed-o-*).

The larger portion of the *io*-stems in Old Irish are not historical *io*-stems, but relatively recent *o*-stem formations to Celtic roots ending in *-*i̯-*. This fact is noted by *GOI* (448f. § 725) and further elaborated by Schumacher (2000: 174f.). The verbal nouns in question correspond to compounds of nasal-present verbs, especially those ending in *°*ina-* < PIE *°*i-n-H-*. The stem-final *°*iH-o-* of the noun has become indistinguishable in Irish from the reflex of *-*(i)i̯o-*, but in Welsh these nouns consistently show a distinctive ending, namely, MW *-wy*; e.g., MW ***gofwy*** 'to visit, to inflict' ≈ OIr. ***fubae*** 'injury, act of injuring' (↔ vb. *fo·ben*, stem **bina-* < PIE **bhi-n-h*$_2$- ← √**bhei̯h*$_2$-). The shape of the Welsh ending decisively rules out zero grade, since PIE *-*iHo-* regularly yields either PBr. *-*ii̯o-* > MW *-yð*, or PBr. *-*i̯o-* > MW *-ø* with final *i*-affection.[85] Schumacher (*loc. cit.*) argues convincingly that the source of the ending must be found in the full grade, where *-*ei̯H-o-* would have become PCelt. *-*ei̯i̯-o-* > MW *-wy*.[86] He posits a pre-Irish development *-*ei̯i̯-* > *-*i̯i̯-* to account for Old Irish words that show raising of *-*o-* to *-*u-*, such as ***fubae*** (< *u̯***u**-bii̯-a-* < *u̯***o**-bei̯(i̯)-o-*) and ***cumbae*** (<*k***u**m-bii̯-a-* < *k***o**m-bei̯(i̯)-o-*); it is at this point that the words would have merged with inherited *io*-stems. Schrijver's (1995: 290f.) recommendation of original *o*-grade would suit the Welsh phonology (PIE *-*oi̯iHo-* > PCelt. *-*oi̯(i̯)o-* > LPBr. *-*oi* > *-*ui* > MW *-wy*) but is problematic for the Old Irish

---

[85] Schrijver 1995: 282–89.

[86] Probably distinct from *-*ei̯o-*, which may have fallen together with *-*ii̯o-* > *-yð*: cp. Schrijver (1995: 287), who suggests that MW *ef-**ydd*** [m.] 'bronze' < PBr. **om-ii̯on* and MW *defn-**ydd*** [m.] 'material' < PBr. **damn-ii̯on* may be from old material adjectives in *-*ei̯o-* comparable to Lat. *aur-**eus***, Gr. χρύσ-εος, Ved. *hiraṇy-**áyaḥ*** 'golden, made of gold '.

words that show raising of *-*o*- to *-*u*-, because Proto-Celtic *-*o̯i̯o*- does not produce an environment that could cause raising in a previous syllable (i.e., PCelt. *$\underset{\frown}{u}$***o***bo$\underset{\frown}{i}$(*$\underset{\frown}{i}$*)o- ⊁ OIr. ***fu****bae*).

There are five verbal-noun stems that have inherited this pattern: ***-be$\underset{\frown}{i}$(*$\underset{\frown}{i}$*)-o-*** 'act of striking' (§ 3.1.12(3), beside **bī-tV-* and **bē-smen-*), ***-kre$\underset{\frown}{i}$(*$\underset{\frown}{i}$*)-o-*** 'act of sifting, shaking' (§ 3.1.29(1)), ***-le$\underset{\frown}{i}$(*$\underset{\frown}{i}$*)-o-*** 'act of sticking, adhering' (§ 3.1.72(2), beside *-lin-*$\breve{\bar{a}}$*-tu-*), ***-re$\underset{\frown}{i}$(*$\underset{\frown}{i}$*)-o-*** 'act of counting' (§ 3.1.99(2), beside remodeled **[-]*rīkkā-*), and ***-$\underset{\frown}{u}$e$\underset{\frown}{i}$(*$\underset{\frown}{i}$*)-o-*** 'act of bending' (§ 3.1.42(1), beside possible *-$\underset{\frown}{u}$e$\underset{\frown}{i}$(*$\underset{\frown}{i}$*)-ā-*). From the roots of this shape the new *io*-type ending has spread to verbal nouns of other nasal presents. These include the compounds of *·gnin* 'know' (← PIE √**ĝneh*$_3$-), with *-gn(a)e* as if from ****-gne$\underset{\frown}{i}$(*$\underset{\frown}{i}$*)-o-*** (§ 3.1.59(1)), of *·lin* 'fill' (← PIE √**pleh*$_1$-), with *-le* as if from ****-le$\underset{\frown}{i}$(*$\underset{\frown}{i}$*)-o-*** (§ 3.1.73(1)), and of *·tlen* 'raise, support, bear' (← PIE √**telh*$_2$-), with *-thl(a)e* as if from ****-tle$\underset{\frown}{i}$(*$\underset{\frown}{i}$*)-o-*** (§ 3.1.129(2)).

These last three are the same problematic strong verbs that McCone (1991: 18–22) discusses at some length, notable for displaying an irregular outcome of the PIE zero-grade resonants in the present tense. By regular historical sound laws the present stem of these verbs should be ⁂*·genn* < **gan-na-* < **ĝ*$\underset{\circ}{n}$*-n-h*$_3$-, ⁂*·all* < *(*ϕ*)*al-na-* < **p*$\underset{\circ}{l}$*-n-h*$_2$-, and ⁂*·tall* < **tal-na-* < **t*$\underset{\circ}{l}$*-n-h*$_2$-. The actual forms, *·gnin*, *·lin*, and *·tlen* respectively, are obvious products of remodeling. The one thing these verbs all have in common, as McCone (*loc. cit.*) shows, is their formation in Celtic from roots of the underlying shape *CReH-* (Benveniste's full grade II). He proposes a process of morphological conditioning to explain why nasal presents of these roots behave differently from nasal presents of full grade I roots (*CeRH-*) which follow the regular development *C*$\underset{\circ}{R}$*-n-H-* > *CaR-n-H-*:

> "The obvious answer would be that in Proto-Celtic $\underset{\circ}{r}$ and $\underset{\circ}{l}$ became *ar* and *al* before *n* under normal circumstances but *ri* and *li* under the influence

> of corresponding "state II"[87] C*r*/*l*V- full grades elsewhere, notably in the aorist system. Thus **tl̥-n-* > **tli-n-* through pressure from aorist (ind. and subj.) **tlā-* as opposed to, say, **bl̥-n-* > **bal-n-* alongside aorist **bela-*." (McCone 1991: 20.)

There can be little doubt that McCone has recognized the crucial factor that clarifies the disparate outcomes, namely the shape of the root. All the other tenses of these Celtic verbs — full-grade, *o*-grade, even the zero-grade *to*-participle where the following obstruent would have conditioned *CR̥H-* > *CRă-* — would have come out with a stem shape *CRV̆-*, making the present tense *CaR-nV-* highly anomalous and a likely candidate for reshaping to *CRV-nV-*. But as for a specific analogical model, the full-grade aorist stem is improbable because it fails to explain why the refashioned zero-grade vowel is always *-i-*. Why would **tl̥-nV-* become **tli-nV-* and not ⁂*tla-nV-* under the influence of **tlā-* (< **tleh₂-*)? And, likewise, why would **gn̥-nV-* become **gni-nV-* and not ⁂*gna-nV-* under the influence of **gnā-* < **gnō-* (< **ĝneh₃-*)? The answer is that the model comes not from within the paradigm of these verbs, but from the well-represented series of *n*-infix presents with *-i-* in the zero grade from Indo-European stems in **°i-n-H-*: PCelt. **bi-na-* 'strike', **gli-na-* 'glue', **kri-ni-* 'sift, shake', **kʷri-na-* 'buy', **li-na-* 'stick', **ri-na-* 'count, sell', **ti-ni-* 'melt, vanish'. These verbs were common and numerous enough in Celtic to establish the perception that *-i-* was the "normal" vowel of any *CRV-nV*-shaped root. Once the present stems of **tal-na-* ⇒ **tli-na-*, etc. had been formally realigned with these verbs, it was a fairly straightforward matter for the verbal nouns to follow suit.

2.2.3.7. **-iā-* This is the feminine counterpart of the preceding suffix. Among Old Irish verbal nouns it occurs predominantly with roots in a final guttural or *-d-*; full grade is most common, but zero grade is also encountered. The *iā*-stems occurring in

---

[87] McCone uses this term as a descriptive handle for the root shape without implying any living Benvenistean system of alternations (26).

our corpus are: *(-)***ag-iā-** 'act of driving' (§ 3.1.2(1), beside *[-]*ag-nā-*), *(-)***g^{w}ed-iā-** 'act of asking, praying' (§ 3.1.63(1)), *(-)***k^{w}lik$^{(w)}$-iā-** 'act of leaping(?)' (§ 3.1.24(1)), ***-rek-iā-** 'act of arranging' (§ 3.1.96(2), beside *-*rek-o-*), ***rig-iā-** 'act of extending' (§ 3.1.102(1)), and ***-sed-iā-** 'act of sitting' (§ 3.1.112(2), beside *[-]*sod-io-* and *-*sed-o-*); with the possible additions of **?*-reg-iā-** 'act of rising' (§ 3.1.98(3), beside *-*reg-o-*, *-*reg-io-* and *-*reg-ĭ/e-tu-*) and **?*-u̯e̯i̯ā-** < ***-u̯e̯i̯(i̯)-ā-** 'act of bending' (§ 3.1.42(2), beside *-*u̯e̯io-* < *-*u̯e̯i̯(i̯)-o-*). It is evident that feminine verbal nouns in *-*iā-* tend to group together with others in *-*io-* and *-*o-*, an observation supported, in the case of the verbal nouns of **sed-* 'sit', by Schumacher's (2000: 218f.) elucidation of MW *eisteð* 'to sit' and *kyf-eisteð* 'to sit together' as reflecting *-*sod-i̯i̯ā*, next to OBret. *estid* 'to sit' < *-*sod-i̯i̯om*.

2.2.3.8. ?*-lo- Several categories can be distinguished among the Indo-European stems in *-*lo-*: deverbative agent nouns and adjectives, such as Lat. *fig-u-**lu**-s* [m.] 'potter' ← *fing-ō, -ere* 'fashion', *trem-u-**lu**-s* [adj.] 'trembling' ← *trem-ō, -ere* 'tremble', etc.,[88] and the perfect active participles of Slavic and Armenian, e.g., OCS *nes-**lъ** (jesmъ)* '(I have) carried', Arm. *ber-ea-**l***[89] *(em)* '(I have) carried'; deverbative action nouns (including concretized) in *-*lo-* such as Go. *sit-**l**-s* [m.] 'seat'[90] < **sed-**lo**-s*, and the Armenian infinitive, e.g., Arm. *ber-e-**l*** 'to carry' < PIE **b^{h}er-e-**lo**-*; diminutives in Italic, Germanic, and Balto-Slavic, such as Lat. *agel-**lu**-s* 'little field, small plot of land' ← *ager* 'field, territory', *porcu-**lu**-s* 'piglet' (cp. OHG *farha-**li***, Lith. *paršẽ-**li**-s*, with altered stem class);

---

[88] With *-u-* from a generalization of thematic *-*e-*, or in some cases probably phonologically by anaptyxis (Weiss 2009: 279 fn.71).

[89] The base in *-ea-* of the participle has been generalized from that of the weak aorist stem, *-ea-c'/-e-c'*. While the sources of the participial and aoristic suffixes are clear (*-l* < PIE *-lo-*; *-c'* < PIE *-sk̂-*), the origin of the element *-ea-* remains somewhat problematic; see Schmitt (2007: 145) for a summary of the various proposals.

[90] For a semantic parallel, cp. OIr. ***suide*** 'position; act of sitting; that in which one sits → seat' (§ 1.3.2(3)).

and secondary adjectives in *-*ló*-, e.g., Ved. *bah-u-**lá**-ḥ* [adj.] 'thick, dense' ← *bah-ú-ḥ* [adj.] 'abundant' ≈ Gr. *παχ-υ-**λό**-ς 'thick'[91] ← παχ-ύ-ς [adj.] 'thick' (< PIE *$b^hn\hat{g}^h$-u- 'id.').

Celtic attests numerous stems in *-*lo*-: for example, OIr. *gab-**ul*** [m.] 'fork' < PCelt. **gab-lo*- 'fork, forked branch'[92] (perh. < PIE *$\hat{g}^{(h)}Hb$-*lo*- ← √*$\hat{g}^{(h)}eHb$- 'take, grab');[93] OIr. *sí-**l*** [n.] 'seed' MW *hi-**l*** [m. f.] 'seed, offspring' and *si-**l*** 'race'< PCelt. **sī-lo*- (< PIE *seh_1-lo*- ← √*seh_1- 'sow'); OIr. *fel* 'evil' ≈ PGmc. **ub-**ila**-z* [m.] 'id.' (> Go. *ub-**il**-s*, OHG *ub-**il***, OE *yf-**el***) < *h_2up-élo*- ← PIE √*$h_2\underset{\frown}{u}ap$- 'evil' (cp. Hitt. *ḫuwapp-a*- 'evil').[94] Stems in *-*lo*- are not generally recognized among the Celtic verbal nouns,[95] but according to one proposed etymology at least, OIr. ***oöl*** 'drink, act of drinking' ↔ vb. *ibid* 'drinks' (§ 3.1.65(1)) would be a Type 1 formation belonging to this class.

2.2.3.9. *-mā-* Hamp (1982–1983: 173–76) finds evidence that the Indo-European *mā*-stem abstracts originated in verbal adjectives in *-*$m^{ó}/_{\underset{\circ}{l}}$ā*- with zero grade of the root, such as Ved. *tig-**má***- 'sharp' (← √*(s)*teiĝ*- 'stick, be sharp'), Lith. *šiř-**ma**-s*, *šìr-**ma**-s*, Latv. *siř-**m**-s* 'grey' (< PIE *$\hat{k}_{\circ}^{r}$-**mó***- 'dark-colored'), and the Balto-Slavic present passive participles in *-mas*. These adjectives become nominalized as both *mo*- and *mā*-stems; e.g., Ved. *yudh-**má***- [m.] 'a warrior' ← 'warlike' (< PIE *$H\underset{\frown}{i}ud^h$-mó*- ← √*$H\underset{\frown}{i}e\underset{\frown}{u}d^h$*- 'move swiftly, fight'), OIr. *lá-**m***, OCo. *lo-**f***, OW *la-**u***, MW *lla-**w*** [f.] 'hand', OHG *fol-**ma***, OE *fol-**m*** [f.] 'flat

---

[91] Implied by the adverb παχυλῶς 'broadly, roughly'.

[92] Cp. MW *gafl*, OBret. *gabl* [f.] 'fork' < PCelt. **gab-lā*.

[93] According to de Bernardo Stempel 1992: "an IE *nomina agentis* formation in *-lo-*" (91), "with the meaning 'he who grasps, he who seizes' (> 'fork')" (93).

[94] Watkins 1969: 30; Melchert 1994: 147; Ringe 2006: 78. Others derive the Germanic and Celtic words forms from PIE **upo*- 'over' in the sense 'overstepping, exceeding proper bounds' (Feist 1939: 508 s.v. **ubils**; W. P. Lehmann 1986: 371 s.v. **U2. ubils**; Heidermanns 1993: 638 s.v. **ubela-**).

[95] But the feminine counterpart *-*lā*- forms the second element of the verbal-noun suffix *-*ag-lā*-, § 2.2.3.18.

of the hand, palm' (< *$p\underline{l}h_2$-*mā* ← PIE √*$pelh_2$- 'flat').[96] The zero-grade *mo*-stems of this class are distinguished from *nomina actionis* in *-*mo*- with *o*-grade of the root, such as Ved. *ghar-**má***-, Av. *garə-**ma***- 'heat' < PIE *g^{wh}or-***mó***- ← √*g^{wh}er*- 'be warm', Gr. κορ-**μό**-ς 'log' ← 'hewn tree' ← √*(*s*)*ker*- 'cut', etc., which have no corresponding formations in *-*mā*- (see Hamp *op. cit.*).

Old Irish has few *mo*-stems of any sort, and none at all among the verbal nouns. The *mā*-stem verbal nouns that occur are all secondary formations associated with weak *ī*-verbs and built to the verbal stem; none of these appear to be primary formations of the sort discussed by Hamp.[97] The Welsh forms, OW *-im* > early MW *-if*, point back to PBr. *-*ī-mā*-,[98] and this is the shape assumed for Irish as well. In Irish the formation is further restricted to *ī*-verbs in root-final dental or guttural: ***-glād-ī-mā***- 'act of speaking' ← vb.

---

[96] So also Gr. παλάμη, Lat. *palma* 'palm' < PIt. **palamā*, but the source of *-ala-* is problematic; for discussions, see Schrijver 1991: 210; Sihler 1995: 111; de Vaan 2008: 441 s.v **palma** w. refs.

[97] It may be useful to draw attention to an intriguing, if inexact, analogue that appears in Hittite. Laroche (1956, esp. 79f.) has highlighted the existence of a series of action nouns in *-ima-* that correlate closely with verbs in *-iya-*, the formation being characterized by the addition of the animate suffix *-ma-* (< PIE *-*mo*-) to the verbal stem in *-i-*(*ya*-). Examples include *katkatt-iya-* 'shake (oneself), tremble' : *katkat-imma-* 'shaking, trembling'; *kurkur-iya-* 'scare, intimidate' : *kurkur-ima-* 'causing of fright, intimidation'; *laḫlaḫḫ-iya-* 'be perturbed, be in commotion' : *laḫlaḫḫ-ima-* 'turmoil, commotion'; etc. The parallel is suggestive: both languages show an animate *mV*-stem action noun derived from a secondary verbs in PIE *-$\hat{i}^{e}/_{o}$- (it will be recalled from § 2.1.5(c) that the Celtic verbal suffix *-*ī*- in most cases reflects the fusion a complex suffix of which the second element was *-$\hat{i}^{e}/_{o}$-). On the other hand, there are some awkward differences. The affinity for reduplicated roots in Hittite and the confinement to weak *ī*-verbs in Celtic pose no serious complications, as both are likely enough to be secondary restrictions; but the relationship between animate *-*mo*- of the Hittite nouns and feminine *-*mā*- of the Celtic is more complicated. We clearly cannot posit an old adjectival formation that generalized the feminine in Celtic after the emergence of that gender, since all of the examples in Hittite are action nouns in the first instance; yet there is a fundamental discrepancy between *-*mo*- and *-*mā*- as noun suffixes, since the former is inherently animate, whereas the latter, if it originated in an old collective like other feminine abstracts in *-*ā*- < PIE *-eh_2-, comes from an underlying neuter. This makes it difficult to unify the two formations without assuming an unexplained replacement, at some point after the emergence of three genders in PIE, of the now masculine *-*mo*- with feminine *-*mā*-. The matter merits further investigation.

[98] Schumacher 2000: 130f.

stem *-*glād-ī-* (§ 3.1.55(1)), ***kredd-ī-mā-*** 'act of believing' ← vb. stem **kredd-ī-* (§ 3.1.28(1)), ***moid-ī-mā-*** 'act of boasting' ← vb. stem **moid-ī-* (§ 3.1.85(1)), ***sek^{w}-ī-mā-*** 'act of following' ← vb. stem **sek^{w}-ī-* (§ 3.1.111(1)), ***u̯et-ī-mā-*** 'act of looking at' ← vb. stem **u̯et-ī-* (§ 3.1.44(1)); also ***dīmeggi-m*** 'act of despising' ← vb. stem **dī-megg-ī-* (§ 4.1.46(1)), although this is a later formation. Two of these verbs are earlier strong verbs that have transferred to the weak class: **sek^{w}-ī-* ⇐ **sek^{w}-i̯^{e}/$_{o}$-* ⇐ PCelt. **sek^{w}-^{e}/$_{o}$-*[99] and **u̯et-ī-* ⇐ PCelt. **u̯et-^{e}/$_{o}$-*.[100]

2.2.3.10. *-mu-* The *-*mu-* suffix is somewhat of an enigma from an Indo-European point of view. Outside of Celtic, only isolated forms are found, usually assumed to be independent secondary formations. These include a few Indo-Iranian and Greek words: Ved. *stā-**mú-*** [m.] 'Seufzen, ängstliches Flehen' (Grassmann 1873: 1589 s.v.) or [adj.] 'brüllend, donnernd' (Böhtlingk-Roth 1855–1875: VII, 1262 s.v.), Av. *garə-**mu-*** [m.] 'heat',[101] Gr. δρῑ-**μύ**-ς [adj.] 'biting, piercing', θα-**μύ**-ς [adj.] 'crowded, thick, close-set';[102] plus several other potential forms that are only indirectly recoverable from apparent derivatives: *ἁλ-**μύ**-ς → ἁλ-μυ-ρός [adj.] 'salty', *γλα-**μύ**-ς → γλα-μυ-ρός [adj.] 'mattery (of the eyes)', *ὀσ-**μύ**-ς → ὀσ-μύ-λη [f.] 'strong-smelling octopus', *στω-**μύ**-ς → στω-μύ-λος [adj.] 'talkative', etc., for which δρῑ-**μύ**-ς → δρῑ-μύ-λος [adj.] 'sharp, piercing' and θα-**μύ**-ς → θα-μυ-ρός [adj.] 'busy, well-used' (ὁδους θαμυρούς · τὰς λεωφόρους

---

[99] *KPV* 564 n.(a) s.v. **1. *sek^{w}-e/o-*$_{DEP}$.

[100] Klingenschmitt *apud* Tichy 1980: 3f. fn.8; Watkins 1995: 118.

[101] Considered by Brugmann (1906: 254 § 177 Anm.) to be a remodeling of *garə-ma-* (*-*mo-*) through influence of the synonym *taf-nu-* (*-*nu-*).

[102] A poetical adjective only attested in the plural (masc.nom. θαμέες, acc. θαμέας, dat. θαμέσι, fem.nom. θαμειαί, acc. θαμειάς); the singular θαμύς is cited by grammarian Apollonius Dyscolus. The PNN Θάμυ-ρις (or Θαμύ-ρας) and Θαμυ-κλῆς also appear to contain this stem, but it is hard to imagine in what sense it would be amenable to a personal name.

'thoroughfares', Hesych.) provide a model.[103] Many of the Greek forms are of obscure origin, however, and the words in -μύς that actually occur are adjectival rather than substantival (further on this point below). Traces of a nominal *mu*-formation may also be found in the Albanian abstract suffix *-ím*, which evidently derives from a compound suffix **-í-mu*, since only an old *u*-stem plural can produce the *-e* ending of the plural *-íme*.[104]

De Bernardo Stempel (1999: 243f.) explains Celtic **-mu-* as an innovative Caland variant created by a mixture of the masculine suffix **-mo-* with the stem formant **-u-*. Although it is hard to disprove such an assumption, it would be preferable, if possible, to find an explanation that follows more regular derivational processes. One such explanation may in fact be available: there are various examples from other stem classes where (*C*)*u*-stem abstracts stand next to (*C*)*o*-stem adjectives in a pattern that could point to some sort of derivational relationship between the pairs. The best-known correspondence of the type consists of deverbative *to*-adjectives and *tu*-abstracts (cp. PIE **g^{w}m̥-**tó**-* > Ved. *ga-**tá**-*, Av. *ga-**ta**-* 'gone', Gr. βα-**τό**-ς 'accessible' : PIE **g^{w}em-**tu**-* > Ved. *gán-**tu**-* [m.] 'way, course', Lat. *(ad-)ven-**tu**-s, -ūs* [n.] 'arrival'); but other pairs show a similar pattern, including simple **-o-* : **-u-*, **-no-* : **-nu-*, **-lo-* : **-lu-*.[105] Whether or not an actual derivational rule can be posited for Proto-Indo-European by which the (*C*)*u*-stem noun could be derived from the (*C*)*o*-stem adjective, the existence of such corresponding pairs could have provided at least an analogical model for forming new *mu*-stem abstracts from existing *mo*-stem adjectives. This scenario would provide an

---

[103] See Bader 1974: 85–87 for an exhaustive collection, with further literature.

[104] G. Klingenschmitt *apud* Schumacher 2000: 129.

[105] See Nussbaum 1998b: 527f. for a discussion and examples; cp. also Rau 2007: 282.

understandable motivation for the appearance of *-*u*- for *-*o*- in these words. From the distribution of individual forms in Indo-Iranian, Greek, Celtic, and possibly Albanian, this development might be placed as far back as late Proto-Indo-European.

As for direct evidence to support this hypothesis, there is admittedly very little. Indo-Iranian **ghar-má-* > Ved. *ghar-má-*, Av. *garə-ma-* [m.] 'heat' is from an *o*-grade noun *g^{wh}*or-mo-*[106] rather than a zero-grade adjective *g^{wh}*r̥-mó-*, so the correspondence with Av. *garə-mu-* is not of the sort suggested here. Greek, on the other hand, shows a few correspondences between stems in *-*mo-* or *-*mā-* and postulated stems in *-*mu-*: ἅλ-**μη** 'saltwater; saltiness' : *ἁλ-**μύ**-ς; γλα-**μό**-ς · μύξα 'mucus', Hesych. : *γλα-**μύ**-ς; ὀσ-**μή** [f.] 'odor', -ὀσ-**μό**-ς [adj.] '-smelling' : *ὀσ-**μύ**-ς. If the relationship suggested here is correct, the adjectival meaning of the only two *mu*-stems that are actually attested in Greek must be assumed to be secondary. Celtic exhibits only a few *mo*-stems: OIr. *ala-**m*** [n.?] 'herd, flock', MW *ala-**f*** [m.] 'herd, wealth, property' prob. < PIE *$pelh_2$-**mo**-;[107] OIr. *coí-**m***, MW *cu* (< **cu-f*), OBret. *-cu-**m***, MBret. *cu-(**n**)**ff*** [adj.] 'dear, beloved' (≈ Gmc. **hai-**ma**-z* > Go. *hai-**m**-s* 'village', OHG *hei-**m*** 'home', OE *hā-**m*** 'home, village', ON *hei-**m**-r* 'dwelling, world') < PIE **k̂oi̯-**mo*- perh. ← √**k̂ei̯*- 'lie down', √**tk̂ei*- 'settle, dwell', or **k̂ei̯*- ← **k̂i*- 'this (here)';[108] OIr. *lo-**m**(**m**)*, MW *llw-**m*** [adj.] 'bare, naked' < PIE **lup-s-**mo*- or **lub*$^{(h)}$*-s-**mo**-*; OIr. *o-**m***, MoW *o-**f*** 'raw' < PCelt. **o-**mo*- (≈ Ved. *ā-**má***-, Gr. ὠ-**μό**-ς, Arm. *hu-**m*** 'id.') < PIE

---

[106] Hamp 1982–1983: 171f. Gr. θερμός and Arm *jerm* [adj.] 'warm' < PIE *g^{wh}*er-mó-*, according to Hamp, form a Helleno-Armenian isogloss with *e*-vocalism taken from of the *s*-stem *g^{wh}*ér-es-* (Ved. *háras*, Gr. θέρος), and a secondary transfer to adjectival meaning. Phrygian *germe* [adj.] 'id.' also belongs here, making this a clear "central" Indo-European isogloss.

[107] Schrijver 1991: 75f.

[108] See § 4.3.10 comment B.

*HoH-**mó**-, *h_3eH-**mó**-, or *h_2eh_3-**mó**-;[109] OIr. *tro-**m**(**m**)*, OW *tru-**mm***, OBret. *tro-**m**, tru-**m*** [adj.] 'heavy' < PIE **trud-s-**mo-* or **truks-**mo-*;[110] plus a few others of doubtful origin. Neither these nor the existing *mā*-stems (§ 2.2.3.9) correspond to attested *mu*-stems within Celtic or elsewhere.

Whatever the earlier history of this formation, it enjoyed great productivity in Celtic. Nouns in *-*mu*- are well attested in both Old Irish and Middle Welsh, and marginally in Middle Breton. Gaulish too possesses the suffix, but there is not enough information to determine its distribution or function in that language (see § 5.1). In Insular Celtic *-*mu*- was attached almost exclusively to monosyllabic roots ending in a long vowel; in Old Irish these are contemporary hiatus verbs:[111] ***(-)gnī-mu-*** 'deed, act of doing, making' (§ 3.1.58(1), beside *-*gnĭ-tu*-), ***(-)knā-mu-*** 'act of gnawing' (§ 3.1.26(1)), ***(-)rā-mu-*** 'act of rowing' (§ 3.1.94(1)), ***-slī-mu-*** 'act of deserving' (§ 3.1.118(1), beside *-*slĭ-tu*-), and ***(-)snī-mu-*** 'act of spinning, weaving' (§ 3.1.122(1)). It was also attached to two derivatives of PIE √*-*stā*- 'stand' which have become reanalyzed as weak *ā*-verbs: ***-niss-ā-mu-*** 'act of accusing', built to *-*niss-ā*- < *-*ni-stā*- (§ 3.1.88(1)) and ***(-)sissa-mu-*** 'act of setting' built to *-*sissa*- < *-*si-sta*- (§ 3.1.117(1), beside remodeled **-*sissam-tion*-); the short vowel of the last-mentioned verbal base is shown by the short -*ă*- of MW *gwaesaf* [m.] 'guarantee, pledge' (≈ OIr. ***fóes(s)am***).[112]

---

[109] The short vowel of Celtic may be due to Dybo's Law (pretonic shortening, Dybo 1961) or loss of the second laryngeal by dissimilation: pre-Celt. *HoHmo- > *Homo- > PCelt. *omo-; see *EDPC* 299 s.v. ***omo-**.

[110] See § 4.1.106 comment A.

[111] See § 2.1.5(b).

[112] Schrijver 1995: 408; Schumacher 2000: 129.

2.2.3.11. *-no-* Primary PIE *-*nó*-, like *-*tó*- (2.2.3.14), is commonly added to the zero grade of the root to form verbal adjectives: for example, Ved. *pūr-**ṇá***-, Av. *pərə-**na***-, Lith. *pìl-**na***-*s*, OCS *plъ-**nъ***, PGmc. **ful-**na***-*z* (> Go. *fulls*, OE *full*), OIr. *lá-**n*** [adj.] 'full' < PIE **pl̥h₁-**nó***-; these could also be substantivized. There are also deverbative abstracts in *-*no*- with various ablaut grades that are not easily systematized: for example, Ved. *dā́-**na***-*m*, Lat. *dō-**nu***-*m* [n.] 'gift' < PIE **deh₃-**no***-*m* or **doh₃-**no***-*m*; Ved. *ghṛ-**ṇá***-*ḥ* [m.], *ghṛ-**ṇā́*** [f.] 'heat', OCS *grъ-**nъ*** [n.] 'cauldron', Ru. *gor-**n*** [n.] 'blacksmith's hearth' < PIE **g^wh^r̥-**nó***- (probably a substantivized adjective), next to OIr. *gor-**n*** 'fire' < PIE **g^wh^or-**no***-;[113] OE *swef-**n***, ON *svef-**n***, Toch.A *ṣpä-**ṃ***, Toch.B *ṣpa-**ne*** 'sleep' < PIE **sṷep-**no***-*s*, beside OIr. *súa-**n***, MW *hu-**n***, Lith. *sãp-**na***-*s*, Arm. *k'ow-**n*** 'id.' < PIE **sṷop-**no***-*s*, and Ved. *sváp-**na***-*ḥ*, GAv. *x^vaf-**nō***, Lat. *som-**nu***-*s* 'id.' < PIE **sṷep-**no***-*s* or **sṷop-**no***-*s*; Gr. ὕπ-νο-ς, OCS *sъ-**nъ***, Alb. *gju-**më*** 'id.' < PIE **sup-**no***-. In addition, secondary *-*eno*- forms Slavic past passive participles (e.g., OCS *nes-**enъ*** 'carried'),[114] and *-*ono*- lies behind the Germanic past participles of strong verbs (e.g., Go. *bit-**an***-*s* 'bitten' < PGmc. **bit-**ana***-*z*) and the Germanic infinitives (e.g., Go. *beit-**an*** 'to bite' < PGmc. **bīt-**ana***-*n*).

Only one verbal noun in Old Irish carries this suffix: ***mlegon*** [n.] 'act of milking' < PCelt. **mlig-ono-m* ← PIE **h₂ml̥ĝ-*. It does not happen to be attested in our corpus of materials, but appears elsewhere as early as the eighth century (AU I, 188.8, year 732). It has been noted[115] that this formation in *-*ono*- corresponds exactly to the Germanic infinitival ending *-an* < PGmc. *-*anan*, a fossilized suffix that represents PIE *-*o-nom*

---

[113] Also Lat. *for-**nu***-*s* [m.] 'oven', which could be either zero-grade or *o*-grade.

[114] Cp. also Go. *fulg-**in***-*s* 'hidden', from a fossilized equivalent formation in Germanic.

[115] Wodtko 1987: 67; repeated *apud* Schumacher 2000: 201.

(acc.sg.). Deverbative abstracts in *-*ono*- are vanishingly rare in Celtic,[116] so PCelt. **mligonom* may reasonably be assumed to be a relic of some sort; thus a material connection with the Germanic infinitive appears plausible. Nevertheless, the historical details behind the Germanic past participle and infinitive are themselves not well understood,[117] much less their connection with possibly related outside forms: this isolated Celtic verbal noun, the Slavic past passive participles in *-*eno*-, and the pair of Old Irish verbal nouns in *-*enā*- and *-*onā*-, discussed in the next section.

2.2.3.12. *-*nā*- The suffix *-*nā*- is the feminine counterpart of *-*no*-. As a verbal-noun suffix, *-*nā*- is associated with four roots in our corpus, all ending in -*d*- or -*g*-: ***(-)ag-nā-*** 'act of driving' (§ 3.1.2(2), beside *[-]*ag-iā*-), ***(a)ud-nā-*** 'act of lending' (§ 3.1.92(1)), ***(-)org-e-nā-*** 'act of destroying' (§ 3.1.93(1), beside *-*org-to*-), and ***(-)u̯ed-o-nā-*** 'act of leading' (§ 3.1.41(1)). The last two formations may well have originated in feminine substantivizations of the same *no*-formation with intervening thematic vowel that lies behind the Germanic and Slavic nonfinite verb forms discussed in the previous section; like the Germanic infinitives, they appear to have been built to the verb's present stem. Full grade of the root is certain in these two formations and in

---

[116] Possibly no other examples are quotable. OIr. *étan* 'forehead' < PCelt. **ant-ono*- is ultimately from a nominal root (PIE *$h_2$ent*- 'face, forehead'). Matasović (*EDPC* 352 s.v. **sowono-**) recommends deriving MW *huan* [m. f.] 'sun' < PCelt. **su̯-ono*- from PIE √**seu̯h_1*- 'turn, set in motion', comparing Ved. *Savitár*- (**seu̯h_1-tér*-), an epithet of the Sun; but a connection with nominal PIE **seh$_2$u̯-el/n*- 'sun' via **suh$_2$-on-o*- > PCelt. **su̯ono*- or **suh$_2$-en-o*- > PCelt. **su̯ano*-, both involving laryngeal metathesis (Schrijver 1991: 334), while less straightforward morphologically, is more likely from a semantic standpoint.
De Bernardo Stempel (1999: 452 fn.42) argues for a preform **u̯os-ono-m* > **u̯ōnom* behind OIr. *fúan* [n.] 'type of outer garment', based on the parallel with Ved. *vásana*- [n.] 'garment' (← PIE √**u̯es*- 'clothe'), but this is not workable phonologically: PCelt. *-*oso*- > PICelt. *-*oho*-, when under the stress, would have yielded a disyllabic hiatus sequence -*oö*-/-*oä*-/-*oü*- in Early Old Irish that contrasted with EOIr. -*ó*- (whether from PCelt *-*ou*- or PrIr. *-*ŏC-/__R* by compensatory lengthening); such hiatus vowels were soon simplified to -*ó*- within Old Irish, but, unlike the earlier long -*ó*-, did not undergo breaking to -*úa*-: cp., e.g., OIr. *fooït, foüt, fót* [m.] 'sod'; *loön, loän, lón* [m.] 'food'; *oöl, oül, ól* [n.] 'drink'; but never ⁑*fúat*, ⁑*lúan*, ⁑*úal*. Meid's (1970: 140) reconstruction of **u̯os-no*- is therefore undoubtedly correct.

[117] See Ch. 5, fn. 56.

PCelt. **ag-* < PIE **h₂eĝ-*; it is also possible in **(a)ud-*, though here both full grade (PIE **h₂eu̯dʰ-neh₂-* > PCelt. ****aud-nā-***) and zero grade (PIE **h₂udʰ-neh₂-* > PCelt. ****ud-nā-***) would equally well produce the existing OIr. ***ón, úan*** 'act of lending; a loan', and zero grade is rather to be expected from Proto-Indo-European.

2.2.3.13. **-ni-* Primary **-ni-* is found in some Proto-Indo-European abstracts such as Skt. *lū-**ni**-ḥ* 'act of cutting off', Go. *lū-**n**-s* 'ransom, price of redemption' < PIE **luH-**ni**-* (← √**leu̯H-* 'cut off, set free'), but does not appear to have been very common. One *ni*-stem occurs in the Old Irish verbal nouns, namely ***búain*** 'act of cutting, breaking' < ****boug-ni-*** (§ 3.1.16(1), beside **-boug-o-*). This word is to be separated from the *nā*-stems with which it is grouped by *GOI* (454 § 736.1). In the first place, unlike ***á(i)n*** 'act of driving, ***tá(i)n*** 'act of driving away' and ***ó(i)n, úa(i)n*** 'act of lending', ***búain*** never occurs with neutral final in the nominative singular (⁂*búan*). By itself this fact is not conclusive since it could simply be an accident of attestation, but the genitive singular *búana* (Sg. 62b10), with the correct *i*-stem ending in a ninth-century Old Irish manuscript, provides corroborating evidence that the difference is indeed one of stem class.[118] By contrast, the *nā*-stems with genitive singular in *-a, tána* and *óna* noted by *GOI* (*loc. cit.*), occur in Middle Irish copies of Old Irish texts and certainly go back to earlier *-(a)e*, as confirmed by examples of *áne* (TBC[1] 415, readings of LU and YBL) and *tānae* (SMMD 11.2, reading of TCD H 3.18) which attest the authentic *ā*-stem ending.

2.2.3.14. **-to-* Primary **-tó-* added to the zero-grade root was one of the principal suffixes of verbal adjectives in Proto-Indo-European, frequently substantivized already in the proto-language as (chiefly neuter and feminine) verbal abstracts; for example, Ved. *mṛ́-tá-m* [n.] 'death', PGmc. **mur-þa-n* > OHG *mord*, ON *morð* [n.] 'murder' < PIE

---

[118] Cp. Schumacher 2000: 65, 195, and see the discussion on *ā*-stems and *i*-stems, § 2.2.3.25(2) *infra*.

$m\underset{\circ}{r}$-tó-m 'death'. Full grade may be met with, in most cases probably representing a *vṛddhi*-derivation from the zero-grade adjective;[119] for example, PIE *$\hat{k}$lu-tó-* [adj.] 'audible' → *$\hat{k}leu$-to-m* [noun] 'hearing' > Av. *srao-tə-m*, ON *hljó-ð* [n.] 'hearing';[120] PIE *$\hat{g}\underset{\circ}{n}h_1$-tó-* [adj.] 'born' → *$\hat{g}enh_1$-to-m* (concretized) 'child' > OS *kind*, MoG *Kind* [n.] 'id.'

The Old Irish verbal nouns that directly continue substantivized neuter *to*-adjectives include ***(-)ba-to-*** 'death' < PIE *g^wh_2-tó-* (§ 3.1.9(2), beside **bā-sto-* and **-ba-tion-*), ****mra-to-*** 'betrayal, act of betraying' < PIE *$m\underset{\circ}{r}h_2$-tó-* (§ 3.1.82(1)), and ****ra-to-*** 'bestowal, grace' < PIE *$p\underset{\circ}{r}h_3$-tó-* (§ 3.1.39(1)).[121] Here too perhaps belongs ***indmat, indlat*** 'act of washing the hands or feet', from ****-am-to-*** 'act of washing' with substantial remodeling (§ 3.1.4(1)). Some apparent *to*-forms of ***fius(s)*** 'knowledge, act of ascertaining' (§ 3.1.46(1) comment B) are not genuine, having arisen through confusion between the *u*-declension and the *o*-declension (for which see further below).

There are several neuter compounds of ****-men-to-*** 'act of thinking' (§ 3.1.86(2)) with **-to-* suffixed to the full grade (beside feminines in **-man-tion-*). The quality of the root vowel is guaranteed by the corresponding Welsh formations: MW *gor-vynt* [m.] 'ambition, jealousy' (≈ OIr. ***for-mat*** [n. *-o*] 'envy, act of envying'), *dy-fynt* [m.] 'eagerness, avidity', and *gorðy-fynt* [m.] 'perverseness, repugnance, opposition', which consistently

---

[119] For which see Bammesberger 1990: 91–96 and Irslinger 2002: 241–43, with further references.

[120] Go. *hliu-þ** (dat.sg. *hliuþa*), which appears in Uppström's (1864–1868: 44, 88) edition of the Codices Gotici Ambrosiani at I Tim. 2:11, is evidently a ghost word, being a misreading of *hauniþai* 'humility'; see Regan (1974: 53 s.v. **hliuþa**); Bammesberger (1990: 79f.).

[121] On the sorely vexed question of whether *CRăT-* or *CRāT-* is the regular outcome of PIE *$C\underset{\circ}{R}HT$-*, see Watkins 1962: 188f.; Joseph 1982; Schrijver 1995: 168–91; McCone 1996: 51–54; Irslinger 2002: 22–26; *KPV* 136–38 The most recent solution, proposed by Isaac (2007: 21–55), is a rather involved sound-law system which purports to produce the existing long- and short-vowel variants without resort to secondary analogical remodeling. The outcome is impressive but perhaps not 100% reliable (see § 3.1.23 comment A).

show *-fynt* (or *-vynt*) < **-men-to-*.[122]

Verbal nouns in **-eto-* are found with both zero grade: ****dlig-eto-*** 'entitlement, condition of being entitled' (**dlig-* < PIE **$d^{h}l̥g^{\wedge h}$-*) (§ 3.1.33(1)); and full grade: ****tek^{w}-eto-*** 'act of fleeing' (§ 3.1.127(1), beside **-tek^{w}-o-*). Indo-European deverbative **-e-tó-* formations[123] appear to be original verbal adjectives with specific semantic values, either passive in the case of transitives ('to be *X*-ed, worthy of being *X*-ed' in the full-grade forms and '[not] to be *X*-ed, [un-]*X*-able' in the zero grade, virtually all of the latter occurring in negative compounds), or else active ('*X*-ing') in the case of intransitives; they lend themselves well to concretization (e.g., Ved. *vratá-*, Av. *uruuata-* 'vow' ← '[that which is] to be spoken' ← PIE √**$\underset{\wedge}{\mu}erh_{1}$-* 'speak'; OCS *teneto* 'hunting net' ← '[that which is] to be stretched' ← PIE √**ten-* 'stretch'; Gr. ἕρπετον 'creature' ← 'creeping [thing]' ← PIE √**serp-* 'crawl'; etc.), but not to direct abstract nominalization.[124] The possibility may be considered, therefore, that these Old Irish verbal nouns come from secondarily thematized *t*-stems (**-et-o-*) rather than *to*-formations from thematic stems (**-e-to-*); but the situation is not entirely clear (see § 5.4.2). An *o*-grade stem in **-e-to-* is found with one *o*-grade causative-iterative root, ****tonk-e-to-*** 'fortune, condition of being destined' ↔ vb. **tonk-ī-* 'destine' < PIE caus. **tomk-$\underset{\wedge}{e}i^{e}/_{o}$-* (§ 3.1.130(1)). One other weak *ī*-verb, *fo·rimi* 'sets down', the historical source of which is uncertain, appears to make a *to*-stem verbal noun ****$\underset{\wedge}{\mu}o$-rim-ī̆/e-to-*** > ***fuirmiud*** [m.] 'setting down' → 'composition' uniquely in the compound *mac-fuirmid*, apparently 'son of composition', a grade of poet; but in every other context the word is a *tu*-stem **$\underset{\wedge}{\mu}o$-rim-ī̆/e-tu-* (§ 3.1.103(1) comment B).

---

[122] Schumacher 2000: 53.

[123] See, for an in-depth discussion, especially of Greek, Italic, and Indo-Iranian forms, Vine 1998 *passim*, and esp. 38–44.

[124] Vine 1998: 66.

As weak verbs most typically take *tu*-stem verbal nouns (§ 2.2.2.2), one suspects that these last two *to*-stem nouns may have transferred from that class. A sharp distinction between *to*-stems and *tu*-stems is not always maintained in the texts (see § 2.2.3.25(1)), so one must allow for the possibility of mixture.

2.2.3.15. **-tā-* As a class, *tā*-stems originated in the feminine substantivization of PIE adjectives in **-to-*. As might be expected, zero grade dominates by far in the Indo-European daughter languages. Likewise in Celtic, *tā*-stems are more numerous with zero grade than with full grade; yet full-grade *tā*-stems are more common in Celtic than in any other Indo-European language, indicating likely Celtic innovation. A comparison with outside cognates suggests that many of the Celtic *tā*-stems may have replaced inherited *ti*-stems, with full grade of the root perhaps through influence of the *tu*-stems.[125]

Two patterns of alternation involving *tā*-stems have been identified by Schumacher (2000) through a comparison between the related Irish and British nouns.

(1) ****-tā- : *-ti-.*** The occurrence of the archaic *tā*-stem simplex ****bu-tā-* > *both*** [f.] 'state of being' (§ 3.1.14(1)) beside *ti*-stem **-bu-ti-* in all the compounds (e.g., ***cétbuid*** [f.] 'feeling, act of perceiving' < **kanta-bu-ti-*, etc., § 3.1.14(2)) is echoed in Old Breton by simple ***bot*** (< **bu-tā-*) vs. compound ***gudbut*** (< **-bu-ti-*). The combined evidence thus points to an original alternation between **-tā-* in the simplex and **-ti-* in the compounds of this root.[126]

(2) **Zero grade + **-tā-* (⇐ **-ti-*) : full grade + **-tā-*; roots of the structure **CeR-*.** A second sort of alternation is exemplified by simple ****bri-tā-*** (< **bṛ-tā-*) > ***breth*** [f.] 'act of

---

[125] Hamp 1994; Irslinger 2002: 376–81.

[126] Schumacher 2000: 66–68.

bearing, a judgment' (3.1.13(1)), reflecting a zero-grade form of the root, against the compounds, which all show full-grade ***-ber-tā-*** (e.g., ***epert*** [f.] 'utterance, act of saying' < **exs-ber-tā-*, etc., § 3.1.13(2)). The same pattern is repeated, albeit less consistently, in other roots of similar structure: ****gʷli-tā-*** 'act of grazing' (§ 3.1.53(1), not found in our corpus) vs. ****(-)gʷel-tā-*** (§ 3.1.53(2)), and ****kli-tā-*** 'act of hiding' (§ 3.1.19(1)) vs. ****-kel-tā-*** (e.g. ***díchelt*** 'concealment, act of covering' < **dī-kel-tā-*, not attested in our corpus), which may have been modeled on the alternation of **bri-tā-* : **-ber-tā-*.[127] Analogy undoubtedly lies behind *****mli-tā-*** 'act of grinding' (§ 3.1.84(1)) and *****-mel-tā-*** (§ 3.1.84(2)), since the implied *aniṭ* preforms ***mḷ-tā-* : ***-mel-tā-* are incompatible with the exclusively *seṭ* PIE √**melh₂-* 'grind'.

Additional details, not recoverable from the Irish words, are provided by the British forms of **ber-*. The relevant evidence, explored by Schumacher (2000: 70–72), includes both verbal nouns and ordinary substantives formed from the root. Next to clear traces of full-grade **-ber-tā-* in the Middle Welsh compounds *drycyr-uerth* [m.] 'to lament', *a-berth* [m. f.] 'sacrifice, offering', etc., there are other forms that point back to zero grade **(-)bri-tV-*, including simple *bryt* [m.] 'mind, desire' and compound *det-uryt* [m.] 'to proclaim, pronounce judgment' or [f.] 'verdict', etc. In theory, **(-)bri-tV-* could represent a stem in **-ti-*, **-to-*, or **-tu-*, but, significantly, not **-tā-*, which would have resulted in ***bret*, etc. As Schumacher observes (71), one other crucial piece of evidence here is the feminine gender of *deturyt*. Since, unlike the masculine gender of *bryt*, the feminine of *deturyt* is not explainable by analogical spread, the suffix here must be **-ti-*.

With all the clues in place, a plausible scenario emerges wherein an earlier alternation **bri-ti-* : **-ber-tā-* was leveled in different directions: In Irish **-tā-* was

---

[127] Schumacher 2000: 72.

generalized throughout; in British, the simplex **bri-ti-* tended to spread to the compounds, and in few a further cases mixed compounds in **-bri-tā-* also emerged, such as MW *dio-fret* [m.] 'to renounce, abjure' (next to *dio-fryt*) and MW *a-bret* 'release, deliverance' *vel sim.* (next to *a-berth* [m. f.] 'sacrifice').

Other verbal nouns in **-tā-* that do not participate in the above alternations are ****-ank-tā-*** 'condition of being inclined' (§ 3.1.1(1)), ****-i-tā-*** 'act of going' (§ 3.1.40(1)), ****(-)tig-tā-*** 'act of going' (§ 3.1.128(1)), and ****-soid-ī̆/e-tā-*** 'act of accusing' (§ 4.2.5(1)). The last stem represents the only *tā*-formation belonging to a weak verb in our corpus. The obsolete verbal noun ***críth*** 'purchase' has sometimes been classed among the *tā*-stems, but neither the gender nor stem class is entirely clear; all that can be determined with certainty is that it bears a suffix of the shape **-tV-*.[128]

2.2.3.16. ****-ti-*** Feminine nouns in **-ti-* comprise a well-known class of *nomina actionis* in Proto-Indo-European, which also make infinitives in Indo-Iranian (Ved. *-táye*) and Balto-Slavic (e.g., Lith. *-ti*, OCS *-ti*). Generalization of the zero grade in both root and suffix throughout the paradigm is most common (e.g., Ved. *ma-tí-ḥ*, Lith. *min-tì-s* [f.] 'thought' < PIE **mn̥-ti-s*; Ved. *gá-ti-ḥ*, Gr. βά-σι-ς [f.] 'going, a step', Go. *ga-qum-þ-s* [f.] 'gathering, assembly', Lith. *pri-gim-tì-s* 'nature, character' < PIE **gʷm̥-ti-s*), from which it would appear that the trend of leveling an earlier mobile paradigm was already underway by late Proto-Indo-European. But forms with full grade in the root (e.g., GAv. *aŝi-* 'lot, reward' < **ar-ti-* < PIE **h₁ér-ti-*; GAv. *darəgō.jiiāi-ti-* 'long life' < PIE **-gʷi̯éh₃-ti-*; Go. *ana-min-d-s* 'suspicion' < PIE **-mén-ti-s*[129]) and in the suffix (Gr. dat.sg. -σει < PIE **-téi̯-i*)

---

[128] Irslinger 2002: 92f. See further § 3.1.27(1) comment A.

[129] Beside zero-grade *ga-mun-d-s* 'memory' < PIE **-mn̥-ti-s*.

are vestiges of an earlier proterokinetic stress pattern R(*é*)S()E() / R()S(*é*)E().[130]

This suffix is only found with two stems in our corpus: primary *-*ti*- added directly to the root, ***-bu-ti-*** 'state of being' (§ 3.1.14(2)) (the simplex probably originally used *-*tā*-, see § 2.2.3.15(1) above), and secondary *-*ti*- with intervening front vowel, *(-)***sag-i-ti-** 'act of seeking' (§ 3.1.105(1)). Indeed, *ti*-stems in general are not very common in Irish, the simple suffix having been replaced in large part by the related compound suffix *-*tion*- (see § 2.2.3.22).

2.2.3.17. *-tu-* Like its counterpart *-*ti*-, the suffix *-*tu*- was widely used to form verbal abstracts in Proto-Indo-European, and served as the basis for the infinitives and supines of several daughter languages, including Indo-Iranian (Ved. *-táve, -tum, -tos*), Latin (supine I *-tum*, II *-tū, -tuī*), and Balto-Slavic (e.g., Lith. *-tų*, OCS supine *-tъ*). The Indo-European type is generally masculine with an original proterokinetic accent pattern that has usually been leveled out in the daughter languages. In Old Irish too, masculine predominates (the only neuter in our corpus is ***indas*** 'manner' [< **inde-u̯id-tu*]), and zero grade is most common, although full grade may also be met with. Hamp (1983; 1994), noting the Celtic predilection for *tu*-stems where other Indo-European languages have *ti*-stems (e.g., OIr. *sruth* [m. *-tu*] 'stream' vs. Ved. *srutí*, Gr. ῥύσις 'id.', Arm. *aṙu* 'canal'), suggests a broad shift in stem class among the Celtic verbal nominalizations, with the new *tu*-stems retaining the zero grade of the earlier *ti*-stems.

(1) The suffix is added directly to the root in the verbal nouns of strong verbs, which in our corpus include ***-em-tu-*** or ***-am-tu-*** 'act of taking' (§ 3.1.38(1), beside *-*am-tion*-), ***-lū-tu-*** 'act of escaping' (§ 3.1.75(1)), *(-)***med-tu-** 'act of measuring' (§ 3.1.83(1)), ***-ret-tu-*** 'act of running' (§ 3.1.100(3), beside *[-]*ret-u-*, *-*ret-o*-, and

---

[130] For further discussion, see Meier-Brügger 2003: 207f.; Schumacher 2000: 39f.; Vine 2004: 357f.

remodeled **-*rext-ā*-), and *(-)***u̯id-tu-** 'act of finding out' (§ 3.1.46(1), beside *-*u̯id-tion*-). In the last three, the initial *-*t*- of the suffix has merged with the final dental of the root to produce -*s*(*s*)-. It is also probably a primary formation in the verbal noun ***íadad*** 'closure, act of closing' < ***ē-dă̆-tu-** (§ 3.1.36(1)), although since this compound was early reinterpreted as a weak *ā*-verb, the *tu*-stem formation here might be secondary.

(2) Hiatus verbal nouns generally show the presence of an intervening vowel, indicated by archaic spellings such as disyllabic ***bruüd*** 'breakage, act of breaking' < **brus-i-tu-* ↔ vb. *bruïd*. Trisyllabic pronunciation is implied by the spellings ***tintuuth***, ***tintuúth*** 'conversion, translation, act of translating' < **t*(*u*)*-inde-so̯u̯-e-tu-* ↔ vb. *do·intaí*, found three times in Würzburg (12a10, 12b23, 13a1), but this is unexpected since *-*u̯*- between unstressed vowels should have disappeared without a trace in the prehistory of Irish.[131] The hiatus may have been restored in the compound by analogy with the simplex ***soüd*** 'change, act of turning, changing' < **so̯u̯-e-tu-*[132] ↔ vb. *soïd*. The verbal-noun stems of this type in our corpus include ***brus-i-tu-*** 'act of breaking' (§ 3.1.17(1), beside **brunn-ă̆-tu-*), *(-)***klau̯-ĭ̆/e-tu-** 'act of turning (back)' (§ 4.1.24(1)), ***lo̯u̯-ĭ̆-tu-*** 'act of moving' (§ 3.1.79(1)), *(-)***so̯u̯-e-tu-** 'act of turning' (§ 3.1.123(1)), and remodeled ****-sre̯i̯-V-tu-*** 'act of strewing' (§ 3.1.115(3), beside **sar-ā-* and remodeled ***sri-tā-*).

A few hiatus forms had no intervening vowel; this is evident especially from British: ***u̯o-gnī-tu-*** > OIr. ***fognad*** 'service, act of serving' ≈ MW **gweinit* 'to serve',[133] MBret. *gounit* 'to till, win' (§ 3.1.58(2)), and ***tu-ari/ro-slī-tu-*** > MW *dyrllid* 'to deserve',

---

[131] *GOI* 125 § 205.3; Kortlandt 1986: 89f.; Uhlich 1995: 12.

[132] The *-o*- in the verbal noun shows that the intervening vowel *-*V*- was not *-*ĭ̆*-, because that would have resulted in ⁑*suüd* (McCone 1991: 132; 1996: 55). Since this verb has weak *ī*-flexion, the intervening vowel must have been *-*e*- (see paragraph (3) below).

[133] Found only in the compound *gwener* ***we*[*i*]*nit*** 'serving Venus' and as the basis of ***gweinid****awc* 'servant, minister' and ***gweynyd****uarch* 'working horse'; see Schumacher 2000: 46.

MBret. *dellit* 'to merit' (cp. OIr. ***áirilliud*** 'merit, act of deserving' ↔ vb. *ad·roilli* 'deserves', probably reflecting ****ad-ro-slī-tu-*** [§ 3.1.118(2)], although **ad-ro-sliu̯-V-tu-* would also be possible in theory). OIr. ***fognad*** and MW **gweinit* are rare variants of the usual OIr. ***fognam***, MW *gweini* < **-gnī-mu-*,[134] and OIr. ***áirilliud*** < **ad-ro-slī-tu-* shows a similar alternation next to another compound of the same root, OIr. ***fuillem*** 'gain, act of earning' < **u̯o-slī-mu-*. The two roots in question, *·gní* 'go, make' belonging to PIE **ĝenh₁-* 'produce', and *·slí* 'deserve' belonging to PIE **selh₁-* take', are unusual formations and are evidently parallel Celtic remodelings. The suggestion[135] of **gnī-i̯e/o-* based on a PIE "state II" **ĝneh₁-i̯e/o-* may be compatible with the Irish verbal forms and the verbal nouns, but is contradicted by some British verbal forms that require earlier **gnĭi̯e/o-*.[136] It is difficult to know whether the *mu*-suffix or the *tu*-suffix is the older in these words.

(3) Weak verbs regularly had an intervening vowel between the root and suffix. Because this vowel appears in an unstressed syllable, it is always short and its pronunciation in Old Irish depends entirely on the quality of the flanking consonants.[137] Its earlier quality can only be determined, if at all, from indirect clues found in the raising or lowering of a preceding stressed vowel, the palatalized or neutral quality of the preceding consonant, and, where it exists, the testimony of British cognates which tend better to preserve internal vowel quality. (These are discussed at length by Schumacher 2000: 79–104). From this incomplete evidence it can be inferred that weak *ā*-verbs made verbal nouns with both **-ā-tu-* and **-ă-tu-* in an unclear distribution, while

---

[135] Hesitantly McCone 1991: 33, followed by *LIV*² 164f. n.21 s.v. ****ĝenh₁-***.

[136] For further details see *KPV* 341–44 n.(a) s.v. ****gn-i̯e/o-***.

[137] See *GOI* 63f. §§ 101–102, and § 1.5.1.2(3) *supra*.

weak *ī*-verbs made both **-ī-tu-* (also **-ĭ-tu-*?) and **-e-tu-*. It is difficult to specify the range of this last suffix with any precision, beyond the observation that it is frequent among the verbal nouns of causative-iterative verbs and of the verbs in **-sag-*.[138] Schumacher (2000: 96–104) argues, based on the fairly robust pattern of correspondence among Celtic verbs with *o*-vocalism, especially old causative-iteratives, between active preterites in **-ess-*, passive preterites in **-e-to-*, and verbal nouns in **-e-tu-*, that **-e-tu-* was the regular Proto-Celtic verbal-noun morpheme of causatives and iteratives,[139] and from there it spread, at least partially, to the *sag*-verbs. If this inference is correct, then the few clear examples of a causative or iterative verbal noun with **-ĭ̄-tu-* (e.g., ***luüth*** 'movement, act of moving' < **lo̯u̯-ĭ̄-tu-* [§ 3.1.79(1)], ***scuchad*** 'act of moving, proceeding' < PrIr. **skok-ĭ̄-tu-* [§ 3.1.108(1)]) must be Primitive Irish innovations by influence of the verb.

2.2.3.18. ****-aglā-*** The Old Irish suffix *-ál* is attached to only one root in our corpus, ****ga^{i}b-*** 'take' (§ 3.1.50(1)), in the simplex and most of its numerous compounds. Etymologically it is no doubt a hybrid of the Indo-European suffix **-lā* < **-leh$_2$* added to another element of the shape *-aT-*. A plausible account of its origins has been proffered by Schumacher (2000: 204–6 with refs), who takes it to be in a Proto-Insular Celtic (or earlier) contamination of the verbal noun of **gab-*, whatever its original stem formation, with its synonym **kag-lā* (> MW *cael* 'to get'), resulting in a hybrid verbal noun

---

[138] Telltale signs of **-e-* are (where applicable) lack of raising in the root syllable and the more limited effects of the first Irish palatalization, as spelled out by Greene (1973: 129–31) and modified by McCone (1997c). For the **-sag-* verbs, neutral *-g-* is conclusive by rule 5(c), since the sequence **-aCĭ̄-* regularly yielded a palatalized consonant but **-aCĕ̄-* did not, and it is generally palatalization rather than non-palatalization that spreads secondarily.

[139] For the Old Irish evidence, Schumacher (2000: 98) invokes the verbal nouns derived from the iterative verb **skok-ī-* ← PIE √**skek-* 'move quickly' (***cumscugud*** 'movement, act of moving', etc.); but as discussed under § 3.1.108(1) comment A, these forms do not in fact support his point. Clearer examples would be ***gorad*** 'act of heating, burning' (§ 3.1.64(2)), which must reflect **g^{w}or-e-tu-* rather than **g^{w}or-ĭ̄-tu-* > ⁂*guiriud*, and ***slondud*** 'declaration, act of declaring' (§ 3.1.120(2)), which must reflect **slond-e-tu-* rather than **slond-ĭ̄-tu-* > ⁂*sluindiud*.

gabag-lā* > OIr. ***gabál*, MW *gauael*. From this very common word a new ending **-aglā-* > OIr. *-ál* (also *-áil* by replacement of the nominative by the dative) was extracted and thence spread analogically to other verbal nouns such as ***tĭcsál*** 'act of taking up, removing' (§ 4.2.3).

2.2.3.19. ****-mnā-*** Only one verbal noun in our corpus uses this suffix, added to an *n*-infixed verbal stem: ****gli-na-mnā-* > *glenamon*** 'act of adhering' ↔ vb. *glenaid*, stem < PIE **gli-n-H-* ← √**gleiH-* (§ 3.1.56(1)). To this *GOI* (455 § 737) adds two others, ****li-na-mnā-* > *lenamon*** 'act of following' ↔ vb. *lenaid*, stem < PIE **h₂li-n-H-* ← √**h₂leiH-* (§ 3.1.72(1)) and ****tli-na-mnā-* > *tlenamon*** 'act of stealing' ↔ vb. *tlenaid*, stem as if < ⁂*tli-n-h₂-*[140] (§ 3.1.129(1)), but these happen not to appear in our texts. That this suffix is consistently added to the verbal present stem rather than the root indicates its relatively recent creation.

There is some uncertainty surrounding its source. It has traditionally been taken be formed from an enlargement in **-ā-* added to the zero grade of the neuter action-noun suffix **-men-*.[141] Thurneysen (1904: 94; cp. *GOI* 70f. § 112) has shown that post-apocope **-mn#* did not become syllabic and acquire an anaptyctic vowel (**-mn̥* > *-mon*) until after the period of syncope, so the second syllable of these words was regularly retained. McCone (*apud* Schumacher 2000: 125) has observed that *-ā* added to the Proto-Irish agent noun suffix **-iamon-* would also produce the correct syncope outcome. If this derivation is correct, the pervasive neutral quality of the internal *-n-* (*glenamon*, etc.) would have to be secondary, as Schumacher (*loc. cit.*) notes — the most likely source being the present stem of the verb — since the **-i-* of **-iamon-* would have regularly palatalized the

---

[140] Replacing regular **talna* < PIE **tl̥-n-h₂-* ← **telh₂-* 'carry, support, lift'; see § 2.2.3.6 *ad fin.* above.

[141] *VKG* II, 61f. § 403; Marstrander 1924: 47–54; de Bernardo Stempel 1994: 298 w. fnn.116f.; 1999: 248, 437f.

preceding *-n-* (⁂*gle**ine**mon*, etc.).

2.2.3.20. *-(*s*)*men-* The neuter suffix **-men-* is very common in the Indo-European languages with verbal action nouns. These often acquire subsequent concrete meaning, for example, Lat. *sē-men*, OCS *se-mę* etc., *'act of sowing' → 'that which is sown = seed'; Gr. ῥεῦ-μα, OIr. *srúaim* *'act of flowing' → 'that which flows = a flow, stream'. The suffix (or a variant thereof) remained productive as a formant of both abstract and concrete nouns in several branches of Indo-European, including Indo-Iranian, Greek, Italic, Slavic, and Celtic. **-men-* is also the basis of several infinitive formations (Ved. *-mane*, Av. ?*-mənē*, Gr. -μεν), and also of course of verbal nouns in Celtic.

Besides plain **-men-*, an enlarged variant **-s-men-* also existed in the parent language, as evidenced by doublets such as Gr. ζεῦγμα 'yoke' < PIE **i̯eu̯g-mn̥* beside Lat. (pl.) *iūmenta* 'draft animals' < OLat. *iouxmenta* < PIE **i̯eu̯g-smn̥-*; Ved. *ájman-*, Lat. *agmen* 'procession, troop' < PIE **h₂eĝ-mn̥* beside Lat. *ex-āmen* 'swarm' < PIE **-h₂eĝ-smn̥*; or Gr. (Att.) πρᾶγμα 'deed' < **prāg-mn̥* beside (Ion.) πρῆγμα < **prāk-smn̥*.[142]

The original accentual pattern of *men*-stems was proterokinetic R(*é*)*-mn̥* / R()*-mén-*. There may have been a tendency already in Proto-Indo-European to extend the full grade of the root throughout the paradigm, since no fully ablauting paradigm is attested in any of the daughter languages and the full-grade root predominates; but this process cannot have been completed before the breakup of the parent language, as shown by the remains of zero grade still found in several daughter languages. In this respect the Celtic branch is somewhat conservative, still preserving the paradigmatic ablaut of the suffix and providing clear cases of both full grade and zero grade among

---

[142] The base appears to be **pr̥-h₂-k-* derived from PIE √**per-* 'cross, pass', but the details are obscure (Beekes 2010: II, 1230 s.v. πράσσω)

the roots.[143]

In Celtic *-(*s*)*men*- is suffixed to both simple and compound verbal-noun roots, but is more frequent with the former. Roots that attest only simplex formations are particularly well-represented among this set. The variant with *-*s*- is far more frequent than the plain suffix, tending especially to attach to roots ending in a guttural (as is also the case in Latin).

The stems in *-*men*- are: with non-ablauting root, ****mad-men-*** 'act of breaking' (§ 3.1.80(1)); with zero grade, ****(-)nad-men-*** 'act of binding' (§ 3.1.87(1)); and (re)built to the present stem, ****su̯ann-men-*** 'act of making a musical sound' (§ 3.1.113(1)). Those that employ *-*smen*- are: with full-grade or non-ablauting root, ****bē-smen-*** 'act of striking' (§ 3.1.12(2), beside *$bī$-*tV*- and *-*bei̯*(*i̯*)-*o*-), ****(-)gar-smen-*** 'act of calling' (§ 3.1.52(1), beside *-*gar-io*-), ****-grēd-smen-*** 'act of driving' (§ 3.1.62(1)), ****(-)rēd-smen-*** 'act of riding' (§ 3.1.97(1)); with zero-grade root, ****(-)lang-smen-*** 'act of leaping' (§ 3.1.74(1)), ****-tud-smen-*** 'act of falling' (§ 3.1.132(1)); slightly remodeled, ****dreg-smen-*** 'act of climbing' (§ 3.1.35(1)); and with indeterminate grade, ****gang-smen-*** 'act of bellowing' (§ 3.1.54(1)), ****-glend-smen-*** or ****-gland-smen-*** 'act of showing, bringing to light' (§ 3.1.57(1)). The stem ****tand-men-*** or ****tann-men-*** 'act of cutting' (§ 3.1.126(1)) could be an early formation built to the zero-grade root or, less likely perhaps, a later formation based on the present stem of the verb.

2.2.3.21. ****-sto-, *-stā-*** These suffixes are of the compound structure *-*s*-*tV*-, related to *-*to*- and *-*tā*-. They belong to a broader *-*stV*- type with a variety of vowels in the -*V*- slot. These suffixes probably originated in *-*tV*- derivatives of *s*-stem nouns, or nouns with an *s*-extended root, which became reanalyzed as a having a compound suffix

---

[143] See Stüber 1998: 45–47.

*-*s-tV*-. As an example, Meid (1965: 123) cites the Vedic *ti*-stem pair *śrú-ti-* 'hearing' (< PIE **ĥlu-ti-*) next to *s*-enlarged *śruṣ-ṭí-* 'obedience' (< PIE **ĥlu-s-ti-*), to which PGmc. **hlus-ti-* > OE *hlys-t* etc. 'hearing, ear' corresponds; a reanalysis of the latter as **ĥlu-sti-* could have provided a model for the spread of other *st*-suffixes. They became particularly productive in Germanic and Celtic.

A full-grade variant of the same *s*-enlarged root lies behind ***clúas*** [f.] 'sense of hearing, act of hearing, ear' ↔ vb. *ro·cluinethar* 'hears'. Schrijver (1995: 406–15, esp. 414f.) argues, based on *-st* instead of ⁂*-s* in MW ***clust*** [f. m.] 'ear', that the productive *st*-suffix was re-added to the *s*-enlarged root in Celtic: **ĥleu-s-**stā***-; see § 3.1.25(1) comment B.

There is a series of Old Irish abstracts in *-s(s)-* < **-stV-* that correspond to adjectives in *-th-* < **-tV-*,[144] one or two of which may serve as Old Irish verbal nouns. The first, ****bā-sto-*** 'death' ↔ vb. *baïd* 'dies' (§ 3.1.9(1), beside **ba-to-* and **-ba-tion-*), is built to the full grade of the PIE root **$g^{w}eh_2$-* 'go' with the suffix **-sto-*. It is generally regarded as the verbal noun of *baïd*;[145] but, as noted in § 1.3.4 *ad fin.*, its status as such is not assured, and its synonym ***bath*** [n.] 'death' < **batom*, a neuter substantivization of the corresponding verbal *to*-adjective, PIE **$g^{w}h_2$-tó-m*, may have a better claim to being the old verbal noun (see further § 3.1.9(1) comment C). The second noun of this type, ****tu-gai-stā-*** > ***togáes*** [f.] 'deception, act of deceiving' ↔ vb. *do·gáetha* [wk. *-ā*] 'deceives' (§ 4.4.5(1)), is also related to the *to*-adjective. In this case, however, the verb is a weak *ā*-factitive derived from the adjective **gai-t^{0}/$_{ā}$-* > OIr. *gáeth* [adj.] 'clever', and the related noun *gáes* 'cleverness' is used as the base of the verbal noun. This formation therefore belongs to derivational Type 4, in which the verbal noun is a nominalization of the

---

[144] These have been analyzed by Greene 1963, Meid 1965, and Irslinger 2002: 412–19.

[145] E.g., *GOI* 450 § 728; *LÉIA* B-21 s.v. **bás**; Schumacher 2000: 73.

verb's source adjective; see § 2.2.4.2 below.

2.2.3.22. **-tion-* This suffix goes back to a compound of **-ti-* plus another element, apparently **-Hon-*,[146] which remains somewhat obscure. It has been compared to the fundamentally possessive "Hoffmann suffix" **-$h_{1/3}$on-*[147] (e.g., McCone 1994: 111; Olsen 2004: 239f.), but this claim can neither be verified nor disproved: whatever its original semantic value, the second element of **-ti-Hon-* has become entirely bleached of meaning, thus reducing the basis for comparison to formal resemblance alone; and with the uncertainties surrounding the laryngeal in both suffixes, it is not assured that they are identical.

Abstracts in **-ti-Hon-* are very well attested in Italic and Celtic (represented by Irish; no Welsh forms remain, and the Continental Celtic materials are too meager to permit any conclusions regarding the silence there) and generally correspond to nouns with simple **-ti-* in other branches of Indo-European. Armenian abstracts such as *lawowt'iwn* 'goodness' have also been taken to reflect this suffix;[148] if correct, this would demonstrate that the suffix is not a distinctive Italo-Celtic phenomenon. Stempel (1983: 96f.) raises doubts, noting that Arm. *-t'iwn* always follows *-ow-* (< **-eu̯-*) and finding phonological difficulties with many of the case forms; he suggests instead that the Armenian words are an *n*-enlargement of the suffix *-oyt'/-owt'ic'* (< **-eu̯ti-*), and thus unrelated to **-tiHon-*. Olsen (1999: 549) counters that the suffix derivation could just as

---

[146] Evidence for the laryngeal comes from the alternation of nom. **-tion-* : obl. **-tīn-* in Sabellic: Osc. nom.sg. **frukta-tiuf** < **-ti-**Hō*** + *-n-s* vs. acc.sg. *medica-tinom* < **-ti-**Hn**-om* and Umbr. abl.sg. **na-tine** < **-ti-**Hn**-ed*; and possibly also Armenian *-(ow-)t'iwn* : *-(ow-)t'ean*, if Olsen (1992) is correct in positing that PIE **-$ih_{2/3}$C-* > PArm. **-(i)i̯aC-*. Olsen (1992: 142f; 1994: 346; 1999: 487f.) argues that the laryngeal is specifically **h_3* and that the element **-$h_3$on-* is identical with the Hoffmann suffix (cp. the next footnote).

[147] For which see Hoffmann 1955; Meier-Brügger 2003: 118, 287 w. refs.; Olsen 2004: 229–44; and cp. also Stüber 1998: 90f., 101. There is some disagreement over the nature of the laryngeal.

[148] Brugmann 1906: 319f.; Stüber 1998: 121f.

easily be analyzed as *-oy-/-ow-* + *-t'iwn* (< **-eu̯-* + **-tiHon-*), while the distribution indicates only that the formation has become immensely productive, not that the suffix itself cannot be old; moreover she offers, as an example of a likely primary *tiHon*-formation, Arm. *ar-**diwnk'*** 'action, achievement, production' < PIE **h₂r̥-tiHon-* ← √**h₂er-* 'to fit together'.[149] Taking the Armenian evidence together with some possible indication in Italic of an old ablaut alternation in this suffix[150] — Osc. nom.sg. **frukta-tiuf** < **-ti-**Hō*** + *-n-s* vs. acc.sg. *medica-tinom* < **-ti-**Hn**-om* and Umbr. abl.sg. **na-tine** < **-ti-**Hn**-ed* — Stüber (1998: 121, 194) concludes that the **-tiHon-* stem type must go back to Proto-Indo-European proper.

In our corpus **-tion-* is used in the first instance with nine verbal-noun stems: ****āg-ī-tion-*** 'act of fearing' (§ 3.1.3(1), the only example belonging to a weak verb), ****-ba-tion-*** 'act of dying' (§ 3.1.9(3), beside **bā-sto-* and **[-]ba-to-*), ****-blā-tion-*** 'act of dying' (§ 3.1.11(1)), ****(-)dam-tion-*** 'act of submitting' (§ 3.1.31(1)), ****-am-tion-*** 'act of taking' (§ 3.1.38(2), beside **-em-tu-* or **-am-tu-*), ****-kʷis-tion-*** 'act of seeing' (§ 3.1.21(1)), ****-man-tion-*** 'act of thinking' (§ 3.1.86(1), beside **-men-to-*), ****-sam-tion-*** 'act of pouring' (§ 3.1.116(1)), and ****-u̯id-tion-*** 'act of finding out' (§ 3.1.46(2), beside **[-]u̯id-tu-*); and secondarily with two more stems: ****-ink-tion-*** 'act of reaching' (§ 3.1.66(2), beside **-ank-o-*) and ****-sissam-tion-*** 'act of setting' < **si-stā-* (§ 3.1.117(2), beside **[-]sissa-mu-*). It is found mostly with compounds. The root, in common with simple *ti*-stems, shows zero grade where it can be ascertained from the preforms.

Two verbal nouns, ***aisndís*** [f.] 'declaration, act of declaring' and ***fresndís*** [f.] 'contradiction, act of contradicting', both from **-u̯id-tion-*, end in (neutral) *-s* in the

---

[149] Citing Godel 1970: 151.

[150] Cp. Brugmann 1906: 319.

nominative singular, in contrast to the other verbal nouns of this stem type which end in *-siu*, *-t(i)u* or *-th(i)u*. This has been explained by a special Primitive Irish deletion rule[151] whereby **-siį̯-* is reduced to **-s-* between two unstressed vowels when the second is non-front: **exs-ande-u̯id-tiį̯ō* > **essandeu̯issiį̯ū* > **esandeu̯isu* > **es'in'd'eu̯'i^{u}s* > **es'†n'd'iu̯'i^{u}s* > **es'n'd'ī^{u}s* > OIr. ***aisndís***. The other verbal nouns belonging to **-u̯id-tion-* (***taidbsiu*** [f.] 'appearance, act of showing', ***forndisse*** [f.] 'disclosure, act of disclosing, § 3.1.46(2) with comment E) and the verbal nouns of **-k^{w}is-tion-* (***aicsiu*** [f.] 'sight, act of seeing', etc., § 3.1.21(1) with comment B) must be analogical to forms like ***tuistiu*** [f.] 'birth, act of engendering' (< **t(o)-uss-sam-tion-*), etc., where preservation is regular since this reduction did not apply to PrIr. **-tiį̯ū*.

2.2.3.23. ****-tro-, *-tlo-, *-tlā-*** Proto-Indo-European **-tro-* and its variants **-tlo-*, **-d^{h}ro-*, **-d^{h}lo-* formed deverbative neuter nouns designating the instrument of the action; for example, ****-tro-***: Gr. τέρε-τρο-ν [n.] 'drill', Lat. *arā-tru-m* [n.] 'plow'; ****-d^{h}ro-***: Lat. *crī-bru-m* [n.] 'sieve'; ****-tlo-***: Go. *nē-þla* [n.] 'needle', Osc. **pes-tlú-m** [n.] 'shrine'; ****-d^{h}lo-***: Lat. *sta-bulu-m* < **sta-blu-m* [n.] 'stable', Cz. *rá-dlo* [n.] 'plow'. Feminine variants in ****-trā-, *-d^{h}rā-, *-tlā-, *-d^{h}lā-*** also exist: Gr. χύ-τρᾱ [f.] 'earthen pot', Lat. *tere-bra* [f.] 'drill', Gr. ἐχέ-τλη [f.] 'plow handle', γενέ-θλη [f.] 'birth, origin', etc. As Olsen (1988 *passim*, esp. 36–43) has shown, the neuters and feminines have both developed from a single ablauting paradigm, **CéC-TRom* / **CC-TRéh$_2$*; the variants **-Tr^{o}/$_{e}$-* and **-Tl^{o}/$_{e}$-* were originally in complementary distribution, the former added to roots containing a liquid and to any root ending in **-s-*, the latter as the "elsewhere" variant, while the dental variants **-t-* and **-d^{h}-* were also in complementary distribution, the aspirated variant occurring after consonantal **-h$_{1/2}$-* and possibly after aspirated stops, the plain variant

---

[151] Put forward by McCone (1995: 130f.) to account for both the 3.sg. relative forms of the verb and these verbal nouns that end in neutral *-s*; see also Stüber (1998: 12, 125).

elsewhere.[152] By late PIE the system had become disrupted by assimilatory and dissimilatory processes and analogical levelings, and there were further realignments subsequently in the individual branches, so that only traces of the original distributional patterns are still discernible.

Nomina instrumenti of this sort are numerous in Celtic: e.g., OIr. *arathar* [n.], MW *aradr* [f.] 'plow' (< PCelt. **ara-tro-m*); OIr. *láthar* [n.] 'arrangement, disposition', MW *llawdyr* [m. f.] 'trousers'[153] (< PCelt. *(ɸ)*lā-tro-m*); OIr. *dál* [f.], OW *datl* [m. f.], OBret. *dadl* [f.] 'meeting, assembly' (< PCelt. **da-tlā-*); OIr. *focul* [n.] 'word, saying',[154] MW *gwaethyl* [m.] 'debate' (< PCelt. **u̯ok^{w}-tlo-m*); etc.[155] It appears that **-t-* has been generalized in the suffix in Celtic.[156] There are also verbal-noun formations with these suffixes: with **-tro-*, ***al-tro-*** 'act of nourishing' (§ 3.1.5(1)); with **-tlo-*, *(-)***aneg-tlo-** 'act of guarding' (§ 3.1.7(1)) and *(-)***kan-tlo-** 'act of singing' (§ 3.1.18(1)); and with **-tlā-*, ***ana-tlā-*** > ***anál*** 'breath, act of breathing' (§ 3.1.6(1), beside *[-]*an-ă̄-tu-*). Schrijver (1995: 26) and de Bernardo Stempel (1999: 303) take ***anál*** to have been originally neuter,[157] but it is unambiguously feminine in Old Irish, and the Middle Welsh equivalent *anaðl* [m. f.]

---

[152] Olsen concludes (1988: 37–43), based on the assumption that the aspiration here arose from metathesis of the voiceless laryngeal *$h_{1/2}$ and the following **t*, and citing the support of some Indo-Iranian evidence coupled with a lack of reliable counter-evidence elsewhere, that the aspirated dental was voiceless *t^{h} instead of *d^{h}. She does not discuss the implications of this for the theoretical reconstruction of a fourth series of stops in PIE, which is not generally accepted.

[153] For the semantic development, *VKG* (II, 45 § 390(2)) compares Fr. *bas* 'bottom; stockings, hose'.

[154] The Old Irish noun is the basis of the denominative verb *foclaid* [w. *-ā*] 'declares' and is noted as its verbal noun by *DIL* (s.v.), although its usage as such is not explicitly quoted in *DIL*'s citations and is not evident in our corpus.

[155] *VKG* II, 45f. §§ 390(2), 391; Olsen 1988: 24–27.

[156] Olsen 1988: 6.

[157] The latter reconstructs **anadlo-* < PIE **anə-d^{h}lo-*.

'breath' is inconclusive. There does not seem to be any reason to assume *a priori* that it did not exist as a feminine noun in Proto-Celtic.[158] If inherited directly from Proto-Indo-European, one might expect either a neuter with full grade of the root, i.e., PIE $*h_2énh_1\text{-}d^hlom$ > PCelt. **anatlom*, or a collective (> feminine) with zero grade of the root, PIE $*h_2ṇh_1\text{-}d^hléh_2$ > PCelt. **nă̆-tlā*.[159] It is not certain that this noun was created that early, since Celtic is the only branch to preserve this formation to the root $\sqrt{*h_2enh_1}$- 'breathe'; but if it is old, secondary reshaping of either the root or the suffix could have occurred at virtually any time in its post-PIE development.

2.2.3.24. ***-axtā-*** Old Irish uses *-acht*, from a suffix of the shape **-axtā-*, to form verbal nouns of weak *ī*-verbs in root-final *-s(s)-*. It is found with four stems in our corpus: ****dṷāss-axtā-*** 'madness, condition of being possessed' (§ 4.4.4(1)), ****gōss-axtā-*** 'danger' (§ 4.4.6(1)), ****(-)kʷess-axtā-*** 'compassion, act of pitying' (§ 4.4.2(1)), and ****-tōss-axtā-*** 'attention, act of paying attention' (§ 4.4.10(1)).

This suffix resembles the feminine suffix **-axtā-* (> OIr. *-acht*, MW *-aeth*) which is used primarily to derive abstracts from other nouns but serves secondarily as a verbal-noun suffix in Welsh.[160] Given this fact, it is most economical to assume that the Irish verbal-noun suffix represents the same formation, and therefore that these verbal nouns belong to derivational Type 4, both formations derived mutually from another abstract. The source noun may still be evident in the language in the case of ****gōss-axtā-*** 'danger'

---

[158] It is so taken by *EDPC* 35 s.v. ***anatlā**.

[159] Or **an-tlā*, in accordance with Joseph (1982: 50f.); there is some uncertainty regarding the outcome of **HṚHC* sequences in Celtic (see McCone 1996: 53f.). Either outcome would have been ripe for analogical reshaping based on the verbal stem **ana-* (later **an-ā-*, § 3.1.6 comment A).

[160] For example, the Welsh verbal nouns *marchogaeth* 'to ride' and *gwassanaeth* 'to serve', both denominatives, are derived respectively from *marchawc* 'rider' and **gwassan* 'servant' (unattested diminutive of *gwas* [m.] 'id.').

(cp. OIr. *gúas* [f.] 'id.') and *(-)***k**^{w}***ess-axtā-*** 'compassion' (cp. OIr. *ces* 'debility'), but is no longer extant in the case of ****dāss-axtā-*** 'madness' and ****-tōss-axtā-*** 'attention'.[161]

As to the source of this suffix, Schumacher (2000: 208f.) suggests the possibility of an abstract derivative of PCelt. **ag-* 'drive' (< PIE √**h₂eĝ-*), originally used as the second member in compounds, which was grammaticalized as an abstract suffix as early as Proto-Insular Celtic. It is possible, however, that there is a different suffix at play in the Old Irish verbal nouns, if their formation is the same as that of the proper name *Gós**acht**, Gúas**acht***, Ogham gen. *GOSSUCTTIAS, GOSOCTEAS*. These names appear to bear a suffix **-uxtā-* instead of **-axtā-*, although it is difficult to analyze it further without additional information.[162]

2.2.3.25. Confusion of Stem Classes in Old Irish. After the sixth-century apocope eliminated the vocalic endings that had provided the most distinctive markers of a noun's declension, the way was open for confusion to arise between certain stem classes.

(1) ***o*-stems and *u*-stems.** The *o*-stem and *u*-stem declensions (including *to-* and *tu*-stems, and *mo-* and *mu*-stems) are generally quite similar in Old Irish: in most words the differences only show up in the genitive singular and plural and (among masculines) in the nominative plural. It is therefore not unusual, even in fairly early texts, for *u*-stems to acquire *o*-stem features such as a genitive singular with palatalized final, and, *vice versa*, for *o*-stems to acquire a *u*-stem genitive singular in *-o/a*. This mixing was probably furthered by the occasional presence of inherited doublets consisting of a

---

[161] De Bernardo Stempel's (1999: 335) assignment of these verbal nouns to "desubstantivische Erweiterungen von ****sta***-Abstrakta" is too restrictive. In general, the underlying nouns could derive from any formation in **-stV-* as well as from **-tV-* added to a root-final dental or **-s-*. In our data, OIr. *gúas* 'danger' probably continues either PCelt. **goud-tā-* or **goud-stā-*, less likely **gou-stā-* (see § 4.4.6 comment A), and OIr. *ces* 'debility' may be from a *tu*-stem PCelt. **k*^{w}*et-tu-* (see § 4.4.2 comment A).

[162] See *GOI* 452 § 732; Ziegler 1994: 185; Schumacher 2000: 209.

masculine *u*-stem beside a synonymous neuter *o*-stem.[163]

The waters are further muddied by the obsolescence of the neuter gender in late Old Irish and its almost complete disappearance in the tenth century. It is usually replaced by the masculine gender, but also not infrequently by the feminine. As a result, the Middle Irish copies of Old Irish texts often present divergent and contradictory clues, so the earlier gender of less common words is sometimes impossible to determine.[164]

This state of affairs accounts for the large number of examples where *DIL* is ambivalent as to the stem class and gender of verbal nouns. In instances where "o,m." (i.e., "*o*-stem, masculine") is recorded based only on the later evidence, without corroborating forms from earlier texts it is often impossible to be certain that the word was not in fact "u,m." or "o,n." in the earlier language.

(2) ***ā*-stems and *i*-stems.** The situation with feminine *ā*-stems and *i*-stems (including *nā*- and *ni*-stems, and *tā*- and *ti*-stems) was somewhat different. *GOI* (186 § 294(b)) notes a certain amount of ambiguity between these stem classes in common case forms. It is true that there was regular overlap in the accusative and dative singular, both of which ended in a palatalized consonant; and furthermore, that the progressive general tendency for dative singular forms of verbal nouns to encroach upon the nominative, arising out of their frequent occurrence with the preposition *do* 'to, for' which governs the dative,[165] caused inconsistent convergence in the nominative singular as well. However, as Schumacher (2000: 65) emphasizes, the declensions

---

[163] *GOI* 196 § 309.

[164] Cp. *GOI* 154 § 245.

[165] *GOI* 164f. § 256.

remained fundamentally distinct in Old Irish and were consistently differentiated in the genitive singular and most of the plural. Thus the *ā*-stems regularly have gen.sg. *-e* following a palatalized consonant, nom./acc.pl. *-a*, gen.pl. with zero-ending, and neutral stem consonance throughout the plural. By contrast, *i*-stems regularly have gen.sg. *-o/a* following a neutral consonant, nom./acc.pl. *-i*, gen.pl. *-e*, and palatalization throughout the plural. While there can be variation in the palatalization pattern, mostly resulting from the effects of syncope, the endings are nonetheless still distinguishable in Old Irish.[166]

Real confusion only arose in Middle Irish when all final unstressed short vowels became reduced to schwa [ə] so that the earlier distinctions of vocalic quality in the endings were eradicated.[167] Where Old Irish texts are preserved only in Middle Irish copies, we may be unable at times to discern what the earlier forms were. But as long as there is adequate attestation of genuine Old Irish forms outside the nom./acc./dat.sg., the two sets of declensions can be readily distinguished.

2.2.4. Types 3, 4, and 5 are not limited to the deverbative suffixes of the first two derivational categories, but represent a cross-section of all Old Irish nominal stems.

2.2.4.1. Type 3: Source Nouns ([V]N → V). In this category the abstract noun that forms the basis of a denominative verb also serves as its verbal noun. These verbs are all, by definition, weak verbs, and the verbal nouns, being basically ordinary substantives, are not formally marked in any special way. *GOI*'s assertion (446 § 722) that "an abstract noun from which a denominative verb has been formed usually serves

---

[166] Thus *GOI* overstates the case at 449 § 727 and 454 § 736.1, where it is implied that the verbal-noun declension was actually mixed.

[167] Cp. McCone 1996: 142f.

as verbal noun of the latter" is likely true historically, but is somewhat overstated for the period of Old Irish. Even in our early corpus, the ratio of source nouns (Type 3) to deverbative *tu*-stems (Type 2), even excluding the two formations cited in the next paragraph, is roughly 1 : 1.[168] This ratio can only have decreased over time as *tu*-stems continued to gain ground.

Two denominative verb formations appear to be excluded from participation in Type 3. (1) Verbs derived from nouns with exclusively concrete meaning form their verbal nouns by means of suffixation (usually with *-*tu*-); for example, *claidbid* [w. -*ī*] 'kills with a sword' ← *claideb* [m. -*o*] 'sword' ↔ vn. ***claidbad*** [m. -*tu*] 'act of killing with a sword' (§ 4.1.22). (2) Weak verbs in *-*sag*- (§ 2.1.5(c), formation (2) of the weak *ī*-class) always form their verbal nouns with a typical suffix (again, usually *-*tu*-); for example, *cairigid(ir)* 'rebukes, blames' ← *caire* [f. -*iā*] 'crime, fault' + *-*sag*-*ĭ*- ↔ vn. ***cairiugud*** [m. -*tu*] 'rebuke, act of rebuking' (§ 4.1.14).

The verbs with Type 3 verbal nouns include both *ā*-formations and *ī*-formations, in no clear pattern of distribution. As history progresses these basic verbal nouns tend to be replaced by the more characterized *tu*-stem formations. The example of ***gell*** 'pledge, act of pledging' next to ***gellad*** [m. -*tu*] 'id.' ↔ vb. *gellaid* [w. -*ā*] 'pledges' was noted earlier (§ 2.2.1). Other examples include ***áer*** [f. -*ā*] 'satire, act of satirizing' (§ 4.3.1(1)) next to ***áerad*** [m. -*tu*] 'id.' ↔ vb. *áeraid* [w. -*ā*] 'pledges'; ***dál*** [f. -*ā*] 'meeting, encounter' (§ 4.3.15(1)) next to ***dálad*** [m. -*tu*] 'id.' ↔ vb. *dálaid* [w. -*ā*] 'meets'; and ***rann*** [f. -*ā*] 'division, act of dividing' (§ 4.3.29(1)) next to ***rannad*** [m. -*tu*] 'id.' ↔ vb. *rannaid* [w. -*ā*] 'divides'. The list could be extended. In each of these instances the *tu*-stem form is not attested until after our target period.

---

[168] If one were to count all of the ambiguous *o*-stem forms listed in § 2.2.3.1(2) as denominatives, as Thurneysen appears to do (*GOI* 338 § 525(c); 446 § 722), the ratio would still be only about 4 : 3.

2.2.4.2. Type 4: Deadjectival/Denominative Formations (V ← Adj/N → VN).

(a) In the case of factitive verbs, a nominalization or derivation of the source adjective may serve as the verbal noun. Here belong ***-gai-stā-*** [f.] 'deception, act of deceiving' ↔ vb. *·gáetha* [w. *-ā*] 'deceives', both derived from PCelt. **gai-t$^{o}/_{ā}$-* (> OIr. *gáeth*) [adj.] 'clever' (§ 4.4.5(1)); ****-kert-ā-*** [f.] 'correction, act of correcting' ↔ vb. *·certa* [w. *-ā*] 'puts right', both derived from PrIr. **kert-$^{o}/_{ā}$-* (> OIr. *cert*) [adj.] 'right' < Lat. *certus* 'firm, certain' (§ 4.4.1(1)); ****-kub-ro-*** [n.] 'desire, act of desiring' ↔ vb. *·cobra* [w. *-ā*] 'desires', both derived from PCelt. **-kub-r$^{o}/_{ā}$-* [adj.] 'desirous' (in OIr. *mil-chobur* 'honey-desiring' → 'bear', *ól-chobar* 'drink-desiring', etc.) (§ 4.4.3(1)); ****(-)labr-iā-*** [f.] 'speech, act of speaking' ↔ vb. *labraid*, *·labra* 'speaks', both derived from PCelt. **lab-r$^{o}/_{ā}$-* (> OIr. *labar*) [adj.] 'talkative, eloquent' (§ 4.4.7(1)); and ****-mixsk-o-*** [m.] 'mixture, confusion, act of mixing, confusing' ↔ vb. *·mesca* [w. *-ā*] 'mixes, confuses', both derived from PCelt. **mixsk-$^{o}/_{ā}$-* (> OIr. *mesc*) [adj.] 'mixed' (§ 4.4.8(2)).

(b) A denominative verbal noun and a denominative verb may derive mutually from the same noun. This appears to be the case with the verbal nouns in **-axtā-* (§ 2.2.3.24). Here too belong ****sign-iā-*** [f.] 'rejection, act of rejecting' ↔ vb. *sénaid* [w. *-ā*] 'rejects', both derived from PrIr. **signo-* (> OIr. *sén*) [n.] 'sign' < Lat. *signum* 'id.' (§ 4.4.9(1)); and ****-treb-o-*** [n.] 'residence; act of residing (in)' ↔ vb. *·treba* [w. *-ā*] 'resides', both from **treb-ā-* (> OIr. *treb*) [f.] 'house, farm, holding' (§ 4.1.103(2)).

2.2.4.3. Type 5: Suppletive Verbal Nouns (V // VN). The last derivational category consists of nouns that are not directly related etymologically to the corresponding verb, but function as verbal noun by semantic association. This type is represented by six stems in our corpus: ***?*dal-u-*** 'act of coming into being, coming from something' (§ 3.2.3(1)) ↔ vb. *téit* 'goes' < **ti-n-g-* and **teig-$^{e}/_{o}$-*; ****gal-ā-*** 'valor, ability, condition of being able' (§ 3.2.1(1)) ↔ vb. *fichid* 'fights' < **u̯ik-$^{e}/_{o}$-*; ****it-iā-*** 'act of eating' (§ 3.2.2(1)) ↔

vb. *ithid* 'eats' < **īd-* / **ed-*; ***?*sterk-ā-*** 'love' (§ 4.5.1(1)) ↔ vb. *caraid* 'loves' < **kar-ā-*; ****-tek-o-*** 'act of swearing' (§ 3.2.4(1)) ↔ vb. *·toing* 'swears' < **-tu-n-g-$^{e}/_{o}$-* ← **lu-n-g-$^{e}/_{o}$-* (the compounds only); and the Latin borrowing ***precept*** 'teaching, act of preaching' < Lat. *praeceptum* (§ 4.5.2(1)) ↔ vb. *pridchid* 'preaches' < Lat. *praedicō, -āre*.

CHAPTER 3.

VERBAL NOUNS OF PRIMARY VERBS AND NON-DENOMINATIVE SECONDARY VERBS

In this and the following chapter, the morphology of the verbal nouns in our corpus will be presented in detail. Chapter 3 covers the verbal nouns of both primary verbs and non-denominative secondary verbs, i.e., chiefly causative-iteratives and statives, which, while morphologically derived, belong to the stratum of inherited and unproductive formations. Thus the verbs in this chapter include all strong verbs, hiatus verbs, and certain weak-verb formations (§ 2.1.5). The verbal nouns of denominative verbs will be treated in Chapter 4.

The data is organized by verb. The headword of each entry is the Old Irish verbal stem, followed by a brief etymology. Below this appears an enumeration of the verbal-noun formations, along with any pertinent derivational data. Under each formation are listed the appropriate verbal nouns with their corresponding verbs. The simplex is placed first (set off by the symbol ◊), followed by the compounds arranged in order of the preverbs, starting with the preverb closest to the root and branching leftward form there: **ad-*, **kom-ad-*, **tu-kom-ad-*, **u̯or-ad-*, **tu-u̯or-ad-*, **ari-*, **ambi-ari-*, **en-*, **d(e)-en-*, **ambi-d(e)-en-*, etc. Commentary, as applicable, completes each entry.

For the most part, the presentation and discussion are limited to the verbal nouns that actually appear in our corpus. Three exceptions to this restriction have been made, however, in the interest of completeness. (1) Because there are often significant differences of formation between the simple verbal noun and its related compounds (see under § 2.2.2.1), the Old Irish simplex is always cited if it exists, even when it is not attested in our corpus; in this case, the entry is enclosed in double brackets ([[...]]).

(2) Other verbal nouns may be cited in the commentary where they are relevant to the discussion. (3) New abstracts created by adding a productive preverb to an existing verbal noun are also noted, even when it is apparent that they themselves do not function as verbal nouns, and no corresponding verb exists.

In the reconstructions, the historical designation applied to a form is based on the earliest plausible date for its formation type: generally, "PrIr." or "pre-Ir." is used if the formation is not attested outside of Irish, "PICelt." if it is found in Irish and British, but not Continental Celtic, otherwise "PCelt." Of course, in individual cases, depending on the productivity of the formation in question, a given word might have been created at a later point.

3.1. Types 1 and 2: Deradical (V ← √ → VN) and Deverbative (V → VN) Formations.

As noted above (§ 2.2.2.1), verbal nouns of strong verbs most often belong to Type 1, representing independent formations from the same historical root as the verbal noun. Only infrequently and secondarily do they transfer to Type 2, taking the verbal stem as their base. On the other hand, the verbal nouns of primary weak verbs generally belong to Type 2, with the exception of some *o*-grade *o*-stem verbal nouns of Type 1 that are associated with causative-iterative verbs (§§ 2.2.2.2, 2.2.3.1(2)).

* * *

3.1.1. *-ác(c)-* 'be inclined'

< PCelt. **-ānk-* < PIE perf. **h_2e-h_2(ó)nk-* ← √**$h_2$enk-* 'bend, flex'.Ⓐ

◊ No simplex.

(1) PCelt. ****-ank-tā-*** (← PIE **-h_2ŋk-* or **-$h_2$enk-*):Ⓑ

de-u̯o-tr(i)-anktā-* > ***dúthracht*Ⓒ [f.] 'wish, desire, devotion; act of wishing, desiring'

↔ vb. *do·futhrac(c)air* [pret.pres.] 'wishes, desires'.

Comments:

Ⓐ Earlier accounts[1] have taken the stem of OIr. *do·fu-thraccair* 'wishes, desires' to be **-trank-*, comparable to Go. *þreihan*, OE *þringan*, OHG *dringan* 'to push', from PIE **-trn̥k-* ← √**trenk-* 'push, press'. Yet in a preterite-present verb such as this, one would expect there to be traces of PIE reduplication, which Celtic regularly preserves. The solution advocated by *KPV* (208 n.(b) s.v. **Perfekt **-ānk-/*-ānk-***) is probably correct therefore: in **-trank-* we see the combination of an old preverb **-tri-*[2] plus **-ānk-* < PIE **h_2e-$h_2$ónk-* / **h_2e-$h_2$nk-*, the perfect of √**$h_2$enk-* 'bend, flex'. The semantic development would be 'be bent toward something, be inclined' → 'wish, desire'.

Ⓑ The underlying grade is indeterminate, as both PIE **-h_2n̥k-teh$_2$-* and **-$h_2$enk-teh$_2$-* would yield PCelt. **-ank-tā-*. Zero grade is the expected Indo-European root grade, and is still most common in the Celtic *tā*-stems, but Celtic has also added no small number of innovative full grades to the mix (§ 2.2.3.15).

Ⓒ By regular phonological processes, either **dóthracht* (< **de-u̯o-*) or **díuthracht* (< **dī-u̯o-*) would be expected. The actual form is probably to be explained through an interplay of these variants, with added influence from the far more common *dú(s)-* from **dī/e-uss-* (itself the result of assimilation between regular *díu(s)-* < **dī-uss-* and *dŭ(s)-* < **d(e)-uss-*), resulting in a blended form with *-ú-*.[3] The prehistoric details cannot be recovered, however, since the sole surviving representative of this root is this very form with the unhistorical vowel.

---

[1] For example, *VKG* II, 653f. § 850; *IEW* 1093 s.v. ***1. trenk-***; *LÉIA* T–120f. s.v. **tracc-**; Irslinger 2002: 341f., 382.

[2] Cp. *GOI* 534 § 856.

[3] For further details, see Uhlich 1995: 32–34.

3.1.2. *ag-* 'drive, lead'

< PCelt. **ag-$^{e}/_{o}$-* ← PIE √**$h_2eĝ$-* 'drive'.

(1) PCelt. ****ag-iā-*** (← PIE **$h_2eĝ$-*):

◊ **agiā-* > ***aige*** [f.] 'act of racing (horses)' → 'celebration, act of celebrating a festival'

↔ vb. *agaid* [s. -$^{e}/_{o}$] 'drives'.

kom-agiā-* > ***comgae* [f.] 'protection; act of protecting'

↔ no attested vb. **con·aig*.

(2) PCelt. ****ag-nā-*** (← PIE **$h_2eĝ$-*):

◊ **agnā-* > ***án*** [f.] 'act of driving'

↔ vb. *agaid* [s. -$^{e}/_{o}$] 'drives'.

exs-agnā-* > ****esán, esáin* [f.] 'expulsion; act of expelling'

↔ no attested vb. **as·aig*.

?**t(u)-ari-u̯o-r(o)-agnā-* > ***taurrán**** Ⓐ [f.] 'act of driving across'

↔ no attested vb. **do·airrig*.

t(u)-agnā-* > ***tán* [f.] 'act of driving off, driving away'

↔ no attested vb. **do·aig*.

Comment:

Ⓐ This word is found exclusively in legal texts, and only in the plural *taurrána* (also spelled *taurránna, turanau, torána*). The exact preform is uncertain. *DIL* (s.v. **taurráin**) suggests a base *to-air-ag-* (i.e., **t(u)-ari-ag-*), but this might rather be expected to have yielded ⁂*ta(i)rána* or the like, with a different first vowel and a lenited *-r-*. Binchy's (1971: 166) suggestion of the preverb chain **to-air-ro-ag-* (i.e., **t(u)-ari-ro-ag-*) would adequately account for the unlenited /ʀ/, which is shown by the spellings in ⟨*-rr-*⟩, through merger of the two single consonants after syncope, but it does not explain the *u*-vocalism consistent indicated by the spellings in ⟨*-(a)u-*⟩. These could imply a historical preverb

sequence *-*ari-u̯o-* or *-*ari-uss-*,[4] but neither would produce the unlenited *-rr-*. As all attestations of this word are found in later manuscripts, it may be possible to assume that the confusion is due to a Middle Irish intrusion of -(*a*)*u-*,[5] but the high level of agreement in the extant texts renders this assumption less than ideal. Hamp (1986) suggests **t(u)-ari-u̯o-r(o)-ag-* or **t(u)-ari-uss-r(o)-ag-*, but notes that the latter would probably have yielded **t-ar-ō-r-ag-* or **t-ar-ū-r-ag-* instead.[6]

3.1.3. *ág-i-*$_{DEP}$ 'fear'

< PCelt. **-āg-ī-*$_{DEP}$ ← PIE perf. **h_2e-h_2(*ó*)g^h-* Ⓐ ← √**h_2eg^h-* 'be afraid'.

(1) PCelt. ****āg-ī-tion-*** (← vb. stem **-āg-ī-*): Ⓑ

◊ **āgītion-* > ***áigthiu*** [f.] 'act of fearing'

↔ vb. (*ad*)·*ágadar* [w. *-ī*] 'fears'.

Comments:

Ⓐ The long *ā* of this verb has now been explained by *KPV* (206 s.v. ****āg-/*āg-***) as the outcome of an old perfect formation, PIE **h_2e-$h_2$ógʰ- / *h_2e-h_2gʰ-*. It is also suggested there, based on a proposal of Schrijver (1999), that the **-ī-* is to be identified with the PIE stative suffix **-eh_1-* > **-ē-* assumed to lie behind Gr. ἦδ-**η**, OCS *vědě-*, used historically to form the *plusquamperfect* and also serving as a functional imperfect to the perfect with present meaning. Such a pluperfect *qua* imperfect would have occasioned the weak *ī*-flexion of PCelt. **āg-ī-*. Other explanations for the above forms may be available, however — for example, Jasanoff (1997: 125 fn.20; 2003: 36 fn.20) explains Gr. ἦδη as a back-formation from the remade optative εἰδείη, on the model of intransitive aorist pairs such as

---

[4] Cp. *GOI* 497f. § 823.A.

[5] *GOI, loc. cit.*

[6] Cp. *GOI* 525f. § 849.A.

2/3.sg.opt. φανείη(ς) : 2/3.sg.ind. (ἐ)φάνη(ς) 'appeared' — in which case the source of the Celtic ī-formation is unknown.

Ⓑ The palatalized consonance of ***áigthiu*** shows the earlier presence of an intermediate front vowel. The specific front vowel is assumed here to be *-ī- (in agreement with Stüber 1998: 129) on the basis of the verbal present stem *āg-ī-; but, depending on the morphological derivation of the suffix *-ī- in this verb, *-ĭ- or *-e- might also be possible.

3.1.4. *-a$^{(i)}$m-* 'wash'

< PCelt. *-am-(i)$^{e}/_{o}$- ← PIE √*$h_2$em(H)- 'pour'.Ⓐ

◊ No simplex.

(1) PCelt. ***-am-to-*** (← PIE *h_2m̥-):Ⓑ

*and(e)-amto- ⇒ ***indmat, indlat***Ⓒ [m.] 'act of washing (the hands or feet)'

↔ vb. *ind·aim* [s. -(i)$^{e}/_{o}$] 'washes (the hands or feet)'.

Comments:

Ⓐ The meaning of the Irish verb comes from the custom of washing the hands and feet by pouring water on them.[7]

Ⓑ The reconstruction with a final laryngeal of the PIE root √*$h_2$em(H)- is not entirely certain, as *LIV*² notes (265 n.1 s.v. ***$h_2$emH-***). The Old Irish verbal noun with final *-t* (/-d/) < *-nt- < *-mt- certainly reflects an *aniṭ* root, but this could be a post-PIE formation.

Ⓒ As *GOI* (454 § 737) notes, the expected outcome of *and(e)-am-to- would be *indat*. The reintroduction of *-m-* into ***indmat*** may have come about through influence of the 3.pl.pres.conj. *·indmat* < *and(e)-am-ont(i). Its frequent usage with *lám* 'hand' in phrases such as *indmat inna lám* 'washing the hands' led to the variant ***indlat*** by assimilation.[8]

---

[7] See Watkins 1959.

[8] See *VKG* II, 575 § 773 Anm.

The earliest genuine Old Irish attestation of the form with *-l-* is in the marginalia of the ninth-century St. Gall manuscript (*Thes.* II, 249.10). It is also found in both Middle Irish copies of the Old Irish law tract *Críth Gablach*.

3.1.5. *al-* 'nourish, bring up'

< PCelt. **al-$^{e}/_{o}$-* ← PIE √**$h_2$el-* 'grow, nourish'.

(1) PCelt. ****al-tro-*** (← PIE **$h_2$el-*):

◊ **altro..* > ***altram(m)***Ⓐ [n.] 'nurture, fosterage; act of nurturing, fostering'

↔ vb. *alaid* [s. -$^{e}/_{o}$] 'nourishes, nurtures, fosters'.

Comment:

Ⓐ The source of the unlenited final *-m(m)* is unknown. Thurneysen (*GOI* 452 § 731) assumes it must be some sort of analogical extension of **altar* (< **altro-*), but there is no clear model.[9] There is little indication, *pace DIL* (s.v.), that this word was originally a neuter *n*-stem: the neutral quality of the final in the nominative, and the gen.sg. *altrammo* (CCC^2, Eg. 1782 version = Windisch 1880: 142.5), *altrama* (CCC^2, RIA D IV 2 version = Meyer 1905b: 503.24; *Thes.* II, 291.8) are against this, while the dat.sg. *altraim* (Fél. 44.8) is inconclusive. The attested case forms are inconsistent with any regular paradigm.

The simple abstract *-altar*, unattested by itself, is preserved in two compounds, *mi-**altar*** [m.] 'bad fosterage' and *com-**altar*** [m.] 'joint fosterage' (neither of which occurs in our corpus).

---

[9] He notes (*loc. cit.*): "**saltram** ZCP VI 264 § 13, vb.n. of **saltraid** 'tramples upon', would appear to have lenited *m*." *DIL* (s.v. **saltraid**) is no doubt correct, however, to take *saltram* as a finite form of the verb, presumably 1.pl.ipv. in parallel with the other two verbs that appear in the same quatrain, *sgarum* (= *scaram*) 'let us separate' and *nā carum* 'let us not love'. Thus *saltram* provides no possible analogical model for the ending of ***altram***.

3.1.6. *an-a-* 'breathe; stay, remain'

< PCelt. **an-ā-* ⇐ **ana-*[Ⓐ] < PIE √**h₂enh₁-* 'breathe'.

(1) PCelt. ****ana-tlā-*** (← PIE **h₂enh₁-*):[Ⓑ]

◊ **anatlā-* > ***anál*** [f.] 'breath; act of breathing'[©]

↔ vb. *anaid* [w. *-ā*] 'stays, remains'.

(2) PCelt. ****an-ă̄-tu-*** (← vb. stem **an-ā-*):

◊ **ană̄tu-* > ***anad*** [m.] 'act of staying, waiting'

↔ vb. *anaid* [w. *-ā*] 'stays, remains'.

kom-uss-ană̄tu-* > ***cumsanad* [m.] 'rest; act of resting, ceasing'

↔ vb. *con·osna* [w. *-ā*] 'rests, ceases'.

Comments:

Ⓐ Weak *ā*-flexion arose through reanalysis of the laryngeal reflex of the athematic verb as a segmentable suffix: PIE 3.sg. **h₂énh₁-ti* > PCelt. **ana-t(i)* (≈ Ved. *áni-ti*), resegmented as **an-a-t(i)* and absorbed into the productive denominative class of verbs in **-ā-t(i)*.

Ⓑ Schrijver (1995: 26) takes the suffix to be neuter **-tlom*, while de Bernardo Stempel (1999: 303) reconstructs PIE **-dʰlom*, but as noted above in § 2.2.3.23, there is no real reason to discount the evidence of Irish for PCelt. **-tlā-* < PIE **-tleh₂-*.

© OIr. *anál* and its British cognates MW *anaðl*, MCo. *anel*, Bret. *anal* 'breath' retain the original PIE root meaning 'breathe', whereas the Old Irish verb and the *tu*-stem verbal nouns show a semantic development 'breathe' → 'stop, rest' (cp. Eng. "take a breather") → 'stay, remain'.

3.1.7. *aneg-* 'guard, protect'

< PCelt. **aneg-$^{e}/_{o}$-*, etymology uncertain.Ⓐ

(1) PCelt. ****aneg-tlo-***:

◊ **anegtlo-* > ***anacul*** [n.] 'protection; act of protecting'

↔ vb. *aingid* [s. -$^{e}/_{o}$] 'protects'.

ad-anegtlo-* > ***adnacul* [n.] 'burial, funeral; act of burying; a grave'

↔ vb. *ad·anaig* [s. -$^{e}/_{o}$] 'buries'.

and(e)-anegtlo-* > ***indnacul* [n.] 'surrender; act of delivering up, surrendering'

↔ vb. *ind·anaig* [s. -$^{e}/_{o}$] 'delivers up, hands over'.

t(u)-and(e)-anegtlo-* > ***tindnacul* [n.] 'bestowal; act of bestowing; act of delivering up, surrendering; a gift' ↔ vb. *do·indnaig* [s. -$^{e}/_{o}$] 'bestows; delivers up, hands over'.

Comment:

Ⓐ Several etymologies have been proposed. The suggestions of a connection with the root of OIr. *·ic(c)* 'reach, attain' put forward by *VKG* (II, 456f. § 656) and *LÉIA* (A-76f. s.v. **anacul**) can no longer be entertained. Besides the semantic difficulties, the etymology depends on a reconstruction of OIr. *·ic(c)* from a PIE root shape **anag-*, **ang-*, or **ank-*, whereas it is now generally acknowledged to be derived from PIE √**$h_2$nek̂-* (§ 3.1.66). Klingenschmitt *apud* Joseph (1982: 40 fn.10) offers a PIE formation **n̥H-eĝ-* derived from √**neH-* 'be of help' (cp. Ved. ***nā-thá-*** [n.] 'refuge, help' etc.) with the addition of a rather obscure element **-eĝ-* that he equates with the second element in Ved. *bhiṣ-**áj-*** [m.] 'cure' < PIE **$b^{h}$is-**eĝ-***, Lat. *gr-**ex*** [m.] 'herd' < **$h_2$gr-**eĝ**-s*, and Saka *ph-**aj**-sa-* 'buttocks' < PIran. **sfi-**eĝ-*** < PIE **sph$_{1}$i-**eĝ-***. Most recently *KPV* (197–200 s.v. ****aneg-e/o-***) has suggested that the verb **an-eg-$^{e}/_{o}$-* 'protect' is a back-formation from the abstract **an-eg-tlom* 'non-neglect' → 'care, protection' > OIr. ***anacul*** (≈ Gaul. *anextlo-* in *ANEXTLO-MARVS*, an attribute of Apollo, perhaps 'he whose protection is great [*MĀRUS*]'), which was

composed of privative **an-* (< PIE **n̥-*) plus an unattested abstract **eg-tlom* 'neglect' belonging to a primary verb **eg-$^{e}/_{o}$-* 'neglect' (also unattested, but cp. Toch.B *yäknāstär* 'is neglectful'), from PIE √?**$h_1e\hat{g}H$-* 'be lacking' (*LIV*² 231). Both solutions are rather speculative.

3.1.8. *arc-* 'ask, plead'

< PCelt. **(ϕ)ar-sk$^{e}/_{o}$-* < PIE **pr̥k̂-sk̂$^{é}/_{ó}$-* ← √**prek̂-* 'ask'.

◊ Simple verb *arcaid*, only in stereotyped phrase *arcu fuin* 'I beg pardon'; no simple verbal noun attested.

(1) PrIr. ****-ark-o-*** < PCelt. **(ϕ)ark-o-* (← PIE **pr̥k̂-*):Ⓐ

ambi-kom-arko-* > ***imchomarc* [n.] 'inquiry; act of inquiring about, asking after' →

'greeting, salutation' ↔ vb. *imm·comairc* [s. -$^{e}/_{o}$] 'asks, inquires about'.

ati-kom-arko-* > ***aithchomarc* [n.] 'question; act of asking'

↔ vb. *ad·comairc* [s. -$^{e}/_{o}$] 'asks, questions'.

(*dí-* + ***comairc*** [n.gen.sg.] > ***díchmairc*** [as adv.] 'unauthorizedly, without permission'.)Ⓑ

tu-kom-arko-* > ***tochmarc* [n.] 'act of wooing, courting'

↔ vb. *do·comairc* [s. -$^{e}/_{o}$] 'asks, requests'.

u̯rit-kom-arko-* > ***frecmarc* [n.] 'inquiry; act of inquiring about'

↔ vb. *fris·comairc* [s. -$^{e}/_{o}$] 'asks questions of or about, asks for'.

Comments:

Ⓐ The verbal-noun stem **ark-* appears most plausibly to continue PCelt. **(ϕ)ark-* from the PIE zero-grade **pr̥k̂-*. Schumacher (2000: 184) suggests an earlier full-grade **rek-* (< PIE **prek̂-*) in accordance with the general tendency for British *o*-stem verbal nouns to show a preference for full-grade roots (170, 176–80), secondarily replaced by **ark-* from the verbal stem once the fusion of **ar-sk-* > **ark-* had obscured the verb's *sk*-formation. While not impossible, this assumption is unnecessary in light of the frequent zero-grade

o-stems found in Irish (see § 2.2.3.1(1)); there is no good reason to assume that the Proto-Celtic formation was not zero grade.

Ⓑ No nom.sg. **díchmarc* is attested. The only form actually occurring is a petrified gen.sg. ***díchmairc***, in our texts always as an adverb meaning 'without asking, without permission', hence 'unlawfully'. It is doubtful that a verb ‡*do·comairc* ever actually existed; ***díchmairc*** 'of non-permission' was probably coined independently by prefixing negative *dí-*[10] to the genitive singular of the verbal noun ***comarc*** *'act of inquiring'[11] < **kom-arko-* (not found in our corpus).

3.1.9. *bă̆-* 'die'

< PICelt. **bă̆-(i̯)$^{e}/_{o}$-*(?)Ⓐ ← PIE √**$g^{w}eh_{2}$-* 'go (on foot)'.Ⓑ

(1) PCelt. ****bā-sto-*** (← PIE **$g^{w}eh_{2}$-*):

◊ **bāsto-* > ***bás*** [n.] 'death'Ⓒ

↔ vb. *baïd* [h.] 'dies'.

(2) PCelt. ****ba-to-*** (← PIE **$g^{w}h_{2}$-*):

◊ **bato-* > ***bath*** [n.] 'death'Ⓒ

↔ vb. *baïd* [h.] 'dies'.

dī-bato-* > ***díbad* [n.] 'extinction; act of dying out; property of a deceased person, inheritance' ↔ vb. *do·bá* [h.] 'dies out, becomes extinct'.

---

[10] In origin the same word as the preposition *di, de* 'away from' (*GOI* 544 § 873).

[11] The original sense is not attested; existing meanings include 'commemoration, invocation' → 'quatrain, verse; token, indication; outcry, battle cry, act of crying out' (see the entries in *DIL* s.v. **comarc**). The corresponding verb **con·airc* 'inquires' is also unattested, but must have existed at one time, given the numerous further derivations from it: *imm·comairc* 'inquires about', *ad·comairc* 'questions', *do·comairc* 'requests', *fris·comairc* 'inquires about', *do·frecmairc* 'inquires'.

(3) PCelt. ***-ba-tion-*** (← PIE *$g^{w}h_2$-):

apthu* *-ation-*** > ***apthu*** [f.] 'death, destruction; act of destroying'

↔ vb. *ad·bath* (*a-t·bath*) [narr.pret.] 'died, perished'.Ⓓ

Comments:

Ⓐ The comparative evidence points to a reduplicated present for PIE √*$g^{w}eh_2$- (e.g., Ved. *jí-gā-ti* 'goes', Gr. [Hom.] βί-βα-ς 'striding along'),[12] but (Insular?) Celtic has replaced this with an unreduplicated base **bă̄-* (< PIE *$g^{w}eh_2$- or *$g^{w}h_2$-) which has fallen together with some inherited root-presents (e.g., **snéh$_2$-* → OIr. *snaïd* 'swims') and *i̯*$^{e}/_{o}$-presents (e.g., **knéh$_2$-i̯e-* → OIr. *cnaïd* 'gnaws') in the class of hiatus verbs with *a*-vowel. The immediate historical stem shape, whether **bă̄-*$^{e}/_{o}$- or **bă̄-i̯*$^{e}/_{o}$-, and its development are unclear.[13]

Ⓑ 'Go away' → 'die' is a very common metaphor (cp. English *pass away*, French *s'en aller, être parti*, Italian *andarsene*, German *dahinscheiden, von uns gehen*, Serbian *preminuti*, etc.).

Ⓒ The verbal noun of *baïd* is usually taken to be ***bás***,[14] although Meyer (*Wortk.* 182) opts for ***bath***. Neither abstract is actually used as a strict verbal noun. The phrase *dibliadin rem**bas** dáu*, literally 'two years before **death** to him' (Arm. 3 = *Thes.* II, 238.18), which *LÉIA* (B-21 s.v. **bás**) cites as an example of a verbal-noun construction with agentive *do* ('death to him' = 'his dying') and translates "deux ans avant qu'il ne meure," can just as readily be understood with possessive *do* ('death to him' = 'his death'), and is so translated by the editors of *Thes.*: "two years before his death." On the other hand, the presence of the compound ***díbad*** 'extinction, act of dying out' ↔ vb. *do·bá* 'dies out,

---

[12] Cp. *LIV*² 205 s.v. ***g^{u}eh$_2$-**.

[13] For further details, see *KPV* 215 n.(a) s.v. ***bā-***, 418f. n.(a) s.v. ***knā-i̯e/o-***, and 596 n.(a) s.v. ***snā-***.

[14] E.g., *VKG* II, 458 § 659; *GOI* 450 § 728; *DIL* s.vv. **baïd**, **1 bás**; *LÉIA* B-1 s.v. **2 ba-**; Schumacher 2000: 73.

becomes extinct' may lend support to ***bath*** being the rightful verbal noun of *baïd* (cp. § 1.3.4 *ad fin.*).

Ⓓ Old Irish *a-t·bath* serves as the narrative preterite to *a-t·baill* 'dies' (§ 3.1.11). It is a *to*-participle in origin: *(-)*batos* (*esti*) '(is) gone' → 'died'. The petrified infixed neuter pronoun *-t-* is semantically out of place, acquired by analogy with *a-**t**·baill* (for which see comment B under § 3.1.11).

3.1.10. *bád-i-* 'immerse, drown'

< PCelt. **bād-ī-* < PIE caus.-iter. *$*g^{w}oh_{2}d^{h}$-éi̯$^{e}/_{o}$-* ← √*$*g^{w}eh_{2}d^{h}$- 'immerse'.

(1) PCelt. ***bād-e-tu-*** (← vb. stem **bād-ī-*):

◊ **bādetu-* > ***bádud*** [m.] 'act of drowning'

↔ vb. *bádaid* [w. *-ī*] 'submerges, drowns, overwhelms'.

3.1.11. *-ba^{i}l-l-* 'die'

< PCelt. **-bal-ni-* ⇐ PIE *$*-g^{w}$ḷ-n-h_{1}-* Ⓐ ← √*$*g^{w}elh_{1}$- 'throw'.

◊ No simplex.

(1) PCelt. ***-blă̆-tion-*** (← PIE *$*-g^{w}$ḷh_{1}-*):

exs-blă̆tion-* > ***epeltu* [f.] 'death; act of dying, perishing'

↔ vb. *as·baill* (*a-t·baill*) [s. *-ni*] 'dies'. Ⓑ

Comments:

Ⓐ The stem ending **-ni-* is not the regular phonological outcome of PIE *$*-nh_{1}$-* but the result of paradigmatic leveling in the prehistory of Celtic.[15] The PIE alternation 3.sg. *$*g^{w}$ḷ-né-h_{1}-ti* : 3.pl. *$*g^{w}$ḷ-n-h_{1}-énti* would have yielded PCelt. **balnīti* : **balnenti*. In instances such as this, where the inherited alternation involved both length and quality, Celtic

[15] The Celtic restructuring of ablaut summarized here is explicated by McCone (1986: 226–29; 1991: 12f., 22f.; 1991b: 2f.).

regularly simplified the contrast to one of length only by assimilating the quality of the plural vowel to that of the singular: **balnīti* : **balninti*. This assimilation occurred before the general Celtic leveling of paradigmatic ablaut in favor of the plural variant, which then resulted in **balniti* : **balninti* and a stem synchronically segmentable as **bal-ni-*.

Ⓑ The Irish verb always occurs with a petrified infixed neuter pronoun *-t-*, semantically 'throws it (= life) away' → 'dies' (cp. Finn. *heittää henkensä* 'to throw one's life (breath, spirit)' = 'to die'). The narrative preterite is supplied by *a-t·bath* (§ 3.1.9(3) comment D).

3.1.12. *be-n-* 'strike, hit'

< PCelt. **bi-na-* < PIE **b^hi-n-h_2-* ← √**b^heih_2-* 'strike'.

(1) PCelt. ****bī-tV-*** (← PIE **b^hih_2-*):

◊ **bītV-* > ***bíth*** [gender?] 'a stroke, wound'Ⓐ

↔ vb. *benaid* [s. *-na*] 'strikes, beats; cuts, reaps'.

(2) PCelt. ****bē-smen-*** (← PIE **b^heih_2-*):Ⓑ

◊ **bēsmen-* > ***béim*(*m*)** [n.] 'stroke, blow; act of striking, beating'

↔ vb. *benaid* [s. *-na*] 'strikes, beats; cuts, reaps'.

(3) PCelt. ****-beiˍ(iˍ)-o-*** (← PIE **b^heih_2-*):Ⓒ

ati-beiˍ(iˍ)o-* > ***aithbe* [n.] 'decline, decay'

↔ no attested vb. **ad·ben*.

ambi-dī-beiˍ(iˍ)o-* > ***imdibe* [n.] 'circumcision; act of circumcising'

↔ vb. *imm·díben* [s. *-na*] 'excises, circumcises'.

t(u)-ambi-dī-beiˍ(iˍ)o-* > ***timdibe* [n.] 'circumcision; act of cutting away'

↔ vb. *do·imdiben* [s. *-na*] 'cuts away, shortens'.

t(u)-* + ***airdbe* > ***tairdbe***Ⓓ [n.] 'act of cutting off'

↔ no attested vb. **do·airdben*.

enter-dī-beu̯(i)o-* > ***etardibe* [n.] 'destruction; act of destroying'

↔ vb. *eter·díben* [s. *-na*] 'destroys'.

kom-beu̯(i)o-* > ***cumbae* [n.] 'formation; act of cutting, carving; shape, form' → '(*idiom.*) the same'Ⓔ ↔ vb. *con·ben* [s. *-na*] 'smites, hacks, cuts off'.

(**an-* [< PIE **n̥-* priv.] + ***cumbae*** > ***écumbae*** [n.] 'not the same, unequal, inadequate'.)

ati-kom-beu̯(i)o-* > ***aithchumbae* [n.] 'mutilation; act of cutting, maiming'

↔ vb. *ad·cuimben* [s. *-na*] 'cuts, wounds, maims'.

and(e)-ad-ro-uss-beu̯(i)o-* > ***indarbae*Ⓕ [n.] 'expulsion; act of driving out, expelling'

↔ vb. *ind·árban* [s. *-na*] 'drives out, expels'.

tu-exs-ro-uss-beu̯(i)o-* > ***terbae* [n.] 'act of severing, separating, cutting off'

↔ vb. **do-érban* [s. *-na*] (⇒ MIr. *terbaid* [w. *-ā*]) 'severs, separates, cuts off'.

ambi-ro-beu̯(i)o-* > ****immrobae* ⇒ ***immarbae***Ⓖ [n.] 'deceit'

↔ no attested vb. **imm-roben.*

u̯o-beu̯(i)o-* > ***fubae* [n.] 'harm, injury; act of harming, injuring'

↔ vb. *fo·ben* [s. *-na*] 'harms, injures'.

ari-u̯o-beu̯(i)o-* > ***aurbae* [n.] '(lopping, clearing →) a gap, breach'

↔ no attested vb. **ar·foben.*

tu-u̯o-beu̯(i)o-* > ***tóbae* [n.] 'excision; act of cutting off or out, removing'

↔ vb. *do·fuiben* [s. *-na*] 'cuts out, cuts off, destroys'.

Comments:

Ⓐ Obsolescent ***bíth***, the old verbal noun of *benaid* 'strikes', had already been replaced in pre-Old Irish by ***béim(m)***[16] (see comment B). It survives only in extremely restricted contexts: accusative singular in the etymological figure *benaid* ***bíth*** 'strikes a blow', and

---

[16] *GOI* 453 § 735.

dative singular in the prepositional syntagm *fo* ***bíth*** (+ gen.) 'on account of, because of, for the sake of'. Neither the gender nor the stem class, whether *-*to*-, *-*tu*-, *-*tā*-, or *-*ti*-, can be determined from these occurrences. It has been taken as a neuter verbal adjective *$b^{h}ih_{2}$-*tó*-*m*, identical with the preterite passive *ro·bíth* 'as struck',[17] which is possible. Alternatively, a comparison with ***críth*** 'purchase' might perhaps favor the suffix *-*tā*- or *-*tu*- (see § 3.1.27(1) comment A). If MW *bid* [f.] 'hedge, bush' is the same formation, a feminine suffix should be reconstructed; and if Irslinger's observation (2002: 93, 173f., 379) that *-*tā*- does not occur with other zero-grade stems of the shape **CIH*- is decisive, then *-*ti*- would be the optimal choice. None of this is certain, however.

Ⓑ No trace of the original root-final laryngeal is to be seen in OIr. ***béim(m)*** < PCelt. **bēmman* < **beismān* (vs. OIr. ⁂*biamm* < PCelt. **beiamman* < **beiasman* < PIE **$b^{h}ei̯h_{2}$-smn̥*). This does not necessarily imply an original *aniṭ* root, however, since it could be the product of a late formation or of remodeling. The resegmenting of forms such as subjunctive **beia-se*- (< PIE **$b^{h}éi̯h_{2}$-se*-) to **bei̯-ase*- following the vocalization of the laryngeal could have yielded a synchronic root **bē*- / **bei̯*- as the basis of any further formations.

Stüber (1998: 63f.) suggests another possibility, based on a phonological explanation put forward by McCone (1997b: 173f.), by which *H* has disappeared in the environment of *i̯*__*Că̆*, either through failure to vocalize in the first place or through dissimilation after it has vocalized to *-*a*-. Thus, Stüber concludes, "it becomes possible to derive **beismān* regularly from **beiasman* or directly from *$b^{h}ei̯h_{2}$-smn̥*" (64). The second alternative needs a qualification, however. Since the suffix *-*smn̥* did not originally contain *-*a*-, derivation directly from *$b^{h}ei̯h_{2}$-smn̥* would only be possible by this rule if PIE *-*n̥*- had vocalized to

---

[17] Watkins 1962c: 116; *LÉIA* B-54 s.v. **bíth**; de Bernardo Stempel 1999: 442.

PCelt. *-*an*- before interconsonantal laryngeals were vocalized, otherwise there would have been no *a* in the following syllable to block the vocalization of the laryngeal. Two recent attempts at establishing a relative chronology of sound changes from PIE to Proto-Celtic,[18] while differing significantly from one another, both place the emergence of *aN* from syllabic nasals after the disappearance of all laryngeals. Assuming this chronological detail holds up to further scrutiny, the rule would necessarily involve the loss of the vocalic reflex by later dissimilation rather than the failure of the laryngeal to vocalize in the first place.

© For the shape of the stem *-*beu̯*(*i̯*)-*o*-, see Schumacher (2000: 174f.) and § 2.2.3.6 *supra*.

Ⓓ The "double-syncope" of ***tair†d†be*** does not regularly go back to **t(u)-ari-dī-beu̯(i̯)o*-, which should instead have yielded ‡*tairdibe* (like ***imdibe, timdibe, etardibe***); the same is true of its basis ***air†d†be*** 'act of cutting off, slaying' < **ari-dī-beu̯(i̯)o*- (not found in our corpus) and of the prototonic forms of the corresponding verb *ar·díben* 'cuts off, slays', e.g., *ni air†d†ben* gl. *nec interimit* (Sg. 30a4). This may be evidence of a post-syncope creation of *air-ˁ + do·ben* 'cuts away' ↔ vn. ***díbe***, producing *ar·díben* ↔ vn. ***aird†be***, with analogical syncope of the second syllable on the model of existing morphological alternations such as *con·tuli* 'sleeps' ↔ vn. ***cot†lud***, etc. (for which see further § 3.1.105(1) comment C on *con·dieig* 'asks, seeks, requests' ↔ vn. ***cuindchid, cuindgid***; and compare *ar·condlai* 'shares' ↔ vn. ***erndail***, § 4.3.16(2) comment B).

Ⓔ In Würzburg the word is always spelled with *-mm-* and used in its idiomatic sense of 'the same'. By contrast, both occurrences in the legal text *Críth Gablach* are spelled with historical *-mb-* and refer to literal cutting or carving (of meat).

Ⓕ The presence of *-*uss*- in the preverb chain is revealed by the fact that the *-b-* is

---

[18] Isaac 2007: 61–74; *EDPC* 6–11. McCone (1996) does not specify the relative order of these sound changes.

unlenited /-*b*-/, as shown by several Old Irish spellings with ⟨-*p*-⟩ and ⟨-*bb*-⟩ in both verb and verbal noun (e.g., for *ind·árban* ↔ vn. ***indarbae***: 3.sg.pret. *nachim·r-indar**pai***, Wb. 5a18, vn. *indar**pe***, Wb. 26b27; for *terbaid* ↔ vn. ***terbae***: 2.pl.ipv. *nobor·terpaid-si*, vn. *ter**bba***, Trip.[2] 1285), and by the Modern Irish words (vb. *ionnar**baim***, vn. *ionnar**ba***).

Ⓖ The verbal etymon is adduced by Meyer (*Wortk.* § 219) as **imb-ro-ben-* (< **ambi-ro-bina-*); for the semantics, he compares MoG *verhauen sich* 'beat oneself up' → 'make a mistake'. The medial *-ar-* of ***immarbae*** is unhistorical, with metathesis from inherited **immrobae* < **ambi-ro-bei̯(i̯)o-*, to which a parallel may be found in ***immarmus*** 'transgression, sin' instead of expected **immromus* < **ambi-ro-med-tu-* (↔ vb. *imm·ruimdethar*) (§ 3.1.83(1)).

3.1.13. *ber-* 'carry, bear'

< PCelt. **ber-*$^{e}/_{o}$- ← PIE √**b*^{h}*er-* 'bear, carry'.

(1) PrIr. ****bri-tā-*** ⇐ PCelt. **bri-ti-* (← PIE **b*^{h}*r̥-*):Ⓐ

◊ **britā-* > ***breth*** [f.] 'act of bearing, carrying, taking; a judgment'

↔ vb. *beirid* [s. -$^{e}/_{o}$] 'bears, carries, takes'.

(2) PCelt. ****-ber-tā-*** (← PIE **b*^{h}*er-*):

ambi-bertā-* > ***imbert* [f.] 'usage, behavior; act of using, employing'

↔ vb. *imm·beir* [s. -$^{e}/_{o}$] 'carries around, uses, employs'.

ari-bertā-* > ***airbert* (*biuth*)Ⓑ [f.] 'usage, practice; act of partaking, using'

↔ vb. *ar·beir* (*biuth*)Ⓑ [s. -$^{e}/_{o}$] 'uses, employs, eats, enjoys'.

(*com-* + ***airbert*** > ***comairbert*** [f.] 'way of life'.)Ⓒ

t(u)-ari-bertā-* > ***tairbert* [f.] 'act of bending (down), inclining'

↔ vb. *do·airbir* [s. -$^{e}/_{o}$] 'bends (down), inclines'.

kom-bertā-* > ***compert* [f.] 'conception, begettal; act of conceiving, begetting'

↔ vb. *con·beir* [s. -$^{e}/_{o}$] 'conceives, begets'.

exs-bertā-* > ***epert* [f.] 'speech, utterance, statement; act of saying'

↔ vb. *as·beir* [s. -$^{e}/_{o}$] 'says'.

tu-bertā-* > ****tubart* ⇒ ***tabart***Ⓓ [f.] 'bestowal; act of giving; act of bringing'

↔ vb. *do·beir* [s. -$^{e}/_{o}$] 'gives; brings'.

ad-uss-bertā-* > ***idbart* [f.] 'offering, sacrifice; act of offering'

↔ vb. *ad·opair* [s. -$^{e}/_{o}$] 'offers, sacrifices'.

di-uss-bertā-* > ***díupart* [f.] 'deprivation; act of depriving; an unequal bargain'Ⓔ

↔ vb. *do·opair* [s. -$^{e}/_{o}$] 'takes away, deprives'.

kom-dī-u̯o-bertā-* > ***cundubart*Ⓕ [f.] 'doubt'

↔ no attested vb. **con-tabair*.

u̯or-bertā-* > ***forbart* [f.] 'growth, increase; act of growing, increasing'

↔ vb. *for·beir* [s. -$^{e}/_{o}$] 'grows, increases'.

(3) PCelt. ****-ber-o-*** (← PIE **bʰer-*):

ati-bero-* > ***aithber* [n.(?)]Ⓖ 'reproach, blame; act of reproaching, blaming'

↔ vb. *ad·beir* [s. -$^{e}/_{o}$] 'reproaches, blames'.

Comments:

Ⓐ Schumacher (2000: 70–72) finds from the British evidence that the original simplex was probably **bri-ti-* < PIE **bʰr̥-ti-* alternating with compounds in **-ber-tā-* < PIE **bʰer-teh₂-* (§ 2.2.3.15(2)). Reflexes of PIE **bʰr̥-ti-* are widespread in Indo-European, e.g., Ved. *bhr̥tí-* 'sustenance, support', Av. *-bərətī-* 'offering', Lat. *fors, -tis* 'fortune', Goth *ga-baurths*, OE *ge-byrd* 'birth, origin', Arm. *bard, -ic'* 'bunch, sheaf'; although, as Schumacher notes (71 fn.53), **-ti-* tended to be productive in the daughter languages, so not all of these are certain to be inherited. No trace of the *ti*-stem remains in Old Irish, which has generalized the *tā*-suffix to all the verbal nouns of this verb.

Ⓑ *Ar·beir* and ***airbert*** are frequently accompanied by the dat.sg. of *bith* 'world'[19] in an idiom meaning 'uses, partakes of, enjoys (esp. of food)'.

Ⓒ The unhistorical syncope (**kom-ari-ber-tā-* should have yielded something like OIr. ***comraibert*) hints at a late formation *com-* + ***airbert***, though a secondary remodeling after ***airbert*** is also a possibility; the absence of a corresponding verb **con·airber*, however, makes the late formation more probable.

Ⓓ Expected **tubart* is not attested, though two examples of *tu-* in the prototonic verb are found: 3.sg.pret. ·***tu***bert (LG 308.34) and ·***tu***bart (Arm. 18b1 = *Thes.* II, 242.20). By the time of the Würzburg glosses, the initial syllable had already been altered to *ta-*. According to *GOI* (162 § 251.3), this has spread from the suppletive perfect, 3.sg. *do·rat*, ·***ta***rat, etc., where the vowel of the initial syllable had become attracted to the vowel that followed in the stem *-rat*. There is at least one other instance of this phenomenon, however, for which a similar explanation cannot be invoked: OIr. ***tailciud, teilciud*** 'act of releasing, letting go', verbal noun of *do·léici* 'lets go, lets loose' (§ 3.1.68(1)); there the unrounding of the vowel of **tu-* remains unexplained.

Ⓔ For the meaning of OIr. ***díupart***, see the vocabulary of Murphy's *Early Irish Lyrics*:

> lit. 'depriving, deprivation', but used especially of a bargain which is greatly to the disadvantage of one side: e.g. Adam's loss of the world for an apple is called *in derb-dīubart* ['the truly unequal bargain'], Laws, i. 52.4 [= *CIH* II, 351.27 = V, 1897.11] .... Meyer, Contrib. 665, s.v. *díupart*, cites a gloss *meallchunnradh* 'a deceitful bargain'." (1956: 263 s.v. **díupert**.)

Ⓕ Spellings vary, with *cundubart, cuntubart, cumdubart,* and *cumtubart* all appearing in the Old Irish glosses. Their distribution is notable: the variants in *-n-* are found in Würzburg, those in *-m-* in Milan and St. Gall. If Pedersen's derivation (*VKG* II, 467 § 665(4)) from **kom-dī-u̯o-ber-tā-* is right, then *cundubart* is the earlier form, and the

---

[19] *GOI* 162 § 251.3.

spellings in *-tubart* (as well as later examples in *-tabart*) are probably due to the influence of ****tubart*** (***tabart***) 'bestowal; act of giving; act of bringing'. The variants with *-m-*, which may be slightly later if the difference in distribution is a simple matter of chronology, are probably also innovations, perhaps by analogy with ***cumtach*** 'construction, act of building' < **kom-uss-dē/ig-o-*. It seems less likely that a compound **kom-uss-dī-u̯o-ber-tā-* would have survived in Milan and St. Gall separately from the synonymous **kom-dī-u̯o-ber-tā-* of Würzburg.

Ⓖ The noun is masculine in Middle Irish, while the only genuine Old Irish attestation, dat.sg. *aidbiur*, is indeterminate as to gender; but neuter gender is typical for Old Irish *o*-stem verbal nouns (see § 2.2.3.1(1)).

3.1.14. *bi̯ / be-n-* 'be'

< [1] PCelt. **-b(u̯)-i̯i̯$^{e}/_{o}$-* (⇒ [2] PrIr. ***-bi-na-*) ← PIE √**bʰuH-* (or √**bʰeu̯H-* or √**bʰu̯eh₂-* or √**bʰeh₂u̯-* ?) 'be'.Ⓐ

(1) PCelt. ****bu-tā-*** (⇐ PIE **bʰuH-*):

◊ **butā-* > ***both*** ⇒ ***buith***Ⓑ [f.] 'state of being'

↔ vb. *at·tá* [irreg.] '(there) is'.Ⓒ

(2) PCelt. ****-bu-ti-*** (⇐ PIE **bʰuH-*):

kanta-buti-* > ***cétbuid* [f.] 'sense, feeling; act of feeling, perceiving'

↔ vb. *ceta·bí* [h.] 'feels, perceives'.

*com-*ʻ + ***cétbuid*** > ***comchétbuid***Ⓓ [f.] 'consent, agreement; act of consenting, agreeing'

↔ vb. *con·cétban* [s. *-na*] 'consents, agrees'.

de-buti-* > ***debuith*Ⓔ [f.] 'difference of opinion or purpose; strife, contention'

↔ vb. *do·tá* [h.] 'stands apart, differs'.

(?**eni/ande-buti-* or *in(d)-*ʻ + ***buith*** > ***inbaid*** [f.] 'time, period, proper time'.)Ⓕ

*ess- + ***buith*** > ***esbaid***Ⓖ [f.] '(being out →) lack, deficiency, defect'

↔ no attested vb. **as·tá*.

t(u)-ess-* + ***buith* > ***tesbuid***Ⓖ [f.] 'absence, lack, deficiency'

↔ vb. *do·esta* [h.] 'is absent, lacks'.

u̯rit(s)-buti-* > ***fribuith* ⇒ ***frepaid***Ⓗ [f.] 'cure, remedy; act of healing'

↔ vb. *fris·ben* [s. *-na*] 'heals'.

(3) as if ****-bei̯(i̯)-o-*** (analogically remodeled):Ⓘ

tu-ro-bei̯(i̯)o-* > ***torbae [n.] 'benefit, profit'

↔ vb. *do·roban* [s. *-na*] 'benefits, helps'.

Comments:

Ⓐ The present tense of the substantive verb, which almost always occurs with a preverb, is generally *-*tā*- < PIE √**steh*$_2$- 'stand' (§ 3.1.125), and stands in a suppletive relationship with forms of *biïd, ·bí* < PCelt. *-*b*(*u̯*)-*ii̯*$^{e}/_{o}$- ← PIE √**b*^{h}*eu̯H*- or √**b*^{h}*u̯eh*$_2$- 'be' in the other tenses.[20] Because of the close resemblance between the conjunct forms of consuetudinal *biïd, ·bí* 'is (wont to be)' and *benaid, ·ben* 'strikes' in certain parts of the paradigm, especially the subjunctive (e.g., 3.sg.pres.subj. *·bé* : 3.pl. *·bet* 'may be' vs. 3.sg. *·be* : 3.pl. *·bet* 'may strike') and the preterite and perfect (e.g., 3.sg.perf. *·robae* : 3.pl. *·robatar* 'has/have been' vs. 3.sg. *·rubai* : 3.pl. *·rubatar* 'has/have struck'), compounds of *biïd, ·bí* tend to model themselves after those of *benaid, ·ben*, secondarily acquiring present-tense forms in *·ben, -ban*.[21] From the resulting confusion it is sometimes difficult to determine which root constitutes the historical base.[22] In most cases, however, the

---

[20] An exception is *ad·cota* 'gets, obtains; is able' which carries *-*tā*- throughout the conjugation.

[21] *VKG* II, 441 § 647; *GOI* 356 § 551, 480 § 783.

[22] See *KPV* 231 n.(f) s.v. ***bi-na-***.

verbal noun still preserves the original formation, the sole exception being ***torbae*** 'profit' (comment I).

The base of the verbal nouns of 'be' is **bu-*. The short *-ŭ-* of Celtic **bu-*, instead of the expected **bū-* from the PIE zero-grade **bʰuH-*, is somewhat enigmatic. Joseph (1980, Chapter 4) discusses this root at some length, along with others that show "super zero grade" in Celtic; after examining various possible scenarios to account for the short vowel, he concludes (359–61) that the most likely source of PCelt. **bu-* is the 3.pl.aor. **bʰuH-ént*, which would have regularly developed into a hiatus form **bʰu'ent* from which the new zero grade **bʰu-* could have been extracted as the source of the derivatives. It has otherwise been taken to be the result of an analogical productive ablaut alternation *ī* : *ĭ* and *ū* : *ŭ* parallel to that of Greek (e.g., nom.sg. πῦρ : gen.sg. πυρ-ός 'fire' or 1.sg. δείκνῡ-μι : 1.pl. δείκνῠ̆-μεν 'I/we show').[23] Schrijver (1991: 512–36), on the other hand, building on a suggestion of Kortlandt (1981), has proposed a phonological account to explain the alternation. The crux of his argument is that in Greek, Latin, and Celtic, pretonic **-HI-* yielded short **-ĭ-*, **-ŭ-*, whereas stressed **-HI-* yielded long **-ī-*, **-ū-*. It does not seem possible to settle the matter at present. The validity of any proposal depends partly on the reconstructed shape of the PIE root. The Kortlandt-Schrijver explanation requires an original **bʰeHu̯-* / **bʰHu-*; but more traditional reconstructions have involved **bʰeu̯H-* / **bʰuH-*[24] or **bʰu̯eh₂-* / **bʰuh₂-*,[25] or an abnormal root **bʰuH-* lacking PIE full grade.[26] A useful summary of the various proposals (and arguments for the

---

[23] The phenomenon in Greek is discussed by Kimball (1988).

[24] E.g., Bammesberger 1981.

[25] E.g., Rix 1992: 214; Joseph 1980: 344f.; *LIV*² 98–101 s.v. ****bʰu̯eh₂-***; *KPV* 245 n.(a) s.v. ****bu̯-iu̯e/o-***.

[26] E.g., Anttila 1969: 141; Jasanoff 1997b; Kümmel 2000: 348–50.

validity of the last) may be found at McCone (1991: 127–31).

Ⓑ The rare archaic simplex ***both*** < **bu-tā-* occurs only a handful of times.[27] Far more common is ***buith***, which was probably initially a dative form that spread to the nominative, but may have been further influenced by the compounds, all of which use the stem *-buid* < **-bu-ti-* (see § 2.2.3.15(1)).

Ⓒ The morphological counterpart of ***both*** (***buith***) is the consuetudinal *biïd* [h.] 'is (wont to be)', to which *at·tá* '(there) is' serves as suppletive present.

Ⓓ A calque on Lat. *cōn-sēnsus*, with analogically leniting *com-*ʿ (§ 2.1.3.3(2)) added to existing ***cétbuid*** 'sense'. A corresponding verb *con·cétban* 'consents' was also created.

Ⓔ The preverb *de-*ʿ, from the preposition *di, de* 'away from', usually appears as *dí-*ʿ before consonants. For this reason Thurneysen (*GOI* 246 § 392, 505 § 831) suggests that the prefix in ***de-buith*** is a distinct preverb *de-*ʿ with the meaning 'in two, asunder', related to Goth *twis-*, Lat. *dis-*, but modified by analogy with the preposition. Further support for Thurneysen's view is adduced by *DIL* (s.v. **1 de, di**), which cites an apparent distinction in meaning between *dí-*ʿ, tending to imply physical separation and distance, and *de-*ʿ, implying mere division or difference, in the pairs ***di·tá*** 'stands apart' vs. ***de-buith*** 'difference of opinion, dissent', and ***dí-chor*** 'a putting away' vs. ***de-chor*** 'a disagreement, a difference, diversity'. *DIL* notes further:

> De- was either developed before broad consonants or possibly like Gr. δία [*sic*] it goes back to dis-a (modelled on μετά, κατά = Ir. ceta-). … The original sense of dis- seems preserved only in nominal cpds. in Irish (de-chor, de-buith, de-dail). (Col. D-132.)

A preform **dis-a* would be ideal phonologically, at once explaining both the vowel of *de-*ʿ

---

[27] *DIL* (s.v. **1 buith**) lists two examples in Würzburg (25a13, 26b21); one in Hy.Broc. (70 = *Thes.* II, 344.4); an occurrence in the first paragraph of SFM (LU 133a31), to which may be added the other four manuscript witnesses of the same tale (RIA 23 N 10 p.64, Eg. 88 fol. 15b, and, with aberrant spellings, YBL col. 912 [*broth*] and TCD H 4.22 p.42 [*boith*]); and acc.sg. *boith* in HB § 13d.

and the following lenition, but the comparison with Gr. διά < **dis-a* is misleading since the Greek preposition is evidently an analogical formation, modeled on κατά, μετά, παρά, etc.[28] While Celtic **kanta-*, reflected in OIr. *cét-, ceta-* and OW, OBret. *cant* 'with', is likely to be an exact cognate with Gr. κατά, both descended from PIE **kn̥-ta-*,[29] this form is of extremely limited distribution in Celtic, occurring exclusively as a preverb with *bī̆-* 'be', and by itself is hardly a sufficient model for a new Celtic **dis-a* ⇐ **d(u̯)is*. Therefore, if we assume *de-*ʿ does indeed continue **d(u̯)is*, analogy with the preposition *di, de* seems the better explanation of its shape.

LÉIA (D-30 s.v. **debuith**, D-100 s.v. **di-tá**), on the other hand, takes this *de-*ʿ to be the same word as the preposition *di, de*, noting that the form *di-* is preserved in the verb *di·taam-ni* glossing *distamus* (Ml. 117b9). This position is also favored by Irslinger (2002: 403). The spelling of the verb form is of questionable value, however, as one cannot rule out influence from the Latin word which it glosses.

Ⓕ The noun is well attested from early times, but there is no example of a verb **in·tá*.

Ⓖ The preservation of the preverb **exs-* as OIr. *es-* here hints at a relatively late compound formation, since PrIr. **(tu-)exs-bu-ti-* would have regularly yielded OIr. ⁂*(t)epuid*, ⁂*(t)epaid* (§ 2.1.3.3(1)). Given the existence of *do·esta* 'is absent, lacks', it is virtually certain that *as·tá* 'lacks' also once existed.

Ⓗ The lowered vowel of the preverb *fre-* is secondary, as the historically regular form had *fri-* (see § 2.1.3.1 *ad fin.*). This is attested once, at CG § 8, *l.*58 (= *CIH* III, 778.3), where the edition has normalized *frepuith* but the manuscipt has *fr̥ibuith*.

Ⓘ While the verbal noun ***torbae*** is formally in line with the verbal nouns of many of

[28] *IEW* 232 s.v. ***du̯ō(u)*** 6.; *DÉLG* 276 s.v. διά; Beekes 2010: I, 327 s.v. διά.

[29] *IEW* 613 s.v. ***kom***; *GOI* 501 § 828; *LÉIA* C-84 s.v. **2 cét-**; Hamp 1975b.

the compounds of *benaid* 'strikes' (§ 3.1.12(3)), the meaning of *do·roban* 'benefits, helps' stands apart from the violent or harmful connotations of those verbs ('cut off, maim, destroy, decay, deceive, drive off', etc.). *VKG* (II, 445 § 647(11)) accordingly lists *do·roban* under the compounds of 'be'. (See comment A on the frequent confusion between compounds of *benaid, ·ben* 'strikes' and *biïd, ·bí* 'is'.) The existing verbal noun was no doubt remodeled after the synonym *báe* 'benefit, advantage, profit', and presumably replaces earlier ***torbuid*** (< **-bu-ti-*).

DIL (s.v. **1 do-rorban**) lists two definitions for the verb: I. 'comes, arrives, happens to, reaches'; and II. 'profits, advantages, helps'. Thurneysen instead sees two distinct verbs: (1) *do·fórban* 'comes to, arrives' from **tu-u̯or-* plus the substantive verb remodeled after *benaid* (*GOI* 356 § 551, 480 § 783), and (2) *do·roban, ·torban* 'profits', a back-formation from the noun ***torbae*** 'benefit, profit', which he takes as "probably a compound of **bae** 'profit' with **to-ro-**," also formally influenced by *benaid* (*GOI* 529 § 852.A). Pedersen (*VKG* II, 445f. § 647(11) Anm.) objects, with justification, that the preverb group **tu-ro-* does not participate in normal nominal composition, so the source of ***torbae*** can only be understood in terms of verbal-noun morphology. He initially postulates (445) a single verb *do-roban* (⇐ **tu-ro-* + the substantive verb) meaning both 'comes to' and 'benefits', comparing for the semantics Lat. *prōficō, -ere* 'to advance, make progress' → 'to benefit, profit, be of use'; but later Lewis and Pedersen (*CCCG* 330f. § 487(12)) divide them into Thurneysen's separate compounds, *do·fórban* 'comes to' (**tu-u̯or-*) and *do·roban* 'profits' (**tu-ro-*).

Further examination of the prototonic forms confirms that the separate treatment is correct. Regularly **tu-u̯or-* becomes *tór-* under the stress; for example, 3.sg.pres. ***do·for**maig* 'increases' : 2.sg.ipv. ***tór**maig*, vn. ***tórmach*** (and the long *-ó-* is sometimes transferred analogically back onto the deuterotonic forms: *do·**fórmaich***, cp. *do·**fórban***

above). By contrast **tu-ro-* always produces a prototonic short vowel; for example, 3.sg.pret. ***do·rogab*** 'transgressed' : prot. ***torgab***, vn. ***torgabál***. A perusal of the *DIL* entry s.v. **1 do-rorban** reveals a conspicuous pattern: there are four prototonic examples listed under meaning **I.** 'arrives, happens to, reaches', of which two are spelled with long *-ó-*; but under meaning **II.** 'profits, advantages, helps', not one of the dozen(!) prototonic forms cited shows long *-ó-*. This stark delineation aligns neatly with the form and sense of ***torbae***, which always has a short vowel and means only 'benefit', never 'arrival'. It appears that the other verbal noun, ****tórbuid*** 'arrival, act of reaching', has not survived.

3.1.15. *-bo-n-d-* 'proclaim, give notice'

< PCelt. **-bu-n-d-$^{e}/_{o}$-* ← PIE **$b^{h}u$-n-d^{h}-* ← √**$b^{h}e\underset{\sim}{u}d^{h}$-* 'be awake, be aware'.

◊ No simplex.

(1) PCelt. ****-boud-o-*** (← PIE **$b^{h}e\underset{\sim}{u}d^{h}$-*):

ad-boudo-* > ***apud*Ⓐ [n.] 'proclamation, notice; act of proclaiming, giving notice'

↔ vb. *ad·boind* [s. *-n..$^{e}/_{o}$*] 'proclaims, gives notice or warning'.

Comment:

Ⓐ The total absence of *u*-coloration of the preverb (**au-*) in any of the numerous attestations of this verbal noun is probable evidence that the root was full-grade **-boud-* < **-$b^{h}e\underset{\sim}{u}d^{h}$-* instead of zero-grade **-bud-* < **-$b^{h}ud^{h}$-*.[30]

3.1.16. *bo-n-g-* 'break'

< PCelt. **bu-n-g-$^{e}/_{o}$-* ← PIE **$b^{h}u$-n-$g^{(h)}$* ← √**$b^{h}e\underset{\sim}{u}g$-* 'use, enjoy' or √**$b^{h}e\underset{\sim}{u}g^{h}$-* 'bend, bow'.Ⓐ

---

[30] Cp. *GOI* 51f. § 80(c).

(1) PCelt. ***boug-ni-*** (← PIE *$b^heu̯g^{(h)}$-) or ***bug-ni-*** (← PIE *$b^hug^{(h)}$-):

*$b(o)ugni$- > ***búain***Ⓑ [n.] 'act of breaking, cutting, reaping'

↔ vb. *bongaid* [s. *-n..*$^e/_o$] 'breaks, cuts'.

(2) PCelt. ***-boug-o-*** (← PIE *$b^heu̯g^{(h)}$-):

*kom-$bougo$- > ***combach*** [n.] 'act of breaking, destroying'

↔ vb. *con·boing* [s. *-n..*$^e/_o$] 'breaks, smashes, destroys'.

*tu-$bougo$- > ***tobach*** [n.(?)]© 'act of cutting, reaping' → 'exacting, levying (a fine, etc.)'

↔ vb. *do·boing* [s. *-n..*$^e/_o$] 'plucks, wrests, tears (away)' → 'exacts, levies (a fine, etc.)'.

*$u̯or$-$bougo$- > ***forbach*** [n.] 'an extraordinary levy, additional fine (exacted by a chief)'

↔ vb. *for·boing* [s. *-n..*$^e/_o$] 'breaks, subdues'.

Comments:

Ⓐ The nasal present is consistent with a derivation from PIE √*$b^heu̯g$- 'use, enjoy' (Ved. *bhu-**ná**-k-ti* 'enjoys, uses, consumes', Lat. *fu-**n**-g-or, -ī* 'occupy oneself, perform'),[31] but the meaning is closer to PIE √*$b^heu̯g^h$- 'bend, bow'.[32] Schumacher (2000: 193 fn.161; *KPV* 239 n.(a) s.v. ****bu-n-g-e/o-***) suggests a merger of the two roots in Celtic.

Ⓑ For the reconstruction as a *ni*-stem rather than a *nā*-stem, see § 2.2.3.13. The form ***búain*** appears most naturally to be from a full-grade root (PIE *$b^heu̯g^{(h)}$-*ni*- > PCelt. *$boug$-*ni*- > OIr. **bóin* > *búain*), but zero grade could also have produced the attested outcome with only minor remodeling (PIE *$b^hug^{(h)}$-*ni*- > PCelt. *bug-*ni*- > EOIr. **búin* ⇒ OIr. [**bóin* >] *búain*).[33]

© The word is masculine in Middle Irish (nom.pl. *tobaig*, etc.). While no genuine Old

[33] Schumacher 2000: 195, following a suggestion of Damian McManus.

Irish examples are found to confirm the earlier gender, neuter would be expected.

3.1.17. *brŭ- / bronn-a-* 'break, damage'

< [1] PCelt. **brus-i̯ᵉ/₀-*; [2] PrIr. **brunn-ā-* ⇐ ***brus-na-*Ⓐ ← PIE √**bʰreu̯s-* 'break in pieces'.

(1) PCelt. ****brus-i-tu-*** (← vb. stem **brus-i̯ᵉ/₀-*):Ⓑ

brusitu-* > ***bruüd* [m.] 'breakage; act of breaking'

↔ vb. *bruïd* [h.] 'breaks in pieces'.

(2) PrIr. ****brunn-ă̆-tu-*** (← vb. stem **brunn-ā-*):

brunnă̆tu-* > ***bronnad* [m.] 'damage; act of damaging, injuring'

↔ vb. *bronnaid* [w. *-ā*] 'uses up, consumes; damages'.

Comments:

Ⓐ On the surface, the weak *ā*-verb *bronnaid* appears to be derived from a *na*-stem formation **brus-na-*,[34] as if from PIE ⁂*bʰrus-n-H-*. PIE √**bʰreu̯s-* did not end in a laryngeal, however, so this must be secondary.[35]

Ⓑ Absence of lowering in the root vowel of ***bruüd*** points to either a high vowel or **-e-* before the *tu*-suffix. The only source for the intervening vowel would appear to be the verb stem, which narrows the field to **-i-* < **-i̯e-*.[36]

---

[34] *VKG* I, 54 § 37(2); *LÉIA* B-96f. s.v. **2 bronn-**.

[35] *LIV*² 97 n.4 s.v. ****bhreu̯s-***.

[36] Cp. Cowgill 1980: 54 fn.7; McCone 1994: 70; 1996: 49.

3.1.18. *can-* 'sing'

< PCelt. **kan-$^{e}/_{o}$-* ← PIE **$\widehat{k}$an-* 'sing'.

(1) PCelt. ****kan-tlo-*** (← PIE **$\widehat{k}$an-*):

◊ **kantlo-* > ***cétul*** [n.] 'song; act of singing'

↔ vb. *canaid* [s. -$^{e}/_{o}$] 'sings'.

ari-kantlo-* > ***airchetul* [n.] 'poetry, poetic ability; act of chanting, reciting'

↔ vb. *ar·cain* [s. -$^{e}/_{o}$] 'chants, recites'.

t(u)-ari-kantlo-* > ***tairchetul* [n.] 'prophecy; act of prophesying'

↔ vb. *do·airchain, do·aurchain* [s. -$^{e}/_{o}$] 'foretells, prophesies'.Ⓐ

dī-kantlo-* > ***díchetul* [n.] 'incantation, recitation; act of chanting, reciting'

↔ vb. *do·cain* [s. -$^{e}/_{o}$] 'chants, recites (esp. a spell, incantation or magic formula)'.

kom-kantlo-* > ***coicetul* [n.] '(singing together →) concord, harmony, harmonious music'

↔ vb. *con·cain* [s. -$^{e}/_{o}$] 'sings, utters in harmony'.

(*ro-* + ***cétul*** > ***rochetul*** [n.] 'act of singing, chanting'.)Ⓑ

u̯or-kantlo-* > ***forcetul* [n.] 'instruction, doctrine; act of teaching, instructing'

↔ vb. *for·cain* [s. -$^{e}/_{o}$] 'teaches, instructs'.

Comments:

Ⓐ The verbal noun ***tairchetul*** (and once with *ter-* at Ml. 64c22) continues **t(u)-ari-kan-tlo-*, but several of the verbal forms have *-(a)ur-* (1.sg.pres. *do·**aur**chanaimm*, 3.sg. *do-n·**aur**chain*, 2.sg.ipv. ***tur**chan*, etc.) which implies underlying **-ari-u̯o-*. As Thurneysen points out (*GOI* 498 § 823.A), it is rare for *aur-* to appear in Old Irish texts where it is not historically justified, so it is possible that two compounds that fallen together in this verb. The compound with **-u̯o-* is not preserved in the verbal noun.

Ⓑ This is evidently a compound of "intensive" *ro-* added to the verbal noun ***cétul*** 'song; act of singing', hence 'a great song' or 'mighty singing'. In historical Irish this

prefix *ro-*, etymologically identical to the preverb, is added productively to adjectives and nouns to contribute a sense of high, sometimes excessive, quality. *DIL* (s.v. **2 ro**) records that its use in the earliest Irish is limited to adjectives, and that it only becomes common with nouns in Middle Irish. Its occurrence with the noun *cétul* in the relatively early text of *Echtrae Chonnlai* therefore may warrant a comment, especially because ***díchetul*** could have worked just as well in the context. In this passage of *Echtrae Chonnlai*, the woman from the otherworld had just come to the court of Conn Cétchathach and invited his son Connlae to the blissful kingdom of Mag Mell. Conn immediately summoned his druid Corann 'of great song' (*mórchétlach*) to drive away the spirit that had come to steal his 'very fair' (*rochaín*) son. When the druid 'chanted' (*do·cachain*) over the woman's seat, she withdrew before the 'great chanting' (***rochetul***) of the druid. Here, following on the heels of *do·cain*, the corresponding verbal noun ***díchetul*** might have been expected as the default choice. Instead, the rare word ***rochetul*** was chosen for its rhetorical and aesthetic qualities; it echoes the meaning of *mór-chétlach* 'characterized by great song' and the consonance of *ro-chaín* 'very fair' (which is, incidentally, an example of the more common type of compounding of intensive *ro-* with an adjective).

3.1.19. *cel- / cel(l)-a-* 'hide, conceal'

< [1] PCelt. **kel-$^{e}/_{o}$-* (⇒ [2] PrIr. ***-kel(l)-ā-*)Ⓐ ← PIE √**ḱel-* 'hide, conceal'.

(1) PCelt. ****kli-tā-*** (← PIE **ḱl̥-*):

klitā-* > ***cleth* [f.] 'concealment; act of hiding, concealing'

↔ vb. *ceilid* [s. -$^{e}/_{o}$] 'hides, conceals'.

dī-klitā-* > ***díchleth* [f.] 'concealment; act of concealing'

↔ vb. *do·ceil* [s. -$^{e}/_{o}$] 'conceals'.

(2) PrIr. ***-kell-ă̆-tu-*** (← vb. stem *-*kell-ā*-):

ari-kellă̆tu-* > ***airchellad* [m.] 'act of taking away, stealing'

↔ vb. *ar·cela* [w. -*ā*] 'takes away, steals'.

Comment:

Ⓐ Weak *ā*-flexion has spread to the compound *ar·cela* 'takes away, steals' and its *tu*-stem verbal noun ***airchellad***. The model was probably provided by the formally similar *·cella* 'goes around' < **-kʷell-ā-* ⇐ **kʷal-na-* or **kʷel-na-* (§ 3.1.20), and/or *·cíalla* 'signifies', denominative of *cíall* 'sense' (§ 4.3.12). The weak conjugation has not spread to any remaining formations of this verbal stem, however, which otherwise continue as strong *e*/*o*-verbs. Pedersen (*VKG* II, 482 § 678(1)) is probably right in invoking additional pressure from the synonymous *do·ella* [w. -*ā*] 'steals' (↔ vn. ***tellad***, § 3.1.37(2)) to account for the transfer of **ar·ceil* ⇒ *ar·cela*. The legacy of this displacement may be seen in an orthographic alternation unique to this compound: the *-l-* is usually single when the stem is stressed (*ar·cela*) but double when it is unstressed (*airchellad*).[37]

3.1.20. *-cell-a-* 'go around'

< PrIr. **-kʷell-ā-* { ⇐ **-kʷel-na-* ⇐ PCelt. **kʷal-na-* < PIE **kʷl̥-n-h₂-* or: ; ⇐ PCelt. **-kʷel-na-* < PIE **kʷel-n-h₂-*Ⓐ ← √**kʷelh₁-* 'turn, rotate'.

◊ No simplex.

(1) PrIr. ***-kʷell-o-*** ⇐ PCelt. **-kʷel-o-* (← PIE **kʷelh₂-*):Ⓑ

t(u)-ambi-kʷello-* > ***timchell* [n.] 'circuit; act of going around; [as adv.] around (+ gen.)'

↔ vb. *do·imchella* [w. -*ā*] 'goes round, makes a circuit of'.

Comments:

Ⓐ The *e*-vocalism of *·cella* 'goes around' is paralleled by three other *n*-infix verbs, *·sern*

---

[37] *GOI* 469 § 760.

'strews, arranges', *·ern* 'gives', and *·ella* 'goes towards'. Opinion is divided as to whether traces of verbal ablaut were preserved in these verbs or whether the *e*-vocalism has been adopted by analogy with the subjunctive stem. See § 3.1.37 comment A for a fuller discussion.

Ⓑ The double *-ll-* of **-k^{w}ell-o-* has been taken from the verbal present stem in *-ll-* < **-ln-*.

3.1.21. *-cĭ̆-* 'see'

< PCelt. **-k^{w}is-$^{e}/_{o}$-* ← PIE √**k^{w}e̯i-s-* 'observe, consider'.Ⓐ

◊ No simplex in Insular Celtic.

(1) PCelt. ****-k^{w}is-tion-*** (← PIE √**k^{w}is-*):Ⓑ

ad-k^{w}istion-* > ****aicius* ⇒ ***aicsiu*** [f.] 'act of seeing'

↔ vb. *ad·cí* [h.] 'sees'.

ari-ad-k^{w}istion-* > ****aircius* ⇒ ***aircsiu*** [f.] 'act of looking on'

↔ vb. *ar·aic(c)i* [h.] 'looks on'.

u̯or-ad-k^{w}istion-* > ****forcius* ⇒ ***forcsiu*** [f.] 'act of surveying, overlooking'

↔ vb. *for·aic(c)i* [h.] 'surveys, overlooks'.

u̯riss-ad-k^{w}istion-* > ****frescius* ⇒ ***fresc(i)siu*** [f.] 'expectation, anticipation; act of looking forward to, expecting' ↔ vb. *fris·aic(c)i* [h.] 'looks forward to, expects'.

d(e)-en-k^{w}istion-* > ****déicius* ⇒ ***déicsiu*** [f.] 'act of looking at, viewing'

↔ vb. *do·éic(c)i* [h.] 'looks at, views'.

ambi-d(e)-en-k^{w}istion-* > ****imdéicius* ⇒ ***imdéicsiu*** [f.] 'act of looking around' → 'circumspection, being circumspect' ↔ vb. *imm·déc(c)ai* [h.] 'looks around'.

Comments:

Ⓐ The PIE root √**k^{w}e̯i-s-* 'observe, consider' is in origin an *s*-enlarged variant of √**k^{w}e̯i-* 'notice, perceive', which *LIV*^{2} (381 n.1 s.v. ****k$^{u̯}$e̯is-***) takes as an old desiderative with the sense 'bemerken wollen' → 'auf etw. achten'. While this semantic development is not

implausible, it is not clear that the assignment of desiderative meaning is required for the progression from 'notice, perceive' to 'observe, consider'. Given the presence of a *t*-extended variant **k^{w}ei̯-t-* (Ved. *cét-ati, cíket-ati* 'perceives, pays attention', OCS *čьt-ǫ, čis-ti* < **čit-ti* 'count, read, honor'), the **-s-* may simply be a parallel root extension of unspecifiable meaning, as Pokorny thought (*IEW* 636f. s.v. ***1. k^{u}ei(-t)-***).[38] However that may be, √**k^{w}ei̯s-* had already become a root in its own right by late Proto-Indo-European. Ⓑ According to the Primitive Irish deletion rule proposed by McCone (1995: 130f.; see § 2.2.3.22 *supra*), **-sii̯-* (here from **-s-tii̯-*) was reduced to **-s-* between unstressed vowels when the second of them was a non-front vowel. The regular forms of these compound verbal nouns would then be expected to be **aicius, *(im)déicius, *forcius, *frescius*. The final *-iu* of the actual ***aicsiu, (im)déicsiu, foircsiu, frescsiu*** must be analogical to other nouns in **-tion-* such as ***tuistiu*** [f.] 'birth; act of engendering' (< **t(u)-uss-sam-tion-*), etc., with **-tii̯-* which was not subject to the reduction. This analogy may also account for the "double-syncope" pattern of ***air†c†siu*** < **ariadk^{w}istiō*, ***foir†c†siu*** < **u̯oradk^{w}istiō*, and ***fres†c†siu*** (beside ***frescisiu***) < **u̯rissadk^{w}istiō*, which cannot be explained by historical processes.

3.1.22. *cing-* 'step, stride'

< PCelt. **keng-$^{e}/_{o}$-* ← PIE √**ĝ^{h}eng^{h}-* 'stride' or √**(s)keng̑-* 'hobble, limp'.Ⓐ

(1) PCelt. ****kanx-smen-*** (← PIE **kn̥ĝ$^{(h)}$-*):Ⓑ

◊ **kanxsmen-* > ***céim(m)*** [n.] 'step, stride; act of stepping, proceeding'

↔ vb. *cingid* [s. *-$^{e}/_{o}$*] 'steps, strides, proceeds'.

---

[38] There can be no question, of course, if the view of McCone (1986: 256f.; 1991: 63f., 142–47) and others (cp. Szemerényi 1996: 285f.) is correct, that unreduplicated desideratives did not exist in PIE.

tu-kanxsmen-* > ***tochim(m)* 'act of proceeding, advancing; gait'

↔ vb. *do·cing-* [s. -$^{e}/_{o}$] 'steps, strides forward, proceeds, advances'.

Comments:

Ⓐ The voiceless initial of PCelt. **keng-$^{e}/_{o}$-* makes the usual connection with PIE √**ĝʰengʰ-* 'stride' (Ved. *jáṃh-as-* [n.] 'step', OHG *gīht* [f.] 'course, way' < PGmc. **ginx-ti-*, Lith. *ženg-iù, žeñg-ti* 'to walk'; with *o*-grade, Go. *gagg*, OHG, OE *gang* 'course, way', Go. *gagg-an*, ON *gang-a*, OHG, OE *gang-an* 'to go', etc.)[39] somewhat difficult, although the semantic fit is good. *KPV* (397f. s.v. ****keng-e/o-***) suggests instead a derivation from PIE √**(s)kenĝ-* 'hobble, limp', which is phonologically much closer. Although Pāli *khañjati*, Gr. σκάζω, OHG *hinkan* all have a negative connotation 'to limp', some Germanic nominal derivatives carry a neutral meaning: OHG *skinka* [f.] 'shin, lower leg', OE *sconca* [m.] 'shin', OFris. *skunk(a)* [m.] 'thigh'. From this, *KPV* suggests that the original meaning in Indo-European was 'walk', still preserved in Celtic **keng-$^{e}/_{o}$-*, and that the negative connotation developed independently in the other daughter languages. No plausible connection seems possible with Lat. *cingō, -ere* 'surround, gird', the etymology of which is uncertain.[40]

Ⓑ The original vocalism cannot be determined from OIr. ***céim(m)***, which could reflect either PCelt. **kanx-smen-* ← **kn̥g-* or PCelt. **kenx-smen-* ← **keng-*; but the *-a-* of the British cognates, MW *cam* [m.], Bret. *kamm* [f.] 'a step', unambiguously show the zero-grade **kanx-smen-*.

---

[39] Zupitza 1904: 388; *VKG* I, 187; *IEW* 438f. s.v. ****ĝʰengʰ-***; *LÉIA* C-103 s.v. **cingid**; *LIV*² 175f. s.v. ****ĝʰengʰ-***.

[40] See de Vaan 2008: 114 s.v **cingō, -ere**.

3.1.23. *clad-* 'dig, bury'

< PCelt. **klad-$^{e}/_{o}$-* ← PIE **k̥lh$_2$d$^{(h)}$-*Ⓐ ← √**kelh$_2$-d$^{(h)}$-* 'strike'.Ⓑ

(1) [[PCelt. ****klad-io-*** or ****klad-iā-***Ⓒ (← PIE **k̥lh$_2$d$^{(h)}$-*):

◊ **kladio/ā-* > ***claide*** [n./f.(?)] 'act of digging'

↔ vb. *cladaid* [s. -$^{e}/_{o}$] 'digs'.]]

(2) PCelt. ****-klad-i-*** or ****-klad-ā-***Ⓓ (← PIE **k̥lh$_2$d$^{(h)}$-*):

u̯o-kladi/ā-* > ***fochlaid* [f.] 'act of burrowing, rooting'

↔ vb. *fo·claid* [s. -$^{e}/_{o}$] 'digs under, burrows, undermines'.

Comments:

Ⓐ Schrijver's (1995: 171) proposal of PIE **k̥ld-* underlying PCelt. **klad-* would only be possible on the basis of a preform **k̥ld-i̯$^{e}/_{o}$-* together with a rule *R̥ > Ra / _DC*.[41] Whatever the validity of the rule in general, a *i̯$^{e}/_{o}$*-present is excluded by MW *clað-u* 'dig, bury', since *i*-affection would have resulted in ⁑*claeð-u*. Therefore the Proto-Celtic formation must have been thematic **klad-$^{e}/_{o}$-*, with *-la-* from the zero grade of a root with laryngeal. The root-final *-d-* is probably a PIE *d-* or *d^{h}*-extension (or a *d$^{(h)}$*-present formative?) added to the root √**kelh$_2$-* 'strike'; it appears also in Lat. *clādēs* [f. *-ī*] 'defeat, disaster' ← **k̥lh$_2$-d$^{(h)}$-*. (For further discussion of the Celtic verb, see *KPV* 412 n.(a) s.v. ****klad-e/o-*** with references.)

The words belonging to this root may provide a test for Isaac's (2007: 21–59) rule of laryngeals (cp. § 2.2.3.14, fn. 121). According to his formulation, a root containing *h$_2$* and lacking specific labializing environments will regularly yield forms in a short vowel only with suffixes in *-ā-*. In the case of this verb, therefore, PIE **k̥lh$_2$d$^{(h)}$-$^{e}/_{o}$-* should have produced PCelt. ⁑*klād-$^{e}/_{o}$-* with a long vowel, which it did not. With the ordinary

---

[41] *D* = a voiced stop, *C* any consonant. For the data and discussion see Schrijver (1991: 477–85).

substantive OIr. *clad* [m. *-o*] 'ditch, trench', too, the predicted vowel should be long: PIE *$*k̥lh_2d^{(h)}o$- > PCelt. ⁑*klādo*- > OIr. ⁑*cláad*; again it is short. In the case of the simple verbal noun, the situation is rather less clear. It is not known if the historical form should be reconstructed as *$*k̥lh_2d^{(h)}$-$i(\underset{\frown}{i})o$-, *$*k̥lh_2d^{(h)}$-$i(\underset{\frown}{i})ā$-, *$*k̥lh_2d^{(h)}$-$\underset{\frown}{i}o$-, or *$*k̥lh_2d^{(h)}$-$\underset{\frown}{i}ā$-, and further, in regard to either of the last two possibilities, whether the phonetic factors governing the rule apply equally across a cluster $C\underset{\frown}{i}$. Assuming they do, only the last possibility would yield the attested short vowel; the other three would produce long vowels. As for the compound verbal nouns, the length of the root vowel is irrelevant to the issue since the vowel in the unstressed syllable in Old Irish will be short in any event.

Ⓑ The Celtic semantic development was PIE 'strike' → PCelt. 'hew, thrust' → 'dig'.[42] The original meaning is still evident in the derivative PCelt. **kladi̯os* 'sword', the probable source of Lat. *gladius* and OIr. *claideb* through separate borrowings from Gaulish and British respectively, although the phonological details are somewhat murky.[43]

Ⓒ The Old Irish gender and stem class are not certain. The only attestation from a contemporary Old Irish manuscript is the ninth-century *hi claidi* gl. *in planta* 'in a cultivated place(?)', lit. 'in a digging' (Sg. 35a8), which has the ending of an *iā*-stem. However, later attestations are both feminine and masculine and the word is masculine in Modern Irish. This could point to an original neuter, as *DIL* (s.v. **claide**) suggests, since the neuter gender was already beginning to break down by late Old Irish; but unfortunately the accuracy of this suggestion cannot be verified.

Ⓓ It is unclear from lack of definitive case forms whether the compounds of **-klad-*, OIr.

---

[42] Cp. Kelly 1971: 190–92.

[43] See Vendryes 1908: 130; Kelly 1971: 192–96; McManus 1983: 33f.; *LÉIA* C-110f. s.v. **claideb**; and cp. § 4.1.22 *infra*.

fochlaid 'act of burrowing' and ***acclaid*** 'act of hunting' (the latter not found in our corpus), are *i*-stems or *ā*-stems with palatalized final in the nominative singular taken from the dative. A comparison with Lat. *clādēs* 'defeat, disaster', a feminine *i*-stem from the zero-grade *$*k̥lh_2d^{(h)}$-, may tip the balance in favor of the former.

3.1.24. *clich-* 'leap(?)'

< PCelt. *$k^{w}lik^{(w)}$-$^{e}/_{0}$-, etymology uncertain.Ⓐ

(1) PCelt. ***$k^{w}lik^{(w)}$-iā-*** (← *$k^{w}lik^{(w)}$-):

◊ [[?*$k^{w}lik^{(w)}iā$- > ?***cluiche*** [f.] 'act of bestirring oneself'

↔ vb. *clichid* [s. -$^{e}/_{0}$] 'stirs, bestirs oneself(?)'.]]Ⓑ

ari-$k^{w}lik^{(w)}iā$- > ***airchlige* [f.] 'act of warding off, defending'

↔ vb. *ar·clich* [s. -$^{e}/_{0}$] 'wards off'.

kom-$k^{w}lik^{(w)}iā$- > ***cuclaige* [f.] 'act of shaking, tottering; tossing, tilting, whirling about'

↔ vb. *con·clich* [s. -$^{e}/_{0}$] 'starts, jumps up, precipitates oneself'.

Comments:

Ⓐ "Eine uridg. Wurzel lässt sich nicht finden; es ist eher mit einer urkeltischen Neuschöpfung zu rechnen, die im weitesten Sinne lautmalend-ikonisch ist" (*KPV* 436 n.(a) s.v. ***$k^{u}lik^{(u)}$-e/o-***).

Ⓑ The meaning of the simplex verb *clichid* is conjectural, as it is only marginally attested in late and unclear contexts (for which see *DIL* s.v.); it is glossed *clichidh .i. tionoilidh* 'gathers, assembles' by O'Clery (O'Cl. 386.10). The initial *k^{w}- is shown by the noun *cluiche* [n. *-io*] 'game, play, sport' where *$k^{w}li$- > *clu-* is almost certainly regular.[44] The root vowel *-i-* of the verb is therefore unexpected, and was probably reintroduced

---

[44] This is indisputable in the case of *$k^{w}ri$-. Cp. *GOI* 137 § 223(1); Cowgill 1980: 56f.; Schrijver 1999c: 134.

through influence of the phonologically similar *dligid* < **dlig-$^{e}/_{o}$-*,[45] where *-li-* is historically regular from the PIE zero-grade **dl̥ǵ$^{(ʰ)}$h-* (§ 3.1.33).

In regard to the verbal-noun formation, if the root **k^{w}lik$^{(w)}$-* follows the same pattern as that of **g^{w}ed-* 'pray' (§ 3.1.63), then both the simple verbal noun and the compounds should be *iā*-stems. It is possible therefore that an unattested feminine *iā*-stem ****cluiche*** 'act of bestirring oneself(?)' may have served as the simple verbal noun. However, it is also conceivable that the neuter *io*-stem **k^{w}lik$^{(w)}$io-* > ***cluiche*** 'game, play, sport' represents the old verbal noun of *clichid*. *DIL* (s.v.) attests several instances of its usage "as quasi-vn."; these could be vestiges of its verbal-noun function, if they are not merely examples of an ordinary substantive used in this manner (§ 1.3.5).

3.1.25. *clu^{i}-n-$_{DEP}$* 'hear'

< pre-Ir. **klu-ni-$_{DEP}$* ⇐ PCelt. **kli-nu-* ⇐ **kal-n-u-* < PIE **k̂l̥-n-u-*Ⓐ ← √**k̂leu̯-* 'hear'.

(1) PCelt. ****klous-stā-***Ⓑ (← PIE **k̂leu̯-s-*):

◊ **klousstā-* > ***clúas*** [f.] 'sense of hearing; act of hearing; an ear'

↔ vb. (*ro*)*·cluinethar* [s. *-ni*] 'hears (of)'.

Comments:

Ⓐ PIE √**k̂leu̯-* underwent the same morphological remodeling of the nasal-present stem in Celtic as did other verbs of the "state II" root shape (see § 2.2.3.6 *ad fin.*). Thus phonologically regular PIE **k̂l̥-n-u-* > PCelt. **kal-n-u-* was first reshaped to PCelt. **kli-nu-*. At some point (the precise timing cannot be determined), this stem was further remodeled to **klu-ni-*, probably through the combined pressure of two coincidental factors: (1) zero-grade **klu-* existed in other forms of the verb, e.g., the passive participle **klu-to-* (> OIr. pret.pass. *·cloth* 'was heard'); and (2) **-ni-* was a common synchronic

---

[45] See *KPV* 436 n.(a) s.v. ****k^{w}lik$^{(w)}$-e/o-***.

nasal-present suffix (cp. **bal-**ni**-* 'die', **kri-**ni**-* 'sift, shake', **-(ϕ)li-**ni**-* 'flow', **ti-**ni**-* 'melt, vanish') whereas **-nu-* was rare and unproductive.[46] Anomalous **kli-nu-* was accordingly remade into the more "normal"-seeming **klu-ni-*.

Ⓑ The Irish noun ***clúas*** can in theory go back to **$\hat{k}$leu̯-stā-*, **$\hat{k}$leu̯s-tā-*, or **$\hat{k}$leu̯s-stā-*. The Welsh cognate *clus**t*** 'ear', with *-st*, may provide evidence that the last choice is correct. Based on a comparison of this and other British forms with historical **-st-*, Schrijver (1995: 406–15, esp. 414f.) concludes that since Proto-Celtic intervocalic **-st-* regularly yields British *s*, the reflex *st* is most likely the outcome of a sequence **-sst-*. Thus this form appears to show the Celtic suffix **-stā-* added to PCelt. **klous-* < PIE √**$\hat{k}$leu̯-s-*, an extended form of the root √**$\hat{k}$leu̯-* that underlies the verb. This mismatch in underlying root formation between the verbal noun and its verb is remarkable, as it underscores the independent derivational nature of Type 1 verbal nouns in Celtic (§ 2.2.2.1). Both forms of the root date back to Proto-Indo-European;[47] since the verb and verbal noun are ultimately based on separate inherited root forms, their historical relationship is clearly shown to be associative rather than derivational.

3.1.26. *cnă̆-* 'gnaw'

< PCelt. **knā-i̯$^{e}/_{o}$-* Ⓐ ← PIE **kneh$_2$-* 'scrape, rub'.

(1) PCelt. ****knā-mu-*** (← PIE **kneh$_2$-*):

◊ [[**knāmu-* > ***cnám*** [m.] 'act of gnawing, laying waste'

↔ vb. *cnaïd* [h.] 'gnaws away, consumes'.]]

u̯o-knāmu-* > ***fochnam* [m.] 'act of corroding, wasting'

↔ vb. *fo·cná* [h.] 'corrodes, wastes'.

---

[46] McCone 1991: 13; *KPV* 416 n.(b) s.v. ****kli-n-u-**$_{DEP}$***.

[47] See *LIV*^{2} 334f. s.v. ****$\hat{k}$leu̯-***, 336 s.v. ****$\hat{k}$leu̯s-***.

Comment:

Ⓐ The verb *cnaïd* forms a morphological class in (Insular?) Celtic with several other hiatus verbs (*baïd* 'dies', *raïd* 'rows', *snaïd* 'swims', etc.) that come from inherited root-presents and $\underset{\frown}{i}^{e}/_{o}$-presents.[48] Most of them form verbal nouns in *-*mu*-.

3.1.27. *cre-n-* 'buy'

< PCelt. *$k^{w}ri$-na- < PIE *$k^{w}ri$-n-h_2- ← √*$k^{w}re\underset{\frown}{i}h_2$- 'buy, exchange'.

(1) PCelt. ***$k^{w}r\bar{\imath}$-tV-** (← PIE *$k^{w}rih_2$-):Ⓐ

◊ *$k^{w}r\bar{\imath}tV$- > ***críth*** [gender?] 'purchase; act of buying, purchasing'

↔ vb. *crenaid* [s. *-na*] 'buys, purchases'.

(2) as if ****$k^{w}r\bar{\imath}kk\bar{a}$-** (analogically remodeled):Ⓑ

◊ [[**$k^{w}r\bar{\imath}kk\bar{a}$- > ***creic*(*c*)** 'purchase, act of buying'

↔ vb. *crenaid* [s. *-na*] 'buys, purchases'.]]

$t(u)$-*ati*-$k^{w}r\bar{\imath}kk\bar{a}$- > ***taithchrec*(*c*) [f.] 'redemption; buying back, redeeming'

↔ vb. *do·aithchren* [s. *-na*] 'buys back, redeems'.

$\underset{\frown}{u}o$-$k^{w}r\bar{\imath}kk\bar{a}$- > ***fochraic*(*c*) [f.] 'reward, payment, [pl.] wages; act of giving as payment'

↔ vb. *fo·cren* [s. *-na*] 'gives as payment'.

$t(u)$-*ari*-$\underset{\frown}{u}o$-$k^{w}r\bar{\imath}kk\bar{a}$- > ***taurchrec*(*c*) [f.] '(*leg.*) fore-purchase' → 'fief'Ⓒ

↔ vb. *do·aurchren* [s. *-na*] 'fore-purchases, gives stock to, enfeoffs'.

Comments:

Ⓐ The verbal noun ***críth*** is found almost exclusively in reference to the law tract *Críth Gablach* 'Branched Purchase' on the divisions of social rank within the Old Irish society, beside one other example in the compound ***críth**chaíni* 'exotic merchandise' (Bl. § 120d).

---

[48] The morphological details are somewhat obscure. See § 3.1.9 comment A and *KPV* 215 n.(a) s.v. ***bā-***, 418f. n.(a) s.v. ***knā-$\underset{\frown}{i}e/o$-***, and 596 n.(a) s.v. ***snā-*** for further discussion.

It is taken as a feminine *tā*-stem by *DIL* (s.v.), Schrijver (1991: 531), and Schumacher (2000: 73), but as a masculine *tu*-stem by McCone (1991: 11), de Bernardo Stempel (1999: 559) and Irslinger (2002: 92f.). The only positive support for a *tā*-stem is the gen.sg. *crithi* at *CIH* VI, 2121.28, *.ui. haid*$^{\underline{echa}}$ *na* ***crithi*** *gabl*$^{\underline{aigi}}$ *... co* $^{\underline{n}}$*apair isi*$^{\underline{n}}$ *c*$^{\underline{r}}$*ith gabl*$^{\underline{ach}}$ '6 milch-cows of the ***Críth*** *Gablach ...* as it is said in the *Críth Gablach*', which appears to be a Middle Irish spelling for an *ā*-stem genitive **críthe*. Irslinger (*loc. cit.*) dismisses the late spelling as a scribal creation owing to the word's no longer being part of the living lexicon, and argues that a *tu*-stem is more likely since **-tu-* seems to be preferred over **-tā-* in Irish nouns with zero-grade stems of the shape **CIH-* (173f., 379). The masculine gender of corresponding MW *prit* 'price, purchase, pledge', which might seem to support a *tu*-stem, is not reliable since the masculine gender tended to spread in Welsh at the expense of the feminine.[49] An inner-Celtic substitution may also possible; Schumacher (*loc. cit.*) argues on the basis of the cognate MSogd. *xryc* 'buying' < PIran. **xrī-ti-* that the *tā*-stem, a productive category in Celtic, has replaced an earlier *ti*-stem.[50] It should be pointed out that a *to*-participle, PIE **k*^{w}*rih*$_2$*-tó-* > PCelt. **k*^{w}*rī-to-*, would also be formally possible.[51] No clearly favorable solution stands out.

With regard to the root connection, Stokes (1910: 141f.) saw two homonyms in OIr. ***críth***, one meaning 'purchase' (≈ MW *prit* [m.] 'price, purchase, pledge'), from PIE √**k*^{w}*reiH*$_2$- 'exchange, trade' (> Ved. *krīnāti* 'buys', Myc. *qi-ri-ja-to* (/k^{w}*riato*/), Gr. πρίατο

---

[49] Schumacher 2000: 71, 73.

[50] Hamp (1976b: 18f.) considers the historical **-t-* in this form and in ***bíth*** 'stroke, act of striking' to be "the familiar semantically empty dental which extended IE roots in final syllabic"; in Hamp (1987: 114), he takes the noun to be "no doubt an ancient feminine," but does not elaborate.

[51] Cp. *LÉIA* C-230 s.v. **críth**: **k*^{w}*ri-ə-t(o)-*.

[aor.] 'bought', OIr. *crenaid* 'buys');[52] and another meaning 'division, classification', from PIE √**kreh$_1$(i)-* 'sift, separate' (> Gr. κρίνω 'judge', κρίσις [f.] 'judgment', Lat. *cernō, -ere* 'sift, distinguish, decide', *crībrum* [n.] 'sieve', OIr. *críathar* 'divides').[53] The only evidence for two meanings comes from the introduction to *Críth Gablach*, which Stokes[54] understood to offer two competing explanations of ***críth***:

> *Cid ara neiper crith gabhl$^{\underline{ac}}$h .nī. ari$^{\underline{n}}$di crenus in fer tuaithe dia dhagfoltaibh hi tuaith co nairmith$^{\underline{er}}$ ina g$^{\underline{r}}$a techta i mbi i tuaith ⁊ ara li$^{\underline{n}}$ do gablaibh i fodlaith$^{\underline{er}}$ g$^{\underline{r}}$a tuathe.*
> 'Why is it called *Críth Gablach*? It is not hard (to say): [1] because the layman purchases according to his qualifications of substance in the society, so that he may be accounted in the proper rank in which he stands in the society; *or* [2] because of the number of branches into which the ranks of a society are divided'.

Since Binchy (1941: xvii), however, it has been understood that the opening gloss of this text does not in fact give two alternative explanations of ***críth***, but presents two glosses on the title *Críth Gablach*, the first attempting to clarify ***críth*** 'purchase' and the second *gablach* 'branched' (with ⁊ 'or' being the equivalent of 'and', as is frequent in the legal texts). Binchy's explanation is considered authoritative, and the reason behind the title *Críth Gablach* 'Branched Purchase' remains obscure.

Ⓑ The expected form of the compound verbal nouns would be **-chrae* < **-k^{w}reḭ(i̯)-o-* < PIE **k^{w}reḭh$_1$-o-*, but these, and the new simplex ***creic(c)*** (not found in our corpus), have been remodeled after ***íc(c)*** 'act of paying, redeeming' < **īkkā-*. See §§ 2.2.3.2, 4.3.26(1).

© The verbal noun ***taurchrec(c)***, literally 'fore-purchase', is only used in the technical legal sense of a fief, i.e., a grant of property (usually stock, less commonly land) given by

---

[53] *LIV*^{2} 366f.

[54] So also Mac Neill 1923: 281f. fn.4.

a noble to a base client in return for which he pays an annual food-rent. For details, see Binchy (1941: 108f. s.v. **taurchrecc**), and cp. *DIL* (s.v.).

3.1.28. *cret-i-* 'believe'

< PCelt. **kredd-ī-* ⇐ **kred-dī-*[Ⓐ] < PIE **k̂red-* 'trust' + √**dʰeh₁-* 'put, place'.

(1) PCelt. ****kred-dī-mā-*** (← PIE **k̂red-* + √**dʰeh₁-*):

◊ **kreddīmā-* > ***creitem*** [f.] 'belief, faith; act of believing'

↔ vb. *creitid* [w. *-ī*] 'believes'.

Comment:

Ⓐ The synchronic weak *ī*-verb *creitid, ·creiti* (*-t-* = */d'/*) < PCelt. **kredd-ī-* arose through reanalysis of the inherited compound **kred-dī-* < PIE **k̂red-* + √**dʰeh₁-* 'place credence'. Parallel formations are found in Skt. *śrad-dadhāti*, Lat. *crēdō, -ere* (< **krezd-* < **kred-d-*).

3.1.29. *-cri-n-* 'sift, shake'

< PCelt. **-kri-ni-* ⇐ PIE **kri-n-h₁-*[Ⓐ] ⇐ √**kreh₁-i̯-* 'sift, separate'.

◊ No simplex.

(1) PCelt. ****-kreⁱ̯(i̯)-o-*** (← PIE **kreⁱ̯h₁-*):[Ⓑ]

ari-kreⁱ̯(i̯)o-* > ***airchrae* [n.] 'deterioration; act of perishing, decaying'

↔ vb. *ar-a·chrin* [s. *-ni*] 'perishes, decays'.[Ⓒ]

Comments:

Ⓐ The zero grade of the PIE "long-diphthong" root √**kreh₁i̯-* is **kr̥h₁i̯-*[V] or (with metathesis) **krih₁-*[C], the latter form subsequently serving as the basis of both a nasal present **kri-né/n-h₁-* and a new full-grade **kreⁱ̯h₁-*.[55] The stem-final **-ni-* of PCelt. **-kri-ni-*, replacing phonologically regular **-na-* < PIE **-nh₁-*, is the result of morphological leveling

---

[55] *LIV*² s.v. ****kreh₁(i̯)-*** n.1, citing Rasmussen 1989: 276f.

in the prehistory of Celtic. For details, see § 3.1.11 comment A.

Ⓑ The secondary PIE full-grade **kreu̯ih₁-* (see comment A) is assumed to underlie the verbal noun, following the pattern of other verbal nouns from roots in **°eiH-* such as ***-beu̯(i)-o-*** 'strike' < PIE **bʰeu̯ih₂-o-* (§ 3.1.12(3)), ***-leu̯(i)-o-*** 'stick' < PIE **h₂leu̯iH-o-* (§ 3.1.72(2)), etc.; but in fact the outcome would be the same if we were to start from a full grade of the root without the *i*-extension (PIE **-kreh₁-o-* > **kre(i̯)-o-* > OIr. *-cre*). From a strictly phonological perspective, the metathesized zero grade would also yield the same end result: PIE **krih₁-o-* > **kri(i̯)-o-* > OIr. *-cre*, but zero grade is not expected for this type of verbal noun (see § 2.2.3.6).

Ⓒ For the semantic shift from PIE 'sift, separate' to OIr. 'perish, decay', cp. *KPV* (422 n.(b) s.v. ****kri-ni-***). This is a purely Irish development, as the British cognates retain a meaning easily derived from the original: 'sift' → 'shake (a sieve)' → 'tremble, shake (with fear)'. The clue to the Irish meaning is probably to be found in the neuter infixed pronoun that always appears with the verb in Old Irish (*ar-**a**·chrin*), which would have formed an idiom 'sifts it (= one's life)' or 'separates it (= one's life)' meaning 'decays, wastes away' and hence 'perishes'.[56]

3.1.30. *cur-i-*$_{DEP}$ 'put, cast, throw'

< PCelt. **kor-ī-*$_{DEP}$ < PIE caus.-iter. **korH-éi̯ᵉ/₀-* ← √**kerH-* 'pour out, distribute'.Ⓐ

(1) PCelt. ****kor-o-*** (← PIE √**korH-*):

◊ **koro-* > ***cor*** [m.] 'cast, throw; act of putting, placing; casting, throwing; a contract'

↔ vb. (*fo*)·*cuirethar* [w. -*ī*] 'puts, places; casts, throws'.

ari-koro-* > ***airchor* [m.] 'extension; act of extending' → 'cast, shot; a dart, arrow'

↔ vb. *ar·cuirethar* [w. -*ī*] 'extends'.

---

[56] Cp. McCone 1991: 17.

ambi-ari-koro-* > ***immarchor* [n.] 'errand, message; act of carrying (about), bearing'

↔ vb. *imm·airchuirethar* [w. *-ī*] 'carries (about), bears'.

t(u)-ati-koro-* > ***taithchor* [m.] 'return; act of returning'

↔ vb. *do·aithchuirethar* [w. *-ī*] 'returns'.

(*de-*ʿ + ***cor*** > ***dechor*** [n.] 'distinction; act of distinguishing'.)Ⓑ

t(u)-eni/ande-koro-* > ***tinchor* [m.] 'contribution; supply; act of contributing; supplying; furnishings, equipment' ↔ no attested vb. **do·inchuirethar*.

t(u)-eter-koro-* > ***tetarcor* [m.] 'act of interposing'

↔ vb. *do·etarcuirethar* [w. *-ī*] 'intercedes'.

tu-koro-* > ***tochor* [m.] 'act of putting, placing; throwing'

↔ vb. *do·cuirethar* [w. *-ī*] 'puts, places; throws'.

u̯or-koro-* > ***forcor* [m.] 'rape, violation; act of raping, violating'

↔ vb. *for·cuirethar* [w. *-ī*] 'overpowers, overthrows; rapes, violates'.

u̯rit-koro-* > ***frec(c)or* [m.] 'worship; act of worshiping'

↔ vb. *fris·cuirethar* [w. *-ī*] 'applies (the mind), worships'.

Comments:

Ⓐ Although this verb has sometimes been taken as a denominative formation from its verbal noun ***cor***,[57] it has also been argued that it derives from an inherited causative-iterative formation.[58] Semantic considerations might help decide the matter, if there were not considerable uncertainty as to the PIE root connection. A derivation from PIE √**(s)ker-* 'spring' or 'turn', as proposed by Pokorny (1920: 78f.; *IEW* 935 s.v. **2. (*s*)*ker-*, *skerə-* : *skrē-***; cp. *LÉIA* C-206 s.v. **1 cor**, and *EDPC* 217 s.v. ***koro-**), poses semantic

---

[57] *GOI* 338 § 525(c), 446 § 722; *EDPC* 217 s.v. ***koro-**.

[58] Pokorny 1920: 78f.; Schumacher 2000: 160f., 164f.; *LIV*² 354f. s.v. 3.****kerH-***.

difficulties. Schumacher's suggestion (2000: 161) that **kor-ī-* is derived from the causative of PIE **ḱerh₂-* 'break, shatter' is also problematic. As Schumacher notes, the morphology requires a post-PIE formation, since it can have developed only after the loss of the laryngeal; PIE **ḱorh₂-éi̯e/o-* would have resulted in **ḱor-a-i̯e/o-* > ‡*kor-ā-*. The semantic development would also require this, since it starts from the uniquely Celtic meaning 'fall' (seen in the OIr. pret. *do·cer* 'fell', suppletive to *do·tuit* 'falls') and proceeds from 'cause to fall' to 'put, throw'. Yet there is no evidence that an *o*-grade causative formation continued to be productive within Celtic. *LIV*²'s (354f. s.v. 3.****kerH-***) assignment of the Celtic verb to an iterative formation **korH-éi̯e/o-* of the root √**kerH-* 'pour out, distribute' does not face the same difficulties, and has outside support from some Indo-Iranian words: YAv. *kāraiieiti* 'streut aus, (be)sät, (be)pflanzt', Khot. *kerīndi* 'sie säen, pflanzen', Sogd. *kyr-* (/*kēr-*/) 'säen', and possibly Skt. *kālaya-* 'wegtreiben, verfolgen' ← 'zerstreuen'. Because of this, the last solution is here deemed the most plausible (see also § 2.2.3.1(2)).

Ⓑ *de-*ˈ here may be a prefix meaning 'in two, asunder', related to Lat. *dis-* and separate from the more common preverb *de-*ˈ < *de* 'away from', since the latter usually appears as *dí-*ˈ before consonants. Cp. *DIL* s.v. **dechor**: "A cpd. of dĕ- and cor, vn. of cuirithir .... The distinction made between dí-chor ['a putting away'] and de-chor ['a disagreement, a difference, diversity'] points to dis- as the origin of de-." See § 3.1.14(2) comment E for additional discussion.

3.1.31. *da^{i}m-* 'yield, submit, endure'

< PCelt. **dam-i̯e/o-* < PIE **dm̥h₂-i̯e/o-* ← √**demh₂-* 'tame, subdue'.

(1) PCelt. ****dam-tion-*** (⇐ PIE **dm̥h₂-*):Ⓐ

◊ [[**damtion-* > ***déitiu*** 'recognition, admission; act of recognizing, admitting'

↔ vb. *daimid* [s. *-i̯e/o-*] 'submits, concedes, yields'.]]

ad-damtion-* > ****aitiu* ⇒ ***aititiu***Ⓑ [f.] 'acknowledgement, admission; act of acknowledging, admitting' ↔ vb. *ad·daim* [s. *-i̯e/o*] 'acknowledges, admits'.

(*com-*ᶜ + ***déitiu*** > ***comd(e)itiu*** [f.] 'acknowledgement; act of acknowledging (fully ?)'.)Ⓒ

u̯o-damtion-* > ****foitiu* ⇒ ***fodaitiu***Ⓑ [f.] 'suffering, bearing, enduring'

↔ vb. *fo·daim* [s. *-i̯e/o*] 'suffers, endures'.

Comments:

Ⓐ A direct inheritance from the PIE *seṭ* root would have produced PCelt. **dmă̆-tion-* < **dm̥h₂-tiHon-*. Old Irish ***déitiu*** < **dam-tiō* is probably an inner-Celtic formation, or if inherited must have been remodeled on the Celtic root **dam-*, which shows the regular loss of a laryngeal between a resonant and **-i̯-*.

Ⓑ The unsyncopated compound forms have been restored through influence from the simplex;[59] regular phonological development should have produced **ad-damtiō* > **aitiu* and **u̯o-damtiō* > **foitiu* (cp. **tu-mantion-* > ***toimtiu*** 'opinion, act of holding an opinion' and **u̯o-mantiō* > ***foimtiu*** 'readiness, act of being on guard', § 3.1.86(1)). The *-d-* of ***fodaitiu*** is shown to be neutral in Old Irish by the ninth-century spellings *fo**d**aitiu* (Sg. 137b10, 209b2) and *fo**d**aitin* (Ml. 24b13). It would appear therefore, although there are no genuine Old Irish attestations to confirm this, that a form **ataitiu* with neutral **-ta-* was restored in the first place, and the attested ***aititiu*** with palatalized *-ti-* is probably a Middle Irish innovation.

Ⓒ Leniting *com-*ᶜ (cp. MIr. *o chomdhiden*),[60] with *-m-* preserved before the dental, reveals a late formation (see § 2.1.3.3(2)). No corresponding verb is attested.

---

[59] Cp. *GOI* 69 § 109 on ***foditiu***.

[60] FBM 22.21.

3.1.32. *di-n-g-* 'press, form'

< PCelt. **di-n-g-$^{e}/_{o}$-* ← PIE **$d^{h}i$-n-$\hat{g}^{h}$-* ← √**$d^{h}e\underset{\sim}{i}\hat{g}^{h}$-* 'form, knead'.

(1) [[PrIr. ****dig-io-*** or ****dig-iā-*** (← PIE **$d^{h}i\hat{g}^{h}$-*):

◊ **digio/ā-* > ****dige*** ⇒ MIr. ***dinge*** [gender?]Ⓐ 'act of pressing, compressing, oppressing'

↔ vb. *dingid* 'presses, thrusts down'.]]

(2) PCelt. ****-dēg-o-*** (← PIE **$d^{h}e\underset{\sim}{i}\hat{g}^{h}$-*) or ****-dig-o-*** (← PIE **$d^{h}i\hat{g}^{h}$-*):

ari-uss-dē/igo-* > ***airtach* [n.] 'refreshment; act of refreshing'

↔ vb. *ar·utaing* [s. *-n..$^{e}/_{o}$*] 'refreshes, restores, builds up'.

kom-uss-dē/igo-* > ***cumtach* [n.] 'construction, edification; covering; adornment; act of constructing, building (up); act of covering, adorning; a building, edifice; a cover, case' ↔ vb. *con·utaing* [s. *-n..$^{e}/_{o}$*] 'builds, constructs; covers; adorns'.

ati-kom-uss-dē/igo-* or *aith-*ʿ + ***cumtach* > ***aithchumtach*** [n.] 'act of rebuilding'

↔ no attested vb. **ad·cumtaing*.

Comment:

Ⓐ The simple verbal noun ***dinge*** is first attested in the tenth-century *Togail Troí* ('Destruction of Troy') preserved in the twelfth-century *Book of Leinster* (LL 223b24 = TT 470). The Old Irish form must have been **dige*, with *-n-* inserted in Middle Irish from the verbal present stem, as implied by the compound **$\underset{\sim}{u}$or-dig-io/ā-* > OIr. ***fortige*** < 'act of oppressing' (Ml. 75b16) vs. MIr. ***fordinge*** ↔ vb. *for·ding* 'oppresses'. There is no indication of its original gender or whether the stem class was **-io-* or **-iā-*.

3.1.33. *dlig-* 'be entitled; be obligated'

< PCelt. **dlig-$^{e}/_{o}$-* ← PIE **$d^{h}l\underset{\circ}{e}g^{(\wp)h}$-* ← √*$d^{h}leg^{(\wp)h}$- 'debt, guilt, duty'.

(1) PCelt. ****dlig-eto-*** (← PIE **$d^{h}l\underset{\circ}{e}g^{(\wp)h}$-*):

◊ **dligeto-* > ***dliged*** [n.] 'right, due; duty, obligation (→ guiding principle, rule); condition of being entitled to, deserving'

↔ vb. *dligid* [s. -$^{e}/_{o}$] 'is entitled to, deserves; [pass.] is due from, required of'.Ⓐ

Comment:

Ⓐ *DIL* (s.v.) lists seven major definitions of the noun ***dliged***, all of which revolve around, or extend from, the notion of obligation in two basic senses: (1) 'entitlement, that which is deserved' (i.e., obligation toward the subject from another) and (2) 'duty, that which is required' (i.e., obligation from the subject toward another). These correspond to the two basic senses of the verb *dligid*: in the active, 'deserves, is entitled to', and in the passive, 'is due from or required of'. While the close connection between the verb *dligid* and the noun ***dliged*** is obvious, the latter very rarely appears in a true verbal-noun meaning, and never with strict verbal-noun syntax.[61] Only the seventh definition in *DIL*'s entry cites ***dliged*** as verbal noun of *dligid*, and that in an Early Modern Irish text. An early example of verbal-noun semantics may perhaps be seen in CG § 23, *ll.*320–21, *Cair*: *caiti déis ḟlatha, dég* ***dligid*** *comditen dána* 'Question: what is the authority of a lord, on account **of entitlement** of acknowledgment of profession?' Binchy expresses some perplexity: "The addendum to the question is puzzling: 'on account of right and acknowledgment and (or 'of') office'?" (1941: 32, ed.n.320). He suggests emending with a relative verb to provide better sense: *dég* ***dliges*** *comditin dána* 'because **he is entitled to** (or perhaps 'by reason of which **he is entitled to**') the

---

[61] Cp. Bergin 1949: 188f.; *GOI* 683, Translators' Note 157. For a fuller discussion of the semantics of ***dliged***, see Charles-Edwards 2003.

acknowledgment of his office'. But taking the verbal noun ***dliged*** to have the more verbal type of meaning here gives the same good sense without the need for emendation: 'on account **of** (his) **being entitled to** the acknowledgment of his office'.

3.1.34. *dlo-n-g-* 'split'

< PCelt. **dlu-n-g-$^{e}/_{o}$-* ← PIE ?**$d^{(h)}lu$-n-$\hat{g}^{(h)}$-* ← ?√**$d^{(h)}leu\hat{g}^{(h)}$-* 'split'.Ⓐ

(1) [[PCelt. ****dlug-io-*** (← PIE ?**$d^{(h)}lu\hat{g}^{(h)}$-):

◊ **dlugio-* > ***dlugae*** [n.?]Ⓑ 'act of splitting, cleaving'

↔ vb. *dlongaid* 'splits, cleaves'.]]

(2) PCelt. ****-dloug-o-*** (← PIE ?**$d^{(h)}leu\hat{g}^{(h)}$-) or ****-dlug-o-*** (← PIE ?**$d^{(h)}lu\hat{g}^{(h)}$-):

en(i)/ande-dl(o)ugo-* > ***indlach* [n.] 'division, dispute; act of cleaving, separating'

↔ vb. *in·dloing* [s. *-n..$^{e}/_{o}$*] 'cleaves, parts, separates'.

Comments:

Ⓐ The standard etymology derives the verb from PIE √**delg^{h}-* 'hew',[62] but it is hard to envision how the nasal-infixed form, PIE **dl̥-n-g^{h}-* > PCelt. **dling-*, could have developed into the Old Irish stem *dlong-*. The verbal noun too would have to have undergone the same mysterious replacement of **-i-* with *-o-*: PIE **dl̥g^{h}-* > PCelt. **dlig-* ⇒ **dlog-*. Analogy from the verbal stem can be effectively ruled out, since the absence of the nasal infix in the verbal noun shows an independent formation from the root. On the other hand, the verb stem *dlong-* and the verbal-noun stem *dlug-* are fully compatible with a *u*-diphthong root **$d^{(h)}leu\hat{g}^{(h)}$-*, and this would be the obvious solution if not for reduplicated preterite *·dedlaig*, which cannot be reconciled with a root of this shape.[63] The obstacle is removed if one recognizes the preterite to be suppletive, belonging etymologically to the weak

---

[62] Cp. *LÉIA* D-108f. s.v. **dlong-**; *LIV*² 113f. s.v. ****delg^{h}-***; *EDPC* 102 s.v. ****dlo-n-g-o-***.

[63] McCone 1991: 45.

ī-verb *dedlaigid(ir)* 'severs, separates', a denominative in **-sag-*[64] derived from *dedail* 'separation', and therefore not of the same formation as the *u*-diphthong verb.[65] While this resolves the formal difficulties, the etymology still remains obscure, as the verbal root **d(h)leu̯g̑(h)-* does not appear elsewhere in Indo-European.[66] Perhaps some sort of contamination has occurred in Proto-Celtic between **dlig-* 'hew' < PIE **dl̥gʰ-* (: √**delgʰ-*) and **lug-* 'break' (: PIE √**leu̯g-*)?[67]

Ⓑ *DIL* (s.v. **dluige**) and *LÉIA* (D-108f. s.v. **dlong-**) cite the word as an *io*-stem, apparently on the evidence of certain examples in Middle Irish and later with acc./dat.sg. in final *-e* instead of the *-i* proper to a feminine *iā*-stem. Assuming that the final vowel of these late spellings may be taken at face value (an assumption that is by no means assured), the additional fact that the word is feminine in Modern Irish might identify the Old Irish gender as being neuter.

3.1.35. *dri-n-g-* 'climb, advance'

< PCelt. **dri-n-g-e/o-* ← PIE **dr̥-n-gʰ-* ← √**dregʰ-* 'grasp, hold tight'.

(1) PCelt. ****dreg-smen-*** (← PIE **dregʰ-*):

dregsmen-* > ****dreim(m)* ⇒ ***dréim(m)***Ⓐ [n.] 'ascent; act of climbing, ascending'

↔ vb. *dringid* [s. *-n..e/o*] 'climbs, ascends, advances'.

Comment:

Ⓐ The regular outcome of PIE **dregʰ-smn̥* > PCelt. **dreg-sman* would be a form with a

---

[64] See § 2.1.5(c), formation (2) of the weak ī-class.

[65] See *DIL* s.v. **dedlaigidir** and *KPV* 284f. n.(a) s.v. ****dlu-n-g-e/o-***.

[66] *KPV* (*loc. cit.*) briefly considers Hitt. *daluki-* 'long', taken by Melchert (1994: 67) to be from PIE **dl-(e)ugʰ-*, but finds the semantic gap too wide to bridge.

[67] I owe this suggestion to Brent Vine (p.c.).

short vowel, OIr. **dreim(m)*. It is probable that the actual long-vowel form ***dréim(m)*** has been refashioned on the analogy of ***léim(m)*** 'leap, bound; act of leaping, jumping' ↔ vb. *lingid* 'leaps, springs'.[68] This alternative is to be preferred over the possibility of a late formation from the verbal stem *dring-*, although the latter would directly produce the correct outcome, because *(s)men*-constructions are almost always built to the root (§ 2.2.3.20), and furthermore because *dringid* shows influence from *lingid* in another part of the paradigm, namely, pret. *dreblaing, drebraing*, obviously remodeled after *leblaing* (⇐ *eblaing* < perf. **(φ)e-plong-*), preterite of *lingid*.[69] See further under § 3.1.74 comment A.

3.1.36. *éd-a-* 'close'

< PICelt. **ēd-ā-* ⇐ **ē-dă̆-* < PCelt. **e(φ)i-dă̆-* ← PIE **epi-* 'at' + √**deh₃-* 'give' or √**dʰeh₁-* 'put, place'. Ⓐ

(1) PICelt. ****ē-dă̆-tu-*** < PCelt. **e(φ)i-dă̆-tu-* (← PIE **epi-* + **deh₃-* or **dh₃-*^{C} or **dʰh₁-*^{C}): **ēdă̆tu-* > ***íadad*** [m.] 'closure; act of closing'

↔ vb. *íadaid* [w. *-ā*] 'closes'.

Comment:

Ⓐ The synchronic weak verb **ēd-ā-* arose from reanalysis of the compound **ē-* + **dă̆-* after the preverb had ceased to be recognized as such. The root may be from PIE √**deh₃-* 'give' > **dō-* > PCelt. **dā-*. Because Insular Celtic shows no trace of the PIE reduplicated present (Ved. *dá-dā-ti*, Gr. δί-δω-μι), *KPV* (266 n.(a) s.v. ****dā-***) supposes that the stem has been taken from the root-aorist imperative **dā* 'give!', itself secondarily drawn from pre-Celt. **dō-* in a non-final syllable, since inherited monosyllabic **dō* would have

---

[68] Stüber 1998: 69f.

[69] *GOI* 426 § 689(b); McCone 1991: 47; *KPV* 286 n.(a) s.v. ****dri-n-g-e/o-***.

become **dū* in Proto-Celtic. A simpler alternative may be to see **ēd-ā-* as the replacement of **ē-da-*, from the zero-grade form **epi-dh₃-*^{C}.[70] *EDPC* (86 s.v. ***dā-**) prefers to see the root √**dʰeh₁-* 'put, place' here for semantic reasons (cp. Gr. ἐπι-τίθημι ← √**dʰeh₁-*), which would also be possible if from the zero-grade **epi-dʰh₁-*^{C}.

The *tu*-stem verbal noun is as likely to be an inherited primary formation, cognate with the Vedic *tu*-infinitive (cp. acc. *dā́-tu-m*, dat. *dā́-tav-e*, abl.-gen. *dā́-to-s* ← PIE √**dʰeh₃-* 'give'; or acc. *dhā́-tu-m*, dat. *dhā́-tav-e*, abl.-gen. *dhā́-to-s* ← PIE √**dʰeh₁-* 'put') and the Latin and Balto-Slavic supines (cp. Lat. sup. *da-tu-m* [⇐ **dō-tu-m*?] ← PIE √**dʰeh₃-* 'give'), as a secondary *tu*-formation created after the compound had become opaque and the verb reanalyzed as a weak *ā*-verb. Again the PIE root is ambiguous: if full-grade, PIE √**dʰeh₃-* is the only choice (PIE **dʰeh₃-tu-* > **dʰō-tu-* > PCelt. **dā-tu-* vs. PIE **dʰeh₁-tu-* > **dē-tu-* > PCelt. ⁂*dī-tu-*); but Celtic has mostly generalized the zero grade in the *tu*-stem nouns, in which case either root would be possible (PIE **dʰh₃-tu-* or **dʰh₁-tu-* > PCelt. **dă-tu-*).

3.1.37. *-ell-a-* 'approach, go towards'

< PrIr. **-ell-ā-* { ⇐ **el-na-* ⇐ PCelt. **(ϕ)al-na-* < PIE **pl̥-n-h₂-* or: ⇐ PCelt. **(ϕ)el-na-* < PIE **pel-n-h₂-*Ⓐ } ← √**pelh₂-* 'approach'.

◊ No simplex.

(1) PrIr. ****-ell-o-*** ⇐ PCelt. **(ϕ)el-o-* (← PIE **pelh₂-*^{V}):Ⓑ

ad-ello-* > ***adall* [n.] 'visit; act of visiting'

↔ vb. *ad·ella* [w. *-ā*] 'visits, approaches'.

t(u)-ad-ello-* > ***tadall* [n.] 'visit, arrival; act of visiting, coming to'

↔ vb. *do·aidlea* [w. *-ā*] 'visits, comes to'.

---

[70] Watkins 1962: 190.

*u̯o-and(e)-ello- > **foíndel** [n.(?)]© 'vagrancy; act of wandering, roving'

↔ vb. *fo·indlea* [w. -ā] 'wanders, roves'.

*dī-ello- > **díall** [n.] 'deviation, moral deviance; act of turning aside, going astray'

↔ vb. *do·ella* [w. -ā] 'turns aside, deviates, goes astray'.

(2) PrIr. ***-ell-ă̆-tu-*** (← vb. stem *-ell-ā-):

*t(u)-en-kom-ellă̆tu- > **tecmallad** [m.] 'collection; act of collecting, gathering'

↔ vb. *do·ecmalla* [w. -ā] 'collects, gathers'.

*t(u)-ellă̆tu- > **tellad** [m.] 'act of taking away, depriving'

↔ vb. *do·alla, do·ella* [w. -ā] 'takes away, steals, strips away, cuts off'.

Comments:

Ⓐ The transfer to weak ā-flexion could not have happened before *-ln- had become -ll-, rendering the earlier *na*-stem formation opaque, but it undoubtedly occurred before the split of British and Irish.[71]

This verb is one of four *n*-infix presents that have *e*-vocalism in Irish, the others being *·ern* 'bestows, grants' (§ 3.1.39), *·sern* 'strews, arranges' (§ 3.1.115), and *·cella* 'moves (round)' (§ 3.1.20). The attested Welsh equivalents, *sarn-u* 'strew' and *pall-u* 'come to an end' corresponding to the last two Irish verbs, have the *-aR-* of an inherited zero grade. According to the view espoused by Marstrander (1924: 33–36), *KPV* (43–45), and others, the zero grade was universally generalized in Proto-Celtic and *e*-vocalism adopted in prehistoric Irish by analogy with the subjunctive. But McCone (1991: 27–37), objecting to the inexplicable failure of this analogy to affect other *n*-presents under apparently identical conditions, and noting parallel *e*-grade forms in Italic and elsewhere, proposes that these four verbs had "state I" *e*-grade strong nasal presents

[71] McCone 1991: 32f.

(*CéR-n-H-*) in PIE and retained their apophonic alternation into Celtic, British later generalizing the zero grade and Irish the full grade.

A potentially serious drawback to McCone's solution is that it espouses a minority view that amphikinetic "state I" nasal-infix presents (*CéR-n-C- : *C̥R-n-C-´) existed in PIE beside a "state II" hysterokinetic type (*C̥R-n-éC- : *C̥R-n-C-´).[72] Furthermore, McCone's objection to the lack of uniformity in analogical spread is not strong. While it is always desirable to be able to account for the distribution of analogical changes, it must be kept in mind that analogy is by its nature less predictable than general sound laws and cannot necessarily be expected to apply consistently even under apparently identical conditions. The balance of weight therefore seems to be somewhat in favor of the more traditional explanation involving analogical replacement of the root grade in Irish; but the verdict is not decisive. The parallel *e*-grade forms seen elsewhere, especially in the closely connected branch of Italic, constitute a potentially significant detail that should not be lightly dismissed. Moreover, since it is undeniable that Celtic strongly favors the generalization of the zero grade in inherited ablauting paradigms, the synchronically anomalous vocalism of these four common verbs, set against the generalized zero grade of all other *n*-infix presents in Celtic, does have the appearance of an archaism.

Ⓑ Original *-*el-o-* was reshaped to *-*ell-o-* through influence of the verbal present stem in *-ll-* < *-*ln-*.

Ⓒ The gender in Old Irish is not clear, but presumably neuter in common with all the other *o*-stem compounds of this root.

---

[72] According to this theory, the original hysterokinetic strong stem *C̥R-n-éC- was secondarily resegmented as *C̥R-né-C-. For complete details, see McCone 1991 chs. 2 and 3 w. further refs., esp. Strunk 1967; 1973; 1984.

3.1.38. *-em-* 'take'

< PCelt. **-em-$^{e}/_{o}$-* ← PIE √**$h_1$em-* 'take'.

◊ No simplex.

(1) PCelt. ****-em-tu-*** (← PIE **$h_1$em-*) or ****-am-tu-*** (← PIE **$h_1\underset{\circ}{m}$-*):

kom-e/amtu-* > ***coiméit* [m.] 'preservation; act of keeping, preserving'

↔ vb. *con·oí, con·eim* [s. -$^{e}/_{o}$] 'keeps, preserves'.Ⓐ

ambi-kom-e/amtu-* > ***imchomét* [m.] 'act of guarding, watching over'

↔ no attested vb. **imm·coim.*

ari-kom-e/amtu-* > ***airchomét* [m.] 'preservation; act of keeping, preserving'

↔ no attested vb. **ar·coim.*Ⓑ

(2) PCelt. ****-am-tion-*** (← PIE **-$h_1\underset{\circ}{m}$-*):

ari-(u̯o-)amtion-* > ***airitiu* [f.] 'reception, acceptance; act of receiving, accepting' → 'act of tending, looking after' ↔ vb. *ar·eim* and *ar·foím* [s. -$^{e}/_{o}$] 'receives, accepts'.

di-amtion-* > ****détiu* ⇒ ***dítiu***Ⓒ [f.] 'shelter, protection; act of sheltering, protecting'

↔ vb. *do·eim* [s. -$^{e}/_{o}$] 'shelters, protects'.

Comments:

Ⓐ The preterite and perfect forms of **kom-em-* supply the preterite and perfect of *con·oí* (< **kom-au-*). The verbal noun, which corresponds to **kom-em-*, serves for both.[73]

Ⓑ Compare the derived verb *ar·coimti* [w. -ī] 'excuses oneself', § 4.1.4.

Ⓒ The stem vocalism of ***dítiu*** instead of regular **détiu* may be due to the influence of verbal forms such as 3.sg.pres.subj. *·dímea* < **-di-ema-*.[74]

---

[73] *GOI* 472 § 767.

[74] Stüber 1998: 124.

3.1.39. *er-n-* 'grant, bestow'

< PrIr. **er-na-* { ⇐ PCelt. *(ϕ)*ar-na-* < PIE **pr̥-n-h₃-* or: / < PCelt. *(ϕ)*er-na-* < PIE **per-n-h₃-*Ⓐ } ← √**perh₃-* 'provide'.

(1) PrIr. ****ra-to-*** < PCelt. *(ϕ)*ra-to-* (← PIE **pr̥h₃-*):

◊ **rato-* > ***rath*** [n.] 'bestowal, grace; a gift, favor'Ⓑ

↔ vb. *ernaid* [s. *-na*] 'bestows, grants'.

Comments:

Ⓐ For the issues surrounding the *e*-vocalism of *·ern* 'gives', *·sern* 'strews, arranges', *·ella* 'goes towards', and *·cella* 'goes around', see § 3.1.37 comment A.

Ⓑ ***Rath*** is formally a verbal noun corresponding to the *to*-participle of the verb, but it is only used in its abstract and concrete senses 'bestowal, grace; a gift, favor', etc.

3.1.40. *eth-a-* 'go'

< PrIr. **it-ā-* ← PCelt. perf.pass. **i-to-*Ⓐ < PIE **h₁i-tó-* ← √**h₁ei̯-* 'go'.

◊ Simple verb *ethaid* [w. *-ā*] 'goes, moves'; no simple verbal noun attested in Old Irish.Ⓑ

(1) PCelt. ****-i-tā-*** (← PIE **h₁i-*):

ad-itā-* > ***aided* [f.] 'violent death'Ⓒ

↔ vb. *ad·etha* [w. *-ā*] 'goes towards, attacks, seizes; obtains, gets'.

Comments:

Ⓐ The verb *ethae, ·eth*, historically a passive participle formation from the *to*-adjective of the PIE verb √**h₁ei̯-* 'go', supplies the preterite passive of *téit* 'goes'. From this base a weak *ā*-verb *ethaid* 'goes' and its compound *ad·etha* 'goes towards, seizes, gets' were built.[75]

Ⓑ The only simple verbal noun attested is MIr. ***ethamain*** [f.] 'act of going, moving'

---

[75] *GOI* 473 § 769; for further details, see *KPV* 375f. n.(a) s.v. ****i-to-***.

(LL 239a35 = TT 1663–64) which appears to be of the same late productive formation as that found in many other verbal nouns in Middle Irish: ***ailemain*** 'act of rearing' (⇐ OIr. ***altram(m)***), ***anmain*** 'act of remaining, staying' (⇐ OIr. ***anad***), ***canamain*** 'act of singing' (⇐ OIr. ***cétul***), ***crenamain*** 'act of spending' (⇐ OIr. ***creic(c)***), ***sloinnemain*** 'act of declaring' (⇐ OIr. ***slondud***), etc.

© Despite *DIL*'s (s.vv. **ad-etha** and **aided**) hesitation, the suggestion of *VKG* (II, 514 § 716(1)) that ***aided*** is the verbal noun of *ad·etha* 'attacks, seizes' seems sound. Marstrander's (1962: 206) objection to the voicing of the dental ("Not from *ad·etha* 'goes against, attacks' (pl. aide*d*a!)") is not relevant since the spelling in question is of Middle Irish date, when the voicing of the fricative between unstressed vowels (**aide**th**a* > *aide**d**a*) is to be expected; this phenomenon was already underway in our early texts and had become the norm already by later Old Irish.[76] Marstrander's suggestion of a derivation from PIE √**ped-* 'fall' (Ved. *pádyate* 'falls, perishes', OE *fetan* 'to fall', Lat. *pessum* (supine) *dō* 'strike down, kill') is unlikely because this root is otherwise missing in Celtic. It is true that the usual formation for the verbal noun of a weak verb would be a deverbative *tu*-stem (in this case **aditātu* > **aδ'θaθ* > **atʲtʲəθ* = ⁂*aited*), but given the etymology of the root (comment A), a substantivization of the *to*-participle is fitting. The attested forms generally indicate an *ā*-stem, **ad-i-tā-*. In terms of semantics, a development from 'attack, seizure' to 'violent death' is understandable.

---

[76] *GOI* 82 § 129.

3.1.41. *fed-* 'lead, bring'

< PCelt. **u̯ed-$^{e}/_{o}$-* ← PIE √**u̯ed^{h}-* 'lead'.

(1) PCelt. ****u̯ed-o-nā-*** (← vb. stem **u̯ed-o-*):Ⓐ

◊ **u̯edonā-* > ***fedan*** [f.] 'act of bringing, leading; a yoke, harness'

↔ vb. *feidid* [s. -$^{e}/_{o}$] 'brings, leads'.

ad-u̯edonā-* > ***aidbden* [f.] 'act of leading (to, towards)'

↔ vb. *ad·feid* [s. -$^{e}/_{o}$] 'leads (to, towards)'.

t(u)-ari-u̯edonā-* > ***tairiden* [f.] 'act of leading (water); a watercourse, millrace'

↔ no attested vb. **do·airet*.

dī-u̯edonā-* > ***díden* [f.] 'act of leading (away); end'Ⓑ

↔ vb. *do·feid* [s. -$^{e}/_{o}$] 'leads away; brings about'.

tu-dī-u̯edonā-* > ***tuididen* [f.] 'act of leading, guiding'

↔ vb. *do·diät* [s. -$^{e}/_{o}$] 'leads, guides'.

tu-u̯edonā->* ***tuíden*Ⓒ [f.] '(*leg.*) act of bringing, leading in' → 'proof, sworn evidence'

↔ vb. *do·feid* 'brings, leads; goes before, takes precedence'.

Comments:

Ⓐ The absence of raising of the root vowel in *fedan* shows that the intervening vowel was not a high vowel, and the neutral cluster in the syncopated genitive *inna **fednae*** gl. *invectionis* (Ml. 76a9) shows that it was not a front vowel. Of the two remaining possibilities, **-a-* or **-o-*, the thematic **-o-* appears most likely, given the lack of an obvious source for **-a-* coupled with the fact that **-o-nā-* is the feminine correspondent to the neuter **-o-no-* formation of one other verbal noun (not attested in our corpus), ***mlegon*** 'act of milking' < **mlig-o-no-* < **mḷg-o-no-* (§ 2.2.3.11).

Ⓑ The only examples of ***díden*** listed by *DIL* (s.v.) are with the meaning 'end' in the phrase *áin dídine* 'end fast' = 'Friday' (i.e., the second of two fast days of the week,

opposed to *cét-áin* 'first fast' = 'Wednesday'). But Baumgarten (1983) and Breatnach (1987: 118) have noted further examples in the literature where it is used as a verbal noun corresponding to *do·feid* 'leads (away)' (< *$dī$-$u̯$ed-$^{e}/_{o}$-). (*DIL*'s entry **do-fed** appears to combine both *$dī$-$u̯$ed-$^{e}/_{o}$- 'lead (away)' and *tu-$u̯$ed-$^{e}/_{o}$- 'bring (in); take precedence'.)[77]

© There is no reason to regard ***tuíden*** as a by-form of ***tuididen***, despite the suggestion of *DIL* (s.v. **tuidin**). The latter reflects *tu-$dī$-$u̯$ed*V*nā*-, whereas the former is the regular outcome of *tu-$u̯$ed*V*nā*-. As Breatnach points out (1989: 35), the vowel of the first syllable is the diphthong *-uí-* rather than *-u-* followed by palatalization. It is likely to be the same word as MIr. *toíden/taíden* (MoIr. *taoidhean*) 'troop, company',[78] since *uí* as a rule ceases to be distinguished from *oí, óe, aí, áe,* etc. in Classical Old Irish.[79] The spelling *tuíden* 'proof, evidence', as distinct from *toíden/taíden* 'troop, company', is thus probably only graphical and traditional from its status as a technical legal term.

3.1.42. *-fe-n-* 'bend, enclose'

< PCelt. *-$u̯$*i-na*- < PIE *$u̯$*i-n-h_1*- ← √*$u̯eih_1$- 'bend, enclose'.

◊ No simplex.

(1) PCelt. ***-$u̯ei$(*i*)-o-*** (← PIE *$u̯eih_1$-):Ⓐ

*ambi-$u̯ei$(*i*)o- > ***imbe*** [n.] 'act of fencing, hedging in; a fence, hedge'

↔ vb. *imm·fen* [s. *-na*] 'hedges round, fences in, encloses'.

*ari-$u̯ei$(*i*)o- ⇒ ***airbe***Ⓑ [n.] 'hedge, fence'

↔ vb. *ar·fen* [s. *-na*] 'erects a fence, fences in'.

[78] Cp. Meyer, *Wortk.* 187; *DIL* s.v. **1 taíden**.

[79] Cowgill 1967: 135–37; Greene 1976: 39f.

kom-ati-u̯ei̯(i̯)o-* > ***comaithe* [n.] 'neighborhood, vicinity; neighbors (*coll.*)'

↔ no attested vb. **con-aithen*.

u̯or-u̯ei̯(i̯)o-* > ***forbae* [n.] 'completion, perfection; act of finishing, completing'

↔ vb. *for·fen* [s. *-na*] 'finishes, completes'.

(2) PCelt. ***?*-u̯ei̯(i̯)-ā-*** (← PIE **u̯eih₁-*):

*?*ati-u̯ei̯(i̯)ā-* > ***aithe*** [f.?][Ⓒ] '(re)payment, recompense; act of paying, repaying'

↔ vb. *ad·fen* [s. *-na*] 'requites, repays, recompenses'.[Ⓓ]

Comments:

Ⓐ For the shape of the stem **-u̯ei̯(i̯)-o-*, see Schumacher (2000: 174f.) and § 2.2.3.6 *supra*.

Ⓑ Inherited intervocalic **-u̯-* regularly disappears without a trace in unstressed syllables,[80] so ***airbe*** with *-b-* cannot be regularly derived from **ari-u̯ei̯(i̯)o-*. The obvious analogical model for this form was ***forbae***: *for·fen* : *forbae* :: *ar·fen* : X = *airbe*.

Ⓒ Feminine gender has been assumed because of the acc.sg. *aithi* which appears five times in Würzburg.[81] Caution is in order, however, as there is no direct indication of the early gender, and there is some indication of an anomalous (perhaps indeclinable?) paradigm. Thurneysen succinctly sums up the unusual nature of this word: "The vb.n. of **ad·fen** 'requites' occurs later as **aithe** (**aith-ḟe*); but in Wb. the acc. is always **aithi**, and in Sg. 11[b]3 and Thes. II 227, 21 this form seems to be written even for the nom.; cp. also Trip. 54, 5" (*GOI* 449 § 725). These are the only case forms that appear in Old Irish. Scribal error seems excluded since the two ninth-century nominatives appear in unrelated manuscripts, the St. Gall Priscian and the Carlsruhe Priscian. Analogy is also unlikely in the absence of any model for it. This problematical set of facts looks

---

[80] *GOI* 125 § 205.3; Kortlandt 1986: 89f.; Uhlich 1995: 12.

[81] E.g., *LÉIA* A-54 s.v. **aithe**; *LWG* 65 s.v. **aithe**.

suspiciously like an inheritance, although it is not clear how to account for it.[82]

Ⓓ The sense 'repay, recompense' is probably an extension of an earlier meaning 'return' ← 'bend back'. If the feminine gender is not an illusion (see comment C), it is possible that the feminine formation served to distinguish ***aithe*** [f.] '(re)payment' from a no longer extant **aithe* [n.] 'return' < **ati-u̯ei̯(i̯)-o-*.

3.1.43. *-fet-* 'blow'

< PCelt. **su̯isd-e/o-* 'blow' ← PIE ?**su̯isd-* ← ?**√su̯ei̯sd-* 'whistle, hiss'.Ⓐ

◊ No simplex in Irish.

(1) PrIr. ****-su̯idd-o-*** < PCelt. **su̯isd-o-* (← PIE ?**su̯isd-*):

t(u)-ande-su̯iddo-* > ***tinfed* [n.] 'breath; inspiration; act of breathing'

↔ vb. *do·infet* [s. *-e/o*] 'breathes; inspires'.

Comment:

Ⓐ Pokorny (*IEW* 1040f. s.v. ***su̯ei-, su̯i-***) lists various Indo-Iranian, Greek, Balto-Slavic, and Celtic words belonging to the semantic group of 'hiss, whistle' *et sim.* under an onomatopoeic etymon **su̯eizd-*.[83] *KPV* (612 n.(a) s.v. ****su̯isd-e/o-***) expresses some doubt as to their Proto-Indo-European antiquity, excluding Sanskrit *kṣvēḍati, kṣvēdati* 'hums,

---

[82] One might speculate that the answer is to be sought in the distinctive shape of the stem. It is just possible that the strongly front quality of the pre-apocope sequence **-iu̯'i̯a-* was resistant to the usual *a*-affection of unstressed syllables (Greene's rule 6, Greene 1973: 131f.), so that final **-i* instead of **-e* remained after apocope. (Whether the suffix was earlier **-io-* or **-iā-* is irrelevant, as both had fallen together in **-i̯a-* by this stage.) If this is correct, it means that the compounds ***airbe***, ***comaithe***, and ***imbe*** (replacing **airi*, **comaithi*, and **imbi* respectively) underwent the same analogical reshaping to the "regular" stem type that later affected ***aithe***. Remodeling has certainly occurred in the case of ***airbe***, as has been seen (comment B), and ***comaithe*** only appears in Middle Irish manuscripts, so the Old Irish form is not recoverable. The nom.sg. ***imbe*** in Milan would only show that the reshaping of this word had taken place by the ninth century. The solution suggested here does not appear to be verifiable, however, since to my knowledge the sequence in question has no parallel outside of the compounds of this verb.

[83] Also some Italic and Germanic words from a variant base **su̯eighl-* (but for Lat. *sībilāre* etc., cp. de Vaan 2008: 561 s.v. **sībilus**: from onomatopoeic *sīb-*, or *sī-* with a suffix **-þlo-*).

murmurs, growls, hisses, etc.' completely and suggesting that the other words are independent dialectal formations. Nevertheless, the ablaut alternation implicit in a comparison of this verbal base *-fet*, from the zero-grade **su̯isd-* (not obvious from the Irish compound forms but confirmed by MW *chwythu* 'to blow, blast', etc.), with the related verb *séitid* 'blows' and its associated forms, from the full-grade **su̯ēsd-* < **su̯ei̯sd-* (§ 4.1.95), would seem to support a Proto-Indo-European date for this root.

3.1.44. *feth(-i)-* 'look at, observe'

< PCelt. **u̯et-$^{e}/_{0}$-* (⇒ PrIr. **u̯et-ī-*) ← PIE √**u̯et-* 'be familiar with, aware of'.Ⓐ

(1) PrIr. ****u̯et-ī-mā-*** (← vb. stem **u̯et-ī-*):Ⓑ

◊ [[**u̯etīmā-* > ***fethem*** [f.] 'act of looking at, observing, watching'

↔ vb. *feithid* [s. -$^{e}/_{0}$ / w. -*ī*] 'watches, observes, pays attention to'.]]

ande-u̯etīmā-* > ***indithem* [f.] 'attention, heed; act of paying attention, heeding'

↔ vb. *ind·feith* [s. -$^{e}/_{0}$ / w. -*ī*] 'pays heed to, is intent on'.

Comment:

Ⓐ Schumacher (*KPV* 677 n.(a) s.v. **1 **u̯et-e/o-***) has made the attractive suggestion that the original meaning of the PIE root was 'turn, make one's way', extended secondarily (through 'turn one's attention to') to the generally accepted sense 'be familiar with, be aware of',[84] thereby unifying this lemma with PIE √**u̯et-* 'turn' which lies behind **u̯et-es-* 'year' ← 'a turning, i.e., going in a circle' (> Gr. [ϝ]έτος 'year', Lat. *vetus* 'old'), etc. If this proposal is correct, then both OIr. *feithid* 'observes, pays attention to, considers' (*DIL's* **1 fethid**) and OIr. *feithid* 'goes, makes one's way' (*DIL's* **2 fethid**) can be united under the same root.

---

[84] This meaning was first suggested by Tichy (1980: 3f. fn.8), based largely on Indo-Iranian evidence, and is accepted by Watkins (1995: 118) and *LIV*^{2} (694 s.v. ****u̯et-***).

Ⓑ The Old Irish verb *feithid* is secondarily a weak *ī*-verb,[85] but the original strong formation is still evident in a number of its forms such as the *ā*-perfect[86] *ro·fāith*, the endingless 3.sg.pres. of the compound *ar·feith* 'tends, looks after', etc. The verbal noun has a type of formation typically associated with weak *ī*-verbs in Insular Celtic (§ 2.2.3.9).

3.1.45. *fill-i-* 'bend'

< PrIr. **u̯ell-ī-* ⇐ PCelt. **u̯el-ni-* ⇐ PIE **u̯l̥-n-h₁-* (or **u̯el-n-h₁-*?) ← PIE √**u̯el-h₁-* 'turn, wind'. Ⓐ

(1) PrIr. ****u̯ell-ĭ̆-tu-*** (← vb. stem **u̯ell-ī-*):Ⓑ

u̯ellĭ̆tu-* > ***filliud* [m.] 'act of bending; bowing, kneeling'

↔ vb. *fillid* [w. *-ī*] 'bends, bows, kneels'.

Comments:

Ⓐ The traditional etymology takes this verb to be an old *n*-present,[87] but this analysis poses certain challenges. The Primitive Irish weak stem **u̯ell-ī-* must have replaced **u̯el-ni-*, a preform that presupposes a PIE *n*-infixed present to a *set* root √**u̯elh₁-* (cp. PCelt. **-bal-ni-* 'die' ⇐ PIE **-gʷl̥-n-h₁-*, § 3.1.11 comment A). (For the *e*-grade of the root instead of zero-grade **u̯al-ni-* < **u̯l̥-n-h₁-*, see § 3.1.37 comment A.) Although no nasal present of this root is attested elsewhere in Indo-European, it would be the only satisfactory source of the Irish verb in **-ll-ī-*. The Irish verb is not listed at all in *LIV*², but from a formal standpoint it most logically belongs under the entry 2.****u̯elH-*** '(sich) wälzen, wallen' (677), and would specify the laryngeal as being **h₁*. Semantically,

---

[85] Klingenschmitt *apud* Tichy, *loc. cit.*; Watkins, *loc. cit.*

[86] *EIV* 53f.

[87] E.g., *VKG* II, 522 § 725; *IEW* 1141 s.v. **7. *u̯el-, u̯elə-, u̯lē-***. The stem presented by *EDPC* (411f. s.v. ***wel-no-***), i.e., PCelt. **u̯el-n-ᵉ/₀-* ← PIE √**u̯el-* 'turn, wind', clarifies neither the **-n-* nor the weak *ī*-verb.

however, it fits better under 2. ***u̯el-*** 'drehen, rollen' (675). These two entries, along with 1. ***u̯elg-*** 'sich rollend (?) bewegen' (676), almost certainly reflect extended variants of a single underlying root, and Pokorny appropriately assembles them, together with other root enlargements and stem formations, under the single rubric **7. *u̯el-, u̯elə-, u̯lē-*** 'drehen, winden, wälzen'. *LIV*²'s attempt to segregate the various formations into separate roots with clear semantic boundaries probably oversimplifies the reality.

Ⓑ Intermediate *-*ĭ̯*- is indicated by the raising of the root vowel *-*e*- to -*i*-.

3.1.46. *fin-n-*$_{DEP}$ / *-fit-* / *-fét-* 'find out, experience'

< [1] pre-Ir. *$u̯i\text{-}n\text{-}d\text{-}nu\text{-}_{DEP}$ ⇐ PCelt. *$u̯i\text{-}n\text{-}d\text{-}{}^{e}/_{0}\text{-}_{DEP}$ ← PIE *$u̯i\text{-}n\text{-}d\text{-}$;Ⓐ [2] PCelt. *-*u̯id-*;

[3] PCelt. *-*u̯ēd-*$^{e}/_{0}$- ← PIE √*$u̯eid$- 'see, perceive'.

(1) PCelt. ***u̯id-tu-*** (← PIE *$u̯id$-):

◊ *$u̯idtu$- > ***fius(s)***Ⓑ [m.] 'knowledge; act of finding out, knowing'

↔ vb. *ro·finnadar* [s. *-nu*], *ro·fitir* [pret.pres.] 'finds out, knows'.

ande-u̯idtu-* > ***indas* [n.] '(description, account →) manner, nature, kind'Ⓒ

↔ vb. *in(d)·fét* [s. -$^{e}/_{0}$] 'tells, makes known'.

(**kom-u̯issu-* > ***cubus*** [m.(?)] 'conscience'.)Ⓓ

(**kom-* + ***cubus*** > ***cocubus*** [m.(?)] 'conscience'.)Ⓓ

(2) PCelt. ***-u̯id-tion-*** (← PIE *$u̯id$-):

t(u)-ad-u̯idtion-* > ***taidbius* ⇒ ***taidbsiu***Ⓔ [f.] 'appearance, manifestation; act of showing, pointing out' ↔ vb. *do·adbad* [s. -$^{e}/_{0}$] 'shows, points out; appears'.

exs-ande-u̯idtion-* > ***aisndís*Ⓔ [f.] 'declaration; act of declaring'

↔ vb. *as·indet* [s. -$^{e}/_{0}$] 'declares'.

u̯or-ande-u̯idtion-* > ***forndís* ⇒ ***forndisse***Ⓔ [f.] 'disclosure; act of telling, disclosing'

↔ vb. *for·indet* [s. -$^{e}/_{0}$] 'tells, discloses'.

*u̯riss-ande-u̯idtion- > ***fresndís***Ⓔ [f.] 'contradiction; act of contradicting'

↔ no attested vb. **fris-aisndet*.

Comments:

Ⓐ The Celtic strong *-n..ᵉ/₀*-verb that would be expected from the PIE nasal infix **u̯i-n-d-* (cp. Ved. *vi-**n**-d-áti* 'finds') was replaced at some point with a *nu*-formation **u̯i-n-d-nu-*, apparently on the model of **gni-nu-* > OIr. *·gnin* 'knows, recognizes'.[88] It is unclear whether British shares this innovation,[89] but the remodeling is fairly late in any event, since **gni-nu-* is itself the outcome of an earlier reshaping (see § 3.1.59 comment A). The verbal nouns of this root do not reveal a corresponding influence from the verbal nouns of *·gnin*.

Ⓑ Secondary *to*-stem inflection has begun to spread to ***fius*(s)** even as early as Würzburg, with gen.sg. *fiss* (5c16, 13b11) beside the historically regular *fessa* (26d15).[90]

Ⓒ For the semantic connection between the verb *in(d)·fét* 'tells, makes known' and the abstract ***indas*** 'manner, nature, kind', cp. OHG *wīsen* 'to show, direct, instruct', MoG *weisen* 'to point' and the related noun OHG *wīsa* 'method', MoG *Weise* 'way, manner'. Although ***indas*** is cited by both *DIL* (s.v.) and *LWG* (s.v.) as a verbal noun of *in(d)·fét* 'tells, makes known', it nowhere appears in strict verbal-noun usage, nor for that matter in any usage that would demonstrate a close semantic relationship with the verb. *VKG* (II, 519f. § 722(3)) therefore perceptively distinguishes between the "Abstrakt" ***indas*** and the "Infinitiv" (i.e., verbal noun) ***indisiu*** 'account, description; act of telling, describing' (which happens not to be attested in our corpus). The latter, reflecting a *tion*-stem

---

[88] *GOI* 357 § 552; *KPV* 691f. n.(b) s.v. ****u̯i-n-d-e/o-***.

[89] See *KPV* 692 n.(b) s.v. ****u̯i-n-d-e/o-***.

[90] Cp. § 2.2.3.25(1) on the broader confusion of *o*-stems and *u*-stems.

**ande-u̯id-tion-*, is the form that matches all the other compounds of this root with the preverb **ande-*.

Ⓓ Old Irish ***cubus*** 'conscience' (< **kom-u̯issu-*) is a Primitive Irish calque on Lat. *cōn-scientia*. The evidence shows that it was formed after initial **u̯-* had already become spirantized as *f-*, yielding OIr. *-b- /-β-/* < **-mf-* (see § 2.1.3.3(2); the earliest stratum of compounding with **kom-* + **u̯°* would have seen the complete disappearance of **-mu̯-*), but before raising caused the change of **-o-* > *-u-* in the stressed syllable before the following **-i-*. This post-dates the Proto-Insular Celtic change of **-DD-* > **-ss-*.[91] ***Cocubus*** is a later re-formation of **kom-* plus existing ***cubus***, no doubt through influence of the same Latin word after the earlier compound had become opaque; but it is still earlier than compounds with analogically leniting *com-* (e.g. ***com-chétbuid*** 'consent; act of consenting' calquing Lat. *cōn-sēnsus*, § 3.1.14(2)). ***Cubus*** and ***cocubus*** are pure abstracts, with no associated verb and no verbal-type semantic.

Ⓔ Unstressed **-u̯id-tiō* > PCelt. **-u̯issiu̯ū* appears to have regularly yielded OIr. **-(f)ius* by a special reduction rule that reduced **-siu̯-* to **-s-* in this environment (see § 2.2.3.22 and § 3.1.21(1) comment B), so ***aisndís*** and ***fresndís*** are the historically regular forms. Therefore ***aidbsiu*** [f.] 'declaration, act of setting forth' (not attested in our corpus) ↔ vb. *ad·fét* 'tells, relates', ***taidbsiu***, and ***forndisse*** must have restored the final vowel by analogy with forms such as ***tuistiu*** [f.] 'birth, act of engendering' (< **t(u)-uss-sam-tion-*), etc., where **-tiu̯-* was preserved.

---

[91] McCone 1996: 48.

3.1.47. *foíd-i-* 'send'

< PCelt. **u̯oid-ī-* < PIE caus. **u̯oi̯d-éi̯e/o-* ← √**u̯ei̯d-* 'see, perceive'.Ⓐ

(1) PCelt. ****u̯oid-e-tu-*** (← vb. stem **u̯oid-ī-*):

◊ **u̯oidetu-* > ****foídiuth*** > ***foít***Ⓑ [m.] 'act of sending'

↔ vb. *foídid* [w. *-ī*] 'sends'.

tu-u̯oidetu-* > ****toöídiuth* > ***toöít***Ⓑ [m.] 'act of sending'

↔ vb. *do·foídi* [w. *-ī*] 'sends'.

Comments:

Ⓐ The semantic development from PIE to Celtic was probably 'show' → 'assign' → 'send'.[92]

Ⓑ Both verbal nouns show unusual syncope of the historical penult and consequent coalescence of the two dentals, for which diverse explanations have been offered. Bergin (1928b: 193) proposed a generalized back-formation from the gen.sg. **foít†teo*, **toöít†teo*.[93] McCone (1981: 40f.), on the other hand, suggested a sporadic syncope of short vowels between dentals in final (post-syncope) syllables. The intermittency of this last rule is rather troubling, however, and in a later discussion McCone (1996: 128f.) seems somewhat more sympathetic to Bergin's explanation. Schrijver (1992: 183–85), also objecting to McCone's account, suggests that ***foít*** is probably analogical to the compounds ***toöít*** and ***esfoít*** [m.] 'emission, act of sending out' (the latter not attested in our corpus), where the final *-t* is explained to be regular by virtue of a pre-apocope rule (inspired by Cowgill 1980: 58) that deleted a short vowel between identical consonants — *t* and *d* being identical for purposes of this rule — in post-posttonic position:

---

[92] *LIV*² 667 n.15 s.v. ****u̯ei̯d-***.

[93] The retention of the diphthongal second syllable of **tu̯oidetu-* and the consequent syncope of the third is evidently a regular phenomenon; see § 4.2.5(1) comment B.

*'tu-u̯oiδeθu-, *'exs-u̯oiδeθu- > *'tuu̯oiδ†θu-, *'essu̯oiδ†θu- > *tuu̯oitt, *essu̯oitt > OIr. > ***toöít***, ***esfoít***. However, as McCone (1996: 106) has shown, this rule predicts the wrong outcome in the case of another verbal noun, OIr. ***cos(s)oít*** [f. *-tā*] 'accusation, act of accusing' (for which see § 4.2.5(1), fn. 222), and therefore cannot be valid. In the end, a back-formation from the genitive appears to be the most plausible explanation.

3.1.48. *-fort-i-* 'pour'

< PCelt. *-u̯ort-ī- < PIE caus.-iter. *u̯ort-éi̯e/o- ← √*u̯er-t-* 'turn'.Ⓐ

◊ No simplex.

(1) PCelt. ***-u̯ort-e-tu-*** (← vb. stem *-u̯ort-ī-*):

*di-u̯ortetu- > ***dórtad*** [m.] 'act of pouring (out), shedding'

↔ vb. *do·fortai* [w. *-ī*] 'pours (out), sheds'.

Comment:

Ⓐ PIE √*u̯er-t-* 'turn' is a *t*-extension of PIE √*u̯er-* 'bend, turn'.

3.1.49. *-fúar-* 'found'

< PCelt. pret. *u̯eur- ⇐ *u̯e-u̯rū-Ⓐ < PIE perf. *u̯e-u̯roh$_1$- ← PIE √*u̯reh$_1$-* 'find'.

(1) PCelt. ***u̯rī-to-*** (< PIE *u̯reh$_1$-to-*, or ⇐ PCelt. *u̯răă-to-* < PIE *u̯r̥h$_1$-tó-*):Ⓑ

◊ *u̯rīto- > ***fríth*** [n.] 'that which is found (thing or person); a find, a stray'

↔ vb. *fo·fúair* 'found', suppl. pret. of *fo·gaib* [s. *-i̯e/o*] 'finds, meets with, discovers'.

Comment:

Ⓐ For an account of this replacement of inherited PCelt. *u̯e-u̯rū- with *u̯e-ur- (> *u̯our- > PrIr. *-u̯ōr- > OIr. *·fúar*), and similarly PIE *ĝe-ĝnoh$_3$- > PCelt. *-ge-gnū- ⇒ *-ge-gn-* (> PrIr. *-geγn- > OIr. *·gén, ·géuin*), see *KPV* (681 n.(b) s.v. ***u̯e-u̯rū-/*u̯e-u̯răă-***; 73f.).

Ⓑ OIr. ***fríth*** 'a find, a stray' ultimately goes back to PIE √*u̯reh$_1$-* 'find', the root of OIr.

fo·fúair[94] 'found', suppletive preterite of *fo·gaib* 'finds'. Binchy (1941: 31) first suggested that ***fríth*** is an old verbal noun, noting its formal parallel with participial *fríthe* < **u̯rī-tio-*; this cannot be taken as certain, however, because no examples of verbal-noun usage are attested to provide verification.

Proto-Celtic **u̯rī-to-* appears to be a straightforward continuation of full-grade PIE **u̯reh₁-to-*, perhaps a "*vṛddhi* formation" from the *to*-adjective **u̯r̥h₁-tó-* (cp. § 2.2.3.14). However, the preterite passive forms of *(fo)·fúair* show the same long vowel: 3.sg. *fo·fríth* 'was found', *ni fríth* 'was not found', and as the Insular Celtic preterite passive goes directly back to the Proto-Indo-European *to*-participle,[95] these forms must have originated in the zero-grade **u̯r̥h₁-tó-*. For this reason Schumacher (*KPV* 682 n.(c) s.v. ****u̯e-u̯rū-/*u̯e-u̯ră-***) takes the full grade of **u̯rī-to-* to be an early Celtic innovation, perhaps modeled after the full grade of PCelt. **gnā-to-* (> OIr. *gnáth*) 'known'[96] at a time when Proto-Celtic still preserved transparent reflexes of the PIE ablaut grades. If so, then the source of the long vowel in ***fríth*** could also be an analogous root-vowel replacement. On the other hand, the influence could as well have gone the other way, with PCelt. **u̯rī-to-* < PIE **u̯reh₁-to-* supplying (additional) impetus for the remodeling of the *to*-participle.

---

[94] The preverb *fo-* disappears when there is a conjunct particle (see *GOI* 351 § 543(a)).

[95] *GOI* 437 § 705.

[96] As Schumacher regards the regular outcome of *CR̥HT* sequences to be PCelt. *CRăT* (*KPV* 136–38), he posits that PCelt. **gnā-to-* 'known' < (virtual) PIE **gneh₃-to-* was itself secondarily remodeled from inherited **gnă-to-* < PIE **ĝnh₃-tó-* in order to disambiguate it from the homonym **gnă-to-* 'born' < PIE **ĝn̥h₁-tó-* (349f. n.(s) s.v. ****-gni-na-***).

3.1.50. *ga^{i}b-* 'take, seize'

u̯or-gabu-* > ***forgub, forgab* [m.] 'blow, thrust (esp. a downward thrust from a spear or other pointed weapon)' ↔ vb. *for·gaib* [s. *-i$^{e}/_{o}$*] 'attacks with a pointed weapon'.

Comments:

Ⓐ The nasal of the second preverb is seen in two forms in the Milan glosses, acc.sg. *frisngabáil* (42c30) and dat.sg. *fresngabail* (56b1, 3); the spelling *fresgabá(i)l* shows the common loss of *-n-* between consonants.[97] The nasal must have abutted upon the root with no intervening vowel since the *-g-* of *fresgabál* is unlenited (modern *freasgabháil*); it is therefore a distinct formation from *ingabál* (< **eni/ande-gabaglā-*) which has lenited *-g-* (modern *iongh*abháil), a point also underscored by the semantic disparity between *ingabál* 'reproach' and *fresgabál* 'ascension'. Pedersen (*VKG* II, 530 § 734(10)) posits underlying **u̯riss-en-*, or perhaps **u̯riss-kom-*. Thurneysen (*GOI* 514 § 839.A), comparing the verb *as·ingaib* 'exceeds' (< **exs-en-gabi$^{e}/_{o}$-*), suggests a preverb chain beginning with **u̯rit(s)-exs-en-*; but the irregular syncope (**u̯rit(s)-exs-en-gabaglā* > ***fris†seng†bál*) makes this suggestion formally unappealing. It is more likely that **u̯riss-en-gab-* 'ascend' would be a parallel formation to **exs-en-gab-* 'exceed' rather than built upon it. If **u̯riss-en-* is the correct reconstruction, then *frisngabáil* (Ml. 42c30) with unlowered *-i-* is the earlier form, and those with *fres-* must be secondary. On the other hand, if Pedersen's alternative **u̯riss-kom-* is the correct preform, then the lowered vowel would be original: **u̯riss-kom-gab-aglā* > **fresc†ngabál* > **fresngabál, fresgabál* (for the loss of **-c-*, cp. ***forngaire, forgaire*** 'command, injunction' < **forc†ngaire* < **u̯or-kom-gario-* ↔ vb. *for·congair*

---

[97] *GOI* 113 § 180(3).

'commands, orders').

The verb does not provide any clarification on the matter. Ambiguous prototonic forms such as 3.pl. *·frescabat* are found in Old Irish, but the corresponding deuterotonic forms, **fris·engaib* or **fris·congaib*, etc., are not.[98]

Ⓑ The verb *ind·ocaib* is at best only marginally attested (see *DIL* s.v.), but the presence of both the verbal noun and a participle *inducbaide* 'glorious, exalted' provide confirmation of its existence.

Ⓒ The relationship between the synonyms *do·fócaib* 'lifts up, raises' and *do·furcaib* 'id.' is rather complex. Pedersen (*VKG* II, 530f. § 734(11)) assembles all the Old Irish finite forms, with various analogical remodelings, under a single verb, *do·furgaib* < **tu-u̯or-uss-gab-*, but suggests the possibility of a replacement of earlier **tu-ro-uss-gab-*. In spite of pondering whether some early deuterotonic forms in *t-úar-* (= *do·úar-*) — e.g., 3.sg.perf. *tuargab*, Wb. 26d11; pass. *tuárgabad*, 14b22 — might imply an underlying formation **t(u)-uss-* plus the inflectional perfective particle **-ro-* instead of the derivational preverb **-ro-*, he nonetheless admits no finite verbal forms from **t(u)-uss-gab-* before Middle Irish, but only the Old Irish abstract ***tocbál***. There is a contradiction here, of course, since the very presence of ***tocbál*** in Old Irish implies the prior existence of a verb **do·ocaib* < **t(u)-uss-gab-*. Thurneysen (*GOI* 341 § 529; 526 § 849.A) rectifies the matter by situating both verbs, **t(u)-uss-gab-* > pres. **do·ocaib* and **tu-ro-uss-gaib-* > pres. **do·rócaib*, in Old Irish, with confusion arising from their similarity in the perfect: **do·úargaib*, (·)*túargab* and *do·rurgab*, *·*turgaib*, respectively. The present forms in *·f-*, *do·fócaib* and *do·furgaib* were back-formed from the perfect (·)*túargab* and

---

[98] A suppletive compound *fris·ocaib* (< **u̯riss-uss-gabi*$^{e}/_{o}$-) appears in later manuscripts, but it is impossible to know how old this usage is, as no examples are citable from the few manuscripts that actually date to the Old Irish period; see *DIL* s.v. **fris-ócaib**.

*·*turgaib* by reanalyzing the underlying stems as ⁂*tu-u̯o-uss-gab-* and ⁂*tu-u̯or-uss-gab-*.

Ⓓ The unhistorical "double syncope" of ***tur†c†bál*** 'act of lifting, raising' undoubtedly arose by analogy with its synonym ***tocbál***: prot. *·*tocaib* : vn. ***tocbál*** :: prot. *·*turgaib* : *turgabál* ⇒ ***turcbál***.

3.1.51. *ga^{i}n-*$_{DEP}$ 'be born'

< PCelt. **gan-i̯^{e}/$_{0}$-$_{DEP}$* ← PIE √**ĝenh$_{1}$-* 'give birth'.

(1) PCelt. ****gen-en-*** (← PIE **ĝenh$_{1}$-*):

◊ **gen-en-* > ***gein*** [n.] 'birth, origin; act of procreating; (that which is born →) an infant, a person' ↔ vb. *gainidir* [s. *-i̯^{e}/$_{0}$*] 'is born, comes to life'.

ati-gen-en-* > ***aithgein* [n.] 'rebirth, regeneration; likeness, equivalent' → '(*leg.*) restitution, compensation' ↔ vb. *ad·gainedar* [s. *-i̯^{e}/$_{0}$*] 'is reborn'.

3.1.52. *ga^{i}r-* 'call, cry out'

< PCelt. **gar-i̯^{e}/$_{0}$-* ← PIE √**ĝar-* 'shout, call'.

(1) PCelt. ****gar-smen-*** (← PIE **ĝar-*):

◊ **garsmen-* > ***gairm***Ⓐ [n.] 'call, cry; act of calling, crying out'

↔ vb. *gairid* [s. *-i̯^{e}/$_{0}$*] 'calls, cries out'.

tu-garsmen-* > ***togairm* [n.] 'a calling, vocation; act of calling (on), invoking'

↔ vb. *do·gair* [s. *-i̯^{e}/$_{0}$*] 'calls (on), invokes'.

(*com-*$^{\text{'}}$ + ***togairm*** > ***comthogairm*** [n.] 'convocation'.)Ⓑ

(2) PCelt. ****-gar-io-*** (← PIE **ĝar-*):

ad-gario-* > ***acrae* [n.] 'suit, legal action; act of suing, prosecuting'

↔ vb. *ad·gair* [s. *-i̯^{e}/$_{0}$*] 'sues, prosecutes, brings legal action against'.

t(u)-ad-gario-* > ***tacrae* [n.] 'dispute, (*leg.*) lawsuit; act of disputing'

↔ vb. *do·acair* [s. *-i̯^{e}/$_{0}$*] 'disputes; (*leg.*) pleads, sues, argues'.

ari-gario-* > ***airgaire* [n.] 'prohibition; act of forbidding, prohibiting'

↔ vb. *ar·gair* [s. -$\underset{\frown}{i}^{e}/_{0}$] 'forbids, prohibits'.

t(u)-ari-en-gario-* > ***tairngire* [n.] 'promise; act of promising'

↔ vb. *do·airngir* [s. -$\underset{\frown}{i}^{e}/_{0}$] 'promises'.

$\underset{\frown}{u}$or-kom-gario-* > ***forngaire* [n.] 'command, order; act of commanding'

↔ vb. *for·congair* [s. -$\underset{\frown}{i}^{e}/_{0}$] 'commands, orders'.

$\underset{\frown}{u}$o-uss-gario-* > ***fócrae* [n.] 'announcement, proclamation; act of announcing, proclaiming, giving notice' ↔ vb. *fo·ocair, fúacair* [s. -$\underset{\frown}{i}^{e}/_{0}$] 'announces, proclaims'.

ari-$\underset{\frown}{u}$o-uss-gario-* > ***airfócrae* [n.] 'proclamation, warning; act of proclaiming, giving notice' ↔ vb. *ar·fócair* [s. -$\underset{\frown}{i}^{e}/_{0}$] 'proclaims, gives notice, warns'.

$\underset{\frown}{u}$rit(s)-gario-* > ***frecrae* [n.] 'answer, reply; act of answering, replying'

↔ vb. *fris·gair* [s. -$\underset{\frown}{i}^{e}/_{0}$] 'answers, replies'.

Comments:

Ⓐ While OIr. ***gairm*** could continue either **gar-men-* or **gar-smen-*, the unlenited *-m* of MW *gary**m***, MBret., MCo. *gar**m*** 'shout' shows that it must continue PCelt. **gar-sman*.

Ⓑ A calque on Lat. *con-vocātiō*, with analogically leniting *com-*‘ (§ 2.1.3.3(2)) added to ***togairm*** 'calling, vocation'.

3.1.53. *gel-* 'graze'

< PCelt. **g^{w}el-$^{e}/_{0}$-* ← PIE ?√**g^{wh}el-* or ?√**$\underset{\frown}{g}^{(\mathfrak{H})h}\underset{\frown}{u}$el-* 'graze'.Ⓐ

(1) [[PCelt. ****g^{w}li-tā-*** (← PIE **$g^{wh}\underset{\cdot}{l}$-* or **$\underset{\frown}{g}^{(\mathfrak{H})h}\underset{\frown}{u}\underset{\cdot}{l}$-*):

◊ **g^{w}litā-* > ****gleth, gleith*** [f.] 'act of grazing, feeding'

↔ vb. *geilid* [s. -$^{e}/_{0}$] 'grazes'.]]

(2) PCelt. ****g^{w}el-tā-*** (← PIE **g^{wh}el-* or **$\underset{\frown}{g}^{(\mathfrak{H})h}\underset{\frown}{u}$el-*):

◊ [[**g^{w}eltā-* > ***gelt*** [f.] 'act of grazing, feeding'

↔ vb. *geilid* [s. -$^{e}/_{0}$] 'grazes'.]]

eni/ande-g^{w}eltā-* or *in(d)-*‘ + ***gelt* > ***ingelt*** [f.] ‘act of grazing, feeding’

↔ no attested vb. **in-geil.*

kom-g^{w}eltā-* > ***congelt, comgelt*Ⓑ [f.] ‘act of sharing grazing with’

↔ vb. *con-geil* [s. -$^{e}/_{o}$] ‘has joint grazing with’.

Comments:

Ⓐ The reconstruction of PCelt. **g^{w}el-* from a PIE root ?√**g^{wh}el-* or ?√**ǵ^{h}u̯el-* is based on the likely equation of OIr. ***gelt*** ‘act of grazing’ with MW *gwellt* ‘grass’,[99] but a root of this shape does not appear elsewhere in Indo-European.

Ⓑ No genuine Old Irish examples of this verbal noun are attested, and the Middle Irish forms that occur vary between *congelt,* implying historical **kom-g^{w}eltā-,* and *comgelt* (*coimghelt*), implying a late formation of leniting *com-*‘ + ***gelt***.[100] It is debatable which represents the actual Old Irish form.

3.1.54. *gés-* ‘roar, bellow’

< pre-Ir. **gang-s-ī-* ← PIE √**gang-* ‘to mock’.Ⓐ

(1) PCelt. ****gang-smen-*** or ****gang-s-men-*** (← PIE **gang-*):Ⓑ

◊ **gangsmen-* > ***géim(m)*** [n.] ‘shout, roar, bellow (deep, resonant sound); act of lowing, bellowing’ ↔ vb. *géis(s)id* [w. -ī] ‘cries out, roars, bellows’.

Comments:

Ⓐ OIr. *géis(s)id* ‘cries out, roars, bellows’ appears to belong to the family of words that includes Skt. *gañjati* ‘sounds, makes a sound’, *gañjaḥ* ‘disrespect’, Gr. (Hesych.)

---

[99] Schumacher 2000: 57; *KPV* 372 n.(a) s.v. ****g^{u}el-e/o-***.

[100] The single occurrence in our corpus is spelled *coimgeilt,* BNT^{2} III.11 = *CIH* VI, 2219.8, with a variant reading *(co)mhfoighelt, CIH* III, 1138.16.

γαγγαίνειν · τὸ μετὰ γέλωτος προσπαίζειν, OE *canc* 'mockery', etc.[101] The *s*-extension, which is uniquely attested in Old Irish (whether or not this is general Celtic cannot be ascertained as no cognate Celtic forms survive), may be due to an expressive or onomatopoeic alteration; words of this semantic type are frequently subject to unpredictable reshaping.

Ⓑ It is not possible to know whether the **-s-* here belongs to the suffix **-smen-* or to the *s*-enlarged root **gang-s-* of the verb.

3.1.55. *-glád-i-*$_{DEP}$ 'speak'

< pre-Ir. **-glād-ī-*$_{DEP}$ (?)⇐ PIE caus.-iter. **$\hat{g}^{(h)}roh_1d$-éi$^{e}/_{o}$-* ← √**$\hat{g}^{(h)}reh_1d$-* 'cry, call out'.Ⓐ

◊ No simplex.

(1) pre-Ir. ****-glād-ī-mā-*** (← vb. stem **-glād-ī-*):

ad-glādīmā-* > ***ac(c)aldam* [f.] 'address, conversation; act of addressing, speaking to'

↔ vb. *ad·gládadar* [w. *-ī*] 'addresses, speaks to, converses with'.

ambi-ad-glādīmā-* > ***immac(c)aldam* [f.] 'conversation, dialogue; act of conversing together' ↔ vb. *imm·ac(c)aldadar* [w. *-ī*] 'converses together'.

Comment:

Ⓐ While this etymology is not beyond question, the verb may be comparable to PGmc. **grōtijan* > OE *grētan* 'to greet', ON *gróta* 'to distress, cause to weep' (cp. Sc. *greet* 'to weep'), a causative-iterative formation from PIE √**$\hat{g}^{(h)}reh_1d$-* 'cry, call out', with a replacement of *-r-* by *-l-* that is unexplained.[102] It has also been suggested that Skt.

---

[101] *IEW* 352 s.v. ***gang-***.

[102] Brent Vine (p.c.) suggests that the preverb *ad-* might be the significant factor here, perhaps triggering some sort of "coronal assimilation" that derhotacized the **-r-*. The operation of such an assimilation would hinge upon the phonetic details of the consonants in question; unfortunately, the pronunciation of /d/, /g/, /r/, and /l/ in the prehistory of Irish cannot be determined precisely. One other root shows a possible change of **-r-* to *-l-*, i.e., PCelt. **(ϕ)leng-* 'jump, leap' (→ OIr. *lingid*),

hrādate 'makes a noise, roars' may also belong to this PIE root.[103]

3.1.56. *gle-n-* 'stick, adhere'

< PCelt. **gli-na-* < PIE **gli-n-H-* ← √**gleiH-* 'stick, adhere'.

(1) PCelt. ****glina-mnā-*** (← vb. stem **gli-na-*):

◊ **glinamnā-* > ***glenamon*** [f.] 'act of sticking, adhering'

↔ vb. *glenaid* [s. *-na*] 'adheres, cleaves, sticks to'.

3.1.57. *-glen-n-* 'show, bring to light'

< PCelt. **-glan-n-d-$^{e}/_{o}$-* ← PIE **$g^{h}l̥$-n-d^{h}-* ← √**$g^{h}lend^{h}$-* 'shine; show'.

◊ No simplex.

(1) PCelt. ****-glend-smen-*** (← PIE **$g^{h}lend^{h}$-*) or ****-gland-smen-*** (← PIE **$g^{h}l̥nd^{h}$-*):

t(u)-exs-en-gle/andsmen-*(?) > ***teisclim*Ⓐ [n.] 'preparation; act of gleaning, gathering (in preparation for), preparing (?)'Ⓑ ↔ no attested vb. **do·ais(n)glainn.*

t(u)-exs-gle/andsmen-* > ***teclaim(m)* [n.] 'selection, partiality; act of selecting, choosing'

↔ vb. *do·eclainn* [s. *-n..$^{e}/_{o}$*] 'picks out, selects'.

u̯o-gle/andsmen-* > ***foglaim(m)* [n.] 'knowledge, study; act of learning, studying'

↔ vb. *fo·gleinn* [s. *-n..$^{e}/_{o}$*] 'gathers → studies, learns'.

Comments:

Ⓐ *LÉIA* (T-46 s.v. **teisclim**) takes this incorrectly as "nom verbal de *do·eclainn*, composé *to-ess-glenn*"; the verbal noun of *do·eclainn* is properly ***teclaim(m)***. The palatalized cluster and the preservation of *-s-* before the stop betray the erstwhile presence of another preverb with front vowel and final consonant. Breatnach (1987: 133 ed.n. § 18

---

assuming this to be from PIE √*(s)*preng^{h}-* 'spring' (§ 3.1.74), but it shares no common phonetic environment with pre-Ir. **-glād-*.

[103] De Vries 1962: 185 s.v. **gráta**.

teiscleimnig) suggests *to-ess-ind-gleinn-*, but this too is problematic: as *ind-* derives from PCelt. **ande-*, a disyllabic form with final vowel, **t(u)-exs-ande-gle/and-sman* would have yielded a different outcome, probably ‡*teis(n)délaim*; but even if **ande-* > **ind-*‘ had become generalized on the basis of its later shape, the following *-g-* should still have been lenited. Either the word has been remodeled after a related verbal noun like ***teclaim(m)***, or the earlier form of the preverb was **-en-*.

Ⓑ This meaning is proposed by Breatnach:

> "The meanings suggested for *teisclim* in *DIL* (s.v.) are 'learning, instruction (?)'. In Modern Connacht Irish we find the noun *téisclim* in the meaning 'preparing for, gathering together in preparation for' .... On the basis of the examples, of the etymology, and of the meaning in Modern Irish, I suggest that *teisclim* in Early Irish meant 'gleaning, gathering together in preparation for, preparation'." (1987: 133 ed.n. § 18 **teiscleimnig**.)

3.1.58. *gnĭ-* 'do, make, produce'

< PCelt. **gn-iį̆^{e}/$_{o}$-*Ⓐ ← PIE √**ĝenh$_1$-* 'beget, produce'.

(1) PCelt. ***gnī-mu-*** (← vb. stem **gnī-*):

◊ **gnīmu-* > ***gním*** [m.] 'deed, action, work, function; act of doing, making' → '(*gramm.*) active voice' ↔ vb. *gníid* [h.] 'does, makes'.

de-gnīmu* > ***dénum* [m.] 'deed; act of doing, making'

↔ vb. *do·gní* [h.] 'does, makes'.

kom-gnīmu-* > ***congnam* [m.] 'help, assistance; act of helping, assisting'

↔ vb. *con·gní* [h.] 'helps, assists'.

imm-‘ + ***congnam*** > ***imchongnam*** [m.] 'mutual assistance, co-operation'Ⓑ

↔ no attested vb. **imm·congnai*.

u̯o-gnīmu-* > ***fognam*Ⓒ [m.] 'service; act of serving, being of use'

↔ vb. *fo·gní* [h.] 'serves, is of use'.

(2) PCelt. ***-gnī-tu-*** (← vb. stem **gnī-*):

u̯o-gnītu-* > ***fognad*Ⓒ [m.] 'service; act of serving, being of use'

↔ vb. *fo·gní* [h.] 'serves, is of use'.

Comments:

Ⓐ The shape of the Celtic root is rather problematic. If one is willing to accept a Schwebeablaut variant of PIE **ĝenh₁-*, McCone's (1991: 33) suggestion of underlying **gnī-* < **ĝneh₁-* is fairly straightforward. It requires a simple thematized **gnī-* + **-e/o-* > **gnii̯-e/o-* parallel to *sniid* 'spins, weaves' < **snii̯-e/o-* < **snī-* + **-e/o-* ← PIE √**sneh₁-*; a *i̯e/o-*present is excluded,[104] since British forms such as 3.sg. MW *gwei-nyð*, MBret. *gou-nez*, MCo. *gou-neth* show a preform with a short vowel, PBr. **·gnɨð* < PCelt. **gnĭi̯e/o-*, whereas a PIE **ĝneh₁-i̯e/o-* would have produced PCelt. **gnīi̯e/o-* > PBr. ⁂*·gnið* > MW ⁂*gwei-nið*, MBret. ⁂*gou-niz*, MCo. ⁂*gou-nith* with the reflex of a long **-ī-*.[105] There is no outside support, however, for a "state II" root **ĝneh₁-*,[106] and on the whole the evidence is more consistent with a post-PIE innovation. Formally this verb correspond closely to two other Celtic verbs, **bu̯-ii̯e/o-* 'be' (← PIE **bʰuH-*, § 3.1.14) and **sl-ii̯e/o-* 'deserve' (← PIE **selh₁-*, § 3.1.118); all appear to have been created within Celtic by adding the *i̯e/o-*suffix to a new zero-grade form of the root, likely through the influenced of **snii̯-e/o-* 'weave', where the PIE "state II" root √**sneh₁-* is genuine. For further details, see *KPV* (246f. n.(b) s.v. ****bu̯-ii̯e/o-***, 341–44 n.(a) s.v. ****gn-ii̯e/o-***, 590 n.(a) s.v. ****-sl-ii̯e/o-***).

Ⓑ Historical **ambi-kom-gnī-mu-* would produce the same outcome, but the reciprocal meaning supplied by the preverb *imm-*ʿ points rather to a late productive formation.

© Regularly *Vgn > $\bar{V}n$; the *g* in ***fognam*** and ***fognad*** has been retained (or analogically restored) from its being the initial of the second element of a compound.[107]

3.1.59. *-gni-n-* 'recognize'

< pre-Ir. *gni-ni- ⇐ PCelt. *gni-nu- ⇐ *gni-na- ⇐ *gan-na- < PIE *$\hat{g}\underset{\circ}{n}$-$n$-$h_3$- Ⓐ

← √*$\hat{g}neh_3$- 'know'.

◊ No simplex.

(1) as if ****-gneį(į)-o-*** (analogically remodeled): Ⓑ

ati-$gne\underset{\frown}{i}(\underset{\frown}{i})o$- > ***aithgne* [n.] 'knowledge, recognition; act of knowing, recognizing'

↔ vb. *ad·gnin* [s. *-nu*] 'knows, recognizes, is aware of'.

$ambi$-$r(o)$-ati-$gne\underset{\frown}{i}(\underset{\frown}{i})o$- > ***imraithgne* (> MIr. ***imraichne***) [n.] © 'error, mistake'

↔ no attested vb. **imm·raithgnin*.

en-$gne\underset{\frown}{i}(\underset{\frown}{i})o$- > ***engnae* [n.] 'comprehension; act of understanding'

↔ vb. *in·gnin* [s. *-nu*] 'understands'.

$enter$-$gne\underset{\frown}{i}(\underset{\frown}{i})o$- > ***etargne* [n.] 'knowledge, signification; act of knowing'

↔ vb. *eter·gnin* [s. *-nu*] 'knows, finds out, understands'.

Comments:

Ⓐ By regular historical sound laws, PIE *$\hat{g}\underset{\circ}{n}$-$n$-$h_3$- should have become PCelt. *gan-na- > OIr. ⁂*·genn*. Multiple remodelings must be invoked to account for the actual OIr. *·gnin*, as McCone (1991: 11–23, esp. 21-23) explains. In the first place, **gan-na-* was replaced by **gni-na-* on the model of other *n*-present verbs such as **bi-na-* 'strike', **gli-na-* 'glue', *$^*k^{w}ri$-na- 'buy', etc. (as discussed above, § 2.2.3.6 *ad fin.*). Subsequently **gni-na-* was replaced with **gni-nu-*. It is traditionally thought that this replacement was based

---

[107] *GOI* 78f. § 125(a).

on the model of **kli-nu-* 'hear' (later **klu-ni-*, see § 3.1.25 comment A).[108] However, McCone (1991: 21f.) has argued for an earlier reshaping of 3.sg. **gninā́ti* to **gninū́ti* through the influence of other tense-forms such as 3.sg.ipf. **gninūt* ⇐ **gannūt* < **ĝn̥nōt* < PIE **ĝn̥néh₃t* and 3.sg.aor. **gnūt* < **gnōt* < PIE **ĝneh₃t*, where **ū* is the regular reflex of **ō* in a final syllable. From here, the normal patterns of paradigmatic leveling in Celtic may be invoked:[109] first, the difference in both vocalic quality and length of 3.sg. **gninū́ti* : 3.pl. **gninanti* was leveled to one of length only based on the third-person singular, producing **gninū́ti* : **gninunti*; then the vowel of the third-person plural was universally generalized throughout the paradigm, yielding **gninuti* : **gninunti*,[110] with a stem now segmentable as **gni-nu-*; and lastly, the attested OIr. 3.sg. *·gnin*, 3.pl. *·gninat* instead of expected **·gniun*, **·gninut* reveals an ultimate replacement of **-nu-* with **-ni-*. Depending on the date of this development, it could have been based on the model of **kli-nu-* ⇒ **klu-ni-* (but without alteration of the root vowel), or it could have arisen later on the model of inherited *ni*-verbs such as OIr. *·lin*, *·linat* 'flow' < **-(ɸ)li-ni-* (§ 3.1.73) and OIr. *·crin*, *·crinat* 'perish' < **kri-ni-* (§ 3.1.29).

Ⓑ With the remodeling of the verb stem (comment A), the verbal nouns have also been analogically reshaped to correspond to the verbal nouns of other *n*-present verbs such as **bi-na-* 'strike' (**-beu̯i(u̯)-o-* < PIE **-bʰeu̯ih₂-o-*), etc., for which see § 2.2.3.6.

Ⓒ The presumed Old Irish spelling ****imraithgne*** is unattested, but variants in both *-**aithne*** and *-**aichne*** are found in later manuscripts; for the latter, compare MIr. *frichnam* 'exertion' next to OIr. ***frithgnam*** (not found in our corpus) ↔ vb. *fris·gní* 'practices (a

---

[108] *GOI* 357 § 552; *KPV* 350 n.(b) s.v. ****gni-na-***.

[109] McCone 1986: 226–29; 1991: 22f.; 1991b: 2f. Cp. § 3.1.11 comment A *supra*.

[110] For other examples of this process, cp. **bal-ni-* 'die' (§ 3.1.11), **kri-ni-* 'sift, shake' (§ 3.1.29), and **(ɸ)li-ni-* (§ 3.1.73).

pursuit)'. The feminine gender cited by *DIL* (s.v. **imraichne**) can only be affirmed for Middle Irish and later; there are no genuine Old Irish examples. If the etymology accepted here is correct (*DIL* shows some hesitancy and the corresponding verb is missing), the word must have been neuter *-*io*- in Old Irish, since all the other compounds of this verb belong to this stem class — as indeed also the compounds of *-li-n-* 'flow, overflow' (§ 3.1.73(1)) and *-tle-n-* 'take away, steal' (§ 3.1.129(2)), which underwent similar remodeling. We may note further that gen.sg. *imraichni* at IB 57b, the correct form of an Old Irish *io*-stem, while not actually appearing in any of the extant manuscripts (all of which are later copies dating from the Middle Irish period), is guaranteed to have existed in the Old Irish original because of the rhyme (: acc.pl. *flaithi*).

3.1.60. *-go-a-* 'choose'

⇐ OIr. *-gŭ-* < PCelt. *-*gus-$^{e}/_{o}$*-(?)Ⓐ ← PIE √**ĝeu̯s-* 'taste, enjoy'.

◊ No simplex.

(1) PCelt. ***-gus-o-*** (← PIE √**ĝus-*):Ⓑ

**dígu* [n.] 'act of rejecting, spurning; (that which is rejected →) the worst'

↔ vb. *do·goa* [w. *-ā*] 'rejects, spurns'.

tugu* ⇒ ***togu* [n.] 'choice; act of choosing'

↔ vb. *do·goa* [w. *-ā*] 'chooses'.

Comments:

Ⓐ The verb is normally cited as a weak *ā*-verb *·goa*, but this flexion is only securely datable to Middle Irish, and there is meager evidence to determine how early it may have arisen. *KPV* (357–59 n.(a) s.v. ***-gus-e/o-***) takes the ninth-century hapax at Ml. 58b9, *asa·**gú** dia*, understood to mean 'that God desires', to imply earlier *-*guset*, and on this basis reconstructs a Proto-Celtic thematic *-*gus-$^{e}/_{o}$*-. The interpretation of the gloss is not

beyond doubt, however. Given the Latin context, *ET GEMITUS MEUS A TE NON EST ABSCONDITUS* : *et uota nosti et necessitates obtandi* [*sic*], one must assume that the glossator understood the last word to be *optatis*. Whether or not the evidence is strong enough to establish the preform as **-gus-$^{e}/_{o}$-*, it is clear from other forms such as the *s*-subjunctive 3.sg. *do·gó* (< **tu-gous-s$^{e}/_{o}$-*), the corresponding 2.sg.ipv. *tog* (< **tu-gous-s(i)*), etc., that we are dealing with an earlier primary hiatus verb (§ 2.1.5(b)).

The *ā*-flexion may have arisen first in the subjunctive, as *KPV* suggests (359f. n.(b)). The *s*-subjunctive is of very limited distribution, occurring only in strong verbs with root-final dental or guttural obstruent or unlenited *n*, and vestigially in two other hiatus verbs,[111] whereas the *ā*-subjunctive is widespread and productive. In our verb the *ā*-subjunctive *·goa* has already begun to replace the *s*-subjunctive *·gó*, and the general association of *ā*-subjunctives with weak verbs may have subsequently led to adoption of the "quite exceptional 3sg. *-a*" (*EIV* 28) in the indicative as well, since in the *ā*-conjugation most forms of the subjunctive are identical to those of the indicative.

Ⓑ The verbal nouns are indeclinable neuters in Old Irish. Binchy (1950: 148f.) suggests the possibility of a compositional root-noun **-gous* or thematic **-gous-om* in keeping with the expected Indo-European ablaut, but as Schumacher points out (2000: 169), both of these would have generated Old Irish ⁂*-go*. A zero-grade *o*-stem must be posited instead. After the Primitive Irish loss of intervocalic **-h-* < **-s-* and the apocope of final syllables, case distinctions (outside of the dat.pl.) would have been reduced to just two forms, **-go* and **-gu*, an anomalous paradigm that was subsequently leveled in favor of **-gu* before our earliest attestations:

---

[111] *GOI* 380 § 596; *EIV* 33.

sg.nom./acc. *-*gus-om* > *-*gohan* > *-*go*^{n}

dat. *-*gus-ū* > *-*guhu* } > -*gu*$^{\text{c}}$

gen. *-*gus-ī* > *-*guhi* }

pl.nom./acc. *-*gus-ā* > *-*guha* > *-*go*$^{\text{c}}$

dat. *-*gus-obis* > *-*guhoβih* > *-*goöβ'*

gen. *-*gus-om* > *-*guhan* > *-*go*^{n}

} ⇒ -*gu*[112] (w. appropriate mutations)

3.1.61. *gon-* 'strike, smite'

< PCelt. *$g^{w}an$-$^{e}/_{o}$- ← PIE *$g^{wh}\underset{\circ}{n}$- ← √*$g^{wh}en$- 'strike, kill'.

(1) PCelt. ***$g^{w}an$-i-*** (← PIE *$g^{wh}\underset{\circ}{n}$-):

◊ *$g^{w}ani$- > ***guin*** [n.] 'wound, death by wounding; act of wounding, slaying'

↔ vb. *gonaid* [s. -$^{e}/_{o}$] 'wounds, slays'.

*$dī$-$g^{w}ani$- > ***díguin*** [n.] '(*leg.*) outrage, violation of a man's honor (through wounding or slaying of one under his protection)' ↔ vb. *do·goin* [s. -$^{e}/_{o}$] 'violates, outrages'.

Comment:

Ⓐ Schumacher (2000: 181) derives OIr. ***guin*** and MW *gwan* from PCelt. *$g^{w}on$-i- < PIE *$g^{wh}on$-i- (with dissimilatory unrounding of *-*o*- to -*a*- following a labial in the Welsh word),[113] comparing it to a small class of Indo-European *i*-stems with *o*-grade of the root noted by Kümmel (1996: 14f.), of which Ved. *ghāsí-* [m.] 'food', Gr. τρόπ-ι-ς [f.] 'keel', Lat. *scrob-i-s* [m. f.] 'ditch', PGmc. **balg-i-z* [m.] 'bellows' (< PIE *$b^{h}olĝ^{h}$-*i-s* 'swollen') constitute examples outside of Celtic. All the examples given by Kümmel and Schumacher are of animate gender, whereas the Celtic word is neuter. This could be a significant difference, if the formation represents a directly derived verbal abstract; but if, as

---

[112] And presumably dat.pl. *-*guib*, but the form does not appear.

[113] *CCCG* Suppl. 5–6; Jackson 1967: 481, 432f.; cp. *CCCG* 2 § 3(4), 112 § 185(2).

Kümmel considers likely, these words are nominalizations of a verbal adjective, then neuter substativizations are *a priori* as likely as animate. Nevertheless, this is a rather uncommon formation in Indo-European, so it seems more likely, in the absence of solid evidence to the contrary, that Cowgill (1980: 61) is correct in deriving the verbal noun from the zero grade, in common with the verb.

3.1.62. *-grenn-* 'drive'

< EOIr. **·grenn-* ⇐ PCelt. **-gri-n-d-$^{e}/_{0}$-* ← PIE **g^{h}ri-n-d^{h}-* ← √**g^{h}reid^{h}-* 'proceed'. Ⓐ

◊ No simplex.

(1) PCelt. ****-grēd-smen-*** (← PIE **g^{h}reid^{h}-*):

eni/ande-grēdsmen-* > ***ingreim(m)* [n.] 'persecution; act of persecuting'

↔ vb. *in·greinn* [s. *-n..$^{e}/_{0}$*] 'persecutes'.

Comment:

Ⓐ On the face of it, the Celtic verb behind OIr. *in·greinn* 'persecutes' and MW *grynnyaw* 'to push, drive out' would appear to be related to Lat. *gradior, -ī* 'step, walk, proceed', both mutually traceable to a root of the shape **$g^{(h)}$rd$^{(h)}$-*, with a nasal present in Celtic and an *i*-present in Latin.[114] Pokorny (*IEW* 456f.) unites these forms with OCS *grędǫ, gręsti* 'come', Lith. *grìdiju, grìdyti* 'walk, wander', Go. acc.sg. *grid* 'step', and others, under a PIE root √**g^{h}red^{h}-* 'proceed'. This root connection encounters difficulties, however, upon closer scrutiny. Middle High German *grit* 'step', *griten* 'to straddle' and *graiteln* 'to hold the legs apart' show clear Germanic reflexes of a PIE *i*-diphthong root √**g^{h}reid^{h}-*. This root form is fully compatible with Lith. *grìd-iju, grìd-yti* < **g^{h}rid^{h}-*, OCS *grędǫ, gręsti* < **g^{h}ri-n-d^{h}-* (with the nasal secondarily generalized to the entire verb), and — significantly — the Old Irish *s*-subjunctive 3.sg. *·gré*, 3.pl.ipf. *·grías-tais* < PCelt. **-grēd-s$^{e}/_{0}$-* ← PIE

---

[114] Cp. de Vaan 2008: 269 s.v. **gradior, gradī**.

$g^hre\underset{\frown}{i}d^h$-s-. The correspondence of these three branches seems too conspicuous to be dismissed, although the Latin *grad-* is now left as a puzzling outlier. The Old Irish present-tense forms do not continue a simple nasal present in *°-*n-d-*, because they unanimously show *-nn-* instead of *-*nd-* in the early language. A "double-nasal" present *$g^hr\underset{\circ}{n}$-n-d^h- would produce OIr. *-nn-*, but a root with radical *-*n-* is contradicted by the Germanic and Baltic forms and by the shape of the Old Irish subjunctive. The only other phonologically regular alternative, a formation with nasal suffix (e.g., *VKG* II, 549 § 747 Anm.: **ghrendh-nā-*; or *IEW, loc. cit.*: **ghr$\underset{\circ}{n}$-dh-ne-t*), is not understandable in terms of Celtic verbal morphology. The best explanation is therefore probably that of McCone (1998: 473), who posits a recent back-formation from the subjunctive *·*grēss-* on the model of OIr. ·*gleinn* 'show, bring to light' (< *-*glan-n-d-*$\underset{\frown}{e}/_o$- ← PIE *$g^hl\underset{\circ}{n}$-n-d^h-, § 3.1.57) : subj. *·*glēss-* (< *-*glend-s*$\underset{\frown}{e}/_o$-).

3.1.63. *gu^{i}d-* 'ask, plead, pray'

< PCelt. *g^wed-$\underset{\frown}{i}^e/_o$- ← PIE √*$g^{wh}ed^h$- 'ask, wish for'.

(1) PCelt. ***g^wed-iā-*** (← PIE *$g^{wh}ed^h$-):

◊ *$g^wediā$- > ***guide*** [f.] 'prayer; act of praying, entreating'

↔ vb. *guidid* [s. -$\underset{\frown}{i}^e/_o$] 'prays, entreats'.

ad-$g^wediā$-* > ***aicde* [f.] 'bond, surety; a manufactured article'Ⓐ

↔ vb. *ad·guid* [s. -$\underset{\frown}{i}^e/_o$] 'invokes sureties or guarantees, appoints guarantors'.

ari-ni-$g^wediā$-* > ***airnigde* [f.] 'prayer; act of praying'

↔ vb. *ar·neget* [s. -$\underset{\frown}{i}^e/_o$] 'prays'.

dī-$g^wediā$-* > ***dígde* [f.] 'act of entreating, asking pardon'

↔ vb. *do·guid* [s. -$\underset{\frown}{i}^e/_o$] 'entreats earnestly, asks pardon'.

$\underset{\frown}{u}o$-$g^wediā$-* > ***foigde* [f.] 'mendicancy; act of begging'

↔ vb. *fo·guid* [s. -$\underset{\frown}{i}^e/_o$] 'begs'.

Comment:

Ⓐ Besides 'manufactured article', the meanings 'structure, building' and 'material, substance' are also found in this word. Assuming that this is the same word as the verbal noun ***aicde*** 'bond, surety', the semantic connection must come from the sense of 'that which is secured or guaranteed' → 'a requisition' extended to mean any manufactured item.[115]

3.1.64. *gur-i-* 'heat up'

< PCelt. **g^{w}or-ī-* < PIE caus.-iter. **g^{wh}or-éi^{e}/$_{o}$-* ← √**g^{wh}er-* 'become warm'.

(1) [[PCelt. ****g^{w}or-o-*** (← PIE **g^{wh}or-*):Ⓐ

◊ **g^{w}oro-* > ***gor*** [m.] 'inflammation; act of becoming inflamed; act of brooding'

↔ vb. *guirid* [w. *-ī*] 'heats, warms, burns; broods, hatches'.]]

(2) PCelt. ****g^{w}or-e-tu-*** (← vb. stem **g^{w}or-ī-*):Ⓑ

◊ **g^{w}oretu-* > ***gorad*** [m.] 'act of heating, burning; act of blushing, causing to blush'

↔ vb. *guirid* [w. *-ī*] 'warms, heats, burns'.

Comments:

Ⓐ The noun ***gor*** occurs as a verbal noun of *guirid* in two secondary senses, 'inflammation; act of becoming inflamed' ("On the Household of Christ," LB 146b49) and 'act of brooding (of hens)' (*O'C* 882 = *CIH* III, 920.39). Assuming that the *o*-grade *o*-stem formation is older than the *tu*-stem (cp. § 2.2.1), this provides an illustrative example of Kuryłowicz' fourth principle of analogy: "(IV) *Quand à la suite d'une transformation morphologique une forme subit la différenciation, la forme nouvelle correspond à sa fonction primaire (de fondation), la forme ancienne est reservée pour la fonction secondaire (fondée)*" (1949: 30). That is, the main sense 'heating, burning' and the common

---

[115] *VKG* II, 551 § 749(1); accepted by *DIL* s.v. **2 aicde** and *LÉIA* A-25 s.v. **aicde**.

metaphorical sense 'blushing, causing to blush' have become attached to the productive *tu*-formation, while the older formation has taken on the two other secondary senses.

Ⓑ The absence of raising in the root confirms that the intervening vowel was **-e-*.

3.1.65. *ib-* 'drink'

< PCelt. *(ɸ)*ib-*$^{e}/_{o}$- ← PIE **pi-ph*$_3$- ← √**peh*$_3$- 'drink'.

(1) ?PrIr. ****o̯ia-lo-*** < PCelt. *(ɸ)*o̯ia-lo-* < PIE **poi̯h*$_3$*-lo-* ⇐ **poh*$_3$*i̯-* ← √**peh*$_3$(*i̯*)- 'drink':Ⓐ

◊ ?**o̯ialo-* > ***oöl*** > ***ól*** [n.] 'act of drinking; a drink; a measure of liquid'

↔ vb. *ibid* [s. -$^{e}/_{o}$] 'drinks'.

(*imm-ro-* + ***ól*** > ***imról*** [n. *-o*] 'a great draft' → 'abundance'.)

Comment:

Ⓐ The usual etymologies attempt to derive OIr. ***ól*** 'drink, act of drinking' from PIE **pŏ̄-tlo-*,[116] but this approach faces insurmountable difficulties. Such a preform simply cannot produce the Old Irish word. Both PIE full-grade **peh*$_3$- and *o*-grade **poh*$_3$- > **pō-* would yield PCelt. *(ɸ)*ā-* rather than *(ɸ)*ō-*, and zero-grade **ph*$_3$-^{C} would yield PCelt. *(ɸ)*a-*, not *(ɸ)*o-*; either way, PCelt. *(ɸ)*ătlo-* would result in OIr. ⁂*ál*. *EDPC* (*loc. cit.*) suggests three possible solutions to this problem: (1) an *ad hoc* pre-Celtic leveling of *(ɸ)*atlo-* > *(ɸ)*otlo-* on the basis of the vocal quality of the full-grade stem *(ɸ)*ō-*; (2) an (also *ad hoc*) assimilation of **-a-* to the following vowel; or (3) the operation of Dybo's Law on the full-grade **peh*$_3$*-tló-* > **pō-tló-* > **pŏ-tló-* to produce PCelt. *(ɸ)*o-tlo-* > PrIr. **oθlo-* > OIr. *ól*. But none of the existing proposals, and no amount of special pleading, can account for the crucial fact that the word was disyllabic in early Irish (cp. nom.sg. *óol*, IB 13d, dat.sg. *óol*, IDB § 2b, both established by meter).

If in fact OIr. ***oöl*** belongs to PIE √**peh*$_3$(*i̯*)-, the only solution that appears to be in any

---

[116] E.g., *LÉIA* O-19 s.v. ***ól***; de Bernardo Stempel 1999: 302 fn.124; *EDPC* 137f. s.v. ***fotlo-**.

way workable is that of Pokorny (*IEW* 840 s.v. **2. *pō(i)- : pī-*** und (von ***pō-*** aus) ***pₒ-***), who proposes an etymon **poi̯ə-lo-* (i.e., in laryngeal terms, **poi̯h₃-lo-*). This would indeed generate the Old Irish disyllabic form, though the *ad hoc* metathesis of PIE ****poh₃i̯-*** ⇒ ****poi̯ih₃-*** that it supposes is hard to motivate. If this proposal is correct, the metathesis would have to have occurred at a rather early date, before laryngeals disappeared in the development of **V̆HC* > *V̄C*, but after the loss of laryngeals in the environment of **oRHC* by the "Saussure effect."[117] As the alternative is to assume a suppletive verbal noun of unknown provenance, this solution is provisionally accepted here.

3.1.66. *-ic(c)- / -ic(c)-i-* 'reach, come to'

< [1] PCelt. **ink-$^{e}/_{o}$-* (⇒ [2] PrIr. **-ink-ī-*) { ← **īnk-* < PIE **h₂ḗnk̂-* or ?**h₂i-h₂nk̂-* or: < **-an-n-k-$^{e}/_{o}$-* < PIE **h₂n̥-n-k̂-*Ⓐ

← √**h₂nek̂-* 'reach, obtain'.

◊ No simplex.

(1) PCelt. ****-ank-o-***Ⓑ (← PIE **-h₂n̥k-*):

ari-anko-* > ***airec(c)* [n.(?)] 'invention, contrivance; act of finding, devising'

↔ vb. *ar·ic(c)* [s. *-n..$^{e}/_{o}$*] 'comes upon, finds; devises, contrives'.

ambi-ari-anko-* > ***immairec(c)* [n.(?)] 'a meeting, encounter; conflict, battle'

↔ vb. *imm·airic(c)* [s. *-n..$^{e}/_{o}$*] 'concerns, is appropriate to, happens, befalls'.

exs-anko-* > ***ais(s)ec(c)*© [n.(?)] 'restitution, restoration; act of restoring, giving back'

↔ vb. **as·ic(c)* [s. *-n..$^{e}/_{o}$*] (→ *ais(i)cid* [w. *-ī*]) 'returns, reverts, restores'.

---

[117] The "Saussure effect" (de Saussure 1905: 511 fn.2) is evidently of Proto-Indo-European date, since it is observed in several branches including Greek (Beekes 1969: 74f., 238–42), Italic (Nussbaum 1997), Balto-Slavic (Rasmussen 1989), and most importantly for the purposes of dating, Anatolian (Melchert 1994: 49–51). The date of **V̆HC* > *V̄C* is post-Anatolian PIE at the earliest, and possibly post-PIE; but it is early enough to make the resulting compensatorily lengthened vowels indistinguishable from other inherited long vowels in the non-Anatolian dialects.

kom-anko-* > ***cumac(c)* ⇒ ***cumang***[Ⓓ] [n.(?)] '(being able →) power, ability'

↔ vb. *con·ic(c)* [s. *-n..$^{e}/_{o}$*] 'can, is able'.

kom-r(o)-anko-* > ***comrac(c)* [n.] 'act of meeting, encountering; a meeting, encounter; combat' ↔ vb. *con·ric(c)* [s. *-n..$^{e}/_{o}$*] 'meets, encounters; attains to, arrives at'.

ambi-kom-r(o)-anko-* > ***imchomrac(c)* [n.(?)] 'act of meeting, encountering; a meeting, encounter' ↔ vb. *imm·comraic(c)* [s. *-n..$^{e}/_{o}$*] 'meets with, encounters'.

t(u)-ari-kom-r(o)-anko-* > ***terchomrac(c)* [n.(?)] 'assembly, gathering'

↔ vb. *do·airchomraic(c)i* [w. *-ī*] 'heaps together, assembles, amasses'.

*com-*ʿ + ***terchomrac(c)*** > ***comtherchomrac(c)***[Ⓔ] [n.] 'assembly, congregation'

↔ vb. *con·terchomraic(c)i** [w. *-ī*] 'assembles, congregates, convenes'.

tu-kom-r(o)-anko-* > ***tochomrac(c)* [n.(?)] 'assemblage, an assembly'

↔ vb. *do·comraic(c)(i)* [s. *-n..$^{e}/_{o}$* / w. *-ī*?] 'heaps up, accumulates'.[Ⓕ]

u̯o-r(o)-anko-* > ****forac(c)* ⇒ ***fuirec(c)***[Ⓖ] [n.] 'provision of food or entertainment; hospitality' ↔ vb. *fo·ric(c)* [s. *-n..$^{e}/_{o}$*] 'comes across, finds'.

(?)**tu-u̯o-r(o)-anko-* > ****tórac(c)*** ⇒ ***tóraic(c)*** [n.(?)][Ⓗ] 'discovery; act of discovering'

↔ vb. *do·fuiric(c)* [s. *-n..$^{e}/_{o}$*] 'finds, comes upon, discovers'.

(2) PrIr. ****-ink-tion-*** (← vb. stem **ink-*):[Ⓘ]

r(o)-inktion-* > ***ríchtu* [f.] 'arrival; act of arriving, coming to'

↔ vb. *ro·ic(c)*, *ric(c)* [s. *-n..$^{e}/_{o}$*] 'arrives (at), reaches, attains (to), accomplishes'.

t(u)-inktion-* > ***tíchtu* [f.] 'arrival; act of arriving, coming to'

↔ vb. *do·ic(c)*, *tic(c)* [s. *-n..$^{e}/_{o}$*] 'comes to, approaches'.

(3) PrIr. ****-ink-ĭ̄-tu-*** (← vb. stem **ink-ī-*):

t(u)-ad-r(o)-inkĭ̄tu-* > ***táirciud* [m.] 'cause, provision; act of causing, bringing (about), providing' ↔ vb. *do·áirci* [w. *-ī*] 'causes, brings (about), provides'.

Comments:

Ⓐ There is no small disagreement over the historical shape of the Celtic verb stem, although the ultimate derivation from PIE √*$h_2nek̂$- 'reach, obtain' is not in question. McCone (1991: 50f.; 1991b: 1–3; 1996: 64f., 108f.; 1998: 468–72) has argued for a "Narten" present of a Schwebeablaut variant, *$h_2énk̂$- / *$h_2énk̂$- > PCelt. *$īnk$- / *ink- → *-ink-$^{e}/_{o}$-, comparing Hitt. *ḫinkzi* 'allots' < PIE *$h_2énk̂$-*ti*. He further tentatively suggests (1998: 471f.) that the descriptive Schwebeablaut might have arisen by alternating dissimilations from an initial root √*$h_2nenk̂$-, reconstructible from the perfect *h_2e-$h_2nónk̂$- / *h_2e-$h_2nn̥k̂$- (> Ved. 3.sg. *ānáṁśa* / 3.pl. *ānaśúr*; OIr. pret. ·*ánaic*(*c*)),[118] with the second *-*n*- being lost when a following consonant rendered it tautosyllabic in a triconsonantal group, thus *$h_2nVnk̂$-^{C} > *$h_2nVk̂$-^{C}, but otherwise the first *-*n*- disappearing when the second *-*n*- was retained before heterosyllabic *-$k̂$-, whence *$h_2nVnk̂$-^{V} > *$h_2Vnk̂$-^{V}. *LIV*² (282–84 s.v. ***$h_2nek̂$-**; similarly Jasanoff 1997b: 179 fn.16) hesitantly traces *ink-$^{e}/_{o}$- ← *$īnk$- back to a reduplicated present ?*h_2i-$h_2nk̂$-. Lindeman (1992) proposes a Proto-Celtic reanalysis of a hypothetical **arink*- < PIE *$pr̥i$-$h_{2/3}n̥k̂$- (comparing Ved. *pári aś*- 'arrive at, reach, attain') as underlying **ari-ink*-, and subsequent generalization of the new root **ink*-. Schrijver (1993: 39–42; 1999b: 139 fn.23), followed by *KPV* (200–5 s.v. ***-an-n-k-e/o-**), opts for a nasal present PIE *$h_2n̥$-*n*-$k̂$- > PCelt. *-*an*-*n*-*k*-$^{e}/_{o}$- > OIr. ·*ic*(*c*).

None of these proposals is problem-free. Schumacher (2000: 163) rejects McCone's suggestion of a PIE root √*$h_2nenk̂$- on the grounds of an evident root constraint against identical resonants or semivowels flanking the root vowel. Schrijver (*loc. cit.*) questions the validity of both Eichner's Law, which holds that long *-$ē$- resists coloring by a laryngeal, and the Old Irish outcome of PCelt. *$īnC$ proposed by McCone. Even apart

---

[118] Perhaps also the Vedic desiderative *ínakṣati* ⇐ **ínakṣati* (with analogical shortening on the model of the normal Indo-Iranian pattern of desiderative reduplication) < *h_2i-$h_2nn̥k̂$-*s*-$^{e}/_{o}$- (McCone, *loc. cit.*).

from these phonological objections, whatever their merit, the connection of Hitt. *ḫinkzi* 'allots' with PIE √*$h_2nek̂$- 'reach, obtain' has been questioned on both semantic and formal grounds;[119] and if this Hittite verb is left out of consideration, there is no extra-Celtic evidence for a Schwebeablaut variant of PIE √*$h_2nek̂$- (whether of the "Narten" type or not). *LIV*²'s reduplicated present suffers similarly from the objection (if valid) that PCelt. *$\bar{i}nC$ would not produce OIr. ·*ic*(*c*), and from a lack of outside support. Lindeman's account suffers from being highly speculative as to both formation and phonology. And Schrijver's nuanced phonological development appears to require, among other things, a rather improbable phonemic distinction in Primitive Irish between oral *-*e*- before *-*nk*- (**enk* > **ink* > /*ig*/ = *ic*(*c*)) and nasalized *-$\tilde{e}$- in the same position (*$\tilde{e}nk$ > *$\tilde{e}g$ = *éc*(*c*)), while his appeal to the OLat. *nanciō* 'reach' in support of a nasal present is of debatable value, given the uncertainties surrounding this form.[120] The entire matter remains unsettled.

Ⓑ There is no direct evidence to determine the Old Irish gender of most of these nouns, but neuter is generally expected for the type (see § 2.2.3.1(1)). In the case of **forac*(*c*) (⇒ ***fuirec*(*c*)**), neuter is suggested by the nom.pl. ***fuireca*** (LL 172a47 = CRR § 9), although the word has normally become masculine by Middle Irish. The nasalization in the nom.sg.

---

[119] Cp. Oettinger 1979: 174f.; *EWAia* II, 28 w. refs.; Lindeman 1992: 199; García Ramón 1999: 57f.; *LIV*² 268 n.1 s.v. ?***$h_2enk̂$**-. It is, however, accepted by Melchert 1994: 143f. and Peters 1975: 41.

[120] See McCone 1998: 468f. for specific objections; cp. also *LIV*², *loc. cit.*, esp. nn.10, 10a. De Vaan (2008: 400 s.v. **nancīscor, -ī**) accepts the position of Schrijver on both OLat. *nanciō* and OIr. ·*ic*(*c*), and assumes, following a suggestion of Kümmel (2000: 284–87), that the characteristic *-*n*- of the nasal present *h_2ne-*n*-$k̂$- became a fixed part of the root at an early date, yielding the secondary root *$h_2nenk̂$- that lies behind the perf. *h_2e-$h_2nónk̂$- / *h_2e-$h_2nn̥k̂$- attested in both Indo-Iranian and Celtic. If the existence of a "Narten" present is accepted, and — assuming Hitt. *ḫinkzi* 'allots' is related — if the date of this secondary root in Proto-Indo-European can be pushed back before the separation of Anatolian, then this solution might open the door for a reconsideration of McCone's (1998: 471f.) suggested dissimilation of *$h_2nVnk̂$- ⇒ *$h_2Vnk̂$- and the subsequent development of PIE *$h_2ék̂nk̂$- / *$h_2énk̂$- > PCelt. *$\bar{i}nk$- / **ink*- → **ink*-$^{e}/_{0}$- > OIr. ·*ic*(*c*).

comrag ***m**bairdne* (O'C 2773 = *CIH* IV, 1481.33f.), if not a Middle Irish hypercorrection, would imply that ***comrac**(**c**)* was neuter in Old Irish, and the same is probably also true of its derivatives. But masculine ***comrac**(**c**)* is found as early as Milan (*is**hé** cainchomrac* '**that** [masc.] is peace', Ml. 19c14), and both masculine and neuter treatments of ***comtherchomrac**(**c**)* occur in close proximity to each other in that same manuscript (e.g., masc.acc.pl. *inna**comthercomrucu*** 'the assemblies', 37c8, next to an endingless neut.pl. *inna**comtherchomrac** .i. sechis **comthercomrac** inna cenel* 'the assemblies, that is, the assemblies of the nations', 37c6). These examples in the Milan glosses may provide evidence that the neuter gender was beginning to break down as early as the ninth century.[121]

© The two derivations of OIr. ***ais**(**s**)**ec**(**c**)* suggested by *LÉIA* (A-51f. s.v. **aissec**) are both problematic, as Marstrander's review (1962: 213) points out. The first, which proposes *aith-* + **sink^{w}-* 'pour back' → 'pay back' ← PIE √**se̯i̯k^{w}-* 'pour out' (cp. Ved. *siñcáti* 'pours out'), is semantically appealing but formally impossible as an inherited compound: PrIr. **ati-sink^{w}-o-* > **aθ'ihigo-* > OIr. ⁂*aithec(c)*. There are a few examples of post-syncope *-θ-s-* or *-δ-s-* becoming OIr. *-s(s)-* (*GOI* 88 § 139 lists *fáis**s**ine* 'prophecy' beside *fáit**s**ine*, *con·dosi**s**itis* 'that they should fail' for **·do**th**sitis*, and *ro·cretsi**s**i* 'you have believed' beside *·cretsi**d**-si*), so a late compound of *aith-* plus **sec(c)* < **sink^{w}o-* could conceivably have resulted in OIr. *ais(s)ec(c)* for **ai**th**sec(c)*; but the chronology would be uncomfortably tight: the *terminus post quem* for the creation of this compound is the syncope of the mid-sixth century, yet the simplex **sec(c)* has left no trace in the preserved texts which begin approximately a century later. Alternatively, an older compound **ad-sink^{w}-o-* might be posited, with an originally non-reciprocal meaning

---

[121] See *GOI* 447f. § 724.

'pour out to' or the like. In either case, a derivation from PIE √*seik^{w}- 'pour out' would require that the base be a verbal present-stem formation *si-n-k^{w}-, from which it follows that *sec(c) and ***ais(s)ec(c)*** would have to be late deverbative formations of a verb that is otherwise unattested in Celtic. On the whole this etymology warrants skepticism. The second suggestion, which derives ***ais(s)ec(c)*** from a compound of *ess-* + ***íc(c)*** 'pay out' (i.e., **exs-* + **īkkā-*, see § 4.3.26(1)), is indefensible, as the final consonant would be /-k/ (cp. MoIr. *íoc*) rather than /-g/ (MoIr. *aiseag*).

In fact, as Watkins (1962: 118) points out vis-à-vis the related compound *do·aisic(c), taisic(c)* of similar meaning,[122] the verb is a compound of OIr. *·ic(c)*. The original meaning was intransitive 'goes out' → 'reverts, returns', from which the transitive notion 'repays, restores' developed secondarily, probably by influence of *ic(c)aid* 'pays'.

Ⓓ The older spelling is ***cumac(c)***, but ***cumang*** appears as early as Würzburg (cp. § 2.2.2.1), with *-n-* reinserted analogically by influence of the prototonic verb *·cumaing*.

Ⓔ ***Comthercomrac(c)*** is a calque on Lat. *con-gregātiō*. The recency of its formation is indicated by the form of preverb, analogically leniting *com-*ʿ (see § 2.1.3.3(2)), added to the existing ***tercomrac(c)***. The verb *con·terchomraic(c)i** is almost certainly weak like *do·airchomraic(c)i* on which it is based, although none of the scantily attested forms actually show this.

Ⓕ It is unclear whether the verb is strong or weak. In support of weak flexion, *DIL* (s.v. **?do-comraicci**) cites a single attestation, 1.sg.pres. *tu·comracim* (MS *tucóracim*) gl. *aggero*, in an Old-Irish gloss on the Latin *Ars Malsachani*.[123]

Ⓖ The historically regular form would be **forac(c)* < **u̯o-r(o)-ank-o-*. The palatalized *-r-*

---

[122] *DIL* s.vv. **do-aisicc, taisiccid**.

[123] Naples, Biblioteca Nazionale IV.A.34, fol. 246r; see Thurneysen (1940: 282).

of ***fuirec(c)*** was probably borrowed from the prototonic verb *·fuiric(c)* < **u̯o-r(o)-ink-et(i)*, etc.

Ⓗ ***Tóraic(c)*** is generally assumed to be the verbal noun of *do·fuiric(c)* 'discovers', although its precise meaning is not well established;[124] no better candidate can be found at any rate. There are no genuine Old Irish attestations, and the gender and stem class cannot be established clearly from the forms that appear in the Middle Irish manuscripts. The genitive singular ***tóraice*** (*CIH* V, 1551.34) would appear to belong to an *ā*-stem, with the palatalization in the nominative could support this, assuming the common transfer of palatalization from the dative. On the other hand, the palatalized final of the nominative plural ***tóraic*** 'findings' (CG § 40, *l.*530) is in keeping not with a feminine *ā*-stem but with a masculine *o*-stem. Taking for granted the accepted etymology, we are surely justified in supposing that it was a neuter *o*-stem in Old Irish. This matches the stem class of its morphological base ***fuirec(c)*** ⇐ **forac(c)* < **u̯o-r(o)-ank-o-* (see comments B and F) and can account for the Middle Irish vacillation in stem class.

① Stüber (1998: 134) suggests that the verbal nouns in *-ichtu* are relatively late formations based on the verbal stem, showing the regular outcome of **in-* before a fricative: **inkt* > **inxt* > **īxt*. The cluster *-cht-* always resists palatalization.[125]

3.1.67. *-lă̆-* 'put, place, throw, send'

< PCelt. **-lă̆-i̯e/o-* ← PIE **l̥h₁-ᶜ* ← √**leh₁-* 'let, leave'.Ⓐ

◊ No simplex.

---

[124] Binchy 1941: 37 ed.n.530; *LÉIA* T-112 s.v. **toraic**.

[125] *GOI* 101 § 162.

(1) PCelt. ***-l-o-*** (← PIE *lh_1-^{V}):

*$\underset{\frown}{u}$riss-ande-lo- > ***fresndal, frestal*** [n.] 'service; act of receiving (a guest), attending to (sb. or sth.)' ↔ vb. *fris·indlea* [h.] 'serves (a purpose), attends to (sb. or sth.)'.

*tu-$\underset{\frown}{u}$riss-ande-lo- > ***túarasndal*** [n.] 'stipend, remuneration; (*leg.*) eyewitness evidence' ↔ no attested vb. **do·fresndala*.

*ad-kom-lo- > ***accomol*** [n.] 'union; act of joining, uniting' ↔ vb. *ad·comla* [h.] 'joins, unites'.

*dī-lo- > ***díl*** [n.]Ⓑ 'remittance, recompense; act of discharging, remitting (debts, etc.)' ↔ vb. *do·lá* [h.] 'discharges, remits (debts, etc.)'.

*t(u)-en-uss-lo- > ***tinól*** [n.] 'collection; assembly; act of collecting, gathering' ↔ vb. *do·inóla* [h.] 'gathers, collects, assembles'.

*com-$^{\text{ʿ}}$ + ***tinól*** > ***comthinól*** [n.] 'collection, assembly; act of gathering together, assembling' ↔ no attested vb. **con-tinóla*.

Comments:

Ⓐ The Celtic verb was a $\underset{\frown}{i}^{e}/_{o}$-present, probably derived secondarily from the root-aorist of PIE √*leh_1- 'let, leave', with generalized zero grade of the weak stem.[126] McCone's (1991: 33) tentative proposal of PCelt. *$l\bar{a}$- < PIE *h_1leh_2-, a Schwebeablaut variant of √*h_1elh_2- 'go, move, drive' (Gr. ἐλῶ), is not as attractive, as there is no other evidence to support the existence of a "state II" variant *h_1leh_2-.

Ⓑ ***Díl*** is treated as a masculine *u*-stem (gen.sg. *díla, díola*, etc.) in Middle Irish, but unless one is willing to posit a different stem class from all other compound verbal nouns of this verb, the Old Irish word must have been a neuter *o*-stem.

---

[126] *KPV* 442–46 esp. nn.(a),(b) s.v. ***-la-$\underset{\frown}{i}$e/o-***.

3.1.68. *léc-i-* 'leave, let'

< PrIr. **lēgg-ī-* ⇐ PCelt. **li-n-k^{w}-$^{e}/_{o}$-* ← PIE √**leiḳ^{w}-* 'leave'.

(1) PrIr. ****lēgg-ĭ̄/e-tu-*** (← vb. stem **lēgg-ī-*):

◊ [[**lēggĭ̄/etu-* > ***léiciud*** [m.] 'act of leaving; releasing; allowing'

↔ vb. *léicid* [w. *-ī*] 'leaves; releases; allows'.]]

ari-lēggĭ̄/etu-* > ***airliciud* [m.] 'act of lending; a loan'

↔ vb. *ar·léici* [w. *-ī*] 'lends'.

com- + ***airliciud*** > ***comairleciud***Ⓐ [m.] 'act of allowing, permitting'

↔ vb. *con·airléici* [w. *-ī*] 'allows, permits'.

tu-lēggĭ̄/etu-* > ***tailciud, teilciud*Ⓑ [m.] 'act of releasing, letting go'

↔ vb. *do·léici* [w. *-ī*] 'lets go, lets loose'.

uss-uss-lēggĭ̄/etu-* > ***oslucud*Ⓒ [m.] 'act of opening'

↔ vb. *as·oilci* [w. *-ī*] 'opens'.

ari-uss-uss-lēggĭ̄/etu-* > ***airsolcud*Ⓓ [m.] 'act of opening'

↔ vb. *ar·osailci* [w. *-ī*] 'opens'.

u̯o-uss-uss-lēggĭ̄/etu-* > ***fúasalcad* [m.] 'release; act of releasing, freeing'

↔ vb. *fo·osailci* [w. *-ī*] 'releases, frees'.Ⓔ

tu-u̯o-uss-uss-lēggĭ̄/etu-* > ***túaslucud* [m.] 'deliverance; act of releasing, setting free'

↔ vb. *do·fúasailci* [w. *-ī*] 'releases, sets free'.

Comments:

Ⓐ ***Comairleciud*** is probably a recent formation, as inherited **kom-ari-link^{w}ĭ̄/etu-* should have yielded ⁂*comrailiciud*, but a recent remodeling based on ***airliciud*** may also be considered. The consistent spellings with *-lec-* in Old Irish (as early as Milan) and *-léc-* (in Middle Irish) are also unhistorical, as the inherited vowel would have regularly been reduced to a short /-ĭ-/ (cp., e.g., *airliciud*). They have undoubtedly been influenced by

the simplex ***léiciud***.

Ⓑ The expected form of the verbal noun would be **tuilciud*, which may in fact be reflected in a by-form ***tuilged***, unless this word belongs to **do·lega* 'melt, dissolve' < **tu-leg-ā-* (cp. § 3.1.70).[127] In Old Irish it appears as ***tailciud*** or ***teilciud***, with the stressed vowel unrounded.

© The preverb **uss-* was treated in *VKG* as two preverbs, **od-ess-*. In this verb it was thought that the order of the two preverbs was inverted in the deuterotonic forms: **od-ess-léic-* > prot. *·oslaici* vs. **ess-od-léic-* > deut. *as·oilci*;[128] but this explanation has been abandoned in light of the now universally accepted reconstruction of unitary **uss-*. Russell (1988: 106) suggests that **uss-link^{w}-* 'opens' operated like the handful of verbs that avoid the shift of stress between prototonic and deuterotonic forms by repeating the first preverb in the deuterotonic,[129] so that deuterotonic **os·oilc* (**uss-* + **uss-link^{w}-*) was built from prototonic **·oilc* (**uss-link^{w}-*). In other such cases, however, only the deuterotonic forms have the doubled preverb, while the prototonic forms and the verbal noun keep the single instance; but all forms related to *as·oilci* have the doubled preverb (e.g., prot. *·oslaici*, vn. ***oslucud*** < **uss-uss-link^{w}-* instead of ⁂*·óilc(i)*, ⁂*ólcud* < **uss-link^{w}-*), as do also the other compounds (e.g., *ar·osailci* 'reveals' instead of ⁂*ar·óilci* < **ari-uss-link^{w}-*; *do·fúasailci* 'releases', instead of ⁂*do·fúailci* < **tu-u̯o-uss-link^{w}-*). McCone (2006: 181f.) offers the possibility that the preverbs were **exs-uss-*, and that prototonic **·eslaici* and the verbal noun **eslucud* were remodeled on the basis of the stressed vowel of deuterotonic

---

[127] So Plummer *apud DIL* s.v. **? tuilged**.

[128] VKG II, 563f. § 759(3).

[129] *GOI* 351 § 543(b). Other examples include *·tuit* 'falls' (< **tu-tud-*) : *do·tuit* (< **tu-* + **tu-tud-*), *·fúasna* 'disturbs' (< **u̯o-uss-an-ā-*) : *fo·fúasna* (< **u̯o-* + **u̯o-uss-an-ā-*), *·imgaib* 'avoids' (< **ambi-gab-i̯^{e}/$_{o}$-*) : *imm·imgaib* (< **ambi-* + **ambi-gab-i̯^{e}/$_{o}$-*).

*as·**oilci***. The forms related to *as·oilci* and *ar·osailci* could be accounted for readily enough by this explanation, but ***fúasalcad*** is more difficult, since *fúa-* is the regular reflex of **u̯o-uss-*, not **u̯o-exs-*.[130] Either analogical remodeling of the vowel of **exs-* took place relatively early, before the prefixing of **(tu-)u̯o-*, or, more likely, double **uss-uss-* had existed all along. Doubling of a preverb is possibly attested in at least one other Irish verb:[131] *as·éirig* 'arises' ↔ vn. ***es(s)éirge*** < **exs-exs-reg-* (§ 3.1.98(2)).[132] Since **uss-* appears to have a dual origin in **uxs-* < **up-s* and **uts-* < **ud-s*,[133] one might also speculate — though it is impossible to verify this — that the preverbs were originally distinct: **uxs-uts-* or **uts-uxs-* + **link^{w}-*.

Ⓓ Spellings indicating */-solg-/* (*ir**solc**oth*, *er**solc**ud*, *er**solg**ud*, etc.) are consistent in the glosses. Later */-slog-/* or */-slug-/* (*(a)ur**sluc**ud*, *er**sloc**ud*, *er**sloc**adh*, etc.) becomes the norm by analogy with ***oslucud***.

Ⓔ The verb *fo·osailci* 'releases, frees' is not listed in *DIL* or *KPV*. *VKG* (II, 564 § 759(3)), followed by *DIL* (s.v. **fúaslaici, fúasailci**), considers the later simple verb *fúaslaici* 'id.' to be a back-formation from *do·fúasailci* 'id.' However, as Kelly points out, forms of the verb *fo·osailci* can be identified in early Old Irish:

> Though it [i.e., *fo·osailci*] does not occur in the Glosses it was clearly well established in early OI.... Early attestations of finite forms of the verb

---

[130] *GOI* 526 § 849.A. The reflex of **u̯o-exs-* would probably be *·fóe-*: cp. *GOI* (512 § 837.A) and further *fo·etlan*, prot. ***·fóetlan*** 'carries off' < **u̯o-exs-tlina-* (*DIL* s.v. **fo-etlan**).

[131] It is also attested elsewhere in Indo-European, e.g., PIE **pro* in Hitt. *parā parā makkiški-* 'increase more and more', Ved. *prá-pra-jan-* 'be born again and again', *prá-pra-vī-* 'advance against, attack', Gr. (Hom.) προ-προ-κυλινδόμενος 'being rolled on and on'. See Dunkel 1980; 1981; 1981b for a fuller examination, with additional examples, of Indo-European preverb repetition.

[132] But Hamp (1963) reconstructs **exs-ē-reg-*, with the second preverb reflecting PCelt. **e(ϕ)i* < PIE **epi* (see further § 3.1.98(2) comment A).

[133] See Russell 1988: 116–25.

include *fafuasailcci, Bürgschaft* p. 32 § 2, *fonuasluice, AL* V 214.29 [= *CIH* I, 25.15 and parallels]. (1976: 48, ed.n.101.)

The reality of earlier *fo·osailci* is also assured by the existence of both the verbal noun ***fúasalcad*** 'release; act of releasing' and the verb *do·fúasailci* which had *fo·osailci* as its base (cp. § 2.1.4).

3.1.69. *leg-* 'lie'

< PCelt. **leg-$^{e}/_{o}$-* ← PIE √**leg^{h}-* 'lie down; set down'.

(1) PCelt. ****leg-io-*** (← PIE **leg^{h}-*):

◊ **legio-* > ***lige*** [n.] 'act of lying (down), sleeping'

↔ vb. *laigid* [s. *-$^{e}/_{o}$*] 'lies (down), sleeps'.

kom-u̯o-legio-* > ***coiblige* [n.] 'cohabitation, wedlock'

↔ no attested vb. **con-foilg*.

u̯riss-legio-* > ***frislige* ⇒ ***freslige***Ⓐ [n.] 'juxtaposition; act of lying beside'

↔ vb. *fris·laig* [s. *-$^{e}/_{o}$*] 'lays (? or lies) beside'.

Comment:

Ⓐ The infrequently attested ***frislige*** (e.g., *Senchas Már, Cethairślicht Athgabálae* = *CIH* V, 1899.19) is the historically expected form. The lowered vowel in ***freslige*** is secondary (see § 2.1.3.1 *ad fin.*).

3.1.70. *leg-a-* 'melt, dissolve, destroy'

< PrIr. **leg-ā-*Ⓐ ⇐ PCelt. **leg-$^{e}/_{o}$-* ← PIE √**leg̑-* 'drip, dribble'.

(1) PrIr. ****leg-ă̆-tu-*** (← vb. stem **leg-ā-*):

◊ **legă̆tu-* > ***legad*** [m.] 'dissolution, corruption; act of melting, dissolving, perishing'

↔ vb. *legaid* [w. *-ā*] 'melts, dissolves, perishes'.

(2) as if ***-leg-end-o-*** (analogically remodeled):Ⓑ

dī-legendo-* > *dílgend [n.] 'extermination; act of exterminating'

↔ vb. *do·lega* [w. *-ā*] 'destroys, abolishes, cancels'.

Comments:

Ⓐ The Old Irish verbs are inflected as weak *ā*-verbs, and the simple *tu*-stem verbal noun ***legad*** follows suit. Evidence for a primary verb as late as Insular Celtic is found in several Middle Welsh words, including the verbal nouns *di-lein* 'to abolish' (< **-leg-nā-*) and *go-leith* 'to avoid, shun' (< **-leg-tV-*), the verbal abstracts *di-leith* 'doom, destruction' and *lleith* 'death' (< **-leg-tV-*), and the adjective *lleith* 'damp, moist' (< **leg-to-*, an old *to*-participle).[134] A cognate primary verb is also attested in Germanic: ON *leka* 'to drip, leak' (> Eng. *leak*) < **leH-e/o-*.[135]

Ⓑ The verbal noun ***dílgend*** is a transparent remodeling after ***légend*** 'studying, reading' < Lat. *legendum* (see the next entry) by reason of the resemblance between the respective verbs *legaid, ·lega* 'dissolves' and *légaid, ·léga* 'reads'.

3.1.71. *lég-a-* 'read, study'

< PrIr. **lēg-ā-* < VLat. **lēg-o, -ere* < Lat. *leg-ō, -ere* 'read'.Ⓐ

(1) Lat. ***leg-endum***:Ⓑ

Lat. *legendum* > OIr. ***légend*** [n. *-o*] 'act of reading, studying'

↔ vb. *légaid* [w. *-ā*] 'reads, studies'.

Comments:

Ⓐ The quantity of the Old Irish root vowel *-é-* does not match the short *-e-* of Lat. *lĕgō*. Thurneysen (*GOI* 573 § 923) appeals to analogy with *scríbaid* (cp. § 3.1.107), possibly with

---

[134] Schumacher 2000: 56, 74, 195f.; *KPV* 449 n.(a) s.v. **2. *leg-e/o-***.

[135] *LIV*² 397 s.v. ?***leH-***.

the support of *líacht(u)*, archaic **lēcht(u)* 'text, lesson' < Lat. *lēctio*. But appeal to analogy is not necessary, since the Vulgar Latin pronunciation would have been **lēgo*, with regularly lengthened vowel in a stressed open syllable.[136] This lengthening probably reflects the register of learned ecclesiastical Latin rather than that of spoken British Latin, since the latter appears not to have participated in this Vulgar Latin readjustment of vowel quantity.[137] The long vowel of the verbal noun ***légend*** (see comment B) must have arisen by analogy from the verb, since in both Classical and Vulgar Latin *legendum* would have had a short vowel.

Ⓑ The derivational relationship of *légaid* ↔ vn. ***légend*** is not Irish, but taken from Lat. *legō* : *legendum*. The fact that Irish adopted the Latin gerund *qua* verbal noun along with the verb is further evidence of the learned nature of the borrowing (cp. also *scríbaid* 'writes' ↔ vn. ***scríbend***, § 3.1.107(1)).

3.1.72. *le-n- / len-a-* 'stick, adhere'

< [1] PCelt. **li-na-* (⇒ [2] PrIr. **-lin-ā-*) < PIE **$h_2$li-n-H-* ← √**$h_2$leiH-* 'smear'.

(1) [[PCelt. ****lina-mnā-*** (← vb. stem **li-na-*):

◊ **linamnā-* > ***lenamon*** [f.] 'act of adhering (to)'Ⓐ

↔ vb. *lenaid* [s. *-na*] 'remains, continues; clings to, adheres to'.]]

(2) PCelt. ****-leiˆ(i)-o-*** (← PIE **$h_2$leiH-*):Ⓑ

ati-leiˆ(i)o-* < ***aithle* [n.] '(that which follows →) consequence'

↔ vb. *ad·len* [s. *-na*] 'adheres to, follows'.

---

[136] *LHEB* 134 fn.1; McManus 1983: 68; Schumacher 2000: 195 fn.166. Cp. Grandgent 1907: 75–77; Richter 1934: 127.

[137] *LHEB* 88, 270f.

(3) PrIr. ***-lin-ă̆-tu-*** (← vb. stem *-*lin-ā*-):Ⓒ

exs-linăt*u- > *éilned [m.] 'pollution, defilement; act of polluting, defiling'

↔ vb. *as·lena* [w. -*ā*] 'pollutes, defiles'.

Comments:

Ⓐ The earlier simple verbal noun of *lenaid* 'adheres' may have been **líth* < PCelt. **lī-tV-* < PIE **h*$_2$*liH-tV-*, to judge by similar pairs *benaid* 'strikes' ↔ vn. ***bíth*** and *crenaid* 'buys' ↔ vn. ***críth***, though the gender and stem class of these words cannot be fully ascertained. (See the discussions under § 3.1.12(1) comment A and § 3.1.27(1) comment A.) There is an ordinary substantive *líth* [m. -*u*] 'festival, festivity; luck; omen', but it is doubtful on semantic grounds that this can be the same word, and other etymologies have been proposed.[138] A late *tu*-stem verbal noun ***lenad*** is found in Early Modern Irish in the phrase *lucht a* ***leanta*** 'people of his **adherence**' = 'his followers', but there is no evidence for its antiquity, and indeed it would be eminently surprising if this patently weak formation were found with a strong verb in the early materials.

Ⓑ For the shape of the stem *-*le*i̯(*i̯*)-*o*-, see Schumacher (2000: 174f.) and § 2.2.3.6 *supra*.

Ⓒ The transfer of *as·lena* to a weak *ā*-verb has already occurred by Würzburg, and consequently the verbal noun has acquired the default weak formation. For the meaning 'smudge, befoul' ← 'smear, plaster with something oily or wet' compare Lat. *linō, -ere* 'smear; befoul' and MoE *smear*.

---

[138] For example, H. Zimmer (1888: 284) connects OIr. *líth* with Bret. *lid* 'festival, joy', MW *llid* [m.] 'wrath, anger', and PGmc. **līþu-* (> Go. *leiþu*, OE *līð*, OHG *līd*, ON *líð*) [n.] 'cider, fermented drink', imagining the Irish 'festival mood' resulting from intoxication; Thurneysen (1900: 20–22) takes the word rather to be from **lī-tu-* < **plē-tu-* ← PIE √**pleh*$_1$- 'fill', in the sense of the festival as the "'Fülle' alles Guten ..., die eine Festfeier zu bieten pflegt, bei der auch der minder Begüterte und im gewöhnlichen Leben Darbende einmal aus dem Vollen schöpft," and compares Gr. πλη<u>θ</u>ύς [f.] 'throng, crowd' (⇐ *πλητύς with -θ- from πλῆθος [n.] 'id.', πλήθειν 'to swell, become full') and MHG *un-vlāt* [m.] 'enkelhafte Unschönheit', *(un)vlætec* [adj.] '(un)schön, (un)fein', with the semantic development 'fullness' → 'delight' → 'beauty'; Meyer (1895: xvii) supposes a borrowing from Lat. *lēctiō* [f.] 'reading (aloud)' through MW *llith* [f. m.] 'lesson'. Cp. Irslinger 2002: 113f.

3.1.73. *-li-n-* 'flow, overflow'

< PCelt. *-(ϕ)*li-ni-* ⇐ *-(ϕ)*al-na-*[Ⓐ] < PIE *$p\underset{\circ}{l}$-n-h_1- ← √*$pleh_1$- 'fill, become full'.

◊ No simplex.

(1) as if ***-le̯i̯(i̯)-o-*** (analogically remodeled):[Ⓑ]

tu-le̯i̯(i̯)o-* > ***tuile [n.] '(flood, inundation →) abundance; act of flowing (in), flooding'

↔ vb. *do·lin* [s. *-ni*] 'flows; abounds'.

Comments:

Ⓐ PCelt. *(ϕ)*al-na-*, the regular reflex of the verbal formation *$p\underset{\circ}{l}$-n-h_1-*, has been remodeled to *(ϕ)*li-ni-* through two processes of morphological leveling. The replacement of *-*al-* < *-$\underset{\circ}{l}$-* by *-*li-* on the model of the *n*-present stems of *i*-diphthong roots, **gli-na-* 'glue', etc., is predictable in the Celtic descendants of PIE "state II" roots. For details, see § 2.2.3.6 *ad fin.* Stem-final *-*ni-* is the result of ablaut leveling within Celtic, where the vocal quality of the singular first spread to the rest of the paradigm, followed by the customary generalization of the plural stem:[139] PIE 3.sg. *$p\underset{\circ}{l}$-né-h_1-ti* : 3.pl. *$p\underset{\circ}{l}$-n-h_1-énti* > PCelt. *(ϕ)*alnīt(i)* : *(ϕ)*alnent(i)* ⇒ *(ϕ)***li**nīt(i)* : *(ϕ)***li**nent(i)* ⇒ *linīt(i)* : *lin**i**nt(i)* ⇒ *lin**i**t(i)* : *linint(i)*; from the last set of forms a synchronic stem *li-ni-* was extracted.

Ⓑ Parallel to the remodeling of the verbal stem (comment A), the verbal nouns were also reshaped to **-le̯i̯(i̯)-o-* (as if < PIE ⁂-le̯i̯h_1-o-) on the model of verbal nouns to *i*-diphthong roots (see § 2.2.3.6).

---

[139] See McCone 1986: 226–29; 1991: 22f.; 1991b: 2f.; and cp. **bal-ni-* 'die' (§ 3.1.11) and **kri-ni-* 'sift, shake' (§ 3.1.29).

3.1.74. *ling-* 'jump, leap'

< PCelt. *(ϕ)*leng-*$^{e}/_{o}$- (?)⇐ PIE √*(s)*preng*^{h}- 'spring'.Ⓐ

(1) PrIr. ***lang-smen-*** < PCelt. *(ϕ)*lang-smen-* (⇐ PIE √*(s)*prn̥g*^{h}-):Ⓑ

◊ **langsmen-* > ***léim(m)*** [n.] 'leap, bound; act of leaping'

↔ vb. *lingid* [s. -$^{e}/_{o}$] 'leaps'.

ari-langsmen-* > ***airlim(m)* [n.] 'act of leaping forward'

↔ vb. *ar·ling* [s. -$^{e}/_{o}$] 'leaps forward'.

Comments:

Ⓐ In the reduplicated future and preterite tenses of this verb, the consonant *-b-* consistently appears before the *-l-*, implying a root with historical initial *p-*: fut. ***ib****lais* < **pi-pl°* and pret. ***eb****laing* < **pe-pl°* (⇒ *leblaing* with secondary addition of initial *l-*).[140] A connection with √*(s)*pleiĝ*^{h}- 'spread the legs' (cp. Gr. πλίσσομαι 'stride along'), as proposed by Osthoff (1910: 23) and *IEW* (1000 s.v. ***(s)pleiĝh-***), is conclusively refuted by the related British nouns, MW *llam* [m. f.], MBret., MCo. *lamm* [m.] 'a jump, leap', which show that the root vowel could not have been an *i*-diphthong. Schumacher (2000: 116) proposes a root √**plen*$\hat{g}^{(h)}$-, unassailable phonologically but unfortunately *ad hoc,* since no cognates are to be found elsewhere in Indo-European.

Stüber (1998: 65f.)[141] argues for an origin in PIE √**h*$_1$*leng*^{wh}- 'move effortlessly', a root without initial **p-*, and attempts to justify the introduction of *-b-* through analogy. As a parallel she cites *alaid* 'nourishes, rears', which has unetymological *-b-* in the future ***eb****laid* through contamination from *eblaid* 'will drive' < (virtual) **pi-pl̥h*$_2$*-se-ti*,[142] suppletive

---

[140] Cp. *GOI* 426 § 689(b).

[141] So also *LIV*^{2} 247f. s.v. ***h*$_1$*leng*^{wh}-** and *EDPC* 237f. s.v. ***leng-o-***.

[142] Etymologically related to *·ella* 'approaches' < PIE **pl̥-n-h*$_2$- or **pel-n-h*$_2$-, cp. § 3.1.37.

future of *aigid*, with possible reinforcement from ***eb**raid* 'will bestow' < (virtual) **pi-pr̥h₃-se-ti*, future of *ernaid*;[143] this *-b-* eventually also spreads to the preterite (MIr. 3.sg. ***eb**ail* [LU 124a1], 3.pl. ***eb**latar* [LU 123b30], sg.pass. ***eb**lad* [LU 123b20]). Upon closer inspection, however, this comparison does not turn out to be especially instructive. In the case of pres. *alaid* 'drives' : fut. *eblaid* 'will drive', the analogical model is clear, and the subsequent spread of *-b-* to the pret. *ebail* 'drove' is a separate and much later development; it is first attested in the Middle Irish recension of *Tochmarc Emire*,[144] and replaces the established Old Irish *t*-preterite *·al**t***. In the case of *lingid* 'leaps', the facts are different. No contemporary Old Irish forms of the future tense are attested, while those that appear in manuscripts from the Middle Irish period are contradictory, some pointing to fut. *iblais*, others to *lilis*; but in this instance it is the latter that must be analogical, based on the obvious model of *cingid* 'steps, strides' : fut. *cicis* and *dingid* 'presses, thrusts' : fut. *didis*, since there is no good model for the creation of a new future *iblais*.[145] On the other hand, pret. *eblaing* 'jumped' is firmly established for Old Irish, and there is no hint of an earlier preterite **ílaing* < PIE **h₁e-h₁long^{wh}-* (or **lílaing* if renewed reduplication following the loss of the laryngeal is assumed) for it to replace; nor, again, is there any known source for the analogical introduction of *-b-*.[146] In the absence of any

---

[143] From PIE **pr̥-n-h₃-* or **per-n-h₃-*, cp. § 3.1.39.

[144] A precise date of this recension cannot be determined, but it is later than the Old Irish recension 1. All three *b*-preterite forms appear on an intercalated leaf of LU (pp. 123–24) supplied by the scribe known as H, whose revisions and interpolations are well known in this manuscript. See Thurneysen (1921: 377–82) and Toner (1998) on the transmission of the LU text.

[145] The only possible sources for a renewed Old Irish future tense are the same formations that influenced *eblaid* 'will nourish, rear', namely *eblaid* 'will drive' and *ebraid* 'will bestow'; being asigmatic futures, they are rather unsuitable models for a reshaped *s*-future *iblais* 'will jump'.

[146] Here not even the historical preterites of *·ella* 'approaches' and *ernaid* 'bestows' are available, as both have already been replaced by new formations, the former by the weak preterite *·ell*, the latter by a form reflecting PCelt. **(ɸ)īr-* (for an explanation of which see *KPV* 509 n.(b) s.v. ****ɸar-na-***).

early analogical models for secondary *-b-*, a root with original initial **p-* appears to be the only plausible solution.

The most recent solution offered, *KPV*'s (522–24 s.v. ****φleng-e/o-***) derivation from PIE √**(s)preng^{h}-* 'leap', is the least objectionable. The semantic match is perfect, and the morphophonology is remarkably straightforward, apart from the puzzling change of **-r-* to **-l-*. For this, *KPV* suggests, "das **-l-* entweder auf einer spontanen Dissimilation beruht oder auf dem Einfluss der Kontinuante von uridg. **h$_1$leng^{wh}-* 'sich mühelos bewegen'" (*loc. cit.* n.(a)). It is not clear what is meant by a "Dissimilation" here since no similar sounds are present in the phonetic environment, but the sporadic change from **-r-* to **-l-* is perhaps not entirely unknown elsewhere in Celtic: cp. **-glād-ī-* 'speak' (OIr. *ad·gládathar* 'addresses', etc.), if this is to be traced back to PIE **ĝ^{h}roh$_1$d-éi̯$^{e}/_{o}$-* ← √**ĝ^{h}reh$_1$d-* 'cry, call out' (see § 3.1.55 comment A). On the other hand, contamination from **leng^{w}-$^{e}/_{o}$-* < PIE √**h$_1$leng^{wh}-* would not be unreasonable had this verb also existed in Proto-Celtic, though additional evidence for this possibility is lacking.

Ⓑ While the OIr. verbal noun could theoretically continue either PCelt. **(ɸ)leng-smen-* (← full-gr. **pleng-*) or PCelt. **(ɸ)lang-smen-* (← zero-gr. **pl̥ng-*), the British cognates, MW *llam* [m. f.], MBret., MCo. *lamm* [m.] 'a jump, leap', show that the latter must be the case.[147]

3.1.75. *-lo-i-* 'escape'

< PCelt. **-luu̯-$^{e}/_{o}$-* ← PIE **luH-* ← √**leu̯H-* 'free, cut off, separate'.

◊ No simplex.

---

[147] Stüber 1998: 47, 65; Schumacher 2000: 116.

(1) PCelt. ***-lū-tu-*** (← PIE **luH-*):

(?)**ari-lūtu-* > ***aurlúd*** [m.] 'escape(?), evasion(?)'Ⓐ

↔ no attested vb. **ar·loí.*

exs-lūtu-* > ***élúd* [m.] 'escape, evasion; act of escaping, evading'

↔ vb. *as·loí* [h.] 'escapes, evades'.

Comment:

Ⓐ The *hapax* ***aurlúd*** is included here in the interest of completeness, but its analysis and meaning are not certain. If the long *-ū-* is correct (the manuscript has *aurlud*), it would appear to be the verbal noun of an unattested **ar·loí* and should probably mean something like 'escape, evasion'. This meaning is not self-evident, however, from its usage in context. It appears in CG § 43, where the qualifications of the warrior worthy to cook the king's food are enumerated; among them: *Fer for-gaib cimbid cen* ***aurlud*** 'a man who thrusts [a weapon through] a captive without ***aurlúd***'. If the meaning is 'escaping, fleeing', one might rather expect *oc* ***aurlúd*** 'while escaping'.[148]

3.1.76. *lód-i-* 'set in motion'

< PCelt. **(ɸ)loud-ī-* < PIE caus.-iter. **ploud-éi̯e/o-* ← √**pleu̯-d-* 'swim, flow'.Ⓐ

(1) PICelt. ****loud-o-*** (← PIE **ploud-*):Ⓑ

◊ **loudo-* > ***lúad*** [m.] 'movement; mention; act of moving, setting in motion; mentioning'

↔ vb. *lúaidid* [w. *-ī*] 'moves, sets in motion, brings about; mentions'.

Comments:

Ⓐ PIE √**pleu̯-d-* is a *d*-enlarged variant, perhaps in origin a *d*-present stem, of PIE √**pleu̯-* 'swim, float'. It is found only in Celtic, Germanic, and Baltic.[149]

---

[148] Binchy 1941: 38 ed.n.554f.

[149] *LIV*² 488 n.1 s.v. ?****pleud-***.

Ⓑ While full-grade PIE **pleu̯d-* would generate the same Old Irish form, *o*-grade is characteristic of *o*-stem verbal nouns to causative-iterative verbs (see § 2.2.3.1(2)).

3.1.77. *-lo-n-g-* 'put, place'

< PCelt. **-lu-n-g-$^{e}/_{o}$-* ← PIE √**leu̯g-* 'bend'.Ⓐ

◊ No simplex.

(1) PCelt. ****-loug-o-*** (← PIE **leu̯g-*):Ⓑ

en-lougo-* > ***ellug, elluch* [n.] 'union, unity; act of uniting, joining'

↔ vb. *in·loing* [s. *-n..$^{e}/_{o}$*] 'joins, unites, brings together; imposes'.

u̯o-lougo-* > ***folog, folach* ⇒ ***fulang***Ⓒ [n.] 'support, endurance; act of supporting, enduring' ↔ vb. *fo·loing* [s. *-n..$^{e}/_{o}$*] 'supports, endures'.

Comments:

Ⓐ The verbal forms uniformly point to a Proto-Celtic root **loug-* < **leug-*,[150] so a connection with PIE √**leu̯g-* 'bend' is formally faultless. Schumacher (2000: 183; *KPV* 460–62 s.v. ****-lu-n-g-e/o-***) posits a basic sense of 'put, place' in Celtic to account for the various attested meanings: OIr. *in·loing* 'brings together; imposes',[151] *fo·loing* 'supports', MW *ellwng* 'to set free, release' (< **exs-lung-*), *dillwng* 'id.' (< **dī-exs-lung-*), *gollwng* 'to let go, set free' (< **u̯o-exs-lung-*), etc. The development from PIE 'bend' would be 'bend in a certain direction' → 'put somewhere'.[152]

Ⓑ Zero grade is excluded by the presence of stressed *-o-* in the archaic spellings ***folog*** (Wb. 17b23, *a prima manu*) and ***folach*** (CG *passim*) 'act of supporting', since in a zero-grade preform ⁑*u̯o-lug-o-*, the **-u-* of **-lug-* would have raised the **-o-* of the first syllable

---

[150] Cp. McCone 1991: 42f.

[151] Cp. *DIL* s.v. **in-loing**: "The original sense seems to have been *lays, or puts, in or on.*"

[152] Cp. *LIV*² 416 n.2 s.v. 2.****leu̯g-***.

to *-*u*-. For full-grade *$leu\hat{g}^{(h)}$- rather than *o*-grade *$lou\hat{g}^{(h)}$-, cp. § 2.2.3.1(1), esp. fn.52.

© The oldest spellings are *folog, folach*, etc. found in the Würzburg *prima manus* and regularly in the Laws. In Milan *fulach* is found once (22d9). But the most common spelling, from as early as the main hand of Würzburg, is *fulang*, showing analogical influence from the verb's prototonic present stem *·fulaing* (cp. § 2.2.2.1).

3.1.78. *-lug-i-* 'lay down' or 'dissolve'

< PCelt. *-*log-ī*- < PIE caus. *log^h-$\acute{e}i^{e}/_{o}$- ← √*leg^h- 'lie down' or √*$leg^{(h)}$- 'drip, dribble'.Ⓐ

◊ No simplex.

(1) PCelt. ***-log-e-tu-*** (← vb. stem *-*log-ī*-):

*dī-logetu- > ***dílgud*** [m.] 'forgiveness, pardon; act of forgiving, pardoning'

↔ vb. *do·luigi* [w. -*ī*] 'forgives, pardons'.

Comment:

Ⓐ It has been suggested[153] that *do·luigi* 'forgives' (< *dī-log-ī-) belongs to the PIE root √*leg^h- 'lie down' (*KPV*'s **1. *leg-e/o-**), beside *fo·álgi* 'lays low' and *fo·luigi* 'hides'; the sense would be 'cause to lie down' → 'forgive'. *VKG* (*loc. cit.*) also admits the alternative possibility that it could belong to PIE √*$leg^{(h)}$- 'drip, dribble' (*KPV*'s **2. *leg-e/o-**),[154] in the sense 'cause to leak away' → 'dissolve (tr.)' → 'forgive' (for which cp. *do·lega* [w. -*ā*] 'destroys, abolishes, cancels' < *dī-leg-ā-, § 3.1.70). It is difficult to decide between the two proposals.

---

[153] *VKG* II, 573 § 771 Anm.; Sjoestedt 1925: 327, 337; *LIV*² 398f. s.v. ***leg^h-**.

[154] So also Watkins 1956: 615.

3.1.79. *lu-i-*$_{DEP}$ 'fly, move'

← PCelt. *(ɸ)lo̯u-ī- < PIE iter. *plo̯u-éi̯^{e}/$_{o}$- ← √*ple̯u- 'swim, float'.

(1) PrIr. ***lo̯u-ĭ̆-tu-*** ⇐ PCelt. *(ɸ)lo̯u-e-tu-Ⓐ (← vb. stem *lo̯u-ī-):

◊ *lo̯uĭ̆tu- > ***luüth*** [m.] 'motion, power of movement, vigor; act of moving'

↔ vb. *luïthir* [h.] 'moves'.

Comment:

Ⓐ The intermediate vowel *-ĭ̆- of PrIr. *lo̯u-ĭ̆-tu- is indicated by the raising of *-o- to *-u- in ***luüth***. This presumably replaces earlier *(ɸ)lo̯u-e-tu- (see § 2.2.3.17(3)).

3.1.80. *ma^{i}d-* 'break, burst'

< PCelt. *mad-i̯^{e}/$_{o}$- ← PIE √*mad- 'be(come) wet'.Ⓐ

(1) PCelt. ***mad-men-*** (← PIE *mad-):

◊ *madmen- > ***maidm*** [n.] 'defeat, rout; act of breaking (a battle), defeating'

↔ vb. *maidid* [s. -i̯^{e}/$_{o}$] 'breaks'.

Comment:

Ⓐ The semantic connection between PIE 'be(come) wet' (→ Gr. μαδάω 'melt away', Lat. *madeō, -ēre* 'be wet') and Celtic 'break' is not obvious. The rather dubious progression suggested by Thurneysen (1903: 132f.) is 'melt away, dissolve' → 'fall apart' → 'break'.[155] A more plausible alternative is offered by Matasović (*EDPC* 252 s.v. **mad-yo-**), who suggests that the basic sense in Celtic is 'burst', extended from the idea of the bursting forth of streams, floods, heavy rain, etc., and notes a parallel in Croat. *pr̂skati* 'to sprinkle' vs. *pr̂snuti* 'to burst, explode'. This scenario finds support in the common application of both Irish *maidid* and Welsh *maeddu* to defeating one's enemies by bursting upon them and overwhelming them.

---

[155] Cp. also *LIV*^{2} 421 n.3 s.v. ***mad-**.

3.1.81. *-mach-* 'increase'

< PCelt. **-mak-$^{e}/_{o}$-* ← PIE **$mh_2\hat{k}$-* ← √**$meh_2\hat{k}$-* 'thin'.Ⓐ

◊ No simplex.

(1) PCelt. ****-mak-o-*** (← PIE **$mh_2\hat{k}$-*):

tu-u̯or-mako-* > ***tórmach* [n.] 'increase; act of increasing'

↔ vb. *do·formaig* [s. *-$^{e}/_{o}$*] 'increases'.

Comment:

Ⓐ *KPV* (468f. n.(a) s.v. ****mak-e/o-***) observes that the corresponding British verbs — MW *magu*, MBret. *mag[u]aff*, MCo. *maga* 'raise, nourish' — uniformly show the voiced reflex (by British lenition) of a Proto-Celtic voiceless guttural at the end of the root, so a derivation from PIE √**$meĝ$-* 'big' (→ OIr. *mogaid*, § 4.1.75) cannot be maintained. This fact suggests a connection with PIE √**$meh_2\hat{k}$-* 'thin', with a Celtic semantic development 'thin' → 'long, wide' → 'large' similar to that of Gr. μακρός 'long, tall, far'.[156] The Celtic verb **mak-$^{e}/_{o}$-* is evidently a post-PIE creation, since the factitive meaning is not marked with a PIE factitive suffix.

3.1.82. *mar-n-* 'betray'

< PCelt. **mar-na-* < PIE **$m\underset{\circ}{r}$-n-h_2-* ← √**$merh_2$-* 'seize forcibly, crush'.Ⓐ

(1) PCelt. ****mra-to-*** (< PIE **$m\underset{\circ}{r}h_2$-to-*):

◊ **mrato-* > ***mrath*** [n.] 'treachery; act of betraying, deceiving'

↔ vb. *marnaid* [s. *-na*] 'betrays'.

Comment:

Ⓐ PIE √**$merh_2$-* 'seize forcibly, crush' provides the only reasonable root connection. An exact parallel for the semantic shift from 'seize forcibly, crush' to 'betray' is not easy to

---

[156] For a discussion of the various Celtic and Indo-European cognates, see *KPV, loc. cit.*

find, but Fr. *attraper* 'catch' → 'trick, dupe' comes close. The use of terms for violence in a figurative sense to mean 'betray, deceive, cheat', etc. is not unusual typologically. English is rich in informal examples such as *burn, gouge, ream,* etc. In line with this, one may suppose a figurative application of 'seize forcibly, crush'[157] or 'rub, rub out'[158] to mean 'betray'.

3.1.83. ***med-***$_{DEP}$ **'measure, judge'**

< PCelt. **med-*$^{e}/_{o}$*-*$_{DEP}$ ← PIE √**med-* 'measure; give advice'.

(1) PCelt. ****med-tu-*** (← PIE **med-*):

◊ **medtu-* > ***mes(s)*** [m.] 'judgment, estimation, appraisal; act of judging, estimating'

↔ vb. *midithir* [s. -$^{e}/_{o}$] 'judges, estimates, appraises'.

ad-medtu-* > ***ammus* [m.] 'attempt, estimate; act of aiming at, attempting'

↔ vb. *ad·midethar* [s. -$^{e}/_{o}$] 'aims at, attempts'.

ande-medtu-* > ***indmus* [m.] 'zeal, ardor, devotion(?); moderation, measure(?)'Ⓐ

↔ vb. *ind·midethar* [s. -$^{e}/_{o}$] 'aims, strives after(?); estimates, measures(?)'Ⓐ

kom-medtu-* > ***com(m)us* [m.] 'control, power, ability; act of controlling, having power (over)' ↔ vb. *con·midethar* [s. -$^{e}/_{o}$] 'is competent, able; controls'.

ambi-ro-medtu-* > ****immromus* ⇒ ***immarmus***Ⓑ [m.] 'transgression, sin'

↔ vb. *imm·ruimdethar* [s. -$^{e}/_{o}$] 'transgresses, sins'.

tu-medtu-* > ***tomus* [m.] 'measure, quantity, amount; act of weighing, measuring'

↔ vb. *do·midethar* [s. -$^{e}/_{o}$] 'weighs, measures'.

u̯o-medtu-* > ***fomus* [m.] 'estimate; act of estimating'

↔ vb. *fo·midethar* [s. -$^{e}/_{o}$] 'forms an estimate'.

---

[157] So *LIV*² 440 s.v. ****merh₂-***.

[158] So *IEW* 735–37 s.v. ***5. mer-, merə-***.

*dī-uss-medtu- > **díum(m)us** [m.] 'overestimation' → 'pride'

↔ no attested vb. **do·uimdethar.*

Comments:

Ⓐ The meanings listed in *DIL* are those of Meyer (1921b): *ind·midethar* 'is zealous for, devotes oneself to' ↔ vn. ***indmus*** 'zeal, ardor, devotion'. However, Hull (1968: 78 ed.n.2, 85 ed.n.73) insists — perhaps correctly — that 'estimates, measures' and 'moderation, measure' are more appropriate to the contexts in which the words appear.

Ⓑ Similar metathesis may be seen in **immrobae* ⇒ ***immarbae*** 'deceit' (§ 3.1.12(3)).

3.1.84. *mel-* 'grind'

< PrIr. *$mel\text{-}^{e}/_{0}$- (? ⇐ PCelt. *$mal\text{-}^{e}/_{0}$- ← PIE *$m\underset{\circ}{l}h_2$-)Ⓐ ← PIE √*$melh_2$- 'grind'.

(1) as if ****mli-tā-*** (analogically remodeled):Ⓑ

◊ ***mlitā-* > ***mleth*** [f.] 'act of grinding'

↔ vb. *meilid* [s. $-^{e}/_{0}$] 'grinds'.

(2) as if ****-mel-tā-*** (analogically remodeled):Ⓑ

tu-meltā-* > ***tomalt [f.] 'consumption; act of using up, consuming (esp. food or drink)'

↔ vb. *do·meil* [s. $-^{e}/_{0}$] 'uses up, consumes; eats'.

Comments:

Ⓐ The Old Irish verb displays an *e*-grade root, but the cognate Welsh verb ***malu*** has the reflex of a zero grade. Assuming a uniform formation for Celtic, *KPV* (472 n.(a) s.v. ***mal-e/o-***) reconstructs a zero-grade thematic present stem *$mal\text{-}^{e}/_{0}$- < *$m\underset{\circ}{l}h_2\text{-}^{e}/_{0}$-, with the *e*-vocalism in Irish secondarily introduced from the subjunctive stem. However, the possibility exists that the analogical replacement may have gone the other way. The Italic evidence is similarly divided: Lat. *molō, -ere* is normally assumed to reflect the

e-grade *$melh_2$- (with the regular rounding of *-*e*- > -*o*- before velar -*l*-),[159] though *o*-grade is also phonologically possible, while Umbr. 3.sg.ipv. **ku-mal-tu** < **kom-male-tōd* reflects zero-grade *-$m̥lh_2$-*e*-.[160] Jasanoff (2003: 64–72) reconstructs an acrostatic *o*/*e*-present formation for this PIE root,[161] based on the existence of forms with unambiguous radical *-*o*- (> -*a*- in Lith. *malù*, *málti*; Go. *malan*) next to those with *-*e*- (OCS *meljǫ*, *mlěti*; OIr. *meilid*) and zero grade (Umbr. **kumaltu**, MW *malu*, and perhaps Arm. *malem*). If this is correct, then the *e*-grade forms in Slavic, Old Irish, and perhaps Latin continue the historical weak stem *$melh_2$-, while MW *malu* and Umbr. **kumaltu** have secondarily replaced the inherited weak root vocalism with the productive zero-grade *mal-* < *$m̥lh_2$-^{V}.

Ⓑ The verbal nouns have been remodeled after the structurally similar verbal nouns of *beirid*: simplex ***breth*** < **bri-tā*- < zero-grade *$b^hr̥$-teh_2- : compound ***-bert*** < *-*ber-tā*- < full-grade *b^her-teh_2- (§ 3.1.13; cp. § 2.2.3.15(2)). The regular reflexes of *seṭ* *$melh_2$- would have been *$mlăth$ < PCelt. *$mlă$-*tā*- < zero-grade *$m̥lh_2$-teh_2-[162] : *-*melath* < **mela-tā*- < full-grade *$melh_2$-teh_2-.

---

[159] E.g., Schrijver 1991: 216, 394; *LIV*² 432f. s.v. ***mélh₂-***; de Vaan 2008: 386f. s.v. **molō, -ere**.

[160] *LIV*² 433 n.4 s.v. ***mélh₂-***, w. further lit.; the vowel -*o*- ((-*o*-, -*u*-)) in the Umbrian spellings *comoltu*, **kumultu** may reflect secondary rounding (see Joseph & Klein 1981: 296–98).

[161] Strong stem *$mólh_2$- : weak stem *$mélh_2$-. He presents this verb as the exemplar of the root-present class of the h_2e-conjugation.

[162] The masculine PCelt. *$mlā$-*to*- < zero-grade *$m̥lh_2$-*tó*- is possibly attested in MW *blawt*, OBret., OCo. *blot* 'flour', if these come from √*$melh_2$- and are cognate with Lith. *mìltai* [m.pl.] 'id.' (*IEW* 716 s.v. ***1. mel-*** (auch ***smel-***), ***mela-*** : ***mlē-***, etc.; Vine 1998: 27f.; *EDPC* 273f. s.v. ***mlāto/i-***, where the possibility of a *ti*-stem *$m̥lh_2$-*ti*- is also considered; the latter is certainly continued by OIr. *mláith* [adj.] 'soft' ← '(finely) ground'). Schrijver (1995: 179f.), however, prefers to identify the British words with MW *blawd* [m.], OCo. *blod-on*, OIr. *bláth* [m. -*u*] 'flower, blossom, bloom' < PIE *$b^hl(e)h_3$-*tu*- (: √*b^hleh_3- 'blossom, flower'), with semantics parallel to Eng. *flower* : *flour*, Fr. *fleur* [f.] 'flower; flour' (< Lat. *flōs*, -*ris* < PIE *b^hleh_3-*os*-), and Du. *bloem* [c.] 'id.' (< PGmc. *$blō$-*mōn*- < PIE *b^hleh_3-*mon*-).

3.1.85. *moíd-i-* 'boast'

< PCelt. **moid-ī-* < PIE caus. **moi̯d-éi̯$^{e}/_{o}$-* ← √**(s)mei̯-d-* 'laugh, smile'. Ⓐ

(1) PCelt. ****moid-ī-mā-*** (← vb. stem **moid-ī-*):

moidīmā-* > ***moídem* [f.] 'cause of boasting, boast; act of boasting, vaunting'

↔ vb. *moídid* [w. *-ī*] 'boasts, vaunts'.

Comment:

Ⓐ The root of OIr. *moídid* reflects an *o*-grade of a PIE root of the shape √**mei̯d$^{(h)}$-*, the full grade of which is found in OIr. *míad* [m. *-o*] 'honor, dignity' < PCelt. **mēd-o-*. The only plausible PIE root connection appears to be that proposed by Pedersen (1928), a *d*-extension of PIE √**(s)mei̯-* 'laugh, smile', seen also in Gr. (Hom.) μειδάω, μειδιάω 'smile', φιλο-μμειδής (< **-σμειδής) 'ever smiling', Latv. *smaida* 'a smile', *smaidît* 'to smile', and without the **-d-*, Ved. *smáyate* 'laughs', OCS *smějǫ sę, smijati sę* 'to laugh', Toch.B *smiyäṃ* 'smiles', and possibly Lat. *mīrus* 'remarkable, astonishing'. This etymology requires a root with *s*-mobile, consistent with Pokorny's root **1. (*s*)*mei-*** (*IEW* 967f.), but *contra LIV*^{2} (568f. s.v. ****smei̯-***), which does not include Gr. (Hom.) μειδάω, μειδιάω. The semantic connection may be seen in Skt. *vi-smayate* 'wonders, is astonished; is proud, boasts', *smayaḥ* 'wonder, astonishment; arrogance, pride', starting with the initial shift from 'smile' to 'look of surprise'. The corresponding Sanskrit causative *vi-smāyayati* 'astonishes, surprises' thus provides a parallel to OIr. *moídid* < PCelt. **moid-ī-* < PIE caus. **moi̯-d-éi̯$^{e}/_{o}$-* 'cause to be in awe, astonish' → 'boast, vaunt'.

3.1.86. *mu^{i}n-*$_{DEP}$ 'think, remember'

< PCelt. **man-i̯$^{e}/_{o}$-*$_{DEP}$ ← PIE **mn̥-* ← √**men-* 'think'.

◊ Simple verb *muinithir* [s. *-i̯$^{e}/_{o}$*] 'intends; thinks, deems'; no simple verbal noun attested.

(1) PCelt. ***-man-tion-*** (← PIE *$m\underset{\circ}{n}$-):Ⓐ

ari-mantion-* > ***airmitiu* [f.] 'honor, respect; act of honoring, respecting'

↔ vb. *ar·muinethar* [s. -$\underset{\frown}{i}^{e}/_{0}$] 'honors, respects'.

tu-mantion-* > ***toimtiu* [f.] 'opinion; act of thinking, holding an opinion'

↔ vb. *do·muinethar* [s. -$\underset{\frown}{i}^{e}/_{0}$] 'thinks, holds an opinion'.

$\underset{\frown}{u}$o-mantion-* > ***foimtiu* [f.] 'anticipation, wariness; act of taking heed, being on guard against' ↔ vb. *fo·muinethar* [s. -$\underset{\frown}{i}^{e}/_{0}$] 'takes heed, is on guard against'.

(2) PCelt. ***-men-to-*** (← PIE **men-*):Ⓑ

t(u)-ati-mento-* > ***taithmet* [n.] 'remembrance; act of remembering'

↔ vb. *do·aithmuinethar* [s. -$\underset{\frown}{i}^{e}/_{0}$] 'calls to mind, recalls'.

$\underset{\frown}{u}$or-ati-mento-* ⇒ ***foraithmet*Ⓒ [n.] 'remembrance, memory; act of remembering, calling to mind' ↔ vb. *for·aithminedar* [s. -$\underset{\frown}{i}^{e}/_{0}$] 'calls to mind, commemorates'.

de-ro-mento-* > ***dermat* [n.] 'forgetfulness; act of forgetting'

↔ vb. *do·ruimnethar* [s. -$\underset{\frown}{i}^{e}/_{0}$] 'forgets'.

$\underset{\frown}{u}$or-mento-* > ***format* [n.] 'envy, jealousy; act of envying'

↔ vb. *for·muinethar* [s. -$\underset{\frown}{i}^{e}/_{0}$] 'envies'.

Comments:

Ⓐ Both full-grade **men-* and zero-grade **man-* would correctly produce the Old Irish forms. Stüber (1998: 128), noting the likelihood that the original proterokinetic paradigm of *ti*-stems (nom.sg. *mén-ti-s* : gen.sg. **$m\underset{\circ}{n}$-t$\acute{e}\underset{\frown}{i}$-s*) was still intact in late PIE, reasons that a full-grade preform **men-ti-Hon-* cannot be completely excluded for OIr. **-métiu* and its Latin cognate *mentiō*. Since, however, in Old Irish at least, *tion*-stems regularly take zero grade wherever the root grade can be determined (cp. § 2.2.3.22), there seems no compelling reason to assume otherwise here.

Ⓑ Full grade is proven here by the cognate Welsh forms, MW *gor-vynt* [m.] 'ambition,

jealousy' (≈ OIr. *for-mat*), *dy-fynt* [m.] 'eagerness, avidity', and *gorðy-fynt* [m.] 'perverseness, repugnance, opposition', with *-fynt* (*-vynt*) < **-men-to-* (see § 2.2.3.14).

© ***Foraithmet*** is not directly derivable from the preform **u̯or-ati-men-to-*, which would have yielded **forthamat* instead. It may have been remodeled on the basis of ***aithmet*** 'commemoration; act of calling to mind' (not attested in our corpus) and ***taithmet*** 'id.', or, alternatively, both the verb *for·aithminedar* and the verbal noun ***foraithmet*** may be recent (post-syncope) neologisms.

3.1.87. *na-sc-* 'bind'

< PCelt. **nad-sk$^{e}/_{o}$-* { < PIE **nHd-sk̂é/ó-* ← √**neHd-* 'tie, bind' or: ⇐ **and-sk$^{e}/_{o}$-* < PIE **Hn̥d^{h}-sk̂é/ó-* ← √**Hned^{h}-* 'tie, bind'. Ⓐ

(1) PCelt. ****nad-men-*** (← PIE **nHd-*, or ⇐ PCelt. **and-men-* ← PIE **Hn̥d-*):

◊ **nad-men-* > ***naidm*** [n.] 'bond, pledge; act of binding (*fig.*), pledging'

↔ vb. *naiscid* [s. *-$^{e}/_{o}$*] 'binds, secures by pledge'.

ari-nad-men-* > ***airnaidm* [n.] 'bond, guarantee; act of binding (*fig.*)' → 'betrothal, marriage' ↔ vb. *ar·naisc* [s. *-sk$^{e}/_{o}$*] 'binds, guarantees'.

(*com-*^{c} + ***naidm*** > ***comnaidm*** [n.] 'mutual bond, contract'.)

Comment:

Ⓐ The conventional derivation from PIE √**Hned^{h}-* 'bind'[163] is slightly problematic in that it necessitates a zero-grade **nad-* in Proto-Celtic instead of expected **and-* < PIE **Hn̥d^{h}-*. Schrijver (1991: 477–85, esp. 481), reconstructing the root as √**ned$^{(h)}$-*, suggests an Italo-

---

[163] *LÉIA* N-4 s.v. **nasc-**; Stüber 1998: 73f.; *LIV*^{2} 227 n.3 s.v. ****Hned^{h}-***. The reconstruction with initial laryngeal is based on Vedic forms with long *-ā-* in compounds (e.g., *upā-náh-* [f.] 'shoe') and the reduplication of the 2.pl.pf. *anāha* ⇐ **ānāha* (RV; but AV *nanā́ha*); the dental **-d^{h}-* is shown in the verbal adjective *-naddha-*.

Celtic rule *$\underset{\circ}{R}D$ > *RaD* / __*C* (where *D* = voiced obstruent, *C* = any consonant)[164] that could account for PCelt. **nad-* < PIE *$\underset{\circ}{n}d^{(h)}$- — but only if the root does not possess an initial laryngeal, since PIE *#*H$\underset{\circ}{n}$C-* regularly produces PCelt. **anC-*.[165] *KPV* (490 n.(a) s.v. ***nad-ske/o-***) solves the difficulty by separating the root of PCelt. **nad-sk$^{e}/_{o}$-* from that of Ved. √*nah-* 'tie, bind' and OIr. *nessam* 'nearest' (also Gaul. *neđđamon*, Osc. **nessimas**, etc.), and taking it instead as a zero grade of another root of the same semantic field, PIE √**neHd-* 'bind', of which the *o*-grade appears in Lat. *nōdus* [m.] 'knot' and ON *nót* [f.] 'fish net'.

3.1.88. *-ness-a-* 'tread underfoot' → 'blame, scorn'Ⓐ

< PrIr. **niss-ā-* ⇐ PCelt. **ni-stā-$\underset{\sim}{i}^{e}/_{o}$-* ← PIE **ni* 'down' + √**steh$_2$-* 'stand'.

◊ No simplex.

(1) PrIr. ***-nissā-mu-*** < PCelt. **ni-stā-mu-* (← PIE **ni* + **steh$_2$-*):

ad-nissāmu-* > ***áinsem* [m.] 'accusation, reproach; act of accusing, reproaching'

↔ vb. *ad·nessa* [w. *-ā*] 'accuses, reproaches'.

kom-nissāmu-* > ***comainsem* [m.] 'act of trampling underfoot, treating with contempt'

↔ vb. *con·nessa* [w. *-ā*] 'tramples underfoot; condemns, spurns'.

Comment:

Ⓐ The literal historical sense of 'tread underfoot' is still seen in *con·nessa* 'tramples', *do·nessa* 'tramples on, crushes' and *for·nessa* 'treads, kicks', beside the figurative meanings 'condemns, despises', etc.

---

[164] Cp. § 4.1.64 comment A with regard to OIr. *labar* 'talkative, eloquent' < PCelt. **lab-r$^{o}/_{ā}$-*. A summary of all the relevant data, with further literature, is provided by Vine 1999: 12f.

[165] Beekes 1988b: 93.

3.1.89. *nig-* 'wash'

< PCelt. **nig-i̯e/o-* ← PIE **neig̑ʷ-* 'wash'.Ⓐ

(1) [[PCelt. ****nig-iā-*** (← PIE **nigʷ-*):

◊ **nigiā-* > ***nige*** [f.] 'act of washing'Ⓑ

↔ vb. *nigid* [s. *-i̯e/o*] 'washes'.]]

(2) PCelt. ****-nig-o-*** (← vb. root **nig-*) or ****-nēg-o-*** (⇐ PIE **neig̑ʷ-*):Ⓒ

dī-u̯o-nē/igo-* > ***díun(n)ach* [n.] 'act of washing, cleansing'

↔ vb. *do·fonaig* [s. *-i̯e/o*] 'washes, washes away'.

Comments:

Ⓐ The *i̯e/o*-formation is guaranteed by the fact that Celtic has **g* < PIE **gʷ* instead of the default reflex **b*; PIE **gʷi̯* had already been delabialized to **gi̯* before the Proto-Celtic change of **gʷ* > **b* took place.[166]

Ⓑ No simple verbal noun is attested in Old Irish, but in Middle Irish it is an *iā*-stem.

Ⓒ The *o*-stem verbal noun, with **-g-* instead of historically regular **-b-* < PIE **-gʷ-*, was either formed directly from the Celtic verbal root **nig-* (see comment A), or analogically remodeled by influence of the verb and/or the simple verbal noun **nig-iā-* < **nigʷ-i̯ā-*.

3.1.90. *-nŏ̆-* 'nod, assent to'

< PCelt. **-nou̯-e/o-* (< **-neu̯-e/o-*) or **-nuu̯-e/o-*Ⓐ ← PIE √**neu̯-* 'nod, incline (the head)'.

◊ No simplex.

(1) PCelt. ****-nou̯-io-*** (← PIE **-neu̯-*):Ⓑ

t(u)-ambi-ad-nou̯io-* > ***timne* [n.] 'command(ment), precept; act of commanding'

↔ vb. *do·immna* [h.] 'commits, entrusts, enjoins, commands'.

---

[166] *GOI* 115 § 184(a), 137 § 224; Sims-Williams 1981: 206–16. The delabialization of **gʷʰi̯* > **gʰi̯* occurred in parallel; see Schrijver 1995: 317; McCone 1996: 42.

Comments:

Ⓐ It is not possible to tell whether the Proto-Celtic verbal root was zero-grade or full-grade because both become **-ou-* in most contexts in both Irish and British.[167]

Ⓑ As with the verbal root, both full grade and zero grade could account for the existing form; but since *io*-stem verbal nouns usually show full grade wherever the original root grade can be determined (§ 2.2.3.6), it is assumed here too.

3.1.91. *-no-i-* 'cook'

?⇐ EOIr. **·năï* < PrIr. **·nāh-ī-* < PCelt. **nās-ī-* 'nourish' < PIE caus. **nōs-éi̯$^{e}/_{o}$-* or:

?< PCelt. **nos-$^{e}/_{o}$-* 'nourish' ← PIE √**nes-* 'return safely'.Ⓐ

◊ No simplex.

(1) PCelt. ?****-nes-o-*** or ?****-nes-io-*** (← PIE **nes-*):Ⓐ

?**u̯o-nes(i)o-* > ***fuine*** [n.]Ⓑ 'act of cooking, baking, roasting'

↔ vb. *fo·noí* [h.] 'cooks, bakes, roasts'.

Comments:

Ⓐ The etymology is very uncertain. Lindeman (1998) notes the existence of a Germanic verb **nōz-ija-* in ON *nœra*, Norw. *nøra, nøre* 'to nourish, refresh', and proposes that the particular Norwegian idiom *nøra upp, nøre opp* 'to kindle, light a fire'[168] has a formal equivalent in the Old Irish compound *fo·noí* 'cooks',[169] with the further semantic shift in Celtic from 'make burn, heat' to 'cook, bake, boil'. The Germanic formation, if

---

[167] *KPV* 492 n.(b) s.v. ***?*-neu̯-e/o-***. For a detailed analysis of the development of PCelt. antevocalic **uu̯* and **ou̯*, see Schrijver 1995: 326–45.

[168] Cp. dialectal Swed. *nöra* 'to light a fire'. The semantic connection with 'nourish, refresh' is not obvious, but perhaps extends from the expression 'to feed a fire', which can use the same verb; see Lindeman 1988: 171 fn.2.

[169] I.e., with OIr. *fo·* < PCelt. **u̯o* being cognate with PGmc. **upp*, both from PIE **upo*.

inherited, would reflect a PIE causative *$n\bar{o}s$-$\acute{e}\underset{\wedge}{i}^{e}/_{o}$-, ultimately from PIE √*nes- 'return safely', which would also yield PCelt. *$n\bar{a}s$-$\bar{\imath}$-. For OIr. *·noí* instead of expected *·*naï* (with neutralized vowel length in hiatus) < PrIr. *·$n\bar{a}h$-$\bar{\imath}$- < PCelt. *$n\bar{a}s\bar{\imath}$-, Lindeman suggests an Early Old Irish analogical reshaping of *·*naï* to *·*nauï* > ·*noí* based on the synonym *doïd*, conj. *·*dauï* > ·*doí* 'kindles, burns' < PCelt. *$d\breve{a}\underset{\wedge}{u}$-$\bar{\imath}$- < PIE *$doh_2\underset{\wedge}{u}$-$\acute{e}\underset{\wedge}{i}^{e}/_{o}$- ← √*$deh_2\underset{\wedge}{u}$- 'burn'. This account is highly conjectural. There is no evidence in this verb of "Narten" ablaut $\bar{e} : e$ by which to justify a PIE causative-iterative in long *-$\bar{o}$-, while the regular formation, PIE *$n\breve{o}s$-$\acute{e}\underset{\wedge}{i}^{e}/_{o}$- > PGmc. *$naz$-$ija$-, is well attested in Go. *nasjan*, OHG *nerien*, OE *nerian*, etc. 'to save, rescue; nourish';[170] the long-vowel variant *$n\bar{o}z$-ija- therefore appears to be a Northern Germanic innovation. If we start from the standard PIE caus. *nos-$\acute{e}\underset{\wedge}{i}^{e}/_{o}$-, the expected outcome in Old Irish would be *·*nuï*, with *o raised to *u by the *$\bar{\imath}$ in the next syllable.[171] This is not fatal for Lindeman's proposal, as an analogical replacement of this form with *·*nauï* is likewise imaginable. However, the verbal noun ***fuine*** ↔ vb. *fo·noí* is somewhat problematic under this scenario, as it is not the *o*-grade *o*-stem formation that would normally be expected of the verbal noun of an old causative-iterative verb (§ 2.2.3.1(2)).

Another possibility might be to posit an *o*-grade thematic formation *nos-$^{e}/_{o}$- for the verb, which could straightforwardly produce OIr. *·noí*.[172] As for the verbal noun, the raising of *-*o*- to -*u*- in the first syllable and the palatalized -*n*- point to an earlier *-*i*- or

---

[170] See *IEW* 766f. s.v. ***nes***-; *LIV*² 454f. s.v. ****nes***-.

[171] *GOI* 47f. § 75; cp. *KPV* 703f. n.(a) s.v. ****u̯os-e/o***-.

[172] For the phonology, see *KPV* 358 n.(a) s.v. ****-gus-e/o***-. Thematic *o*-grade verbs are rare in Celtic, but at least one other is attested, namely *$\underset{\wedge}{u}os$-$^{e}/_{o}$- > OIr. *foaid*, *·foí* 'spends the night' (Schumacher 2000: 60; *KPV* 702–7 s.v. ****u̯os-e/o***-).

*-*u*- (> */-ĭ-/)[173] in the second syllable, so Lindeman's (174) reconstruction of an *e*-grade thematic noun *-*nes-o*-, with Proto-Insular-Celtic raising of unstressed *-*e*- before *-*sV*-,[174] is unproblematical: PCelt. *$\underset{\frown}{u}$*o-neso*- > PICelt. *$\underset{\frown}{u}$*o-niso*- > PrIr. **fun'iha*- > **fun'e*(*h*)*a*- > OIr. ***fuine***; an *io*-stem *$\underset{\frown}{u}$*o-nesio*- would produce the same outcome. There is, moreover, no formal incongruity between either verbal-noun formation and the verb. However, separating the Celtic verb formation from that of the Germanic verb is problematical, as the rather peculiar semantic development seems explicable only by a comparison with the Germanic facts.

Ⓑ The verbal noun was feminine in Middle Irish, as the *DIL* entry (s.v. **1 fuine**) shows. That it was earlier a neuter (*i*)*o*-stem is apparent from the dat.sg. *fuini**u*** (*Cormac's Glossary* s.v. *Orc tréith* in the reading of the conservative MS Laud 610, Stokes 1891b: 176.32), not cited by *DIL*.

3.1.92. *od-* 'grant, lend'

< PrIr. *od-$^{e}/_{o}$- ⇐ PCelt. *ud-$^{e}/_{o}$- ← PIE √*$h_2e\underset{\frown}{u}d^h$- 'grant'.Ⓐ

(1) PCelt. ***aud-nā-*** (← PIE *$h_2e\underset{\frown}{u}d^h$-) or ***ud-nā-*** (← PIE *h_2ud^h-):Ⓑ

*(*a*)*udnā*- > ***ón, úan*** [f.] 'act of lending; a loan'

↔ vb. *odaid* [s. -$^{e}/_{o}$] 'offers, grants, lends'.

Comments:

Ⓐ The longstanding want of a satisfactory etymology[175] has now been plausibly supplied by Schumacher (2000: 193f.; *KPV* 728–37 Anh. § 4). From the evidence of the 3.sg. preterite (< perfect) *·úaid*, he reconstructs a *u*-diphthong root **aud*- as the basis of

---

[173] Greene 1973: 134.

[174] See *GOI* 49 § 78.2; McCone 1996: 99f.

[175] See *LÉIA* O-16 s.v. **oid-**, and cp. Breatnach 1998: 37.

both the Irish verb and Celtib. *auđeti, auđanto*, etc. (probably 'gewähren, stiften'),[176] from a PIE root *$*h_2eu̯d^h$- which also underlies the PGmc. ppl. *$*auđ-ana$- > OE *ēaden*, ON *auðenn*, OS *ōdan* 'bestowed'. From this base a zero-grade present stem *$*ud-^e/_o$- would have been generalized in keeping with the usual pattern of thematic *u*-diphthong stems in Celtic, subsequently remodeled to *$*od-^e/_o$- under the influence of nasal presents to *u*-diphthong roots such as *·boind* 'gives notice' (< *$*bond-^e/_o$- < *$*bu-n-d-^e/_o$-) and *·toing* 'swears' (< *$*tong-^e/_o$- < *$*tu-n-g-^e/_o$-) where *$*unC$ > *$*onC$ is phonologically regular.[177] Schumacher (2000: 194 fn.164; *KPV* 736f.), modifying a proposal by Rubio Orecilla (1996: 184f.; 1999: 110), suggests the further possibility that PIE √*$*h_2eu̯d^h$- could be based on an ancient compound *$*h_2eu̯-d^hh_1$-, composed of the preverb *$*h_2eu̯$- 'away' (Ved. *av-i*, Lat. *au-*, OIr. *ó, úa*, etc.) plus the zero grade of √*$*d^heh_1$- 'put, place' and comparable to PIE √*$*u̯id^h$- ← *$*u̯i$- + *$*d^hh_1$- (> Ved. √*vidh-* [*vindháte*] 'be empty, lack' and Lat. *dī-vidō, -ere* 'divide').[178]

Ⓑ Both full-grade PIE *$*h_2eu̯d^h$-neh_2- > PCelt. *$*aud$-*nā*- and zero-grade PIE *$*h_2ud^h$-neh_2- > PCelt. *$*ud$-*nā*- > would produce the OIr. verbal noun ***ón, úan***. If from a Proto-Indo-European verbal adjective, zero grade would be the expected ablaut grade (§ 2.2.3.12).

3.1.93. *org-* 'destroy'

< PCelt. *$*org$-^e/_o$- ← PIE √*$h_3erg$- 'perish'.

(1) PCelt. ***org-e-nā***- (← vb. stem *$*org$-*e*-):Ⓐ

◊ *$*orgenā$- > ***orcun*** [f.] 'slaughter, destruction; act of killing, slaying; raiding, ravaging'

↔ vb. *orcaid* [s. -$^e/_o$] 'kills, slays; ravages, devastates'.

---

[176] Untermann, *MLH* IV, 412.

[177] Stüber 1998: 87f.

[178] See Thieme 1949: 36f.; Hoffmann 1969; *EWAia* II, 555f. w. further refs.

*t(u)-ambi-orgenā- > ***timmorcon*** [f.] 'restraint; act of (re)pressing, restraining, constraining'

↔ vb. *do·immoirg* [s. -$^{e}/_{o}$] 'presses, restrains, constrains, compels'.

*kom-ari-orgenā- > ***comrorcon*** [f.] 'error, mistake'

↔ vb. *con·erairg* [s. -$^{e}/_{o}$] 'errs, goes astray'.

*dī-orgenā- > ***díorcon*** [f.] 'destruction'

?↔ vb. *do·oirg* [s. -$^{e}/_{o}$] 'destroys'.Ⓑ

*exs-orgenā- > ***es(s)orcon*** [f.] 'blow, stroke; beating, striking'

↔ vb. *as·oirg* [s. -$^{e}/_{o}$] 'beats, strikes'.

*t(u)-exs-orgenā- > ***tes(s)orcon*** [f.] 'salvation, deliverance; act of saving, delivering'

↔ vb. *do·es(s)airg* [s. -$^{e}/_{o}$] 'saves, delivers'.

*t(u)-orgenā- > ***(*)torcun*** [f.] 'devastation'Ⓒ

↔ vb. *do·oirg* [s. -$^{e}/_{o}$] 'beats, pounds, destroys'.

*tu-u̯o-orgenā- > ***túarcon*** [f.] 'affliction; act of grinding, crushing, beating; threshing'

↔ vb. *do·fúairg* [s. -$^{e}/_{o}$] 'grinds, crushes, beats'.

*com-*ˈ + ***túarcon*** > ***comthúarcon*** [f.] 'destruction; act of striking (together), crushing'

↔ vb. *con·túairg* [s. -$^{e}/_{o}$] 'strikes, pounds, crushes'.

*t(u)-ari-u̯o-orgenā- > ***turorcon*** [f.] 'plunder; act of plundering'

↔ no attested vb. **do·auroirg*.

*u̯rit-orgenā- > ***frithorcon*** [f.] '(cause of) offence, injury; act of offending, injuring'

↔ vb. *fris·oirg* [s. -$^{e}/_{o}$] 'offends, injures'.

(2) PCelt. ***-org-to-*** (← PIE *h_3erg-):Ⓓ

*kom-orgto- > ***comart*** [n.] 'act of striking together'

↔ vb. *con·oirg* [s. -$^{e}/_{o}$] 'strikes together; smites, crushes, kills'.

Comments:

Ⓐ The alternation in palatalization between nom.sg. *orcun* and gen.sg. *oircne* points to

an original front vowel in the second syllable which caused palatalization when it was syncopated; the Gallo-Latin PN ORGENO-MESCUI (or -QUI) shows that this vowel was *-*e*-: nom.sg. **orgenā* > **orgen* > OIr. *orgun* (*orcun*) vs. gen.sg. **orgenās* > **orgena* > **or'g'†n'a* > OIr. *oirgne* (*oircne*).[179] Thus, as Schumacher (2000: 201) notes, this vowel cannot be the reflex of a *seṭ* variant of the root (**h$_3$ergH-neh$_2$* > ‡*org-a-nā*).[180]

Ⓑ The archaic verbal noun ***díorcon*** appears only once: Cambr. 38a = *Thes.* I, 247.11, *issi indercmartre do foditu chruche ocus* ***diorcne*** *archrist* ... 'this is the red martyrdom to him, endurance of a cross and **of destruction** for Christ ...' If the corresponding verb **dī·org-* 'destroys' is attested at all, it has fallen together with **tu-org-* > *do·oirg* 'beats, pounds' (see the next comment).

© Attestation of the verbal noun ***torcun*** 'devastation' is questionable. The only possible instances are by emendation, as suggested by Baumgarten (1983: 192f.), in a difficult passage in TBDD^1 regarding Conaire son of Mess Búachalla, who was killed at the Hostel of Úa Derga: *is e do·feith* [or *do-da·feith, do·díḟeith*?] ***trogain*** ⁊ *ba he b*$\underline{\text{er}}$*t* ***troghain*** *tar Breghæ.* Baumgarten emends the word to *torgain* (= *torcuin*) and translates: "it is he who causes devastation [*torgain* legg.] (through violating a *geis*), and it was he who brought [*berte* legg.] devastation across Brega (viz. when coming from Munster)." It has traditionally been taken to be the word *trogain* 'sunrise'; thus L. Gwynn (1915: 218), who sees in this a reference to the violation of one of Conaire's *geasa*,[181] and Thurneysen (1921:

---

[179] Cp. *GOI* 100 § 160.

[180] *Pace* Hamp 1974: 391.

[181] I.e., Conaire was prohibited from spending a night outside of Tara: *Facbait airmit fair .i. na funfed* ⁊ *na taurcébad grían fairsium a Temraig* 'They lay a prohibition upon him that the sun should neither set nor rise upon him outside of Tara' (from *De ṡíl Chonairi Móir*; cp. Nettlau 1891: 250 and L. Gwynn 1912: 135.61–62, where, however, the restored text has *i Temair* 'in Tara' instead of *a Temraig* 'outside of Tara', a reading that renders less good sense).

622), who understands the noun as a temporal dative and assumes the redundant ┐*ba he bert troghain* to be an incorporated gloss: "Er ist es, der in der Dämmerung über Bregia zu ihr kam"; in this he is followed by Ó Cathasaigh (1990: 107–9).[182] Complicating the matter is the uncertain identity of *do·feith* (*do-da·feith*, *do·díḟeith*?), which shows a good deal of confusion among the manuscript readings. It could represent underlying **do-u̯ed-* 'goes', **dī-u̯ed-* 'leads, brings', either of these with an infixed pronoun, or **do-dī-u̯ed-* 'leads, brings'. None of this is at all certain. Baumgarten's emendation is not unreasonable, however: the meaning is appropriate to the context, and the existence of the verbal noun ***torcun*** at one time can hardly be doubted. The verb *do·oirg* 'beats, pounds, destroys' is marginally attested in the 3.sg.pret. *do-s·n-ort* 'er eroberte es' (Meyer 1913–1914: I, 17 § 4) and in a few forms of the perfect (with *-com-*): *do·comar*, *du·comarr*, *do·comart*, *du·comart*. It is true that these forms, all deuterotonic, could theoretically reflect **dī-org-* (↔ vn. ***díorcon***, see comment B), but the derivative *fris·**tu**airc* gl. (*ocutorum aciem*) *obtundit* (Ml. 143c2) exposes the preverb as **tu-*. For the most part *do·oirg* < **tu-org-* has been replaced by *do·fúairg* < **tu-u̯o-org-*, and the same fate may be assumed for the verbal noun.

Ⓓ In the nominative singular, ***comairt*** always appears with a palatalized final cluster, but the compound *lám-**chomart*** 'clapping of hands (in grief or lamentation)' has at least one instance of a neutral final. The feminine gender is clearly established in Middle Irish by the article in nom.sg. ***ind*** *lamhcomart* (AU I, 240.2 = FM I, 370.15), ***ind*** *Lámchomairt libuir Ieremiae* (*Hib.Min.* 188) and by both the article and the form of the gen.sg. ***ina***

---

[182] *DIL*'s citation of this passage s.v. **2 trogan** 'raven' is certainly misplaced, as no sense can be made of it.

lamcomarthae[183] (AU I, 240.1 = FM I, 370.15). This would seem to imply a *tā*-stem noun. But if so, the form of the word in the syntagm *claideb* ***comairt*** '**smiting** sword', which appears in the second poem of Blathmac (Bl. § 259b), is remarkable. Carney conjectures: "The meaning is not in doubt but *comairt* is strange; possibly a dative of accompaniment" (1964: 153 ed.n.1034); yet a genitive of destination would be expected. Accordingly *DIL* (s.v. **comart**) suggests that ***comart*** was originally an *o*-stem, and cites a second instance, *lecc* ***commairt*** *chnáma* 'flagstone of the breaking of bones' (LL 302a2 = Bór. 66 § 68), for additional support. These two examples imply an earlier neuter **-org-to-m* that transferred to the feminine class when the neuter gender fell out of use.

3.1.94. *rā̆-* 'row'

< PCelt. **rā-i̯e/o-* ?< PIE **h₁rōh₁-i̯e/o-*Ⓐ ← √**h₁reh₁-* 'row'.

(1) PCelt. ****rā-mu-*** (← PIE **h₁roh₁-*):

◊ [[**rāmu-* > ***rám*** [m.] 'act of rowing'

↔ vb. *ráïd* [h.] 'rows, travels (by boat)'.]]

ambi-rāmu-* > ***imram* [m.] '(sea-)travel; act of sea-voyaging, traveling about (by boat)'

↔ vb. *imm·rá* [h.] 'rows about, travels about (by boat)'.

Comment:

Ⓐ The stem formation is difficult. Historical *o*-grade appears to be required, as PIE full-grade **h₁reh₁-i̯e/o-* would have yielded PCelt. **rī-i̯e/o-* > OIr. ⁂*ríïd*, and zero-grade **h₁r̥h₁-i̯e/o-* probably PCelt. **ar-i̯e/o-* > OIr. ⁂*airid*.[184] Yet no verbal formation R(*o*)-*i̯e/o-* or R(*o*)-*i-* (subject to secondary thematization) appears in the standard Proto-Indo-European inventory.

---

[183] Correctly *lámchomartae*; the *-th-* is probably due to influence from the similar-looking noun *comartha* 'sign, mark, token' (OIr. *comardae* < *com-* + *airde* 'sign, token').

[184] Cp. McCone 1996: 51–54.

Germanic, however, possesses an exact counterpart to the Celtic verb in PGmc. *$r\bar{o}$-$j^e/_a$- > ON *róa*, OE *rōwan* 'row'. This is one of a small class of verbs that also includes PGmc. *$gr\bar{o}$-$j^e/_a$- > ON *gróa*, OE *grōwan* 'grow' and PGmc. *$sp\bar{o}$-$j^e/_a$- > OHG *spuoen*, OE *spōwan* 'succeed', all from PIE roots in final *-h_1-. *LIV*²'s position (e.g., 584 n.2 s.v. ***sp^heh_1-**) that the *o*-grade of the present has been adopted from the preterite (< PIE perfect) in these Germanic verbs is speculative and extremely hard to justify, as Jasanoff has pointed out: "The association of *e*-grade with the present, and *o*-grade with the preterite, is too solidly entrenched a phenomenon in Germanic for an innovation of this kind to have had any chance of establishing itself" (2003: 108). Nor (*pace LIV*² 251 n.3 s.v. 2.***h_1reh_1-**) does there appear to be any parallel for such an innovation in Celtic *$r\bar{a}$-$i^e/_o$- 'row'. In regard to PGmc. *$sp\bar{o}$-$j^e/_a$-, Jasanoff suggests (108–10) an underlying "Narten" *i*-present of a root in *-h_2 instead of *-h_1 (i.e., PIE *$sp\acute{e}h_2$-i- / *$sp\acute{e}h_2$-i-, with the (thematized) strong stem preserved, for example, in Lith. *spéju* < *$sp\acute{e}$-i-$^e/_o$- ← *$sp\acute{e}h_2$-i- and the weak stem in PGmc. *$sp\bar{o}$-$j^e/_a$- < *$sp\acute{a}$-i-$^e/_o$- ← *$sp\acute{e}h_2$-i-).[185] Such a solution cannot be extended to *h_1reh_1- 'row', however, as Gr. ἐρετμόν 'oar', Myc. *e-re-e* (*/ere^{h}en/*) 'to row', and Lat. *rēmus* 'oar' point positively to root-final *-h_1-.

Rasmussen (1998: 553–56) takes a different approach, setting up a basic PIE root form √*erh_1-, with PCelt. *$r\bar{a}$-$i^e/_o$- < PIE *$_{\text{r}}rh_1$-$i^e/_{\acute{o}}$-,[186] and suggesting that the Germanic verb was borrowed from Celtic. The difference in root vowel between PCelt. *$r\bar{a}$- and PGmc. *$r\bar{o}$- is not fatal: if the Proto-Germanic rounding of *$\bar{a}$ > *$\bar{o}$ was a late sound change, as Ringe (2006: 146f.) argues, the word could have been borrowed before this point; but even if the borrowing was later than the sound change, PGmc. *$\bar{o}$ could arguably have still been

---

[185] This type of *i*-present is one of the stem types of the h_2e-conjugation that Jasanoff proposes. All that would remain of it in Germanic is the anomalous root shape accompanied by a $i^e/_o$-formation.

[186] Assuming initial *h_1- to avoid a vowel-initial root would make no difference to the Celtic phonology.

the nearest native equivalent to PCelt. *$\bar{a}$. A more troubling difficulty with Rasmussen's scenario lies in the fact that a single borrowing turns out not to be sufficient for his argument. In addition to the loan from Celtic to Germanic, there must also be an independent borrowing, this time from Greek to Latin, to explain the problematical Lat. *rēmus* 'oar'. This all-too-easy appeal to borrowing as a kind of *deus ex machina* to explain otherwise intractable phonological problems raises doubts about the explanatory value of the account.

A way out of these difficulties may be at hand if we posit an original acrostatic ablaut pattern *$h_1róh_1$- : *$h_1réh_1$- for this root.[187] An iterative formation *$h_1rōh_1$-$éi^{e}/_{o}$-[188] would produce the Germanic and Celtic verbs directly without any need of recourse to remodeling or borrowing, and an iterative meaning is entirely apropos to the action of rowing. Full-grade *$h_1réh_1$- would also explain Lat. *rēmus*, whatever the further details of its formation. A new productive zero-grade formation *$h_1\underset{\circ}{r}h_1$- can account for the Greek words in ἐρε- and for Lith. *iriù, irti* 'row', *irklas* 'oar'. And, finally, Ved. *arítra-* 'oar', *aritár-* 'rower', etc. point back to a Schwebeablaut variant *h_1erh_1- that is limited to Sanskrit and thus likely to be an Indo-Iranian, or even specifically Indic, innovation, secondarily formed from the zero-grade *$h_1\underset{\circ}{r}h_1$-.

---

[187] So also Vine 1993: 126.

[188] Or *$h_1r\acute{o}h_1$-$i^{e}/_{o}$-, in accordance with Klingenschmitt's model (1978: 12f.; cp. *LIV*² 23) of acrostatic causative-iterative formations; but see Vine (forthc.) for an instructive critique of the theory.

3.1.95. *rád-i-* 'consider; speak'

< PCelt. **rād-ī-* < PIE caus.-iter. **roh$_1$d^h-éi̯^{e}/$_o$-* ← √**reh$_1$d^h-* 'arrange, prepare'.Ⓐ

(1) PCelt. ****rād-o-*** (← PIE **roh$_1$d^h-*):

◊ **rādo-* > ***rád*** [m.] 'speech, talk; act of saying, speaking, talking'

↔ vb. *rádaid* [w. *-ī*] 'says, speaks, talks'.

(2) PCelt. ****-rād-e-tu-*** (← vb. stem **rād-ī-*):

ambi-rādetu-* > ***imrádud* [m.] 'thought, opinion, intention; act of thinking, considering, intending' ↔ vb. *imm·rádi* [w. *-ī*] 'thinks (of), considers, intends'.

Comment:

Ⓐ The meaning at the heart of this root appears to be 'arrange, prepare' rather than *LIV*^{2}'s (499f. s.v. ****reh$_1$d^h-***) 'erfolgreich durchführen' ← 'Erfolg haben'. The attested meanings in OCS *ražděǫ, raditi* 'mind, take thought, attend to', Go. *-rēdan* 'plan, propose; advocate, advise', and OIr. *imm·rádi* 'thinks (of), considers, intends' are difficult to derive from a starting point of 'be successful, accomplish', whereas 'arrange, prepare' → 'plan, consider' easily accounts for the Slavic, Germanic, and Celtic meanings as well as for Ved. √*radh-* 'succeed, accomplish'. Celtic **rād-ī-* 'speak, say' (OIr. *rádaid* 'says', MW *ad-rawð* 'speak, tell, relate') is mirrored by the Gothic equivalent *rōdjan* 'speak, talk', extended from 'advise, advocate, argue for'.

3.1.96. *-rech-* 'arrange, establish'

< PCelt. **-rek-^{e}/$_o$-* ← PIE √**rek-* 'arrange, set in order'.Ⓐ

◊ No simplex.

(1) PCelt. ****-rek-o-*** (← PIE **rek-*):

ati-eri-reko-* > ***aitherrach*Ⓑ [n.] 'repetition; act of repeating; [dat.sg. as adv.] again'

↔ vb. *ad·eirrig* [s. *-^{e}/$_o$*] 'repeats, reiterates; changes, repents'.

(2) PCelt. ***-rek-iā-*** (← PIE **rek-*):

ati-rekiā-* > ***aithrige*Ⓑ [f.] 'penitence, repentance; act of doing penance, repenting'

↔ vb. *ad·eirrig* [s. -$^{e}/_{o}$] 'repeats, reiterates; changes, repents'.

Comments:

Ⓐ The Old Irish words have traditionally been connected with PCelt. **-reg-* 'rise, straighten (oneself)' (§ 3.1.98).[189] However, as *KPV* (537 n.(a) s.v. ****-rek-e/o-***) points out, while the Irish guttural is ambiguous as to original voicing,[190] the British cognates are not: MW *attrec* [m.] 'repentance, return' (= MoW *atreg*), MBret. *azrec* 'repentance', MCo. *edrek* [m.] 'id.' all contain reflexes of an old voiceless stop.[191] *KPV* thus reconstructs the Proto-Celtic verbal root as **-rek-*$^{e}/_{o}$- 'arrange, establish' (cpd. **ati-rek-*$^{e}/_{o}$- 're-establish, restore' → 'repent') and connects it to the PIE root √**rek-* 'arrange, set in order' (> Skt. *racayati* 'causes, produces', *racanā-* [f.] 'arrangement'; OCS *rokъ* [m.] 'a set time'; Go. *ragin* [n.] 'advice, decision'; also, from the sense of 'setting forth in order, ordering one's words', OCS *rekǫ, rešti* 'say'; Toch.B *reki*, A *rake* 'word').[192]

Ⓑ The verbal noun ***aithrige, aithirge*** cannot go back to the same compound as that of ***aitherrach***, since the preform **ati-eri-rek-iā-* would have generated OIr. ⁂*aitherrige*. On the other hand, a preform **ati-rek-iā-* produces OIr. ***aithrige*** unproblematically, and moreover (apart from the suffix) matches the British cognates (comment A). It appears therefore that the verbal nouns distinguish two earlier compounds, **ati-eri-rek-* 'repeat' in ***aitherrach*** and **ati-rek-* 'repent' in ***aithrige***; they have fallen together in the Old Irish

---

[189] E.g., *VKG* II, 593 § 795; *CCCG* 388 § 604(1); *LÉIA* R-13f. s.v. **1 reg-**.

[190] See *GOI* 81–83 §§ 128–130.1.

[191] Also noted by *LÉIA* A-56 s.v. **aithrech**.

[192] *LIV*² 506 s.v. ****rek-***.

verb *ad·eirrig* 'repeats; repents', which formally continues the first compound but subsumes both meanings.

3.1.97. *réd-* 'ride, drive'

< PCelt. **rēd-$^{e}/_{o}$-* ← PIE √**reid^{h}-* 'ride, drive'.

(1) PCelt. ****rēd-smen-*** (← PIE **reid^{h}-*):

◊ **rēdsmen-* > ***réim(m)*** [n.] 'movement, advance; act of going, advancing'

↔ vb. *réidid* [s. -$^{e}/_{o}$] 'rides, drives, goes'.

ambi-rēdsmen-* > ***imrim(m)* [n.] 'journey; act of riding around, travelling'

↔ vb. *imm·réid* [s. -$^{e}/_{o}$] 'rides or drives around, travels (by land)'.

tu-rēdsmen-* > ***toraim(m)* [n.] 'progress(ion); act of riding, driving'

↔ vb. *do·réid* [s. -$^{e}/_{o}$] 'rides, drives'.

u̯o-rēdsmen-* > ***foraim(m)* [n.] 'progress, advancement; act of moving (towards a point)'

→ 'stalking, hunting' ↔ no attested vb. **fo-réid.*

3.1.98. *-reg- / -reg-i-* 'rise, straighten (oneself)'

< [1] PCelt. **-reg-$^{e}/_{o}$-* (⇒ [2] PrIr. **-reg-ī-*) ← PIE √**h$_3$reĝ-* 'extend, stretch, rule'.

◊ No simplex.

(1) PCelt. ****-reg-o-*** (← PIE **h$_3$reĝ-*):

kom-dī-rego-* > ***cuindrech* [n.] 'correction, chastisement; correcting, chastising'

↔ vb. *con·dírig* [s. -$^{e}/_{o}$] 'checks, controls, corrects'.

(2) PCelt. ****-reg-io-*** (← PIE **h$_3$reĝ-*):

exs-regio-* > ***éirge* [n.] 'act of rising, standing up'

↔ vb. *as·reig* (*a-t·reig*) [s. -$^{e}/_{o}$] 'rises'.

ari-exs-regio-* > ***airéirge* [n.] 'act of rising up, rising up before (in token of esteem)'

↔ vb. *ar·éirig* [s. -$^{e}/_{o}$] 'rises up before (in token of esteem)'.

exs-exs-regio-* or **exs-ē-regio-*?Ⓐ > ***es(s)éirge*Ⓑ [n.] 'resurrection, revival; act of rising again, reviving' ↔ vb. *as·éirig* [s. -$^{e}/_{o}$] 'rises again'.

(3) PCelt. ***?*-reg-iā-*** (← PIE **h₃reĝ-*):

*?*ambi-exs-regiā-* > ***imméirge*** [f.]Ⓒ 'act of moving about, wandering'

↔ no attested vb. **imm·éirig*.

(4) PrIr. ****-reg-ĭ̄/e-tu-*** (← vb. stem **-reg-ī-*):

ari-di-exs-regĭ̄/etu-* > ***airdérgud* [m.] 'proposition, intention'

↔ vb. *ar·dérgi* [w. -ī] 'proposes, intends'.

Comment:

Ⓐ Hamp (1963) takes the second preverb of *as·éirig* 'rises again' ↔ vn. ***es(s)éirge*** to reflect PICelt. **-ē-* < PCelt. **e(ϕ)i-* < PIE **epi*, and suggests (fn.2) that **-ē-reg-* might also lie behind *do·éirig* 'abandons' ↔ vn. ***déirge***, ***dérach*** (**di-ē-reg-*) and *con·éirig* 'arises, sets out' ↔ vn. ***coméirge*** (**kom-ē-reg-*). (These verbal nouns happen not to appear in our corpus of texts.) By way of support, Hamp invokes a series of cognate Welsh verbs with *-wy-*: *arwyrein, kyuarwyre, diarwyrein, cyfwyrein, kyfðwyrein, kynwyrein, dygynwyre, dwyrein, dyðwyrein, arðwyrein, gorwyrein*, and a few others, which would represent combinations of **tu-/*kom-/*ari-* + **(tu-)ē-reg-*, **u̯or-/*(tu-)kanta-* + **ē-reg-*, **kom-/*di-* + **ari-* + **ē-reg-*, etc. The traditional reconstruction[193] assumes **-ud-reg-* > *-wy-re(i-)* behind the Welsh forms; but Hamp's formulation has the distinct advantage of being able to unify the British and (some of) the Irish forms, with exact cognates in the case of OIr. *con·éirig* 'arises, sets out' ↔ vn. ***coméirge*** ≈ MW *cyfwyrein* 'to raise' < **kom-ē-reg-* and perhaps OIr. *do·éirig* 'arises, goes forth' (↔ no attested vn.) ≈ MW *dwyrein* 'to arise, rise (of the sun)' < **t(u)-ē-reg-*. Of course, the formation **exs-reg-*, which is entirely missing from the British evidence, is

---

[193] *VKG* II, 596 § 795 Anm.3; *KPV* 532f. s.v. ****reg-e/o-***.

clearly established in OIr. *as·reig* (*a-t·reig*) 'rises' ↔ vn. ***éirge***, so at least some of the Old Irish compounds may be assumed to have been built to this base; it is not possible to state which ones, however, as both formations would be indistinguishable by Old Irish. Thus it is unclear whether *as·éirig* 'rises again' ↔ vn. ***es(s)éirge*** should be understood to continue **exs-exs-reg-* with a doubled preverb (cp. § 3.1.68(1) comment C), or **exs-ē-reg-*, as per Hamp.

Ⓑ Vowels appear to have resisted syncope before the cluster **-xsr-* as they did before *-cht-*,[194] resulting in the preservation of the second syllable in the verbal noun ***es(s)éirge*** and in the prototonic forms of the verb (e.g., Wb. 13c20, *i n-eséirset* 'in which they arise').

Ⓒ No attestation of the feminine noun appears in a contemporary Old Irish manuscript, so it is conceivably a Middle Irish replacement of the earlier neuter *io*-stem.

3.1.99. *re-n-* 'count, reckon'

< PCelt. **ri-na-* < PIE **h₂ri-n-H-* ← √**h₂reiH-* 'count, reckon'.

(1) as if ****rīkk-ā-*** (analogically remodeled):Ⓐ

◊ ***rīkkā-* > ***reic(c)*** [f.] 'act of selling, bartering'

↔ vb. *renaid* [s. *-na*] 'sells, barters, exchanges'.

exs-rīkkā-* > ***éraic(c) [f.] 'compensation; act of paying out; (*leg.*) damages for loss inflicted' ↔ vb. *as·ren* [s. *-na*] 'pays out'.

(2) PCelt. ****-reiH(i)-o-*** (← PIE **h₂reiH-*):Ⓑ

ari-reiH(i)o-* > ****airre* > ***arrae***Ⓒ [n.] 'payment, compensation; act of paying, compensating'

↔ vb. *ar·ren* [s. *-na*] 'pays, hands over (on behalf of, or in place of)'.

dī-reiH(i)o-* > ***díre* [n.] 'honor-price'

↔ vb. *do·ren* [s. *-na*] 'pays (esp. an honor-price or a fine)'.

---

[194] *GOI* 67 § 106; McCone 1996: 123f.

Comments:

Ⓐ The original formation of the simplex was probably **ríth* < **rī-tV-* < PIE **h₂riH-tV-* (cp. ***bíth***, § 3.1.12(1), and ***críth***, § 3.1.27(1)), and the compound ***éraic(c)*** should have been **érae* < **exs-reu̯(i)-o-*, like ***arrae*** and ***díre*** in formation (2). These verbal nouns have undergone reshaping after the model of ***íc(c)*** 'act of paying, redeeming' < **īkkā-* (§ 4.3.26(1)). It appears that **érae* 'compensation' was remodeled first in order to avoid confusion with its homonym *érae* 'refusal', and from there the transformation spread to the related simplex and further to the compound verbal nouns of *crenaid* 'buys' (§ 3.1.27(2)), another verb of the same semantic field.[195] (See § 2.2.3.2.)

Ⓑ For the shape of the stem **-reu̯(i)-o-*, see Schumacher (2000: 174f.) and § 2.2.3.6 *supra.*

Ⓒ Binchy (1962: 51) ascribes the lack of expected palatalization to analogy with the deuterotonic forms of the verb, combined with the fact that the most common source of *-rr-* in verbal nouns and prototonic verb forms was *ar-r(o)-* and *for-r(o)-*.

3.1.100. *reth-* 'run'

< PCelt. **ret-$^{e}/_{o}$-* ← PIE √**ret-* 'run'.

(1) PCelt. ****ret-u-*** (← PIE **ret-*):

◊ **retu-* > ***riuth*** [m.] 'act of running; a course'

↔ vb. *rethid* [s. -$^{e}/_{o}$] 'runs'.

kom-retu-* > ***comrud* [m.] 'race, competition; act of racing, competing'

↔ vb. *con·reith* [s. -$^{e}/_{o}$] 'runs together, races, competes'.

ro-retu-* > ***ruiriud* [m.] 'act of running, stampeding'

↔ no attested vb. *ro·reith.*

---

[195] Thurneysen 1899: 82; *GOI* 454 § 737.

*dī-uss-retu- > **díurad** [m.] 'remainder'

↔ vb. *do·urat ⇒ *do·fúarat*Ⓐ [s. -$^{e}/_{o}$] 'remains (over)'.

(2) PCelt. ***-ret-o-*** (← PIE **ret-*):

ande-reto-* > ***indred* [n.] 'invasion, devastation; act of invading, laying waste'

↔ vb. *ind·reith* [s. -$^{e}/_{o}$] 'invades, plunders, lays waste'.

(3) PCelt. ***-ret-tu-*** (← PIE **ret-*):

t(u)-ati-rettu-* > ***taidrius* [m.] 'return'

↔ vb. ? *do·aithrith* [s. -$^{e}/_{o}$] 'returns'.

(4) as if ****-rext-ā-*** (analogically remodeled):Ⓑ

t(u)-ambi-dī-rextā-* > ***timthirecht [f.] 'service; act of serving'

↔ vb. *do·imthiret* [s. -$^{e}/_{o}$] 'serves'.

tu-kom-rextā-* > ***tochomracht [f.] 'weariness, vexation'

↔ vb. *do·comret* [s. -$^{e}/_{o}$] 'becomes weary, vexed'.Ⓒ

t(u)-ērm-u̯o-uss-rextā-* > ***tíarmórachtⒹ [f.] 'pursuit; act of following, pursuing'

↔ vb. *do·íarmórat* [s. -$^{e}/_{o}$] 'follows, comes or goes after'.

Comments:

Ⓐ The verb *do·fúarat* was remodeled on the basis of verbs with historical *-u̯o-uss- > OIr. *·fó-, ·fúa-*.[196]

Ⓑ The model for the reformation to *-recht* was most likely provided by compounds of ***techt*** 'going' ↔ vb. *téit*, the verbal forms of which happen to resemble the compounds of *rethid*, on the basis of proportions like *do·imtét* : ***timthecht*** :: *do·imthiret* : X = ***timthirecht***.

Ⓒ The single possible attestation of *do·comret* is at Wb. 14b23, *ut tenderet nos* : *.i.*

---

[196] *GOI* 526 § 849.A.

toncomra.[197] H. Zimmer (1881: 93.5) read the form as 3.sg.pret. *to-n·comrit*, but although the manuscript is stained at this spot, the facsimile appears to confirm the reading *to-n·comra*, in agreement with *Thes.*, so *DIL* (s.v. **do-comra**) is probably correct in suggesting a 3.sg.pres.subj. of *do·comret*. From a formal standpoint, a 3.sg.pres.subj. of **do·comrig* (< **tu-kom-reg-*) would be equally possible (and the verbal noun would then correspond to the *to*-stem *-recht* < **-rek-to-*), but the semantic development 'rise, straighten' → 'become weary' is hard to envision.

Ⓓ *VKG* (II, 599 § 797(6)) takes the preverb chain to be "to-iarm-fo-" (= **t(u)-ērm-u̯o-* in our notation), but this should have yielded something like ‡*do·íarmrat*, ‡*tíarmracht*. The long *-ó-* (both the verb and the verbal noun are so spelled in St. Gall) indicates rather a combination **-u̯o-uss-* in the preverb chain.[198]

3.1.101. [1]*-rig-* 'bind'

< PCelt. **-rig-$^{e}/_{o}$-* ← PIE **riḯ̯g-* ← √**reiḯ̯g-* 'tie, bind'.

◊ No simplex.

(1) PCelt. ****-rēg-o-*** (← PIE **reiḯ̯g-*):Ⓐ

ad-rēgo-* > ***árach* [n.] 'act of binding'

↔ vb. *ad·rig* [s. *-$^{e}/_{o}$*] 'binds'.

ari-u̯o/uss-rēgo-*(?) > ***air(r)ech* [n.] 'forced loan, requisition'

↔ vb. *ar·fuirig* [s. *-$^{e}/_{o}$*] 'holds back, restrains', or unattested **ar·úirig*?Ⓑ

dī-rēgo-* > ***dírech* [n.] 'act of uncovering, stripping'

↔ vb. *do·rig* [s. *-$^{e}/_{o}$*] 'uncovers, strips, lays bare'.

---

[197] *A prima manu.*

[198] Cp. *GOI* 526 § 849.A.

kom-rēgo-* > ***cuimrech* [n.] 'bondage, imprisonment; act of binding, imprisoning; a bond, chain' ↔ vb. *con·rig* [s. -$^{e}/_{o}$] 'binds, ties, constrains'.

Comments:

Ⓐ The Irish verbal nouns do not reveal any information about the root grade, but MW *gwa-rwy* 'to play' (≈ OIr. ***fuirech*** 'delay; act of tarrying', not found in our corpus) points to full-grade **u̯o-rēg-o-* ← PIE **reiĝ-*.[199]

Ⓑ The various spellings *air(r)ech, e(i)rrech, aurrach*, etc. can indicate either a preform **ari-u̯o-rēg-* or **ari-uss-rēg-*.[200] If it is the former, this would be the same word as *airrech* ↔ vb. *ar·fuirig* 'holds back' (< **ari-u̯o-rig-*),[201] in a specialized legal usage; if the latter, then we are likely dealing with the verbal noun of an obsolete verb **ar·úirig* (< **ari-uss-rig-*).

3.1.102. ²*rig-* 'extend, stretch, rule'

< PCelt. **rig-$^{e}/_{o}$-* ← PIE **riĝ-* ← √**reiĝ-* 'stretch out, extend'.

(1) PCelt. ****rig-iā-*** (← PIE **riĝ-*):

◊ **rigiā-* > ***rige*** [f.] 'act of stretching, extending'

↔ vb. *rigid* [s. -$^{e}/_{o}$] 'stretches, extends'.

3.1.103. *-rim-i-* 'place, put'

< PCelt. **-rim-ī-* { ⇐ **-rim-$^{e}/_{o}$-* ← PIE **h₁r̥m-* or: ; < **-r̥m-ī-* ⇐ **-rom-ī-* < PIE caus. **h₁rom-éi̯$^{e}/_{o}$-* ← √**h₁rem-* 'rest, be still'.Ⓐ

◊ No simplex.

---

[199] Schumacher 2000: 171.

[200] *GOI* 497 § 823A.

[201] Cp. *DIL* s.v. **ar-fuirig** and s.v. **1 airrech**.

(1) PCelt. ***-rim-ī̆/e-tu-*** or ***-rim-e-to-*** (← vb. stem *-*rim-ī-*):Ⓑ

u̯o-rimī̆/etu/o-* > ***fuirmiud* [m.] 'composition; act of setting down'

↔ vb. *fo·rimi* [w. -ī] 'sets, lays down'.

Comments:

Ⓐ The palatalized *-rm-* and the raising of **fo-* to *fu-* in the prototonic *·fuirmi* (Wb. 8c1) and the verbal noun ***fuirmiud*** are clear indications of underlying **-rim-*, the reflex of a historical zero-grade **-r̥m-* < **h₁r̥m-*.[202] *LIV*² (252f. s.v. ***h₁rem-***) advocates a causative of PIE √**h₁rem-* 'rest, be still' with secondary zero grade. The sense would fit well, with a semantic development 'cause to rest' (cp. Ved. *rāmáyati*, YAv. *rāmaiieiti* 'bring to a stop, set at rest') → 'set in place, put', and the ī-stem flexion of the Celtic verb would be consistent with this, but the change in root grade would be a rather extraordinary development since Celtic regularly preserves the *o*-grade of the PIE causative (cp. OIr. *(do)·**fo**rtai* 'pours' < PCelt. **-u̯ort-ī-* < PIE **u̯ort-éi̯e/o-* [§ 3.1.48], OIr. *lúaidid* 'sets in motion' < PCelt. **(ɸ)loud-ī-* < PIE **plou̯d-éi̯e/o-* [§ 3.1.76], etc.). The root grade is better suited to an earlier thematic verb with generalized zero grade, secondarily transferred to the weak class.[203] The meaning could be explained by a shift from intransitive to transitive: 'come to rest, stop (intr.)' → 'stop (tr.)' → 'put, place'. A third possibility would be a denominative formation, but no source noun **rim* is to be found. The matter must remain unresolved at present.

Ⓑ The verbal noun is generally declined as a *tu*-stem, as indicated by the Middle Irish

---

[202] Initial **h₁-* regularly fails to vocalize, cp. PIE **h₁r̥gʰ-* > **r̥g-* > PCelt. **rig-* → OIr. *regaid* 'will go' vs. PIE **h₂r̥tk̂o-* ⇒ **h₂r̥k̂to-* > PCelt. **arkto-* > OIr. *art* 'bear'. McCone's (1996: 52) chronology is: (1) **#h₁-* > ø, (2) **#h₂/₃L̥-* > **aL-*, (3) **L̥T* > **LiT*. A different development is formulated by Isaac (2007: 61–74): (1) **#h₂/₃RC* > **h₂/₃əRC*, (2) **L̥T* > **LiT*, (3) **#HV-* > **V-*, (4) **ə* > *a*. Both accounts generate the actual outcomes.

[203] The motivation for such a transfer is not clear, but sporadic shifts from strong to weak flexion are not unknown, cp., e.g., **-reg-ī-* ⇐ **-reg-e/o-* (§ 3.1.98).

spellings of gen.sg. *fuirmeda* and nom.pl. *fuirmighi* = OIr. *fuirmidi*, and probably also by the ninth-century Old Irish spelling of nom.sg. *comḟuirmud* 'compound' (Sg. 203a2), with *-ud* rather than *-ed*. On the other hand, a genitive singular in *-id*, proper to a *to*-stem, is almost always found in the compound *mac-ḟuirmid* ('son of composition', a grade of poet). This could perhaps be secondary, since **-tu-* is the default suffix for verbal nouns of weak verbs (cp. § 2.2.3.14 *ad fin.*); but it is also possible that the *to*-stem indicated by *mac-ḟuirmid* reflects a Celtic noun in **-eto-*, like ***dliged*** [n.] 'entitlement' < **dlig-eto-*, and thus represents a different formation from the *tu*-stem verbal noun.

3.1.104. *rud-i-* 'become red, redden'

< PCelt. **rud-ī-* < PIE stat. **(h₁)rudʰ-éh₁-i̯e/o-* ← √**(h₁)reu̯dʰ-* 'red'.

(1) PCelt. ****rud-ĭ/e-tu-*** (← vb. stem **rud-ī-*):

◊ **rudĭ/etu-* > ***ruided*** [m.] 'act of turning red, reddening'

↔ vb. *ruidid* [w. *-ī*] 'turns red; flushes, blushes'.

3.1.105. *saⁱg- / sag-i-* 'seek'

< [1] PCelt. **sag-i̯e/o-* (⇒ [2] PrIr. **-sag-ī-*) ← PIE **sh₂g̑-* ← √**seh₂g̑-* 'seek out, follow a track'.

(1) PCelt. ****sag-i-ti-*** (← vb. stem **sag-i̯e/o-*):Ⓐ

◊ **sagiti-* > ***saigid*** [f.] 'act of seeking; discussing, disputing; (*leg.*) claim, suit; act of suing'

↔ vb. *saigid* [s. *-i̯e/o*] 'goes toward, seeks, strives after'.

ad-sagiti-* > ***ascaid* [f.] 'act of seeking, requesting; a request, favor, gift'

↔ vb. *ad·saig* [s. *-i̯e/o*] 'seeks after, desires'.

ari-sagiti-* > ***airigid* [f.] '(fore-claim →) choice portion of food; sample'

↔ vb. *ar·saig* [s. *-i̯e/o*] 'goes toward, advances on; (*leg.*) claims, sues for'.

de-sagiti-* > ***degaid*Ⓑ [f.] '(seeking, pursuing →) following after, in succession'

↔ no attested vb. **do·saig*.

*com-*ˁ + ***degaid*** > ***cuindchid, cuindgid***© [f.] 'request; act of seeking, requesting'

↔ vb. *con·diëig* [s. -$i^e/_o$] 'asks, seeks, requests'.

tu-sagiti* > ***toichid* [f.] 'act of seeking, suing'

↔ vb. *do·saig* [s. -$i^e/_o$] 'comes, approaches; seeks (often in a hostile sense), sues'.

t(u)-uss-sagiti* > ****toschaid* ⇒ ***toischid***Ⓓ [f.] 'sustenance; act of sustaining, maintaining'

↔ vb. **do·ossaig* [s. -$i^e/_o$] ⇒ *do·foscai* [w. -*ī*] 'supports, nourishes, keeps'.

u̯o-sagiti-* > ***fochaid* [f.] 'affliction; act of afflicting'

↔ vb. *fo·saig* [s. -$i^e/_o$] 'afflicts'.

ērm-u̯o-sagiti-* > ***íarfaigid* [f.] 'inquiry; act of seeking, inquiring about'

↔ vb. *íarmi·foich* [s. -$i^e/_o$] 'seeks, inquires'.

Comments:

Ⓐ The palatalized **-g-* in *saigid, airigid*, etc. shows that the intervening vowel between the root and the suffix must have been **-ĕ̄-* rather than **-e-*, since the latter did not cause palatalization in this environment.[204] This has produced a (mostly) consistent alternation between palatalized **-g-* when the root vowel is retained and neutral *-ch-* when that vowel is syncopated, the latter being the regular outcome of the post-syncope cluster **-h†g-* < **-hag'-* < **-sag'-*. The intervening vowel cannot be the weak-verb suffix **-ī-* since *saigid* and its compounds are strong verbs in Old Irish. (The one possible exception, weak *do·foscai* 'sustains, nourishes', is only attested in later manuscripts and probably replaces OIr. **do·ossaig*; it is at any rate too marginal to account for all the verbal nouns.) It is therefore most likely to be identical with the short **-i-* < **-ie-* of the

---

[204] Greene 1973: 131.

verbal stem,[205] implying that the verbal-noun formation has been derived from the Celtic verb.

Ⓑ The historically regular form would be **dechaid* < **deh†gith* < **desagiti-*, but the voiced *-g-* has been restored from the basic stem **sag-*. This probably began in the verb, where regular alternations such as 3.pl. **de·saiget* : **·dechat* were leveled to **de·saiget* : **·degat*, the voiced variant being reinforced by the corresponding simplex *segait* : *·segat*, and from there spread to the verbal noun.[206]

© By regular sound laws, an inherited compound **kom-dī-sagīti-* or **kom-de-sagīti-* would have come out to OIr. ‡*cuintigid* or ‡*cointigid*, instead of the actual ***cuindchid***, ***cuindgid***. McCone (1994–1995) has clarified the discrepancy by showing that this is in fact a more recent compound of *com-*$^{\epsilon}$ + ***degaid*** that must have been formed after the historical apocope and syncope had already taken place. From the variant spelling *cuind**ch**id* it appears that historically regular **dechaid* was still in use at the time (see the previous comment). The further loss of the second syllable in **condechaid* > ***cuind†chid*** is analogical, not based on the historical phonological process of syncope but on the contemporary morphological patterns that had resulted from it. Thus alternations such as *con·tuli* 'sleeps' : vn. ***cot†lud***, *do·ceil* 'conceals' : vn. ***dích†leth***, *fo·gaib* 'finds' : vn. ***fag†bál***, etc. set the stage for *con·dïëig* : vn. ***cuind†chid*** (***cuindgid***). The raising visible in *cuindgid* must also be analogical, since this phonological process had already been completed well before the syncope. While no single Old Irish model is apparent, the historical phonology of the language has created a fairly robust pattern whereby verbal compounds with *con-* followed by stressed *-ĭ-* in the deuterotonic forms frequently show

---

[205] See Cowgill 1980: 54 fn.7; McCone 1994: 70; 1996: 49; *KPV* 39, 556f. n.(a) s.v. ****sag-(i̯)e/o-***.

[206] Cp. McCone 1994–1995: 157.

raising to *cuin-/cuim-/cui-*^{n} in the prototonic forms and in the verbal nouns. For example: ***con·dírig*** 'controls, defines' : vn. ***cuin**drech*, ***con·ling*** 'contests, races' : vn. ***cuim**leng*, ***con·rig*** 'constrains' : vn. ***cuin**rige*, ***con·tibi*** 'laughs (at)' : vn. ***cuit**biud*. The same pattern applied to the verbal noun of ***con·diëig*** yielded ***cuin**dgid*.

Ⓓ The usual spelling is ***toischid*** with palatalized *-sch-*, although neutral *-sch-* would be expected by the regular sound laws. The secondary palatalization is at least as old as Milan, as shown by the derivative noun *toi**sch**idetu* [f. *-t*] 'necessity' in *ar tha**isch**idetud* (leg. *ar thaischitedaid*) (Ml. 65b11). The spellings in Würzburg — ***toschi**d*, ***toschi**th*, ***tasgi**d* — are ambiguous.

3.1.106. *scar-a-* 'separate, divide'

$$< \text{PCelt. } *skar\text{-}\bar{a}\text{-} \Leftarrow *skara\text{-} \begin{cases} < *skera\text{-} \quad \text{or:} \\ \Leftarrow *skr\bar{a}\text{-} < \text{PIE } *sk\r{r}H\text{-}^{Ⓐ} \end{cases} \quad \leftarrow \text{PIE } \sqrt{}*(s)kerH\text{-} \text{ 'split, divide'.}$$

(1) PCelt. ***skar-ă̆-tu-*** (← vb. stem **skar-ā-*):

◊ **skarătu-* > ***scarad*** [m.] 'separation; act of separating, parting'

↔ vb. *scaraid* [w. *-ā*] 'separates, parts'.

enter-skarătu-* > ***etarscarad* [m.] 'separation; act of separating, distinguishing'

↔ vb. *eter·scara* [w. *-ā*] 'separates, divides'.

kom-skarătu-* > ***coscrad* [m.] 'destruction; act of overthrowing, destroying'

↔ vb. *con·scara* [w. *-ā*] 'destroys, knocks down'.

tu-skarătu-* > ***tascrad* [m.] 'act of overthrowing, casting down'

↔ vb. *do·scara* [w. *-ā*] 'overthrows, casts down'.

Comment:

Ⓐ Two differing explanations have been put forward to account for the Celtic **-aRa-* that appears in this verb. Watkins (1962: 188f.) takes it as an example of "morphological

zero-grade,"[207] the replacement of phonologically regular *-*Rᾰ*- < *-*Ṛ*H-^{C} with analogical *-*aRa*- in order to restore regularity where the systematic oppositions had become skewed. Thus:

PIE full-gr. *CéRH*-^{V} : *CéRH*-^{C} :: zero-gr. *CṚH*-$^{\acute{V}}$: *CṚH*-^{C}

> PCelt. *CeR*-^{V} : *CeRa*-^{C} :: *CaR*-^{V} : *Crᾰ*-^{C} ⇒ *CaRa*-^{C}.

Joseph (1982) takes a different approach, proposing a regular phonological rule PIE **e* > PCelt. **a* / __*RaCV*-, the general validity of which appears confirmed by the further investigation of Schrijver (1995: 75–94, esp. 91–93). Joseph's rule does not in principle contradict the phenomenon of morphological zero grade, but in this instance at least, it has the advantage of removing the need for an appeal to analogy.

3.1.107. *scríb-a-* 'write'

< PrIr. **scrīb-ā-* < Lat. *scrīb-ō, -ere* 'write'.

(1) Lat. ***scrīb-endum***:Ⓐ

Lat. *scrībendum* > OIr. ***scríbend*** [n. *-o*] 'act of writing'

↔ vb. *scríbaid* [w. *-ā*] 'writes'.

Comment:

Ⓐ The derivational relationship of Lat. *scrībendum* to the finite verb *scrībō* long predates the Irish borrowing. When Irish adopted the Latin verb, it also took the corresponding gerund to serve as the verbal noun. (Cp. § 3.1.71(1) comment B.)

---

[207] See Kuryłowicz 1956: 166–74.

3.1.108. *scuch-i-* 'move, change position'

< PCelt. **skok-ī-* < PIE iter. **skok-éi̯$^{e}/_{o}$-* ← √**skek-* 'move rapidly'.

(1) PrIr. ****skok-ĭ̄-tu-*** ⇐ PCelt. **skok-e-tu-* (← vb. stem **skok-ī-*):Ⓐ

◊ [[**skokĭ̄tu-* > ***scuchad*** [m.] 'act of moving, proceeding'

↔ vb. *scuchaid* [w. *-ī*] 'moves, proceeds'.]]

kom-uss-skokĭ̄tu-* > ***cumscugud* [m.] 'movement, change, removal; act of moving, changing, removing' ↔ vb. *con·oscaigi* [w. *-ī*] 'moves, changes, removes'.

ande-skokĭ̄tu-* > ***indscuchud* [m.] 'departure, movement; act of changing position' ↔ vb. (*)*ind·scuchai* 'changes, moves'.Ⓑ

de-ro-uss-skokĭ̄tu-* > ***derscugud* [m.] 'excellence, pre-eminence; act of surpassing, excelling' ↔ vb. *do·róscai* [w. *-ī*] 'surpasses, excels, distinguishes oneself'.

Comments:

Ⓐ Schumacher (2000: 98) asserts that the vowel before the *tu*-suffix in these verbal nouns must have be **-e-* rather than **-ĭ̄-*. However, he does not explain his reasoning, and it is not clear why this should be the case. The neutral quality of the guttural is indeterminate, since the preceding back vowel, whether **-o-* or **-u-*, would have blocked this consonant from becoming palatalized before any front vowel according to Greene's rule 5 (1973: 130f.). Nor do spellings with *-a-* in certain case forms, such as gen.sg. *cumsc**a**igthe* (Ml. 15a2), acc.pl. *cumsc**a**igthiu* (Ml. 111a7), carry any weight, as *-u-* > *-a-* (i.e., [ɵ] > [ə]) in unstressed syllables is common before a palatalized consonant; pairs such as *cétb**u**id* / *cétb**a**id* 'feeling, act of perceiving', *deb**u**id* / *deb**a**id* 'contention' ← **-bu-ti-*, etc. are frequent. On the other hand, positive evidence for **-ĭ̄-tu-* is provided by the fact that the root vowel of the simplex ***scuchad*** is always *-u-*, never **-o-*, pointing to raising by a following high vowel. (That *-u-* almost always appears in the compounds as well is less significant, because *-o-* and *-u-* are used more or less interchangeably in Old and Middle

Irish orthography to represent an unstressed rounded vowel.) It seems necessary therefore to reconstruct PrIr. **skok-ĭ̆-tu-* as the immediate preform, although this has probably replaced earlier **skok-e-tu-* (§ 2.2.3.17(3)).

Ⓑ The entry in *DIL* is for the later verb **in(d)scuchaid**, with the following note: "(The forms inscuiche[t] (indic. pres. pl. 3) and indsguither (*leg.* indsguichter) (do. pass.) may be from an earlier in(d)-scuich, from the prototonic stem of which this vb. arises)." The Old Irish verb is correctly *ind·scuchai*, a weak *ī*-verb with originally neutral *-ch-*.

3.1.109. *scur-i-* 'release, unharness, bring to an end'

< PCelt. **skor-ī-* < PIE caus. **skorH-éi̯e/o-* ← √**(s)kerH-* 'separate, divide'.

(1) PCelt. ****skor-o-*** (← PIE **-skorH-*):

◊ **skoro-* > ***scor*** [m.] 'act of unyoking, unharnessing'

↔ vb. *scuirid* [w. *-ī*] 'unyokes; encamps, comes to a halt'.

ad-skoro-* > ***ascur*Ⓐ [m.(?)] 'remission'

↔ no attested vb. **ad·scuiri.*

kom-skoro-* > ***coscur*Ⓑ [m.] 'victory, triumph'

↔ no attested vb. **con·scuiri.*

Comments:

Ⓐ Pedersen (*VKG* II, 613 § 809(1))[208] takes ***ascur*** 'remission' to be from **ad-skar-*, a compound of *scaraid* 'separates, parts' (§ 3.1.106). (*DIL*'s further suggestion [s.v. **1 ascur**] of by-form of ***escar*** 'act of springing up, ripening, blossoming (of grain); an overthrow, fall, downfall' < **exs-skar-* is rendered rather less likely both by the vowel of the preverb, since there is no motivation for the change from ***es-*** to ***as-*** in the verbal noun, and by the large disparity in meanings.) However, if we take the rounded vowel of the second

---

[208] Followed by *LWG* 110 s.v. **ascur**.

syllable to be etymological instead of merely phonetic,[209] this suggests a connection with ***scor*** ↔ vb. *scuirid* 'unyokes, unharnesses', a causative-iterative formation from the same root[210] (the sense presumably having developed from separating an ox from its yoke or a horse from its harness to a wagon, etc.). The *-u-* of *ascur* may be a mere spelling variant of unstressed *-o-*,[211] but influence from the vowel of *scuirid, ·scuiri* could also be in operation (cp. the Middle Irish variant *ascuir* cited by *DIL, loc. cit.*).

Ⓑ It has generally been assumed that ***coscur*** is an old verbal noun of *con·scara*,[212] but there are reasons to suspect that it rather belongs to a now extinct compound **con·scuiri*: (1) the rounded vowel of the second syllable, indicated by the frequent spellings *coscur* and *coscor*, may point to PCelt. **-skor-* (cp. comment A), although this is not conclusive; (2) the masculine *o*-stem verbal noun is consistent with marked tendency for such formations to pair with causative-iterative verbs (§ 2.2.3.1(2)), whereas the rare *o*-stem verbal nouns that occur with weak *ā*-verbs are otherwise neuter (§ 2.2.3.1(3)); and (3) another verbal noun of the expected *tu*-stem type already exists for *con·scara*, namely ***coscrad*** [m.] 'destruction, act of destroying' (§ 3.1.106(1)).

3.1.110. *sech- / sech-a- / ¹sech-i-* 'say'

< [1] PCelt. **sek^{w}-$^{e}/_{o}$-* (⇒ [2] PrIr. **-sek^{w}-ā-*; [3] PrIr. **sek^{w}-ī-*); [4] PrIr. **cosc-ī-* Ⓐ

← PIE √**sek^{w}-* 'say'.

---

[209] Rounding between a guttural and a resonant is common; cp. *GOI* 108f. § 173 and § 1.5.1.2(3) *supra*.

[210] Cp. *VKG* II, 615 § 809 Anm.

[211] *GOI* 63 § 101. Phonetically this was simply the rounded reduced vowel [ɵ] (§ 1.5.1.2(3)).

[212] E.g., *VKG* II, 614 § 809(3); *DIL* s.v. **con-scara**; *LÉIA* C-215 s.v. **coscar**.

◊ Simple verb *seichid* [w. -*ī*] 'declares'; no simple verbal noun attested.[213]

(1) PCelt. ***-sk^{w}-o-*** (← PIE **sk^{w}-*):

ati-sk^{w}o-* > ***aithesc* [n.] 'answer, reply'

↔ no attested vb. **ad·seich.* Ⓑ

tu-ati-sk^{w}o-* > ***taithesc* [n.] 'answer, reply'

↔ no attested vb. **do·aithesc.*

kom-sk^{w}o-* > ***cosc* [n.] 'correction, punishment; admonition, advice; act of correcting, punishing' ↔ vb. *con·secha* [s. -$^{e}/_{o}$ / w. -*ā*/-*ī*] 'corrects, punishes'.

ande/eni-kom-sk^{w}o-* > ***inchosc* [n.(?)] 'indication, signification; act of indicating, signifying' ↔ vb. *in·cosaig* [s. -$^{e}/_{o}$] 'indicates, signifies'.

t(u)-ande/eni-kom-sk^{w}o-* > ***tinchosc* [n.] 'instruction; act of teaching, correcting'

↔ vb. *do·inchoisc* [s. -$^{e}/_{o}$] 'teaches, instructs'.

(2) PrIr. ****-sek^{w}-ĭ/e-tu-*** (← vb. stem **sek^{w}-ī-*):

tu-de-uss-sek^{w}ĭ/etu-* > ***todiuschud* [m.] 'wakening, rousing, raising up'

↔ vb. *do·díuschi* [w. -*ī*] 'awakens, rouses, raises up'.

Comments:

Ⓐ The verbs belonging to this root have a mixture of stems in Old Irish, in no clear pattern of distribution.[214] The primary thematic stem is the oldest, still found in the compound verbs *in·cos(s)aig* 'indicates' and *do·inchoisc* 'instructs', from **(tu)-ande/eni-kom-sek^{w}-*. Most of the verbal nouns are also primary formations, built from the basic stem **-sk^{w}-o-*. The unattested verbs corresponding to the verbal nouns

---

[213] *VKG* (II, 621 § 814 Anm.) notes that the simple abstract is OIr. *scél* [n.] 'story, tidings' < **sk^{w}-e-tlo-*, a secondary neuter *tlo*-stem noun built to a thematized zero-grade stem, but no indications can be found that this word stands in any systematic relationship to the verb.

[214] Cp. *GOI* 472 § 768; *VKG* II, 620f. § 814 Anm.; Schumacher 2000: 168f. Some clarification is ventured by Hamp 1975.

aithesc and ***taithesc*** 'answer' are therefore assumed to belong to the older thematic type. However, the compound *con·secha* 'corrects' < **kom-sek^{w}-ā-* has acquired weak flexion already by Old Irish. It is basically an *ā*-stem,[215] supplied in the prototonic and certain other forms by a weak *ī*-denominative **cosc-ī-* (e.g., 2.pl.ipv. *coscid*, pl.pres.pass. *coscitir*) derived from the corresponding verbal noun ***cosc***. The *ī*-flexion may have spread from there to the simplex *seichid* 'relates'[216] and to the compound *do·díuschi* 'awakens'. Only this last verb has acquired a *tu*-stem verbal noun.

Ⓑ While there is no attestation of **ad·seich* in Old Irish, there is a corresponding British verb, MW *attebaf* 'I answer'.[217]

3.1.111. ^{2}***sech-i-***$_{DEP}$ 'follow'

< PrIr. **sek^{w}-ī-*$_{DEP}$ ⇐ **sek^{w}-i̯^{e}/$_{o}$-*$_{DEP}$ Ⓐ ⇐ PCelt. **sek^{w}-^{e}/$_{o}$-*$_{DEP}$ ← PIE √**sek^{w}-* 'follow'.

(1) PrIr. ****sek^{w}-ī-mā-*** (← vb. stem **sek^{w}-ī-*):

sek^{w}īmā-* > ***sechem* [f.] 'following; imitating'

↔ vb. *seichidir* [w. *-ī*] 'follows'.

Comment:

Ⓐ Inherited thematic deponents regularly acquired *i̯^{e}/$_{o}$*-inflection in Irish:[218] for instance, PCelt. **sek^{w}-e-tor* (≈ Ved. *sácate* 'associates oneself', Gr. ἕπομαι 'follow', Lat. *sequor*, *-ī* 'id.') ⇒ PrIr. **sek^{w}-i̯e-tor* > OIr. *seichidir* 'follows'; PCelt. **med-e-tor* (≈ Gr. μέδομαι) ⇒ PrIr. **med-i̯e-tor* > OIr. *midithir* 'thinks'; and PICelt. **siss-e-tor* (perhaps

---

[215] In regard to which Hamp (1975: 173) notes that "*con·certa* carries about the same meaning and morphology."

[216] Hamp 1975: 172f.

[217] Schumacher 2000: 169.

[218] McCone 1996: 239f.

replacing PCelt. **si-st-a-* < **si-sth$_2$-e-*, see § 3.1.117 comment A) ⇒ PrIr. **siss-i̯e-tor* > OIr. **sissidir*, *·sis(s)edar* 'stands'. Old Irish *seichidir*, however, has transferred further to the weak *ī*-class, with an *f*-future (3.sg. *seichfed* [i.e. *-fid*]), an *s*-preterite (3.sg.perf. *ro·sechestar*), and the verbal-noun suffix **-mā-* which is associated with weak *ī*-verbs in stem-final dental or guttural (§ 2.2.3.9).

3.1.112. *sed-* 'sit'

< PCelt. **sed-$^{e}/_{o}$-*Ⓐ ← PIE **sed-* 'sit'.

(1) PCelt. ****sod-io-*** (← PIE **sod-*):

◊ **sodio-* > ***suide*** [n.] 'position; act of sitting; a seat'

↔ vb. *saidid* [s. *-$^{e}/_{o}$*] 'sits'.

ambi-sodio-* > ***impuide* [n.] 'encompassment; act of surrounding, encompassing'

↔ vb. *imm·said* [s. *-$^{e}/_{o}$*] 'surrounds, encompasses'.

ande-ni-sodio-* > ***indnaide* [n.] 'expectation; act of expecting, awaiting'

↔ vb. *ind·neät* [s. *-$^{e}/_{o}$*] 'expects, awaits'.

(2) PCelt. ****-sed-iā-*** (← PIE **sed-*):Ⓑ

ambi-sediā-* > ***impide* [f.] 'entreaty'

↔ vb. *imm·said* [s. *-$^{e}/_{o}$*] 'asks, demands'.

tu-ni-sediā-* > ***tuinide* [f.] 'fixed position, station'

↔ vb. *do·neät** [s. *-$^{e}/_{o}$*] 'waits, stays in place'.

(3) PCelt. ****-sed-o-*** (← PIE **sed-*):Ⓒ

u̯o-ni-sedo-* > ***fuined*Ⓓ [m./n.?] 'setting (of the sun); the west'

↔ no attested vb. **fo·neät*.

ari-u̯o-ni-sedo-* > ***airinded*Ⓓ [m./n.?] 'abatement; act of lowering, abating'

↔ no attested vb. **ar·fuinet*.

tu-ari-u̯o-ni-sedo-* > ***tairinded*Ⓓ 'act of lowering, descending, abating'

↔ vb. *do·aurnat* [s. -$^{e}/_{o}$] 'lowers, lets down; descends; abates'.

tu-u̯o-ni-sedo-* > ***tóined*Ⓓ [m./n.?] 'departure; act of descending, departing; setting (of the sun)' ↔ no attested vb. **do·fuinet*.

Comments:

Ⓐ The root vowel *-a-* of 3.sg. *saidid, imm·said*, etc. (vs. 3.pl. *sedait, imm·sedat*, etc.) is analogical to *laigid* 'lies' (: 3.pl. *legait*) < **leg-*$^{e}/_{o}$*-*, where the lowering of **-e-* > *-a-* is regular before palatalized *-g-*.[219]

Ⓑ The palatalization of ***impide*** and ***tuinide*** implies *e*-grade of the root, which appears to be accompanied by feminine gender. In the case of ***tuinide***, however, the gender is not certain: gen.sg. *tuinide* (O'D 622 = *CIH* VI, 1961.4) is to an *iā*-stem (unless the form is gen.pl.), but dat.sg. *tuinidhiu* (*CIH* II, 590.17) is to an *io*-stem. Unfortunately, as all the attestations of these words come from Middle Irish manuscripts or later, the spellings cannot be relied upon to indicate the earlier gender and stem class. It is also at least possible that we are dealing with Old Irish neuters that later transferred to the feminine class.

Ⓒ Zero grade is excluded by the fact that PCelt. **-ni-sdo-* would have yielded PrIr. **-niddo-* > OIr. ⁂*-net*. It cannot be determined whether these Old Irish nouns are masculine or neuter.

Ⓓ The root *fuin-* first set up in *VKG* (II, 526f. § 733) as the basis of ***fuined*** and its related compounds is in fact a Middle-Irish back-formation, as subsequently recognized in *CCCG* (383f. § 594). The Old Irish verb is there taken to represent *fo-* plus *ned-*, with the root *ned-* further analyzed as consisting of the preverb **ni-* plus zero-grade **$d^{h}h_{1}$-* ← PIE

---

[219] McCone 1994: 79; 1996: 111.

√*d^heh_1- 'put, place', hence 'set down'. However, such a formation might be expected to have produced a weak *ā*-verb **nid-ā-* ⇐ **ni-da-* < PIE **ni-d^hh_1-*^{C} (for which compare **ēd-ā-* 'close' ⇐ **ē-da-* < PIE **epi-d^hh_3-*^{C}, § 3.1.36 comment A, and Watkins 1962: 190), yet no such verb occurs. Instead, the earliest attested verbal form, and the only one that has any good claim to being of Old Irish date, is *do·aurnat*[220] 'lowers, lets down' (↔ vn. ***tairinded***), which is obviously strong and aligns formally with *ar·neät, ·airnet* 'waits for, expects' < **ari-ni-sed-$^e/_o$-* and *ind·neät* 'id.' < **ande-ni-sed-$^e/_o$-*, from **-ni-sed-* 'sit down'. Rather than manifesting confusion with *·neät*, as *VKG* (*loc. cit.*, Anm.) and *DIL* (s.v. **do-airindi**) suggest, the form of *do·aurnat* simply reveals that it too derives from **-ni-sed-*.

In Middle Irish ***fuined*** and ***tóined*** came to be reanalyzed as *to*-stems or *tu*-stems, and from them *fuin-* and *tóin-* were extracted as the bases of further derivatives. At first glance, an early example of such a *tu*-stem might appear to be at hand in the nom.sg. *tóini**ud*** (Wb. 26a5 [2x]), but this might rather be an instance of the dative form used for the nominative. The ninth-century spellings *tōine**d*** (Ml. 42c30), *fuine**d*** (BCr. 18c2, 33b18), *fune**d*** (Ml. 119d9), gen.sg. *fuini**d*** (Ml. 94b19) still point to the etymologically expected *o*-stems. Similarly, ninth-century *tairinnu**d*** (BCr. 33d18) is countered by acc.sg. *tairinne**d*** (AC § 1, supported by several MSS; cp. also nom.sg. *airinne**d, airinde**d***, AC § 9, also supported by several MSS).

---

[220] I.e., *t-a·n-aurnat* 'bows himself down' (St.M § 8 = *Thes.* II, 253.5), 3.sg.pres. + masc.sg.ifx.pron.; cp. also *do·airnet* (O'D 877 = *CIH* VI, 2082.18). These forms are listed by *DIL* under a weak *ī*-verb **do-airindi**, which is based on the testimony of various Middle Irish forms.

3.1.113. ¹*senn-* 'make a musical sound'[Ⓐ]

< PCelt. **s̥uann-$^{e}/_{o}$-*[Ⓑ] ⇐ **s̥uan-na-* < PIE **s̥u̯n̥-n-h₂-* ← √**s̥uenh₂-* 'sound, resound'.

(1) PCelt. ****s̥uann-men-*** (← PCelt. **s̥uan(n)-*, or analogically remodeled):[©]

◊ **s̥uannmen-* > ***seinm*** [n.] 'sound, tone, (instrumental) music; act of playing (a musical instrument)' ↔ vb. *seinnid* [s. *-$^{e}/_{o}$*] 'plays (a musical instrument), sounds'.

Comments:

Ⓐ This and the following entry were taken as a single verbal root by Pedersen (*VKG* II, 625 § 819) due to their formal identity in Irish, but Thurneysen (*GOI* 353 § 548) is no doubt correct to separate them into two etymologically distinct entities that merged in the prehistory of Irish.

Ⓑ Both this verb **s̥uann-$^{e}/_{o}$-* 'make a musical sound' and the following verb **s̥uann-$^{e}/_{o}$-* 'reach, attain' inherited *n*-infix present formations in **°an-na-* < PIE **°n̥-n-H-*. These were replaced within Celtic by thematic **°ann-$^{e}/_{o}$-* on the analogy of *n*-infix verbs of roots ending in **-nd-* such as *·gleinn* 'show' < PCelt. **-glann-$^{e}/_{o}$-* < **-glan-n-d-$^{e}/_{o}$-* ← PIE **g^{h}ln̥-n-d^{h}-*.[221]

© Since PIE **s̥uenh₂-* is a *set* root, the historically regular shape of an inherited verbal noun would have been **s̥uénh₂-mn̥* > PCelt. **s̥uena-man* > OIr. **senam*. The form ***seinm*** therefore appears to be a later creation based on the verbal stem; depending on the date of the formation, it could represent either **s̥uan-* extracted from PCelt. **s̥uan-na-* < PIE **s̥u̯n̥-n-h₂-*, or **s̥uann-* extracted from the newer thematic stem **s̥uann-$^{e}/_{o}$-*. Alternatively, the inherited **senam* could have acquired its new form by analogy with the similar-sounding verb *sceinnid* 'darts, leaps' ↔ vn. ***sceinm*** (not attested in our corpus) < PCelt. **skend-man* or **skand-man* ← PIE √**skend-* 'leap', by the proportion *sceinnid* : *sceinm* ::

---

[221] *KPV* 559 n.(a) s.v. ****san-na-***; cp. Watkins 1962: 132f., esp. 133 fn.12; McCone 1998: 466–68.

seinnid : X = *seinm.*[222]

3.1.114. [2]*senn-* 'reach, attain'

< PrIr. **su̯ann-$^{e}/_{o}$-* Ⓐ ⇐ PCelt. **sann-$^{e}/_{o}$-* ⇐ **san-na-* < **sn̥-n-h_2-* ← PIE √**senh$_2$-* 'reach, attain'.

◊ Simple verb *seinnid* [s. -$^{e}/_{o}$] 'brings, takes (sth./sb. swh.)'; no simple verbal noun attested.

(1) PrIr. ***-su̯ann-o-*** (← vb. stem **su̯ann-$^{e}/_{o}$-*)

de-ati-su̯anno-* > ***daithfenn* [n.] 'act of driving back, repulsing'

↔ no attested vb. **do·aithfeinn.*

tu-su̯anno-* > ***tofonn* [n.] 'act of pursuing, chasing, hunting'

↔ vb. *do·seinn* [s. -$^{e}/_{o}$] 'pursues, chases, hunts'.

Comment:

Ⓐ Initial **su̯-*, recognizable in the lenited */f/* of the reduplicated 3.sg.fut. *sifis*, 3.sg.pret. *sephaind*, vn. *tofonn*, etc., was secondarily introduced in the prehistory of Irish through influence of the similar-sounding verb **su̯ann-$^{e}/_{o}$-* 'make a musical sound' (see § 3.1.113 comments A and B) with which it fell together formally.

3.1.115. *ser-n-* / *sr̆ĕ-* 'strew, spread out'

< [1] PrIr. **ser-na-* ⇐ **sar-na-* < PCelt. **star-na-* < PIE **str̥-n-h_3-*; [2] PrIr. ***sr̆ĕ-* Ⓐ ← PIE √**sterh_3-* 'scatter, spread out'.

(1) as if *****sri-tā-*** < ***sr̥-tā-* (analogically remodeled): Ⓑ

◊ ***sritā-* > ***sreth*** [f.] 'arrangement; act of strewing, spreading out; (that which is arrayed, laid out →) furnishings' ↔ vb. *sernaid* [s. *-na*] 'arrays, arranges, sets in order'.

---

[222] Stüber 1998: 74f.

(2) PrIr. ***-sar-ā-*** Ⓒ < PCelt. **star-ā-* (← PIE **stṛh₃-*):

kom-sarā-* > ***cos(s)ar* [f.] 'arrangement, formation; act of spreading out, strewing'

↔ vb. *con·sern* [s. *-na*] 'spreads out, strews'.

exs-sarā-* > ****essar, es(s)air* [f.] 'strewing, litter' → 'straw (used for floor-covering, bedding, etc.)' ↔ no attested vb. **as·sern*.

u̯o-sarā-* > ****fossar, fos(s)air* [f.] 'accompaniment, supplement; (that which is arrayed, laid out →) furnishings' ↔ vb. *fo·sern* [s. *-na*] 'arrays, lays out in order'.

(3) as if *****-sreḭ-V-tu-*** (← vb. stem ***srĕ̆-*):

◊ Simple verb *sreïd* [h.] 'scatters'; no simple verbal noun attested.

exs-sreḭVtu-* > ***esreud [m.] 'act of dispersing; scattering'

↔ vb. *as·sré* [h.] 'scatters; sprinkles'.

Comments:

Ⓐ The hiatus verbal stem ***srĕ̆-* in *sreïd* 'scatters' and *as·sré* 'sprinkles' cannot be historical, because there is no way to generate the form from PIE √**sterh₃-*. Pedersen (*VKG* II, 626 § 820 Anm. 1) and Schumacher (*KPV* 602 n.(a) s.v. ****star-na-***) no doubt rightly ascribe it to a back-formation from pret.pass. *sre-th* < **sri-to-* or the vn. ***sre-th*** < **sri-tā-* (cp. comment B), based on the model of *sceïd, ·scé* 'vomits' < **skeḭ-$^{e}/_{o}$-*, pret.pass. **sceth* < **ski-to-*, vn. ****sceth, sceith*** < **ski-tā-* (not attested in our corpus).[223] Watkins (1958: 94) suggests that OIr. *sreöd* [m. *-o*] 'sneeze', with which *sreïd* 'scatters' was likely associated, may have contributed an additional formal impetus for the remodeling.

Ⓑ Since PIE √**sterh₃-* is a *seṭ* root, the verbal noun ***sreth***, as if from ***sri-tā-* < ***sṛ̆-tā-*, must be a remodeling (so also pret.pass. *sreth*, as if from ***sri-to-* < ***sṛ̆-to-*), as **stṛh₃-to/ā-*

---

[223] The preterite passive is not attested, but **sceth* would be the regular outcome of the PIE *to*-participle **sk̂ʰi-tó-*. The verbal noun ***sceith*** is only attested with a palatalized final in the nom.sg., but a *tā*-stem **ski-tā-* is guaranteed by the lowering of the vowel in the stressed syllable. The palatalization must have secondarily spread from the dative (cp. *GOI* 164f. § 256).

would have regularly produced ⁑*srăth*. It was probably modeled on the pattern of *aniṭ* verbs in **CeR-*, which regularly have *CReth* in the preterite passive and verbal noun; these include ***breth*** (↔ vb. *beirid* ' bears' ← PIE √**bʰer-*, § 3.1.13(1)), ****gleth*** (***gleith***) (↔ vb. *geilid* 'grazes' ← PCelt. **gʷel-*, § 3.1.53(1)), and ***cleth*** (↔ vb. *ceilid* 'hides' ← PIE √**ḱel-*, § 3.1.19(1)).

© The nominatives of ***es(s)air*** and ***fos(s)air*** are only attested in the literature with palatalized final, and no other case forms appear that would serve to distinguish whether they are *i*-stems or *ā*-stems. The situation is clarified by ***cos(s)ar***, however, which is attested at least twice with a neutral final *-r* (confirmed by rhyme), showing the stem suffix to have been **-ā-*.

3.1.116. *-sim-* 'pour'

< PCelt. **-sem-*$^{e}/_{o}$- ← PIE √**sem(H)*- 'draw, pour, scoop'.

◊ No simplex.

(1) PCelt. ****-sam-tion-*** (← PIE **sm̥(H)-*):Ⓐ

t(u)-exs-samtion-* > ***teistiu* [f.] 'act of pouring out, shedding'

↔ vb. *do·es(s)im* [s. -$^{e}/_{o}$] 'pours, sheds'.

t(u)-uss-samtion-* > ***tuistiu* [f.] 'creation, procreation; act of creating, engendering'

↔ vb. *do·fuis(s)im* (⇐ **do·oissim*) [s. -$^{e}/_{o}$] 'creates, brings forth, engenders'.

Comment:

Ⓐ *LIV*² (531 s.v. ****semH-***) reconstructs the root with a final laryngeal on the evidence of Gr. ἄμη, ἅμη 'Wassereimer' < **sm̥H-éh₂-*, although the etymology of this word is rather uncertain.[224] More positive evidence for a root-final laryngeal may be adduced from the acute accent of Lith. ***sémti*** 'to scoop', ***sámtis*** 'ladle', which points to PIE **semH-*,

---

[224] See Beekes 2010: I, 82 s.v. **ἀμάομαι**.

somH-*.[225] On the other hand, OIr. ***teistiu* and ***tuistiu*** seem to imply an *aniṭ* formation: OIr. *-s†tiu* < PrIr. **-sētion-* < PCelt. **-sam-tion-* < PIE **-sm̥-tiHon-*, since a *seṭ* formation **-sm̥H-tiHon-* would have regularly produced PCelt. **-smă̆-tion-* > **-mmă̆-tion-* > OIr. ⁂*-m†thu* (⁂*témthu*, ⁂*tomthu*). One might speculate that the verbal noun in **-tion-* is a later formation, built to a new *aniṭ* root **sem-* that was generalized after the loss of the laryngeal in, for example, the present stem **-sem-$^{e}/_{o}$-* < **-semH-$^{e}/_{o}$-*. But the possibility of an inner-Celtic creation is rendered less likely by the attractive suggestion of Stüber (1998: 128) that Lat. *sentīna* 'wash (of a ship)' also belongs to this root.[226] If correct, this would put the *aniṭ* root at least as far back as Italo-Celtic. Add to this the Old Irish preterite passive stem (*do-r·es*)***set***, (*do·for*)***sat*** < **-sēto-* < PCelt. **-sam-to-* < PIE **sm̥-tó-*, which as a formation type directly continues the PIE *to*-participle, and it seems that there sufficient evidence to posit the *aniṭ* variant **sem-* in PIE itself beside *seṭ* **semH-*.

3.1.117. *sis(s)-*$_{DEP}$ 'set, stand'

< PrIr. **siss-i̯$^{e}/_{o}$-*$_{DEP}$ ⇐ PICelt. **siss-$^{e}/_{o}$-* ⇐ PCelt. **si-st-$^{a}/_{o}$-*(?)Ⓐ ← PIE **sti-sth$_2$-* ← √**steh$_2$-* 'stand'.

---

[225] For a discussion of the *o*-grade in this and other Lithuanian nouns that are descriptively *ti̯o*-stems, see Vijūnas 2009: 100–4. Lithuanian *sámtis* < **somH-t-* also fails to show the operation of Saussure-Hirt's Law (the "Saussure effect"), whereby the laryngeal should have been lost in the sequence **-oRHC-*; see Yamazaki 2009: (447–58) for an assessment of this phenomenon in Lithuanian and a proposed morphological solution to the numerous counterexamples (although *sámtis* itself does not happen to figure in to the discussion there).

[226] Stüber sets up an underlying $^{o}/_{\bar{a}}$-stem adjective built to **sentīn-* < **sm̥-tiHn-*, the weak stem of the same **-sm̥-tiHon-* that lies at the base of the Old Irish verbal noun. While there is evidence for the zero-grade *n*-stem form **-tiHn-* in Sabellic (see § 2.2.3.22), its existence in Latin is more doubtful, as Vine (1999b) shows; but a deinstrumental solution along the lines of that proposed by Vine (*op. cit.*) for Lat. *festī-nus* 'quick, hasty', *festī-nāre* 'to hurry' etc. would work as well: from the original *ti*-stem verbal abstract **sm̥-ti-* (the basis of **sm̥-ti-Hon-*), the "possessive" instrumental **sm̥-ti-h$_1$* 'with a scooping' could have been taken as the base of a new *no*-stem adjective **sm̥tih$_1$-* + **-no-* > **sentī-no-* 'characterized by scooping', from which Lat. *sentīna* would follow in a straightforward manner, understood either as an abstract/collective 'scooping(s)', or as a substantivized *sentīna* (*aqua*) 'scooped (water)' → 'wash (of a ship)'.

(1) PICelt. ***sissa-mu-*** < PCelt. **sista-mu-* (← vb. stem **si-sta-*):Ⓑ

◊ [[**sissamu-* > ***ses(s)am*** [m.] 'act of standing'

↔ vb. *sis(s)idir, ·sis(s)edar* [s. *-i̯e/o*] 'stands'.]]

t(u)-ari-sissamu-* > ***tairis(s)em* [m.] 'steadfastness; act of standing firm, remaining'

↔ vb. *do·airis(s)edar* [s. *-i̯e/o*] 'stands firm, remains'.

u̯o-sissamu-* > ***fóes(s)am*Ⓒ [m.] 'protection; act of taking under one's protection'

↔ vb. *fo·sis(s)edar* [s. *-i̯e/o*] '(stands under →) (*leg.*) becomes responsible for, protects'.

tu-(u̯o-)sissamu-* > ***tóes(s)am* [m.] 'resistance'

↔ no attested vb. **do·sis(s)edar* or **do-fois(s)edar*.

(2) as if *****-sissam-tion-*** (analogically remodeled):

u̯o-sissamtion-* > ***foísitiuⒹ [f.] 'confession'

↔ vb. *fo·sis(s)edar* [s. *-i̯e/o*] '(stands under →) confesses'.

Comments:

Ⓐ The stem *siss-* of the Old Irish deponent verb *sissidir, ·sissedar* 'sets, places' obviously reflects the PIE reduplicated present (weak) stem **sti-sth₂-*, but the inner-Celtic development of this verb is unclear. Outside of Irish, only one other Celtic verbal form is attested: Celtib. *SISTAT* 'sets up(?)' (Peñalba de Villastar inscription), an ambiguous form, but possibly 3.sg. present indicative with early apocope of **-i*.[227] If it represents */sistăt/* with short *-ă-*, then a thematized PCelt. **si-st-a/o-* < **si-sth₂-e/o-* is probably to be reconstructed;[228] but if */sistāt/* with long *-ā-*, the form could either directly continue

---

[227] Villar 1995: 36; McCone 1996: 15; *KPV* 573 n.(c) s.v. ***?*si-st-a/o-***.

[228] It could also, in theory, represent a generalized weak athematic stem **sti-sth₂-*[C], but this is improbable, as only the 1.pl. (PIE **sti-sth₂-mós*) and 2.pl. (PIE **sti-sth₂-té*) supply the necessary morphophonological conditions to yield a Proto-Celtic present stem **si-stă-*, and neither is a very likely source of paradigmatic leveling. It is more plausible that a thematized stem **sti-sth₂-a-* spread from the 3.pl. through the resegmentation of athem. **sti-sth₂-enti* (> **sti-sth₂-anti*) as **sti-sth₂-e-nti* (> **sti-sth₂-a-nti*). This could conceivably have occurred already in late PIE, since, with the exception of Gr. ἵ-στη-μι, all

athem. PIE **sti-steh$_2$-ti*, or it could represent a weak *ā*-verb that came about through reanalysis of an earlier PCelt. **sistă-*.[229] *KPV* (571–73) considers PCelt. **si-st-$^{a}/_{o}$-* to be best suited to the known Celtic evidence, replaced in Insular Celtic by **siss-$^{e}/_{o}$-* with the "normal" thematic suffix **-$^{e}/_{o}$-* (since PCelt. **si-st-a-*, if maintained, would almost certainly have become a weak *ā*-verb), and subsequently in pre-Irish **-$\underset{\frown}{i}^{e}/_{o}$-*when it acquired deponent inflection.[230]

Ⓑ Because the *-a-* always appears in an unstressed syllable, it is not possible to tell from the Irish evidence whether this continues an inherited short or long vowel, but the question is clarified by MW *gwaesaf* [m.] 'guarantee, pledge' (≈ OIr. ***fóes(s)am***), the short *-ă-* of which points back to the weak stem **-si-stă-* < PIE **si-sth$_2$-*.[231]

Ⓒ The diphthong */-oi-/* in the first syllable of ***fóes(s)am*** (*/foisaμ/*), instead of the more usual hiatus reflex */-oï-/* of PrIr. **-osi-*, is the result of a regular pre-syncope loss of lenited **-ś-* before unlenited **-ss-* in the following syllable.[232]

Ⓓ The two senses of the verb *fo·sis(s)edar* 'stands under' → 'becomes responsible for, protects; confesses' are distinguished in the verbal nouns, ***fóes(s)am*** 'protection' and ***foísitiu*** 'confession'. The latter has been remodeled after its near-synonym ***aititiu*** [f.] 'acknowledgement' < **ad-dam-tion-*.[233]

---

the unambiguous Indo-European reduplicated present formations display a thematic paradigm (see *LIV*^{2} 591 n.6 s.v. ****steh$_2$-***); but these are more probably independent post-PIE developments, firstly because thematization was highly productive in the daughter languages, and secondly because there is no good reason to assume that the athematic Greek verb arose through a secondary reversal of thematization.

[229] See § 2.1.5(c), formation (3) of the weak *ā*-class.

[230] McCone 1996: 239f.

[231] Schrijver 1995: 408; Schumacher 2000: 129.

[232] *GOI* 112 § 179.

[233] Sarauw 1900: 70; *VKG* II, 629 § 824(2); *GOI* 451 § 730; Stüber 1998: 133.

3.1.118. *-slĭ̄-* 'deserve'

< PCelt. **-sl-i̯i̯$^{e}/_{o}$-*Ⓐ ← PIE √**selh$_1$-* 'take'.

◊ No simplex.

(1) PCelt. ****-slī-mu-*** (← vb. stem **slī-*):

u̯o-slīmu-* > ***fuillem* [m.] 'gain, profit, interest'

↔ vb. *fo·slí* [h.] 'earns; incurs (liabilities, etc.)'.

(2) PCelt. ****-slĭ̄-tu-*** (← vb. stem **slĭ̄-*):

?**ad-ro-slĭ̄tu-* ⇒ ***áirilliud***Ⓑ [m.] 'merit; act of deserving, meriting'

↔ vb. *ad·roilli* [h.] 'deserves, merits'.

Comments:

Ⓐ The shape of the verb stem **-sl-i̯i̯$^{e}/_{o}$-* appears to be an inner-Celtic formation based on a new zero-grade **sl-* + **-i̯$^{e}/_{o}$-*. It is parallel to **bu̯-i̯i̯$^{e}/_{o}$-* 'be' ← PIE **b^{h}uH-* (§ 3.1.14) and **gn-i̯i̯$^{e}/_{o}$-* 'do, make' ← PIE **genh$_1$-* (§ 3.1.58), and was probably influenced by **sni̯i̯-$^{e}/_{o}$-* 'weave' ← **snī-* < PIE **sneh$_1$-* (§ 3.1.122). For the details, see § 3.1.58 comment A and *KPV* (246f. n.(b) s.v. ****bu̯-i̯i̯e/o-***, 341–44 n.(a) s.v. ****gn-i̯i̯e/o-***, 590 n.(a) s.v. ****-sl-i̯i̯e/o-***).

Ⓑ There are multiple phonological problems with the forms of this compound, as Armstrong (1976: 49f.) discusses. The palatalized *-r-* of ***áirilliud*** is historically anomalous, and the second syllable would ordinarily have been lost to syncope; the expected form would be **ár†lud*. The verbal noun has evidently been fashioned after the Celtic verbal stem, and indeed the same idiosyncrasies appear in the prototonic forms of the verb, such as 3.pl.pret. *·áirillset* instead of expected **·ár†laiset*. It is possible that the palatalization is secondary, replacing earlier forms with neutral *-r-* (the earliest spellings, ***ari***lliud, ·***ari***lset in Würzburg, are ambiguous), but the lack of syncope is still difficult to explain. Pedersen's (*VKG* II, 631 § 826(2)) suggestion of prototonic **·árl-* ⇒ *·áirill-* through contamination from deuterotonic *ad·roill-* is uncomfortably *ad hoc*. One solution

might be to posit a post-syncope creation made by adding preverbal *ad-* to an existing (unattested) **ro·slí, *·roilli* to yield the new *ad·roilli, *árailli* ⇒ *áirilli*. If so, the alternation *ad·r-* : *á(i)r-* must be analogical, patterned on the systematic alternation of inherited pairs such as *ad·reith, ·árat* 'runs towards, reaches', *ad·rími, ·áirmi* 'counts', vn. ***áram***, etc., since the phonological rule that produced the assimilation **adr-* > **ár-* had already taken place before syncope.[234] Still unexplained, however, is the absence of raising in deuterotonic *ad·roilli*, which should have become **ad·ruilli* by the conditioning of the following **-ĭ-*.

3.1.119. *slig-* 'strike, hew'

< PCelt. **slig-$^{e}/_{o}$-* ← PIE **sliĝ-* ← √**sleiĝ-* 'smear'.Ⓐ

(1) [[PCelt. ****slig-iā-*** (← PIE **sliĝ-*):

◊ **sligiā-* > ***slige*** [f.] 'slaughter; act of smiting, hewing'

↔ vb. *sligid* [s. -$^{e}/_{o}$] 'hews, strikes down'.]]

(2) PCelt. ****-slēg-o-*** (← PIE **sleiĝ-*):

ad-slēg-o-* > ***aslach* [n.] 'temptation; act of tempting, inducing'

↔ vb. *ad·slig* [s. -$^{e}/_{o}$] 'tempts, urges, tries to induce'.

ari-slēg-o-* > ***airlech* [n.] 'slaughter; act of slaughtering'

↔ vb. *ar·slig* [s. -$^{e}/_{o}$] 'slays, slaughters'.

Comment:

Ⓐ A parallel to the semantic shift from 'smear' to 'strike' may be seen in PGmc. **strīkan* 'to stroke' (← PIE √**streiĝ-* 'stroke, rub') > OHG *strīhhan*, OE *strīcan* 'id.' → MoE *strike*, MoG *Streich* 'a stroke, blow' (both meanings are contained in the Modern English noun

---

[234] Greene 1973: 133–35.

stroke); similarly, PGmc. **smītan* 'to smear'[235] > Go. *bi-smeitan* 'to anoint', OHG *smīzan* 'to stroke, smear' > MoG *schmeißen* 'to throw, fling', OE *smītan* 'to smear' > MoE *smite*, etc. The association has perhaps to do with the type of motion involved.

3.1.120. *slund-i-* 'declare'

< PrIr. **slond-ī-* < PCelt. **splond-ī-*[236] < PIE caus. **splond$^{(h)}$-éi^{e}/$_{o}$-* ← √**splend$^{(h)}$-* 'be(come) clear, evident'. Ⓐ

(1) PrIr. ****slond-o-*** < PCelt. **splond-o-* (← PIE **splond$^{(h)}$-*):

◊ **slondo-* > ***slond*** [m.] 'expression; act of expressing, mentioning'

↔ vb. *sluindid* [w. *-ī*] 'expresses, declares, signifies'.

(2) PrIr. ****slond-e-tu-*** < PCelt. **splond-e-tu-* Ⓑ (← vb. stem **splond-ī-*):

◊ **slondetu-* > ***slondud*** [m.] 'declaration; act of declaring'

↔ vb. *sluindid* [w. *-ī*] 'expresses, declares, signifies'.

dī-slondetu-* > ***díltud* [m.] 'denial, rejection, cause of offense; act of denying, rejecting'

↔ vb. *do·sluindi* [w. *-ī*] 'denies, rejects'.

Comments:

Ⓐ This etymology follows Pedersen's comparison (*VKG* I, 83f. § 50(5)) of OIr. *sluindid* 'expresses, declares' ↔ vn. ***slond*** 'expression, act of expressing', OW *istlinnit* gl. *profatur, loquitur*, and MoW *ystlwn* 'connection' with Lat. *splendeō, -ēre* 'shine'. The semantics are unproblematic if one starts from a root meaning 'be(come) clear, evident'. Latin *splend-ē-* reflects a PIE stative present **spl̥nd$^{(h)}$-éh$_1$-i^{e}/$_{o}$-* 'be clear, evident' → 'be bright, shine', while

---

[235] The immediate preform would be **smeid-* (cp. *LIV*[2] 569 s.v. ?****smeid-***); perhaps ultimately from PIE √**smeh$_1$-* 'wipe, rub' (> Gr. σμῶ, σμῇ 'wipe off, rub off', σμῆμα 'ointment' < **sméh$_1$-mn̥-*) by way of **smeh$_1$-i-d-* (a *d*-present of extended **smeh$_1$-i-*?); cp. *IEW* 966 s.v. ***smē-, smeī-, sm-ei-***; Watkins 2011: 83 s.v. **smē-**. These connections are doubted, however, by W. P. Lehmann (1986: 72f. s.v. **B68. *bi-smeitan**).

[236] For the retention of PIE initial **sp-* in Proto-Celtic, see McCone 1996: 44f.

Celtic **splond-ī-* continues a PIE causative **splond$^{(h)}$-éi$^{e}/_{o}$-* 'make clear, evident' → 'express, declare'. This equation is only convincing, however, if one assumes PIE **spl-* > PCelt. **spl-* > OIr. *sl-* and Brit. (?**sl-* >) *stl-*. On the other hand, MW ***fled*** 'trick' < PCelt. **spli-tā-* < PIE **spl̥-teh$_2$-* (≈ OIr. *sleth* 'act of taking sexual advantage of a sleeping woman' < **slitā-* and OIr. *intled* 'trap' < **ande-slitā-*) presents a troubling counter-example, because it clearly indicates PIE **spl-* > PBr. **fl-* rather than **stl-*. On this evidence *LÉIA* (S-138 s.v. **slond-**) and *DGVB* (203 s.v. **gurstli(n)**) both reject the connection with Lat. *splendeō, -ēre* and instead set up an isolated PICelt. **stlond-* for the root of OIr. *sluindid*, OW *istlinnit*, etc. A convincing resolution to the conflicting British outcomes has been put forward by Schrijver (1995: 435–38), who argues for a double treatment of initial **spl-* in British comparable to that of initial **s-* (e.g., MW ***s**edd* [f.] 'seat' vs. ***h**edd* [m. f.] 'peace' < PCelt. **sed-*) and **st-* (e.g., MBret. ***st**affn* [f.] 'palate' vs. MW ***s**afyn* [f. m.] 'mouth' < PCelt. **stamnā*). The divergent sibilant reflexes would represent the detritus of old unlenited/lenited pairs that became phonemicized before the general grammaticalization of lenition in British. (For details, see Schrijver, *loc. cit.*, esp. 438, and 377–83, esp. 381–83) Acknowledging a split outcome of PIE **spl-* into PBr. (unlenited) **stl-*/(lenited) **fl-* is more economical than the alternative, which leaves both PICelt. **stlond-* and Lat. **splend-* stranded as orphans in their respective branches.

Ⓑ Intermediate **-e-* instead of **-ĭ-* is shown by the absence of raising in the stressed syllable of ***slondud*** 'declaration; act of declaring'.

3.1.121. *snad-* 'cut, carve'

< PCelt. **snad-$^{e}/_{o}$-*, etymology uncertain.Ⓐ

(1) [[PCelt. ****snad-iā-*** (← PIE **sn̥Hd^{h}-*):

◊ **snadiā-* > ***snaide*** [f.] 'act of cutting, chipping, hewing'

↔ vb. *snadaid* [s. *-$^{e}/_{o}$*] 'cuts, chips, hews'.]]

(2) [[PrIr. ***snas-so-*** < PCelt. **snad-to-* (← PIE **sn̥Hdʰ-*):

◊ **snasso-* > ***snas(s)*** [m.] 'act of cutting, chipping'

↔ vb. *snadaid* [s. -$^{e}/_{o}$] 'cuts, chips, hews'.]]

(3) PCelt. ****snad-ā-*** or ****snad-i-*** (?) (← PIE **sn̥Hdʰ-*):[Ⓑ]

en-snadā/i-*(?) > ***esnaid* [f.(?)] 'insertion; act of inserting, grafting in'

↔ vb. *in·snaid* [s. -$^{e}/_{o}$] 'inserts, grafts in'.

Comments:

Ⓐ The shape of the Celtic root **snad-* is difficult. *LIV*^{2}'s (571 n.2 s.v. ?****sned***^{h}***-***) *ad hoc* suggestion of PCelt. **sned-/snad-* < **sned-/sn̥d-* ⇐ **snéd-/sn̥d-* is not plausible: there is no evident reason why PIE **sn̥d*^{h}*-* should have followed this morphophonemic development rather than the regular PCelt. **sn̥d-* > ⁂*sand-*. *KPV* (595 n.(a) s.v. ****snad-e/o-***) reconstructs a root with laryngeal, PIE?√**sneHd*^{h}*-* 'cut', predicated on the position that PIE **sn̥Hd*^{h}*-* would have regularly produced PCelt. **snăd-*;[237] this, of course, is problematic if the regular outcome of PIE **CR̥HT-* sequences is PCelt. *CRāT-* with a long vowel. As the root is only attested in Celtic (also in MW *naðu* 'to cut', OBret. pl. *em-nedeticion* 'polished') and Germanic (OHG *snat(t)a* [f.] 'bruise, scar, stigma'), a non-Indo-European source is possible.

Ⓑ The gender and stem class are ambiguous due to the few forms attested. The dat.sg. *esnid* in Würzburg could belong either to a feminine *ā*-stem or an *i*-stem of indeterminate gender. The nom.sg. ***esnaid***, if taken at face value, would point to an *i*-stem because of the palatalized final, but little stock can be placed in this given the frequent spread of palatalization from the dative to the nominative singular of *ā*-stems.

---

[237] See *KPV* 49 fn.39.

3.1.122. *snĭ̄-* 'spin, weave'Ⓐ

< PCelt. **sniu̯-$^{e}/_{0}$-* ← **snī-* < PIE √**sneh$_1$-* 'spin'.

(1) PCelt. ****snī-mu-*** (← PIE **sneh$_1$-*):

◊ [[**snīmu-* > ***sním*** [m.] 'act of spinning, weaving, twisting'

↔ vb. *sniid* [h.] 'twists, spins, ties'.]]

kom-snīmu-* > ***cosnam* [m.] 'strife, contention; act of striving, contending'

↔ vb. *con·sní* [h.] 'strives, contends'.

ad-kom-snīmu-* > ****acsnam* ⇒ ***ascnam***Ⓑ [m.] 'act of going towards, seeking'

↔ vb. *ad·cosnai, ·ascnai*Ⓑ [h.] 'goes towards, seeks'.

t(u)-ad-kom-snīmu-* > ****tacsnam* ⇒ ***tascnam***Ⓑ [m.] 'act of coming to, approaching'

↔ vb. *do·ascnai*Ⓑ [h.] 'comes to, approaches'.

t(u)-exs-ro-snīmu-* > ***térnam* [m.] 'act of escaping'

↔ vb. *do·érnai* [h.] 'gets away, escapes'.

Comments:

Ⓐ While the simplex still retains the basic meaning 'spin, weave, turn, twist' (also extended to 'tie, bind'), the various compounds of this verb display some rather remarkable semantic developments: 'approach, seek', 'escape', 'strive, contend', etc. The point of departure for all of these would appear to be the act of turning quickly in one direction or another, with an extended implication of the motion continuing in that direction. Thus **ad-kom-snĭ̄-* and **tu-ad-kom-snĭ̄-* both mean essentially 'turn and move towards so as to come together', hence 'go towards, seek' and 'come to, approach'; it may be presumed that **kom-snĭ̄-* originally also had a neutral meaning 'come together, meet', and acquired its hostile sense secondarily after the other two compounds had

been formed from it.[238] Movement in the opposite direction is shown by **tu-exs-ro-snĭ-* 'turn and move forth so as to go out', hence 'escape, get away'.

Ⓑ The verbal nouns and prototonic forms of the verb all show post-syncope metathesis of *(-)*ac*†*s*° > *(-)*asc*°.

3.1.123. *so-i-* 'turn'

< PCelt. **sou̯-*$^{e}/_{o}$- < **suu̯-*$^{e}/_{o}$-$^{Ⓐ}$ ← PIE **suh*$_1$- ← PIE √**seu̯h*$_1$- 'bend, turn'.

(1) PCelt. ***sou̯-e-tu-*** (← vb. stem. **sou̯-*$^{e}/_{o}$-):

◊ [[**sou̯etu-* > ***soüd*** [m.] 'turn, change; act of turning, changing'

↔ vb. *soïd* [h.] 'turns, changes'.]]

t(u)-ande-sou̯etu-* > ***tintúd* [m.] 'conversion, translation; act of turning back, translating'

↔ vb. *do·intaí* [h.] 'turns back, changes, translates'.

kom-tu-sou̯etu-* > ***cotúd* [m.] 'change, conversion; act of changing, converting; conception; act of conceiving' ↔ vb. *con·toí* [h.] 'changes, converts; conceives'.

Comment:

Ⓐ The PIE long-vowel iterative **sōu̯-éi̯*$^{e}/_{o}$- posited by *IEW* (914 s.v. ***3. seu- : su- : seu̯ə- : sū-***) is morphologically questionable, as it apparently assumes an unusual metathesis of **seu̯h*$_1$- ⇒ **soh*$_1$*u̯-*, and probably also phonologically problematic. While it is not entirely clear how the long-vowel diphthongs behaved in Celtic,[239] it is almost certain that **-ōu̯-* would not have remained, since inherited long **-ō-* disappeared entirely in Proto-Celtic. If **-ōu̯-* had merged with **-āu̯-* in the first instance (parallel with monophthongal **-ō-* >

---

[238] Motion toward someone easily acquires a connotation of aggression. For example, an identical development is found in OIr. *con·ric(c)* 'attains to, arrives at; meets, encounters (often in combat)' ↔ vn. ***comrac(c)*** 'meeting, encounter(ing); combat' (§ 3.1.66(1)), as also in Eng. *encounter*; and compare English expressions such as *turn on* = 'attack' and *round on* = 'assail (verbally)'.

[239] Cp. McCone 1996: 64.

*-ā- in non-final syllables), the outcome would have been PCelt. *sāu̯-ī- > *sau̯-ī- > OIr. ⁂*saï-*; or else, if simple shortening had occurred, raising of the vowel in the root syllable would have resulted: PCelt. *sou̯-ī- > *su̯-ī- OIr. ⁂*suï-*. On the other hand, there is no problem with McCone's (1986: 228; 1991: 109, 180f.) proposal of a thematic PCelt. *su̯-$^{e}/_{o}$- generalized from the athematic 3.pl. *su̯-onti (⇐ *su̯-enti < PIE *suh$_1$-énti). A morphological parallel exists in Ved. *suváti* 'impels' (PIE 3.sg. *séu̯h$_1$-ti : 3.pl. *suh$_1$-énti > Ved. *sávi-ti : suv-ánti ⇒ suv-á-ti : suv-ánti*), and the phonological development is entirely regular, with PCelt. *-uu̯- becoming *-ou̯- when any vowel other than *-ĭ̯- appears in the following syllable.[240]

3.1.124. *sud-i-* 'seat, situate'

< PCelt. *sod-ī- < PIE caus. *sod-éi̯$^{e}/_{o}$- ← √*sed-* 'sit'.

◊ Simple verb *suidid* [w. -ī] 'seats'; no simple verbal noun attested.Ⓐ

(1) PCelt. ***-sod-e-tu-*** (← vb. stem *sod-ī-):

*ad-sodetu- > ***astud*** [m.] 'act of holding back, detaining; fixing, establishing'

↔ vb. *ad·suidi* [w. -ī] 'holds back, detains; fixes, establishes, makes permanent'.

*kom-sodetu- > ***costud*** [m.] 'act of setting up, establishing; checking, restraining'

↔ vb. *con·suidi* [w. -ī] 'sets up, establishes'.

*u̯o-sodetu- > ***fothud*** [m.] 'foundation, basis; support, sustenance; act of founding or establishing' ↔ vb. *fo·suidethar* [w. -ī] 'maintains, provides sustenance for'.

Comment:

Ⓐ The verb is only sparsely attested (see *DIL* s.v.), normally replaced by the denominative *suidigid(ir)* ← ***suide*** 'seat' (vn. of *saidid* 'sits', § 3.1.112(1)). The expected verbal noun of *suidid* would be either a masculine *o*-stem *sod* or a masculine *tu*-stem

---

[240] McCone 1991: 132; 1996: 55.

sodud, neither of which is attested.

3.1.125. *-tă̆-* 'stand, find oneself (somewhere)'

< PCelt. **tā-* < post-PIE **ta-ē-* or:

< PCelt. **tā-i̯e/o-* < PIE **st(e)h₂-i̯e/o-* or **sth₂-eh₁i̯e/o-* Ⓐ ← √**steh₂-* 'stand'.

◊ No simplex in Irish.

(1) PCelt. ***-t-ā-***(?) Ⓑ (← PIE **sth₂-*):

en-tā-*(?) > ***ét* [f.(?)] 'act of getting, acquiring, obtaining'

↔ vb. *ad·cota, ·éta* Ⓒ [h.] 'gets, obtains, procures'.

Comments:

Ⓐ Italic appears to have the same formation in Lat. *stō, stāre*, Umbr. *stahu* 'stand', but there is disagreement as to its exact analysis. Cowgill (1973) argues for a post-PIE stative formation **sta-ē-* (< **stə-ē-* or perhaps **stā-ē-*), corresponding to OCS *stojǫ, stoěti* 'id.' and preserved in Osc. 3.sg.pres. **staít**, 3.pl. **stahínt**, Umbr. 3.pl.fut. **staheren**, etc., and contracted in Latin *stā-* and Proto-Celtic **tā-* (> OIr. *·tá*, MW *-tau* 'is'). Meiser (1998: 187), adhering to an older view,[241] takes the underlying formation to be a *i̯e/o-*present **steh₂-i̯e/o-*, with the stative meaning 'stand, find oneself (somewhere)' that corresponds to the perfect. More recently, *KPV* (625 n.(a) s.v. ****tā-i̯e/o-***), following the theoretical framework implicit in *LIV²*'s treatment (590 s.v. ****steh₂-***), prefers an Italo-Celtic essive construction **sth₂-eh₁i̯e/o-*[242] to account for the stative meaning.

Ⓑ The gender cannot be determined from any of the attested forms, but an *ā*-stem

---

[241] Going back at least as far as Brugmann; see Cowgill (1973: 275–77) for an extensive list of earlier literature reconstructing a *i̯e/o-*present with either full grade (**steh₂-i̯e/o-* > **stā-i̯e/o-*) or zero grade (**sth₂-i̯e/o-* > **sta-i̯e/o-*).

[242] The standard essive suffix endorsed by *LIV²* (25) is *-h₁i̯e/o-*, so the suffix with *-eh₁-* is there assumed to be an Italo-Celtic innovation.

seems implied by nom.sg. *ét*, with a neutral final, next to acc.sg. *æit* and dat.sg. *éit*, with a palatalized final. Some hesitation is justified, however, since an anomalous dat.sg. *ét* is also attested twice in the Milan glosses, besides the form with palatalization.

© The verb adds an extra preverb **kom-* in the deuterotonic forms (**en-kom-tā-i̯$^{e}/_{o}$-*) which does not show up in the prototonic forms and in the verbal noun. It has been suggested (*EIV* 114) that this **kom-* was originally a telic marker added to the positive forms of the verb, but not to the negative because no attainment of the goal was implied in the latter; and that the positive-negative opposition eventually became realigned as a deuterotonic-prototonic opposition.

3.1.126. *ten-n-* 'break, cut'

< PrIr. **ten-n-$^{e}/_{o}$-* { ⇐ PCelt. **tan-n-$^{e}/_{o}$-* < **tan-n-d-$^{e}/_{o}$-* ← PIE **tn̥-n-d-* or:
{ ⇐ **tind-$^{e}/_{o}$-* < PCelt. **tend-$^{e}/_{o}$-*Ⓐ ← PIE √**tend-* 'cut, split'.

(1) PCelt. ****tand-men-*** (← PIE **tn̥d-*) or ****tann-men-*** (← vb. stem **tan-n-*):Ⓑ

◊ **tandmen-* or **tannmen-* > ***teinm*** [n.] 'act of cutting, breaking open'

↔ vb. *teinnid* [s. -(*n..*)$^{e}/_{o}$] 'cuts, breaks'.

Comments:

Ⓐ As inherited **tend-$^{e}/_{o}$-* would have produced OIr. ⁂*tindid*, ⁂*·tind*,[243] it is clear that OIr. *teinnid*, *·teinn* cannot continue this preform directly. It is less clear, however, whether the historical formation was an *n*-infix present **ten-n-$^{e}/_{o}$-* < PCelt. **tan-n-d-$^{e}/_{o}$-* ← PIE **tn̥-n-d-* or whether inherited **tind-$^{e}/_{o}$-* < PCelt. **tend-$^{e}/_{o}$-* was replaced by **ten-n-$^{e}/_{o}$-* on the analogy of other *n*-infix verbs of this root shape, such as *gleinnid*, *·gleinn* 'show' < **-glen-n-$^{e}/_{o}$-* < PCelt. **-glan-n-d-$^{e}/_{o}$-* ← PIE **g^{h}ln̥-n-d^{h}-*.[244] The pivot for this analogical replacement

---

[243] McCone 1996: 55f.

[244] McCone 1998: 472; *KPV* 614 n.(a) s.v. ****tan-n-d-e/o-* oder **tend-e/o-***; cp. Watkins 1962: 130–33.

would have been the parallelism in the *s*-subjunctive *·*tēss-* (< *-*tend-s$^{e}/_{o}$-*) and *·*glēss-* (< *-*glend-s$^{e}/_{o}$-*).

Ⓑ The vowel of the cognate British words — MW ***tam***, MBret. ***tamm*** 'bit, morsel', MCo. ***tamm*** 'piece' — indicates that the verbal noun descends from a zero-grade form (PCelt. *-*an-* < PIE *-*n̥-*), and the Irish form ***teinm*** shows that the suffix did not have *-*s-* (i.e., PCelt. **tand-smen-* would have become OIr. ‡*téimm*). This leaves two possibilities for the source of the Proto-Celtic preform: either inherited PCelt. **tand-men-* > **tann-men-* > OIr. ***teinm***, LPBr. **tamm*;[245] or a later formation **tann-men-* built from the base of the verbal stem **tann-$^{e}/_{o}$-*. *Ceteris paribus*, we would expect an inherited verbal-noun formation with a primary verb (Type 1, § 2.2.2.1). We need not assume with Stüber (1998: 68) that the British forms imply historical *-*smen-* based on the different outcome of **anman* > OW *anu* 'name'. As Schumacher (2000: 118) points out, this example only indicates that EPBr. *-*nm-* yielded LPBr. *-*nṷ-*; it does not necessarily imply that EPBr. *-*nnm-* did not yield LPBr. *-mm-*.

3.1.127. *tech-* 'run, flee'

< PCelt. *tek^{w}-$^{e}/_{o}$- ← PIE *tek^{w}- 'run, flow'.

(1) PCelt. ***tek^{w}-eto-*** (← vb. stem *tek^{w}-e-):

◊ *tek^{w}eto- > ***teiched*** [n.] 'flight; act of fleeing'

↔ vb. *teichid* [s. -$^{e}/_{o}$] 'flees, runs away'.

(2) PCelt. ***-tek^{w}-o-*** (← PIE *tek^{w}-):

ad-tek^{w}o-* > ***attach* [n.] 'refuge; entreaty; act of imploring, beseeching, invoking'

↔ vb. *ad·teich* [s. -$^{e}/_{o}$] 'calls on, implores, entreats'.Ⓐ

---

[245] For the early assimilation of *-*d-* between two nasals, compare pre-Celt. **bn̥d-no-* > PCelt. **bandno-* > **banno-* > OIr. *benn*, MW *bann*, MBret, *ban* 'peak', Gaul. *BANNO-*, *BENNO-* in place-names.

Comment:

Ⓐ The literal meaning 'flees to, resorts to' is not attested in the verb, but the verbal noun ***attach*** is found in the meaning 'refuge', for example in the Milan manuscript where it regularly glosses Lat. *effugium* and *refugium*.

3.1.128. *tét- / tég-* 'go'

< PCelt. **ti-n-g-* and **tēg-$^{e}/_{0}$-*Ⓐ ← PIE √**steigʰ-* 'tread, stride, go'.

(1) PCelt. ****tig-tā-*** (← PIE **stigʰ-*):

◊ **tigtā-* > ***techt*** [f.] 'act of going'

↔ vb. *téit* [s. *-n..$^{e}/_{0}$*] 'goes'.

ambi-tigtā-* > ***imthecht* [f.] 'journey; act of going about, traveling; [pl.] happenings, adventures' ↔ vb. *imm·tét* [s. *-n..$^{e}/_{0}$*] 'goes about, travels'.

ess- + ***imthecht*** > ***essimthecht*** [f.] 'act of going forth'

↔ no attested vb. **as·imthet.*

kom-ambi-tigtā-* > ***coímthecht*Ⓑ [f.] 'accompaniment, company; act of going together, accompanying' ↔ vb. *con·imthet* [s. *-n..$^{e}/_{0}$*] 'goes together, accompanies'.

com- + ****étecht*** > ***comaitecht***Ⓑ [f.] 'indulgence, tolerance; act of going along with, being indulgent to' ↔ vb. *con·éitet* [s. *-n..$^{e}/_{0}$*] 'goes along with, agrees with, indulges [+ *do*]'.

t(u)-en-tigtā-* > ***titacht* [f.] 'arrival, advent; act of coming'

↔ vb. *do·autat, do·etat* [s. *-n..$^{e}/_{0}$*] 'comes (upon), arrives'.

ess- + ***techt*** > ***estecht*** [f.] 'exit, departure' (→ 'death')

↔ no attested vb. **as·tét.*

tarmi-tigtā-* > ***tairmthecht* [f.] 'transgression; act of transgressing'

↔ vb. *tarmi·tét* [s. *-n..$^{e}/_{0}$*] 'goes across, traverses; transgresses'.

tu-tigtā-* > ***tuidecht*Ⓒ [f.] 'arrival, return; act of coming (back)'

↔ vb. *do·tét* [s. *-n..$^{e}/_{0}$*] 'comes (back)'.

eni-uss-tigtā-* > ***inotacht* [f.] 'entrance; act of entering (into)'

↔ vb. *in·otat* [s. *-n..e/o*] 'enters into'.

u̯or-tigtā-* > ***fortacht* [f.] 'help, assistance; act of helping, assisting'

↔ vb. *for·tét* [s. *-n..e/o*] 'helps, assists'.

u̯rit(s)-tigtā-* ⇒ ***fritecht*Ⓓ [f.] 'obligation; act of meeting, attending to (an obligation)'Ⓔ

↔ vb. *fris·tét* [s. *-n..e/o*] 'meets, attends to (an obligation)'.

Comments:

Ⓐ Most of the verbal forms in the present (1.sg. *tíag-u*, *·tíag*, 3.pl. *tíag-ait*, *·tíag-at*, etc.) straightforwardly reflect PCelt. **tēg-* < PIE **steu̯gʰ-*, but 3.sg. *téit*, *·tét*, rel. *téte*, ipv. *tét*, 2.pl. *·téit*, etc. with final */-d(ʲ)/* (cp. MoIr. [Keating] *téid*) point to forms with historical **-n-t-*.[246] Bergin's suggestion (1938b: 227–29)[247] of suppletion by **ten-t(i)*, etc. from PIE √**ten-* 'stretch' is faultless phonetically but not ideal morphologically or semantically.[248] The objections raised by Meid are worth repeating:

> "Firstly, the etymology does not fit the lexical meaning: IE **ten-* is «stretch», and nowhere does it mean «to go». Secondly, this verbal root is not preserved at all, apart from this alleged form, in Celtic; the only trace of it is nominal and is evidence of the meaning «stretch»: OIr. *tét* «string». Finally, the external form of comparison is a Vedic root-aorist

---

[246] Other solutions have been offered, but none are problem-free. For example, Meid (1972: 348–51) suggests that this verb, perhaps as a result of its high frequency of usage, underwent an irregular pre-apocope syncope: PIE thematic 3.sg. **teigeti* > PrIr. **tēγiδ′* > **tēγ†δ′* > **tēδδ′* > **tēdd′* > *tēd′* = OIr. *téit* : conj. **·tēγiδ* > **·tēγ†δ* > **·tēδδ* > **·tēd* > *·tēd* = OIr. *·tét*. However, as Schrijver (1993: 42f.) points out, the voicing of */θ/* to [ð] after an unstressed vowel is an Old Irish sound change (*GOI* 82 § 129, 83 § 130.2; McCone 1981: 35 fn.29); it would certainly not have been voiced at the time of the purported syncope, so the outcome would have been final */-tʲ/* in Old Irish instead of */-dʲ/*: **tēγiθ′* > **tēx†θ′* > **tēθθ′* > **tētt′* > ⁂*·tēt′* : conj. **·tēγiθ* > **·tēx†θ* > **·tēθθ* > **·tētt* > ⁂*·tēt*. Schrijver (*loc. cit.*) notes further that EOIr. *-ē-* < PIE **-eu̯i-* regularly becomes *-ía-* before a non-palatalized consonant, so conjunct ⁂*·tíat* would have been expected in Old Irish. Similar problems beset Kortlandt's solution (1979: 50 fn.2), which assumes a Primitive Irish loss of **-x-* between a long vowel and a tautosyllabic **-t-*; in this case the progression would be: PIE athem. 3.sg. **(s)teigʰ-ti* > PrIr. **tēxt′* > ⁂*tēt′* : conj. **tēxt* > ⁂*tēt* (> ⁂*tiat*).

[247] Approved by *GOI* 473 § 769; Watkins 1962: 161 fn.7; 1969: 45f., 165f.

[248] Cp. Szemerényi 1964: 191 fn.4; McCone 1981: 35 fn.29.

3rd sing. *a-tan* (< **e-ten-t*), that is to say, the root is punctual and could not, without any extension, furnish an athematic present stem, as assumed for the OIr. forms." (1972: 349.)

A tidier solution may perhaps be found in Schrijver's proposal (1993: 42–46, accepted by *KPV* 639 n.(a) s.v. ****ti-n-g-* und **teig-e/o-***) of an athematic nasal-infixed present **sti-n-g^{h}-ti*, etc. behind these forms. While it requires analogical restoration of **ting-t(i)* to replace PCelt. **tinx-t(i)* < PIE **sting^{h}-ti*, this can be motivated reasonably enough by an appeal to other parts of the paradigm such as 1.sg. **ting-mi*, 3.pl. **ting-ent(i)*, etc. The original distinction between **steig^{h}-* and **sti-n-g^{h}-*, Schrijver suggests (45), was one of aspect: **steig^{h}-* meant 'go' in an indeterminate sense (cp. Gr. στείχω 'step', Go. *steigan* 'to climb'), whereas **sti-n-g^{h}-* had the determinate connotation 'go (somewhere)'; the two formations became mixed in Irish, but the second type of meaning was generalized.

Ⓑ *DIL* (s.v. **coimitecht**) notes that ***comaitecht*** 'going along with' became confused at a relatively early point with ***coímthecht*** 'going together', but in our early materials the meanings are consistently distinguished as 'indulgence, tolerance' and 'accompaniment, company' respectively. The form of ***coímthecht*** < **coïmthecht* < **kom-imm-thecht* < **kom-ambi-tig-tā* shows a regular Primitive Irish dissimilatory loss of lenited **-m-* (/-μ-/) before an unlenited **-mm-* (/-m-/) in the next syllable.[249] ***Comaitecht***, on the other hand, is a post-syncope creation of *com-* + ****étecht*** (unattested verbal noun to *in·tét* 'follows') since the second syllable was not lost in the verbal noun and the prototonic verb (*·cométig*, etc.).

Ⓒ According to *GOI* (77 § 123(b)), the voiced *-d-* of ***tuidecht***, instead of expected *-th-* after the stressed vowel, was influenced by the prototonic forms of the suppletive perfect, etymologically unrelated *do·dechuid*, *·tuidchid* 'has come' < **tu-di-kom-u̯ed-*.[250]

---

[249] *GOI* 112 § 179.

[250] *GOI* 345 § 534.4, 473 § 769, 504 § 831.A.

Ⓓ The regular outcome of historical **u̯rit(s)-tig-tā-* would have been **frissecht*. The most obvious influence behind the restored *-t-* in ***fritecht*** is of course the simplex ***techt***; but the fact that other (non-dental) stops are consistently preserved following this preverb — e.g., **u̯rit-komarko-* > ***frecmarc*** [⟨*c*⟩ = /*k*/], **u̯rit(s)-gario-* > ***frecrae*** [⟨*c*⟩ = /*g*/], etc. — could have also contributed by providing an additional pattern of analogy for the *-t-*.

Ⓔ Literally 'a going toward'. Where this word appears at CG § 8, *ll.*59–60, *Ógfritecht for rátha mani éta nech a frepaid ó fi*[*u*]*r chinad* 'Full ***fritecht*** on guarantors if one does not obtain his cure from the guilty party', Binchy (1938: 84f. fn.f; 1941: 26, ed.n.59) suggests the meaning 'full (amount of a) guarantee or warranty', comparing the expression *téit fri* 'guarantees, goes surety for'. The sense need not be this specific, however. One of the principal applications of this verb (cp. *DIL* s.v. **fris-tét**) is in meeting an obligation or answering to a purpose, so a more general meaning 'full obligation or responsibility' would be sufficient to the context: 'full responsibility falls on the guarantors if the injured party does not obtain his cure from the guilty party'.

3.1.129. *tle-n-* 'take away, steal'

< PCelt. **tli-na-* ⇐ **tal-na-* < PIE **tl̥-n-h₂-*Ⓐ ← √**telh₂-* 'carry, support, lift'.

(1) [[PCelt. ****tlina-mnā-*** (← vb. stem **tli-na-*):

◊ **tlinamnā-* > ***tlenamon*** [f.] 'theft; act of taking away, stealing'

↔ vb. *tlenaid* [s. *-na*] 'takes away, steals'.]]

(2) as if *****-tleu̯(i̯)-o-*** (analogically remodeled):Ⓑ

dī-tleu̯(i̯)o-* > ***díthle [n.] 'theft; act of taking away'

↔ vb. *do·tlen* (< **dī-tli-na-*) [s. *-na*] 'takes away, steals'.

tu-tleu̯(i̯)o-* > ***tothlae [n.] 'secret theft; act of taking away secretly'

↔ no attested vb. **do·tlen* (< **tu-tli-na-*).

$\underset{\frown}{u}o$-$tle\underset{\frown}{i}(i)o$- > ***fothlae* [n.] 'withdrawal, reduction; act of taking away, reducing'

↔ vb. *fo·tlen* [s. *-na*] 'takes away, subtracts, reduces'.

Comments:

Ⓐ In common with other verbs from PIE "state II" roots (i.e., *-gni-n-* 'recognize' from PIE √*$\hat{g}neh_3$- 'know' [§ 3.1.59], and *-li-n-* '(over)flow' from PIE √*$pleh_1$- 'fill' [§ 3.1.73]), OIr. *tle-n-* < PCelt. **tli-na-* has replaced PCelt. **tal-na-* < PIE *$t\underset{o}{l}$-n-h_2- on the model of *n*-presents in *°*i-n-H-* such as **bi-na-* < PIE *b^hi-n-h_2- ← √*$b^he\underset{\frown}{i}h_2$- 'strike' and **li-na-* < PIE *h_2li-n-H- ← √*$h_2le\underset{\frown}{i}H$- 'smear'. For an account of this development, see § 2.2.3.6 *ad fin.*

Ⓑ Along with the remodeling of the verb stem (comment A), the verbal nouns have also analogically taken on the form typical of roots in *°*$e\underset{\frown}{i}H$-* (§ 2.2.3.6).

3.1.130. *toc-i-* 'destine'

< PCelt. **tonk-ī-* < PIE caus. **tomk-$\acute{e}\underset{\frown}{i}^e/_o$-* ← √**temk-* 'thicken, solidify'.

(1) PCelt. ***tonk-e-to-*** (← vb. stem **tonk-ī-*):Ⓐ

◊ **tonketo-* > ***toceth, tocad*** [m./n.?] 'fortune, chance; condition of being destined'

↔ vb. *tocaid**, *·toicther* [w. *-ī*] '(only in pass.) is destined'.

(**du-* 'bad' + ***tocad*** > ***dodcad*** [m./n.?] 'ill luck, misfortune'.)

Comment:

Ⓐ The absence of raising in *toc-* < **tonk-* shows that the vowel that followed was **-e-* rather than **-$\breve{\imath}$-*. There are no clear indications in the literature of the verbal noun's gender, whether masculine or neuter.

3.1.131. *to-n-g-* 'swear'

< PCelt. **tu-n-g-$^{e}/_{o}$-* ⇐ **lu-n-g-$^{e}/_{o}$-* ← PIE **h₂lu-n-g-* ← PIE √**h₂leu̯g$^{(ə)h}$-* 'announce'.Ⓐ

(1) PCelt. ****lug-io-*** (← PIE **h₂lug-*):

◊ **lugio-* > ***lugae*** ⇒ ***luige*** [n.] 'oath; act of swearing'

↔ vb. *tongaid* [s. *-n..$^{e}/_{o}$*] 'swears'.

(2) PCelt. ****-toug-o-*** ⇐ **-loug-o-* (← PIE **h₂leu̯g$^{(ə)h}$-*):Ⓑ

ambi-tougo-* > ****imthech* ⇒ ***imthach***Ⓒ [n.] 'compurgatory oath; act of making oath in compurgation' ↔ vb. *imm·toing* [s. *-n..$^{e}/_{o}$*] 'makes oath in compurgation'.

ari-tougo-* > ***airthech*Ⓓ [n.] 'oath of confirmation or denial, guarantee'

↔ vb. *ar·toing* [s. *-n..$^{e}/_{o}$*] 'affirms by oath'.

kom-tougo-* > ***cotach* [n.] '(swearing together →) covenant, pact, alliance, friendship'

↔ vb. *con·toing* [s. *-n..$^{e}/_{o}$*] 'swears'.

ari-u̯o-tougo-* > ***aurthach*Ⓓ [n.] 'oath of confirmation or denial, guarantee'

↔ vb. *?ar·fothaing* [s. *-n..$^{e}/_{o}$*] 'affirms by oath'.

u̯or-tougo-* > ***fortach* [m.] 'oath assigning liability'

↔ vb. *for·toing* [s. *-n..$^{e}/_{o}$*] 'proves by oath, attests'.

Comments:

Ⓐ A straightforward etymology to this verb has proven elusive. Pokorny (*IEW* 1055 s.v. ***tag-*** (oder ***teg- : tog- : teg-***)) tentatively placed the Irish verb with Lat. *tangō, -ere* 'touch', Gr. τεταγών 'touching', the inference being that swearing in Celtic society involved touching a part of the body.[251] This proposal, as *LIV*² notes (615 n.1 s.v. ?****teg-***), "wäre semantisch passend (vgl. **h₂emh₃-* 'anpacken, schwören'), ist aber lautlich schwierig"; the difficulty has to do with the incompatible vocalism (on which more

---

[251] Stokes, *US* 121 s.v. **tongû**; *LÉIA* T-108 s.v. **tong-**.

below). Pedersen (*VKG* I, 106 § 61(4)) suggested a connection with ON *þing* 'assembly', but, as *LÉIA* (T-108 s.v. **tong-**) points out, the root behind the Germanic word is PIE √**ten-k-* with final **-k-* rather than **-g-*. More significantly, a connection with any root containing a radical nasal is out of the question, because the nasal in the Celtic verb is unquestionably a present-stem infix: OIr. 3.sg.pres. *tongaid*, MW vn. *tyngu*, 3.sg.pres. *twng* vs. OIr. pret.pass. ***tochtae***, vn. ***cotach, fortach***, etc.[252] This fact eliminates at the outset two other etymologies that have been proposed: PIE √**ten-g^{h}-* 'stretch' → OCS *tęžǫ, tęzati* 'to dispute', *tęža* 'dispute, legal case';[253] and PIE √**teng̑-* 'think, seem' → caus. **tong̑-éi̯$^{e}/_{o}$-* > OLat. *tongēre* 'to know', Go. *þagkjan* 'think'.[254] Because *o*-vocalism is out of place in an *n*-infix formation, the Old Irish root grade has most often been assumed to be secondary, though a credible source has yet to be found. The common appeal to the causative **tong̑-éi̯$^{e}/_{o}$-* of OLat. *tongēre* 'to know'[255] has an air of desperation to it: no verbal formation **tong-ī-* is known in Celtic.

Taking a rather different approach, *KPV* (650–52 n.(a) s.v. ****tu-n-g-e/o-*** ← **2. **lu-n-g-e/o-***) posits a mixed verbal paradigm, tracing the Old Irish present stem *to-n-g-* from PCelt. **tu-n-g-$^{e}/_{o}$-*, ultimately from a PIE *u*-diphthong root √**h$_2$leu̯g̑^{h}-* 'announce',[256] with analogical *t-* taken from the root √**tek-* 'stretch out the hand' which supplies the preterite *·tethaig* < PIE perf. **te-tok-*. This explanation may in fact find support among the

---

[252] The underlying verbal-noun stem is assumed to be **teg-* by *IEW* (*loc. cit.*) and *LÉIA* (*loc. cit.*), but the neutral *-t(h)-* in these compounds points to a non-front vowel in the root. On the other hand, the palatalization of *-rt(h)-* in ***airthech*** is regular from the of **-i-* in the preverb **ari-* due to syncope.

[253] Cp. *VKG* I, 106 § 61(4).

[254] H. Wagner 1970: 24f.

[255] *LÉIA* T-108 s.v. **tong-**; *LIV*^{2} 615 n.2 s.v. ?***teg-***; *EDPC* 383 s.v. ***tong-o-***.

[256] Cp. *IEW* 687 s.v. **2. *leugh-***. The initial **h$_2$-* and a general meaning 'announce publicly' *vel sim.* are implied by Hitt. *ḫaluga-* [c.] 'message, news'.

Old Irish verbal nouns, where the variations in root vocalism hint at a mixed origin: ***lugae*** 'oath' straightforwardly derives from PIE *$*h_2lu\hat{g}^{(\mathrm{h})}$-io-*, and the compounds in *-t(h)ach* — taking into account the replacement of the initial consonant — could reflect *$*h_2leu\hat{g}^{(\mathrm{h})}$-o-*; whereas the compounds in *-t(h)ech*, i.e., ***díthech*** 'oath of denial', ***eitech*** 'refusal', and ***freitech*** 'renunciation' (not attested in our corpus), point to an original front vowel in the root that is consistent with PIE √**tek-* (§ 3.2.4(1)).

Ⓑ Full grade is indicated by the absence of raising in the first syllable: **kom-toug-o-* > ***cotach*** vs. **kom-tug-o-* > ⁂*cutach*.

Ⓒ The historically regular form would be **imthech*, with palatalized **-mth-* from syncope of the second syllable of **ambi-* (cp. ***airthech*** < **ari-toug-o-*). Neutral quality has been secondarily restored, perhaps from the finite verb or through influence of the related verbal nouns ***aurthach*** and ***fortach***.

Ⓓ *DIL* includes both *airthech* and *aurthach* under the entry **airthach**, but two formations appear to be indicated by the diverse spellings. Corresponding to the verb *ar·toing* are the verbal-noun forms with palatalized *-rth-*: nom.sg. ***airthech***, dat.sg. ***airthiuch*** < **ari-toug-o-*. But spellings such as ***aurthach*** and ***urthach*** with *(a)u-* and neutral *-rth-* may imply historical **ari-u̯o-toug-o-*,[257] to which one verbal form, 3.sg.pres.rel. *urtoingeas* (commentary to *Senchas Már, Di Astud Chirt ┐ Dliged* 'On the Establishing of Right and Entitlement' = *CIH* I, 232.26) appears to correspond; although, being late and recast as a simple verb, its testimony may not be reliable.

3.1.132. *-tud-* 'fall'

< PCelt. **-tud-$^{e}/_{o}$-* ← PIE √**(s)teu̯d-* 'hit, push, thrust'.

◊ No simplex.

---

[257] Cp. *VKG* II, 653 § 849(4); Marstrander 1962: 213.

(1) PCelt. ***-tud-smen-*** (← PIE *(*s*)*tud-*):

tu-tudsmen-* > ***tuthaim(m)* ⇒ ***tothaim(m)* [n.] 'act of falling'

↔ vb. *do·tuit* [s. -$^{e}/_{o}$] 'falls'.

3.1.133. ***tug-i-***$_{DEP}$ 'cover'

< PCelt. **tog-ī-*$_{DEP}$ < PIE iter. *(*s*)*tog-éi̯$^{e}/_{o}$-* ← √*(*s*)*teg-* 'cover'.

(1) PCelt. ***tog-iā-*** (← **tog-o-* ← PIE **tog-*):Ⓐ

◊ **togiā-* > ***tugae*** [f.] 'cover, protection; act of covering'

↔ vb. *tuigithir* [w. -*ī*] 'covers'.

*imm-ˁ + ***tugae*** > ***imthugae*** [f.] 'protection; act of covering round; a covering, garment'

↔ vb. *imm·tuigethar* [w. -*ī*] 'covers round, clothes'.

kom-togiā-* > ***cotgae* ⇒ ***cotugae***Ⓑ [f.] '(complete) covering'

↔ no attested vb. **con·tuigethar*.

(2) PCelt. ***-tog-o-*** (← PIE **tog-*):

ambi-tog-o-* > ***imthech* ⇒ ***imthach***Ⓒ [n.] 'act of covering round'

↔ vb. *imm·tuigethar* [w. -*ī*] 'covers round'.

t(u)-ambi-tog-o-* > ***timthech* ⇒ ***timthach***Ⓒ [n.] '(cover →) accompaniment, accessories; a covering, garment' ↔ vb. *do·imthét* 'encircles, accompanies, includes'.

en-tog-o-* > ***étach* [n.] 'covering, clothing, a garment'

↔ vb. *in·tuigethar* [w. -*ī*] 'covers, clothes'.

Comments:

Ⓐ At first glance, the simplex *tuigithir* 'covers' ↔ vn. ***tugae*** and its compounds — **con·tuigethar* 'covers, *vel sim.*' ↔ vn. ***cotgae***, *for·tuigethar* 'covers over' ↔ vn. ***fortgae*** (not attested in our corpus), and *imm·tuigethar* 'covers round, clothes' ↔ vn. ***imthugae*** — might appear to be denominative formations based on ***tugae*** 'cover' which also serves as its verbal noun, i.e., belonging to derivational Type 3 (§ 2.2.4.1). On the other hand, the

o-grade thematic verbal nouns of the other compounds — *do·imthét* 'encircles, accompanies, includes' ↔ vn. ***timthach***, *imm·tuigethar* 'covers round, clothes' ↔ vn. ***imthach*** (beside ***imthugae***), *in·tuigethar* 'covers, clothes' ↔ vn. ***étach*** — imply a PIE iterative **tog-éi̯e/o-* (cp. § 2.2.3.1(2)) cognate with PGmc. **þakjan* 'to cover' > ON *þekja*, OE *ðeccan*, OHG *decchen*.[258] The underlying formation appears to have an ancient pedigree, with various cognates in PGmc. **þaka-* [n.] 'roof' > ON *þak*, OHG *dah*, etc., Lith. *stógas* [m.] 'roof', and perhaps OCS *stogъ* [m.] '(hay)stack'[259] (and cp. also Lat. *toga* [f.] 'toga', which may be an old collective).[260] The *iā*-stem formation is found only in Celtic — unquestionably in Irish, less certainly in MW, Bret. *to* [m.] 'roof', OCo. *to* gl. *tectum*, MW *am-do* [m. f.] 'shroud', etc., which could as well (and have at one time or another been assumed to) reflect an earlier *io*-stem, *o*-stem, or *ā*-stem.[261] The most economical explanation is to trace the verb to PCelt. *tog-ī-* < PIE iter. **tog-éi̯e/o-* along with the expected verbal-noun formation **tog-o-*. From this noun an *iā*-stem denominative **tog-iā-* (> OIr. *togae*) was derived in order to distinguished the abstract meaning 'cover, protection' from the concrete 'a covering, garment'; this newer abstract eventually ousted earlier **tog-o-* > OIr. **toch* as the verbal noun of the simplex, while both formations remained in competition in the compounds. If this scenario is accurate, then the British words, which are decidedly concrete in nature, most likely reflect thematic **tog-o-*.

---

[258] *LIV*² 589 s.v. ****(s)teg-***.

[259] *NIL* 635 s.v. ****(s)teg-***, with a query. Otherwise Derksen (2008: 468), also cautiously Frisk (1972: II, 804f.) and Beekes (2010: II, 1410), who compare OCR *stogъ* and Lith. *stãgaras* 'stalk' with Gr. στόχος 'brick pillar' < PIE **stogʰ-o-* ← √**stegʰ-* 'stick, stalk'.

[260] *NIL* 636 n.12 s.v. ****(s)teg-***.

[261] Schrijver 1995: 311 w. refs.

Ⓑ ***Cotgae***, the expected outcome of inherited **kom-tog-iā-*, is attested once, in a legal gloss on *Cáin Ḟuithirbe* 'Law of Landed Estates': ***cotga*** *.i. comtuga* (O'C 474 = *CIH* III, 771.37f.). While the orthography in the extant copy is Middle Irish, the original glosses are Old Irish from the eighth or ninth century;[262] by then the syncopated form had evidently already been replaced by the later type of formation (§ 2.1.3.3(2)) *com-*ˈ + ***tugae*** > ***comthugae*** (not attested in our corpus), and the older word had become obscure enough to require a gloss. Where this word appears in our corpus (AM § 44), it is spelled *cottuge* (dat.sg., normalized *cotugai*) in the most conservative manuscript, RIA 23 N 10, which tends to preserve the Old Irish spellings with only limited modernization.[263] This no doubt represents a kind of intermediate form, comprising older **kom-t°* > OIr. *cot°* (*/kod°/*) coupled with an analogically restored second syllable based on the simplex ***tugae***.

Ⓒ The non-palatalized **-mth-* of ***imthach*** and ***timthach*** is unhistorical, as the syncopated **-i-* of **ambi-* would have regularly produced palatalization. The neutral quality was probably restored through the influence of the homonym ***imthach*** 'compurgatory oath', for which see § 3.1.131(2) comment C.

3.1.134. *tul-i-* 'sleep'

< PCelt. **tol-ī-* < PIE caus. **tol-éi̯e/o-* ← √**(s)telH-* 'be quiet, be still'.

◊ Simple verb *tuilid* [w. *-ī*] 'sleeps, falls asleep'; no simple verbal noun unattested.

(1) PCelt. ****tol-e-tu-*** (← vb. stem **tol-ī-*):Ⓐ

kom-toletu-* > ***cotlud* [m.] 'sleep; act of sleeping'

↔ vb. *con·tuili* [w. *-ī*] 'sleeps'.

---

[262] Breatnach 2005: 348.

[263] Kelly 1976: xx–xxii.

Comment:

Ⓐ The absence of raising of the root vowel confirms that the intervening vowel was **-e-*.

3.2. Type 5: Suppletive Verbal Nouns (V // VN).

3.2.1. *fich-* 'fight'

< PCelt. **u̯ik-$^{e}/_{o}$-* ← PIE √**u̯eiḱ-* 'fight, conquer'.

(1) PCelt. ****gal-ā-*** < PIE **gl̥H-eh₂-* or < **gel-ā-* < PIE **gelH-eh₂-* ← √**gelH-* 'be able'

?or perh.: ⇐ **gel-ā-* < PIE **ĝʰelh₃-eh₂-* ← √**ĝʰelh₃-* 'green, yellow':Ⓐ

◊ **galā-* > ***gal*** [f.] 'warlike ardor, fury, valor'

↔ vb. *fichid* [s. -$^{e}/_{o}$] 'fights'.

ari-galā-* > ***airgal* [f.] 'conflict, strife; act of striving, fighting; arms, armor'

↔ vb. *imm·dích* [s. -$^{e}/_{o}$] 'protects, defends'.

tu-galā-* > ***togal* [f.] 'attack, destruction; act of attacking, destroying'

↔ vb. *do·fich* [s. -$^{e}/_{o}$] 'attacks, destroys'.

u̯o-galā-* > ***fogal* [f.] 'attack, damage, injury; (*leg.*) trespass; act of attacking, plundering'

↔ vb. *fo·fich* [s. -$^{e}/_{o}$] 'attacks, does injury; trespasses, commits an offence'.

Comment:

Ⓐ Old Irish *gal* 'warlike ardor, fury', MW *gal* 'hatred, ferocity, valor', OBret. *gal* 'might, ability', and the ethnonyms *Galli* and Γαλάται, are usually derived from PIE √**gelH-* 'be able, have power over'.[264] Proto-Celtic *galā-* probably continues a zero-grade **gl̥H-eh₂-*,

---

[264] E.g., Dillon 1968: 197; Schumacher 2000: 42; *EDPC* 149 s.v. ****galā-***.

but could also originate in a full-grade PCelt. **gelā-* ⇒ **galā-* with change of vocalism by Joseph's rule (cp. § 3.1.106 comment A) or by analogy with the related verb, PCelt. **gal-nV-* 'be able' < PIE **gl̥-n-H-*, not attested in Irish but shown in MW *gallu* 'be able; take (away)', MBret. *gallout, galloet*, MCo. *galloes* 'be able'.

McCone (2006b; 2010: 7–12) has proposed an alternative etymology for the Irish and British nouns *gal*, the ethnonyms *Galli* and Γαλάται, and the British verbs *gallu*, etc., connecting them with a group of words descended from PIE √*$ĝ^{h}elh_3$- 'green, yellow' and united around the semantic notions extended from the symbolism of 'yellow' as the color of 'heat; bile; anger, battle fury'. The effect of this etymology would be to disconnect these Celtic words — including the British verbs meaning 'be able; take (away)' — from Lith. *galiù, galéti* 'be able' and Arm. *kalaw* 'had, seized, took',[265] which, due to their phonological shape (Lith. *g-*, Arm. *k-*), must derive from a PIE root with initial **g-*.

3.2.2. *ith-* 'eat'

< PrIr. **it-*$^{e}/_{o}$- ⇐ PCelt. **id-*$^{e}/_{o}$- ← **īd-* / **ed-* < PIE **h_1ēd-* / **$h_1$ed-*Ⓐ ← **$h_1$ed-* 'eat'.

(1) PrIr. ***it-iā-*** < PCelt. *(*ϕ*)*it-iā-* ← *(*ϕ*)*itu-* [n.] 'nourishment' (> OIr. *ith* [n.] 'grain')

← PIE √**peit̯-* 'nourish':Ⓑ

◊ **itiā-* > ***ithe*** [f.] 'act of eating, devouring'

↔ vb. *ithid* [s. -$^{e}/_{o}$] 'eats, devours, bites'.

Comments:

Ⓐ As McCone (1991b) has shown, OIr. *ithid* 'eats' cannot plausibly by traced back to a denominative of the verbal noun ***ithe*** 'act of eating' < PCelt. **it-iā-*, as suggested by *VKG* (II, 559 § 753 Anm.), because there is no good evidence for the requisite weak *ī*-stem; the

---

[265] Suppletive root-aorist of *ownim* 'have'.

decisive forms, though not appearing in contemporary Old Irish manuscripts, point consistently to a strong $^{e}/_{o}$-verb. McCone[266] argues that, apart from one relatively late remodeling, the existing verbal formation can be straightforwardly derived from a PIE "Narten" present *$h_1\bar{e}d$- : *h_1ed- > PCelt. *$\bar{\imath}d$- : *ed- following the normal development patterns of ablauting verbal paradigms in Celtic:[267] (1) *$\bar{\imath}d$- : *ed- ⇒ *$\bar{\imath}d$- : *id- (leveling of vocal quality based on the singular); (2) *$\bar{\imath}d$- : *id- ⇒ *id- : *id- (generalization of the vowel of the plural); and (3) *id- → *id-$^{e}/_{o}$- (thematization). Finally, the stem was altered to *it-$^{e}/_{o}$- by analogical influence of *itu- 'grain' and *$iti\bar{a}$- 'feeding, eating'. This last remodeling would be likely to have occurred only after *$iti\bar{a}$ had taken on the function of suppletive verbal noun of this verb, and could therefore be quite late.

Lindeman (1994), citing the strong comparative evidence for a regular athematic present with mobile accent *$h_1\acute{e}d$-ti / *h_1d-$énti$ in this verb, and the corresponding lack of convincing extra-Celtic evidence for a "Narten" present, suggests instead a suppletive replacement of the present stem due to confusion in Insular Celtic between ind. *ess- < PIE *ed-t- and subj. *ess- < PCelt. *ed-s- in the 2/3.sg. and 3.pl. The weakness in this scenario, however, is the unlikelihood that Proto-Celtic would have preserved an athematic present formation in this verb, since — with the regular exception of roots of the shape *$CeRH$- and *$CeIH$- — thematization is the rule in the Proto-Celtic strong verbs;[268] the expected verb stem would therefore have been thematized PCelt. *ed-$^{e}/_{o}$-. Since the development into *-ss- of two dentals, or of a combination of dental plus *-s-,

---

[266] Followed by *KPV* 378f. n.(a) s.v. ***īd-/*ed-**.

[267] See also McCone 1986: 226–29; 1991: 11–23, esp. 21–23.

[268] See *KPV* 36–47 and *passim*.

did not occur before Insular Celtic,[269] there would never have been any chance for confusion between ind. **ed-$^{e}/_{o}$-* and subj. **ed-s-$^{e}/_{o}$-* to have arisen. Thus it seems that McCone's "Narten"-based solution to explain the existing verbal forms is still the most plausible.[270]

EDPC's suggestion (131 s.v. ***ed-o-**) that the basis of the Celtic verb lies in "a reduplicated present *h_1i-h_1d- (with the generalized zero grade of the root from the plural)" is not defensible, since this could only have produced a verb with a long vowel: PIE **h_1i-h_1d-* > PCelt. **īd-* → **īd-$^{e}/_{o}$-* ⇒ **īt-$^{e}/_{o}$-* > OIr. *⁂íthid*.

Ⓑ Old Irish *ith* [n.] 'grain' < PCelt. *(*ϕ*)*itu*- exists as an old zero grade next to the original full grade of OIr. *íath* [n.] 'land, territory' < **ēth*- < PCelt. *(*ϕ*)*eitu*-. These forms point to a proterokinetic PIE **péi̯tu- / pitéu̯-* also seen in Ved. *pitú-* [m.] 'nourishment, food', Av. *pitu-* 'id.', Gr. πίτυ-ρον [n.] 'husk, bran' (zero-grade), and Lith. *piētūs* [m.pl.] 'lunch' (full-grade). This has traditionally been taken to be a *tu*-stem formation **péi̯-tu- / pi-téu̯-* 'nourishment' derived from PIE √**pei̯-*, an *aniṭ* variant of √**pei̯H-* 'swell, become fat'.[271] But another account[272] reconstructs a substantivized *u*-stem adjective **péi̯t-u- / pit-éu̯-* 'nourishing' → 'that which nourishes' ← PIE √**pei̯t-* 'nourish',[273] which subsequently underwent a split, the zero grade becoming generalized in the meaning '(nourishing) grain' and the full grade becoming generalized in the meaning

---

[269] McCone 1996: 48, 99.

[270][270] See *KPV* 378f. n.(a) s.v. ****īd-/*ed-*** for further discussion of the issues.

[271] Brugmann 1906: 442; *IEW* 793f. s.v. ***pei̯(ə)-, pī̆-***; de Bernardo Stempel 1999: 292.

[272] Seebold 1985: 446; McCone 1991b: 3f.; 1994: 114f.

[273] See Benveniste 1955: 29–36.

'(nourishing) land'.[274] The neuter gender of both OIr. *ith* and OIr. *íath* tilts the balance in favor of the latter explanation, since masculine is usual for inherited *tu*-stems.

3.2.3. *tét-* / *tég-* 'go'

< PCelt. **ti-n-g-* and **tēg-$^{e}/_{o}$-* ← PIE √**steiĝ^{h}-* 'tread, stride, go'.Ⓐ

(1) PCelt. **?*dal-u-**, perh. ← PIE √**d^{h}alh$_{1}$-* or √**d^{h}h$_{2}$elh$_{1}$-* 'spring from, sprout from':Ⓑ

◊ ?**dal-u-* > ***dul*** [m.] 'movement; act of going, proceeding'

↔ vb. *téit* [s. *-n..$^{e}/_{o}$*] 'goes'.

Comment:

Ⓐ On the verb formations, see § 3.1.128 comment A.

Ⓑ The preform **dalu-* is suggested by the spelling *daul* (Mon.Tall. 136.2, 146.17), if the fifteenth-century manuscript (RIA 3 B 23) has faithfully preserved the original ninth-century form. The Old Irish word is thought to be related to MW *deillyau* 'emerge from', Gr. θάλλω 'bloom, flourish', and Alb. *dal* 'go out, proceed from'.[275] The Albanian verb, the base of which reflects **dall-* < **daln-* < PIE **d^{h}al- n(é)-h$_{1}$-*, requires a PIE root of the shape √**d^{h}alh$_{1}$-* or √**d^{h}h$_{2}$elh$_{1}$-*, since PIE √**d^{h}elh$_{1}$-* → **d^{h}l̥-n(é)-h$_{1}$-* would have yielded EPAlb. ‡*dlin-*.[276]

3.2.4. *to-n-g-* 'swear'

< PCelt. **tu-n-g-$^{e}/_{o}$-* ⇐ **lu-n-g-$^{e}/_{o}$-* ← PIE **h$_{2}$lu-n-g-* ← PIE √**h$_{2}$leuĝ$^{(e)h}$-* 'announce'.Ⓐ

◊ Simple verb *tongaid* [s. *-n..$^{e}/_{o}$*] 'swears' ↔ vn. ***lugae*** [n.] 'oath; act of swearing' (§ 3.1.131(1)).

---

[274] See further discussion at Irslinger 2002: 165f.

[275] *VKG* II, 648 § 840 Anm.; *KPV* 257–59 s.v. ****dal-nV-***; but *EDPC* 88 s.v. ***dal-n-** considers this connection to be doubtful on semantic grounds.

[276] *KPV, loc. cit.*

(1) PCelt. ***-tek-o-*** ← PIE √**tek-* 'extend the hand':Ⓐ

dī-teko-* > ***díthech* [n.] 'oath of denial, oath of rebuttal'

↔ vb. *do·toing* [s. *-n..$^{e}/_{o}$*] 'swears away, denies by oath'.

exs-teko-* > ***eitech* [n.] 'refusal; act of refusing'

↔ vb. *as·toing* [s. *-n..$^{e}/_{o}$*] 'swears away, clears by oath; refuses'.Ⓑ

u̯rit(s)-teko-* > ***fretech* [n.] 'act of forswearing, renouncing'

↔ vb. *fris·toing* [s. *-n..$^{e}/_{o}$*] 'forswears, renounces'.

Comments:

Ⓐ Schumacher (*KPV* 650–52 n.(a) s.v. ****tu-n-g-e/o-* ← 2. *lu-n-g-e/o-***) resolves the difficult morphological problems surrounding the verb *tongaid* 'swears' (pret. *·tethaig*, vn. [simplex] *lugae*, [compound] *-t(h)ach* and *-t(h)ech*; for further discussion, see § 3.1.131 comment A) by positing a mixed paradigm of PCelt. **lu-n-g-* ← PIE √**h₂leu̯g^{h}-* 'announce' and PCelt. **tek-* < PIE √**tek-* 'stretch out the hand', the initial *t-* of the latter supplanting the initial *l-* of the former everywhere except in the simplex verbal noun ***lugae*** (§ 3.1.131(1)). In accordance with this scenario, the compound verbal nouns that show historical **-e-* in the root may be assumed to derive from PCelt. **-tek-o-*.

Ⓑ It is possible[277] that OIr. *as·toing* represents a merger of two historical forms: PCelt. **exs-tung$^{e}/_{o}$-* 'swear away, clear by oath' ← **tu-n-g-$^{e}/_{o}$-* 'swear' and **exs-stung$^{e}/_{o}$-* 'refuse' ← **stu-n-g-$^{e}/_{o}$-* 'bend' (cp. Eng. *de-cline*), apparently from PIE √**(s)teu̯g-* 'move abruptly'.[278] The two roots are still distinguished in British (MW *tyngu*, MBret. *toeaff* 'swear' vs. MW *estwng*, *ystwng*, MBret. *stouaff* 'cause to bend down, subdue'), but Irish has no independent reflexes of PCelt. **stung$^{e}/_{o}$-* 'bend'. If the scenario is correct, the Irish

---

[277] Cp. Greene 1958b: 44; Schrijver 1995: 419f.; *KPV* 605 n.(a) s.v. ****stu-n-g-e/o-***

[278] *LIV*² 602 s.v. ****(s)teu̯g-***.

merger was complete, so that the perfect *ad·cuitig* (for **as·cuitig*) 'refused, denied' < **exs-kom-tek-* and the verbal noun ***eitech*** 'refusal, act of refusing' < **exs-tek-o-* both contain the suppletive root **tek-* that rightly belongs only with PCelt. **tung$^{e}/_{o}$-* 'swear'.

CHAPTER 4.

VERBAL NOUNS OF DENOMINATIVE VERBS

As mentioned in § 2.1.5(c), the Celtic denominative and factitive formations, from a historical point of view, represent the merger of various Indo-European formations, several of them complex (i.e., *-*ā*- < factitive *-*eh*$_2$- and denominative *-*eh*$_2$-*i̯*$^{e}/_{o}$-; *-*ī*- < denominative *-*e-i̯*$^{e}/_{o}$-, causative-iterative *-*éi̯*$^{e}/_{o}$-, and stative *-*éh*$_1$-*i̯*$^{e}/_{o}$-). Once the formatives had fallen together as either *-*ā*- or *-*ī*- in Proto-Celtic, the synchronic rule of secondary verb formation was simply to add the productive denominative suffix to the source stem minus its final vowel, regardless of whether or not the form of the suffix was historically justified. So, for example, PCelt. **dān-ā-* (> OIr. *dánaid*) 'gives, bestows' and *(*ϕ*)*līn-ā-* (> OIr. *línaid*) 'fills' were created from *u*-stem nouns, PCelt. **dā-nu-* (> OIr. *dán*) [m.] 'gift' < PIE **doh*$_3$*-nu-* and *(*ϕ*)*lī-nu-* (> OIr. *lín*) 'full number, complement' < PIE **pleh*$_1$*-nu-*, although from an etymological standpoint denominative *-*ā*- is not congruent with *u*-stem nouns.

Denominative verbs can be formed from any type of noun, including, as the case may be, the verbal noun of another verb. Thus derivational sequences like the following are not uncommon:

do·lá 'remits' ↔ vn. ***díl*** [n.] 'remittance' (§ 3.1.67(1)) → vb. *dílaid* 'recompenses' → vn. ***dílad*** [m.] 'recompense, act of recompensing' (§ 4.1.44).

The source verbal noun may itself be a derived verbal noun:

molaid 'praises' → vn. ***molad*** [m.] 'praise' (§ 4.1.76) → vb. *(do)·molta* 'urges, incites' → vn. ***tomoltad*** [m.] 'act of urging, inciting' (§ 4.1.77).

These patterns reveal, yet again, the fundamentally substantival nature of the verbal noun, since it functions for derivational purposes like any other type of noun.

Many of the source nouns and adjectives in this chapter lack good etymologies, so there is, unavoidably, much of the speculative in the following pages.

4.1. Type 2: Deverbative Formations (V → VN).

4.1.1. *ador-a-* 'worship'

< PrIr. **ador-ā-* < Lat. *adōr-ō, -āre* 'worship'.

(1) PrIr. ****ador-ă̆-tu-*** (← vb. stem **ador-ā-*):

◊ **adorătu-* > ***adrad*** [m.] 'worship; act of worshipping'

↔ vb. *adraid* ⇒ *ad·ora*Ⓐ [w. *-ā*] 'worships'.

Comment:

Ⓐ The deuterotonic form *ad·ora* (not *ad·or* as cited by *DIL* s.v. **adraid**) is not original, but was extracted from the simplex through reanalysis of the Latin loanword as a native compound in **ad-*. Old Irish *ad·ŏra* has short *-o-* in the stressed syllable, in disagreement with the long *-o-* of Lat. *adōrāre*. McManus (1983: 63 fn.126) suggests two possible explanations: it could be a learned back-formation from post-syncope *ad†raid* (< **aδōrāθi*), or it could have been borrowed with the pretonic vowel already shortened in the British Latin source, **adŏrāre*.[1] To these may be added a third, less likely, possibility, namely that the deuterotonic verb could have been created during the relatively short period (late fifth century to mid-sixth century in Jackson's chronology)[2] between the shortening of long vowels in unstressed syllables and the syncope, i.e., after **aδōrāθi* had become **aδŏrăθ'* but before it had progressed further to **aδ†rəθ'* > OIr. *adraid*.

---

[1] *LHEB* 269f.

[2] *LHEB* 143.

4.1.2. *and-i-* 'kindle, light up'

< PCelt. **anad-ī-* or **anod-ī-*, etymology uncertain.Ⓐ

(1) PCelt. ****ana/od-ĭ̄/e-tu-*** (← vb. stem **-ana/od-ī-*):

◊ [[*ana/odĭ̄/etu-* > ***andud*** [m.] 'act of lighting, kindling'

↔ vb. *andaid* [w. *-ī*] 'lights, kindles'.]]

u̯or-uss-ana/odĭ̄/etu-* > ***fursundud* [m.] 'illumination; act of giving light, illuminating'

↔ vb. *for·osnai* [w. *-ī*] 'lights up, illuminates'.

Comment:

Ⓐ No satisfactory etymology has yet been found. Earlier attempts have started from a Celtic base **-and-*: *VKG* (II, 457 § 657 Anm.) very hesitantly offers a compound of **an-* < PIE **sam-* 'together' + **dŏ̄-* 'kindle, burn' < PIE √**deh₂u̯-* 'burn';[3] *LÉIA* (A-75 s.v. **and-**) sets up a pre-Celtic **pand-* (< PIE **pn̥-d$^{(h)}$-*?) ← PIE √**pen-* 'pull, stretch',[4] through a development 'strike' (comparing OIr. *indeoin* 'anvil' < **n̥d^{h}i-pon-i-*) → 'kindle'; and Thurneysen (1914: 32) attempts to relate Gr. ἄνθρακ̣ 'charcoal' (a notion rejected by *LÉIA*, *loc. cit.*, and Beekes 2010: I, 105 s.v. **ἄνθρακ̣**) and PGmc. **tandjan*, **tundjan* 'to kindle, ignite' (> Go. *tandjan*, OHG *zunten*, OE *tyndan*) which is taken to reflect a preform **t-and-*. However, as Schumacher (*KPV* 375 n.(a) s.v. ****-i-n-d-e/o-***) points out, the shape of the stem must have been **anad-ī-* or **anod-ī-* rather than **and-ī-*, because earlier **and-ī-* would have regularly produced OIr. ⁑*indid*, not *andaid*,[5] and, furthermore, because the past participle *andithe* gl. *accensus* (Ml. 56d3) < **anVd-ĭ̄-tio-* shows an underlying disyllabic

---

[3] Significantly, however, the 2.sg.ipv. *fursain* 'light!' (: *for·osnai*), with final consonant, shows that this cannot be a hiatus verb, since the form should have been ⁑*fursandai* or the like.

[4] *LÉIA* attempts no further analysis of this form, which would be, descriptively, an *aniṭ d-* or *d^{h}*-suffixed derivative of the PIE root now reconstructed as √**(s)penh₁-* (*LIV*² 578f.).

[5] Cp. PIE **h₂m̥b^{h}i-* > PCelt. ****ambi-*** > OIr. ***imb-***, ***imm-*** 'about'; Lat. ***anc**ora* (/ankura/?) > OIr. ***ingor*** 'anchor'; PIE **n̥-de* > PCelt. ****ande-*** > OIr. ***ind-*** 'in(to)', etc. (McCone 1996: 56f., 73f., 76–78, 112).

root (vs. PrIr. **and-ĭ̆-tio-* > OIr. ⁂*in*†*te*). The neutral *-nd-* of the 3.sg.pres. ***·annai*** (< **·andai*) and the vn. ***andud*** shows that the syncopated vowel of the second syllable must have originally been **-a-* or **-o-*. Returning to Vendryes' basic notion (*LÉIA, loc. cit.*) of a derivation from PIE √*(*s*)*penh*$_1$- with the semantic evolution 'pull, stretch' → 'strike' → 'kindle', we might posit a preform **penh*$_1$-*d*$^{(h)}$-[6] > PCelt. *(*ϕ*)*enad-* > **anad-* (by Joseph's rule, cp. § 3.1.106 comment A) as the base of the weak verb. While this allows us to arrive at our phonological destination, it lacks outside support and is speculative both semantically and morphologically. It remains unclear just how this etymon should be analyzed (a *d*$^{(h)}$-present formation?) and on what basis the weak *ī*-verb might have developed in Irish.

4.1.3. *anm-i-* 'cause a blemish'

< PCelt. **anam-ī-* ← **anamī-*(?) (> OIr. *anim*) [f.] 'blemish' ←(?) **ana-* < PIE **h*$_3$*n̥h*$_2$- ← √**h*$_3$*enh*$_2$- 'abuse, revile'. Ⓐ

(1) PCelt. ****anam-ĭ̆/e-tu-*** (← vb. stem **anam-ī-*):

◊ **anamĭ̆/etu-* > ****anmud*** ⇒ ***ainmed*** [m.] 'act of causing a blemish, satirizing'

↔ vb. **anmaid* ⇒ *ainmid* [w. *-ī*(?)] 'causes a blemish, satirizes'.

Comment:

Ⓐ From the Irish evidence alone, the vowel of the second syllable would appear to have been a historical front vowel. While the frequent spelling *anim* is ambiguous, the palatalized clusters in the syncopated forms — gen.sg. ***hainme*** (*CIH* I, 302.30, 31, 33), acc.pl. ***ainmi*** (*CIH* V, 1760.3), dat.pl. ***ainmib*** (Trip.^{2} 1525), etc., and the derivatives ***ainmid***

---

[6] Although it may be noted that, for whatever reason, in *d*-extended forms of this shape the root-final laryngeal is often absent: cp. PIE √**terh*$_1$- (Gr. τέρε-τρον 'drill') vs. **ter-d-* 'bore, drill' (Ved. *tr̥ṇát-ti* 'bores, drills' < **tr̥-né-d-*); PIE √*(*h*$_1$)*u̯elH-* (Ved. *vr̥ṇī-te* 'chooses' < *(*h*$_1$)*u̯l̥-n-H-*) vs. *(*h*$_1$)*u̯el-d-* 'wish, desire, choose' (Gr. ἐέλδ-ομαι 'wish for, desire' < *ἐ*ϝ*έλδ- < **h*$_1$*u̯el-d-*); etc. These and other similar forms are discussed by Vine (1982 *passim*, esp. 228f.).

[w. -ī(?)] 'causes a blemish, satirizes' ↔ vn. ***ainmed*** [m. -*tu*] 'act of causing a blemish, satirizing', and ***ainmech*** [adj. -$^{o}/_{\bar{a}}$] 'having a blemish, disfigured' — should in principle indicate an earlier front vowel; although since these are all of Middle Irish attestation, secondary palatalization cannot be excluded. On the other hand, OW *anamou* (nom.pl.) gl. *mendae*, MW *anaf, anaw*, MBret. *anam, anaf(f)* 'blemish, fault', OBret. *di-anam* 'faultless' (cp. OIr. *di-anim* 'id.') show an unmistakable stem **anamV-*. Since it is unlikely that Primitive Irish would have had a stem **anile-mV-* next to PBr. **ana-mV-*, and since it is well established that palatalization tends to spread secondarily in Irish,[7] the palatalization in these words must not be original.

The stem class of OIr. *anim* is not entirely clear due to a paucity of genuine Old Irish forms and questions surrounding the etymology. The forms that do occur, if they can be taken at face value, would indicate an ī-stem: gen.sg. in *-e, hainme* (*CIH* I, 302.30, 31, 33), and nom./acc.pl. in *-i, anmi* (LU 35b37, 43b11), *ainmi* (*CIH* V, 1760.3). If the root is PCelt. **ana-* (see the next paragraph), this would point to a rather questionable suffix **-mī*. Given the relatively late manuscripts in which these forms appear, the testimony is not decisive.

The validity of Pokorny's (*IEW* 779 s.v. ***ono-*** und ***onə-***) connection of the Celtic words with Gr. ὄνομαι 'blame', (Hom.) ὤνατο hinges upon the shape of the Indo-European root and the behavior of laryngeals in Celtic. Watkins (1962c: 117) regards underlying PCelt. **ana-* as a morphological zero grade[8] of the root **onə-* < PIE √**h₃enh₂-*, replacing PCelt. **nā-* < **h₃n̥h₂-*^{C};[9] the full grade is preserved in OIr. *on* [n.] 'blemish' <

---

[7] Greene 1973: 128, 135.

[8] For which see § 3.1.106 comment A on PCelt. **skara-*.

[9] The precise development of **HR̥HC-* sequences is not entirely clear in Celtic (see Ringe 1988: 421; McCone 1996: 53f.; Stüber 1998: 55); the possibilities seem to be either **RăC-* (i.e., the same outcome as

PCelt. **on-o-* < PIE **h₃enh₂-o-*. A different root shape, PIE √**h₂neh₃-*, is proposed by Hackstein (1995: 65–67) and followed by *LIV*² (282). This is more problematic if PIE **HR̥HC-* yields PCelt. **RāC-*, since PIE full-grade **h₂néh₃-*$^{V/C}$ and zero-grade **h₂n̥h₃-*^{C} would then fall together as PCelt. **nā-*, eliminating the pattern of alternation that could trigger a new analogical zero-grade **ana-*. In addition, OIr. *on* 'blemish' cannot be derived from a root of this shape.

An alternative derivation suggested by *EDPC* (34 s.v. ***anamī**) takes *an-* to be the privative prefix attached to PCelt. **am-* 'wash' < PIE **h₂em(H)-* 'pour' (cp. § 3.1.4), hence 'unwashed, unwashable (thing)' → 'blemish'. In this case a Proto-Celtic *ī*-stem **an-am-ī-* would not be problematic morphologically, but once again OIr. *on* 'blemish' < PCelt. **ono-* would have to be unrelated.

4.1.4. *a^{i}rco^{i}mt-i-* 'excuse oneself'

< PrIr. **arikoment-ī-* ← **ari-kom-en-tu-* < **ari-kom-e/am-tu-*Ⓐ ← PCelt. **-em-tu-* or **-am-tu-* ← PIE √**h₁em-* 'take'.

(1) PrIr. ****arikoment-ĭ̄/e-tu-*** (← vb. stem **arikoment-ī-*):

arikomentĭ̄/etu-* > ***airchoimted* [m.] 'excuse; act of excusing oneself'

↔ vb. *ar·coimti* [w. *-ī*] 'excuses oneself'.

Comment:

Ⓐ The source of the weak *ī*-verb *ar·coimti* 'excuses oneself' (← 'preserves oneself') is the compound verbal noun **ari-kom-e/am-tu-* > ***airchomét*** [m.] 'preservation; act of keeping, preserving', § 3.1.38(1).

**R̥HC-*) or **aR-* (if Joseph 1982: 50f. is correct in proposing that the second laryngeal in such a sequence is regularly lost). In any case the outcome of PIE **HŋH-*^{C} is not PCelt. **ana-*.

4.1.5. *a^{i}r-ig-i-$_{DEP}$* 'perceive, notice'

< PICelt. **ariā-sag-ī-$_{DEP}$* ← **ar-iā-* (> OIr. *aire*) [f.] 'notice, attention', perh. < PCelt. **(ϕ)ar-iā-* ← PIE **pr̥h$_3$-* ← √**perh$_3$-* 'provide'.Ⓐ

(1) PICelt. ****ariāsag-e-tu-*** (← vb. stem **ariā-sag-ī-*):

◊ **ariāsagetu-* > ***airiugud*** [m.] 'perception, notice; act of perceiving, noticing'

↔ vb. *airigidir* [w. *-ī*] 'perceives, notices'.

Comment:

Ⓐ *LÉIA* (A-81f. s.v. **ar-**) takes this root **ar-* 'watch, guard' to be the same as **ar-* 'plow' < PIE √**h$_2$erh$_3$-* 'id.', comparing the range of meanings in Lat. *colō, -ere* 'inhabit; cultivate; take care of'. The comparison is not especially instructive, however. In the case of *colō*, one may trace the meanings 'guard, care for, tend, cultivate' from the basic sense of PIE √**k^{w}elh$_1$-* 'go around, surround'; but in the case of PIE √**h$_2$erh$_3$-*, the evidence is abundantly clear that 'plow' is the original meaning — cp. Gr. ἀρόω, Lat. *arō, -āre*, Go. *arjan*, OHG *erien*, Lith. *arìu, árti*, OCS *orjǫ, orati*, etc., besides OIr. *airid*, MW *eredic* [*arðaf*], etc., all with the meaning 'to plow', plus the widely attested instrument noun, Lat. *arātrum*, OIr. *arathar*, MW *aradr*, Arm. *arawr*, ON *arðr* (**-tro-*); Lith. *árklas* (**-tlo-*); OCS *ralo*, Cz. *rádlo* (**-d^{h}lo-*), etc., all meaning 'a plow' — and a development from 'plow' to 'watch, guard' is very difficult to construe. Furthermore, a comparison of OIr. *aire* 'notice, attention' with the cognate OBret. *areanos* (acc.pl.) 'scouts' hints at a basic Celtic meaning 'observe, perceive' rather than 'watch over, guard'. A connection with Lat. *-periō, -īre/ī* 'find, discover', a *i̯^{e}/$_{o}$*-present from PIE √**perh$_3$-* 'provide',[10] is therefore conceivable.

---

[10] *LIV*^{2} 474f. s.v. ****perh$_3$-*** w. n.6. See Meiser (2003: 72, 100, 185) on the regular Italic "Sievers"-like alternation of 3rd-conjugation *pariō, -ere* (**-i̯^{e}/$_{o}$-*) in the simplex and 4th-conjugation *-periō, -īre/ī* (**-i̯i̯^{e}/$_{o}$-*) in the compounds. For the semantics, Schrijver (1991: 211; 2003: 79) suggests the development 'bring about that something is produced or produces itself to one' → 'find out, discover'.

4.1.6. *a^{i}rlath-ag-i-$_{DEP}$* 'obey'

< PrIr. **ari-uss/u̯o-lăto-sag-ī-$_{DEP}$* ← **ari-uss/u̯o-lă-to-* ← PIE **-l̥h$_1$-tó-* ← √**leh$_1$-* 'let, leave'.Ⓐ

(1) PrIr. ****ariusslătosag-e-tu-*** or ****ariu̯olătosag-e-tu-*** (← vb. stem **ari-uss/u̯o-lăto-sag-ī-*): **ariusslătosagetu-* or **ariu̯olătosagetu-* > ***airladugud*** [m.] 'act of obeying'

↔ vb. *airladaigidir* [w. *-ī*] 'obeys'.

Comment:

Ⓐ Ascoli (*GPH* cxliv), no doubt correctly, takes these forms, along with OIr. ***airle*** [f.] 'counsel, act of advising' and related words (§ 4.3.5(1)), to be from a compound of *air-* (< PCelt. **ari-*) plus *-lă-* 'put, throw' (< PCelt. **-lă-i̯^{e}/$_{o}$-*, cp. § 3.1.67). However, while ***airle*** straightforwardly reflects **ari-l-iā-*, and the adjective *airlithe* 'obedient, submissive' continues **ari-lă-ti^{o}/$_{ā}$-*, the *(a)ur-* of spellings such as ***aur**laithe*, ***ur**laithe*, etc. and the related ***aur**latu* [m. *-t*] 'obedience, submission', as well as the non-palatalized *-rl-* in ***air**ladaigidir* [w. *-ī*] 'obeys' ↔ vn. ***airladugud***, rather imply underlying **ari-uss-lă-* or **ari-u̯o-lă-* in these words.[11] Thus the weak verb is probably a *sag*-derivative of a *to*-participle **ari-uss/u̯o-lă-to-* to an unattested hiatus verb **ar·óla* or **ar·fola*.

4.1.7. *a^{i}this-ig-i-$_{DEP}$* 'revile, insult'

< PrIr. **atiu̯issi-sag-ī-$_{DEP}$* ← **ati-u̯is-si-* (> OIr. *aithis(s)*)Ⓐ [f.] 'insult, reproach' < PCelt. **ati-u̯id-ti-* ← PIE **u̯id-* 'see' ← √**u̯ei̯d-* 'see'.

(1) PrIr. ****atiu̯issisag-e-tu-*** (← vb. stem **atiu̯issi-sag-ī-*): **atiu̯issisagetu-* > ***aithisiugud*** [m.] 'act of reviling, insulting'

↔ vb. *aithisigidir* [w. *-ī*] 'reviles, insults'.

---

[11] See *GOI* 497f. § 823.A.

Comment:

Ⓐ Marstrander (1962: 214) is mistaken in taking OIr. *aithis(s)* [f.] 'insult, reproach' as a *tu*-stem comparable to the related noun ***fius(s)*** < **u̯id-tu-*, etc. (§ 3.1.46(1)). The feminine gender and the palatalized *-s(s)-* in the nom.sg. *aith**is**(**s**)* (unambiguous in MoIr. *aith**is*** vs. *fi**os***), nom./acc.pl. *aith**is**(**s**)**i***, dat.pl. *aith**is**(**s**)**ib***, and gen.pl. *aith**isse***, all of genuine Old Irish date,[12] positively indicate a *ti*-stem noun. It is puzzling therefore that Irslinger states: "Aufgrund des fem. Genus nimmt LEIA A-56 hier einen *ti*-Stamm an, also **ate-u̯id-ti-*, doch gibt es hierfür sonst keine Belege im Air." (2002: 101). In fact, *LÉIA* (*loc. cit.*) advocates either a *tā*-stem or a *ti*-stem, but there is in reality no ambiguity in Old Irish.[13] The only evidence of a *tā*-stem is the MIr. gen.sg. *aith**ise*** (instead of **aith**eso***), which is late and secondary. Besides the Old Irish case forms cited above, there is also the witness of the derivatives, *aith**esech*** [adj. *-$^{o}/_{ā}$*] 'abusive, insulting', *aith**isige*** [f. *-iā*] 'disgrace', *aith**isigidir*** [w. *-ī*] 'reviles, insults' ↔ vn. ***aithisiugud*** [m.] 'act of reviling, insulting', etc., all with a palatalized *-s-* that points to a base form in **-ti-* rather than **-tu-* or **-tā-*.

4.1.8. *ba^{i}ths-i-* 'baptize'

< PrIr. **batiss-ī-* ← **batissa* (> OIr. *baithes*) [m. f.] 'baptism' < VLat. **batisma*[14] < Lat. *baptisma* 'id.'

(1) PrIr. ****batiss-ĭ̄/e-tu-*** (← vb. stem **batiss-ī-*):

◊ **batissĭ̄/etu-* > ***bait(h)sed*** [m.] 'baptism; act of baptizing'

↔ vb. *bait(h)sid* [w. *-ī*] 'baptizes'.

---

[12] See *DIL* s.v. **aithis**.

[13] Compare the remarks under § 2.2.3.25(2).

[14] See McManus 1983: 49 fn.73.

4.1.9. *bendach-a-* 'bless; greet'

< PrIr. **bendic-ā-* < VLat. **bendic-o, -ere* < Lat. *benedīc-ō, -ere* 'bless'.Ⓐ

(1) PrIr. ****bendic-ă̆-tu-*** (← vb. stem **bendic-ā-*):

◊ **bendică̆tu-* > ***bendachad*** [m.] 'a blessing; act of blessing'

↔ vb. *bendachaid* [w. *-ā*] 'blesses'.

Comment:

Ⓐ If the Primitive Irish verb had been borrowed as **benedic-ā-*, the post-syncope form should have been ‡***beindechaid*** with palatalized **-nd-*. McManus (1983: 63 fn.128, 66) concludes therefore that the syncope must have already occurred in the pronunciation of the Vulgar Latin source before it was borrowed into Irish. (Compare also ***maldachad***, § 4.1.70.)[15]

4.1.10. *berr-a-* 'shears, shaves'

< PCelt. **birr-ā-* ← **birr$^{o}/_{ā}$-* (> OIr. *berr*) [adj.] 'short', etymology uncertain.Ⓐ

(1) PCelt. ****birr-ă̆-tu-*** (← vb. stem **birr-ā-*):

◊ **birrătu-* > ***berrad*** [m.] 'act of clipping, shearing; tonsuring'

↔ vb. *berraid* [w. *-ā*] 'clips, shears; tonsures'.

Comment:

Ⓐ The root is well attested in Celtic. To the Irish adjective and derived verb British answers with MW *byrr*, OBret. *berr*, Co. *ber* [adj.] 'short' with derivatives, Gaulish attests the personal names *BIRRUS, BIRRIUS, BIRRŌ*, probably meaning 'Shorty', and Gallo-Lat. *birrus, birrum* 'short hooded cloak' is no doubt from the same word.[16] In light of the

---

[15] McManus makes this statement specifically in regard to the related nouns, OIr. *bendacht* < VLat. **bendictio*, OIr. *maldacht* < VLat. **maldictio*, but the same assumption must be extended to the verb for the same reason, i.e., the absence of palatalization.

[16] *FEW* I, 376 s.v. **birrus**.

Gaulish *-rr-*, a preform in **-rs-* seems unlikely, since the presence of -ρσ- in the Gaulish local name Ουερσιχνοσ[17] suggests that this constellation was preserved in that language.[18] This fact casts further doubt on the PIE **bʰers-* implied by Stokes' (*US* 173 s.v. **berso-s**) hesitant suggestion of a connection to PIE √**bʰres-* 'break, burst', already difficult on semantic grounds, and Schrijver's (1995: 56) conjectural PCelt. **birsos* or **bersos*, of indeterminate etymology. *LÉIA* (B-42 s.v. **berr**) hesitantly suggests a vague connection with PIE **mreĝʰu-* 'short' seen in Lat. *brevis* [adj.] 'id.',[19] as well as Av. *mərəzu-* [adj.] 'id.', Gr. βραχύς [adj.] 'id.', PGmc. **murgus* > Go. **maurgus* → *ga-maurgjan* 'to shorten', OHG *murg(i)* [adj.] 'short', etc. (from PIE **mr̥ĝhu-*), but there is no known mechanism that can produce PCelt. **birro-* from such a base. If the word is of Indo-European origin, the expected preform would probably be PIE **bʰis-ro-* or **gʷis-ro-*, but no good root connections emerge.

4.1.11. *béth-a-* 'nourish, feed'

< PCelt. **bēt-ā-* < **beit-ā-* < **be̯iat-ā-* ← **be̯ia-to-* (> OIr. *biäd*) [n.] 'food' < PIE **gʷe̯ih₃-to-* ← √**gʷi̯eh₃-* 'live'.Ⓐ

(1) PCelt. ****bēt-ă̆-tu-*** (← vb. stem **bēt-ā-*):

◊ **bētă̆tu-* > ***bíathad*** [m.] 'provision of food, maintenance; act of feeding, maintaining'

↔ vb. *bíathaid* [w. *-ā*] 'feeds, maintains'.

ari-bētă̆tu-* > ***airbiathad* [m.] 'act of nourishing, feeding'

↔ vb. *ar·bíatha* [w. *-ā*] 'nourishes, feeds'.

---

[17] Dottin 1920: 102.

[18] *Pace* McCone 1996: 48. It is of course possible that Ουερσιχνοσ represents a relatively early Gaulish form, and that *-rs-* changed to *-rr-* over the course of time, but there is no solid evidence for that conclusion.

[19] Apparently reflecting **mreĝʰu-i-*; see de Vaan 2008: 75 s.v. **brevis** w. further lit.

Comment:

Ⓐ A formal inconsistency has long been recognized between the disyllabic base of OIr. *biäd* [n.] 'food', usually taken to be from PrIr. **bi(i̯)Vto-* or **biu̯Vto-*, and the monosyllabic base of the denominative verb *bíathaid* < PCelt. **bēt-ā-*, the latter also reflected in MW *bwyd*, OCo. *buit*, MBret. *boet* 'food' < **bēto-*. The disyllabic nature of OIr. *biäd* is established both by the voicing of the final *-d* [ð] from *-th* following an unstressed vowel, and by gen.sg. *biïd* instead of ⁂*béith* < **bētī-*, dat.sg. *biüd* instead of ⁂*béth*, ⁂*bíath* < **bētū-*. Hamp's (1976: 88f.) solution deriving OIr. *biäd* from PCelt. **bĭu̯ato-* ⇐ **bīu̯ato-* < PIE **$g^{w}ih_3$-u̯-$h_3$to-*[20] (> Ved. *jīvitá-* 'living creature, life'; Lith. *gyvatà*, OCS *životъ*, Lat. *vīta* 'life', etc.) and taking PCelt. **bēto-* < **beito-* as most likely a new full-grade formation from **bito-* ⇐ **bīto-* < **$g^{w}ih_3$-tó-*, requires that the shortened **-ĭ-* in Celtic must have been generalized from an unspecified stem of the shape **$g^{w}ih_3$-V-* with pre-vocalic loss of the laryngeal. Other attempts at a solution have started from PCelt. **bēto-* and tried to explain the Irish disyllabic **bi(i̯)Vto-* or **biu̯Vto-* in terms of a parallel formation. Pokorny (*IEW* 468 s.v. ***3. g^{u}eu̯-*** und ***g^{u}eu̯ə- : g^{u}(i)u̯ē- : g^{u}(i)u̯ō- : g^{u}ū-***), followed by de Bernardo Stempel (1999: 454 fn.54), takes the preform to be **biu̯eto-* < PIE **$g^{w}ih_3$-u̯-eto-* or **$g^{w}ih_3$-u̯e-to-*, with the short vowel owing to a loss of laryngeal before **-u̯-*;[21] Schrijver (1995: 246) tentatively suggests PIE **$g^{w}ih_3$-eto-*, or a secondary alteration by influence of **biu̯otūt-* > OIr. *bethu* (where, again, the short **-ĭ-* must be explained as either analogical, replacing PCelt. **bīu̯otūt-* ⇐ PIE **$g^{w}ih_3$-u̯o-tūt-*, or resulting from the loss of the laryngeal).[22] However, as

---

[20] Taken to be "an old nominalization in *-eto-* with early repetition of the H_0 from the root" (Hamp 1976: 90).

[21] The usual rule ascribes this loss of laryngeal to **RHi̯/u̯V* or **R̥Hi̯/u̯V* sequences (cp. McCone 1996: 53f.; *KPV* 135), but de Bernardo Stempel (*loc. cit.*, also 214) extends this to include **VHu̯V*.

[22] See Irslinger 2002: 249f. for further discussion of these proposals.

McCone (1997b: 173) points out, OIr. *biäd* is the regular outcome of PCelt. **beiato-* < PIE **gʷeih₃-to-*, so the real difficulty lies in explaining why the laryngeal has failed to vocalize in **bēto-*. McCone posits a new phonological rule that appears to solve the discrepancy more economically:

> A laryngeal failed to vocalize to *a* in the normal way in Proto-Celtic between *y* and another consonant when the following syllable contained short or long *a* or alternatively that after normal vocalisation a sequence (-)*eyaCa/ā*(-) was dissimilated to (-)*eyCa/ā*(-). Hence **gʷeyht-ah-ti* (> **beyatāti*?) > **beytāti* > **bētāti* in Proto-Celtic." (1997b: 173f.)[23]

The result would have been a mixed paradigm in the noun, with PCelt. nom./acc.sg. **beiatom* < PIE **gʷeih₃tom* vs. nom./acc.pl. **bētā* < **beitā* (< **beiatā*) < PIE **gʷeih₃teh₂*. Irish leveled the paradigm in favor of the stem of singular, British in favor of the stem of the plural. The rule must have operated prior to PIE **-ei-* becoming **-ē-* in pre-Celtic or early Proto-Celtic,[24] and thus the denominative verb must also be a formation of considerable antiquity.

Regarding the Schwebeablaut form PIE **gʷeih₃-* from √**gʷieh₃-*, see *NIL* (186 n.1 s.v. **gʷieh₃-*), with further literature.

4.1.12. *briss-i-* 'break'

< PCelt. **brest-ī-* ← PCelt. **bres-tā-* [f.] 'a burst' (> OIr. *bres* 'fight, combat') ← PIE √**bʰres-* 'break, burst'. Ⓐ

---

[23] This rule, incidentally, may also explain the lack of laryngeal vocalization in OIr. ***béim(m)*** 'stroke, blow' < PCelt. *bēmman* < **beisman* < **beiasman* < PIE **bʰeih₂-smn̥*, if the formation is not secondary; compare § 3.1.12(2) comment B.

[24] There is some uncertainty as to whether Celtiberian reflects this change. The spelling **-e-i-** in the inscriptions has been taken to prove the continuance of a diphthong (e.g., K. H. Schmidt 1977: 15), or at least to indicate its earlier pronunciation as such (Schmoll 1959: 106); but it is also possible that the digraph *ei* represented a monophthong at the time when the Iberian alphabet was first adopted (McCone 1996: 15–17).

(1) PrIr. ***bress-ĭ̄-tu-*** < PCelt. **brest-ĭ̄-tu-* (← vb. stem **brest-ī-*):Ⓑ

◊ **bressĭ̄tu-* > ***bris(s)ed*** [m.] 'act of breaking, smashing'

↔ vb. *bris(s)id* [w. *-ī*] 'breaks, smashes'.

Comments:

Ⓐ *IEW*'s (166) derivation of these forms from an *s*-enlargement of **bhrēi-*, **bhrĭ̄-* (i.e., √**bʰreiH-*) 'cut' is problematic because of the root-final laryngeal. The *to*-participle form would not be **bristo-* as suggested, but **brīsto-* < PIE **bʰriHs-tó-*, resulting in OIr. ⁑*brís* and ⁑*bríssid*. The source of OIr. *bris(s)-* is rather to be found in PIE √**bʰres-* 'break, burst' (> PGmc. **brestan* 'to burst' > ON *bresta*, OHG *brestan*, and [metathesized] MoG *bersten*, OE *berstan*), as recommended by *LÉIA* (B-91 s.v. **brissid**).[25] Despite *LÉIA*, however, the base cannot be derived from the *to*-participle **bʰr̥s-tó-*, since this would have yielded PCelt. **barsto-*,[26] but must rather be a Celtic *tā*-abstract from the full-grade **bʰres-*.

Ⓑ Intermediate **-ĭ̄-* is confirmed by the raising in *bris(s)ed* < **bress-ĭ̄-tu-*.

4.1.13. *cán-i-* 'blame, reproach'

< PCelt. **kā(g)n-ī-* ← **kā(g)ni-* (> OIr. *cáin*) [f.] 'law; legal due', etymology uncertain.Ⓐ

(1) PCelt. ****kā(g)n-ĭ̄/e-tu-*** (← vb. stem **kā(g)n-ī-*):

◊ [[**kā(g)nĭ̄/etu-* > ****cánad*** ⇒ ***cáined***Ⓑ [m.] 'act of reviling, blaming, reproaching'

↔ vb. **cánaid* ⇒ *cáinid*Ⓑ [w. *-ī*] 'reviles, blames, reproaches'.]]

*imm-*ʻ + ***cáined*** > ***imcháined*** [m.] 'mutual revilement; act of mutually reviling'

↔ no attested vb. **imm·cánai*.

Comments:

Ⓐ Diverse etymologies have been proposed. It is possible to eliminate at the outset PIE

---

[25] Curiously contradicting *LÉIA* B-85f. s.v. **1 bres**, where the *IEW* derivation is preferred.

[26] De Bernardo Stempel 1987: 24; McCone 1996: 49.

kăp-ni-[27] (← √**kap-* or √**keh*$_2$*p-* 'seize'), which would be expected to generate PCelt. **kăφni-* > **kău̯ni-* > **kōni-* > OIr. ⁂*cóin*;[28] also PIE **k*^{w}*oi̯-ni-*[29] (← √**k*^{w}*ei̯-* 'notice, perceive') which would yield OIr. ⁂*coín*; and PIE **ḱeh*$_2$*s-ni-*[30] (← √**keh*$_2$*s-* 'speak, proclaim') which would generate PCelt. **kānni-* > OIr. ⁂*cáinn* — although, as *EDPC* (183 s.v. **kā(g)ni-**) notes, a preform **ḱeh*$_2$*s-eni-* would not encounter the same difficulty. Nor does it seem especially likely that OIr. *cáin* is ultimately from Lat. *canōn* 'standard, rule', by way of a British intermediary **canū* > **canü* > *canī* to account for the palatalized final, and with the *-á-* lengthened by influence of *cís* in the set phrase *cís ┐ cáin* 'tax and tribute' (later a compound *císcháin*) from Lat. *census et canon*.[31] Somewhat more plausible is Loth's (1920–1921: 157) argument for an inherited base **kān-* 'power, ability' → 'legal power', seen in MW ***digoni*** (***digawn, dichawn***) 'perform, be able', which is generally connected with Lat. *cōnor, -ārī* 'attempt', and SCr. *kániti* 'intend'. But the origin of these Latin and Slavic forms is disputed: *LIV*^{2} (352 s.v. ***kenh*$_1$-**) reconstructs an acrostatic long-vowel iterative **kṓnh*$_1$*-i̯*^{e}*/*$_{o}$- to PIE √**kenh*$_1$- 'endeavor, strive';[32] whereas de Vaan (2008: 130f. s.v. **cōnor, -ārī**, with further literature) prefers a denominative origin from a root-noun **ḱōn-* 'ascent' → 'effort, attempt' ← PIE √**ḱen-* 'ascend', with generalized long vowel from the nominative singular, or, more cautiously, from a lengthened-grade adjective **ḱōn-*^{o}*/*$_{ā}$-

---

[28] Cp. McCone 1996: 45.

[29] *US* 58 s.v. ***qei***.

[30] *US* 74 s.v. ***kâs***.

[31] H. Zimmer 1900: 443f.; accepted by *VKG* I, 193 § 121(4); but doubted by Thurneysen 1910: 26.

[32] But see Vine (forthc.), with further literature, for reservations concerning this type of formation and a critique of the evidence mustered in its support.

built to a thematic noun *$\hat{k}$*on-o-*;[33] *EDPC* (*loc. cit.*) for its part simply reconstructs √**keh*$_3$*n-*, without further elaboration.

The best etymology of OIr. *cáin* is probably that of O'Brien (1956: 172), who takes as his starting point a comparison with OCS *kaznъ* 'punishment' < **kōĝ-ni-* or **kāĝ-ni-*. His argument that the neutral *-n-* in the plural *cána* (i.e., ***cánai*** instead of ⁂***cáini***) shows good evidence of an original stem in **-aCn-*, rather than inherited **-ān-*, is not as weighty as it once seemed, in light of more recent research[34] showing that internal **-āC-* regularly resists palatalization, except in the sequence **-āC$\underset{\wedge}{i}$-* where *C* is not a labial or guttural. Nevertheless, the matching Slavic *ni*-stem formation makes his proposal quite attractive. As for the root connection, Derksen (2008: 222 s.v. **kaznь**) relates OCS *kažǫ, kazati* 'show, admonish', unenthusiastically accepting *LIV*^{2}'s reconstruction (383, 385 n.11 s.v. ***k$^{\mu}$eĥ-***) of a causative **k^{w}ōĝ-$\underset{\wedge}{i}$e-* from a voiced-final variant of the root √**k^{w}eĥ-* 'see, behold'.[35] *EDPC*'s etymon, PIE √**keh$_{2/3}$ĝ-n-*, accounts mechanically for the Slavic and Celtic words but appears to have no wider connections.

Ⓑ Neutral *-n-* would be expected here,[36] but only palatalized forms are attested (the earliest contemporary example being found in the Milan glosses). O'Brien (1956: 172) attributes the secondary palatalization to the influence of forms such as ***cáint-i*** 'he reviles him' and ***cáinte*** [m. *-io*] 'satirist' where the palatalization is regular from syncope; the

---

[33] Of a type put forward by Tremblay (1998: 23–30). Vine (1998b: 690f. fn.21) offers another denominative solution, based on a proposal of a wider class of feminine abstracts and/or collectives that was characterized by lengthened *ō*-grade of the root and barytone accent.

base noun *cáin* [f.] 'law; legal due' < **kā(g)nis* no doubt also contributed.

4.1.14. *ca^{i}r-ig-i-*$_{(DEP)}$ 'rebuke, accuse'

< PICelt. **kariā-sag-ī-* ← PCelt. **kar-iā-* (> OIr. *caire*) [f.] 'crime, fault' ← PIE **kr̥-* ← √**ker-* 'abuse, blame'.

(1) PICelt. ****kariāsag-e-tu-*** (← vb. stem **kariā-sag-ī-*):

◊ **kariāsagetu-* > ***cairiugud*** [m.] 'rebuke, accusation; act of rebuking, accusing'

↔ vb. *cairigid(ir)* [w. *-ī*] 'rebukes, accuses, blames'.

4.1.15. *cath-ag-i-* 'fight'

< PICelt. **katu-sag-ī-* ← **kat-u-* (> OIr. *cath*) [m.] 'battle' ← PIE √**k̂at-* 'fight'.

(1) PICelt. ****katusag-e-tu-*** (← vb. stem **katu-sag-ī-*):

◊ **katusagetu-* > ***cathugud*** [m.] 'fight, battle; act of fighting, battling'

↔ vb. *cathaigid* [w. *-ī*] 'fights, gives battle'.

4.1.16. *cechr-a-* 'muddy, splash'

< PCelt. **kek^{w}(ă̆/o)r-ā/ī-*Ⓐ ← **kek^{w}(ă̆/o)r-ā-* (> OIr. *cechar* [f.]) 'quagmire' ⇐ PIE **k̂ek^{w}r̥/n-* 'excrement'.Ⓑ

(1) PCelt. ****kek^{w}(ă̆/o)r-ă̆/ĭ/e-tu-*** (← vb. stem **kek^{w}(ă̆/o)r-ā/ī-*):

◊ **kek^{w}(ă̆/o)ră̆/ĭ/etu-* > ***cechrad*** [m.] 'act of muddying; perishing in a quagmire'

↔ vb. *cechraid* [w. *-ā/ī*] 'muddies, splashes'.

Comment:

Ⓐ It is impossible to tell if the weak verb belongs to the *ā*-conjugation or the *ī*-conjugation, without an attestation of the 3.sg. conjunct form, since the cluster *-chr-* resists palatalization even in an otherwise palatalizing environment. A verb in **-ā-* may be considered more likely *a priori* from an *ā*-stem base noun, however (see the following comment).

Ⓑ A Proto-Celtic *ā*-stem is implied by the acc./dat.sg. *cechair*, with palatalized final. The word was a heteroclitic $^{r}/_{n}$-stem in Proto-Indo-European (cp. Ved. *śákṛt* [n.], gen. *śaknáḥ* 'excrement'). The Proto-Celtic form may have been **kek^{w}r-ā-*, if the *ā*-stem formation is of Proto-Indo-European date (cp. Gr. κόπρος 'excrement, filth' < **ĥok^{w}r-o-*); but if it is a later formation, then PCelt. **kek^{w}ar-ā-* ← **kek^{w}ar* (< PIE **ĥek^{w}r̥*) + **-ā* is the likely historical shape. *EDPC* (198) suggests a preform PCelt. **kek^{w}orā*, from the old nom./acc. collective of the original $^{r}/_{n}$-stem. This cannot, of course, directly continue original PIE **ĥek^{w}or-h$_2$*, which would have become **ĥek^{w}ōr* already in late PIE, but might entail the suffix **-ā* added secondarily to a short-vowel base **ĥek^{w}ŏr-*.[37] It is also conceivable that the suffix was added to the full PIE form **ĥek^{w}ōr* in pre-Celtic or early Proto-Celtic before the change of **ō* > **ū* in final syllables and **ō* > **ā* elsewhere; the resulting **ĥek^{w}ōr-ā* > PCelt. **kek^{w}ār-ā* would also unproblematically produce OIr. *cechar*.

4.1.17. *celebr-a-* 'celebrate'

< EOIr. *celebr-a-* < Lat. *celebr-ō, -āre* 'celebrate'.

(1) EOIr. ****celebra-th*** (← vb. stem *celebr-a-*):Ⓐ

◊ **celebrath* > ***celebrad*** [m.] 'celebration; act of celebrating'

↔ vb. *celebraid* [w. *-ā*] 'celebrates'.

Comment:

Ⓐ The absence of syncope in OIr. *celebraid* indicates that the borrowing must have occurred in post-syncope Early Old Irish.[38] The verbal-noun suffix at this period is no longer **-tu-* but its reflex **-th*, which subsequently becomes voiced *-d* [ð] after an

---

[37] Cp. *NIL* 413f. n.2 s.v. ?****ĥek^{u}-or-, *ĥe/ok^{u}-r/n-***.

[38] Cp. McManus 1983: 66.

unstressed vowel probably in the early eighth century.[39]

4.1.18. *cert-a-* 'correct, adjudicate'

< PrIr. **kert-ā-* ← **kert-$^{o}/_{ā}$-* (> OIr. *cert*) [adj.] 'right' < Lat. *certus* 'firm, certain'.

◊ Simple verb *certaid* [w. *-ā*] 'puts right, arranges'; no simple verbal noun attested.

(1) PrIr. ****-kert-ă̆-tu-*** (← vb. stem **kert-ā-*):

kom-kert-ă̆-tu-* > ***coicertad*Ⓐ [m.] 'correction, adjudication; act of correcting, adjudicating'

↔ vb. *con·certa* [w. *-ā*] 'corrects, adjudicates'.

Comment:

Ⓐ The assimilation of the nasal of the preverb indicates a relatively early compound.[40] The more common Old Irish verbal noun of *con·certa* is ***coicert*** (§ 4.4.1(1)), but the *tu*-stem formation is found as early as *Críth Gablach* (§ 41, *l.*544), assuming this is not a scribal replacement of the earlier verbal noun.

4.1.19. *cest-ag-i-*$_{DEP}$ 'inquires (into), examines'

< EOIr. *cest-* + *-ag-i-*$_{DEP}$ ← *ceist* [f. *-i*] 'question' < Lat. *quaestiō, -tionis* [f.] 'id.'Ⓐ

(1) EOIr. ****cestag-uth*** (← vb. stem **cest-ag-i-*):

◊ **cestaguth* > ***cestugud*** [m.] 'act of inquiring into, examining, discussing'

↔ vb. *cestaigithir* [w. *-ī*] 'inquires (into), examines; discusses'.

Comment:

Ⓐ As McManus (1984: 155 fn.39) points out, Latin consonant stems of the third declension show a strong preference for the vocalic stem classes in Irish. The *i*-stem

---

[39] McCone 1981: 35 fn.29, 41f., 43f.

[40] See § 2.1.3.3(2) and cp. *GOI* 502 § 830.A(1).

declension is especially common among Latin loan words.[41]

4.1.20. *cés(s)-a-* 'suffer'

< PICelt. **k^{w}a/enss-ā-* { ← PCelt. **k^{w}and-to-* < PIE **k^{w}n̥d^{h}-tó-* or: / < PCelt. **k^{w}a/end-tā-* < PIE **k^{w}n̥d^{h}-teh$_2$-* or **k^{w}end^{h}-teh$_2$-* Ⓐ

← √**k^{w}end^{h}-* 'endure, suffer'.

(1) PICelt. ****k^{w}a/enss-ă̆-tu-*** (← vb. stem **k^{w}a/enss-ā-*):

◊ **k^{w}a/enssă̆tu-* > ***cés(s)ad*** [m.] 'suffering, torment; the Passion; the passive voice; act of suffering, enduring, being tormented' ↔ vb. *cés(s)aid* [w. *-ā*] 'suffers, endures'.

kom-k^{w}a/enssă̆tu-* > ***coicsed* [m.] 'compassion; act of sympathizing' ↔ vb. *con·cés(s)a* [w. *-ā*] 'suffers with'.

Comment:

Ⓐ Various sigmatic solutions have been offered to explain the base of the Irish verb. *VKG* (II, 486 § 680) suggests an **-s-* taken from the subjunctive (< PIE *s*-aorist subjunctive) stem. Watkins (1964–1965) reconstructs PIE **k^{w}n̥t^{h}-s-* with an archaic suffix **-s-* related to **-sk-*,[42] comparing Gr. πάσχω 'suffer' < **παθ-σκ- < **k^{w}n̥t^{h}-sk-*. *LIV*^{2} (390 s.v. ****k^{w}end^{h}-***) considers the formation to be desiderative, comparable to Gr. πείσομαι 'werde erleben, werde erleiden'. The main difficulty with these solutions in suffixal **-s-*, as Bammesberger (1974: 205) points out,[43] is that the Irish verb shows no sign of the expected strong flexion. OIr. *cés(s)aid, ·cés(s)a*, a decidedly weak *ā*-verb, is more compatible with a denominative formation. For this, a PIE *to*-participle **k^{w}n̥d^{h}-tó-* would provide a plausible source via neuter **k^{w}n̥d^{h}tóm* > PCelt. **k^{w}andtom* > PICelt. **k^{w}anssom* or

---

[41] *GOI* 574 § 925.

[42] For which see further Watkins 1962: 61, 75–77.

[43] Supported by Irslinger 2002: 337, 382.

the corresponding feminine *$k^{w}n̥d^{h}$-*téh*$_2$- > PCelt. *k^{w}andtā > PICelt. *k^{w}anssā. A feminine full-grade abstract *$k^{w}end^{h}$-*teh*$_2$- is also theoretically possible, though the zero-grade form is perhaps more to be expected (cp. § 2.2.3.15).

4.1.21. *-cin-i-* 'to fast'

< PrIr. *-*ki/en-ī-*, etymology unknown.Ⓐ

◊ No simplex.

(1) PrIr. ***-ki/en-ĭ/e-tu-*** (← vb. stem *-*ki/en-ī-*):

*-*tu-ki/enĭ/etu-* > ***toichned*** [m.] 'act of fasting, going without food'

↔ vb. *do·cini* [w. -*ī*] 'fasts'.

Comment:

Ⓐ *DIL* (s.v.) and *LÉIA* (D-128 s.v.) cite the verb as *do·cin*, with the consonantal final of a strong verb. The 3.sg.pres. is not actually attested, but the 2.sg.fut. *ni toicne**bu*** (leg. *-bae*) (TAilb. § 12 = Thurneysen 1921c: 276.4) clearly belongs to a weak verb. Binchy (1941: 51) and *LÉIA* (T-95 s.v. **toichned**) are therefore correct in citing the verb as *do·cini*. In the absence of cognates and a reliable etymology, it is impossible to tell if the underlying root is *kin- or *ken-.

4.1.22. *cla^{i}db-i-* 'strike with a sword'

< PrIr. *kladib-ī- ← *kladibo- (> OIr. *claideb*) 'sword' < LPBr. *klaδiβos ⇐ *klaδiδos < *klad-i̯os < PCelt. *klad-i̯os Ⓐ ← *klad- 'strike'.

(1) PrIr. ***kladib-ĭ/e-tu-*** (← vb. stem *kladib-ī-):

◊ *kladibĭ/etu- > ***claidbed*** [m.] 'act of striking with a sword, killing with a sword'

↔ vb. *claidbid* [w. -*ī*] 'strikes or cuts with a sword, kills with a sword'.

Comment:

Ⓐ This etymology, proposed by Vendryes (1908b), remains the most plausible, despite

the doubts of Kelly (1971: 192–96). None of Kelly's objections are insuperable. His claim that *-δ- and *-β- do not regularly alternate in Primitive British a mere argument from silence. The change is common typologically, as Kelly admits, citing among other examples LLat. *gladium* > OFr. *gladie* (10th cent.) > *glaive* (12th cent.), the W. Cork pronunciation [əv] for the descendant of the EMI preterite *-adh*, and Cockney [mʌvə] for Eng. *mother*; moreover, Vendryes points out that "l'on conçoit d'autant mieux qu'elles puissent s'échanger en gallois que ce sont les deux seules spirantes sonores que possède la langue" (312), an argument that was as true in Primitive British as it is in modern Welsh, where multiple examples may be cited (e.g., Denbighshire *tyfyn* for standard *tyddyn* 'farm', Caernarfonshire *y fanodd* for *y ddanodd* 'the toothache', etc.).[44] While it is probably true that MoW *cleddydd* (first attested in the fifteenth century, according to *GPC* 494 s.v **cleddyf, cleddau**) and Co. [pl.] *cledhydhow, cledhedhyow* are the product of late assimilations rather than being historical retentions, this point provides no real evidence against Vendryes' proposal because it can reveal nothing about what dissimilatory changes may or may not have transpired a thousand years earlier.

The suggestion of Loth (1917–1919: 301) that MW *cleδyf* 'sword' reflects a final *-*m* (/-μ/) based on the parallel with MW *neδyf* 'adze' < OW *nedim* gl. *ascia* 'axe', has support in MBret. *clezeff*, Vann. *kleañ* 'sword'; this is also the position of Morris-Jones (*WG* 109), who reconstructs **klad-emō*, i.e., with agentive *-*mō*, *-*mon*- (though the intervening vowel here is probably *-*a*- rather than *-*e*-, from a generalized laryngeal reflex that originated in *seṭ* roots,[45] and hence the progression of PCelt. **kladamū* > PBr. **kladamī* >

---

[44] See Vendryes, *loc. cit.*, for further exx. and refs.

[45] Watkins 1962: 181–90.

kladem* > **kledem* > OW **kledim* > MW *cleðyf*).[46] As *LÉIA* (C-111 s.v. **claideb) points out, however, the existence of PBr. **kladamī* does not preclude the possibility of PBr. **klaδiβos* alongside it, and the latter (whatever its origin) seems necessitated by OIr. *claideb*, which, with its final *-eb*, is hardly explicable through inheritance. There can be no question of final /-μ/ here, since Old Irish, like Old Welsh, preserves the distinction between /μ/ and /β/.

A fifth-century borrowing from British, that is, before apocope and vowel affection, fully accounts for the vocalism and consonantism of the Irish word, as McManus (1983: 33f.) has shown: LPBr. **klaδiβos* > PrIr. **klaδiβah* > **klaδ'eβah* > **klaδ'əβ* = OIr. *claideb*. Lat. *gladius* 'sword', generally accepted to be an ancient loanword from Gaul. **kladi̯os*,[47] may also be taken as relevant, despite Kelly's doubts in regard to the distance of remove in both time and geography, since the meaning 'sword', common to both Insular Celtic and Gaulish, reflects the sense of PIE √**kelh₂-d⁽ʰ⁾-* 'strike' as against that of (Insular?) Celtic **klad-$^{e}/_{o}$-* 'dig, bury' (§ 3.1.23). This strongly implies a common inheritance, and it is reasonable to assume that the agreement in meaning went hand in hand with an agreement in form.

---

[46] Kelly 1971: 195.

[47] It was assumed by Kelly (1971: 196, following Palmer 1954: 51) that the initial *g-* of *gladius* was attributable to an Etruscan intermediary, since the Etruscan language did not distinguish between voiced and voiceless stops. However, as the Etruscan obstruents were phonemically voiceless, one would only expect original voiced stops to be realized as voiceless, not vice versa. The substitution is rather to be attributed to perceptual differences of pronunciation in the respective languages: the voiceless stops of Gaulish were noticeably more lenis in pronunciation than the Latin equivalents (cp. Watkins 1955: 17–19) and were thus perceived by Latin speakers as being more like voiced stops. The same held true for the Greek unaspirated voiceless stops, with similar results in Latin borrowings: e.g., Gr. κυβερνάω 'steer, govern' > Lat. *gubernō*.

4.1.23. *cloch-a-* 'to stone'

< PrIr. **kluk-ā-* or **klok-ā-* ← PCelt. **klu/ok-ā-* (> OIr. *cloch*) [f.] 'stone', etymology unknown.

(1) PrIr. ****klu/ok-ă̆-tu-*** (← vb. stem **klu/ok-ā-*)

◊ **klu/okă̆tu-* > ***clochad*** [m.] 'act of stoning'

↔ vb. *clochaid* [w. *-ā*] 'stones'.

4.1.24. *clo-i-* 'turn (back, aside)'

< PCelt. **klau̯-ī-* ← **klă̆u̯-(i)o-* (> OIr. *cló, cloë*) [m.] 'spike, nail' ← PIE √**kleh₂-u̯-* 'hook, crook'.Ⓐ

(1) PCelt. ****klau̯-ĭ̆/e-tu-*** (← vb. stem **klau̯-ī-*):

◊ **klau̯ĭ̆/etu-* > ***cloüd*** [m.] 'act of turning (back), overthrowing'

↔ vb. *cloïd* [h.] 'turns (back), overthrows'.

kom-ambi-klau̯ĭ̆/etu-* > ***coímchlód*Ⓑ [m.] 'change, alteration; act of changing, altering'

↔ vb. *con·imchloí* [h.] 'changes, alters'.

ati-klau̯ĭ̆/etu-* or *aith-ʿ* + ***cloüd* > ***aithchlód*** [m.] 'reversal; act of reversing'Ⓒ

↔ no attested vb. **ad·cloí*.

Comments:

Ⓐ The derivation put forward by *VKG* (II, 494 § 688 Anm.) and *LÉIA* (C-122 s.v. **clo-**) of a *i̯e/o*-present formation PIE **kʷl-éu̯-i̯e/o-* comparable to Gr. πολεύω 'turn' has only the semantics to recommend it. Besides the phonological difficulty of deriving Gr. πολεύω from PIE **kʷléu̯i̯e/o-* (one might rather expect ⁑πλείω), the Greek verb is in fact not an inherited formation, but a poetic alteration *metri causa* of Gr. πολέω.[48] There is no further

[48] Beekes 2010: II, 1169 s.v. **πέλομαι**. Gr. πολέω reflects a PIE caus.-iter. **kʷolh₁-éi̯e/o-* (*LIV*² 386 s.v. **kʷelh₁-*).

basis for positing PIE *$k^{w}l$-$\acute{e}\underset{\wedge}{u}$-.

A more promising approach is that of Windisch (1894: 83f.), who compared Gr. (Ion.) κληΐ́ω, (OAtt.) κλῄω 'shut' (*-ᾱ-), a denominative from Gr. (Ion.) κληΐ́ς, (OAtt.) κλῆς, (Dor.) κλᾱΐ́ς 'bolt, lock, key' < *κλᾱϝ-ῑ̄- ← PIE *$kleh_2$-$\underset{\wedge}{u}$- 'hook, crook'.[49] Old Irish *cló* [m.] 'spike, nail' reflects an *o*-stem PCelt. *$kl\breve{a}u$-*o*-,[50] but certain disyllabic forms (gen.sg. *cloï*, gen.pl. *cloë*, in some places established by meter) show mixture with a PCelt. *io*-stem *$kl\breve{a}u$-*io*-. It has sometimes been supposed that OIr. *cló* and its British cognates, MW *clo* 'lock, bolt', MBret. *clou* gl. ac[u]*tamenta*, etc., were borrowed from Lat. *clāvus* 'nail',[51] but there is really no compelling reason to assume they are not inherited.[52]

Ⓑ For the regular development of *coím-* < **coïm-* < **koμ-im-* < **kom-ambi-*, see *GOI* (112 § 179).

Ⓒ The corresponding verb **ad·cloí* 'reverses' is unattested, and the verbal noun ***aithchlód***, not listed in *DIL*, is a *hapax legomenon* found only at BNT[1] § 22.[53]

4.1.25. *coín-i-* 'weep, lament'

< PrIr. **koin-ī-* ← **koin-iā-* (> OIr. *coíne*) [f.] 'lament' ← PBr. **ku$\underset{\wedge}{i}$nī-* or **ku$\underset{\wedge}{i}\underset{\wedge}{n}$iV-* (> OW *cuin-* > MW *cwyn*) 'cry, lament' < **ku/ogn$\bar{\imath}$-*, or **ku/ogn$\underset{\wedge}{i}$V-*, etymology unknown.Ⓐ

---

[49] Latin also has cognates in the nouns *clāuis, -is* [f.] 'bolt, key, bar' and *clāuus* (*clāuos*), *-ī* [m.] 'nail, peg' and in the verb *claudō, -ere* 'close', but these forms are more difficult to evaluate. The feminine *i*-stem *clāuis* is possibly, though not necessarily, a borrowing from Greek (see, e.g., Ernout-Meillet 1959: 125 s.v. **clau-; clāuis, clāuus** (*clāuos*), **claudō**), and the verb *claudō* could be either primary, from **klaud-* < **$kleh_2u$-d-*, or a secondary *d*-stem derivative from **klāu-, klāu-i-* or *klāu-o-*. (See the discussion at de Vaan 2008: 118 s.v. **claudō, -ere**.)

[50] The shortening of **āu* to **ău* may be as early as Proto-Celtic, as no surviving reflexes show a distinction between them (see Bergin 1946: 147f.; McCone 1996: 64).

[51] *LÉIA* C-121 s.v. **cló**.

[52] Cp. Foy 1901: 268; *VKG* I, 63 § 42 Anm. 3; Beekes 2010: 711f. s.v. **κλείς**; *EDPC* 207 s.v. ***klāwo-***.

[53] See Breatnach 1984: 451 ed.n.10.

(1) PrIr. ***koin-ĭ̆/e-tu-*** (← vb. stem **koin-ī-*):

◊ **koinĭ̆/etu-* > ***coíniud*** [m.] 'act of weeping, lamenting'

↔ vb. *coínid* [w. *-ī*] 'laments, bewails, "keens"'.

de-ro-koinĭ̆/etu-* > ***derchoíniud* [m.] 'despair, dejection; act of despairing'

↔ vb. *do·rochoíni* [w. *-ī*] 'despairs of'.

in-koinĭ̆/etu-* > ***écoíniud* [m.] 'lamentation, grief; act of lamenting, grieving'

↔ vb. **in·coíni* ⇒ MIr. *éc(c)aínid* [w. *-ī*] 'laments, grieves'.

Comment:

Ⓐ In the likely event that OIr. *coínid* is related to OW *cuinhaunt* 'they will cry', MW *cwynaw* 'to complain, lament', *cwyn* 'complaint, lamentation', MBret. *queinyff* 'I moan', *queinuan* 'a moan', etc., Pedersen's suggestion of a borrowing from British (*VKG* I, 125 § 77, accepted by *LÉIA* C-18f. s.v. **caínid**) is probably correct. While OIr. *coínid* and the related abstract *coíne* [f. *-iā*] 'lament' — its probable immediate source — could in theory derive from an *o*-grade *no*-stem PIE **ĥo̯i-no-*, and thus be related to OIr. *ciïd* [s. *-i̯e/o*] 'cries' < **ki-i̯e/o-* ← PIE √**ĥei̯-* 'fall',[54] this formation cannot explain the British words, because PIE **-oi-* becomes W, Bret. *-u-* rather than W *-wy-*, Bret. *-ei-*. Nor, *pace LÉIA* (*loc. cit.*), can a historical **kei-n-* be defended, as Schumacher (2000: 124) emphasizes, because Bret. *-ei-* cannot go back to an old *i*-diphthong. The only workable preform of the Welsh and Breton words is PBr. **kugnī-*, **kugni̯V-*, **kognī-*, or **kogni̯V-*, the origin of which is obscure.[55] These forms, on the other hand, cannot account for the diphthong in OIr.

---

[54] See *KPV* (404, esp. n.(a) s.v. ****ki-i̯e/o-***$_{DEP}$), where the semantic connection is suggested to be either (1) 'fall to one's knees in grief' or (2) 'suffer a psychological collapse'.

[55] No confidence can be placed in *VKG*'s suggestion (*loc. cit.*) of a connection with the base of Gr. κωκύω 'call'. The Greek word is onomatopoeic and has no Indo-European pedigree; cp. Tichy (1983: 266), and further Beekes (2010: I, 813 s.v. **κωκύω**): "It has been assumed that the verb has intensive reduplication, by comparison with Skt. *káuti, kokūyate* 'to wail' (intens.), but these are only attested in grammarians; ... the word is non-Indo-European."

coíne, etc., so a loan from British must be posited. Taking Jackson's reasoned dating as a guide (*LHEB* 463–66), we must place this borrowing no earlier than the second half of the sixth century, since the process of lenition and vocalization of **-gn-* > **-ɣn-* > **-i̯n-* evidently completed its course around that time. This slightly postdates final *i*-affection, completed by the middle of the sixth century (597–99), so the Late Proto-British base would almost certainly have been pronounced **kui̯n-* at the time of the borrowing. Since Primitive Irish possessed only the two diphthongs */ai/* and */oi/*, as the Ogham inscriptions reveal,[56] the latter would have been the obvious choice to represent British **-ui̯-*, giving PrIr. ****koin-***.

4.1.26. *-coil-i-* 'narrow, constrict'

< PrIr. *-koil-ī-* ← PCelt. **koil-$^{o}/_{ā}$-* (> OIr. *coíl*) [adj.] 'thin, narrow', etymology uncertain.Ⓐ

(1) PrIr. ****-koil-ĭ/e-tu-*** (← vb. stem **-koil-ī-*):

exs-ro-koilĭ/etu-* > ***érchoíliud* [m.] 'definition, determination; injunction, legal pronouncement' ↔ vb. *as·rochoíli* [w. *-ī*] 'defines, determines'.

Comment:

Ⓐ This verb appears to be one of the few examples of a weak *ī*-verb formed from an adjective;[57] at any rate, no corresponding noun is quotable. The Celtic adjective (also seen in MW, MBret., OCo. *cul* 'narrow, lean') has been compared[58] to Latv. *kaîls* 'bare, naked, bald', but the doubts expressed by Matasović (*EDPC* 220 s.v. ***koylo-**) are justified: no wider comparanda exist, and the semantic link leaves much to be desired.

---

[56] Greene 1976: 26.

[57] Cp. *GOI* 338 § 525.

[58] *US* 88 s.v. **koilo-s**; *IEW* 610 s.v. ***koi-lo-***; *LÉIA* C-6 s.v. **cáel**.

4.1.27. *coll-i-* 'damage, violate'

< PICelt. **koll-ī-* ← **kollo-* (> OIr. *coll*) [n.] 'destruction', etymology uncertain.Ⓐ

(1) PICelt. ****koll-e-tu-*** (← vb. stem **koll-ī-*):Ⓑ

◊ **kolletu-* > ***collud*** [m.] 'damage, destruction; act of damaging, destroying'

↔ vb. *cuillid* [w. *-ī*] 'damages, destroys'.

ari-kolletu-* > ***airchollud* [m.] 'act of reviling'

↔ vb. *ar·cuilli* [w. *-ī*] 'prohibits, forbids'.

Comments:

Ⓐ Welsh has the cognate nouns *coll* 'loss, damage' and *archoll* 'wound, injury'. A connection with PGmc. **halts* > Go. *halts*, ON *haltr*, OE *healt* 'lame' (← 'broken, damaged') etc., from PIE **kol-d-* ← √**kelh₂-* 'strike, cut', has often been advocated,[59] but the consistent spelling with *-ll-* instead of **-ld-* in Old Irish is rather troubling for this hypothesis, since inherited **-ld-* is still preserved as such until about the time of the Milan glosses. It is true that the Old Irish spelling is only indirectly established — no genuine Old Irish occurrences are attested — yet *coll, cuillid, airchollud, ar·cuilli,* and related forms are relatively frequent in copies of Old Irish texts, especially in the laws, so the complete absence of the spelling *-ld-* from any manuscript evidence is significant. Another derivation is suggested by Thurneysen (*GOI* 95 § 153(c)), who compares Lat. *culpa* 'blame, guilt' and assumes PIE **-lp-* > OIr. *-ll-*, an approach also favored by Hamp (1974b: 196, 197). The preform would then be a thematic *o*-grade **kolp-o-*, from an extended form of a PIE root √**kel-* 'destroy'.[60]

---

[59] *VKG* I, 114 § 69; *IEW* 546 s.v. ***3. kel-, kelə-, klā-***; *EDPC* 212 s.v. ***koldo-**; *LÉIA* C-158 s.v. **2 coll** (noncommittally); Fowkes 1969: 78f., specifically with respect to the Welsh cognates; etc.

[60] Others, however (cp. de Vaan 2008: 151 s.v. **culpa**), would trace Lat. *culpa* to PIE **kṷolp-h₂-* ← √**kṷelp-* 'wind, turn' (for the semantics, cp. Eng. wrong < 'crooked, twisted' ← PIE √**u̯reng^{h}-* 'turn, twist, "wring"'); other cognates include Gr. κόλπος [m.] 'bosom, lap, womb'; OPru. ppp. *po-quelbton*

To judge from various examples of the sense 'act of destroying, injuring' ("as quasi-vn.," see *DIL* s.v.), the neuter noun *coll* may itself have served as the earlier verbal noun to the denominative verb (Type 3, § 2.2.4.1).

Ⓑ The intervening vowel *-*e*- is indicated by the absence of raising in ***collud***.

4.1.28. *comaln-a-*$_{(DEP)}$ 'fulfill'

< PrIr. **komlān-ā-* ← **kom-lā-n$^{o}/_{ā}$-* (> OIr. *comlann*)Ⓐ [adj.] 'equally full' < PCelt. **kom-* + **(ɸ)lā-n$^{o}/_{ā}$-* (> OIr. *lán*) 'full' < PIE **pl̥h$_1$-nó-* ← √**pleh$_1$-* 'become full'.

(1) PrIr. ****komlān-ă̆-tu-*** (← vb. stem **komlān-ā-*):

komlānă̆tu-* > ***comalnad* [m.] 'fulfillment; act of fulfilling, performing (a duty, etc.)'

↔ vb. *comalnaid(ir)* [w. *-ā*] 'fulfills, performs (a duty, etc.)'.

Comment:

Ⓐ The unlenited *-nn* is due to Mac Neill's Law: "In words of more than one syllable, when any liquid (*l, n, r*) is followed by a short syllable ending in *l* or *n*, the latter consonants acquire their strong value, and are written *ll, nn*" (Mac Neill 1909: 347). This must have operated after the shortening of vowels in unstressed syllables.[61]

4.1.29. *comard-a-* 'makes even'

< PrIr. **komard-ā-* ← **komard$^{o}/_{ā}$-* (> OIr. *comard*) [adj.] 'equally high' < **kom-* + **ard-$^{o}/_{ā}$-* (> OIr. *ard*) 'high' < PCelt. **ard-u̯$^{o}/_{ā}$-* < PIE ?**h$_3$r̥d^{h}-u̯ó-* 'high, upright'.Ⓐ

(1) PrIr. ****komard-ă̆-tu-*** (vb. stem **komard-ā-*):

komardă̆tu- > ***comardad*** [m.] 'rivalry, equality; act of competing, rivaling'

↔ vb. *comardaid* [w. *-ā*] 'makes even, adjusts, arranges'.

'kneeling'; PGmc. **hwelf-a-* 'to wind, bend' in ON *hvelfa* 'to make vaulted, turn over', OHG *be-welben* 'to vault', ON *hualf*, OE *hwealf* [f.] 'vault', etc. If this is correct, the Celtic words are probably unconnected for semantic reasons.

[61] For a fuller discussion of Mac Neill's Law, see Stüber 1998: 39–44.

Comment:

Ⓐ It seems clear that OIr. *ard* 'high', MW *arδ* 'high; hill' and Gaul. LN *ARDUENNA* < PCelt. **ard-u̯o/ā-* are related to Ved. *ūrdhvá-* 'upright, high', Av. *ərəδβa-* 'risen, upright, erect', Gr. ὀρθός 'upright, standing', and ON *ǫrðugr* 'steep', but the PIE etymon is difficult to establish. A reconstruction **h₃r̥dʰ-u̯ó-* is possible, if it is assumed[62] that: (1) Gr. ὀρθός points to initial **h₃-*; (2) Ved. ***ūrdhvá-*** with long *ū-* can be derived from a sequence **HR̥C-* instead of **HR̥HC-*, since Av. ***ərə***δβa- with short *ərə-* cannot reflect **Hr̥Hdʰu̯ó-*; and (3) Lat. *-d-* < **-dʰ-* instead of *-b-* (cp. Lat. *verbum* < **u̯er-dʰó-*) may be explained by its unique position between **-r-* and **-u̯-*. None of these assumptions are indisputable, however, and other root configurations have been put forward; see the further discussions of Joseph (1982: 50f.) and Schrijver (1991: 312f.).

4.1.30. *cosecr-a-* 'consecrate'

< EOIr. *cosecr-a-* < VLat. **cosecr-o, -āre* < Lat. *consecr-ō, -āre* 'consecrate'.

(1) EOIr. ****cosecra-th*** (← vb. stem **cosecr-a-*):Ⓐ

cosecrath* > ***cosecrad* [m.] 'consecration; act of consecrating, dedicating'

↔ vb. *con·secra*Ⓐ [w. *-ā*] 'consecrates, dedicates' .

Comment:

Ⓐ The retention of the second syllable in OIr. ***cosecrad*** points to a post-syncope date of borrowing;[63] by this time the verbal-noun suffix **-tu-* had already been reduced to **-th*, subsequently voiced to *-d* [ð] after the unstressed vowel. The deuterotonic *con·secra* is secondary, back-formed from *cosecra*, which was reinterpreted as the prototonic form of a native compound on the analogy of native compounds such as *con·scara* : *·coscra* :

---

[62] With de Vaan 2008: 52f. s.v. **arduus**; cp. Schrijver 1991: 69.

[63] Cp. McManus 1983: 66.

coscrad 'separate' and *con·secha* : *·coiscea* : ***cosc*** 'correct'. The absence of *-n-* in prototonic *·cosecra* and the verbal noun ***cosecrad*** reflects the pronunciation of Vulgar Latin.[64]

4.1.31. *cór-ag-i-* 'arrange, set in proper order'

< PICelt. **kou̯ari-sag-ī-* ← **ko-u̯ar-i-* (> OIr. *coäir*) [adj.] 'correct' < PCelt. **kom-* + **u̯ar-i-*Ⓐ ← PIE **u̯r̥-* ← √**u̯er-* 'regard'.

(1) PICelt. ****kou̯arisag-e-tu-*** (← vb. stem **kou̯ari-sag-ī-*):

kou̯arisagetu-* > ***córugud* [m.] 'arrangement, order, plan; act of arranging, adjusting'

↔ vb. *córaigid* [w. *-ī*] 'arranges, sets in order, sets up'.

Comment:

Ⓐ The coalescence of **kom-u̯°* > PrIr. **kou̯°* > OIr. *co°* in OIr. *coäir* (later *cóir*) [adj.] 'correct' is characteristic of early compound formations with **kom-* (see § 2.1.3.3(2)). It is at least as old as Proto-Insular Celtic, to judge by the exact Welsh cognate *cywair*. It was evidently no longer perceived as a compound when the *sag*-verb *córaigid* 'arranges, sets in order' was created.

4.1.32. *credb-a-* 'erodes, wears away'

< PrIr. **kridu̯-ā-* ← **krid-u̯ā-*(?) (> OIr. *credb*) [f.?] 'erosion, contraction' ←? PIE **kr̥dʰ-u-* 'truncated, cut short' ← **(s)ker-dʰ-*Ⓐ ← √**(s)ker-* 'cut'.

(1) PrIr. ****kridu̯-ă̆-tu-*** (vb. stem **kridu̯-ā-*):

◊ **kridu̯ă̆tu-* > ***credbad*** [m.] 'act of eroding, wearing away'

↔ vb. *credbaid* [w. *-ā*] 'erodes, wears away'.

Comment:

Ⓐ This derivation was proposed by Marstrander (1910), reconstructing PCelt. **krid-u̯-* <

---

[64] Grandgent 1907: 74; Baldi 1999: 277; Weiss 2009: 171.

PIE *$k_{\underline{r}}d^h$-*u*- and comparing Ved. *kṛdhú*- 'shortened, mutilated, small, deficient'. British answers with some *u*-less forms: MW *cryddu* 'to narrow, shrink'; MBret. *crez* [adj.] 'greedy' < PCelt. **krid*-,[65] to which may also be compared MIr. *cres* [adj.] 'narrow, restricted' < PCelt. **krid-to*-.[66] Further comparisons have been made[67] with a group of Middle Irish words of the basic meaning 'gnaw': MIr. *creinnid* 'gnaws, devours, corrodes' ↔ vn. ***creim(m)***, ***crein(n)***, ***créidim***, and ***crinad***. None of these are attested in Old Irish, however, and their analysis is problematic. Specifically, while ***creim(m)*** could conceivably reflect PCelt. **kred-smen*-, the formation of the verb *creinnid* remains unclear,[68] whereas ***créidim***, if old, must be traced back to a conflicting PIE root form *$k\underset{\frown}{re}id^{(h)}$-;[69] moreover, neither of these formations is easily reconciled with PIE *$ker\text{-}d^h$-. In the end, the question of how (or if) these various words may be related must be left open. (***Crinad***, with its unlowered *-i*-, is clearly a late formation and may be ignored.)

The gender of OIr. *credb* is nowhere directly shown, but indirect clues suggest an *ā*-stem. The Old Irish root vowel *-e*- (whether lowered from earlier *-*i*- or continuing original *-*e*- without raising) implies that the vowel of the suffix must be either *-*o*- or *-*ā*-, while the Middle Irish genitive ***credba*** (Aisl. 93.25) would require an *ā*-stem.

---

[65] Loth 1917–1919: 299; *LÉIA* C-227 s.v. **credb** ou **credba**.

[66] *LÉIA* C-231 s.v. **1 cres**; Irslinger 2002: 264f.

[67] Marstrander 1917–1919: 295, referencing Meyer, *Wortk.* 71; *LÉIA* C-228 s.vv. **créidim, creimm, creinn, creinnid**; Stüber 1998: 69.

[68] Stüber, *loc. cit.*

[69] Marstrander, *loc. cit.*

4.1.33. *croch-a-* 'crucify'

< PrIr. **kruk-ā-* ← **kruk-ā-* (> OIr. *croch*) [f.] 'cross' < Lat. *crux, cruc-is* [f.] 'id.'Ⓐ

(1) PrIr. ****kruk-ă̆-tu-*** (← vb. stem **kruk-ā-*):

◊ **krukă̆tu-* > ***crochad*** [m.] 'crucifixion; act of crucifying, hanging'

↔ vb. *crochaid* [w. *-ā*] 'crucifies, hangs'.

Comment:

Ⓐ The vowel of OIr. *croch* 'cross' need not be attributed to analogy (e.g., after *cloch* 'stone', *GOI* 575 § 925); it is as easily explained by the lowering effect of the feminine ending **-ā*.[70] It is evident that native Irish case-endings were regularly substituted for the Latin endings in borrowed words.[71]

4.1.34. *cúrsag-a-* 'correct, reprove'

< PrIr. **kūras-ag-ā-* < Lat. *cūras ag-ō, -ere* 'look after, attend to'.

(1) PrIr. ****kūrasag-ă̆-tu-*** (← vb. stem **kūras-ag-ā-*):

◊ **kūrasagă̆tu-* > ***cúrsagad*** [m.] 'correction, reproof; act of correcting, reproving'

↔ vb. *cúrsagaid* [w. *-ā*] 'corrects, reproves'.

4.1.35. *dall-a-* 'to blind'

< PICelt. **dall-ā-* ← **dall$^{o}/_{ā}$-* (> OIr. *dall*) [adj.] 'blind' < PCelt. **d̯u̯al-n$^{o}/_{ā}$-* < PIE **d^{h}u̯ḷ-nó-* ← √**d^{h}u̯-el-* 'murky, dim' *vel sim.*Ⓐ

(1) PICelt. ****dall-ă̆-tu-*** (← vb. stem **dall-ā-*):

◊ [[**dallă̆tu-* > ***dallad*** [m.] 'act of blinding'

↔ vb. *dallaid* [w. *-ā*] 'blinds'.]]

---

[70] Cp. *LÉIA* C-242 s.v. **croch**.

[71] McManus 1983: 56 fn.91; 1984 *passim*, esp. 152–55.

ari-dallă̆tu-* > ****airdellad* ⇒ ***airdallad***Ⓑ [m.] 'act of blinding'

↔ vb. *ar·dalla* [w. *-ā*] 'blinds'.

Comment:

Ⓐ *IEW* (261–67 s.v. **4. *dheu-, dheu̯ə-***)[72] presents an underlying root, PIE √**dʰeu̯-*, that carries the basic notion of the swirling movement of smoke, dust, fog, etc. Combined with a wide variety of extensions and suffixes, it forms the foundation of a large number of words denoting the blowing of air, dark colors, maddened senses, and defective wits. Given the vast array of forms and multiplicity of meanings, it is very possible that we are dealing with more than one original root of similar shape that have become mixed.[73] From an *l*-extended variant **dʰu̯-el-* are formed PIE **dʰu̯l̥-nó-* > PCelt. **du̯alno-* > OIr., OBret., MW *dall* 'blind', OCo. *dal* gl. *cecus*; PIE **dʰu̯ol-o-* > Gr. *θϝολός > θολός 'mud, muddy water', PGmc. **dwala-* > Go. *dwals* 'foolish'; and PIE **dʰul-o-* > PGmc. **dula-* > OHG *tol*, OE *dol*, MoE *dull*.

Ⓑ The phonetically regular form would be ****airdellad***, with palatalized *-rd-* from the loss of PrIr. **-i-* in the second syllable. No doubt *-dall-* was restored due to the obvious connection with the source adjective *dall* 'blind'.

---

[72] Along with *s*-extended ***dheu̯es-, dhu̯ĕs-, dheus-, dhŭs-***, *IEW* 268–71.

[73] Compare the remarks of Beekes 2010: I, 568 s.v. θύω **2.** *LIV*² has divided the verbs into multiple lemmata, including ****dʰeu̯-*** 'laufen, eilen' (147f.), ****dʰeu̯dʰ-*** 'erschüttern' (148), ****dʰeu̯H-*** 'rasch hin und her bewegen, schütteln' (149f.), ****dʰu̯eh₂-*** 'Rauch machen' (158), ****dʰu̯enH-*** 'qualmen, rauchen' (159), ****dʰu̯ens-*** 'zerstieben, zerbröckeln' (159), and ****dʰu̯es-*** '(ein-, aus-)atmen'.

4.1.36. *damn-a-* 'condemn'

< PrIr. **damn-ā-* < Lat. *damn-ō, -āre* 'condemn'.

(1) PrIr. ****damn-ă̆-tu-*** (← vb. stem **damn-ā-*):

◊ **damnă̆tu-* > ***damnad*** [m.] 'damnation, condemnation; act of damning, condemning'

↔ vb. *damnaid* [w. *-ā*] 'condemns, punishes'.

4.1.37. *dán-a-* 'give, bestow'

< PCelt. **dān-ā-* ← **dā-nu-* (> OIr. *dán*) [m.] 'gift' < PIE **doh₃-nu-* ← √**deh₃-* 'give'.

(1) PCelt. ****dān-ă̆-tu-*** (← vb. stem **dān-ā-*):

◊ **dānă̆tu-* > ***dánad*** [m.] 'bestowal; act of giving, bestowing'

↔ vb. *dánaid* [w. *-ā*] 'gives, bestows'.

4.1.38. *dán-ag-i-*$_{DEP}$ 'give, bestow'

< PICelt. **dānu-sag-ī-*$_{DEP}$ ← PCelt. **dā-nu-* (> OIr. *dán*) [m.] 'gift' < PIE **doh₃-nu-*

← √**deh₃-* 'give'.

(1) PICelt. ****dānusag-ĭ̆-tu-***Ⓐ (← vb. stem **dānu-sag-ī-*):

◊ **dānusagĭ̆tu-* > ***dánaigiud*** [m.] 'act of giving, bestowing'

↔ vb. *dánaigidir* [w. *-ī*] 'gives, bestows'.

Comment:

Ⓐ Intervening **-ĭ̆-* is confirmed by the palatalized *-g-* of *dánaigidir* and ***dánaigiud***.[74]

---

[74] Greene's rule 5(c), Greene 1973: 131.

4.1.39. *decht-a-* 'dictate'

< PrIr. **dikt-ā-* < Lat. *dict-ō, -āre* 'dictate, compose'.

(1) PrIr. ****dikt-ă̆-tu-*** (← vb. stem **dikt-ā-*):

◊ **diktă̆tu-*> ***dechtad*** [m.] 'instruction, doctrine; act of composing, writing, instructing'

↔ vb. *dechtaid* [w. *-ā*] 'composes, writes, instructs'.

4.1.40. *de^{i}mn-ig-i-*$_{(DEP)}$ 'confirm, make certain'

< PICelt. **demeni-sag-ī-* ← **demeni-* (> OIr. *deimin*) [adj.] 'sure, certain, undoubted', etymology uncertain.Ⓐ

(1) PICelt. ****demenisag-ĭ̆-tu-***Ⓑ (← vb. stem **demeni-sag-ī-*):

◊ **demenisagĭ̆tu-* > ***deimnigiud*** [m.] 'confirmation; act of confirming'

↔ vb. *deimnigid(ir)* [w. *-ī*] 'confirms, certifies'.

Comments:

Ⓐ *VKG* (I, 174 § 102) takes *deimin* to be from a zero-grade form **de-mi-ni-* 'sure' ← 'without alteration', belonging to the family of OIr. *moín* [f. *-i*] 'benefit, item of value', Lat. *com-mūnis* [adj.] 'common' < PIE **$h_2$moi̯-ni-*, OW *muin*, MW *mwyn* [m.] 'benefit, value, wealth', Lith. *maĩnas* 'Tausch', Go. *ga-mains* [adj.] 'common' < PIE **$h_2$moi̯-no-*, etc., from √**$h_2$mei̯-* 'change, exchange'. If the root connection is correct, OIr. *deimin* would rather have to reflect PCelt. **de-mēni-* from the full-grade **$h_2$mei̯-ni-*, since zero-grade **demini-* would have regularly yielded ⁂*dimin*. But in any case, one would probably expect the preverb to take the form **dī-* rather than **de-*,[75] producing OIr. ⁂*dímin*. A connection with PIE √**mei̯-* 'bind, tie' is also difficult because of the preverb, of which neither the form nor the meaning 'away from' seems appropriate.

---

[75] *GOI* 504 § 831.A.

Ⓑ Intervening *-ĭ̯- is confirmed by the palatalized -*g*- of *deimnigid(ir)* and ***deimnigiud***.[76] (The word is ambiguously spelled *de(i)mnigud* in Würzburg, but explicitly *demnigiud* multiple times in Milan.)

4.1.41. *derg-a-* 'redden'

< PCelt. **derg-ā-* ← **derg-$^{o}/_{ā}$-* (> OIr. *derg*) [adj.] 'red' ← PIE √**dʰer-g-* 'dark'.Ⓐ

(1) PCelt. ****derg-ă̯-tu-*** (← vb. stem **derg-ā-*):

◊ ⟦**dergă̯tu-* > ***dergad*** [m.] 'act of reddening, becoming or making red'

↔ vb. *dergaid* [w. *-ā*] 'reddens, makes red (esp. by bloodshed), becomes red'.⟧

ambi-dergă̯tu-* > ***imdergad* [m.] 'act of reddening, causing to blush'

↔ vb. *imm·derga* [w. *-ā*] 'makes red, causes to blush'.

u̯o-dergă̯tu-* > ***fodergad* [m.] 'act of reddening, causing to bleed'

↔ vb. *fo·derga* [w. *-ā*] 'reddens (esp. by bloodshed)'.

Comment:

Ⓐ The base of **dʰer-g-* is PIE √**dʰer-*, which with the addition of various root extensions forms a sizable number of words meaning, 'muddy, murky, dark', etc.[77]

4.1.42. *dí-cenn-a-* 'behead'

< PrIr. **dī-kʷenn-ā-* < PCelt. **dī-* + **kʷenno-* (> OIr. *cenn*) [n.] 'head', etymology unknown.

(1) PrIr. ****dī-kʷenn-ă̯-tu-*** (← vb. stem **dī-kʷenn-ā-*):

dī-kʷennă̯tu-* > ***díchennad*Ⓐ [m.] 'act of beheading'

↔ vb. *díchennaid* [w. *-ā*] 'beheads'.

---

[76] Greene's rule 5(c), Greene 1973: 131.

[77] See *IEW* 251f. s.v. ***1. dher-, dherə-***.

Comment:

Ⓐ The absence of syncope in ***díchennad*** ↔ vb. *díchennaid* does not necessarily imply a recent formation, since the connection with *cenn* 'head' would have been obvious enough to the speakers of Old Irish to have led to its restoration. In fact, the coexistence of the historically regular form, syncopated ***dích†ned***, indicates that this is indeed what happened. The latter is chiefly a grammatical word, applied to the cutting off of the first or last letter of a word; its specialized and figurative meaning evidently prevented it from being reshaped in the same manner as the literal ***díchennad***. The absence of ***díchned*** from our early texts is no doubt accidental, owing to the nature of its usage.

4.1.43. ***díchsn-ig-i-***$_{DEP}$ 'exist'

< EOIr. **dīchsVn-* + **-ag-i-*$_{DEP}$ ← *do·cois(s)in* 'there is' < **dī-kom-se-son-* ← PCelt. **-se-son-*

< PIE perf. **se-sonh$_2$-* ← √**senh$_2$-* 'reach, attain'.Ⓐ

(1) EOIr. ****dīchsnag-uth*** (← vb. stem **dīchsn-ag-i-*):

dīchsnaguth* > ***díchsnugud* [m.] 'existence'

↔ vb. *díchsnigidir* [w. *-ī*] 'exists, is extant'.

Comment:

Ⓐ The Old Irish verb *do·cois(s)in* 'there is, exists' belongs to the family of diverse verbal forms associated with the substantive verb, and is used only impersonally in relative constructions (e.g., Wb. 17b10, *amal* ***do-n·coisin***, lit. 'as **it is to us**' = 'as we (really) are'; 21a13, *arnab uilib cumactib* ***di·choissin*** 'for all the powers **that exist**'). Historically it is the compound of a preterite-present formation from the perfect of PIE √**senh$_2$-* 'reach, attain' (see *KPV* 558–60 s.v. ****san-na-***; cp. § 3.1.114).

The derivative *sag*-verb *díchsnigidir* 'exists, is extant' is not built directly to *do·cois(s)in*, but is denominative to an unattested related substantive or adjective. *LÉIA* (D-129 s.v. **do-coissin, di-coissin**) takes the source to be an unattested verbal noun

díchsne, but there is no way to arrive at such a form, with its "double syncope" cluster *-ch†s†n-*, by the regular phonological developments of prehistoric Irish, since historical syncope resulted in the loss of alternating word-internal syllables: thus a preform **dīkomsesoniom* (or **dīkomsesoniā*) would have generated a three-syllable verbal noun **dích†sine*.

This situation resembles a similar problem that McCone (1994–1995) has dealt with in connection with the verbal noun ***cuin†d†gid*** 'request, act of seeking, requesting', which displays a similar unhistorical syncope pattern (see § 3.1.105(1) comment C), and a similar solution may be invoked here. The key is to note that denominative verbs in **-sag-* derived from multisyllabic nouns or adjectives routinely display syncope; for example, *éicen* 'necessity' → *éic†n-ig-id* 'compels', *fochsal* 'removal' (↔ vb. *fo·coisle* 'takes away') → *fochs†l-aig-id* 'takes away', *ingor* 'impious' → *ing†r-aig-id(ir)* 'renders impious', *toreth* 'fruit' → *toir†th-ig-idir* 'fructifies', etc.[78] Many of these alternations are no doubt genuine examples of historical syncope, but once this morphological pattern had become established, it was then available to be mechanically applied to new formations even after the phonological process had ceased to operate. In this way, starting from a post-syncope nominal form **díchsVn-* (probably an old verbal noun of *do·cois(s)in*, but the specific shape is not recoverable; **díchsine* [*-io* or *-iā*], **díchsen* [*-o* or *-ā*], **díchsin* [*-i*], etc. would all do equally well), we can arrive at the form of *díchsnigidir* by the straightforward application of the synchronic rule: **díchsVn-* 'existence' → *díchs†n-ig-idir* 'exists, is extant'; and from this the weak verbal noun in *-ud* was formed.

---

[78] Several dozen such pairs can be found among the denominatives in **-sag-* compiled by Joseph (1987: 117–34).

4.1.44. *díl-a-* 'satisfy, recompense'

< PrIr. **dīl-ā-* ← **dī-lo-* (> OIr. ***díl***) [n.] 'requital, recompense'Ⓐ < PCelt. **dī-* + **-l-o-*

← PIE **lh₁-* ← √**leh₁-* 'let, leave'.

(1) PrIr. ****dīl-ă̄-tu-*** (← vb. stem **dīl-ā-*):

◊ **dīlă̄tu-* > ***dílad*** [m.] 'satisfaction, recompense; act of satisfying, recompensing'

↔ vb. *dílaid* [w. *-ā*] 'satisfies, pays, recompenses'.

Comment:

Ⓐ The source noun ***díl*** is a verbal noun in its own right, belonging to the primary verb *do·lá* 'discharges, remits (debts, etc.)', § 3.1.67(1).

4.1.45. *díls-ig-i-* 'surrender, forfeit'

< PrIr. **dīlesso-sag-ī-* ← **dī-less$^{o}/_{ā}$-* (> OIr. *díles*) [adj.] 'immune from legal challenge or remedy' ← **dī-* priv. + **lessu-* (> OIr. *les(s)*) [m.] 'benefit, remedy' (?)< PCelt. **lexs-tu-*

← **leks-* < PIE √**h₂leks-* 'protect, ward off'.Ⓐ

(1) PrIr. ****dīlessosag-e-tu-*** (← vb. stem **dīlesso-sag-ī-*):

dīlessosagetu-* > ***dílsiugud* [m.] 'act of renouncing, surrendering, forfeiting'

↔ vb. *dílsigid* [w. *-ī*] 'forfeits, renounces; lets go, gives up, surrenders'.

Comment:

Ⓐ Compare also OIr. *les(s)aigidir* 'remedies, tends' ↔ vn. ***les(s)ugud*** 'act of remedying, looking after', § 4.1.66.

Pedersen (*VKG* I, 167 § 99(3)) takes OIr. *les(s)* 'Vorteil' to be from an enlargement of the PIE root now reconstructed as √**pleh₁-* 'fill' but does not specify the exact formation. The root-final laryngeal is problematic for this analysis (PIE **pleh₁-d$^{(h)}$-tu-* > OIr. **líss*, PIE **plh₁-d$^{(h)}$-tu-* > OIr. **lă̄ss*), and the semantic comparison with 'fullness' is less than optimal. Irslinger's recommendation (2002: 111f., also 106f.) that OIr. *les(s)* and its British cognates, MW *lles* [m.] 'Nutzen, Vorteil, Gewinn' and OCo. *les* gl. *commodum*,

descend from a *tu*-stem derivative of PIE √*h_2*leks-* 'protect, ward off'[79] may be feasible, provided the development of PIE **-Gst-* > PCelt. **-xst-* > OIr. *-s(s)-* can be defended.

The most detailed discussion of this issue to date is that of Greller (1997: 101–8), who concludes that late PCelt. **-xst-* regularly produced OIr. *-s(s)-* and W *-s-*. This conclusion runs counter to the standard doctrine which takes the outcome to be OIr. *-cht-*, W *-th-*.[80] The main evidence in support of the traditional view is provided by OIr. ***echtar*** 'outside of', MW ***eithaw, eithaf*** 'extreme', OIr. ***óchtra, úachtra*** 'upper part', etc., thought to contain the preposition **eks-* 'out of' (> OIr. *es(s)-*, MW *es-, ys-*) and **o̯ups-* 'above' (> OIr. *ós, úas*, MW *uch, uwch*) respectively. However, these may be susceptible of an alternative explanation, since Russell (1988: 120–23) has documented the presence of both asigmatic and sigmatic reflexes of these prepositions in Celtic; these forms could as well reflect **ek-tero-, *ek-tamo-, *o̯up-tero-*, etc., as Pedersen (*VKG* I, 93 § 55; II, 660; *CCCG* 27 § 31) thought. McCone (1986: 232f.; 1991: 73f.) argues that the *t*-preterite of roots in final *-g-* (e.g., OIr. *aingid* 'protects' : pret. *·anacht*, and OIr. *aigid* 'drives' : pret. *·acht* ≈ MW *aeth*) show the regular outcome of **-x-s-t* from the inherited sigmatic aorist. Yet this view does not explain the curious distributional fact, noted by Watkins (1962: 161), that the *t*-preterite is found with roots in **-g-* but not with those in **-k-*, from which he concludes (165f., 173f.) that the formation is analogical in these verbs.[81] On the other side of the question, if PCelt. **-xst-* regularly yields OIr. *-s(s)-*, then the ending *-s(s)*, instead of **-*cht*, in the third-person singular of the *s*-subjunctive of guttural-final stems (e.g., *téit* 'goes' :

---

[79] Probably a variant of √*h_2*elk-* 'ward off', *LIV*² 278 n.1 s.v. ****$h_2$leks-***.

[80] *GOI* 391 § 623; Watkins 1962: 143; McCone 1991: 65.

[81] Cp. also Greller 1997: 90f., 100, 107.

subj. *téis* < **tēxsti* < **tēg-s-ti*) is no longer problematic.[82] Evidence for the development of PCelt. **-xst-* > OIr. *-s(s)-*, W *-s-* might be adduced from MIr. *deisreth* 'right hand', if this represents inherited **deks-ter-eto-* rather than a borrowing from Lat. *dexter* with the addition of the suffix *-eth*; from OIr. ***es(s)air*** 'scattering, litter' < **ek(s)-star-ā-* (§ 3.1.115(2)), if the compound was created before PCelt. **st-* had become simplified to **s-* in pre-Irish; and from OIr. *tes(s)* [m.], W, Co. *tes* [m.], Bret. *tez* [m.] 'heat' < PCelt. **texs-tu-* < PIE **teps-tu-*.[83] Ó Flaithearta (1997) takes the shape of this last form to be the most reliable indicator of the outcome of PCelt. **-xst-*, as he finds no adequate alternative explanation for it.[84] Against this, however, Schrijver (2007: 368 fn.20) argues, on the basis of MW *kystal* 'as good' < **kom-statlo-* and MW *gwest* 'night's stay' < **u̯es-stā-*,[85] that all Proto-Celtic clusters **-Cst-* developed into British *-st-*, and thus PCelt. **texstu-* ought to have produced W ‡*test*; he speculates that PCelt. **-ϕ-* may have been lost before **-sC-* at an early stage, never becoming **-x-* in this environment as it did before **-sV-*.

If this suggestion is valid, then similar problems would face MW *lles* and OCo. *les*, assuming they and OIr. *les(s)* indeed belong to PIE √**h₂leks-*: a *tu*-stem **h₂leks-tu-* > PCelt. **lexstu-* should also, by Schrijver's reckoning, have yielded W ‡*llest*, Co. ‡*lest*, while a simple *u*-stem **h₂leks-u-* > PCelt. **lexsu-* would have generated W ‡*llech*, Co. ‡*le(gh)*. Yet Schrijver's materials (1995: 410–15) include only examples of PICelt. **-sst-* (< PCelt. **-s-st-* and **-d-st-*) and **-mst-*, so it does not necessarily follow that an identical outcome would

---

[82] See *GOI* 391 § 623; Watkins 1962: 143f.; McCone 1991: 73f.; Schrijver 2007: 367.

[83] Greller 1997: 104.

[84] I.e., PIE **tepes-tu-* > PrIr. **teëssu-* > OIr. ‡*tés(s)* (cp. PIE **tepents* > OIr. *teë, té* 'hot', **tepentes* > OIr. *téit*); PIE **tepos-tu-* > PrIr. **teössu-* > OIr. ‡*tiäs(s)*, ‡*tías(s)* (cp. PIE **nepotos* > OIr. **niä* ⇒ *nië*, ***nía*** 'nephew' [*GOI* 207 § 323.3]); PIE **teps-u-* > PCelt. **texsu-* > W ‡*tech*, Bret. ‡*tec'h* (cp. PIE **treg-so-* > PCelt. **trexso-* > MW *trech* → *trechu* 'to overcome, conquer', Bret. *trec'hi* 'id.'). See Ó Flaithearta 1997: 657.

[85] A full discussion is presented at Schrijver 1995: 406–15.

have obtained for *-*xst*-. In view of this, if Irslinger's proposal is to be maintained — and at present no viable alternative seems to be available — the simplest solution is to assume that PIE *-*pst*- and *-*Gst*- fell together in PCelt. *-*xst*- as expected, and that this cluster was then simplified within Proto-Celtic to *-*st*- > PBr. *-*ss*- and thus did not behave in the same fashion as PICelt. *-*sst*- and *-*mst*- > PBr. *-*st*-.

4.1.46. ***dí·mec(c)-i-***$_{DEP}$ 'regard, consider'

< PrIr. *$dī$-*megg-i-*$_{DEP}$ ← LPBr. *$dī$-*meg* < PCelt. *$dī$- priv. + *mik-$ā$- ← PIE √*$me\underset{\frown}{i}\overset{(\frown)}{k}h_2$- 'blink, twinkle'.Ⓐ

(1) PrIr. ***dī-meggi-m*** (← vb. stem *$dī$-*megg-i*-):

*$dī$-*meggim* > ***dímic(c)em*** [f.] 'contempt, condemnation; act of disdaining, condemning'

↔ vb. *do·meic(c)ethar* [w. -*ī*] 'despises, disdains, condemns'.

Comment:

Ⓐ The basic meaning of PIE √*$me\underset{\frown}{i}\overset{(\frown)}{k}h_2$- (*vel sim.*) was probably 'blink, twinkle, flash', from which developed semantic reflexes involving quick movement (e.g., Lat. *micō*, *-āre* 'quiver, dart' besides 'twinkle', Cz. *mikati* 'to move abruptly') and appearance or regard (e.g., CS *mъčьta* [f.] 'vision, apparition', MW *myged* [m. f.] 'honor, respect', etc., and privatively OBret. *di-micit*, MW *di-r-myg*, OIr. *do·meic(c)ethar* 'disregards' → 'disdains').

The base *mik- is clearly established by MW ***myg***-*ed* 'honor, respect', *ed-****myg***-*u* 'to admire', *cein-****myg***-*u* 'to honor', etc., in comparison with Lat. ***mic***-*ō*, *-āre*. The traditional etymology of the Old Irish verb *do·meic(c)ethar* ↔ vn. ***dímic(c)em*** has taken the stem to be from a primary *n*-present formation, i.e., PCelt. *mik-*nā́*- < PIE *$mi\overset{(\frown)}{k}$-*né-*h_2-, with *-*gg*- (> OIr. unlenited /-*g*-/ spelled ⟨-*c*(*c*)-⟩) from *-*kn*- in pretonic position,[86] but this derivation is highly problematical. Even if Celtic geminated stops can be derived from PIE *-*Cn*- in

---

[86] *VKG* II, 576 § 777 Anm.; accepted by Loth 1929: 153; *LÉIA* M-26f. s.v. **mecc-**; *LIV*² 429 s.v. ?*$me\underset{\frown}{i}\overset{(\frown)}{k}h_2$-.

this way, which seems rather doubtful,[87] the expected outcome here should have been voiceless *-*kk*-, not *-*gg*-; and furthermore, the ensuing weak verb should have belonged to the *ā*-conjugation, whereas *do·meic(c)ethar* is unambiguously an *ī*-verb. Other possibilities are no more promising. An earlier cluster *-*nk*- would regularly produce /-*g*-/ in Old Irish, but an *n*-infixed stem **mi-n-k*- (to an *aniṭ* root) would yield OIr. ⁂*méc(c)*- with compensatory lengthening of the vowel; and a combination of two guttural obstruents or a dental plus a guttural, which would also produce OIr. /-*g*-/,[88] does not apply in this instance for etymological reasons. Finally, the absence of raising of the root vowel before the *-*ī*- in the following syllable (i.e., *do·meic(c)ethar* instead of ⁂*do·mic(c)ethar*) is also troublesome. Indeed, there seems to be no way to arrive at OIr. *-mec(c)*- (/-*meg*-/) from PCelt. **mik*- by historically regular sound changes.

It is significant therefore that MW *go-**uec*** (MoW *gofeg*) [f.] 'mind; speech' < PCelt. **u̯o-mik-ā*- and MW *ada-**meg*** [f.] 'speech, riddle, fable' < PCelt. **ati-ambi-mik-ā*- reflect a Late Proto-British base *-*meg*- that is an exact phonetic match of the Irish root; this strongly suggests that the Irish word was borrowed from British. Indications point to a relatively recent loan: the lowering of *-*ĭ*- to *-*e*- by final *ā*-affection in British probably occurred in the first half or the middle of the fifth century,[89] and lenition of *-*k*- to *-*g*- may be assigned to roughly the same period;[90] but the Irish assignment of *i*-flexion to the newly borrowed verb implies a somewhat later date, since one might rather expect the verb to have adopted *a*-flexion as long as the British source stem still retained its *-*ā*-.

---

[87] See the remarks under § 4.3.7 comment A.

[88] *GOI* 86f. § 137; 92 § 149.2.

[89] *LHEB* 578, 694.

[90] McCone 1996: 92, revising *LHEB* 561, 695.

The process of British apocope probably began in the late fifth century and was certainly complete before the second half of the sixth;[91] so we may reasonably place the Irish borrowing in the second half of the sixth century or later. Because the raising and lowering of stressed vowels in Irish had already occurred before this date,[92] the root vowel would not have been affected by the verbal *i*-suffix. This date of borrowing is further corroborated by the preservation of the second syllable in the verbal noun ***dímic(c)em***, which points to a date after the syncope of the mid-sixth century.[93] Because apocope predated syncope, the contemporary verbal-noun suffix at this time would have been (neutral and lenited) **-m* rather than historical **-mā-*.

Only derivatives of **dī-megg-* 'contempt' exist in Irish, so it seems most plausible to assume that it is this compound rather than the simplex that was borrowed. The equivalent British verb is attested in OBret. *dimicit* 'neglects', *dimicent* '(they) despise', and cp. MW *dirmygu* 'to despise'; but since all the British verbs reflect **-mig-* with unlowered vowel, Irish must not have borrowed the verb directly but rather an unattested noun **dīmeg* < **dī-mik-ā-* (compare, with slightly altered prefix, MoBret. *dismeg* [m.] 'dishonor', MBret. *dismegancç* 'contempt'), from which the existing verb was derived.

4.1.47. *dóer-a-* 'enslave, debase'

< PrIr. **duu̯ir-ā-* ← **du-u̯ir^{o}/ā-* (> OIr. *dóer*) [adj.] 'unfree, lowborn, base' ← PCelt. **du-* 'bad' + **u̯iro-* 'man' < PIE **u̯iH-ró-* 'id.' ← 'vigorous, strong' ← √**u̯eiH-* 'be vigorous'. Ⓐ

---

[91] *LHEB* 631, 695f.; cp. McCone 1996: 160.

[92] Probably in the second half of the fifth century (*LHEB* 143).

[93] McCone 1996: 127.

(1) PrIr. ***duu̯ir-ă̆-tu-*** (← vb. stem **duu̯ir-ā-*):

◊ **duu̯irătu-* > ***dóerad*** [m.] 'act of debasing, reducing to the status of serf or thrall'

↔ vb. *dóeraid* [w. *-ā*] 'debases, reduces to the status of serf or thrall'.

Comment:

Ⓐ OIr. *dóer* [adj. *-o/ā*] 'unfree, lowborn' (as subst. [m. *-o*] 'serf, thrall, member of the servile class') is the counterpart to *sóer* [adj. *-o/ā*] 'free' (as subst. [m. *-o*] 'freeman, member of the noble class'); see § 4.1.97 comment A.

The short **-i-* of PCelt. **u̯iros* [m.] 'man' > OIr. *fer* merits some comment, because **u̯īro-* with long **-ī-* < **-iH-* would be expected by reference to the underlying root √**u̯ei̯H-*[94] (cp. Gr. ἴς [f.], Lat. *vīs* [f.] 'strength, force', probably a root noun). The long vowel is found in Indo-Iranian (Ved. *vīrá-* [m.] 'man, hero', Av. *vīra-* [m.] 'man, human') and Baltic (Lith. *výras*, Latv. *vīrs* [m.] 'man, husband'), while the form **u̯ĭro-* with short vowel is found in Germanic (PGmc. **weraz* > Goth *waír*, ON *verr*, OHG, OS, OE *wer* [m.] 'man'), Italic (Lat. *vir* [m.] 'id.'), and Celtic (OIr. *fer*, OW, OCo. *gur*, OBret. *-gur*, MW *gwr* [m.] 'id.'). This shortening has often been attributed to Dybo's (1961) observation that PIE long vowels in pretonic syllables are frequently shortened in Italic and Celtic; the same phenomenon has also been claimed for Germanic.[95] Joseph (1980: 359f.) suggests that a more likely explanation is to be found in the hiatus forms that regularly developed from the antevocalic zero grade of certain oblique cases of the root noun, such as gen.sg. **u̯iH-és* > **u̯i'es*, from which a new zero-grade stem **u̯i-* could have been extracted as the base of secondary derivatives. Casaretto (2004: 419 w. refs.), on the other hand, sees its

---

[94] Sometimes connected with PIE √**u̯ei̯h$_1$-* 'make for (sth.)', e.g., *IEW* 1178 s.v. ***u̯ĭro-s***.

[95] E.g., Schrijver 1991: 340, 532–36; *EDPC* 6; cp. Lühr 2000: 100; Schaffner 2001: 331f., esp. fn.20; Weiss 2009: 99. It is not universally accepted, however; cp., e.g., the criticisms of Joseph 1982: 33–35 and Ringe 1988: 420f., and the conclusion of Ringe 2006: 79: "There was certainly no regular sound change that could have shortened the vowels."

source in a regular loss of laryngeal in composition, subsequently generalized. Isaac (2007: 47–49) takes a different approach, assuming the laryngeal to be *-h_3- and arguing for its regular loss in Celtic in the environment of *-*o*- in the following syllable; he accordingly connects the root with PIE √*$\underset{\frown}{u}e\underset{\frown}{i}h_3$- 'wither' and posits a semantic development 'withering, decaying one' (cp. *$m\underset{\cdot}{r}$-*tó*- 'mortal') → 'human' → 'man (male)'. However, by disconnecting the Celtic form from those of Latin and Germanic, this scenario requires positing independent explanations for similar phenomena,[96] and for this reason, if for no other, it is less attractive than a unified solution.

4.1.48. *dolb-a-* 'form, fashion, shape'

< PCelt. *$dol\underset{\frown}{u}$-*ā*- ← *dol-$\underset{\frown}{u}o$- 'formation, fabrication' (> OIr. *dolb* [m.] 'sorcery, illusion')

< PIE *$dolh_1$-$\underset{\frown}{u}o$- ← √*$delh_1$- 'carve, split'.Ⓐ

(1) PCelt. ***dol$\underset{\frown}{u}$-$\breve{a}$-tu-*** (← vb. stem *$dol\underset{\frown}{u}$-*ā*-):

◊ *$dol\underset{\frown}{u}\breve{a}tu$- > ***dolbud*** [m.] 'formation, invention; act of forming; a formation, thing formed'

↔ vb. *dolbaid* [w. -*ā*] 'fashions, shapes, forms'.

Comment:

Ⓐ *LIV*² (114 s.v. ***delh$_1$-***) reconstructs the laryngeal as *h_1 on the evidence of Lat. *doleō, -ēre* 'schmerzen' ← 'Schmerz empfinden' < *'immer wieder schlagen' < iter. *$dolh_1$-$\acute{e}\underset{\frown}{i}^{e}/_{o}$-, but notes (n.1) that *h_2 or *h_3 would be possible if the Latin verb is to be otherwise explained.

---

[96] He proposes (2007: 56–59) an account for independent shortening in Latin, but offers no explanation for Germanic (59).

4.1.49. *don-a-* 'console'

< PrIr. **don-ā-* ← **dono-* (> OIr. *don*) [m./n.?] 'misfortune, evil', etymology unknown.

(1) PrIr. ****don-ă̆-tu-*** (← vb. stem **don-ā-*):

◊ **donă̆tu-* > ***donad*** [m.] 'consolation; act of consoling'Ⓐ

↔ no attested vb. **donaid.*

dī-donă̆tu-* > ***dídnad* [m.] 'comfort, consolation; act of comforting, consoling'Ⓐ

↔ vb. *do·dona* [w. *-ā*] 'comforts, consoles'.

ambi-dī-donă̆tu-* > ***imdídnad* [m.] 'protection; act of protecting'

↔ vb. *imm·dídna(thar)* [w. *-ā*] 'protects'.

(*com-*ʿ + ***dídnad*** > ***comdídnad*** [m.] 'consolation, comfort'.)Ⓐ

Comment:

Ⓐ The sense 'console' is more understandable in the compound *do·donaid* ↔ vn. ***dídnad***, from *dí-* 'away' plus *don* 'misfortune, evil', than it is in simple ***donad***, and one wonders if the former has lent its sense to the latter. Given the apparent absence of a simple verb **donaid*, it is at least possible that **dī-donā-* represents the initial verb formation. The compound ***comdídnad*** is a recent creation, with productive *com-*ʿ added to post-syncope ***dídnad***, no doubt under the influence of Lat. ***cōn***sōlātiō, ***cōn***sōlārī (cp. Wb. 14b11, *ut possimus et ipsi* ***consulari*** *eos qui in omni presura sunt* **:** *.i. ... isdessimrecht* ***co^{m}díthnatha*** *etsóire dochách arsóireni* 'i.e. ... our freedom is an example of **consolation** and of freedom to everyone').

4.1.50. *escon-a-* 'render common or unclean'

< PrIr. **exscon-ā-* ← **exs-con-$^{o}/_{ā}$-* (> OIr. *escon*) [adj.] 'common, unclean' < **exs-* 'un-, non-, absence of' + **con-$^{o}/_{ā}$-* (> OIr. *con*) [adj.] 'pure',Ⓐ etymology unknown.

(1) PrIr. ***esconosag-ĭ̆-tu-*** (← vb. stem **escono-sag-ī-*):Ⓑ

esconosagĭ̆tu-* > ***esconaigiud* [m.] 'act of rendering common or unclean'

↔ vb. *esconaid* [w. *-ā*] 'renders common or unclean'.

Comments:

Ⓐ The simple adjective OIr. *con* 'pure' appears to be attested once, in *Amrae Choluimb Cille*: *A chub*$^{\underline{us}}$ ***con*** *a anim glan.* 'O conscience **pure**, O clear soul' (Stokes 1899: 132.5, readings of LU and Rawl. B. 502).

Ⓑ Formally the verbal noun ***esconaigiud***, as if from a verb **esconaigid(ir)* < **escono-sag-ī-*, does not exactly correspond to the attested verb *esconaid* < **escon-ā-*. Both are *hapax legomena*, appearing only in Würzburg, and may well be nonce formations.

4.1.51. *ét-i-* 'cover'

< PrIr. **ēt-ī-*, etymology uncertain.Ⓐ

(1) PrIr. ****ēt-ĭ̆/e-tu-*** (← vb. stem **ēt-ī-*):

◊ **ētĭ̆/etu-* > ***éitiud*** [*-tu*] 'act of clothing, covering; raiment, covering, a garment'

↔ vb. *éitid* [w. *-ī*] 'clothes, covers'.

Comment:

Ⓐ The verbal noun ***éitiud*** 'act of clothing, covering' appears as early as Würzburg, although the corresponding verb *éitid* 'clothes, covers' is only attested later. Pedersen (*VKG* II, 655 § 852 Anm.) considers *ét-* to have originated in some way from **en-tog-* (cp. ***étach*** 'covering, clothing, a garment', § 3.1.133(2)) or from a hypothetical **en-teg-* (3.sg.subj. **in·tes(s)*, **·éit*), from PIE √**(s)teg-* 'cover', but it is not clear how this derivation would be achieved. It hardly seems likely that the third-person singular subjunctive conjunct form, which is unique in the loss of the stem-final consonant, would become the source of a new post-syncope weak verb. On the other hand, it might be conceivable that ***étach*** < **en-tog-o-* was reanalyzed as a formation with suffixal *-ach* < **-āko-*, and a

new noun **ét* extracted as the source of a denominative verb **ēt-ī-*. If so, this must have occurred not very long before the appearance of ***éitiud*** in Wurzburg. The confusion could not have arisen before **-ā-* had first been shortened to **-a-* in unstressed syllables and subsequently merged with **-o-* as the reduced vowel [ə], which probably happened in the latter part of the seventh century; it is not consistently reflected in the earliest literary sources.[97]

However that may be, the weak verb clearly belongs to the *ī*-conjugation. It is therefore very doubtful that the 3.sg.pres.subj. *do-n·ētad-som* (Wb. 13d20) belongs to a compound of this verb, despite *VKG* (II, 514 § 715) and *LWG* (348 s.v. **do-éta**). The semantics are attractive — *oportet enim corruptibile hoc induere incorruptionem et mortale hoc induere inmortalitatem* : *.i. isuisse intoichther andruailnitheso honnebdru*$^{\underline{ailnithiu}}$ *nibu degming* ***donetadsom*** *achorp fadesin issuidiu* 'i.e., it is fitting that this corruptible should be clothed with the incorruptible; it were not difficult **that he should clothe** his own body therein' — but *do-n·ētad-som* would belong to a weak *ā*-verb, while the *ī*-verb should have been **do-n·ēted-som*. Furthermore, a close look at the manuscript facsimile appears to confirm Chroust's reading[98] of *-c-* instead of *-t-*, in which case it should be read *do-n·ecad-som* 'that he should see' (from *do·eccai* 'sees').

4.1.52. *fás-ag-i-* 'empty, make void'

< PICelt. **u̯āsso-sag-ī-* ← PCelt. **u̯ās-t^{o}/ā-* (> OIr. *fás*) [adj.] 'empty' ← PIE **h$_1$u̯eh$_2$-s-*$^{Ⓐ}$ ← √**h$_1$u̯eh$_2$-* 'leave, abandon'.

---

[97] McCone 1996: 33, 135f.

[98] See the *Addenda et Corrigenda, Thes.* I, 726^{588}.

(1) PICelt. ***u̯āssosag-e-tu-*** (← vb. stem **u̯āsso-sag-ī-*):

◊ **u̯āssosagetu-* > ***fás(s)ugud*** [m.] 'act of emptying, making void, laying waste'

↔ vb. *fás(s)aigid* [w. *-ī*] 'empties, makes void, lays waste'.

Comment:

Ⓐ An exact cognate of the Irish adjective is found in Lat. *vāstus* 'empty, waste, desolate', and another close cognate in WGmc. **wōstja-* > OHG *wuosti*, OS *wōsti*, OE *wēste* 'deserted, empty, uncultivated'. For the source of the **-s-*, Nussbaum (1998: 80) notes the implausibility of setting up an *s*-stem noun **h_1u̯eh_2-(e)s-*, given both the utter lack of evidence in support of it and the passive semantic value 'desolated, deserted, laid waste' that is possible in both the Latin and Germanic words (versus the non-passive meanings fundamental to Lat. *vānus* 'empty', presumably from **h_1u̯eh_2-no-*, and Go. *wans*, ON *vanr*, OHG, OS, OE, OFris. *wan* 'lacking, wanting, deficient' < **h_1uh_2-ono-*); instead, he suggests the possibility (80f.) that the post-PIE dialects ancestral to Italic, Celtic, and Germanic might have inherited the PIE *s*-aorist stem **h_1u̯eh_2-s-* 'abandon(ed)' (cp. Gr. ἔᾱσα 'left alone, let, allowed') in isolation, reanalyzing it as an indivisible transitive root **(H)u̯ās-* and forming from it in a straightforward manner the passive verbal adjective **(H)u̯ās-to-* 'deserted'.[99]

4.1.53. **fa^{i}tch-ig-i-* 'caution, warn'

< PrIr. **u̯otek^{w}o-sag-ī-* ← **u̯o-tek^{w}-^{o}/$_{ā}$-* (> OIr. *faitech*) [adj.] 'cautious, wary', prob. ← PCelt. **tek^{w}-* 'run, flee' < PIE √**tek^{w}-* 'run, flow'.Ⓐ

(1) PrIr. ****u̯otek^{w}osag-e-tu-*** (← vb. stem **u̯otek^{w}o-sag-ī-*):

u̯otek^{w}osagetu-* > ***faitchiugud* [m.] 'caution; act of cautioning, warning'

↔ no attested vb. **faitchigid(ir)*.

---

[99] For an extensive discussion of the PIE root √**h_1u̯eh_2-*, see Nussbaum 1998: 9–84, esp. 73–84.

Comment:

Ⓐ Pedersen (*VKG* II, 639 § 839 Anm.) expressed hesitation over the source root: "ob air. **faitech** nir. **faiteach** 'vorsichtig, furchtsam' zu **tech-** [i.e., **tek^{w}-* 'run, flee'] oder **tong-** [i.e., **tek-* 'swear' ← 'stretch out the hand', suppl. to **tu-n-g-* 'swear', § 3.2.4(1)] gehört, kann ich nicht entscheiden." (Phonologically **tēg-* 'go' could also produce the correct outcome, but the sense is less suitable.) A comparison with EMW ***godeb*** [m.] 'refuge, shelter' < **u̯o-**tek^{w}**-o-* and MW ***godech*** 'to retreat, hide' < subj. **u̯o-**tek^{w}**-s$^{e}/_{o}$-* would seem to favor the former.

4.1.54. *fír-a-* 'make true'

< PCelt. **u̯īr-ā-* ← **u̯ī-r$^{o}/_{ā}$-* (> OIr. *fír*) [adj.] 'true' < PIE **u̯eh$_1$-ro-* 'id.'

(1) PCelt. ****u̯īr-ă̄-tu-*** (← vb. stem **u̯īr-ā-*):

◊ **u̯īră̄tu-* > ***fírad*** [m.] 'act of realizing, fulfilling'

↔ vb. *fíraid* [w. *-ā*] 'makes true, realizes, fulfills'.

4.1.55. *fírian-ag-i-$_{DEP}$* 'justify'

< PrIr. **u̯īriu̯ono-sag-ī-$_{DEP}$* ← **u̯īriu̯on$^{o}/_{ā}$-* (> OIr. *fírian*) [adj.] 'just, righteous' < PBr. **u̯īr-u̯on$^{o}/_{ā}$-* 'id.' ← PCelt. **u̯ī-r$^{o}/_{ā}$-* [adj.] 'true' < PIE **u̯eh$_1$-ro-* 'id.'Ⓐ

(1) PrIr. ****u̯īriu̯onosag-e-tu-*** (← vb. stem **u̯īriu̯ono-sag-ī-*):

◊ **u̯īriu̯onosagetu-* > ***fírianugud*** [m.] 'justification; act of justifying, making righteous'

↔ vb. *fírianaigidir* [w. *-ī*] 'justifies, makes righteous'.

Comment:

Ⓐ The Old Irish word *fírian, fírion* 'just' is a borrowing of the Proto-British word that appears in Middle Welsh as *gwirion* 'id.'.[100] The Welsh word has been taken as a *dvandva*

---

[100] *GOI* 569 § 917.

compound 'true [and] just', composed of MW *gwir* 'true' + *iawn* 'just'.[101] However, Schrijver (1995: 213f.) shows that this cannot be correct because the word in Middle Welsh is not ⁑*gwiriawn* but always *gwirion*,[102] and his proposal of PBr. **u̯īr-* + **-i̯ono-*, with the same suffix as that found in MW *tir-ion* 'lenient', etc. is unimpeachable. Therefore OIr. *fírian, fírion* must have originally had a short *-o-*, and the long vowel that sometimes appears in OIr. *fírián, fírión* (both attested in Würzburg), and even *fírién* (Milan and later) must be secondary, an inference supported by the fact that the verb *fírianaigidir* and the verbal noun *fírianugud* are nowhere written with the vowel marked long. Final unstressed *-V̆n* is relatively rare in Old Irish, the prevalent pattern being *-V̆nn* (short vowel with unlenited *-n*) vs. *-V̄n* (long vowel with lenited *-n*),[103] so the vowel lengthening in this word may have been initially supplied to make it conform to the common synchronic pattern. The later ***fírién*** most likely shows influence from the diminutives in *-án, -én*.

---

[101] Cautiously *VKG* I, 158 § 96; accepted by Jackson 1967: 132 (PBr. **u̯īroi̯ānii̯ā* 'truth and justice' > MBret. *guiryonez*, W *gwirionedd*), Deshayes 2003: 313 s.v. **Gwirion**, and *GPC* 1668f. s.v. **gwirion, gwiriawn**. There is disagreement over the etymology of W *iawn*, whether from **epōno-* (*VKG* I, 92 § 54) or **i̯ānо-* (Jackson, *loc. cit.*). *EDPC* (113 s.v. ***efino-**) also suggests **h₁epi-* 'on, by' + **-no-* (besides **i̯ānо-*, 433 s.v. ***yānо-**), but the semantic connection with 'just' is far from obvious.

[102] EMW *gwiriawn* (fifteenth-century and later) is a hypercorrection, probably influenced by *iawn*.

[103] The reasons for this are largely historical and circumstantial. Most inherited intervocalic clusters of **C* + **n* underwent simplification, becoming either *-n-* with compensatory lengthening of the preceding vowel (in the case of obstruent + **-n-* generally, except for **-apn-, *-opn-* > **-aun-, *-oun-*) or *-nn-* (in the case of **-sn-*; also **-ndn-*). In addition, the operation of Mac Neill's Law (see § 4.1.28 comment A), which secondarily delenited *n* at the close of an unstressed syllable beginning with *l, n*, or *r*, increased the number of words with final *-V̆nn* at the expense of those with final *-V̆n*, while the productive diminutive suffixes *-án, -én, -ín* further increased the number of words with final *-V̄n*. These circumstances conspired to leave Old Irish with a large body of words ending in *-V̆nn* and *-V̄n* alongside relatively few ending in *-V̆n*.

4.1.56. ***folc-i-*** 'wash (the head)'

< PCelt. *$\underset{\frown}{u}$olk-ī- { ← *$\underset{\frown}{u}$olk-o- (> OIr. *folc* [m.] 'heavy rain') < PIE *$\underset{\frown}{u}$olk-o- or: ; < PIE caus. *$\underset{\frown}{u}$olk-éi$^{e}/_{o}$- ← √*$\underset{\frown}{u}$elk- 'wet'.Ⓐ

(1) PCelt. ***$\underset{\frown}{u}$olk-ī̆/e-tu-*** (← vb. stem *$\underset{\frown}{u}$olk-ī-):Ⓑ

◊ *$\underset{\frown}{u}$olkī̆/etu- > ***folcud*** [m.] 'washing (*spec.* the head)'

↔ vb. *folcaid* [w. -ī] 'washes (*spec.* the head)'.

Comments:

Ⓐ The causative source is favored by *LIV*² (679 s.v. ?***$\underset{\frown}{u}$elk-***), which also cross-references the near-parallel Ru. *volóžit'* 'to make wet' and Lith. *válgau, válgyti* 'eat'[104] < PIE *$\underset{\frown}{u}$olg-éi$^{e}/_{o}$-, from a voiced-final variant of the root, √*$\underset{\frown}{u}$elg-; but in Balto-Slavic, too, a denominative formation cannot be ruled out. Indeed, no other primary verbal forms are attested with √*$\underset{\frown}{u}$elg- or *$\underset{\frown}{u}$elk-, so it is possible that the root is not verbal. Whether PCelt. *$\underset{\frown}{u}$olk-ī- is causative or denominative in origin, it is most probable that PCelt. *$\underset{\frown}{u}$olk-o-s (> OIr. *folc*) [m.] 'heavy rain' represents the historical verbal noun, the contemporary meaning presumably extended from earlier 'washing, pouring'.

Ⓑ It is not clear from the attested Old Irish verbal form *folcaim*(*m*) 'I wash' (Sg. 146b3, 5) whether this is an *ā*-verb or an *ī*-verb, since the cluster *-lc-* would resist palatalization in either case, but the palatalization of MIr. ***foilc-*** implies the latter. This would appear to be confirmed by the gen.sg. ***foilcthe***[*o*] of the verbal noun at CG § 14, *l.*177 — assuming that the evidence of the late manuscript copy can be relied on — where the palatalization shows the syncopation of a front vowel.

---

[104] See *LIV*² 676 n.2 s.v. ?2.***$\underset{\frown}{u}$elg-***: the shifted meaning has been influenced by *vaĩgis* [m.] 'food'; the earlier meaning is maintained in *vìlgau, vìlgyti* 'make wet', with the zero grade taken from inchoative *vìlgstu, vìlgt* 'become wet'.

4.1.57. *fo^{i}lls-ig-i-* 'reveal, make clear'

< PrIr. **u̯osule/ans-sag-ī-* ← PCelt. **u̯o-su-(ϕ)le/and-tu-* (> OIr. *follus*) [adj.] 'clear, evident' < **u̯o-* + **su-* 'good' + **(ϕ)le/and-tu-* [m.] 'light, radiance' < PIE **(s)plend-tu-* or **(s)plṇd-tu-* ← √**(s)plend-* 'shine'.

(1) PrIr. ****u̯osule/anssag-e-tu-*** (← vb. stem **u̯osule/ans-sag-ī-*):

u̯osule/anssagetu-* > ***foillsiugud* [m.] 'manifestation, revelation; act of showing, revealing, making known' ↔ vb. *foillsigid* [w. *-ī*] 'shows, reveals, makes known'.

4.1.58. *fo^{i}rbth-ig-i-*$_{(DEP)}$ 'finish, complete'

< PrIr. **u̯oru̯īti̯o-sag-ī-* ← **u̯or-u̯īti$^{i̯o/ā}$-* (> OIr. *foirbthe*) 'perfect', ppl. of **u̯or-u̯ina-* (> OIr. *for·fen*) 'completes' ← PCelt. **u̯i-na-* 'bend, enclose' < PIE **u̯i-n-h$_1$-* ← √**u̯eih$_1$-* 'id.'Ⓐ

(1) PrIr. ****u̯oru̯īti̯osag-e-tu-*** (← vb. stem **u̯oru̯īti̯o-sag-ī-*):

u̯oru̯īti̯osagetu-* > ***foirbthiugud* [m.] 'act of finishing, completing, making perfect' ↔ vb. *foirbthigid(ir)* [w. *-ī*] 'finishes, completes, makes perfect'.

Comment:

Ⓐ Compare § 3.1.42.

4.1.59. ?**fo^{i}rts-i-* 'harrow'

?< PrIr. **u̯ortess-ī-* ← **u̯ort-essio-* < PCelt. **u̯ort-es-tio-* ← PIE **u̯ort-* ← √**u̯ert-* 'turn'.Ⓐ

(1) PrIr. ****u̯ortess-ĭ̆/e-tu-*** (← vb. stem **u̯ortess-ī-*):

◊ **u̯ortessĭ̆/etu-* > ***foirtsiud*** [m.] 'act of harrowing (*agric.*)' ↔ vb. **foirtsid* > *foirsid* [w. *-ī*] 'harrows'.

Comment:

Ⓐ The etymology is somewhat conjectural. The verbal noun ***foirtsiud*** is a *hapax*,

occurring only at CG § 27, *l.*410, *dá chapal*[*l*] *do* ***ḟoirtsi*[*u*]*d***[105] 'two horses for ***f.***', but it is reasonably identified by Binchy with MoIr. *foirseadh* = MIr. *foirsed*, verbal noun of *foirsid* 'harrows': "I take this to be the O. Ir. form of Mod. Ir. *foirseadh, fuirseadh* (cf. *eich foirseadha, IGT Decl.* ex. 866), which Walde-Pokorny (I, 274) derive from √*u̯ert*, a derivation which would seem to be strengthened by the *-t-* in the present form" (1941: 35, ed.n.410). The sense is ideal, especially given the example in the Irish Grammatical Tracts, and the variation between *-rts-* and *-rs-* has one other set of parallels in the group ***firtse*** / ***firse*** 'strength', ***fertsech*** / ***fersech*** 'strong', ***fertsige*** / ***fersige*** 'force'. However, the presence of the *-t-* in Old Irish precludes any derivation involving a dental suffix added directly to the base **u̯ort-*, since this would only produce OIr. ***fors-***, not ⁑***forts-***; in fact, no inherited combination will yield the attested *-rts-* directly. Nor does epenthetic *-t-* arise regularly in *-rs-* combinations in Old Irish, so the conclusion must be that we are dealing with a syncopated outcome of earlier **u̯ortVs-* (**-V-* being a front vowel) and a subsequent assimilation of the **-t-*. The underlying stem should then be **u̯ortess-ī-*, probably built from a noun **u̯ort-essio-* (in Old Irish terms, **foirtse*) which bears the same unproductive abstract suffix as that of *fíadn-**isse*** 'evidence' < **u̯ēdon-essio-*, from the base of OIr. *fíadu*, gen.sg. *fíadan* [m.] 'witness' (PIE **u̯eid-on-*); *saír-**se*** 'craftsmanship' < **saer-essio-*, from the base of OIr. *sáer* [m.] 'craftsman' (PIE **saper-o-*); etc.[106] The suffix may reflect an earlier compound **-es-tio-* (cp. PrIr. **-essu-* < **-es-tu-*[?] which appears as OIr. *-us* in, e.g., *inrac(c)**us*** [m. *-u*] 'worthiness' ← *inraic(c)* [adj. *-i*] 'worthy', *comarb**us*** [m. *-u*] 'heritage, heirship' ← *comarbae* [m. *-io*] 'heir', etc.),[107] but its further origins are

[107] *GOI* 166 § 259.

obscure.

4.1.60. *fos(s)-ag-i-*$_{(DEP)}$ 'support, provide for'

< PICelt. **u̯osso-sag-ī-* ← **u̯osso-* (> OIr. *fos(s)*) [m.] '(state of) rest, stop, remaining' < PCelt. **u(ϕ)o-st-o-* < PIE **upo-steh₂-o-* ← √**steh₂-* 'stand'.

(1) PICelt. ****u̯ossosag-e-tu-*** (← vb. stem **u̯osso-sag-ī-*):

◊ **u̯ossosagetu-* > ***fos(s)ugud*** [m.] 'sustenance, entertainment; act of keeping (in a place)'

↔ vb. *fos(s)aigid(ir)* [w. *-ī*] 'supports, provides for; makes stable, establishes'.

4.1.61. *foth-ag-i-* 'establish, found'

< PICelt. **u̯osodio-sag-ī-* ← **u̯o-sod-io-* (> OIr. *fothae*) [n.] 'foundation, basis' ← PIE **sod-* ← √**sed-* 'sit'.

(1) PICelt. ****u̯osodiosag-e-tu-*** (← vb. stem **u̯osodio-sag-ī-*):

u̯osodiosagetu-* > ***fothugud* [m.] 'act of establishing, founding, supporting'

↔ vb. *fothaigid* [w. *-ī*] 'establishes, founds, supports'.

4.1.62. *gam-ig-i-*$_{DEP}$ 'pass the winter'

< PICelt. **gami-sag-ī-* ← **gam-i-* (> OIr. *gaim*) [m.] 'winter' ⇐ PCelt. ?**g(i)u̯iem-i-* Ⓐ ← PIE √**ĝʰéu̯-om-*, **ĝʰ(i)u̯-ém-* 'winter'.

(1) PICelt. ****gamisag-ĭ̄/e-tu-*** (← vb. stem **gami-sag-ī-*):

◊ **gamisagĭ̄/etu-* > ***gaimigud*** [m.] 'act of wintering, passing the winter'

↔ vb. *gaimigidir* [w. *-ī*] 'passes the winter'.

Comment:

Ⓐ Multiple problems surround the Indo-European words for 'winter',[108] no less in Celtic that elsewhere. Least problematic are the British words, MW *gaeaf* [m.], OCo. *goyf*,

---

[108] See the entries and notes in *NIL* 162–68 s.v. ? ****ĝʰéu̯-om-***, ****ĝʰ(i)u̯-ém-***, ****ĝʰi-m-´-***.

OBret. *guoiam, guiam*, MBret. *gouaff* 'winter', which consistently point to PBr. **gi̯am-V-*, apparently from PCelt. **g(i)i̯em-* < PIE **ĝʰ(i)i̯-ém-* (cp. Lat. *hiem-s*) with the regular development of PCelt. **-i̯e-* > PBr. **-i̯a-*.[109] Gaulish displays a similar development in the month name GIAMONI and the PNN GIAMILLIUS, GIAMA, GIAMATUS, etc.[110] But the Irish words are not easy to reconcile with these forms, nor indeed with one another.

The earliest attested Old Irish forms indicate an *i*-stem **gami-*: OIr. ***gaimred*** [n. *-o*] 'winter' (Wb. 31d14) < **gami-rāto-*, cp. MW *gaeafrawd* [m.] 'id.', OIr. ***gaimigidir*** 'passes the winter' (1.sg.fut. *gaimigfer*, Wb. 14a9), and the verbal noun ***gaimigud*** (Arm. 188b1 = *Thes.* I, 498.23, predating Würzburg). The consistently palatalatized *-m-* in all these early forms can only come from a syncopated front vowel (contrast ***samrad*** [n. *-o*] 'summer' < **samo-rāto-*), and an *i*-stem is corroborated by the Ogham PN **GAMI**-CUNAS, genitive of **Gamicū* 'Winter Wolf'.

In addition to the form *gaim*(-), Middle Irish manuscripts also display *gem*(-). The suggestion[111] that this reflects ancient **gi̯am-V-* is hardly likely, as Schrijver (1995: 108–10) shows, because Irish never underwent the change of **-i̯e-* > **-i̯a-*, and inherited **gi̯em-V-* would have yielded OIr. ***giäm*, ***gim-*, not *gem*. If it is an inherited form, *gem* could continue PCelt. **gimo-*, thematized from the PIE double zero-grade **ĝʰi-m-*;[112] but the Irish stem class is unclear, and **gimo-* is otherwise unattested in Celtic. Schrijver (*loc.*

---

[109] Schrijver 1995: 101–8; cp. *VKG* I, 65 § 44 Anm. 1; T. F. O'Rahilly 1942: 149; *IEW* 503 s.v. ***i̯eg-***.

[110] Schrijver (1995: 108, 464f.) notes that this sound change is inconsistent in Gaulish and thus probably a relatively late phenomenon. For this reason he regards it as poor evidence of an early Gallo-British unity and more likely an instance of feature spread through cultural contact in the early centuries AD. Since the other linguistic features he discusses appear to have migrated from Gaulish to British, this would be the likely direction of influence in the change of **i̯e-* > **i̯a-* too, which had run its full course in British by the time of the earliest vernacular writings.

[111] *VKG* I, 66 § 45(2), 311 § 213; Ziegler 1994: 105.

[112] *NIL* 165 n.7 s.v. ***? *ĝʰéi̯-om-, *ĝʰ(i)i̯-ém-, *ĝʰi-m-´-***.

cit.), noting the recurring alternation between nom.sg. *-ai-* and gen.sg. *-e-* in other *i*-stems such as ***daig***, gen.sg. ***dego*** 'flame' and ***tailm***, gen.sg. ***telmo*** 'sling',[113] posits an old *i*-stem alternation ***gaim***, gen.sg. **gemo* 'summer' to explain the double outcome in Irish. If correct, this lowering of *-e-* > *-a(i)-* must have taken place already by the fifth century, the probable date of the Ogham inscription GAMICUNAS.[114] Schrijver's scenario is attractive, but must assume PrIr. **gem-i-* from PCelt. **ǵiem-i-* with a Primitive Irish phonological rule **Cie̯-* > **Ce-* that is not well established, as well as an unattested OIr. gen.sg. **gemo*.

A third form, *gam* (probably *o*-stem), is found in Middle Irish, but nonetheless appears to be relatively old from the evidence of the Ogham PN GAMATI (fifth or sixth century), genitive of **Gamatas* 'Winterly' < **gamo-to-*.[115] The underlying stem PrIr. **gamo-* has no doubt arisen through the influence of **samo-* > OIr. *sam* 'summer'.[116] (Compare also OIr. ***samain*** [f. *-i*] 'Samhain, (festival of the) First of November' < **samon-i-* : MIr. ***gamain*** [m. *-i*] 'yearling calf' < **gamon-i-* vs. the Gaulish month names **SAMONI** : **GIAMONI**.)[117]

4.1.63. *imd-ag-i-*$_{(DEP)}$ 'abound, increase'

< PICelt. **imbet(i)o-sag-ī-* ← **imbeto-* (> OIr. *imbed*) [n.] 'large quantity, abundance' or **imbeti*$^{o}/_{ā}$*-* (> OIr. *imde*) [adj.] 'numerous, abundant', etymology uncertain.Ⓐ

[114] McManus 1991: 93f.; Ziegler 1994: 182, cp. 40–42.

[115] Ziegler 1994: 181f. A preform **gamā-to-* would also be possible in theory, cp. Gaul. PN GIAMATUS.

[116] *VKG* I, 66 § 45(2); Schrijver 1995: 108; Stüber 2005: 100.

[117] *VKG* II, 56 § 399(2); *NIL* 165 n.7 s.v. ***? *ĝʰéi̯-om-, *ĝʰ(i)i̯-ém-, *ĝʰi-m-´-***.

(1) PICelt. ***imbet(i)osag-e-tu-*** (← vb. stem **imbet(i)o-sag-ī-*):

◊ **imbet(i)osagetu-* > ***imdugud*** [m.] 'abundance; act of abounding, multiplying'

↔ vb. **imdigid(ir)* ⇒ *imdaigid(ir)* [w. *-ī*] 'abounds, multiplies'.

Comment:

Ⓐ On the basis of the Old Irish noun *imbed* [n.] 'abundance' < PrIr. **imbeto-*, the derivatives must originally have had palatalized **-mbd-* from the syncopation of the *-e-* of the second syllable. The palatalization is still present in Würzburg in the adjective ***imde***, nom.pl. ***imdi*** 'abundant', and perhaps in the verbal noun ***imdugud*** although the spelling of the latter is ambiguous. The verb is not attested in Würzburg. By Milan and later, secondary depalatalization has occurred: ***imdae***, ***imdaigid***, and ***imdugud*** (MoIr. *iomdhughadh*). It is generally thought that the basis of the verb is the adjective,[118] but there is no reason *a priori* that the source could not have been the *o*-stem noun **imbeto-* (> OIr. *imbed*).

The etymology of these words is uncertain. From the shape of the Gaulish PNN *IMBETIUS*, *IMBETUS* (from Nijmegen), the root would appear to be inherited **imb-*, or **emb-* with the Proto-Celtic raising of **e* before a nasal plus obstruent,[119] rather than the reflex of PCelt. **amb* < **ṃb*, although the latter cannot perhaps be ruled out entirely, given sporadic examples of Gaul. *inC* < PCelt. **anC* < PIE **ṇC* (e.g., *brig**ind***- vs. *brig**ant***- < **bʰr̥gʰṇt-*, *iov**inc***- vs. MW *ieu**anc*** < **i̯uu̯ṇk-*).[120] There is probably no valid comparison with Hitt. *panku-* 'total' and Gr. παχύς 'thick, fat', which are better equated with Ved. *bahu-*

---

[118] E.g., *GOI* 337 § 524; *DIL* s.v. **imdaigid(ir)**; Joseph 1987: 127.

[119] Watkins 1954: 516f.; phonetically perhaps [ɪ], McCone 1991: 47; 1996: 56.

[120] McCone 1996: 50, 56.

'many, much, numerous' < PIE *$b^h\eta g^h u$- 'dense, thick'.[121] If there are any outside connections, the most promising may be Lat. *pinguis* 'fat',[122] if it was constructed from PIE *$peng^w$- or *$p\eta g^w$-, but the provenance of this word too is unclear.[123]

4.1.64. *labr-a-*$_{DEP}$ 'speak, talk'

< PCelt. **labr-ā-* ← **lab-r^o/$_{ā}$-* (> OIr. *labar*) [adj.] 'talkative, eloquent' < PIE *$\underset{\circ}{l}b$-r^o/$_{ā}$-* ← √**leb-* 'lip; move the lips'. Ⓐ

(1) PCelt. ****labr-ă̆-tu-*** (← vb. stem **labr-ā-*):

◊ **labrātu-* > ***labrad*** [m.] 'speech, utterance; act of speaking'

↔ vb. *labraithir* [w. *-ā*] 'speaks, talks'.

Comment:

Ⓐ Stokes (*US* 269 s.v. ⟨**p**⟩**labro-**) and Pokorny (*IEW* 831 s.v. ***plab-***) speculatively propose a root **plab-* 'chatter, etc.' > PCelt. **(ϕ)lab-*, possibly related to ME *flappen* 'schlagen, klatschen, schwatzen, plaudern'. The semantic link with the Germanic form is not exact, however, and no other cognates emerge to lend support. On the other hand, the connection suggested by Pedersen (*VKG* II, 7 § 358(2a)) with Lat. *labrum* [n.] 'lip' (cp. also Lat. *labium* [n.] 'id.'; and with *e*-grade, Hitt. *lip-* 'lick'; OE *lippa* [f.] 'lip' < PGmc. **lepjan-*, OHG *lefs* [m.] 'id.' < PGmc. **lepes-*) is unobjectionable, especially given the formal match between the Old Irish adjective *labar* < **lab-r^o/$_{ā}$-* and the Latin neuter substantive *labrum* < **lab-ro-m*. To explain the *a*-vocalism of the root in Italic and Celtic,

---

[121] Benveniste 1953: 258; *DÉLG* 866 s.v. παχύς; Kloekhorst 2008: 624f. s.v. ***panku- / pangaų-*** (reconstructing PIE √**$d^hb^h eng^h$-* based on GAv. *dəbązah-* 'thickness', cp. Beekes 1988: 78); Beekes 2010: II, 1159f. s.v. παχύς.

[122] So Brugmann 1906: 506; hesitantly *US* 46 s.v. **imbeto-**.

[123] See the discussion at de Vaan 2008: 466 s.v. **pinguis**.

Schrijver (1991: 477–85)[124] proposes a specific development *$\underset{\circ}{R}D$ > *RaD* / __*C* (where *D* = voiced obstruent, *C* = any consonant). He also entertains the possibility (479; cp. de Vaan 2008: 319 s.v. **labium**) that **lab-* is a loanword from a non-Indo-European adstrate, but this suggestion is difficult to uphold in light of the *e*-grade shown in both Anatolian and Germanic, which implies Indo-European ablaut of a root √**leb-*.[125]

4.1.65. ***lén-i-*** 'injure, harm'

< PrIr. **leθn-ī-* ← **leθ-na-* (> OIr. *lén*) [n.] 'injury, harm, defeat' < PCelt. **lit-no-* < PIE **h₂lit-nó-* ← √**h₂leit-* 'detest, violate'. Ⓐ

(1) PrIr. ***lēn-ĭ/e-tu-*** (← vb. stem **lēn-ī-*):

◊ **lēnĭ/etu-* > ***léniud*** [m.] 'injury, harm, hindrance; act of injuring, harming, hindering'

↔ vb. *léinid* [w. *-ī*] 'injures, harms, hinders'.

Comment:

Ⓐ This is not, *pace* Pokorny (1925), a variant of *·lena* 'defile, pollute' (§ 3.1.72), which has a short vowel and a distinct meaning,[126] but a denominative of OIr. *lén* [n. *-o*] 'injury, harm'. Both an *ā*-verb *lénaid* ↔ vn. ***lénad*** and an *ī*-verb *léinid* ↔ vn. ***léniud*** are attested, the former still found on MoIr. *léanaim* 'I damage, injure, ruin, destroy' ↔ vn. ***léanadh***, but it is the latter that appears in our corpus (AC § 16, *l.*72, in all MS witnesses but one). As for the derivation of OIr. *lén*, the fact that the vowel does not undergo breaking to *-ía-* indicates that it must be the historical product of compensatory lengthening through the loss of a following consonant.[127] The derivation from PIE **plakno-* (or in laryngeal terms,

---

[127] *GOI* 36f. § 53f.

*$p\underline{l}h_2kno$-) suggested by *IEW* (832 s.v. **2 *plāk-, plāg-***, auch ***plēk-, plēg-***)[128] is only workable if the development of PCelt. *-*ă̆kn-* > PrIr. *-*ă̆χn-* > OIr. *-én-* is valid (in contrast to the entirely uncontroversial PCelt. *-*ă̆gn-* > PrIr. *-*ă̆γn-* > OIr. *-án-*); but the evidence is scanty and not especially compelling.[129] I suggest that a better alternative would be to start from a zero-grade *no*-stem to PIE √**h*$_2$le̯it-* 'detest, violate' (> Gr. ἀλείτης 'offender, criminal', aor. ἤλιτον → ἀλιταίνω 'offend against, transgress', etc.; PGmc. **laiþaz* > OHG *leid* [n.] 'harm', OHG *leid*, ON *leiðr*, OE *lāð* [adj.] 'repugnant, *loath*some'; PCelt. **lit-tu-* > OIr. *lius*(*s*) [m.] 'disgust, loathing', etc.), which would straightforwardly yield the correct outcome: PIE **h*$_2$*lit-no-* > PCelt. **litno-* > PrIr. **liθna-* > **leθna-* > OIr. *lén*. The Irish *ī*-verb is probably a recent formation, since the root vowel has the same lowered *-*e-* as the noun; or else it was analogically changed to bring it in line with the noun after Primitive Irish lowering had altered the vowel of the latter.

4.1.66. *les*(*s*)*-ag-i-*$_{DEP}$ 'be of benefit, remedy'

< PICelt. **lessu-sag-ī-*$_{DEP}$ ← **lessu-* (> OIr. *less*) [m.] 'benefit, remedy' <(?) PCelt. **lexs-tu-* ← **leks-* < PIE √**h*$_2$*leks-* 'protect, ward off'.Ⓐ

(1) PICelt. ***lessusag-e-tu-*** (← vb. stem **lessu-sag-ī-*):

◊ **lessusagetu-* > ***les*(*s*)*ugud*** [m.] 'remedy, attendance; act of remedying, looking after'

↔ vb. *les*(*s*)*aigidir* [w. *-ā*] 'remedies, makes good; tends, looks after'.

Comment:

Ⓐ See § 4.1.45 comment A for a discussion of the etymological problems.

---

[128] Approved by de Bernardo Stempel 1999: 255 fn.131.

[129] *GOI* 78 § 125.

4.1.67. *lín-a-* 'fill'

< PCelt. *(ϕ)*līn-ā-* ← *(ϕ)*lī-nu-* (> OIr. *lín*) [m./n.] 'full number, complement' < PIE *$pleh_1$-nu-* ← √**$pleh_1$-* 'fill'.

(1) PrIr. ***līn-ă̆-tu-*** (← vb. stem *(ϕ)*līn-ā-*):

◊ **līnă̆tu-* > ***línad*** [m.] 'act of filling, fulfilling'

↔ vb. *línaid* [w. *-ā*] 'fills'.

4.1.68. *lob-a-* 'decay'

< PCelt. **lob-ā-* ← **lob-V-*, etymology uncertain.Ⓐ

(1) PCelt. ***lob-ă̆-tu-*** (← vb. stem **lob-ā-*):

◊ **lobă̆tu-* > ***lobad*** [m.] 'decay, rot; act of decaying, rotting, wasting away'

↔ vb. *lobaid* [w. *-ā*] 'decays, rots, wastes away'.

Comment:

Ⓐ The derivational base of the verb *lobaid* 'decays' ↔ vn. ***lobad*** 'decay, act of decaying' is not attested. It is evidently related to the adjective OIr. *lobur* 'weak, infirm, sick' ≈ MW *llwfyr* 'cowardly', MBret. *loffr* 'leprous', and, derived from it, the abstract *lobrae* [f.] 'weakness, infirmity, sickness'. The adjective probably goes back to < **lob-r^{o}/$_{ā}$-*.[130] No comparison with Lat. *labō, -āre* 'totter, waver' or *lābō, -ī* 'slip, glide' seems promising, given the significant discrepancy in root vocalism between Celtic *-*o*- and Latin *-a-* and *-ā-*. *VKG*'s (I, 117 § 72, 183 § 110(3)) connection with Gr. λώβη 'dishonor, damage' also faces problems in the root vowel, since the long *-ō-* of the Greek does not correlate with the short *-ŏ-* of Celtic (unless the former has somehow undergone secondary lengthening

---

[130] MW *llwfyr* appears to reflect an original root vowel *-*u*-, but this is inconsistent with the *-o-* of OIr. *lobrae* < **lobr-iā-* (instead of ‡*lubrae* < **lubr-iā-*) and of MBret. *loffr*. MW *llwfyr* may have been back-formed from the feminine *llofyr* based on the pattern of other adjectives where *-*u*- was historical, e.g., MW *dwfyn* [m.] : *dofyn* [f.] 'deep' < **dubn^{o}/$_{ā}$-*, etc.

for which there is no apparent motivation). The Greek word moreover has traditionally, and probably correctly, been associated with Lith. *slúogas* 'load, weight', *slogà* 'cold' ← 'burden, nuisance', Latv. *slāga* 'burden, trouble, misfortune', a nominal formation corresponding to Lith. *slégiu, slégti* 'oppress', Latv. *slêgt* 'to shut, close', which are from a different root, PIE √**sleh*$_1$*g*^{w}- 'press'.[131] Both the form and origin of the Celtic words remain unclear.

4.1.69. *losc-i-* 'burn'

< PrIr. **losk-ī-* ← **los-ka-* < PCelt. **lux-s-kā-* < **luk-s-kā-* ← PIE √**leu̯k-* 'light, shine'.Ⓐ

(1) PrIr. ****losk-ĭ̄/e-tu-*** (← vb. stem **losk-ī-*):

◊ **loskĭ̄/etu-* > ***loscud*** [m.] 'act of burning, consuming by fire'

↔ vb. *loscaid* [w. *-ī*] 'burns, consumes by fire'.

u̯o-loskĭ̄/etu-* > ***follscud* [m.] 'act of scorching, burning'

↔ vb. *fo·loscai* [w. *-ī*] 'scorches, burns slightly'.

u̯or-loskĭ̄/etu-* > ***forloscud* [m.] 'arson; act of burning (maliciously)'

↔ vb. *for·loscai* [w. *-ī*] 'burns, sets on fire (esp. arson)'.

Comment:

Ⓐ According to *VKG* (I, 76 § 49, 383 § 258; II, 571 § 768), the verbal formation is from PCelt. **lux-sk*^{e}/$_o$- < PIE **luk-sk̂*^{é}/$_ó$-, a *sk̂*^{e}/$_o$-present to PIE √**leu̯k-* 'light, shine', which took different paths in British and Irish: in British it transferred to the weak *ā*-conjugation, and the *-o-* lowered from **-u-* by final *ā*-affection in the third-person singular subsequently spread through the paradigm; whereas in Irish it transferred to the weak *ī*-conjugation, but only after the root vowel had been lowered and generalized from the

---

[131] *IEW* 960 s.v. ***slēgʷ-***; *DÉLG* 653 s.v. **λώβη**; Beekes 2010: I, 882 s.v. **λώβη**. But otherwise Ragot 2002, taking the word to reflect PIE **sleh*$_2$*g*^{w}*-eh*$_2$- 'seizure' ← √**sleh*$_2$*g*^{w}-, related to Gr. λάζομαι 'to seize, take hold'.

thematic plural (3.pl. **lusk-ont[i]*) in more or less regular fashion.[132] This scenario is highly circumstantial, requiring unmotivated and divergent weak-verb transformations at different periods in British and Irish from an earlier strong verb that happens to be unattested in Celtic and unsupported elsewhere in Indo-European; this is moreover the only example cited by *VKG* (I, 383 § 258) of the supposed generalization of final *ā*-affection in a British verbal paradigm. A different scenario is espoused by *LIV*^{2} (402 n.2 s.v. ****leh$_2$p-***, citing Klingenschmitt 1982: 193f. fn.40), which takes PCelt. **losk-ī-* as an analogically formed causative of **la(ϕ)-sk^e/$_o$-* < PIE **l̥h$_2$p-sk̂^{é}/$_ó$-*, a *sk̂^{e}/$_o$*-present to PIE √**leh$_2$p-* 'light up, illuminate'. This, too is problematic, since a doubly characterized verbal formation like **l̥h$_2$p-sk̂-éi̯^{e}/$_o$-* would be unknown in Proto-Indo-European itself, and there is no evidence that new *o*-grade causatives were productively formed in Celtic.

A denominative solution would be less problematic, and one is in fact available. While OIr. **losc* 'burn' is unattested, a cognate is found in MW *losc* [m.] 'burning, inflammation'. The formation may perhaps be comparable to Ru. *losk* 'gloss' < PSlav. **lъskъ-* < **luk-s-ko-*, built from the zero grade of a neuter *s*-stem noun **leu̯kos* ← PIE √**leu̯k-* 'light, shine'.[133] Two assumptions are necessary, neither of them unreasonable, if this suggestion is correct: (1) the Celtic noun must have originally been feminine (PIE **luks-keh$_2$-* > PCelt. **luxs-kā-* > OW *losc*) to account for the final *ā*-affection in Welsh; and (2) the denominative verb must have been created after lowering had already taken place.

---

[132] Cp., e.g., *at·boind* 'proclaims' < **bund^e/$_o$-*; *bongaid, ·boing* 'breaks' < **bung^e/$_o$-*; *dlongaid, ·dloing* 'splits' < **dlung^e/$_o$-*; etc.; and see McCone 1986: 235.

[133] See Klingenschmitt, *loc. cit.* For another such formation, he cites Gr. λέσχη 'community hall, hostel; resting-place, tomb' < **légʰs-keh$_2$-* : Gr. λέχος < **légʰos* 'couch, bed' ← PIE √**legʰ-* 'lie'.

4.1.70. *maldach-a-* 'curse'

< PrIr. **maldic-ā-* < VLat. **maldic-o, -ere* < Lat. *maledīc-ō, -ere* 'curse'.Ⓐ

(1) PrIr. ****maldic-ă̆-tu-*** (← vb. stem **maldic-ā-*):

◊ **maldică̆tu-* > ***maldachad*** [m.] 'curse; act of cursing'

↔ vb. *maldachaid* [w. *-ā*] 'curses'.

Comment:

Ⓐ The neutral *-ld-* of *mal**d**achaid* (instead of ‡*mail**d**echaid*) implies that the second syllable had been syncopated already in Vulgar Latin before the borrowing into Irish; see McManus (1983: 63 fn.128, 66), and cp. § 4.1.9 comment A.

4.1.71. *már-a-* 'make great, exalt'

< PCelt. **mār-ā-* ← **mā-r^{o}/$_{ā}$-* (> OIr. *már*) [adj.] 'great' < PIE **moh$_1$-ro-* ← √**meh$_1$-* 'great'.

(1) PCelt. ****mār-ă̆-tu-*** (← vb. stem **mār-ā-*):

◊ **mār-ă̆-tu-* > ****márad*** ⇒ ***mórad***Ⓐ [m.] 'act of making great, magnifying, exalting'

↔ vb. *máraid, móraid* [w. *-ā*] 'makes great, magnifies, exalts'.

Comment:

Ⓐ Historically regular **márad* happens not to be attested, although long *-á-* is still occasionally found in the verb *máraid* 'makes great' and in the adjective *már* 'great'. Its replacement by *-ó-* is already well underway in Old Irish and complete by Middle Irish. Despite the suggestion of *LÉIA* (M-18 s.v. **már**, citing *VKG* I, 49 § 32(3)), the labial influence of the initial *m-* is not sufficient to motivate this change of *-á-* to *-ó-*, since other words with the same phonetic environment do not show this change; e.g., ***mál*** [m. *-o*] 'prince, chief', ***mál*** [m. *-o*] 'tribute', ***mám*** [m *-u*] 'yoke', and ***mám*** [m. *-o*] 'a fistful'; in the latter pair in particular, the strongly labial environment between two *m*'s might be expected to have triggered such rounding. In light of this, Thurneysen's suggestion (*GOI* 236f. § 375) that the vowel of *mór* has been analogically influenced by the

comparative *mó* < **máu* < PCelt. **mā-i̯ūs* < PIE **moh₁-i̯ōs* appears likely to be correct, subject to a phonological and chronological clarification. By the time of Old Irish, the diphthong *áu* is only maintained in absolute final position in stressed monosyllables.[134] Its modification to *ó* not yet complete, the spellings ⟨*áu*⟩, ⟨*ó*⟩, and transitional ⟨*áo*⟩ are found side by side in the Old Irish manuscripts; e.g., *áu, áo, ó* [n.] 'ear'; *dáu, dó* 'two'; *·táu, ·tó* 'I am'; *gáu, gáo, gó* [f.] 'falsehood', etc.[135] In the case of *mó*, however, this transition is already almost complete by Classical Old Irish: *mó* is the norm in Würzburg (also spelled *moo, móo*, and *moó*), and a few instances of transitional *máo* are attested, but earlier **máu* is nowhere found.[136] Here the labial *m-* probably did aid the transition of **áu* > *ó* ahead of the general trend (though, as noted above, it had no similar effect on monophthongal *-á-*); and the resulting *mó* then prompted the analogical alteration of *már* to *mór* and its derivatives *máraid* ↔ vn. ****márad*** to *móraid* ↔ vn. ***mórad***.

4.1.72. *marb-a-* 'kill'

< PCelt. **maru̯-ā-* ← **mar-u̯⁰/ā-* (> OIr. *marb*) [adj.] 'dead' < PIE **mr̥-u̯ó-* ← √**mer-* 'die'.

(1) PCelt. ****maru̯-ă̆-tu-*** (← vb. stem **maru̯-ā-*):

◊ **maru̯ă̆tu-* > ***marbad*** [m.] 'act of killing, slaying'

↔ vb. *marbaid* [w. *-ā*] 'kills, slays'.

imm- + ***marbad*** > ***immarbad*** [m.] 'act of mutually killing, fighting, contending'

↔ no attested vb. **im·marba*.

---

[134] Greene 1976: 42.

[135] *GOI* 44 § 69.

[136] The form *móu* (Milan, etc.) is an innovation from *mó* plus the productive comparative suffix *-u*. Old Irish *má, máa* probably does not reflect the same preform as the others, but comes instead from the neuter **mā-i̯os* < PIE **moh₁-i̯os*. (See *GOI* 236f. § 375.)

4.1.73. **mebl-ag-i-* 'put to shame, disgrace'

< PICelt. **meblā-sag-ī-* ← **meb-lā* (> OIr. *mebul, mebal*) [f.] 'a cause of shame, a disgrace'

←? PIE √**meb^h-* 'blame'.Ⓐ

(1) PICelt. ****meblāsag-e-tu-*** (← vb. stem **meblā-sag-ī-*):

◊ **meblāsagetu-* > ***meblugud*** [m.] 'act of putting to shame, disgracing'

↔ no attested vb. **meblaigid(ir)*.

Comment:

Ⓐ Proto-Celtic **meblā* > OIr. *mebul, mebal*, MW *mefyl* 'shame, disgrace', Co. *meul* 'evil', cp. OBret. *meplaom* gl. *confutari*, has been compared[137] with Gr. μέμφομαι 'blame' and Go. *bi-mampjan* 'sneer at', assuming a PIE root √**memb^h-* with *ad hoc* changes of **-b-* to *-p-* in Gothic and **-mbl-* > **-bl-* in Celtic. If the root connection is valid, however, it would be more plausible to posit a PIE √**meb^h-* with a present-stem nasal infix in Greek and Germanic, as *EDPC* (261 s.v. ****meblā***) and Beekes (2010 II, 930 s.v. **μέμφομαι**) point out; Beekes suggests the alternative possibility of reduplicated **me-mb^h-*. Given the uncertainties surrounding these forms, and especially the abnormal phonology of the Gothic word, this etymology remains questionable.

4.1.74. *mesr-ag-i-* 'moderate, regulate'

< PrIr. **messūra-sag-ī-* ← **messūra-* (> OIr. *mes(s)ar*) [f.] 'measure' < VLat. **mesūra* < Lat. *mēnsūra* [f.] 'id.'Ⓐ

(1) PrIr. ****messūrasag-e-tu-*** (← vb. stem **mesūra-sag-ī-*):

messūrasagetu-* > ***mesrugud* [m.] 'moderation, self-control; act of moderating, regulating'

↔ vb. *mesraigid* [w. *-ī*] 'moderates, regulates'.

---

[137] *VKG* I, 119 § 73; *IEW* 725 s.v. ***membh-***; *LÉIA* M-26 s.v. **mebul**; de Bernardo Stempel 1999: 225 fn.26; etc.

Comment:

Ⓐ The syncopated second syllable in *mes†raigid, mes†rugud* indicates a Primitive Irish borrowing before the shortening (and subsequent loss) of long vowels in unstressed syllables, probably in the fifth century.[138] Native intervocalic *-*s*- had already undergone lenition — McCone (1996: 87–89) would place this development as early as Proto-Insular Celtic — so the Latin -*s*- is treated here like unlenited -*s*(*s*)- in Irish. The short -*e*- is from the pretonic shortening of vowels in Vulgar Latin, which predated the Irish borrowing.[139] The disappearance of -*n*- before -*s*- was an early phonetic development within Latin itself.[140]

4.1.75. *mog-a-* 'increase, make great'

< PCelt. **mog-ā-*Ⓐ ← **mog-$^{o}/_{ā}$-* 'great' ← PIE √**meĝ-* 'big'.

(1) PCelt. ****mog-ă̄-tu-*** (← vb. stem **mog-ā-*):

◊ **mogă̄tu-* > ***mogad*** [m.] 'increase; act of making great, increasing'

↔ vb. *mogaid* [w. -*ā*] 'makes great, increases'.

Comment:

Ⓐ The evidence for the verbal stem class is somewhat contradictory. On the one hand, the finite forms consistently show the palatalized -*g*- of an *ī*-verb: 3.sg.pres.rel. *moge*s(*s*) 'that increases' or 'exalts'(?) (CG § 19, *l.*274 = *CIH* II, 565.18 = *CIH* III, 781.26), 3.pl.pres. *dia·moiget* (MS *diamoigit*) 'through which increase' (CP § 2, *l.*16), 3.sg.ipv. (with 1.sg.sfx.pron.) *moightiumh* 'may he endow me' (OCC = Meyer 1908: 258.10); 3.sg.fut. *moigfith* 'he will increase' (AM § 3, *l.*27). On the other hand, there are several not

---

[138] *LHEB* 143.

[139] *LHEB* 269f., 331; McManus 1983: 29 fn.13.

[140] Grandgent 1907: 74; Baldi 1999: 277; Weiss 2009: 171.

inconsequential clues that point to an original *ā*-verb.

(1) One of the two earliest attestations of the participle, ***mogthae*** 'endowed' (Ml. 10a2), has an unambiguous neutral cluster *-gth-* incompatible with an *ī*-verb; it must instead reflect an *ā*-stem base **mogā-tio-*. (The other Milan attestation, masc.nom.pl. *neph-mogthi* 'not endowed', Ml. 124c18, is ambiguous as to consonantal quality.) All else being equal, this evidence from a contemporary Old Irish manuscript may be regarded as a more reliable indicator of Old Irish usage than the finite verbal forms attested in later manuscripts, where scribal modernization may have taken place.

(2) In the course of the history of Irish, it is palatalization rather than depalatalization that tends to spread.[141]

(3) The verb's semantics imply derivation from an unattested adjectival base meaning 'great', and deadjectival weak verbs normally belong to the *ā*-conjugation.[142]

Unfortunately, the verbal noun is inconclusive in regard to palatalization, since both **mogăt̆u-* and **mogetu-* would yield the attested nom.sg. ***mogad***, and the genitive, which could be diagnostic (**mogdae* for an *ā*-verb, **moigde* for an *ī*-verb), is not attested.

As for the root vocalism, the evidence may seem at first glance to favor an *ī*-verb. It is generally thought that the base is from PIE **maĝ-*,[143] with the same morphological zero grade of √**meĝ-* 'big' as that seen in Lat. ***magis***, ***maior***, etc., and also evident in OIr. ***mag****dae* [adj. *-i⁰/ā*] 'great, vast', ***maig****e* [adj. *-i⁰/ā*] 'great, mighty', etc. (and cp. Gaul. PNN *MAGIOS*, *MAGIO-MARUS*, etc.). Since there is an Old Irish raising and rounding of **-a-* to

---

[141] Greene 1973: 128, 135. A case in point is MIr. ***moigthe***, glossing *mochta* 'great, mighty' (Stokes 1880: lix). Secondary depalatalization is not entirely unknown, however; cp. ***imdae*** 'abundant', replacing older ***imde***, § 4.1.63 comment A.

[142] *GOI* 338 § 525.

[143] Joseph 1987: 136; Breatnach 1981: 80; **mag-*: *LÉIA* M-8 s.v. **mag-**.

-o- that tends to occur in phonetic environments after *m-* and before a palatalized consonant,[144] there would be a natural explanation for **mag-ī-* > **mog-ī-* here. Yet there is some reason to question the assumption of underlying **mag-*. This change of **-a-* > *-o-* is inconsistently indicated in Old Irish spellings, implying a contemporary rather than a historical phenomenon, so fluctuation between **maig-* and **moig-* might also be expected; yet no early forms of this verb, finite or non-finite, show the root **maig-*.[145] This fact is most embarrassing in the case of the participle and verbal noun in *mog-*, where the neutral *-g-* would not provide the requisite environment to trigger the change. The simplest explanation of the observable facts is that the *o*-vocalism is inherited, the verb having been derived from a Celtic adjective **mog-$^{o}/_{\bar{a}}$-*. While the *o*-grade of PIE √**meĝ-* 'great' is not found outside of Celtic, within Celtic further support may be present in MW *moi* (1.sg. *moaf*) 'to foal' ← **mog-*.[146]

The early Old Irish verb therefore appears to have in fact been **mogaid* < **mog-ā-*. The secondary palatalization may be due to the influence of the Middle Irish variant *móaigid* which arose through a reanalysis of this verb as a *sag*-derivative of *mó* 'greater' (comparative of *már, mór* 'great, big'). Since all *sag*-formations are *ī*-verbs, there would have been an understandable motivation for Middle Irish copyists to conform the Old Irish verbal forms to the *ī*-conjugation, with the result that only a few direct traces of the earlier *ā*-flexion have survived.

---

[144] See *GOI* 50f. § 80, and cp. Ml. 110d10, *forsamoith cath són* 'who is defeated in battle', from *maidid for* 'defeats'.

[145] Cp. Joseph, *loc. cit.* The strong verb *do·formaig* 'increases' is unrelated; see § 3.1.81 comment A.

[146] Cp. *KPV* 469 n.(a) s.v. ***mak-e/o-***.

4.1.76. *mol-a-* 'praise'

< PCelt. **mol-ā-* ← **mol-V-* 'praise', etymology uncertain.Ⓐ

(1) PCelt. ****mol-ā-tu-***Ⓑ (← vb. stem **mol-ā-*):

◊ **molātu-* > ***molad*** [m.] 'praise; act of praising'

↔ vb. *molaid* [w. *-ā*] 'praises'.

ad- + ***molad*** > ***admolad*** [m.] 'act of praising, eulogizing'

↔ no attested vb. **ad·mola.*

Comments:

Ⓐ Old Irish ***molad*** 'praise' matches Gaul. *MESAMOBI MOLATUS* on the plate of Lezoux, if this is to be interpreted as 'praise by (or for) the worst'.[147] The Gaulish form (assuming it is correctly understood) rules out Pokorny's derivation (*IEW* 704 s.v. ***4. mē-, mō-***) of MW *mawl* [m. f.], Bret. *meul* and *meuliñ* [m.] 'praise', OW *molim*, MW *molaf* (supposed to be the source of OIr. *molaid*), and Bret. *meuliff* 'I praise' from LPBr. **mālo-* < **mō-lo-* ← PIE √**meh$_1$-* 'great'.[148] The words are more plausibly connected with PIE √**mel-d^h-* 'speak solemnly',[149] where the **-d^h-* appears to be a root extension in light of the parallel Gr. μέλπω 'celebrate in song', μολπή 'song' ← PIE **mel-p-*; Celtic has inherited the bare root, else OIr. ⁑*mold-* or ⁑*moll-* would be expected. *EDPC* (275 s.v. ****mol-ā-***) speculates that the long vowel of MW *mawl*, Bret. *meul* might come from a PIE root-noun **mōld^h-s* > **mōl-s* from which **mōl-* > PCelt. **māl-* was extracted and extended analogically, but it seems more likely that it has simply been carried over by analogy from PCelt. **māro-* [adj.] 'great' (> OW *maur*, MW *mawr*, OCo. *maur* gl. *magnus*, MoBret. *meur*; cp. Gaul. *MAROS*,

---

[147] Meid 1987: 47f. w. fn.30; 1994: 49; Schumacher 2000: 78.

[148] Doubts also expressed by *LÉIA* M-61f. s.v. **mol-**.

[149] *LÉIA, loc. cit.*; *EDPC* 275 s.v. ****mol-ā-***.

OIr. *már*) < PIE **moh₁-ro-* ← √**meh₁-* (§ 4.1.71), with which it was associated conceptually.

Ⓑ The Welsh cognate, OW *mol**aut***, MW *mol**awt***, points unambiguously to a suffix with long **-ā-*.

4.1.77. *-molt-a-* 'urge, incite'

(?)< PrIr. **-molāt-ā-* ← **molā-tu-* ← **mol-ā-* ← **mol-V-* 'praise', etymology uncertain.Ⓐ

◊ No simplex.

(1) PrIr. ****-molāt-ă̆-tu-***(?)Ⓑ (← vb. stem **-molāt-ā-*):

tu-* + **-moltad* < **-molātă̆tu-*(?) > ***tomoltad* [m.] 'act of urging, inciting'

↔ vb. *do·molta** [w. *-ā*] 'urges, incites, goads'.

Comments:

Ⓐ If, as seems likely, this verb is related to *molaid* 'praises' (§ 4.1.76), the form suggests a denominative derivation from the verbal noun ***molad*** < **molātu-*.

Ⓑ There is in reality no clear indication of the stem class of ***tomoltad***, although a masculine *tu*-stem would be the default assumption. It is unclear what to make of the unusual long *-ó-* of the earliest attestation, *tomoltód* (Wb. 14b26), but this is probably to be read ***tomoltad*** (as in AC § 4, *l.*16 and in TB § 68.7). The shape of the word implies a late compound of **tu-* plus already syncopated **-mol†tad*, since inherited **tumolātă̆tu-* would have regularly generated OIr. ‡*tom†ladud* or ‡*tom†lat*; but the simplex is not attested. The verb occurs only once, in the 2p.ipv. *ni-m·thomoldid* 'do not incite me' (Wb. 20d4).

4.1.78. *mrog-a-* 'move forward, advance'

< PCelt. **mrog-ā-* ← **mrog-i-* [m.] 'extent of land' (> OIr. *mruig* 'territory, domain') ← **mrog-* ⇐ **morg-* < PIE √**morĝ-* 'edge, border'.Ⓐ

(1) PCelt. ***mrog-ă̄-tu-*** (← vb. stem **mrog-ā-*):

◊ **mrogă̄tu-* > ***mrogad*** [m.] 'advancement, extension; act of advancing, extending'

↔ vb. *mrogaid* [w. *-ā*] 'moves forward, advances, extends'.

Comment:

Ⓐ The descendants of this Proto-Indo-European root are widely attested (Hitt. *mārk-i / mark-* 'to divide, separate'; Av. *marəza-* 'border, district'; Lat. *margō* [f.] 'edge, border, margin'; Go. *marka* [f.], OHG *marc(h)a* [f.], OE *(ge)mearc* [n.] 'boundary, border', etc.), all the forms outside of Celtic reflecting PIE **morg-* or **mr̥g-*. The Celtic forms, on the other hand (OIr. *mruig* [m.] 'territory, domain', MW, OBret. *bro* [f.] 'country, land', etc.), point back to a Proto-Celtic *i*-stem **mrog-i-*, with unexplained metathesis of the nucleus. The semantics of the Celtic nouns and the Old Irish verb *mrogaid* 'advances, extends' suggest that the Proto-Celtic connotation was 'extent, expanse (of land)'.[150]

4.1.79. *mún-i-* 'instruct'

< PrIr. **mūn-ī-* perh. < Lat. *moneō, -ēre* 'remind, advise', phonologically influenced by Lat. *mūniō, -īre* 'fortify, strengthen, protect'.Ⓐ

(1) PrIr. ****mūn-e-tu-*** (← vb. stem **mūn-ī-*):

◊ **mūnetu-* > ***múnad*** [m.] 'act of teaching, instructing'

↔ vb. *múinid* [w. *-ī*] 'teaches, instructs'.

Comment:

Ⓐ See Greene (1976b) on the etymology.

---

[150] *LÉIA* M-68 s.v. **mruig**.

4.1.80. *nert-a-* 'strengthen'

< PCelt. **nert-ā-* ← **ner-to-* (> OIr. *nert*) [n.] 'strength' ← √**h₂ner-* 'man, male'.

(1) PCelt. ****nert-ă̆-tu-*** (← vb. **nert-ā-*):

◊ **nertă̆tu-* > ***nertad*** [m.] 'exhortation; act of strengthening, exhorting, urging'

↔ vb. *nertaid* [w. *-ā*] 'strengthens, exhorts; urges'.

4.1.81. *noíb-a-* 'sanctify, make righteous'

< PCelt. **noib-ā-* ← **noib-$^{o}/_{ā}$-* (> OIr. *noíb*) [adj.] 'holy, sacred' < PIE **noi̯bʰ-o-*

← √**nei̯bʰ-* 'holy'.

(1) PCelt. ****noib-ă̆-tu-*** (← vb. stem **noib-ā-*):

◊ **noibă̆tu-* > ***noíbad*** [m.] 'sanctification; act of making righteous, sanctifying'

↔ vb. *noíbaid* [w. *-ā*] 'makes righteous, sanctifies'.

4.1.82. *-nu-ig-i-* 'renew, restore'

< PICelt. **-nou̯io-sag-ī-* ← PCelt. **nou̯-i$^{o}/_{ā}$-* (> OIr. *nu(a)ë*)Ⓐ [adj.] 'new' < PIE **nou̯-i̯o-*

← √**neu̯-* 'new'.

◊ No simplex.

(1) PICelt. ****-nou̯iosag-e-tu-*** (← vb. stem **-nou̯io-sag-ī-*):

ati-nou̯iosagetu-* > ***athnugud* [m.] 'act of renewing, restoring'

↔ vb. *ad·nuigedar* [w. *-ī*] 'renews, restores'.

Comment:

Ⓐ Thurneysen's (*GOI* 45 § 72) rendering of the standard form as *náue* is historically unjustified, as Greene (1976: 29) makes clear. Inherited PCelt. **nou̯-i(i̯)$^{o}/_{ā}$-*, after raising of stressed vowels and *a/o*-affection of unstressed vowels, would have become late PrIr. **nuu̯'e(i̯)a-*, and after apocope and loss of intervocalic **-u̯-*, *nuë* (Sg. 131b1) or *nuäe* (Ml. 17b5, 18d6, etc.). The *-au-* in ***naue*** (Sg. 5b6 etc.) was reintroduced in the confusion that

arose after historical *-au-* had regularly become simplified to *-u-* (e.g., acc.pl. ***baullu***, also ***bullu*** 'members'). The long vowel in MIr. ***núa***, etc. is also a hypercorrection, since earlier vowel length was neutralized in hiatus in Old Irish. The form *náue*, with long *-áu-*, is in fact an artificial construct with no manuscript support.

4.1.83. *-óchtr-a-* 'awaken, rouse'

< PCelt. **-e/ouxter-ā-* ← **e/oux-tero-* (> OIr. *óchtar, úachtar*) 'upper part' ← PIE **(h₁)eu̯p-*

or **(h₁)ou̯p-* ← **(h₁)up-o-* 'up from below'.

◊ No simplex.

(1) PCelt. ****-e/ouxter-ă̆-tu-*** (← vb. stem **-e/ouxter-ā-*):

di-e/ouxterăătu-* > ***díuchtrad* [m.] 'act of awakening; awaking, rousing'

↔ vb. **do·óchtra* ⇒ *do·fochtra, do·fíuchtra*Ⓐ [w. *-ā*] 'awakes'.

Comment:

Ⓐ The verb forms that occur indicate both *do·fochtra* and *do·fíuchtra*. The former no doubt represents the historical form, which (discounting the intrusive *·f-*)[151] would have been **dī·ochtra* (or **dī-ōchtra*, see below). The vowel of *·fíu-* has been taken over from prototonic *·díuchtra*, perhaps influenced by the synonym *do·fusci, ·díuschi* (⇒ *do·fíuschi*) 'wakes' < **dī-uss-sech-*.[152] The superficially attractive etymology proposed by Lindeman (1984b: 203), taking *do·fochtra* (**do·ochtra*) as a metathesized variant of **do·otchra* < **dī-uss-tu-gr-ā-* ← PIE √**h₁ger-* 'waken, rouse' (cp. Gr. ἔγρετο [aor.] 'awoke', Ved. *ájāgar* [aor.] 'id.'), becomes problematic upon closer inspection. Russell (1988: 113) observes that the order of the preverbs is abnormal, since **uss-* ordinarily appears last in a

---

[151] See *GOI* 512 § 837A. Lenited *ḟ* being silent, the regular historical alternation of unlenited deuterotonic *·f-* with lenited prototonic *-ḟ-* has frequently led to the false introduction of unlenited *·f-* into deuterotonic forms where the stressed syllable historically began with a vowel.

[152] *LÉIA* D-141 s.v. **do-fíuchtra**.

chain,[153] and that PIE √*$h_1$ger- is otherwise unattested in Celtic. He suggests that "it is possible that behind this mixture there lies a compound of *gair-* 'call' [← PIE √*ĝar- 'shout, call'] which would fit both semantically and formally," but this only rectifies the second problem and leaves the first unresolved. Furthermore, neither root connection explains the weak *ā*-verb, which, if primary, would call for a *seṭ* root *(*H*)G̥RH- > PCelt. *-*grā*-. Taken together, the weight of the objections renders this approach highly unlikely. O'Brien (1958: 98) is probably on the right track in reconstructing a denominative verb. Comparing OIr. *echtraid* [w. -*ā*] 'goes out', which contains initial *ex(s)- 'out', he proposes a parallel formation **ochtraid* [w. -*ā*] 'starts up, causes to start up' containing initial **ux(s)-* 'up', from which was built a compound in **dī-* with the meaning 'starts up from, causes to start up from' → 'awakes, awakens'. Just as the source of *echtraid* is PCelt. **ex(s)-tero-* (> OIr. *echtar*) 'outside',[154] the parallel formation would probably have been **óchtraid*, from PCelt. **eux(s)-tero-* or **oux(s)-tero-* (> OIr. *óchtar, úachtar*) 'upper part' ← PIE *(h_1)*eu̯p-* or *(h_1)*ou̯p-* (either grade would generate the Old Irish forms). The absence of a length mark in any of the attested forms of *do·fochtra* might rather imply a zero-grade preform **ux-tero-* ← *(h_1)*up-*, although the resultant OIr. **uchtar* is not found; on the other hand, vowel length is inconsistently marked in the manuscripts, so its absence in this instance could be accidental.

---

[153] And **tu-* is usually first or second, cp. McCone 2006: 182f., and § 2.1.4 *supra*.

[154] Although **exs-tero-* might rather have produced OIr. ‡*es(s)ar*; see the discussion under § 4.1.45 comment A.

4.1.84. *óen-ag-i-*$_{DEP}$ 'unite, make one'

< PICelt. **oino-sag-ī-*$_{DEP}$ ← PCelt. **oino-* (> OIr. *óen*) 'one' < PIE **(H)oi̯-no-* 'id.'

(1) PICelt. ***oinosag-e-tu-*** (← vb. stem **oino-sag-ī-*):

◊ **oinosagetu-* > ***óenugud*** [m.] 'act of uniting'

↔ vb. *óenaigidir* [w. *-ī*] 'makes one, unites'.

4.1.85. *othr-a-* 'be sick; treat (the sick or wounded)'

< PCelt. **(ϕ)utr-ā-* ← **(ϕ)utro-* (> OIr. *othar*) [n.] 'illness' < PIE **puH-tró-*Ⓐ

← √**peu̯H-* 'rot, decay'.

(1) PrIr. ***utr-ă̆-tu-*** (← vb. stem **(ϕ)utr-ā-*):

◊ **utrătu-* > ***othrad*** [m.] 'sick-maintenance; act of nursing, curing the sick'

↔ vb. *othraid* [w. *-ā*] '(intr.) is sick, ill; (tr.) tends, treats (the sick or wounded)'.

Comment:

Ⓐ Both OIr. *othar* 'illness' < PCelt. **(ϕ)ŭtro-* < PIE **puHtró-* and Lat. *pŭter* 'rotten' < PIE **puHtrí-* display unexpected short *-ŭ-* from PIE **-uH-*. Several explanations for this have been offered, but none is assured. Joseph (1980: 339f.), noting that there are no attested primary formations with full grade, and that zero grade occurs in at least one expected full-grade environment in Gr. πύος [n.] 'discharge, pus' < **puH-es-*, suggests that a new "super zero grade" was devised to restore the contrast with **CŪ* in the full-grade categories. The short vowel may also be an example of Dybo's Law,[155] involving the pretonic shortening of long vowels in Italic and Celtic; such is the position of *EDPC* (143 s.v. ***futro-***). But while Dybo's Law does seem to account for this and other troublesome forms (cp. OIr. *fer*, Lat. *vir* 'man' < **u̯ĭros* < PIE **u̯iH-ró-*, and see § 4.1.47 comment A), it

---

[155] Dybo 1961.

runs the risk of circularity.[156] Schrijver (1991: 235–37, 339, 535), while leaving open this possibility of Dybo's Law (350f.), prefers an alternative involving an Italo-Celtic rule of laryngeal loss in inherited sequences of **IHTR*. The present reflexes of PIE **puHtrV-* appear to be the only evidence for this rule, but Schrijver (184–91) relates it more broadly to a similar rule of laryngeal loss in sequences of **RHTC* that purports to explain, among other forms, Lat. *glăber* 'smooth' < *$g^{h}lh_{2}d^{h}ro$-. Yet these Italo-Celtic laryngeal deletion rules rest on slim evidence, as Schrijver himself acknowledges (191). If Isaac's rule of laryngeals (2007: 21–59) is valid, then this shortening would be regular if the laryngeal was *h_2 or *h_3; but as this system only applies to Celtic, Lat. *pŭter* would still be left without an explanation. In this respect at least, the solutions of Joseph, Dybo, and Schrijver have the advantage of unifying the Italic and Celtic forms.

4.1.86. *prom-a-* 'test, prove'

⇐ PrIr. **prob-ā-* < Lat. *prob-ō, -āre* 'test, prove'.Ⓐ

(1) PrIr. ****prob-ă̆-tu-*** (← vb. stem **prob-ā-*):

◊ **probătu-* > ****probad*** ⇒ ***promad*** [m.] 'proof, testimony; act of testing, proving'

↔ vb. *promaid* [w. *-ā*] 'tests, tries, proves'.

Comment:

Ⓐ The Old Irish pronunciation of Latin *probāre* would have been with lenited *-b-* (/-β-/). Confusion with the nasal lenited *-m-* (/-μ-/) is unexpected because the two sounds were still distinct phonemes in Old Irish. According to Thurneysen (*GOI* 574 § 924), the form of *promad* is due to influence from *prím-* 'first' < Lat. *prīmus*.

---

[156] Cp. Joseph 1982: 33f.

4.1.87. *rél-a-* 'make clear, reveal'

< PrIr. **reu̯el-ā-* < Lat. *reuēl-ō, -āre* 'reveal'.

(1) PrIr. ****reu̯el-ă̆-tu-*** (← vb. stem **reu̯el-ā-*):

◊ **reu̯elă̆tu-* > ****reëlad*** > ***rélad*** [m.] 'manifestation, clarification; act of making manifest, clarifying, revealing' ↔ vb. *rélaid* [w. *-ā*] 'makes clear, manifests, reveals'.

4.1.88. *rég-a-* 'punish, torture'

< PCelt. **rēg-ā-* ← **rēg-ā-* (> OIr. *ríag*) [f.] 'punishment, torture' ← PIE √**reiĝ-* 'stretch out, extend'.

(1) PCelt. ****rēg-ă̆-tu-*** (← vb. stem **rēg-ā-*):

◊ **rēgă̆tu-* > ***ríagad*** [m.] 'punishment, torture; act of punishing, torturing'

↔ vb. *ríagaid* [w. *-ā*] 'inflicts punishment or torture, punishes'.

4.1.89. *rind-a-* 'mark out, delimit'

< PCelt. **rend-ā-* ← **rend-i-* (> OIr. *rind*) [m.] 'point, tip', etymology unknown.

(1) [[PCelt. ****rend-ă̆-tu-*** (← vb. stem **rend-ā-*):

◊ **rendă̆tu-* > ****rendad*** ⇒ ***rindad***Ⓐ [m.] 'act of incising, carving, engraving'

↔ vb. **rendaid* ⇒ *rindaid*Ⓐ [w. *-ā*] 'incises, carves, engraves'.]]

(2) PCelt. ****-rend-o-*** (← vb. stem **rend-ā-*):

ari-rendo-* > ***errend* [n.] 'mark'

↔ no attested vb. **ar·renda.*

tu-u̯o-rendo-* > ***tórand* [n.] 'division, share; act of marking out, delimiting'

↔ vb. *do·foirndea* [w. *-ā*] 'marks out, delimits'.

Comment:

Ⓐ Celtic **-e-* was regularly raised before **-n-* plus obstruent, so OIr. *rind-* is the basic outcome of PCelt. **rend-*. McCone (1996: 55f.) takes the Primitive Irish reflex of this

vowel to be /ɪ/, distinct from inherited /i/ in this position, to explain the different treatment of the vowel in a word like OIr. *find* 'white' < PrIr. **u̯inda(h)* < PCelt. **u̯indos*, without lowering of *-i-* to *-e-* over the cluster *-nd-*,[157] versus that of *renda*, earlier **rendo* (gen.sg. of *rind* 'point, tip') < PrIr. **rɪndō(h)* < PCelt. **rendōs*, which was lowered as usual before the non-high non-front vowel in the next syllable. This means that the simple *ā*-verb ***rindaid*** 'incises, carves' and its verbal noun ***rindad*** (not found in our corpus) should also have the lowered root vowel due to the following **-ā-*; the alternative would be to assume a recent denominative formation that was made after the Primitive Irish lowering had already taken place, an unlikely scenario in view of the various compounds derived from it[158] which imply a relative antiquity for the verb (cp. § 2.1.4). The raised vowel has undoubtedly been restored from the substantive ***rind***, with which the verb was still obviously connected.

4.1.90. *sam-ag-i-* 'place, set (up)'

< PICelt. **samV-sag-ī-* ← PCelt. **stamV-* 'stance' { < PIE **sth₂-mV-* or: < PIE **sth₂-m[n]-V́-* ← **steh₂-men-*Ⓐ ← √**steh₂-* 'stand'.

(1) PICelt. ****samVsag-e-tu-*** (← vb. stem **samV-sag-ī-*):

◊ **samVsagetu-* > ***samugud*** [m.] 'act of placing, setting (up), establishing'

↔ vb. *samaigid* [w. *-ī*] 'puts, places, sets (up), establishes'.

Comment:

Ⓐ The source noun is not attested in Irish, but the expected form would be PCelt.

---

[157] McCone 1996: 110.

[158] Besides the two compounds listed above, there are also several with three preverbs: *ad·tóirndea* 'prods, goads' < **ati-tu-u̯o-rend-ā-*, *fris·tóirndea* 'marks off, delimits' < **u̯rits-tu-u̯o-rend-ā-*, and *tremi·toirndea* 'transfers' < **tremi-tu-u̯o-rend-ā-*, all built from the base of *do·foirndea*.

stamV-* 'stance', representing either a *mV*-stem built to PIE **sth₂-* or a vocalic-stem derivation from a base **sth₂-m-*. *LÉIA* (S-20f. s.v. **samaig-) takes this base to be an "élargissement en *-m-* de la rac. **stā- : stə-*"; however, given the rarity of root extensions in **-m-* in general, and the widespread occurrence of *men*-stems and derivatives thereof in this root (e.g., Ved. *sthā́-man-* [n.] 'station, power'; Gr. στή-μων [m.] 'warp [of an upright loom], thread', Lat. *stā-men* [n.] 'id. '; Lith. *sto-muõ, -eñs* [m.] 'stature'; Gr. στά-μν-ος [m. f.] 'large wine-jar', etc.), the formations in simple **-m-* (e.g., Umbr. *stah-mei* [loc. or dat.sg.] < **stā-mo-* 'stipulation, agreement' *vel sim.*; Lith. *stúo-ma-s* [m.] 'stature', etc.) may be better viewed as "Schmidt's Law" simplifications (**°C-mn-V́-* > **°C-m-V́-*)[159] of inherited *men*-stem nouns.

It has often been supposed[160] that the British nouns represented by MBret. *saff*, MoBret. *sav*, Co. *saf*, [m.] 'stance, upright position' and MoW *saf* [m.] 'resistance' reflect the same formation. However, as Schumacher (2000: 216f.) shows, these British words probably go back to PBr. **sab-* rather than **sam-*, as shown by OBret. ***sab*** 'stands', OW *ô datse**b**imou* gl. *de stabulis*, *se**b**edlauc* 'bystander, attendant' and MoBret. *sevel* 'to stand', which never shows any trace of nasalization, and are therefore rather cognate with OIr. *sab* [m.] 'shaft, pole', Go. *stafs*, OHG *stap*, OE *stæf* [m.] 'staff', Lith. *stãbas* [m.] 'post, column'.

4.1.91. *sár-ag-i-* 'violate, outrage'

< PICelt. **sagro-sag-ī-* ← PCelt. **sag-ro-* (> OIr. *sár*) [m.] 'outrage, insult, humiliation' ← PIE √**seĝʰ-* 'hold (by force)'.Ⓐ

---

[159] J. Schmidt 1895: 114–121, esp. 120f.

[160] *WG* 393; *IEW* 1008 s.v. ***stā- : stə-***; *LÉIA* S-20f. s.v. **samaig-**; Schrijver 1995: 420f.

(1) PICelt. ***sagrosag-e-tu-*** (← vb. stem **sagro-sag-ī-*):

◊ **sagrosagetu-* > ***sárugud*** [m.] 'violation, outrage; act of violating, outraging'

↔ vb. *sáraigid* [w. *-ā*] 'violates, outrages'.

Comment:

Ⓐ Old Irish *sár* [m.] 'outrage, insult' and *tár* [m.] 'insult, disgrace' (probably prefixed with **tu-* although the word is basically substantival rather than verbal)[161] appear to have formal cognates in MW *haer* [adj.] 'firm, earnest' and *taer* [adj.] 'quick-tempered, violent', and the equation of ***sárugud*** [m.] 'violation, act of violating' with MW *sayrhaët* [f.] 'insult' is highly attractive,[162] despite certain formal difficulties. The initial *s-* < PCelt./PIE **s-*, a somewhat unusual retention in Welsh, is not without parallel; cp. MW ***s**edd* [f.] 'seat' vs. MW ***h**edd* [m. f.]. OBret. *hed* 'peace, calm', MW ***s**il* [m. f.] 'offspring, progeny' vs. MW ***h**il* [f. m.], MBret. ***h**il* 'id.', etc.[163] The short *-ă-* of the later form ***sa**rhaet* and the related verb ***sa**rhaaf* 'I insult' is more difficult to account for, but is most probably to be attributed to pretonic vowel shortening.[164] Whatever the explanation, ***say**rhaët*, well attested in the Middle Welsh laws, is the earlier form. If then, as seems probable, OIr. *sár* and MW *haer, hayr-* are from a single historical form, the shape of this preform would

---

[161] *LÉIA* S-26 s.v. **sár**; Schrijver 1995: 134.

[162] See also H. Zimmer 1909: 72–76; Loth 1924; Joseph 1987: 145; Schumacher 2000: 102f.

[163] See Schrijver 1995: 377–83 for an account of these variants.

[164] Advocated by H. Zimmer 1909: 72–76; Loth 1924; Lewis 1943: 19; and endorsed by *LÉIA* S-26 s.v. **sár**; but doubted by *VKG* I, 536f. The phenomenon is also evident in MW ***ca**rawys*, Bret. *korais* 'Lent', instead of W **caerawys*, Bret. **kaerais*, from **kaiṛagēs-* < **kaδragēs-* < Lat. *quadrāgēsima*, and Bret. ***ta**ladur* [m.] 'adze' instead of **taeladur* with **taiḷ-* < PBr. **taxl-* < PCelt. **taksl-*. The position of the stress does seem to be the key factor that distinguishes these words from those in which the regular reflexes *-aiṛ-* and *-aiḷ-* remain, but the issue merits further investigation. The fact that variants with the diphthong (*say**r**haet*, *sa**er**haed*) are still present as late as Middle Welsh shows that these developments must be relatively late and parallel, not reflexes of a Proto-British event. Middle Breton *coazrel* 'sole of a shoe' < Lat. *quadrellum*, with *-zr-* < **-δr-* < **-dr-*, is not relevant to the issue, as it was borrowed after earlier **-δr-* had already changed to **-iṛ-* (cp. *VKG* I, 225 § 139(3); *LHEB* 431).

have been **sad-ro-* or **saG-ro-*. The best candidate is **sagro-* on the evidence of several old personal names, Ogham *NETTA-**SAGRU**, **SAGR**AGNI* (> OIr. *Sárán*) and Gaul. *AMBI-**SAGRU**S* (the same stem likely reflected in OBret. PNN ***Haer-uuiu**, **Haer-mael***), presumably with a positive connotation 'forceful, tenacious, valiant' *vel sim.* The PIE root is plausibly √**seĝʰ-* 'hold (by force)', as generally assumed, so the *-a-* of *sag-* would appear to be the reflex of *schwa secundum* or a morphological zero grade, i.e., **sag-ró-* instead of **sg-ró-*.

EDPC's suggestion (327 s.v. ***sego-**) of PCelt. **sāxsro-* < **sōxsro-* < PIE **soĝʰ-s-ro-*, comparing *tál* [m.] 'adze' < PCelt. **tāxslo-* < **tōxslo-* < PIE **toḱ-s-lo-*,[165] is problematic: even if one accepts an early Proto-Celtic lengthening of **-o-* before **-xsL-*,[166] the intermediate **-s-* of the two preforms is not comparable, since in the case of PIE **teḱs-* it is radical — or if an enlargement, it still formed a distinct root in PIE (cp. Hitt. *takš-*^{zi} 'devise', Ved. *tákṣ-ati* 'hammers, fashions, Gr. τέχ-νη 'skill' < **teks-nā*, OHG *dehs-ala* 'axe', probably Lat. *texō, -ere* 'weave', etc.) — whereas the formation **sōĝʰ-s-ro-* is *ad hoc*;[167] and this proposal also ignores the witness of the Ogham and Gaulish personal names that point to **sagro-*. Other less compelling etymologies are rightly rejected by *LÉIA* (S-26 s.v. **sár**).

---

[165] Cp. Foy 1896: 330; *VKG* I, 85 § 50(6); *IEW* 1058 s.v. ***teḱþ-***; *LÉIA* T-22 s.v. **1 tál**.

[166] This would necessarily have occurred before the Proto-Celtic change of **ō* > **ā*.

[167] Because of the *o*-grade one cannot suppose a secondary formation based on the *s*-stem **seĝʰ-es-* (cp. Go. *sigis* [n.] 'victory').

4.1.92. *sás(s)-a-* 'satisfy'

< PrIr. **sāss-ā-* ← PCelt. **sā-stV-* 'sufficiency, fill' ← PIE √**seh₂-* 'be full, satisfied'.Ⓐ

(1) PrIr. ****sāss-ă̆-tu-*** (← vb. stem **sāss-ā-*):

◊ **sāssă̆tu-* > ***sás(s)ad*** [m.] 'satisfaction; act of satisfying; food'

↔ vb. *sás(s)aid* [w. *-ā*] 'satisfies (esp. with food), feeds'.

Comment:

Ⓐ The Celtic noun at the base of this verb has not survived in Irish, but is reconstructible as **sā-stV-*, from PIE √**seh₂-* 'be full, satisfied'. (*LÉIA* S-27 s.v. **sás-** is certainly correct in separating OIr. *sás* 'snare, trap'; see below.) A preform **seh₂t-tV-* as offered by *EDPC* (324 s.v. ***sāti-**) is phonologically possible, but there is no good basis for assuming a *t*-extended root variant **seh₂-t-*. On the other hand, the relationship of OIr. **sás* < **sā-stV-* to *sáth* [f.] 'sufficiency, fill' < **sā-tā-* finds parallels in other word pairs such as ***bás*** [n.] 'death' < **bā-sto-* and ***báth*** [n.] 'id.' < **bā-to-* (§ 3.1.9); *gáes* [f.] 'shrewdness, intelligence' < **gai-stā-* and *gáeth* [adj.] 'wise, intelligent' < **gai-t^{o}/ā-* (§ 4.4.5); *gnás* [f.] 'companionship, custom' < **gnā-stā-* and *gnáth* [adj.] 'customary, usual' < **gnā-t^{o}/ā-*; etc. For the *stV*-suffix, see § 2.2.3.21.

A separate problem is OIr. *sás* [m. *-o*] 'snare, trap; instrument, means', which, despite *DIL* (s.v. **sás**), is too remote semantically to be plausibly equated. Greene's (1962b) proposal of a development 'sufficiency' → 'that which is capable of dealing with' → 'trap' is hardly likely. More plausible is Irslinger's (2002: 424) tracing of this word to the homonymous root **seh₂-* 'bind' (cp. Av. *hāiti-* [f.] 'piece, section, chapter' < PIE **seh₂-ti-* 'binding') which lies at the base of PIE √**seh₂(i̯)-* or **sh₂ei̯-* 'bind'.[168]

---

[168] There is no consensus on the shape of this root. Mayrhofer (*KEWA* III, 550; *EWAia* II, 720f., w. lit.) sets up PIE √**seh₂-*, with an *i*-present stem **sh₂-i̯-* as the source of various secondary formations. Rasmussen (1989: 59f.) reconstructs PIE √**seh₂i̯-* / **sh₂ei̯-* as the basis of secondary **seh₂-* through loss of **-i̯-*. Kümmel (2000: 549f.), followed by *LIV*² (544), reconstructs only √**sh₂ei̯-* and takes the Indo-Iranian

4.1.93. *selb-a-* 'possess'

< PCelt. **selu̯-ā-* ← **sel-u̯ā-* (> OIr. *selb*) [f.] 'property' ← PIE √**selh₁-* 'take, grasp'.

(1) PCelt. ****selu̯-ă̆-tu-*** (← vb. stem **selu̯-ā-*):

◊ **selu̯ă̆tu-* > ***selbad*** [m.] 'possession; act of possessing'

↔ vb. *selbaid* [w. *-ā*] 'possesses; takes possession of'.

4.1.94. *sén-a-* 'deny, reject'

< PrIr. vb. **sign-ā-* ← **signo-* (> OIr. *sén*) [n.] 'sign' < Lat. *signum* [n.] 'id.'

(1) PrIr. ****sign-ă̆-tu-*** (← vb. stem **sign-ā-*):Ⓐ

◊ **signă̆tu-* > ***sénad*** [m.] 'rejection; act of rejecting'

↔ vb. *sénaid* [w. *-ā*] 'denies, rejects, disowns'.

Comment:

Ⓐ *DIL* divides the Old Irish verb *sénaid* into two entries, but notes that they are ultimately the same word. Entry **1 sénaid** 'denies, disowns, rejects' appears to be a specialized and pejorated application of **2 sénaid** 'marks with a sign; blesses (in a Christian sense); puts a spell or charm on (in a heathen sense)'. Both are derivatives of *sén* 'sign, omen' < Lat. *signum* 'sign'. The *tu*-stem ***sénad*** is attested in Old and Middle Irish literature as a verbal noun corresponding to both meanings of *sénaid*. In our early corpus, there is only one example of this word, at Bl. § 255b (speaking of the martyrs throughout history) ... *ó boí* ***senad*** *senÁdaim / ro boí co rígaib cloínaib / demán do Chríst glanchoímaib*. Carey, taking the noun to be *senad* 'synod, assembly', translates: "... Since ancestral Adam **held counsel** there has been with perverse kings a multitude of the pure dear ones of Christ." However, as the literary reference here is to the Fall of Man and his

---

words in *sā-* to be from another root, PIE √**seh₁-* 'let go, release'. But the derivation of OIr. *sás* [m. *-o*] 'snare, trap' advocated here calls for a root of the shape **seH-* in the meaning 'bind'. The best solution appears to be that of Lipp (2009: II, 206 fn.21), who takes PIE **sh₂-ei̯-* as an early derivation from the basic √**seh₂-* 'bind'.

consequent expulsion from the Garden of Eden, ***sēnad*** 'act of rejecting, disowning' (the long vowel unmarked) renders superior sense: "... Since the **rejection** of ancestral Adam took place ..." etc. It is uncertain, due to lack of direct evidence, whether ***sénad*** also serves as the verbal noun of *sénaid* in the sense 'blesses, etc.' in our target period as it does later, but this seems likely enough. In any event, the more common verbal noun of *sénaid* 'denies, rejects' in the early literature, ***sénae*** [f. *-iā*] (§ 4.4.9(1)), is never found with the positive meaning in Old or Middle Irish.

4.1.95. ***sét-i-*** 'blow'

< PCelt. **su̯ēsd-ī-* ← **su̯ēsd-V-* < PIE ?√**su̯eisd-* 'whistle, hiss'.Ⓐ

(1) PrIr. ****su̯ēdd-ĭ/e-tu-*** (← vb. stem **su̯ēdd-ī-* < PCelt. **su̯ēsd-ī-*):

◊ [[**su̯ēddĭ/etu-* > ***séited*** [m.] 'act of blowing; a blast'

↔ vb. *séitid* [w. *-ī*] 'blows'.]]

ari-su̯ēddĭ/etu-* > ***airfitiud* [m.] 'entertainment (esp. minstrelsy); act of entertaining'

↔ vb. **ar·séiti* ⇒ *ar·peiti*Ⓑ [w. *-ī*] '(sounds before →) plays for, entertains'.

Comments:

Ⓐ Cp. *-fet-* 'blow' (§ 3.1.43), from the zero grade of this same root. The weak verb **su̯ēdd-ī-* < **su̯ēsd-ī-* reflects a full-grade form, probably denominative from a Proto-Celtic noun **su̯ēsd-V-*.

Ⓑ The historical form would have been **ar·séiti*. The *-p-* of *ar·peiti* is a spurious restoration of the unlenited consonant. Because *ph/f* functioned synchronically in Old Irish as the lenited variant of *p*, the *-f-* in prototonic *·airfiti* and the verbal noun ***airfitiud***, historically from **su̯* in these words, was reinterpreted as lenited *-p-*, and the spurious unlenited stop "restored" in the deuterotonic forms. This confusion could only have arisen after the merger of unlenited **su̯* with **s* in prehistoric Irish and the full integration of the new *p* from loanwords into the system of grammatical lenition. Once

the association with *séitid* 'blows' had been broken, the way was open for the short vowel to be introduced into the root through the influence of the prototonic forms (where the unstressed vowel was regularly shortened), and perhaps also by influence of ***tinfed*** [n.] 'breath'.

4.1.96. *síd-ag-i-* 'pacify, make peace'

< PICelt. **sīdV-sag-ī-* ← PCelt. **sīd-es-* (> OIr. *síd*) [n.] 'peace' < PIE **sēd-es-* ← PIE √**sed-* 'sit'.Ⓐ

(1) PICelt. ****sīdVsag-e-tu-*** (← vb. stem **sīdV-sag-ī-*):

◊ **sīdVsagetu-* > ***sídugud*** [m.] 'act of pacifying, making peace'

↔ vb. *sídaigid* [w. *-ī*] 'pacifies, makes peace'.

Comment:

Ⓐ Various derivatives of PIE √**sed-* imply an acrostatic paradigm with *ē* : *e* ablaut: OIr. *síd* [n.] 'peace' < **sḗd-es-*, Lat. *sēdēs* [f.] 'seat, abode' ← **sḗd-*, ON *sæti* [n.] 'seat' < **sḗd-i̯o-*; also, with **-ō-*, ON *sót*, OE *sōt* [n.] 'soot' < **sṓd-o-* 'a settling, that which settles', Lith. *súodžiai* [m.pl.] 'soot' < **sṓd-i̯o-*, OCS *sadъ* [m.] 'plant, garden' < **sṓd-u-*, OIr. *sáidid* [w. *-ī*] 'plants, erects', MW *(gwa-)hawð* 'to invite' < caus. **(-)sṓd-(i)i̯e/o-*[169] 'cause to sit', etc.[170] On the other hand, Ved. *sádas-* [n.], Gr. ἕδος [n.] 'seat', MW *hedd* [m. f.] 'peace' < PIE **séd-es-*, Ved. *nīḍá-* [m.] 'lair', Lat. *nīdus* [m.], OHG, OE *nest* [n.] 'nest' < PIE **ni-sd-ó-*, Lat. *sub-sidium* [n.] 'support', OIr. *suide* [n.] 'sitting, seat' < **(-)sod-i̯o-*, etc., which are of indisputable antiquity, show the more common ablaut patterns. It is difficult to know

---

[169] For the form of the long-vowel causative, cp. Schumacher 2000: 161f. The Old Irish verb has also been taken to be from PIE **stoh₃-dʰ-éi̯e/o-* 'cause to stand', from an extended form of √**steh₃-* 'stand' (thus *IEW* 1007 s.v. ***stā-* : *stə-***; *LÉIA* S-9 s.v. **sáid-**; Schrijver 1995: 408). But this derivation cannot be true of the Welsh verb, with *h-* < PIE **s-* not **st-*, and it seems preferable to maintain the unity of the Celtic forms.

[170] See Schindler 1975: 267; Rieken 1999: 174f.; Stüber 2002: 145, 205; Weiss 2009: 47.

how to reconcile these discrepant formations, which often appear side by side within a single language. To judge from the discussions in *NIL* (590–600 s.v. ***sed-***) and *LIV*[2] (513–15 s.v. ***sed-***), there appears to be a tendency in the literature — by no means universal — to explain the "Narten"-type forms as innovations, but the question has not been settled. In regard to OIr. *síd* 'peace', Schrijver (1991: 121, 376) suggests that the long vowel was secondarily taken from a root-noun **sēd-s*, which also lies at the base of Lat. *sēdēs*; although this explanation does not so readily account for the forms with **-ō-*. However that may be, the fact that MW *hedd* 'peace' does not share in the long vowel suggests that both **-ē-* and **-ĕ-* survived as coexistent root grades at least until the breakup of Insular Celtic. The meaning 'peace' probably extends from the idea of becoming 'settled, calm'; cp. the semantics of Lat. *sēdō, -āre* 'settle, calm down (tr.)' ← 'cause to sit down'.[171]

4.1.97. *sóer-a-* 'free, deliver'

< PrIr. **suu̯ir-ā-* ← **su-u̯ir$^{o}/_{ā}$-* (> OIr. *sóer*) [adj.] 'free' ← PCelt. **su-* 'good' + **u̯iro-* 'man'Ⓐ < PIE **u̯iH-ró-* 'id.' ← 'vigorous, strong' ← √**u̯eiH-* 'be vigorous'.

(1) PrIr. ****suu̯ir-ă̆-tu-*** (← vb. stem **suu̯ir-ā-*):

◊ **suu̯irătu-* > ***sóerad*** [m.] 'deliverance; act of freeing, liberating, delivering'

↔ vb. *sóeraid* [w. *-ā*] 'frees, liberates, delivers, saves'.

Comment:

Ⓐ OIr. *sóer* [adj. $^{-o}/_{-ā}$] 'free' (as subst. [m. *-o*] 'freeman, member of the noble class') is glossed in the laws as *.i. so-ḟer* 'i.e., good man', and its negative counterpart *dóer* [adj. $^{-o}/_{-ā}$] 'unfree, lowborn' (as subst. [m. *-o*] 'serf, thrall, member of the servile class') as *.i. do-ḟer*

---

[171] D'Arbois de Jubainville 1908–1909: 375; *LÉIA* S-106 s.v. **2 síd, síth**. Formally Lat. *sēd-āre* is a denominative from *sēd-ēs*, and thus not directly derived from PIE **sēd-*.

'i.e., bad man':[172] that is, from *su-, so-* 'good' and *du-, do-* 'bad',[173] plus *fer* < **u̯iro-* 'man'. This Medieval etymological nugget has also been widely accepted in modern times.[174] On this basis one might expect that the forms would be disyllabic **suër, duër*; and indeed, disyllabic *soër* is cited by Watkins (1963: 236). Perhaps we may assume with Greene (1976: 39) that diphthongal *sóer* arose by the influence of *sóer* (*sáer*) 'artificer', a word of different origin traced from **sapero-* (cp. Lat. *sapiō, -ere* 'understand', OHG *int-seffen*, pret. *-suob* 'to notice' etc.),[175] and *dóer* followed suit. Given the productivity of PIE **su-* 'good', there is no reason to assume that the comparison with Ved. *su-vī́raḥ* 'manly, heroic' and *su-vī́ryam* 'heroic force' cited by *LÉIA* (S-162 s.v. **soer**) is anything but coincidental, especially given the divergence in meanings.

For the short **-ĭ-* in Celtic **u̯iro-*, see § 4.1.47 comment A.

4.1.98. *soíb-a/i-* 'contort, pervert, make crooked'

< PCelt. **soib-ā/ī-* ← **soib-$^{0}/_{ā}$-* (> OIr. *soíb*) [adj.] 'crooked, false', etymology uncertain. Ⓐ

(1) PCelt. ****so̯ib-ă̆-tu-*** (← vb. stem **so̯ib-ā-*):

◊ **so̯ibă̆tu-* > ***soíbud*** [m.] 'contortion; deception; act of contorting; perverting, deceiving'

↔ vb. *soíbaid* [w. *-ā/ī*] 'contorts; perverts, deceives'.

Comment:

Ⓐ The *e*-grade of this root occurs in the related word *síabair* [m. *-i*] 'specter' < PCelt.

---

[172] E.g., *CIH* V, 1593.2–3.

[173] The older forms *su-* and *du-* (altered from PIE **dus-*, cp. Gr. δυσ-, Skt. *dur-, duṣ-*, Go. *tuz-*, etc.), are seen in W *hy-, dy-* < **su-, *du-* and Gaul. *SU-CARIUS, SU-RATUS*, gen. *DU-RATI*. In Old Irish these alternate unsystematically with the lowered variants *so-, do-*, except in hiatus where *su-* and *du-* prevail (*GOI* 231 § 365.1).

[174] E.g., Binchy 1960: 85; Watkins 1963: 236; Greene 1976: 39; *LÉIA* S-163 s.v. **soer**, D-159 s.v. **doír**.

[175] *US* 288 s.v. **sa(p)iro-s**; *VKG* I, 92 § 54; *LÉIA* S-6 s.v. **2 saer**.

sēb-ri-* ← **seib-* 'false (spirit)', which also appears as the second element of the compound name OIr. *Find-abair***, MW *Gwen-**hwyfar*** 'white (or fair) specter' < **u̯indo-**sēbrV-***.[176] The existence of ablaut in this root points to a PIE inheritance, but the source is unclear. Pokorny's (1920: 78) derivation of *soíbaid* from **su̯oi̯b-*, an *o*-grade of the root underlying ON *sveipa* 'to spin, wrap', OHG *sweifan* 'to set spinning', Eng. *sweep*, etc., can be discounted, since inherited **su̯-* in lenition gives OIr. *f-*, and consequently PCelt. **u̯indo-su̯ēbri-* should have produced OIr. ⁂*Find-fabar*. Vendryes (1929), noting a widespread connection between 'binding' and 'working magic' (cp., e.g., MW, MBret. *hud* 'magic', ON *seiðr* 'magic, spell' < **soi̯-to-*), took the underlying root to be PIE √**sēi-* 'bind' (cp. *IEW* 891f. s.v. ***3. sē(i)-, -səi- : sī-*** und ***sei- : si-***) and reconstructed a *bʰ*-extended **soi̯-bʰ-* for the Irish form. But the root vowel poses serious troubles for this proposal. The earlier root √**sē(i)-* 'bind' is now generally reconstructed as √**seh₂(i̯)-* / **sh₂ei̯-*, or else the forms are divided between PIE √**seh₁(i̯)-* 'let go, release' and √**sh₂ei̯-* 'bind';[177] while this presents no problems for the *o*-grade of PCelt. **soib-*, which could unproblematically continue PIE **sh₂oi̯-bʰ-*, the *e*-grade of PCelt. **sēb-* < pre-Celt. **seib-* is impossible in a root containing **h₂* because of the inevitable coloring effects of the laryngeal. A pre-Celt. **sēib-* (whether from PIE **sēh₂i̯b⁽ʰ⁾-*, **sh₂ēi̯b⁽ʰ⁾-* or **seh₁i̯b⁽ʰ⁾-*) is probably also to be excluded, as the evidence appears to place the Proto-Celtic change of **-ē-* > **-ī-* before the

---

[176] For the etymology, see *VKG* I, 266 § 171; Vendryes 1929: 264. The original declension is not certain, but it has secondarily acquired a guttural-stem genitive *Findabrech* (*VKG* II, 99 § 446(1)). For *Findabair* instead of ⁂*Fintabair* < **Find*ṫ*ṡabair*, see Watkins 1976: 121f.: intervocalic **-h-* < **-s-* was preserved word-internally when a living alternation remained between unlenited *s* and lenited *ṡ* = /h/ (e.g., *in·samlathar* 'imitates' ↔ vn. ***intṡamail, intamail*** < **ande-samal-*, § 4.3.31(1)), but was otherwise lost; in the case of PrIr. **u̯indahēβrV-*, an inherited compound, the morpheme boundary between the two elements — and hence its synchronic relationship with **sēβri-* 'specter' — had become obscured, leading to the total loss of the medial **-h-*.

[177] See fn. 168.

shortening of long diphthongs,[178] and this would have yielded OIr. ‡*sīb-*. These considerations narrow the field significantly, leaving only a root of the shape **s(t)(h₁)eiḭb⁽ʰ⁾-* as the sole possibility, for which no suitable candidates are evident. An extension of √**seiˍ-* 'drip, flow' (*IEW* 889; cp. 894 s.v. ***seip-, seib-*** 'ausgießen, seihen, rinnen, tröpfeln'; *LIV*² 521 s.v. ****seiḭb-*** 'fließen lassen') would suit the formal requirements, as would √**steiḭb-* 'stiffen' (*IEW* 1015f. s.v. ***stĕib(h)-, stĭb(h)-, stĕip-, stĭp-*** 'Stange, Stecken; steif' und 'zusammendrängen' usw.; *LIV*² 592 s.v. ?****steiḭb-*** 'steif/fest machen'), but neither is amenable semantically.

The examples of Old Irish *ī*-stem flexion (3.sg.pres.rel. *saibes*, Wb. 27a9, 3.pl.pret. *saibset*, Ml. 24d24) are unusual, as Celtic factitives regularly take *ā*-flexion. Thurneysen (*GOI* 338 § 525(c)) suggests analogical remodeling based on OIr. *at(t)oíbi* 'adheres' < **ad-toib-ī-*, which is taken to be denominative formation from *ad-* + *tóeb* [m.] 'side'.[179]

4.1.99. *sud-ig-i-*$_{DEP}$ 'place, set, seat'

< PICelt. **sodio-sag-ī-*$_{DEP}$ ← PCelt. **sod-io-* (> OIr. ***suide***) [n.] 'seat'Ⓐ ← PIE √**sed-* 'sit'.

(1) PICelt. ****sodiosag-e-tu-*** (← vb. stem **sodio-sag-ī-*):

◊ **sodiosagetu-* > ***suidiugud*** [m.] 'placement, position, arrangement; act of placing, putting' ↔ vb. *suidigidir* [w. *-ī*] 'places, puts, arranges'.

Comment:

Ⓐ See § 3.1.112(1).

---

[178] McCone 1996: 64.

[179] So also *LÉIA* A-102 s.v. **attóibid**.

4.1.100. **sund-i-* 'beat with a club'

< PrIr. **su̯ond-ī-* ← PCelt. **spond-o-*[180] (> OIr. *sond*) [m.] 'stake, beam, club' ← PIE **(s)pend-* 'span'.

(1) PrIr. ****su̯ond-ĭ̄-tu-*** (← vb. stem **su̯ond-ī-*):

◊ **su̯ondĭ̄tu-* > ***suindiud*** [m.] 'act of clubbing'

↔ no attested vb. **suindid.*Ⓐ

Comment:

Ⓐ The expected verb is not actually attested, but probably did exist in Primitive Irish, since the verbal noun ***suindiud***, compared with its source noun *sond* 'stake, club', shows the correct raising of the root vowel from PrIr. **su̯ond-ĭ̄-tu-*, and no synchronic Irish model is available to provide a basis for analogy; the only similar-sounding pair that can be found is ***slond*** 'expression' → *sluindid* 'expresses, declares', but here the shape of the verbal noun does not match: ***slondud*** < PrIr. **slond-e-tu-* (§ 3.1.120(2)). (Middle Irish *sonnaid* [w. *-ā*] 'pierces; presses' ↔ vn. ***sonnad*** has no bearing on the issue, as it is a separate, and late, formation from the same noun.)

4.1.101. *tésc-a-* 'begin'

< PrIr. **tēsk-ā-* ← **tēsk-o-* (> OIr. *tíasc*) [m.] 'beginning', etymology unknown.Ⓐ

(1) PrIr. ****tēsk-ă̄-tu-*** (← vb. stem **tēsk-ā-*):

◊ **tēskă̄tu-* > ***tíascad*** [m.] 'beginning ; act of beginning'

↔ vb. *tíascaid* [w. *-ā*] 'begins'.

---

[180] For the retention of PIE **sp-* > PCelt. **sp-* and its subsequent development to PrIr. **su̯-*, see McCone 1996: 44f.

Comment:

Ⓐ Welsh *twysg* 'mass, quantity', also of unknown etymology,[181] could be from the same formation, but can hardly be unified semantically.

4.1.102. *tib-i-* 'mock, ridicule'

< PrIr. **tib-ī-*, etymology uncertain.Ⓐ

◊ Simple verb *tibid* [w. *-ī*] 'beats, breaks (esp. of waves); smiles, laughs'; no simple verbal noun attested.

(1) PrIr. ***-tib-ĭ̄/e-tu-*** (← vb. stem **tib-ī-*):

kom-tibĭ̄/etu-* > ***cuitbiud* [m.] 'mockery, ridicule; act of mocking, ridiculing'

↔ vb. *con·tibi* [w. *-ī*] 'laughs (at); mocks, ridicules'.

(2) as if *****-ti-beu̯i̯(i̯)-o-*** (analogically remodeled):Ⓑ

u̯o-ad-tibeu̯i̯(i̯)o-* > ***fáitbe [n. *-io*] 'a smile, laughter, derision; act of smiling, laughing, deriding' ↔ vb. *fo·áitbi* [w. *-ī*] 'smiles, laughs, laughs at'

Comments:

Ⓐ No source noun is attested in Celtic, and there are no certain external Indo-European connections. It is, nevertheless, possible to specify with some certainty the shape and meaning of the root. The raised vowel of the preverb *cu-* < **kom-* shows that the root is PCelt. **tib-* with historical *-i-* rather than *-e-*; if inherited from Proto-Indo-European, this would reflect the zero grade of an *i*-diphthong root ending in **-$b^{(h)}$-* or **-g^{w}-*. As Vendryes (1938: 42) has shown, the basic Celtic meaning is 'strike, beat' *vel sim.*, evident in OIr. *tibid (fri)* [w. *-ī*] 'beats, breaks (against) (esp. of waves)', from which 'smile, laugh' arose secondarily through the expression *tibid gen (gáire)* 'laughs, smiles' (cp. Fr. *éclat de rire, (s')éclater de rire*, also simply *éclater*). These observations eliminate, for morphological or

---

[181] See Schrijver 1995: 225 with further references.

semantic reasons, most of the various comparisons that have been suggested in the past: Lith. *steb-iù, steb-éti* 'to astonish'[182] (suitable semantically, but PIE √*$steb^{h}$- contains no *i*-diphthong, nor is there any other evidence for *s*-mobile); Ru. *tim-it'sja* 'mock'[183] (**-m-* < **-b-* is unexplained); Toch. *tsip-* 'dance' ?← 'joy of the dance'[184] (semantically awkward, and perhaps rather from an extended form of PIE √**tu̯ei̯-* 'agitate, shake', cp. Anreiter 1984: 160f.); and Gr. στεί̯β-ω 'tread on, trample'[185] (PIE **stei̯b*$^{(h)}$- means 'become stiff, make firm', and in the numerous variants — Arm. *stip-em* 'press, urge', Gr. στῖφ-ος 'a crowd, pack', CS *stъb-lo* 'stem, stalk', etc., and from **stei̯p-*, Lith. *stimp-ù, stìp-ti* 'stiffen', OE *stīf* 'stiff', etc. — there is no evidence of *s*-mobile). The general skepticism expressed by *LÉIA* (T-62 s.v. **tibid**) about any of these proposals is justified.

Ⓑ The expected verbal noun of *fo·áitbi*, namely ***fáitbiud*** [m.] < * *u̯o-ad-tibĭ̆/etu-*, is well enough attested in Old Irish, but the form that appears in our corpus is the neuter *io*-stem ***fāitbe*** *mbrāithre* 'derision of brethren' (AC § 10, *l.*45), in five of the eight manuscript witnesses.[186] It would appear that this verbal noun has been influenced by ***aithbe*** [n.] 'decline, decay', ***(t)airdbe*** [n.] 'act of cutting off', and/or other verbal nouns of the compounds of *·ben* 'strikes' (§ 3.1.12(3)), which is not far removed semantically from *tibid* [w. *-ī*] 'beats, breaks (esp. of waves)'.

4.1.103. *treb-a-* 'reside, occupy'

< PCelt. **treb-ā-* ← **treb-ā-* (> OIr. *treb*) [f.] 'house, farm, holding' ← PIE √**treb-* 'settlement'.

(1) PCelt. ****treb-ă̄-tu-*** (← vb. stem **treb-ā-*):

◊ **trebă̄tu-* > ***trebad*** [m.] 'husbandry; act of plowing, cultivating'

↔ vb. *trebaid* [w. *-ā*] 'cultivates, plows'.

(2) PCelt. ****-treb-o-*** (← vb. stem **treb-ā-*):

ad-trebo-* > ***attrab* [n.] 'residence; act of dwelling (in), occupying; a residence, dwelling'

↔ vb. *ad·treba* [w. *-ā*] 'resides, dwells in'.

4.1.104. *trén-ag-i-* 'confirm'

< PICelt. **trex(s)no-sag-ī-* ← PCelt. **trex(s)-n⁰/ā-* (> OIr. *trén*) [adj.] 'strong' < PIE **treg(s)-no-* or:

< PICelt. **trixno-sag-ī-* ← PCelt. **trix-n⁰/ā-* (> OIr. *trén*) [adj.] 'strong' < PIE **tr̥g-nó-* ← √**treg-* 'strength'. Ⓐ

◊ Simple verb *trénaigid* [w. *-ī*] 'strengthens'; no simple verbal noun attested.

(1) PICelt. ****-trex(s)nosag-e-tu-*** (← vb. stem **trex(s)no-sag-ī-*)

or: PICelt. ****trixnosag-e-tu-*** (← **trixno-sag-ī-*):

ambi-trex(s)nosagetu-* or **ambi-trixnosagetu-* > ***imthrénugud* [m.] 'confirmation; act of confirming, commending' ↔ vb. *imm·trénaidegar* [w. *-ī*] 'assures, confirms'.

Comment:

Ⓐ Most of the surviving Celtic words point to a PCelt. **trex-s-*: MW *trech* [adj.] 'dominant', MBret. *trech* [m.] 'victory', Co. *trygh* [adj.] 'victorious' < **trexs-o-*, Gaul. PNN *TREXA* < **trexs-ā-*, *TREXIUS* < **trexs-io-*; so also OIr. *treis(s)e* [f.] 'strength' < **trexs-iā-*, *tres(s)* [m.] 'contention, fight' < **trexs-u-* (or perhaps **trexs-tu-* if PCelt. **-xst-* > OIr. *-s(s)-*, see § 4.1.45 comment A), etc. Old Irish *trén* [adj.] 'strong' is more ambiguous, perhaps

reflecting PCelt. **trex(s)-n$^{o}/_{\bar{a}}$-*, but possibly also **trix-n$^{o}/_{\bar{a}}$-* < PIE **tr̥g-nó-* or **tr̥k-nó-*.[187] While the vocal quality of the guttural is not ascertainable from the Celtic root, the Germanic cognates, ON *þrekr* [m.], *þrek* [n.] 'strength, courage', OE *ðrece* [m.], *ðræc* [n.], *ðracu* [f.] 'violence', etc. indicate a PIE voiced **-g-*.[188] On the other hand, *LÉIA* (T-136 s.v. **trén**) compares two words reflecting PIE √**trek-*: Latv. *trekns* 'fat, thick'[189] and Alb. *trashë* 'thick' < **trakše* < PIE **trok-so-*;[190] but these may simply reflect a voiceless-final variant of PIE √**treg-*. For the semantic link between 'fat' and 'strong', compare Eng. *stout*.

4.1.105. *tróeth-a-* 'subdue, weary'

< PCelt. **troit-ā-* ← **troi-t$^{o}/_{\bar{a}}$-* (> OIr. *tróeth* 'neuter') [adj.] 'weak' ← ?PIE **trei̯-*

cp. PIE √*terh$_1$-* 'rub, turn, bore through'. Ⓐ

(1) PCelt. ****troit-ă̆-tu-*** (← vb. stem **troit-ā-*):

◊ **troitătu-* > ***tróethad*** [m.] 'subjugation, abatement; act of subduing, overcoming, abating'

↔ vb. *tróethaid* [w. *-ā*] 'subdues, abates, wears out'.

Comment:

Ⓐ Besides *tróeth* < PCelt. **troi-t$^{o}/_{\bar{a}}$-*, two other closely related adjectives occur in Old Irish: *tríath* [adj. *-$^{o}/_{\bar{a}}$*] 'weak, feeble' < PCelt. **trē-t$^{o}/_{\bar{a}}$-* and *tréith* [adj. *-i*] 'weak, feeble' < PCelt. **trē-ti-*, as well as an abstract *tréithe* [f. *-iā*] 'weakness' < PCelt. **trē-tiā-*.[191] These words have been plausibly attached to PIE √**terh$_1$-* 'rub, turn, bore through' (a widely

---

[187] Hamp 1984: 138.

[188] *VKG* I, 296 § 201(1d); *IEW* 1090 s.v. ***treg-***; Hamp, *loc. cit.* fn.1; *EDPC* 389 s.v. ****trexs(n)o-***.

[189] Endzelin 1911: 57.

[190] M. E. Schmidt 1922: 245.

[191] Another abstract, *trés* [f. *-ā*] 'weakness, cowardice', in light of the lack of diphthongization (***trías*) that would have been expected from historical **trē-stā-*, is probably a late analogical formation from the adjective *tréith* (de Bernardo Stempel 1999: 337; Irslinger 2002: 418).

attested root with diverse extended formations, not all of them easily analyzable), showing the same semantic development as seen in MW *trawd*, Bret. *treut* [adj.] 'tired, weak' ← 'worn out'.[192] But whereas the British words can more or less straightforwardly continue PCelt. **trā-to-* < PIE **tr̥h₁-tó-*,[193] the Irish words point back to **treu̯-*, **trou̯-*, preforms that are more difficult to reconcile with PIE √**terh₁-*. A comparison with the Lat. ppp. *trī-tum* is not feasible if this form goes back to **trēu̯-to-* ← **treh₁-i-*,[194] because the Irish words are incompatible with the erstwhile presence of a laryngeal; if, however, the Lat. perf. *trī-vi*, ppp. *trī-tum* are traceable to a suppletive non-present root √**treu̯-*,[195] then we may be able to posit an Italo-Celtic pairing of pres. √**terh₁-* : non-pres. √**treu̯-*. Because of the difficulties of root ablaut — neither *e*-grade nor *o*-grade is expected of a PIE *to*-stem[196] — Irslinger (2002: 214f., 303) considers it probable that **treu̯-to-* and **trou̯-to-* are post-PIE formations.

The base adjective *tróeth* is only attested as a Middle Irish glossator's word in the meaning 'neuter', paired with *moth* '*membrum virile*; a male; masculine gender' and *toth* 'female *pudenda*; a female; feminine gender': for example, San.Corm. 866, ***moth*** *.i. gach ferrda, gach ferindsce, et nomen uirili membro .i. ball ferrda* — '***moth***, *i.e.*, everything male, everything masculine, *et nomen virili membro*, *i.e.*, male member'; 1220, ***toth*** *.i. gach*

---

[192] Cp. Vendryes 1948: 334: "on peut les rapprocher de l'homérique τρητός «usé, percé»."

[193] But note that the long vowel must be explained as secondary if **CR̥HT-* sequences regularly produce short-vowel reflexes in Celtic, or if Dybo's Law of pretonic shortening applies.

[194] Schrijver (1991: 244f., 395f.) considers this more likely than the alternative **trih₁-tó-* ⇐ **trh₁-i-tó-*. De Vaan (2008: 616 s.v. **terō, -ere**) cites both possibilities without committal.

[195] Rix 1999: 517; Meiser 2003: 228; *LIV*¹ 575 n.4 s.v. ***terh₁-***, citing √**treu̯(H)-*; but *LIV*² 632 n.4 s.v. ***terh₁-*** takes the suppletive root to be √**treu̯(H)ǵ-*.

[196] But see Vine 2004: 360–66, with additional literature, for a discussion of some possibly old full grades among verbal adjectives in **-tó-* to laryngeal-final roots.

banindsci ┐ cach femen, quia nomen est membri mulieris — '***toth**, i.e.*, everything feminine & everything female, *quia nomen est membri mulieris*; 1221, ***trōeth** .i. gach neutur .i. nem nechtardea* — '*tróeth, i.e.*, everything neuter, *i.e.*, not either'; Auraic. 1487–90, ***mod** ┐ **tod** ┐ **traeth** .i. anmunda* [v.l. *anmand na*] *ball ferda ┐ band*[*a*] *┐ neudarda sin amal asbert in Laitneoir: nomen membri uiri vel nomen membri muilieris vel nomen membri neutri* — '***moth** & **toth** & **tróeth**, i.e.*, these are the names of the male, female, and neuter members, as the Latinist says: *nomen membri viri vel nomen membri mulieris vel nomen membri neutri*'. The grammatical meaning of 'neuter' may have developed from the concept of being "neutralized," i.e., having undergone an 'abatement' or 'suspension' of the masculine and feminine categories,[197] or perhaps from a metaphorical extension of the notion 'emasculated' ← 'weak'. The word itself is clearly older than Middle Irish, since the Old Irish verb *tróethaid* 'subdues, abates, wears out' is derived from it; the earlier meaning of the adjective is still reflected in the derivative.

4.1.106. *-trom(m)-a-* 'oppress'

< PCelt. **trudsm-ā-* ← **trud-sm⁰/ā-* (> OIr. *trom(m)*) [adj.] 'heavy' ← PIE √**treu̯d-* 'thrust, press'.Ⓐ

(1) [[PICelt. ****trummosag-e-tu-*** (← vb. stem **trummo-sag-ī-*):

◊ **trummosagetu-* > ***trom(m)ugud*** [m.] 'act of becoming or making heavy'

↔ vb. *trom(m)aigid* [w. *-ī*] 'becomes heavy, burdensome; burdens, intensifies'.]]

(2) PrIr. ****-trumm-ă̆̄-tu-*** (← vb. stem **trudsm-ā-*):

tu-ro-trummă̆tu-* > ***tortrom(m)ad* [m.] 'act of oppressing'

↔ vb. *tortrom(m)aid* [w. *-ā*] 'oppresses'.

---

[197] Watkins 1970: 10f.

Comment:

Ⓐ For the etymology cited here, see *EDPC* (391 s.v. ***trummo-***) and *LÉIA* (T-151 s.v. **3 trom**) with further literature. Another possibility is put forward by Hamp (1984: 138), who offers a preform **truks-mo-* 'heavy' related to MoW *trwch* [m.] 'thickness', OBret. *truch* gl. *obtusi*, OCo. *trech* gl. *truncus* < PCelt. **truks-o-*, the epithet *Trwyth* (Hamp suggests the meaning 'stout') < PCelt. **truks-to-*, and *trwysgyl* [adj.] 'clumsy, crude' < PCelt. **truks-t-lo-*, all built from a base **truks-*. Hamp's suggestion of an underlying meaning 'stoutness' is highly speculative and hard to reconcile with other words of a similar base form. Given the shape of the base, a relationship with MW *trwch* [adj.] 'sad, broken', MW *trychu* 'to cut', MBret. *trouch* 'a cut', etc. < PCelt. **truks-*, OIr. *trú* [m. f.] 'doomed, condemned person' < **truk-*, and wider connections in Lith. *trúkstu, trúkti* 'rend, break, burst', *trūkis* 'crack, break', and OE *þryccan*, OHG *drucken*, etc. 'press, oppress' would seem more economical. (See § 4.1.107 comment A for further on these words.) The meaning of the Germanic words in particular would fit well with OIr. *trom(m)* 'heavy'.

4.1.107. *trosc-a-* 'to fast'

< PCelt. **trusk-ā-* ← **trusk-o/ā-* 'fasting, a fast' ←(?) **tru-sk-$^{o}/_{ā}$-* 'afflictive' ← PIE **tru-sk̂$^{é}/_{ó}$-* ← √**treu̯-*, cp. √**terh$_1$-* 'rub, turn'.Ⓐ

(1) PCelt. ****trusk-ă̄-tu-*** (← vb. stem **trusk-ā-*):

◊ **truskă̄tu-* > ***troscad*** [m.] 'act of fasting'

↔ vb. *troscaid* [w. *-ā*] 'fasts'.

Comment:

Ⓐ Despite its appearance, OIr. *trosc* [adj. *-$^{o}/_{ā}$*] 'leprous', [m. *-o*] 'leper' must be different from the word that underlies *troscaid* 'fasts' ↔ vn. ***troscad*** for semantic reasons; **trosc* 'a

fast' is not attested in Old Irish, but still exists in ScGael. *trasg* [f.] 'fasting, a fast'.[198] A derivation from PIE √**ters-* 'dry, thirst'[199] is rather improbable because of the semantics (a connection with 'hunger' would be more obvious),[200] and, more seriously, because there is no known morphological mechanism that can generate PCelt. **trosk-* or **trusk-* from **ters-*; the expected zero-grade **tr̥s-sḱ-* should have produced PCelt. ⁑*tarsk-* > PICelt. ⁑*tark-*.[201] The most straightforward PIE preform would be something like **tru(T)-sḱ-*, so a reasonable formal comparison might be made with Gr. τρύ-σκ-ω 'wear out, distress, afflict' < PIE **tru-sḱ$^{e}/_{o}$-* ← √**ter-u- / *tr-eu̯-*, probably of the family of PIE √**terh$_1$-* 'rub, turn', with derivative meanings extended to 'twist, drill, bore, pierce' on the one hand and 'thresh, grind, crush' → 'afflict, torment' on the other.[202] The meaning is also suitable, with the characterization of fasting as a means of afflicting oneself (cp. Vulg. *affligetis animas vestras* = Heb. תְּעַנּוּ אֶת־נַפְשֹׁתֵיכֶם, Lev. 16: 29, in reference to fasting on Yom Kippur). The immediate derivational basis of the Old Irish words would be **trusk-$^{o}/_{ā}$-*, a (substantivized?) adjectival formation derived from the verbal stem, for which a parallel may be seen in PCelt. **mixsk-$^{o}/_{ā}$-* (> OIr. *mesc*) 'mixed' ← **mix-sḱ$^{e}/_{o}$-* 'mix' (§ 4.4.8).

---

[198] OIr. stressed *-o-* commonly becomes *-a-* in Modern Irish and Scots Gaelic, in an unclear distribution (e.g., OIr. *cos(s)* 'foot' > MoIr. *cos*, ScGael. *cas*; OIr. *foscad* 'shelter' > MoIr. *foscadh, fascadh*, ScGael. *fasgadh*; OIr. *torbae* 'profit' > MoIr., ScGael. *tairbhe*; etc., *VKG* I, 33f. § 26(3)); ⟨*sg*⟩ is the standard Scots Gaelic spelling for /*sk*/. The feminine gender of the Scottish word is not necessarily old.

[199] *VKG* I, 77 § 49(2); Scheftelowitz 1931: 129.

[200] In citing ScGael. *trasgadh* 'fasting, parching of thirst', *VKG* (*loc. cit.*) appears to have equated two distinct words: *trasgadh* 'fasting' and *tràsgadh* 'parching with thirst'. The first is the same word as OIr. *troscad*, but the second must reflect earlier **trās̆cad*. The origin of the latter form is unclear, but in any event the long **-ā-* does not have the same source as the short *-o-* > *-a-*.

[201] Cp. PIE **tr̥s-tu-* > PCelt. **tarstu-* > OIr. *tart* 'thirst', and PIE **pr̥ḱ-sḱ-* > PCelt. **(ϕ)arsk-* > PICelt. **ark-* 'ask' (§ 3.1.8); and see McCone 1996: 49, 99.

[202] See the material under *IEW* 1072f. s.v. ***3. ter-, terə-*** und ***teri-, trēi-, trī-***, auch ***teru- : treu-***.

Alternatively, one might start from PCelt. **trux-s-k$^{o}/_{\bar{a}}$-*, a Celtic adjectival formation in **-k$^{o}/_{\bar{a}}$-* built to either **truk-s-* or **trug-s-*. (For a possible parallel formation, see *loscaid* 'burns', § 4.1.69 comment A.) In regard to the first possibility, a root **truk-* is found in OIr. *trú*, gen. *troch* [m. f.] 'a doomed, condemned person' < nom.sg. **truk-s*, gen. **truk-os*, and with **-s-*, MW *trwch* [adj.] 'sad, broken' < PCelt. **trux-s-$^{o}/_{\bar{a}}$-* < **truk-s-$^{o}/_{\bar{a}}$-*; cp. also Lith. *trúkstu, trúkti* 'rend, break, burst', *trūkis* 'crack, break', OE *þryccan*, OHG *drucken*, etc. 'press, oppress', etc. *EDPC* (391 s.v. ***truk-, *truxso-**) identifies the basic meaning of PIE **treu̯k-* as 'to cut', a meaning that would well suit the British words (cp. also MBret. *trouch* [m.] 'a cut', MW *trychu*, MBret. *trouchaff* 'to cut'), and also Lat. *trux, trucis* 'harsh, savage' → *trucīdō, -āre* 'slaughter, butcher', if related,[203] but is more difficult to reconcile with the cognate Baltic and Germanic words. A meaning 'break' would perhaps be more understandable as the central source from which 'sever, cut' and 'wear out, afflict' developed secondarily. This root is probably to be taken as a *k*-suffixed form of **tru-* (cp. Gr. τρύ-ω 'wear out, exhaust') from PIE **ter-u-* / **tr-eu̯-* as above.[204] As for the second possibility, **trug-* may be seen to lie behind OIr. *tróg, trúag*, OW, MW, MBret. *tru* 'wretched, miserable' < PCelt. **troug-$^{o}/_{\bar{a}}$-*, and could ultimately be related to **truk-*.[205]

Whatever its source, Old Irish *troscaid* was unmistakably an *ā*-verb, as shown by the lowered root vowel *-o-* and the neutral consonant cluster in the Old Irish genitive singular of the verbal noun *trosc‹t›ho* (*Thes.* II, 38.28), owing to the loss of a non-front

---

[203] Thurneysen 1903: 129–31; *LÉIA* T-153 s.v. **trú**; *EDPC* 391 s.v. ***truk-, *truxso-,** also citing Lat. *truncus* 'maimed, deprived of limbs; trunk. torso'. Hamp (1978: 185f.), however, relates Lat. *truncus* to PIE **dru-* 'tree' by way of a sound rule that changes initial **tr- > dr-*. De Vaan (2008: 631 s.v. **truncus**), rejects Hamp's etymology of *truncus*, but (631 s.v. **trux, -cis**) cautiously accepts the proposed sound change in regard to Lat. *trux*, and suggests a connection of with PCelt. **druko-* (> OIr. *droch*) [adj.] 'bad'.

[204] Petersson 1908: 394; Lane 1937: 27f.; *IEW, loc. cit.*

[205] Cp. *IEW, loc. cit.*; *EDPC* 390f. s.v. ***trowgo-**.

vowel to syncope. Palatalization appears in Middle Irish, in forms such as *troiscid* and gen.sg. *troiscthe*, dat.pl. *troiscthib* of the verbal noun, but this must be a late development in any case, because PrIr. *-*sk*- would not have been liable to original palatalization by a following front vowel.

4.1.108. *tum(m)-i-* 'dip, immerse'

< PrIr. **tumm-ī-* or **tomm-ī-* ← **tu/om-mV-*, etymology unknown.Ⓐ

(1) PrIr. ***tumm-ĭ̄/e-tu-*** or ***tomm-ĭ̄-tu-*** (← vb. stem **tu/omm-ī-*):

◊ **tummĭ̄/etu-* or **tommĭ̄tu-* > ***tum(m)ud*** [m.] 'baptism; act of dipping, immersing'

↔ vb. *tum(m)id* [w. -ī] 'dips, plunges, immerses'.

Comment:

Ⓐ Either **tumm-ĭ̄/e-* or **tomm-ĭ̄-* (with raising of the root vowel by the following *-ĭ̄-) could regularly give the existing forms. If of Indo-European origin, the former would represent the zero grade of a *u*-diphthong root, the latter an *o*-grade of a non-diphthongal root, both built from a noun with *mV*-suffix. Stokes' comparison (*US* 135 s.v. **tumbô**) to Lat. *tingō, -ere*, Gr. τέγγω 'make wet', OHG *thunchōn, dunchōn* 'to dunk' supposes a preform **tong-mV-* behind the Celtic source noun. This is not widely endorsed; while the semantic match is very good, it is unclear whether inherited *-*ngm*- would produce -*m(m)*- in Old Irish. No other Indo-European connections can be established.

4.2. Unclear Formations.

The verbs in this section are all weak verbs that, from a formal standpoint, could be either primary or secondary: the *ā*-verbs have a root-final laryngeal, and the *ī*-verbs have certain or possible *o*-grade of the root. Most lack good etymologies; if they are primary, the PIE root connection is unclear, and if secondary, the source noun or

adjective is unknown.

4.2.1. *áls-i-* 'neglect'

< PrIr. ?**ālVs-ī-*, etymology uncertain.Ⓐ

(1) PrIr. **?*ālVs-ĭ̄/e-tu-** (← vb. stem ?**ālVs-ī-*):

◊ ?**ālVsĭ̄/etu-* > ***áilsed*** [m.] 'neglect, negligence'

↔ vb. *áilsid* [w. *-ī*] 'neglects'.

Comment:

Ⓐ Only late forms of the verb are attested. *DIL* (s.v. **áilsedaid, áilsid**) cites 3.sg. *·āilsi* along with several other later forms that are clearly built from the existing verbal noun ***áilsed***. The shape of the Old Irish verb and its origins are unknown. Little can be added to *LÉIA*'s conclusion: "sans étymologie sûre. L'hypothèse d'un ancien composé **ad-less-*, dont *áilsed* serait tiré, est sans portée, en l'absence d'indication sur le sens qu'il faudrait attribuer à *less-*" (A-34 s.v. **áilsed**).

4.2.2. *fer-a-* 'shed, pour, give forth'

< PCelt. **û̯er-ā-* { ⇐ **û̯era-* < PIE **û̯er-H-*? or: ← PIE **û̯er(H)-V-* 'a turning'? ?← √**û̯er-* 'bend, turn'.Ⓐ

(1) [[PCelt. ****û̯er-ă̆̄-tu-*** (← vb. stem **û̯er-ā-*):

◊ **û̯erătu-* > ***ferad*** [m.] **'pouring forth' → '(euphemistic) excrement, feces; a downpour'

↔ vb. *feraid* 'pours, gives forth; grants, supplies'.]]

(2) PCelt. **-û̯er-o-*:

ad-û̯ero-* > ***adbar* [n.] 'matter, material; cause, reason'

↔ no attested vb. **ad·fera*.

tu-û̯ero-* > ***tuär*Ⓑ [n.] 'cultivation, preparation; act of tilling land'

↔ vb. *do·fera* [w. *-ā*] 'causes, brings about'.

Comments:

Ⓐ The basis of OIr. *feraid* and its compounds is a Celtic root *$\underset{\frown}{u}$er-, the basic meaning of which is probably 'shed, pour (esp. of liquids)', from which extend the various other senses: 'pour out, pour forth' → 'grant, supply; yield, pay; furnish a sufficiency, suffice; do, perform', etc., and further in the compounds, *do·fera* 'causes, brings about', *fo·fera* 'prepares, provides for; causes, brings to pass', *con·foíra* 'provides', *remi·foíra* 'prepares'. The corresponding verbal nouns have acquired a remarkable variety of extended meanings, frequently concretized and only sometimes exhibiting the denotation of a strict verbal noun: ***ferad*** 'excrement; downpour'; ***tuär*** 'cultivation, preparation, tilling of land; manuring of land' → 'manure';[206] ***fuär*** 'act of preparing'; ***remḟuar*** 'preparation; act of preparing'. (Of these verbal nouns, only ***tuär*** 'cultivation' appears in our corpus of early materials.) To this may be added ***adbar*** 'matter, material; cause' ← 'that which is produced, supplied', probably the old verbal noun of an unattested verb **ad·fera*.[207]

The Indo-European root connection is difficult to specify. A possibility might be PIE √*$\underset{\frown}{u}$er- 'bend, turn', a root abstraction that lies at the base of various extended Indo-European formations (*$\underset{\frown}{u}$er-b^h-, *$\underset{\frown}{u}$er-g-, *$\underset{\frown}{u}$er-$\hat{g}^h$-, *$\underset{\frown}{u}$er-k-, *$\underset{\frown}{u}$er-p-, *$\underset{\frown}{u}$er-t-, etc.; see *IEW* 1152–60 s.v. ***3. $\underset{\frown}{u}$er-***). It is unclear whether the Celtic root would continue a laryngeal-extended variant or the plain root, neither of which finds any support elsewhere in Indo-European. It is also unclear whether the Celtic weak *ā*-verb is primary, from an athematic **CeRH-* formation like *anaid* (< PIE √*h_2enh_1-*ti*, § 3.1.6 comment A), or secondary, from an unattested noun or adjective in **$\underset{\frown}{u}$er-V-* (< **$\underset{\frown}{u}$erH-V-*?). For the meaning, compare Fr. *verser*, It. *versare* 'to pour' < Lat. *versāre* 'turn over (and over)'.

---

[206] *Tuär* also exists in the meaning 'sign, omen, portent', which may be a figurative outgrowth of the sense 'preparation, achievement, procurement' (*Wortk.* § 178).

[207] *VKG* II, 518 § 721 Anm.

Old Irish *feraid* has also been compared to OS *warōn*, OHG *gi-werōn* < *$\underset{\frown}{u}$er-ā- (cp. OHG [*gi-*]*werēn*, MoG *gewähren* < *$\underset{\frown}{u}$er-ē-) 'grant, perform, pay, pledge, give security,'[208] but the origin of these Germanic weak verbs is also obscure. If they ultimately derive from the PIE root √*$\underset{\frown}{u}$er- meaning 'cover, guard'[209] or from PIE √*$\underset{\frown}{u}$erh$_1$- 'show friendship',[210] then a connection with Celtic *$\underset{\frown}{u}$er-ā- 'pour' seems unlikely.

Ⓑ Beside the very common ***tuar***, Middle Irish also displays a variant ***túr*** which provides a crucial clue to the shape of the underlying root. Since PCelt. **eu*, **ou*, **au* > OIr. *ó* > *úa* never becomes *ú* in the history of Irish, the historical vowel cannot have been a *u*-diphthong. Moreover, while an original zero-grade **tu-$\underset{\frown}{u}$r-o-* could produce ***túr***, it cannot explain ***tuar***. The only remaining possibility is that OIr. *ua* here represents hiatus *uä* < PrIr. **u$\underset{\frown}{u}$V*, which, as Uhlich (1995: 28f. w. fn.93) has shown, can also readily account for later *ú*: dat.sg. **tuür* would regularly become ***túr*** through contraction, and from here it would only be a small step to generalize the vowel through the rest of the paradigm. Based on the fact that other *o*-stem verbal nouns of this type are either full-grade or zero-grade, not *o*-grade (see §§ 2.2.3.1(1) and (3)), and since zero grade has already been ruled out, full-grade **tu-$\underset{\frown}{u}$er-o-* > ***tuär*** must be the correct formation.

4.2.3. *?-ics-a-* 'withdraw, remove'

Etymology unknown and analysis unclear.Ⓐ

tícsál or ***ticsál***? [f. *-aglā*] 'act of taking up; removing'

↔ vb. *do·ícsa* or *do·icsa*? [w. *-ā*] 'raises high; draws out, removes'.

---

[208] Watkins 1956: 615.

[209] Watkins 2010: 102f. s.v. **wer-**^{5}.

[210] *IEW* 1166 s.v. **11. $\underset{\frown}{u}$er-, $\underset{\frown}{u}$erə-**.

Comment:

Ⓐ The verb is certainly weak in Middle Irish, and presumably so in Old Irish as well, though the few early examples are not decisive as to verb class.

The earliest forms of both the verb and verbal noun have *-cs-* (e.g., 3.sg.ipv. *ticsath* 'let him take up', Cambr. 37c = *Thes.* II, 245.3, and vn. ***ticsál*** 'taking up', Cambr. 37c = *Thes.* II, 245.10); later they usually show metathesized *-sc-* (cp. **ad-kom-snī-mu-* > ****acsnam*** ⇒ ***ascnam***, § 3.1.122(1)). Pedersen (*VKG* II, 490f. § 684) included these forms among the compounds of a root *cid-*, but this root is now generally discounted and the other entries under it divided among other roots.[211] The etymology of *do·ĭcsa* ↔ vn. ***tĭcsál***, however, remains unelucidated. It seems clear, given the non-palatalized cluster of *-cs-* (⇒ *-sc-*) in *do·**ĭcsa**, do·**ĭsca*** and the late simple verb *tĭscaid* ↔ vn. ***tĭcsál, tĭscál***, etc.,[212] that a non-front vowel has been syncopated;[213] this clue alone would exclude *cid-* as a viable source even if the root were not to be rejected on other grounds. If the stressed vowel is a short *-ĭ-*, then the syncopated vowel may be assumed to have been **-u-* since lowering did not take place. This is anything but certain, however, and some rare Middle Irish spellings with the length mark (*tíscar* 'is cut off', LU 71a23 = TBC[1] 1583; *ní thíscad* 'he would not remove', LU 112a6 = FB § 88) may indicate that the stressed vowel was long. The source of this vowel, whether it is long or short, is unclear. If the ⟨*c*⟩ here represents voiced */g/*,[214] it might go back to a combination **-nk-*, in which case an original short **-ĭ-* is probably out of the question, as PrIr. **ink* would have become OIr. *éc*

---

[211] See Thurneysen 1941: 31f.; *LÉIA* D-151f. s.v. **do-ícsa** ou **do-icsa**; *KPV* 391f. note (a) s.v. ****keis-se/o-***.

[212] Forms with palatalized *-cs-* or *-sc-* sometimes appear in Middle Irish, but there is no indication that they represent the earlier state of affairs.

[213] Inherited **-ks-* is ruled out *a priori*, as this would have yielded PCelt. **-xs-* > OIr. *-s(s)-*.

[214] It would have become devoiced at any rate when the cluster was metathesized to *-sc-*.

(/ēg/) (cp. § 2.1.3.2); it is also disputed whether earlier **īnk*, with long **-ī-*, would have produced OIr. *ic* (/ig/) (cp. § 3.1.66 comment A). Either way, a long *-ī-* would not appear in Old Irish. Another possible source of OIr. ⟨*c*⟩ could be **-D-* + **-g-* (if it represents /*g*/) or **-D-* + **-k-* (if it represents /*k*/). At any rate, it is clear that the OIr. *-c-* cannot go back to simple **-g-* or **-k-*, as this sound would have been lenited in early Primitive Irish. Similarly, the unlenited *-s-* must be traced back to an earlier consonant combination, either **-n-* + **-s-*, **-s-* + **-s-*, stop + **-s-*, **-s-* + **-t-*, or **-D-* + **-t-*.[215] As there are no known Indo-European verbal roots that match these criteria of both form and meaning, a non-Indo-European source appears rather likely. If so, then the base **tĭcVs-* of the verbal noun could perhaps be the primary borrowing, and the verb *do·ĭcsa* a back-formation following the pattern of native compound verbs. The ending *-ál* of the verbal noun was probably influenced by the near-synonyms ***tocbál*** 'act of raising, lifting', ***turcbál*** 'id.', or another compound of *gaibid* (§ 3.1.50(1)).[216]

4.2.4. *snád-i-* 'protect'

< PCelt. **snād-ī-* ←? **(s)nād-V-* 'protection, defense' < PIE **(s)ne/oh$_2$-d$^{(h)}$-*

← √**(s)neh$_2$-* 'help, serve'. Ⓐ

(1) PCelt. ****snād-ĭ/e-tu-*** (← vb. stem **snād-ī-*):

◊ **snādĭ/etu-* > ***snádud*** [m.] 'protection, safe conduct; act of protecting, giving safe conduct' ↔ vb. *snádaid* [w. *-ī*] 'protects, gives safe conduct'.

Comment:

Ⓐ Formally, Celtic **snād-ī-* could reflect either an old causative or a denominative

---

[215] *VKG* (II, 490f. § 684) suggests that the *-s-* was generalized from the subjunctive stem; cp. also *LÉIA* (D-151f. s.v. **do-ícsa** ou **do-icsa**).

[216] See *VKG* II, 491 § 684(3) and *GOI* 455 § 737.

formation, but a plausible root connection is difficult to find. If Pokorny's hypothesis (1920: 76f.) of a causative of **snēd-* ← PIE √*(*s*)*neh*$_1$- 'weave, spin, sew together' is accepted, the **-d-* must be taken to be a root extension rather than a present-stem suffix, since causatives are built to the unsuffixed root. The derivation from PIE √**ned*^{h}- 'tie, bind' proposed by Sjoestedt (1925: 324f.) — who suggests 'hold' as the original meaning — has formal problems in view of the present-day reconstruction of the root as √**Hned*^{h}- (*LIV*^{2} 227), since the requisite *s*-mobile is not compatible with this. It is more compatible with PIE √**neHd-* 'tie, bind', the root that lies behind Lat. *nōdus* 'knot', ON *nót* 'fish net', and possibly OIr. *naiscid* 'binds' ↔ vn. ***naidm***;[217] and this may be reconcilable with Pokorny's earlier suggestion, if *IEW* (973 s.v. ***(s)nē-*** und ***(s)nēi-***; 758f. s.v. ***1. ned- : n$_e$d-***) is right in taking this as a *d*-extended variant of PIE √*(*s*)*neh*$_1$- 'weave, spin'. In this case the root should be reconstructed as √*(*s*)*neh*$_1$*d-*, and the causative *(*s*)*noh*$_1$*d-éi̯e/o-* > PCelt. **snād-ī-*. Still, the semantic relationship is not close, whether one starts from 'weave, spin' or 'bind' (← 'hold'?), so a denominative solution may be more promising.

While Irish attests no noun that could serve as the basis for a denominative **snād-ī-*, Welsh presents a suitable candidate in MW *nawdd* [m. f.] 'protection, defense', assuming, again, a PIE root with *s*-mobile. *LÉIA* (S-146f. s.v. **snád-**) and *EDPC* (348 s.v. ***snād-ī-**) both favor the suggestion of Fowkes (1947: 420) that these Celtic words are cognate with Ved. *nā-thá-* [n.] 'help', [m.] 'defender', from a root √*(*s*)*neh*$_2$- 'help, serve'.[218] The Celtic noun *(*s*)*nād-V-* 'protection' would have been built from a dental-suffixed stem.

---

[217] *KPV* 490 n.(a) s.v. ****nad-ske/o-***; cp. § 3.1.87 comment A.

[218] Fowkes' further connection of Gr. ὀνίνημι 'avail, be of use' (cp. also *IEW* 754 s.v. ***1. nā-***) is not sound, however, because the initial ὀ- indicates a root with **h*$_3$-; the form *ὀνινᾰ́- has renewed reduplication from inherited *ὀννᾰ́- < PIE **h*$_3$*n̥-né/n-h*$_2$- (see *LIV*^{2} 302 n.2 s.v. ****h$_3$neh$_2$-***).

4.2.5. *-soíd-i-* 'accuse'

< PrIr. **-soid-ī-*, etymology unknown.Ⓐ

◊ No simplex.

(1) PrIr. ****-soid-ĭ̄/e-tā-*** (← vb. stem **-soid-ī-*):

kom-soidĭ̄/etā-* > ***cos(s)oít*Ⓑ [f. *-tā*] 'accusation, complaint; act of accusing, making complaint' ↔ vb. *con·saídi* [w. *-ī*] 'accuses; makes complaint about'.

Comment:

Ⓐ The early suggestion that the verbal noun is a borrowing from Lat. *causātiō*,[219] with reanalysis of *cos(s)-* as if from PrIr. **kom-s-* and the subsequent back-formation of the verb *con·saídi*, cannot be maintained in light of the clear diphthong *-oí-* of the second syllable (> MoIr. *casaoid*).[220] It seems probable therefore that we are dealing with a genuine verbal compound of which the simplex **soídid* is no longer attested; but the source of the stem **soid-ī-* is entirely unclear The initial *cos(s)-* of the verbal noun implies a relatively early compound of **kom-s-*, since the more recent combination of *com-*ˈ + *s-* would have yielded OIr. **com-ṡ-* (*/koμ-h-/*).[221]

Ⓑ The syncope pattern of ***cos(s)oít***, with retention of the second syllable and loss of the third, is noteworthy. Primitive Irish diphthongs regularly resist syncope; e.g., ***togáes*** [f.] 'deception, act of deceiving' (§ 4.4.5(1)) : pl. *togaíse* (Ml. 31a7), ppl. *togáethae*, adj. *togáethach*; *ad·toíbi* 'adheres to' : prot. *·attoíbi*, vn. ***attoíbed*** [m. *-tu*] (not attested in our corpus); **in·coíni* 'laments, grieves' ↔ vn. ***écoíniud*** [m. *-tu*] (§ 4.1.25(1)), etc. The form ***cos(s)oít***, instead of expected **cos(s)oíded*, is reminiscent of other words with final *-t* such

---

[219] Vendryes 1902: 58; Stokes 1905b: 314; Thurneysen 1910b: 15.

[220] *VKG* II, 605f. § 804, Anm.; Pedersen 1912: 28 fn.1; *LÉIA* S-164f. s.v. **soíd-, saíd-**.

[221] See § 2.1.3.3(2) and cp. *GOI* 502 § 830.A(1).

as ***foít*** 'act of sending', ***toöít*** 'id.', ***esfoít*** 'act of sending out' (not attested in our corpus), etc. instead of **foídiud*, **toöídiud*, **esfoídiud* (§ 3.1.47(1)). The final consonantism of these words is probably the result of a generalized back-formation from the gen.sg. **foít†teo*, **toöít†teo*, **esfoít†teo*, *cos(s)oít†te* (cp. *cosaite*, Fél. 4.19), etc.[222] Syncope of the third syllable appears to be regular in words with retained diphthong in the second, as shown further by alternations such as nom.sg. ***attoíbed*** : gen.sg. *atoíb†the*; nom.sg. ***éccoíniud*** : nom.pl. *écaín†ti* : adj. *écaīn†tech*, etc.[223]

4.2.6. *-tluch-i-* 'talk'

< PCelt. **tlok^{w}-ī-* ← √**tlok^{w}-* 'speak', etymology uncertain.Ⓐ

◊ No simplex.

(1) PCelt. ****tlok^{w}-ĭ̄-tu-*** (← vb. stem **tlok^{w}-ī-*):Ⓑ

ad-tlok^{w}ĭ̄tu-* > ***attlugud* [m.] 'thanksgiving; act of giving thanks'

↔ vb. *ad·tluichethar* [w. *-ī*] 'gives thanks'.

Comments:

Ⓐ Related forms are found in Italic and Slavic: Lat. *loquor*, *-ī* 'speak', OCS *tlъkъ* gl. ἑρμηνεύς, ORu. *tъlkъ* > MoRu. *tolk* 'meaning'. The Celtic and Latin words reflect **tlok^{w}-* while the Slavic go back to zero-grade **tl̥k^{w}-*. *EDPC*'s suggestion (380f. s.v. ***tlok^{w}-ī-**) of an old perfect paradigm cannot be upheld in the absence of any hint of reduplication, which is regularly preserved in Celtic. The basic root shape indicated by the evidence is

---

[222] Cp. Bergin 1928b: 193. See further § 3.1.47(1) comment B. Schrijver's (1992: 182–85) proposed pre-apocope deletion rule, *V̆ > -ø- / VC$_1$__C$_1$(...)* when both vowels were unstressed, is contradicted by OIr. ***cos(s)oít***, as McCone (1996: 106) points out. This early deletion would have resulted in an Old Irish non-palatalized voiceless final (**'kosoiδi/eθa-* > **'kosoiδ†θa-* > **kosoitt* with neutral */-t/*), whereas the final consonant of OIr. ***cos(s)oít*** is unquestionably palatalized (cp. Ml. 127c1, *trim chossait* ***se*** 'through complaining of me', with palatalized *-se* instead of neutral *-sa*), and voiced (cp. MoIr. *cosaoid*).

[223] Cp. McCone 1996: 129.

$tlok^w$-, with initial **tl-* and radical *o*-vocalism, which gives the distinct impression of a non-Indo-European word. We should probably, with Oettinger (2003: 191), see this as an early substrate or adstrate borrowing in Northwestern Indo-European.

Ⓑ That the intervening vowel must be **-ī-* is indicated by raising of **-tlok^w-* > **-tluch-*.

4.3. Type 3: Source Nouns ([V]N → V).

4.3.1. *áer-a-* 'defames'

< PrIr. **air-ā-* ← **airā-* (> OIr. ***áer***) [f.] 'defamation' (?)< PCelt. **aig-rā* < PIE **$h_2$eiĝ^h-rā* ← √**$h_2$eiĝ^h-* 'stab, prick'.Ⓐ

(1) PrIr. ****airā-***:

◊ **airā-* > ***áer*** [f.] 'defamation, satire; act of defaming, satirizing'

↔ vb. *áeraid* [w. *-ā*] 'defames, satirizes'.

tu-ati-airā-* > ***tathaír* [f.] 'blame, reproach; act of blaming, reproaching'

↔ vb. *do·athaíra* [w. *-ā*] 'blames, reproaches'.

Comment:

Ⓐ Hamp (1974: 390) suggests that the second element of MW *orn-air* [m.] 'blame, curse, slander' (the first element of which is clearly related to OIr. ***orcun*** [f.] 'slaughter, act of slaying', § 3.1.93(1)) is cognate with OIr. ***áer*** [f.] 'satire, defamation, act of satirizing, defaming' from a Proto-Celtic etymon **aig-rā-*. Comparing Lith. *aĩg-ara* [f.], *aĩg-aras* [m.] 'stalk, blade of grass', OPru. *ayculo* (< **aig-ulō*) [f.] 'needle', OCS *igla* (< PSlav. **jъg-ъla*) [f.] 'id.', Alb. *hell* [m.] 'roasting spit' (< PIE **Heiĝ$^{(h)}$-ul-*), he suggests an original meaning 'sharp weapon' as the source of the Celtic sense of 'satire'. Orel (1985) notes the close formal resemblance of OCS *igra* [f.] gl. *lusus*, *igrъ* [f.] gl. παίγνιον, *ludibrium*, and other Slavic words of the same semantic realm, and suggests that PSlav. **jъgra* meant 'joke,

witticism'. The connection could then be made to a PIE root √*$h_2$ei̯g^h- 'stab, prick'[224] via *h_2(e)i̯g^h-rā- 'sharp word', which developed into 'witticism, joke' in Slavic but 'satire, defamation' in Celtic. No better solution has emerged for the Celtic word (see *LÉIA* A-20 s.v. **áer**).

4.3.2. *aín-i-* 'to fast'

< PrIr. *(i̯)ai̯un-ī- ← *(i̯)ai̯un-io- (> OIr. ***aíne***) [n.(?)] 'a fast' < VLat. *(i)aiūnium* < Lat. *iaiūnium, ieiūnium* [n.] 'id.'Ⓐ

(1) PrIr. ***(i̯)ai̯ūnio-**:

◊ *(i̯)ai̯ūnio- > ***aíne*** ⇒ ***aín*** [n.(?)] 'fast, period of fasting'

↔ vb. *aínid* [w. -ī] 'fasts, keeps a fast'.

Comment:

Ⓐ The Latin source of OIr. ***aíne*** 'a fast' was evidently VLat. *(i)aiūnium* rather than the *ieiūnium* of standard Classical Latin.[225] At least two Romance languages have related forms that display the same initial vowel *a-*: Span. ***ayuno*** 'a fast', ***ayunar*** 'to fast', Rum. ***ajun*** 'eve', ***ajuna*** 'to fast',[226] both with a dissimilatory loss of the initial Lat. /i̯-/.[227] The

---

[224] Distinct from Pokorny's **3. *aig-*** '(sich) heftig bewegen, schwingen, vibrieren' (*IEW* 13f.) to which the Slavic words are often assigned (cp. Berneker 1924: I, 422).

[225] Early Vulgate spellings in *iai-* are found in the Itala (2nd cent. A.D.), in some variant spellings from late Classical Latin (Columella, Pliny the Elder, 1st cent. A.D.), and — significantly — in the Early Latin of Plautus (3rd–2nd cent. B.C.); see Skutsch 1892; Forssman 1993: 96f. Forssman (*op. cit.*) shows that the earlier forms must have been Lat. *iaiiūn-us, -ium*, etc. (with *-*ii-* < *-*gi̯-*, cp. *maior* = *maiior* 'greater' < PIt. *mag-i̯ōs-*), the change of *a* > *e* / *i̯*__*i̯* being later and dialectal; he traces the stem back to *i̯agi̯ū-no- ← PIt. *i̯ag-i̯u-* [adj.] 'verehrungsfreudig' (≈ Ved. *yáj-yu-* 'praiseworthy') ← PIE √*Hi̯aĝ- 'worship' (cp. Gr. ἀζομαι 'reverence' < *ἀγ-i̯o-).

[226] Schuchardt 1882: 492.

[227] In contrast to Fr. *jeûne, jeûner* < OFr. *jeüne(r)*, Port. *jejum, jejuar*, Cat. *dejuni, dejunar*, It. *digiuno, digiunare*, all of which reflect the standard Classical *ieiūn-* (French with loss of the medial *-i̯-* by dissimilation, Catalan and Italian with alteration of the initial *i̯-* to *d-*, probably also dissimilatory in nature and perhaps influenced by the prefix *de-, di-* < Lat. *de-*; cp. Jensen 1999: 190, 214f.).

Vulgar Latin source of the Irish word could as well have lacked the initial /i̯-/, but if the borrowing had occurred early enough, this sound could have been present at first and subsequently lost in Primitive Irish in conjunction with the disappearance of native *i̯-.[228] The final *-e* of OIr. *aíne* suggests a pre-apocope borrowing that subsequently underwent the loss of final and internal syllables that affected all Primitive Irish words;[229] the endingless nominative singular *aín* is secondary.

The gender of the Latin word is of course neuter, but the original gender of the Old Irish word is difficult to ascertain since there are no definitive attestations at the time when neuter was still active in the language; it is plainly feminine in Middle Irish. Change of gender in borrowings is common enough in Old Irish.[230] This is especially true of later borrowings, which make up the bulk of Latin loanwords in Irish and which tend to be assigned to the *i*-stem class by default;[231] e.g., *aibgitir* [f. *-i*] 'alphabet' < Lat. *abecedārium*, *firmimint* [f. *-i*] 'firmament' < Lat. *firmāmentum*, *proind* [f. *-i*] 'meal' < Lat. *prandium*, etc. The testimony of the few early borrowings of Latin neuters in *-ium* is inconclusive: there is nothing too surprising in OIr. *caille* 'veil', an *io*-stem (gender unclear) from Lat. *pallium*, and OIr. *míle* 'thousand', a feminine *iā*-stem from the Latin plural *mīlia*; more difficult on the face of it is OIr. *martrae* [f. *-iā*] 'martyrdom' < Lat. *martyrium*, which would appear to represent an arbitrary transfer from Lat. *-ium* to OIr. *-iā*, but influence from OIr. *martrae* in the sense 'relics of saints or martyrs (*coll.*); tomb of a saint', apparently separately borrowed from the Latin plural *martyria* (= *martyrum ossa*,

---

[228] McCone (1996: 113) places the loss of PrIr. *i̯ probably in the early fifth century.

[229] McManus 1983: 58; *VKG* I, 215 § 134; Pokorny 1921: 36f.

[230] See Vendryes 1902: 76–80 for an extensive, if outdated, list.

[231] *GOI* 574 § 925.

reliquiae; martyrum sepulcra),[232] probably accounts for this.[233, 234] As for OIr. *aíne*, there is some positive evidence that it was originally neuter in the isolated reading ***da n-aíne*** 'two (neut.) fasts' in the LB version of the *Ord prainni ⁊ prainntighi* 'Rule of Refection and Refectory' § 14 (= Meyer 1921: 29 fn.1). This suggests a neuter form in the Old Irish exemplar, since its replacement in the other two manuscript witnesses by feminine *dī ōene* (YBL) and *dī āeine* (RIA 23 N 10) is entirely understandable in terms of scribal modernization, whereas a transfer in the opposite direction would be more difficult.

4.3.3. *ál-i-* 'request'

< PCelt. **i̯āl-ī-* ← **i̯ā-lo-* (> OIr. ***ál***) [n.?] 'request' ← PIE √**i̯eh₂-* 'seek, request, desire'.

(1) PCelt. ****i̯ā-lo-***:Ⓐ

◊ **i̯ālo-* > ***ál*** ⇒ ***áil*** [n.?] 'request, wish, desire; act of requesting, desiring'

↔ vb. **álaid, áilid* [w. *-ī*] 'requests, entreats'.

ari-i̯ālo-* > ****erál* ⇒ ***eráil*** [n.?] 'request; act of urging, requesting'

↔ vb. *ar·áili* [w. *-ī*] 'urges to action; causes, brings about'.

Comment:

Ⓐ The Old Irish declension is anomalous. The forms cited by *DIL* (s.vv. **áil** and **eráil**)

---

[232] Du Cange 1883–1887: IV, 292 s.v. **MARTYRIUM**.

[233] Cp. *LÉIA* M-22 s.v. **martre**; *DIL* s.v. **martrae**, mg. **(c)**.

[234] Vendryes (1902: 79) also lists OIr. *díle* 'deluge, flood' < Lat. *dīluvium*, the derivation followed in *VKG* (I, 197 § 123(5)); but the details are complicated. The word is a feminine *n*-stem in Old Irish, as if *díliu* (a form which it sometimes takes in Middle Irish), gen. *dílenn*, from a stem in **-iō, *-ion-*. *GOI* (212 § 331) takes it to be a native word, an earlier neuter *io*-stem verbal noun of a compound of *·lin* '(over)flow' (cp. § 3.1.73) related to ***tuile*** 'flood, act of flowing' and ***tólae*** 'flood, inundation' (neither one attested in our corpus), but the source of the secondary *n*-stem inflection is not explained. According to *LÉIA* (D-85 s.v. **díliu, díle**), the native verbal noun *díle* [n. *-io*] has become confused with a borrowing from Lat. *dīluvium*, which was adapted to a feminine nasal stem *díliu* [f. *-n*]. However, no parallel examples may be cited of a Latin neuter in *-ium* being borrowed into Old Irish as a feminine *n*-stem, so this remains conjectural.

are nom.sg. *ál*, *áil*(*l*), dat.sg. *áil*, dat.pl. *áilib*, gen.pl. *áil*, and nom.sg. and dat.sg. *eráil*; there is no direct indication of the gender. The neutral final of the nom.sg. *ál* (rare and poetic, but confirmed by rhyme; see *DIL* s.v. **áil**) is not that of an *i*-stem, while the palatalized consonance of the plural (dat.pl. *áilib*, gen.pl. *áil* instead of **álaib*, **ál*) is inconsistent with an *ā*-stem. The British evidence, exemplified by MW *yawl* [m.] 'prayer, supplication', *yoli* [m.] 'to beseech, supplicate', along with the Greek cognate ζῆλος, (Dor.) ζᾶλος 'zeal, jealousy', lead back to a preform **i̯ā-lo-* < PIE **i̯eh₂-lo-*;[235] but the Irish palatalization is problematic for an *o*-stem. De Bernardo Stempel (1999: 384f.) resolves the incongruity by suggesting that the *o*-stem gen.sg. *áil* became reanalyzed as nominative singular from its frequent appearance in the very common construction with copula and predicative genitive: *is/ní* ***áil*** (gen.sg.) ... 'it is/is not **of desire** ...' = 'it is/is not desirable, proper ...'. This came to be perceived as *is/ní* ***áil*** (nom.sg.) ... 'it is/is not **a desire** ...', and the palatalized *-l-* spread through the paradigm. The result was an essentially indeclinable noun, apart from the rare poetic nom.sg. *ál* that still shows evidence of the original stem class.

4.3.4. *ar-i-* 'guard, watch'

< PrIr. **ar-ī-* ← **ar-iā-* (> OIr. ***aire***) [f.] 'notice, attention', perh. < PCelt. **(ϕ)ar-iā-* ← PIE **pr̥h₃-* ← √**perh₃-* 'provide'.Ⓐ

(1) PrIr. ****ar-iā -***:

◊ **ariā-* > ***aire*** [f.] 'notice, attention; act of guarding, watching over'

↔ vb. *airid* [w. *-ī*] 'guards, keeps watch over'.

u̯rit-ariā-* > ***frithaire* [f.] 'act of keeping watch against; a watch, vigil'

↔ vb. *fris·airi* [w. *-ī*] 'keeps watch or vigil'.

---

[235] *IEW* 501 s.v. *i̯ā-* : *i̯ō-*; *LÉIA* A-30 s.v. **áil-**.

Comment:

Ⓐ For the etymology, see § 4.1.5 comment A.

4.3.5. *a^{i}rl-i-$_{DEP}$* 'advise, counsel'

< PrIr. **aril-ī-$_{DEP}$* ← **ari-l-iā-* (> OIr. ***airle***) [f.] 'counsel' ← PIE **lh$_1$-^{V}* ← √**leh$_1$-* 'let, leave'.Ⓐ

(1) PrIr. ****ari-l-iā-***:

ariliā-* > ***airle* [f.] 'advice, counsel; management; act of advising, giving counsel, managing' ↔ vb. *airlithir* [w. *-ī*] 'advises, counsels; looks after, manages'.

com- + ***airle*** > ***comairle*** [f.] 'counsel, admonition; act of counseling; a council'

↔ vb. *con·airlethar* [w. *-ī*] 'consults, takes counsel; advises'.

frith- + ***airle*** > ***frithairle*** [f.] 'act of taking counsel for, providing for'

↔ no attested vb. **fris·airlethar*.

Comment:

Ⓐ Ascoli's placement (*GPH* cxliv) of these and related forms under the Celtic root *-lă̆-* 'put, throw' (§ 3.1.67) is not unreasonable, and *LÉIA*'s (A-47 s.v. **airle**) reluctant acceptance is probably too pessimistic ("Simple hypothèse, la meilleure toutefois qui ait été présentée pour ce mot"). Compare also *airladaigidir* 'obeys' ↔ vn. ***airladugud***, § 4.1.6.

4.3.6. *ás(s)-a-* 'grow'

(?) < PCelt. **(ϕ)āst-ā-* ← **(ϕ)āsto-* (> OIr. ***ás(s)***) 'growth, increase' ← PIE √**peh$_2$-* 'feed, graze'.Ⓐ

(1) PrIr. ****āsso-*** < PCelt. **(ϕ)āsto-* (?):

◊ **āsso-* > ***ás(s)*** [n.] 'growth, increase; act of growing'

↔ vb. *ás(s)aid* [w. *-ā*] 'grows, develops'.

*u̯or-āsso- > ***foras*** ⇒ ***forás*** [n.] 'growth, increase'

↔ vb. *for·ás(s)a* [w. *-ā*] 'grows, increases'.

Comment:

Ⓐ Marstrander's tentative suggestion (1962: 224) of a derivation from PIE √*$h_2$eu̯g-, √*h_2u̯eg- 'increase, magnify'[236] is not viable formally, as this would give OIr. ⁂*ós(s)* < *auxso- or *ouxso-, if from PIE *$h_2$eu̯g-s- or *$h_2$ou̯g-s-; or OIr. ⁂*fes(s)* or ⁂*fos(s)* < *u̯exso- or *u̯oxso-, if from PIE *h_2u̯eg-s- or *h_2u̯og-s-; or else OIr. ⁂*us(s)* < *uxso-, if from PIE *$h_2$ug-s-. The long *-á-* of the Old Irish noun must reflect PIE *-ā- or *-ō- rather than a secondarily lengthened vowel, as there is no compensatory lengthening of a preceding short vowel in any inherited consonant combination that will produce OIr. *-s(s)-*, except *-Ns- which also entails a change in vocal quality of *-ă- > *-ē-*.[237] (The long vowel that often appears in ***forás*** must therefore be analogical, influenced by the simplex or the deuterotonic stem of the compound verb.) The most likely etymology is that of Irslinger (2002: 420), who traces OIr. ***ás(s)*** back to PIE √*peh_2- 'feed, graze' either by way of a Celtic *sto*-formation *(ϕ)ā-sto- or — more likely — by a *to*-formation *(ϕ)ās-to- made to a sigmatic stem *pā-s-* (cp. Lat. *pās-tus, pās-tum* 'pasturage', *pās-tor* 'shepherd', etc.). Her assumption that the *-s- may have been taken over from the verbal present-stem *ph_2-sk̂é/ó- (not actually found in Celtic, but cp. Lat. *pāsc-ō, -ere* 'protect, herd') is unnecessary, however, given that PIE *peh_2-s-* is independently attested in both Anatolian (Hitt. *paḫš-$^{a(ri)}$, paḫš-^{i}* 'to protect, guard, keep') and Slavic (OCS *pasǫ, pasti* 'to pasture', etc.).

Some ambiguity exists in regard to the stem class of the verbal noun, since both

---

[236] For the root variants, see *LIV*² (274f. s.v. ***$h_2$eu̯g-*** and 288f. s.v. ***h_2u̯ek-s-***), and cp. Schindler (1970 [1972]: 152), who suggests a possible phonological source for the Schwebeablaut in the addition of the root extension *-s-*, positing an original alternation *$h_2$eu̯g-* : *h_2u̯eg-s-*.

[237] See *GOI* 96 § 155, 128 § 210, 136 § 221(b), 139 § 227(d).

gen.sg. *áis* (*o*-stem) and gen.sg. *ása* (*u*-stem) occur. However, a (*s*)*to*-stem is rather more compatible with the original neuter gender (confirmed by the nasalization in *ass **n-ingnama*** 'growth of crops', Mon.Tall. 156.8, and the endingless acc.pl. *inna foras* gl. *profectus*, Ml. 104d10) than is a (*s*)*tu*-stem, so the *u*-stem genitive probably arose after the transfer to masculine gender consequent to the loss of the neuter. The nom.pl. ***áis*** (see *DIL* s.v. **1 ás**) must be late and secondary, as no such form occurs in the neuter declension of any stem class.

4.3.7. *att-a-* 'swell'

< PrIr. **att-ā-* ← ?**att-V-* (> OIr. ***att***) [m.] 'a swelling', etymology unknown.Ⓐ

(1) PrIr. ***att-V-***:

◊ **attV-* > ***att*** [m.] 'act of swelling; a swelling, tumor'

↔ vb. *attaid* [w. *-ā*] 'swells'.

Comment:

Ⓐ The unlenited and voiceless final */-t/* of OIr. ***att*** (MoIr. *at*) is not easy to explain. While OIr. */-t-/* may occur in medial position when syncope has brought together a dental plus lenited **-ś-*, or two dentals, one or both of which are voiceless,[238] in neither case can this generate OIr. */-t/* in final position. The suggestion of O'Brien (1954: 353; 1956: 177), accepted by Vendryes (*LÉIA* A-57 s.v. **aittenn**), that inherited **-kt-* > **-cht-* may have been sporadically simplified to *-t-* as early as Old Irish cannot be sustained, as all of the examples cited are of Middle Irish date or later, with the exception of OIr. *utlach* 'lapful', which is to be analyzed as **uth-lach* rather than **ucht-lach*.[239] There is simply no support for such a development in Old Irish. One must therefore assume that the

---

[238] *GOI* 86f. § 137, 116 § 185(d).

[239] Cp. *LÉIA* U-31 s.v. **utlach**.

preform contained geminated *-*tt*-, a sound of rather obscure origins in Celtic. Stokes (1893; 1893b)[240] proposed that some Irish geminated stops derived from inherited *-*Cn*- in pretonic position, a phenomenon parallel to Kluge's Law in Germanic.[241] But this rule seems rather improbable in Celtic: the evidence is uncomfortably *ad hoc*, and a significant number of counterexamples remain unexplained, as Stokes himself acknowledged (1893b: 306f.).[242] Apart from this explanation, it appears that no combination of PIE consonants will regularly produce PCelt. *-*tt*-. Of the few Old Irish words that end in -*tt* (/-*t*/), several are certain or probable borrowings: OIr. *catt* [m. -*o*] 'cat' ≈ MW *cath* [m. f.] < PICelt. **katto*-, probably of Afro-Asiatic origin via Lat. *cattus*; OIr. *grutt* [f. -*ā*] 'malt' < OE *grūt* [f.] 'crushed grain'; also ScGael. *pett*, a land-holding of specific character or extent, from Pictish (appearing as *Pit*- in numerous Scottish place-names); and less certainly, OIr. *brat* [m. -*o*] 'cloak' < PICelt. **bratto*- ≈ MW *brethyn* [m.] 'cloth' < PICelt. **brattino*-, a borrowing from Romance if Thurneysen (*GOI* 93 § 150) correctly connects it to **drappo*- 'cloth' (LLat. *drappus, drappum*, It. *drappo*, Fr. *drap*, etc., of Germanic origin) with metathesis of the place of articulation of the two stops; perhaps also OIr. *crett* [f. -*ā*] 'frame, body, trunk', if from OE *cræt* 'crate'.[243] Other examples listed in *DIL* that can be verified by Modern Irish descendants with final -*t* are of doubtful or

---

[240] Followed, e.g., by Zupitza 1900 *passim*, and *VKG* I, 158–61 § 97.

[241] Kluge 1884; accepted widely but not universally (see, e.g., Ringe 2006: 115). For an in-depth discussion and defense of Kluge's formulation, see now Kroonen 2011.

[242] Cp. also Thurneysen (*GOI* 92 § 150f.): "So far, ... not a single example has been found that is in any way convincing."

[243] Thurneysen 1910: 25. Otherwise Vendryes 1926: 453, following *VKG* I, 160 (cp. also Stokes 1893: 173), who takes the word to be inherited and related to Lat. *crātēs* 'wickerwork', *cartilāgō* 'cartilage', Gr. κάρταλος 'basket', Go. *haurds* 'door', OHG *hurd* 'hurdle', etc. The origin of these words is unclear, however (cp. de Vaan 2008: 141 s.v. *crātis*; Schrijver 1991: 176), and OIr. -*tt* (/-*t*/) remains unelucidated, since the implied historical *-*t*- would have become lenited in Primitive Irish.

unidentified origins: OIr. *aitt* [adj. *-i*] 'pleasant' (MoIr. ***ait***); OIr. *áitt* [f. *-ā*] 'place' (MoIr. ***áit***);[244] OIr. *crott, cruitt* [f. *-ā*] 'harp' (MoIr. ***cruit***) < **kruttā-* ≈ MW *crwth* [m.] 'id.' < **krutto-*; OIr. *lott* [m. *-o*] 'injury, damage' (MoIr. ***lot***); OIr. *mut* 'something short' (MoIr. ***mut***); OIr. *paitt* [f.] 'leather bottle' (MoIr. ***pait***); OIr. *smitt* [f.] 'earlobe' (MoIr. ***smiot***); OIr. *smot* [m.] 'stump' (MoIr. ***smot***, ***smut***); and OIr. *túttt* [n.(?)] 'stench' (MoIr. ***túth***).[245] Many of these are likely to be loanwords from unknown sources, and this may be true in the case of OIr. ***att*** as well.

4.3.8. *bág-i-* 'quarrel, dispute'

< PCelt. **bāg-ī-* ← **bāg-ā-* (> OIr. ***bág***) [f.] 'a quarrel, dispute' < PIE **$b^h\check{o}h_1\hat{g}^h$-eh_2-*

← √**$b^heh_1\hat{g}^h$-* 'id.'Ⓐ

(1) PCelt. ****bāg-ā-***:

◊ **bāgā-* > ***bág*** [f.] 'contest, struggle, boast; act of contending, striving, boasting'

↔ vb. **bágaid, báigid* [w. *-ī*] 'fights, contends, boasts'.

ari-bāgā-* > ***airbag* ⇒ ***airbág***Ⓑ [f.] 'contention, boast; act of contending, boasting'

↔ vb. *ar·bágai* [w. *-ī*] 'contends, boasts'.

*com-*ʿ + ***bág*** > ***combág***Ⓒ [f.] 'competition, combat; act of contending'

(↔ vb. *con·bága* [w. *-ā*] 'contends').

Comments:

Ⓐ Vendryes (*LÉIA* B-5 s.v. **bág**) recommends a connection with Ved. *bhájati* 'shares',

---

[244] Marstrander (1962: 213) suggests that the *-t* may have arisen from *-th* followed by *s-* in fixed phrases such as *ind áit(h) seo* 'at this time', *ind áit(h) sin* 'at that time', etc. This is pure supposition since **-th* is not attested and the etymology of the word is unknown. Even if correct, a similar explanation cannot be applied to the other the words in this list.

[245] Stokes (1909: 564 s.v. **túthmar**) suggests a possible connection with Du. *stuit*, OHG *stiuz* [m.] 'rump, buttocks', but these Germanic forms, which go back to a stem in **-d-* (PIE **(s)teu̯-d-* 'push, hit'), explain neither the Old Irish vowel *-ú-* nor the final *-tt* (/*-t*/).

bhanákti 'breaks', *bhágaḥ, bhā́gaḥ* [m.] 'portion, share', from PIE √**bʰeg-* 'break', with lengthened root grade in the Celtic noun: PIE **bʰōg-eh₂-* > PCelt. **bāg-ā-* > OIr. *bág;* the various Germanic forms represented by OHG *bāg-an* 'to quarrel', OS *bāg* [m.] 'boastfulness', ON *bág-r* [m.] 'strife, contention', etc. are then explained as borrowings from Celtic. No motivation for the lengthened grade is offered in Vendryes' article, however. As there is no reliable evidence elsewhere in Indo-European for "Narten"-type behavior in this root,[246] other attempts have been put forward to explain the vowel length: derivation from an unattested root-noun **bʰōg-s*, with generalized long vowel of the nominative, later thematized as **bʰōg-ā*,[247] or the result of spontaneous vowel lengthening akin to expressive gemination in this and other war terms;[248] but these accounts do not carry much conviction. If a derivation from PIE √**bʰeg-* is to be insisted on, the least problematic explanation would be to see PCelt. **bāgā* as an example of the "κώμη" type analyzed by Vine (1998b), a class of feminine nouns that are characterized by long *ō*-grade of the root and barytone accent. On the other hand, given the existence of Latv. *buôžuôs, buôztiês* 'be angry' (< **bʰōĝ*$^{(h)}$-) plus a few other possible comparanda cited by *IEW* (115 s.v. ***bhēgh-* : *bhōgh-***), a better solution is to keep the long-vowel forms separate from the items belonging to PIE √**bʰeg-* 'break', and place them under their own rubric. The Germanic words straightforwardly reflect a PGmc. root **bē*^{1}*g-*, with a radical **ē* that corresponds apophonically to the **ō* of the Baltic and Celtic words; all point

---

[246] Ved. *bhā́gaḥ*, GAv. *bāga-* 'portion' reveal the existence of a single long-vowel nominal form in Proto-Indo-Iranian, but whether it is older than that cannot be ascertained (see *EWAia* II, 260 s.v. ***bhāgá-***; S. Zimmer 1984: 208). The source could be PIE **bʰogos* with Indo-Iranian lengthening by Brugmann's Law.

[247] K. H. Schmidt 1996: 369.

[248] De Bernardo Stempel 1999: 528.

unproblematically to a PIE root √*$b^heh_1\hat{g}^h$- 'dispute, resist' containing *h_1.[249] Nothing, incidentally, would prevent PCelt. *$b\bar{a}g\bar{a}$ from still reflecting to a "κώμη" formation *$b^h\acute{o}\hat{g}^h$-eh_2-.

Ⓑ The unstressed long -*á*- of ***airbág*** has been secondarily restored, probably by influence of the simplex ***bág*** ↔ vb. *bágaid* and the deuterotonic forms of the verb *ar·bágai*.

Ⓒ This is a late formation with leniting *com-*ʿ as shown by MoIr. ***comhbhágh***. The derivative verb *con·bága* 'contends', a weak *ā*-verb, is later still and apparently isolated; the only two attestations listed in *DIL* (s.v.) are both from the Middle Irish recension of the *Táin Bó Cúailnge* from the Book of Leinster.

4.3.9. *brat-a-* 'plunder'

< PCelt. *$brasd$-$\bar{a}$- ← *$brasd$-$\bar{a}$- (> OIr. ***brat***) [f.] 'plunder', etymology uncertain.Ⓐ

(1) PrIr. ****bradd-ā-*** < PCelt. *$brasd$-$\bar{a}$-:

◊ *$braddā$- > ***brat*** [f.] 'plunder, robbery; act of plundering, robbing'

↔ vb. *brataid* [w. -*ā*] 'plunders, robs'.

Comment:

Ⓐ Proto-Celtic *$brasdā$ has sometimes been taken to descend from PIE *$b^hr̥sd^h$-eh_2-, a zero-grade form either corresponding to *brot* [m.] 'goad, spike' < PIE *b^hrosd^h-o-[250] or else derived from PIE √*b^her- 'bear, carry'.[251] Both of these proposals would entail a curious metathesis of *$Cr̥sC$- > *$CarsC$- > *$CrasC$- in this and certain other words (i.e., if the etymologies are all sound, OIr. ***bras*** [adj.] 'forceful, defiant' < PIE *$b^hr̥s$-$tó$-, OIr. ***crann*** [n.]

---

[249] *LIV*[2] s.v. ****$b^heh_1\hat{g}^h$-***.

[250] *LÉIA* B-79 s.v. **1 brat**; but T. F. O'Rahilly 1942: 169 sees rather a borrowing from ON *broddr* 'goad, spike'.

[251] De Bernardo Stempel 1987: 87.

'tree' < PIE *$k^{w}\underset{\circ}{r}s$-*nó*-,[252] and OIr. ***fras*** [f.] 'shower [esp. of rain]' < PIE *$\underset{\wedge}{u}\underset{\circ}{r}s$-*téh*$_2$-) next to unmetathesized *CarsC- in OIr. ***tart*** [m.] 'thirst' < PIE *$t\underset{\circ}{r}s$-*tu*-, OIr. ***carr***, OBret., MBret., MW ***carr*** [m.] 'cart, wagon' < PIE *$k\underset{\circ}{r}s$-*o*-, and OIr. ***arc***- 'ask' < PIE *$p\underset{\circ}{r}k$-*sk*$\hat{\acute{e}}$/$\acute{o}$-. De Bernardo Stempel (1999: 550 fn.36) suggests that the placement of the accent may have played a role in conditioning the metathesis, "da sie ausnahmlos in oxytonen Bildungen anzutreffen ist"; but even if her explanation is valid, the derivation of PCelt. **brasdā* from PIE **b*^{h}*er*- 'bear, carry' faces the additional obstacle of how to explain the source of the Celtic **-sd*-. Hamp's (1992: 219) reconstruction of a hypothetical (desiderative?) **b*$^{h}\underset{\circ}{r}$*H-s-d*$^{(h)}$*ā* could perhaps yield OIr. *brat*, depending on the Celtic outcome of PIE **CR̥HT*-,[253] but it is unclear how to understand his suggestion of a possible connection to Gr. φώρ 'thief' (< **b*^{h}*ōr-s*), since PIE √**b*^{h}*er*- has no final laryngeal. Perhaps this could be from PIE √**b*^{h}*erH*- 'scrape, cut' → 'strike' (cp. ON *berja* 'strike', Lat. *feriō*, *-īre* 'id.') applied in a metaphorical sense? But the morphology remains unclear.

4.3.10. *cóemn-i-* 'protect'

< PCelt. **koimon-ī-*Ⓐ ← **koimon-io-* (> OIr. ***cóemnae***) [n.(?)] 'protection' ← ?**koi-mon-*

← PIE √**k*$\hat{e}\underset{\wedge}{i}$- 'lie down', √**tkei*- 'settle, dwell', or **k*$\hat{e}\underset{\wedge}{i}$- ← **k*$\hat{o}$- / **k*$\hat{i}$- 'this (here)' (?).Ⓑ

(1) PCelt. ***koimon-io-***:

◊ **koimonio-* > ***cóemnae*** [n.(?)] 'protection; act of protecting, keeping'

↔ vb. *cóemnaid* [w. *-ī*] 'protects, keeps'.

---

[252] But otherwise McManus (1992: 205f.), who, because of Gaul *prenne*, W, Co. *pren*, Bret. *prenn*, posits a single Proto-Celtic form **k*^{w}*resno*- with secondary vocalism in Irish. The motivation for the Irish remodeling would have been the alternation produced by the initial **k*^{w}-, nom.sg. ***crenn*** : dat. ***crunn***, which was without parallel in the Old Irish nominal system and therefore subject to remodeling; and the source would have been a paradigm such as that of nom.sg. ***ball*** : dat. ***bull*** 'limb, member'.

[253] See § 2.2.3.14, fn. 121 w. refs.

Comments:

Ⓐ The neutral stem-final consonant cluster found throughout most of the paradigm is the legacy of a historical **-o-* that was lost to syncope. The palatalization of the final in the 3.sg.pret./perf. *caemu**in**,* (*ro*) *caomha**in*** suggests a weak *ī*-verb.

Ⓑ Old Irish ***cóemnae*** (probably originally a neuter *io*-stem, later feminine) appears to be related to the Proto-Celtic adjective **koi-m$^{o}/_{ā}$-* which produced OIr. *coím* 'dear, pleasant' and its British equivalents, MW *cu* < **cuf*, OBret. *cum*, MBret. *cu(n)ff*, Co. *cuf* [adj.] 'id.', but the exact relationship is somewhat obscure. It may be possible to posit a secondary *no*-stem formation **koi-mo-no-* built to PCelt. **koi-mo-*, from which an *io*-stem abstract **koimon-io-* was subsequently formed, although this requires a hypothetical intermediate preform that has otherwise left no trace. On the other hand, PCelt. **koi-m$^{o}/_{ā}$-* itself might be explainable by means of the underlying **koi-mon-*:[254] if the latter can be traced to a Proto-Indo-European (amphikinetic) *men*-stem formation **k̂éi̯-mon-* (but with a puzzling change in root vocalism), adjectival **k̂oi̯-mo-* could then be understood to reflect a "Schmidt's Law" variant[255] of earlier **k̂oi̯-mn-ó-*.

The root connection is somewhat difficult. Proto-Celtic **koi-m$^{o}/_{ā}$-* [adj.] 'dear, pleasant' has an exact formal cognate in PGmc. **hai-ma-z* [m.] 'home' > Go. *haims* 'village', ON *heimr* 'home, world' OE *hām*, OS *hēm*, OHG *heim* 'home, house'; cp. also Latv. *sàime* [f.] 'household'. Vedic *śi-vá-* [adj.] 'favorable, dear, kind', *śé-va-* [adj.] 'dear, precious', and Latv. *siẽ-va* [f.] 'wife' match the Celtic word semantically, but are from a different stem formation (**-u̯$^{o}/_{ā}$-*); so also PGmc. **hī-wa-* > Go. *hiewa-frauja* [m.] 'master of the house' (tr. οἰκοδεσπότης), OE *hīwan* [pl.] 'members of the household', etc.; cp. also

---

[254] I owe this suggestion to Brent Vine (p.c.).

[255] J. Schmidt 1895: 114–121, esp. 120f.

Lat. *cīvis* [m.] 'citizen'. The traditional derivation from the PIE root √*$\hat{k}$*ei̯*- 'lie down'[256] would presumably involve the semantic development 'resting-place' → 'dwelling-place', whence variously 'home', 'family', 'citizen', and 'homely, belonging to the family' → 'dear, friendly'; but this is not as straightforward as one would like. A derivation from PIE √**tk̂ei̯*- 'settle, dwell' has also been suggested,[257] although this would exclude the Vedic — and perhaps also the Latin — words on phonological grounds (cp. from the same root Ved. ***kṣé-ma-*** [adj.] 'comfortable, at ease', ***kṣi-tí-*** [f.] 'residence, settlement'; and perhaps Lat. ***sinō, -ere*** 'leave alone, let', ***situs*** [adj.] 'placed').[258] Vine (2006: 148f., building on a suggestion of Bader 1982: 133 fn.240) has proposed a solution to both the formal and semantic complications surrounding these words, deriving them from the PIE pronoun **k̂o-* / **k̂i-* 'this (here)' (> Hitt. *kaš*, Lith. *šis* 'this', etc.), itself from the near-deictic particle **k̂i* (> Hitt. *ki-nun* 'now', Lat. *ci-s* 'on this side', etc.), from which a new ablauting root **k̂ei̯-* / **k̂oi̯-* / **k̂i-* was extracted. The semantics would therefore denote 'social closeness' in various applications.

4.3.11. *cennag-i-* 'buy, purchase'

< PCelt. **k*^{w}*ennāk-ī-* ← **k*^{w}*enn-āk-io-* (> OIr. *cennaige*) [m.] 'merchant' ← **k*^{w}*enn-āk-o-* (> OIr. ***cennach***) [n.?] 'purchase' [E 5 c] **k*^{w}*enn-o-* (> OIr. *cenn*) [n.] 'head', etymology unknown.Ⓐ

(1) PCelt. ****k*^{w}*enn-āko-***:

◊ **k*^{w}*ennāko-* > ***cennach*** [n.?] 'payment, purchase, compensation; act of buying, purchasing' ↔ vb. *cennaigid* [w. *-ī*] 'buys, purchases'.

---

[256] *VKG* I, 58 § 39; Holthausen 1934: 41; *IEW* 540 s.v. ***1. k̂ei̯-***; *EDPC* 220 s.v. ****koymo-***, etc.

[257] Watkins 2011: 95 s.v. **tkei-**.

[258] The Latin derivation is disputed; see de Vaan 2008: 566f. s.v. **sinō, -ere**.

Comment:

Ⓐ The verb *cennaigid* has sometimes been assumed to be from **k^{w}enno-sag-ī-*, a denominative in **-sag-* from **k^{w}enno-* (> OIr. *cenn*) [n.] 'head'.[259] Schumacher (2000: 166) has further suggested that the verbal noun ***cennach*** 'bargain; act of buying; price' is an *o*-stem derivation from the verb, cognate with a small group of British verbal nouns ending in *-(h)a* < **-sag-o-*. A different solution has been proposed by de Bernardo Stempel (1999: 346f.), who takes the immediate source of *cennaigid* to be the noun *cennaige* 'merchant, trader', an agent formation in **-io-* from *cennach* 'bargain, etc.', the latter an *ach*-derivative of *cenn* 'head'. For the semantic connection, she recommends (347 fn.20) the usage of *cenn* as 'einzelner Gegenstand einer (Waren)Serie', equivalent to Italian *capo di vestiario, di biancheria* 'head [= piece] of clothing, of linen'; alternatively, *LÉIA* (C-66 s.v. **cennach**) suggests that *cennach* in the sense of 'compensation, payment' etc. was extended from the expressions *do cinn, di chiunn, tar cenn* 'in return for' (→ 'in compensation for') as terms of exchange. Whatever the exact line of semantic development, this second scenario has two distinct advantages. Firstly, it is difficult to see how a verb meaning 'buys, purchases' could be derived directly from a noun meaning 'head', whereas an indirect derivation through the intermediary of a secondary noun created to accommodate the specialized or idiomatic meaning of 'bargain, purchase, etc.' is easier to envision. And, secondly, *sag*-verbs in Old Irish regularly take *tu*-stem verbal nouns; ***cennach***, if it reflects **k^{w}enno-sag-o-* ← **k^{w}enno-sag-ī-*, would constitute the sole exception. Taking ***cennach*** as a derivative of *cenn* and the derivational source of the *cennaigid* (perhaps via *cennaige*) removes the anomaly.

---

[259] E.g., Joseph 1987: 151f.: "(but in what meaning?)."

4.3.12. *céll-a-* 'signify'

< PCelt. **k^{w}ēsl-ă̆-* ← **k^{w}ēs-lā-* (> OIr. *cíall*) [f.] 'sense, understanding' ← PIE √**k^{w}e̯i-s-* 'observe, consider'.Ⓐ

(1) [[MIr. ***cíalla-d*** (← vb. stem *cíall-a-*) and ***cíallug-ud*** (← vb. stem *cíall-ag-i-*):

◊ ***cíallad*** and ***cíallugud*** 'act meaning, signifying; explaining'

↔ vb. *cíallaid* and *cíallaigid* 'means, signifies; explains'.]]

(2) PrIr. ****-k^{w}ēl-lā-*** < PCelt. **k^{w}ēs-lā-*:

u̯o-k^{w}ēllā-* > ***fochell* [f.] 'attention, heed; act of attending to'

↔ vb. *fo·cíallathar* [w. *-ā*] 'pays heed to, attends to, takes care of'.

Comment:

Ⓐ In origin an *s*-enlargement of √**k^{w}e̯i-* 'notice, perceive'; for further observations see § 3.1.21 comment A.

4.3.13. *crád-i-* 'torment'

< PrIr. **krād-ī-* prob. ← **krād-o-* (> OIr. ***crád***) [m./n.?] 'torment', etymology unknown.Ⓐ

(1) PrIr. ****krād-o-***:

◊ **krādo-* > ***crád*** [m./n.?] 'torment, anguish, agony; act of tormenting, hurting'

↔ vb. *crádaid* [w. *-ī*] ' torments, hurts, offends'.

t(u)-ad-krādo-* > ***tocrád* [m./n.?] 'vexation; act of annoying, vexing'

↔ vb. *do·accrádi* [w. *-ī*] 'provokes, exasperates'.

Comment:

Ⓐ As there is no good Indo-European etymology, the verb is probably to be explained as a derivative of the noun ***crád*** 'torment', of unknown origins, rather than an inheritance from a PIE causative-iterative formation **Krōd-éi̯$^{e}/_{o}$-*.

4.3.14. *cobr-i-*$_{DEP}$ 'help'

< PrIr. **koβor-ī-*$_{DEP}$ ← **kom-u̯o-ret-* (> OIr. ***cobair***) [f.] 'help, assistance' ← PIE √**ret-* 'run'.Ⓐ

(1) PrIr. ****kom-u̯o-ret-***:

komu̯oret-* > ***cobair* [f.] 'help, assistance; act of helping, assisting'

↔ vb. *cobraithir* [w. *-ī*] 'helps'.

Comment:

Ⓐ Pedersen's recommendation of **kom-* + PIE √**bʰer-* (*VKG* I, 119 § 73; *CCCG* 40 § 49) was shown to be false by Thurneysen (1941: 25–27), who argued instead for a suffixless compound **kom-u̯o-ret-* (or **kom-u̯o-rit-*, with **-rit-* < PIE **-r̥t-*) ← PIE √**ret-* run' (cp. § 3.1.100). The original dental stem class is clear from the early acc.sg. ***cobrith*** (Wb. 7c4), as well as acc.sg. *cobraid* and gen.sg. *cobrad*, which, while attested in later texts, are no doubt archaisms. A parallel formation is perhaps seen in ***toöir, tóir*** 'help, assistance, act of helping' (not found in our corpus) < **tu-u̯o-ret-*, although the dental flexion is not provable and the apparently disyllabic spelling *tooir* is attested only once, in the early Middle Irish *Saltair na Rann* (SR 1101). There are no attested verbs **con·forat, *do·forat*, but the base **u̯o-ret-*$^{e}/_{0}$- is seen in *fo·reith* 'helps', for which no Old Irish verbal noun is securely identified.[260] Despite the occasional instances of dental-final oblique forms, confusion in the stem class of ***cobair*** must have occurred quite early, as the weak *ī*-verb derived from it, *cobraithir* 'helps', which occurs already in Würzburg, has no trace of the dental.

---

[260] On the pattern of ***cobair*** and ***toöir***, a feminine **foir* or **fuir* would be expected. It is possible that the masculine *o*-stem *fuired* represents a verbal noun of *fo·reith* (cp. Thurneysen 1941: 27), but the meaning of this word is not clear (see *DIL* s.v. **2 fuiriud, -ed**), and the root association cannot be insisted on. MIr. *foirithin* [f.] 'act of helping' is a late formation and does not necessarily imply earlier OIr. **foirithiu*.

4.3.15. *dál-a-* 'meet, assemble'

< PCelt. **datl-ā-* ← **da-tlā-* (> OIr. ***dál***) [f.] 'meeting, assembly' ← PIE **$d^{h}h_{1}$-*

← √**$d^{h}eh_{1}$-* 'put, place'.

(1) PCelt. ****da-tlā-***:

◊ **datlā-*> ***dál*** [f.] 'meeting, assembly'

↔ vb. *dálaid* [w. *-ā*] 'summons to a meeting; meets, assembles'.

4.3.16. *dál-i-* 'share'

< PCelt. **dāl-ī-* ← **dā-lā-* (> OIr. ***dál***) [f.] 'part, share' ← PIE √**deh_{2}-* 'divide'.

(1) [[PCelt. ****dā-lā-***:

◊ **dālā-* > ***dál*** [f.] 'distribution; act of distributing'

↔ vb. *dáilid* [w. *-ī*] 'portions out, distributes'.]]

(2) as if *****dā-li-*** ⇐ **dā-lā-*:[Ⓐ]

air-‘ + ***condail*** > ***erndail*** [f.] 'division, category, part, share'

↔ vb. *ar·condlai* [w. *-ī*] 'shares'.[Ⓑ]

u̯o-dāli-* > ***fodail [f.] 'division, class, section; distribution; act of dividing, distributing'

↔ vb. *fo·dáli* [w. *-ī*] 'divides, distributes'.

kom-* + ***fodail* > ***cobdail***[Ⓒ] [f.] 'equal division; act of dividing equally'

↔ vb. *con·fodlai* [w. *-ī*] 'share(s) jointly, divides, apportions equally'.

Comments:

Ⓐ All the compounds decline as *i*-stems, but the simplex ***dál*** [f.] 'distribution', an *ā*-stem, no doubt shows the original stem class. Schumacher (2000: 142f.) suggests that, in addition to the common influence of the dative singular on the nominative singular of verbal nouns, the fact that the denominative verbs are *ī*-verbs may also have contributed to the change of stem class.

Ⓑ ***Erndail*** cannot be regularly descended from **ari-kom-dālā-* (⇒ ***ari-kom-dāli-*) as this

would have produced OIr. ‡*airchondail*. The sort of analogical reshaping that produced ***cuindchid, cuindgid*** (§ 3.1.105(1) comment C) may be at work here too, with the late addition of *air-*ˁ (*er-*ˁ) to existing ***condail*** 'division' (not attested in our corpus) ↔ vb. *con·dáili* 'shares', accompanied by analogical syncope of the second syllable, to produce **airch*†*ndail* (**erch*†*ndail*) > OIr. ***erndail***.

© Syncopated ***cob*†*dail***, which is a relatively late Primitive Irish formation of **kom-* + ***fodail*** (§ 2.1.3.3(2)), probably represents the standard Old Irish form. It is attested three times in our corpus (BB §§ 10 and 11), and although none of the manuscript copies in which it appears are of Old Irish date (the earliest, TCD H 2.15A, was copied prior to 1350), all consistently agree on the spelling. This, coupled with the fact that it is the expected historical shape, speaks strongly in favor of the genuineness of the form. The spellings *cobodail, cobfodail,* and *cobadail* are also common outside of our corpus, but the second syllable in these forms was probably restored through pressure from simple ***fodail*** 'division'. A few spellings appear to reflect a late compound of *com-*ˁ + ***fodail***: *comfogail* (*CIH* I, 232.8) *comfodhul* (*CIH* V, 1733.1), and *comhḟodhla* (FF 38d). However, all of these appear in late manuscripts (from the fifteenth to eighteenth centuries) and, most significantly, show clear signs of modernized orthography: confusion of lenited *d* and *g*, and representation of lenited *d* by ⟨*dh*⟩ and *m* by ⟨*mh*⟩. They are most readily explained as Early Modern Irish by-forms of *cobfodail* with hypercorrect "etymological" lenited *-m-*, as this was no longer distinguished in pronunciation from lenited *-b-*.

4.3.17. *-delg-a-* 'hold'

< PCelt. **-delg-ā-* ← **-delg-o-* (> OIr. ***-delg***) [n.(?)] 'holding' ← **delg-*$^{e}/_{o}$- 'hold'Ⓐ

← PIE √**delĝʰ-* 'be fixed, firm'.

◊ No simplex in Irish.

(1) PCelt. ***-delg-o-***:

kom-delgo-* > ***coindelg* [n.(?)] 'contract; comparison; comparative degree; act of comparing' ↔ vb. *con·delca* [w. *-ā*] 'compares'.

Comment:

Ⓐ The primary verb **delg-$^{e}/_{o}$-* is attested in Gaul. *DELGU* 'I contain' (on a drinking vessel), and, by way of PIE **dl̥ĝʰ-sk̂$^{é}/_{ó}$-* > **dl̥-sk̂$^{é}/_{ó}$-* > PCelt. **dal-sk$^{e}/_{o}$-* > **dalk$^{e}/_{o}$-* ⇒ **dalg$^{e}/_{o}$-*,[261] MW *daly, dala* (*dalyaf, dalaf*) 'to hold, seize', OBret. *delgim*, MBret. *delcher, delchel* (*dalchaff*) 'to hold, follow', with various compounds. A probable Irish correspondent is found in OIr. ***coindelg*** [n.(?) *-o*] 'contract, comparison, act of comparing' and the derivative weak *ā*-verb *con·delca* 'compares'. The Old Irish noun probably started as a verbal noun of the usual neuter *o*-stem type (§ 2.2.3.1(1)) corresponding to an old primary compound verb **con·deilg* < **kom-delg-$^{e}/_{o}$-*, which was superseded before our earliest attestations by the new denominative formation. Unlikely is Ahlqvist's suggestion (1979–1980: 16 fn.2) that the Irish noun is from *com-* + *delg* [n. *-s*] 'pin, peg' → 'fastening, link, tie', from another root, PIE √**dʰelg-* 'poke, prick; a needle'. The latter noun is only concrete in Celtic (cp. also MW *dala, dal* 'bite, sting', OCo. *delc*[*h*] gl. *monile*, etc.) and thus not readily combinable with a preverb; it is furthermore an original *s*-stem (gen.sg. and nom./acc.pl. *deilge* in Old Irish), later an *o*-stem, whereas ***coindelg*** is an *o*-stem in Old Irish, later an *ā*-stem.

4.3.18. *dord-a-* 'hum, drone, growl'

< PCelt. **dord-ā-* ← **dord-o-* (> OIr. *dord*) [m.] 'humming, droning, growling sound' ← **dor-d-* ← PIE **d$^{(h)}$er-* 'drone, growl, grumble, etc.' (onomatopoeic).Ⓐ

---

[261] Schrijver 1995: 142f.; *KPV* 273 n.(b) s.v. ****delg-e/o-* und **dal-ske/o-***.

(1) [[PrIr. ***dord-agno-*** (← **dord-o-*):

◊ **dordagno-* > ***dordán*** [m.] 'a droning, humming sound; act of making such a sound'

↔ vb. *dordaid* [w. *-ā*] 'makes a droning, humming sound'.]]

(2) PCelt. ****-dord-o-***:

u̯o-dordo-* > ***fodord* [m.] 'humming, droning sound; act of muttering, murmuring'

↔ vb. *fo·dorda* [w. *-ā*] 'murmurs, grumbles'.

Comment:

Ⓐ PIE **d$^{(h)}$er-* is not a "root" as such, but the presumed base of a wide variety of imitative words for humming, buzzing, droning, growling, murmuring, or other such low, indistinct sounds. (See the citations by *IEW* 203f. s.v. **2. *der-*** and 255f. s.v. **3. *dher-***.) Being imitative in nature, these words cannot be traced back to a single etymon, although they share a similar core shape that seems to be old.

4.3.19. *écndag-i-*$_{(DEP)}$ 'slander, defame'

< PrIr. **ankomdag-ī-* ← **an-kom-dag-o-* (> OIr. ***écndach***) [n.] 'slander, defamation' ← PCelt. **an-* priv. + **kom-* + **dag-$^{o}/_{ā}$-* [adj.] 'good', etymology uncertain.Ⓐ

(1) PrIr. ****an-kom-dag-o-***:

ankomdago-* > ***écndach* [n.] 'slander, defamation; act of slandering, defaming'

↔ vb. *écndaigid(ir)* [w. *-ī*] 'slanders, defames'.

Comment:

Ⓐ It is clear that the verb *écndaigid(ir)* is not a *sag*-denominative from ***écndach***, otherwise the verb would have been ***écnd†ch-aigid(ir)*; cp. *eólach* → *eól†ch-aigid*, *grésach* → *grés†ch-aigidir*, etc.[262] Pedersen (*VKG* II, 9 § 358(2c)) is no doubt correct in deriving ***écndach*** from **an-* (< PIE **n̥-* priv.) + **kom-* + **dag-o-* 'good', comparing *andach* [n.]

---

[262] Joseph 1987: 117, 135; it therefore does not belong in his table of *sag*-verbs (124).

'badness, iniquity' < *an-dag-o-*.[263] As with many Indo-European words for 'good' (cp. Gr. ἀγαθός, Lat. *bonus*, Go. *gōths*, OCS *dobrъ*, etc.), PCelt. **dag-^{o}/ā-* > OIr. *dag* lacks a convincing Indo-European etymology.[264]

4.3.20. *focl-a-* 'declare'

< PCelt. **u̯ok^{w}tl-ā-* ← **u̯ok^{w}-tlo-* (> OIr. ***focul***) [n.] 'word' ← PIE √**u̯ek^{w}-* 'say'.

(1) PCelt. ****u̯ok^{w}-tlo-***:

u̯ok^{w}tlo-* > ***focul* [n.] 'word; a saying'

↔ vb. *foclaid* [w. *-ā*] 'affirms, declares, pronounces'.

4.3.21. *for-cenn-a-* 'bring to an end'

< PrIr. **u̯or-k^{w}enn-ā-* ← **u̯or-k^{w}enn-o-* (> OIr. ***forcenn***) [n.] 'end' ← PCelt. **u̯or-* + **k^{w}enn-o-* (> OIr. *cenn*) [n.] 'head', etymology unknown.

◊ No simplex.

(1) PCelt. ****-k^{w}enn-o-***:

u̯or-k^{w}enno-* > ***forcenn* [n.] 'end, final limit, termination'

↔ vb. *for·cenna* [w. *-ā*] 'puts an end to; brings to an end, finishes'.

4.3.22. *gat-a-* 'take away'

< PCelt. **gasd-ā-* ← **gasd-ā-* (> OIr. ***gat***) [f.] 'removal' prob. < PIE **ĝ^{h}asd^{h}-* 'rod' or 'spike'.Ⓐ

(1) PrIr. ****gadd-ā-***< PCelt. **gasd-ā-*:

◊ **gaddā-* > ***gat*** [f.] 'removal, theft; act of taking away'

↔ vb. *gataid* [w. *-ā*] 'takes away, steals'.

---

[263] For the voiceless final *-ch* instead of etymological **-g*, see *GOI* 82f. § 130.1(a).

[264] See *LÉIA* D-8 s.v. **dag** and *EDPC* 87 s.v. ***dago-** for a range of dubious suggestions.

Comment:

Ⓐ Pedersen (*VKG* II, 536 § 737; *CCCG* 53 § 73(3)) attempts to trace OIr. *gataid* [w. *-ā*] 'takes away' from a nasal-present formation **g^{h}ad-nā́-* (← PIE √**g^{h}ed-* 'take, get'), but this is morphologically difficult: the development of pretonic **-dn-* > *-dd-* is doubtful,[265] the root vowel *-a-* is problematic, and there is no justification for a verbal formative **-nā-* to a PIE *aniṭ* root **CeC-*.[266] The verb must be a denominative from ***gat*** [f.] 'removal, theft', but the derivation of this noun is not absolutely clear. The most plausible etymology is that of Thurneysen (1936b: 114f. fn.4), who reconstructs a PCelt. base **gasd-*, comparing Lat. *hasta* 'spear', Go. *gazds* 'sting, goad'. All of these words can be united in a Northwestern Indo-European preform **ĝ^{h}asd^{h}-* 'rod' or 'spike'.[267] T. F. O'Rahilly (1942: 168) explains the semantics: "The original sense of *gat*, f., would therefore have been something like 'spearing' or 'piercing' (this is well preserved in the compound *tregat*, lit. 'through-piercing') and the sense-development ('spearing' > 'taking, thieving') is parallel to that of *creach* ('a cutting' > 'plunder')."[268]

---

[265] See the remarks under § 4.3.7 comment A.

[266] The Celtic descendants of PIE √**g^{h}ed-* are represented by OIr. *(ro)·geinn*, MW *genni* 'to be contained, find place'. The "double nasal" formation behind this verb is discussed by McCone (1998: 467f.; additional details at *KPV* 330f. n.(a) s.v. ****gan-n-d-e/o-***; and see further Klingenschmitt 1982: 184f. w. fn.26 on the rather complicated wider Indo-European picture). The Celtic forms reflect a nasal-present verb **gan-n-d-$^{e}/_{o}$-* < PIE **g^{h}n̥-n-d-*, which presupposes an underlying root √*g^{h}end-*, also attested in Gr. pres. χανδ-άνω, aor. ἔ-χαδ-ον, fut. χεί-σομαι 'hold' (< pres. **g^{h}n̥-n-d-*, aor. **g^{h}n̥d-$^{e}/_{o}$-*, fut. **g^{h}end-s$^{e}/_{o}$-*), Lat. *(pre-)hend-ō* 'grasp, seize' (< **g^{h}end-*, **g^{h}n̥d-*, or even **g^{h}n̥-n-d-*), and others listed in *LIV*^{2} (194 s.v. ****g^{h}ed-***). Most likely this late PIE root was secondarily formed from **g^{h}n̥d-*, the zero grade of an earlier *n*-present **g^{h}-ne-d-* / **g^{h}-n̥-d-* to the original aorist root **g^{h}ed-*, for which compare PGmc. **get-an* 'to get' and Lat. *praeda* 'booty' < **preh$_{2}$i-g^{h}ed-eh$_{2}$* or **-g^{h}od-eh$_{2}$* (de Vaan 2008: 487 s.v. **prehendō, -ere**).

[267] Which may be of non-Indo-European provenance; cp. Lubotsky 2004: 329f.

[268] A relationship with OIr. *gat* [m. *-o*] 'withe, osier' is far harder to justify for semantic reasons, despite Thurneysen (*loc. cit.*): the sense of 'anstechen' is not a good fit for 'Weidenrute, zusammengredrehter Zweig', since the flexibility of willow renders it useful for twisting and binding but unsuitable for piercing; and little sense can be made of a metaphorical connection between 'Weidenruten abschneiden' and 'stritzen, stibitzen'.

There is nothing to recommend *EDPC*'s proposal (155 s.v. ***gazdo-**) of a reflex of PIE **g^{h}osti-* 'stranger, guest' (OCS *gostь*, Go. *gasts* 'guest'; Lat. *hostis* 'stranger, enemy; host', etc.). Besides the semantic difficulty ('stranger, enemy' → 'thief'? — but the Old Irish word denotes the abstract 'removal', not the personal 'thief'), there are insurmountable morphological and phonological obstacles. With respect to the root vowel, the suggestion that earlier *goit* was altered to *gait* to avoid homonymy with *got* 'stammering, lisping', is pure speculation. There is no indication that the word originally had the root vowel *-o-*: it is spelled with *-a-* in Old Irish (*gait*, Ml. 70a5) and throughout almost all of the medieval Irish literature; forms with *-o-* first appear in late Middle Irish and only take over as the standard in Modern Irish. As for the stem class, several examples of nom.sg. *gat* with neutral */-d/* show beyond reasonable doubt that the word was historically an *ā*-stem rather than an *ī*-stem; therefore the palatalization that is commonly seen has spread secondarily from the dative.[269] And, finally, PIE **-st-* would have yielded PCelt. **-st-* > OIr. **-s(s)-*, not PCelt. **-zd-* > PrIr. **-dd-* > OIr. */-d/*.

4.3.23. *gell-a-* 'pledge'

< PrIr. **gissl-ā-* < PCelt. **gidtl-ā-* ← **gid-tlo-* (> OIr. ***gell***) [n.] 'pledge' ← PIE

√**g^{h}eid^{h}-* 'desire, yearn for'.

(1) PrIr. ****gisslo-*** < PCelt. **gid-tlo-*:

◊ **gisslo-* > ***gell*** [n.] 'pledge, surety; act of pledging'

↔ vb. *gellaid* [w. *-ā*] ' pledges, vows, promises'.

ari-gisslo-* > ***airgell* [n.] 'fore-pledge'

↔ vb. *ar·gella* [w. *-ā*] 'replaces, substitutes'.

---

[269] See *DIL* s.v. **gait**.

*t(u)-ari-gisslo- > ***tairgell*** [n.] 'preliminary pledge, advance security'

↔ vb. *do·airgella* [w. -*ā*] 'gives a preliminary pledge'.

eni-gisslo- > ***ingell* [n.] 'promise, vow; act of promising, vowing'

↔ vb. *in·gella* [w. -*ā*] 'promises, vows'.

u̯o-gisslo- > ***fugell* [m.] 'judicial pronouncement, decision; act of passing judgment on'

↔ vb. *fo·gella* [w. -*ā*] 'pronounces a verdict, decides, passes judgment'.

u̯or-gisslo- > ***forgell* [n.] 'testimony, attestation; act of bearing witness, testifying'

↔ vb. *for·gella* [w. -*ā*] 'testifies, attests'.

4.3.24. *gélln-i-*(?) 'yield homage'

< PrIr. **gēsslon-ī-*(?)Ⓐ ← **gēssl-on-iā-* (> OIr. *gíallnae*) [f.] 'hostageship' ← PCelt. **gēd-tlo-* (> OIr. *gíall*) [m.] 'surety, pledge' ← PIE √**g*^{h}*eid*^{h}- 'desire, yearn for'.

◊ Simple verb **gíallnaid*, unattested; simple verbal noun ***gíallnad*** [m. -*tu*] 'hostageship, captivity', not attested in our corpus.Ⓑ

(1) PrIr. ***-gēsslon-iā-***:

ad- + gíallnae >
or: **ad-gēssloniā* > **aiclenae* ⇒ } ***aicellnae* ⇒ *aicillne***Ⓒ [f.] 'clientship'

↔ vb. *ad·gíallnai** [w. -*ī*(?)] 'serves, is in base clientship to'.

Comments:

Ⓐ A weak *ī*-verb formation would be expected from the *iā*-stem base noun *gíallnae*. Unfortunately, the extant forms (none belonging to the simple verb **gíallnaid*, and very few of the compound *ad·gíallnai**) cannot tell us if the Old Irish verb was an *ī*-stem or an *ā*-stem, since in either case the loss of *-*o*- to syncope would have left behind non-palatalized consonantism through most of the conjugation, and the few forms that could clarify the matter — the third-person singular conjunct of the present tense in a genuine Old Irish manuscript to indicate the early quality of the final vowel, or a conjunct

preterite or perfect-tense form to show the quality of the stem-final consonant — nowhere appear. In most instances these verbs and their verbal nouns have been replaced by the closely related and synonymous group of *ā*-stems based on *gíallaid* ↔ vn. ***gíallad*** (not attested in our corpus) derived from the base noun *gíall* [m. -*o*] 'surety, pledge'; the latter word is used as a verbal noun in Early Modern Irish (Keating), but it is impossible to know if this usage is old.

Ⓡ This form is a *hapax*, found only at Trip.[1] 307, probably of late Old Irish or Early Middle Irish date.[270]

© The shape of ***aicill†ne*** shows unusual syncope (expected would be **aic†lenae* < **ad-gēssloniā*). This might indicate a post-syncope compound of *ad-* + *gíallnae*, or a secondary restoration based on the simplex *gíallnae*; but the shortening of the root vowel is difficult to explain in either case. The *-lln-* has been secondarily palatalized, replacing historically regular **aicellnae*.

4.3.25. *gol-a-* 'weep, wail'

< PCelt. **gol-ā-* ← **gol-o-* (> OIr. ***gol***) [m.] 'wailing' ← PIE **g^{h}ol-* ← √**g^{h}el-* 'call, cry'.

(1) PCelt. ****gol-o-***:

◊ **golo-* > ***gol*** [m.] 'lamentation; act of weeping, wailing'

↔ vb. *golaid* [w. -*ā*] 'weeps, wails'.

---

[270] Dated by Jackson (1986: 15f.) to the later part of the tenth century, albeit based on late Old Irish sources.

4.3.26. *íc(c)-a-* 'heal; save; pay'

< PrIr. **īkk-ā-* ← **īkkā-* (> OIr. ***íc(c)***) [f.] 'cure, healing', etymology uncertain.Ⓐ

(1) PrIr. ****īkkā-***:

◊ **īkkā-* > ***íc(c)*** [f.] 'cure, payment, redemption, salvation; act of healing, (re)paying, saving' ↔ vb. *íc(c)aid* [w. *-ā*] 'heals, makes compensation (for), redeems, pays'.

Comment:

Ⓐ The reconstruction of the Irish root is highly troublesome, and no satisfying solution has yet been found. It has, reasonably enough, been assumed to be related to MW *iach* [adj.] 'healthy', OBret. *iac* gl. *suspite*, OCo. *iach* gl. *sanus*, and Gaul. PN *IACCUS*, but the details of the relationship do not lend themselves to a clear solution. Insofar as the vocalism is concerned, the traditional[271] comparison with Gr. ἄκος [n. *-s*] 'medicine, remedy' = **ἄκος*[272] is formally problematic. Despite Beekes (2010: I, 54f. s.v. **ἄκος**), the zero grade of a PIE root √**H̯ieh₂k-* would normally be expected to come out as **Hih₂k-* > **īk-*, not **H̯ih₂k-* > **i̯ak-*. Even if one were to accept the irregular syllabification implied by **i̯ak-*, the Celtic forms display conflicting outcomes: the British and Gaulish have *ia-* while Irish has *í-*. Hamp's (1976b: 17) suggestion of a general split in the outcome of PIE **iHC-* between British and Gaulish on the one hand and Irish on the other, the former developing syllabic laryngeal **i̯H̥C-* > **i̯aC-* and the latter a long vowel **īC-*, is justly rejected by Schrijver (1995: 103f.) on chronological grounds, as it would imply a separation between Brittonic and Goidelic in the pre-Celtic period when a PIE laryngeal would still have been present between a vowel and a consonant. Schrijver disconnects

---

[271] *US* 222 s.v. **jakko-s**; *IEW* 504 s.v. ***i̯ēk-* : *i̯ək-***.

[272] The psilosis of ἄκος is likely an epicism or an Ionicism; initial */h-/* is manifest in certain dialect compounds, (Delph.) εφ-ακείσθων, (Arg.) ἀφ-ακεσάσθō, and in Myc. ***a₂-ke-te-re /hakestēres/*** (and — if it is the same word — ***ja-ke-te-re***, where *ja-* would represent an "etymological" equivalent of *a_2- /ha-/*).

the Celtic words from the Greek and proposes a different root form instead, PICelt. *i̯iekk- (for the etymology of which see below), assuming an Irish development to *iikk- and finally ***íc(c)*** beside the regular British (and, sporadically, Gaulish) development of *i̯e- to *i̯a-. However, besides the *ad hoc* nature of the Irish solution — which Schrijver candidly acknowledges — there is also a problem with the British development: the regular outcome of LPBr. *i̯iá is MW *aea* (cp. PIE *ĝʰi̯em- 'winter' → PICelt. *gi̯iem-o- > LPBr. *gi̯i̯ámo- > MW *gaeaf*),[273] so it is unclear why in this instance PICelt. *i̯iekk$^{o}/_{ā}$- > LPBr. ***i̯i̯ákk$^{o}/_{ā}$- should yield MW ***iach*** and not ⁂***aeach***. As for the initial *i̯i̯- < PIE *i̯-, Schrijver (104 fn.1) wonders if Celtic could have had a dual outcome *i̯- and *i̯i̯- < PIE *(H)i̯-, analogous to Gr. *h-* and ζ-, but admits that this is highly speculative. Lambert (1979: 209f.) observes that, "dans quelques cas," inherited initial *i̯- appears to have acquired syllabic status in Irish and subsequently merged with the following vowel to produce long *í-*; this could account for the differences between the Goidelic and the Brittonic words, as this development was limited to Irish. By way of illustration he cites the form in question, OIr. ***íc(c)*** < *i̯i̯akkā- vs. MW *iach* [adj.] 'healthy' < *i̯ákk$^{o}/_{ā}$-; also OIr. *íth* [m.] 'fat' < *i̯i̯utu- next to OW *iot* gl. *pultum*, MW *yut* [m.] 'porridge, pottage' < *i̯uto-; OIr. *ít(t)u* [f.] 'thirst' < *i̯i̯antitut- < *i̯n̥titut-; and OIr. *Ísu* < *I̯i̯esu < Lat. *Iēsūs* vs. W *Iesu*.[274] This proposal is intriguing, though the conditions that might have triggered this outcome instead of the normal disappearance of *i̯- remain unspecified. *EDPC* (171 s.v. ***īkkā, *yekkā***) offers the possibility of a reduplicated present *i̯i-i̯iekk-$^{e}/_{o}$- as the basis for a deverbative *i̯i̯i̯ekk-ā-> OIr. ***íc(c)***, but it is difficult to know what to make of such a form:

---

[273] *LHEB* 358–60; Schrijver 1995: 101; cp. § 4.1.62 comment A.

[274] He also cites OIr. *Hirusalem* < Lat. *Hierūsalēm*, OIr. *Hirōnymus* < Lat. *Hierōnymus*, and OIr. *Hirōdes* < VLat. ?**Hierōdēs* < *Hērōdēs*, but these are not exactly equivalent in that all the Old Irish words have initial short /*i*-/, and the last one must assume a hypothetical intermediate deformation.

the reduplicated present is understandable in Indo-European terms, but the root-final geminate *-*kk*- is not. De Bernardo Stempel's (1991: 160; 1999: 517) appeal to expressive gemination explains little; such sound symbolism hardly seems suitable to words of the semantic class 'cure, remedy'. Schrijver (1995: 104) more usefully reconstructs *$\hat{ie}$*t-k^{o}/ā-* ← PIE √**$\hat{ie}$*t-* 'set out, strive for'(Ved. *yát-ate* 'places oneself in position', *yát-ati* 'sets in order'), which offers better promise in the regular derivation of *-*kk*- < *-*t*- + *-*k*-. The problems of the root vocalism, however, remain unresolved.

4.3.27. *-math-i-* 'threaten'

< PCelt. *-*mat-ī*- ← **ma-tā*- '?gesture' ← PIE √**meh*$_2$- 'give a sign'.Ⓐ

◊ No simplex.

(1) PCelt. ***-ma-tā-***:

tu-matā*-Ⓑ > ***tomad* [f.] 'threatening; aiming at, striking at'

↔ vb. *do·maithi* [w. -*ī*] 'threatens'.

Comments:

Ⓐ *LÉIA* (M-13 s.v. **maith-**) takes *do·maithi* 'threatens' ↔ vn. ***tomad*** as a compound of *maithid* 'remits, pardons' ↔ vn. ***maithem*** (not attested in our corpus), derived from *maith* [adj.] 'good, favorable', yet it cannot be taken for granted that the two verbs originate from the same root. The simple verb is perhaps derivable from *maith* [n.] 'a good, benefit'[275] < PCelt. **ma-ti*- < PIE **mh*$_2$*-ti*- ← √**meh*$_2$- 'good'[276] — the original meaning could be 'grant a boon' or the like — but this is less understandable in the case of the compound, since the preverb **tu*- does not usually supply an adversative sense. PIE

---

[275] Since weak *ī*-verbs are normally not deadjectival (*GOI* 338 § 525), *maithid* cannot be expected to have been built directly from the adjective *maith* 'good'.

[276] *IEW* 693 s.v. **2. *mā-***; cp. Lat. *mānus* 'good' < **meh*$_2$*-no-*, *mātūrus* 'seasonable, ripe, mature' ← **meh*$_2$*-tu-*, etc.

√*meh_2- 'give a sign'[277] makes a better starting point, particularly if it is in reference to a hand gesture,[278] as for example in Lith. *móju, móti* 'beckon', OCS *-majǫ, -majati* 'wave'. The Celtic semantics would be 'gesture at' → 'make a threatening gesture' → 'threaten, strike at', for which a close parallel may be observed in Alb. *matem* 'raise the hand to strike, throw'.[279] Attempts have been made to connect √*meh_2- 'good' with *meh_2- 'give a sign', by way of 'give a sign of approval' → '[that which is] approved, favorable, good',[280] but this alternative is not as compelling.

Ⓑ The neutral final of the nom.sg. *tomad* in Würzburg (Wb. 11a16) coupled with the palatalized final of the acc.sg. ***tomaith*** (Ml. 31c26) and dat.sg. ***tomaith*** (Ml. 33b15, 18) establishes this word as an *ā*-stem. The anomalous gen.sg. *tomtho* in Milan (Ml. 26d2) is probably not that of an *i*-stem, but analogical to the numerous *tu*-stem verbal nouns.[281]

4.3.28. *penn-a-* 'do penance'

< PrIr. **penn-ā-* ← **pennidd* (> OIr. ***pennait***) [f.] 'penance' < LPBr. **penid* (> MW *penyd*, MBret. *penet*) < Lat. *paenitet* (*me*) 'I am sorry', from *paeniteō, -ēre* 'regret, repent'.Ⓐ

(1) PrIr. ****pennidd***:

◊ ***pennait*** [f.] 'penitence, penance; act of doing penance'

↔ vb. *pennaid* [w. *-ā*] 'does penance'.

---

[277] *LIV*² 425.

[278] Cp. *IEW* 693 s.v. ***1. mā-*** 'mit der Hand winken'.

[279] This word should therefore be taken back to √*meh_2- 'make a sign', rather than √*meh_1- 'measure' → 'aim at' → 'raise the hand to strike', as advocated by *VKG* II, 575f. § 775 Anm.; *IEW* 703 s.v. ***3. mē-, m-e-t-***; *LÉIA* M-13 s.v. **maith-**.

[280] Irslinger 2002: 208; *EDPC* 260 s.v. ***mati-**; de Vaan 2008: 364 s.v. **mānus**.

[281] *VKG* II, 575 § 775; cp. *GOI* 448 § 724.

Comment:

Ⓐ While OIr. ***pennait*** corresponds in meaning to Lat. *paenitentia* 'penitence, penance', it cannot be a direct borrowing because this would have yielded OIr. ⁂*pendait(e)*, ⁂*pendaind* or the like (depending on the exact pronunciation of the Vulgar or British Latin source and the date of the Irish borrowing). The spelling *-nn-* is consistent even in the oldest manuscripts (*ippennit* 'in penance', Cambr. 38a = *Thes.* II, 247.8; *pennit*, Wb. 26b20; etc.), long before *nd* merged with *nn* in late Old Irish or early Middle Irish, and thus the later spellings *pendid, pendaid* (Mon.Tall. 135.13, 19), *pendaite* (PH 453), etc. must be Middle Irish hypercorrections rather than authentic etymological spellings.[282] Pedersen (*VKG* I, 213 § 132(3)) considers the Irish word to be "wohl eine gelehrte Umbildung von lat. paenitentia" and the corresponding British words, MW *penyd*, MBret. *penet*, to be borrowings from the Irish. In fact, however, ecclesiastical influence generally proceeded in the opposite direction, as Christianity was introduced into Ireland from Britain starting with Patrick in the fifth century and continuing thereafter. Much of the ecclesiastical vocabulary therefore exhibits distinct British characteristics, whether it was taken directly from the Latin of the British church, or borrowed through the intermediary of spoken Late Proto-British or Primitive Welsh.[283]

In the case of OIr. ***pennait***, a borrowing from Late Proto-British is imaginable. It is widely accepted that LPBr. **penid* was adopted from the Latin verb *paenitẽo*[284] (or, more probably, from the locution *paenitet* [*me*] 'it repents me, I regret, I am sorry').[285] This

---

[282] *VKG* I, 239 § 147.

[283] See *GOI* 565 § 913.

[284] Lewis 1943: 10; *GOI* 569 § 918.

[285] S. Zimmer 2000: 434.

substantival use of the Latin verb was probably idiomatic. Typologically comparable transfers of word class abound in English, cp. Eng. *alibi* [noun] 'an excuse or defense, esp. by establishing one's whereabouts at a certain time' < Lat. *alibi* [adv.] 'elsewhere'; Eng. *per diem* [noun] 'daily allotment for expenses' < Lat. *per diem* 'by day'; Eng. *ad lib* [vb.] 'to improvise' < Lat. *ad lib(itum)* 'as it pleases'; etc. While it is not impossible that British and Irish could have made this same transfer independently, a borrowing seems more reasonable. The unlenited intervocalic /-*N*-/ indicated by the Irish spelling ⟨-*nn*-⟩ remains unexplained. It is tempting to hypothesize that the Proto-British pronunciation might have been **pennid* through the analogical influence of PBr. **penn* 'head' (> MW, OBret., MBret. *penn*, OCo. *pen*), but there appears to be no support for this in the spellings of MW, MoW *penyd* and MBret. *penet* → MoBret. *pinijenn, penijenn*, always with a single (lenited) nasal.

The synchronic association of OIr. ***pennait*** with Lat. *paenitentia* provided the model for a more general equation of OIr. *-it* (/*-id'*/) with Lat. *-entia*, applied to later borrowings like OIr. *abstana**it*** < Lat. *abstin**entia*** 'abstinence', OIr. *aiccid**it*** < *accid**entia*** 'accidence', etc.[286] The reanalysis of OIr. ***pennait*** as composed of a root *penn-* plus suffix *-it* also explains the form of the derivative verb, OIr. *pennaid* [w. *-ā*] 'does penance' < **penn-ā-*.

4.3.29. *rann-a-* 'divide'

< PCelt. *(*ϕ*)*rasn-ā-* ← *(*ϕ*)*ra-snā-* (> OIr. ***rann***) [f.] 'division, part' < (virtual) PIE **pr̥h₃-s-neh₂-*(?) ← √**perh₃-* 'provide'.Ⓐ

(1) PrIr. ****ra-snā-*** < PCelt. *(*ϕ*)*ra-snā-*:

◊ **rasnā-* > ***rann*** [f.] 'division; act of sharing, dividing; a part, share'

↔ vb. *rannaid* [w. *-ā*] 'divides, parts, separates; shares'.

---

[286] *GOI* 569 § 918.

kom-rasnā-* > ***comrann* [f.] 'partition, division; act of sharing, dividing'

↔ vb. *con·ranna* [w. *-ā*] 'divides, apportions; shares in, participates in'.

Comment:

Ⓐ Old Irish ***rann*** 'division, part' and its British counterparts, OW *guo-renniou* 'fractions, subdivisions, MW *ran* 'part', *rannu* 'to share', *kyf-ran* 'to share, divide', MCo. *ran* 'a share', OBret. *rannou* gl. *partimonia*, MBret. *rann* 'part, piece', etc., are no doubt etymologically related to Lat. *par-s, -tis* 'part, piece',[287] from PIE √**perh$_3$-* 'provide' (also in Ved. ipv. *pūr-dhí* 'give, provide'; Gr. aor. ἔ-πορ-ον 'bestowed', Lat. *par-ō, -āre* 'prepare, provide', etc.). The preform **pr̥H-snā-* has been suggested for the Celtic words,[288] which would produce the existing forms entirely straightforwardly if **CRăC* is the regular phonological outcome of a **CRHC* sequence;[289] or, if **CRHC* > **CRāC* is regular, by way of an "Osthoff"-style shortening of the vowel before **-sn-* in Proto-Celtic,[290] or through the application of a morphological zero grade or other analogical process.[291]
De Bernardo Stempel's (1987: 135f.; 1999: 550 fn.36) recommendation of an *aniṭ *pr̥-snā-* > PCelt. **(ϕ)arsnā-*, with subsequent liquid metathesis to **(ϕ)rasnā-*, affords no perceivable advantage. The Celtic semantic development was presumably 'grant, bestow' → 'allocate, apportion' → 'divide'.

---

[287] For a discussion of the issues surrounding Lat. *pars, -tis*, see de Vaan 2008: 448 s.v. and Schrijver 1991: 195–97. In Schrijver's view, the Latin noun must be a post-PIE *ti*-stem creation to a new root **par-*, extracted from the present *pariō* < **prh$_3$-i-*, comparable to the *to*-stem ppp. *partus* and the *tu*-stem substantive *partus* 'young, offspring'.

[288] Cp. *VKG* I, 52 § 35(1); Schrijver 1995: 177, 456. PCelt. **-snā-* would presumably reflect a compound suffix **-s-neh$_2$-*, probably of similar origins to the **stV*-suffixes, § 2.2.3.21.

[289] Schrijver 1995: 168–91; *KPV* 136f.

[290] McCone 1996: 63f.

[291] Joseph 1982; *EDPC* 138f. s.v. ***frasnā**.

4.3.30. *rím-i-* 'count'

< PCelt. **rīm-ī-* ← **rī-mā-* (> OIr. ***rím***) [f.] 'number' ← PIE **$h_2$riH-* ← √**$h_2$reiH-* 'count'.

(1) PCelt. ****rī-mā-***:

◊ **rīmā-* > ***rím*** [f.] 'enumeration; act of counting, reckoning, numbering; recounting, telling; a number' ↔ vb. *rímid* [w. *-ī*] 'counts, reckons, estimates'.

ad-rīmā-* > ***áram* ⇒ ***áirem*** [f.] 'amount, number; act of counting, reckoning' ↔ vb. *ad·rími* [w. *-ī*] 'counts, numbers, computes'.

tu-ande-rīmā-* > ***tinnrem* [f.] 'performance, service; act of performing, carrying out, undertaking' ↔ no attested vb. **do·innrimi*.

kom-rīmā-* > ***comram*Ⓐ [f.] 'contest, contention; triumph, victory' ↔ no attested vb. **con·rími*.

tu-rīmā-* > ***tuirem* [f.] 'number, account; act of enumerating, recounting, telling, relating' ↔ vb. *do·rími* [w. *-ī*] 'enumerates, mentions, recounts, tells, relates'.

Comment:

Ⓐ Pedersen (*VKG* II, 602 § 798) suggests that "eine ältere Form des Abstr. [***réim(m)*** 'riding'] steckt möglicherweise in comram 'Kampf', *-u*-Stamm, ... Pl. comrama Wb. 30d12 (**-reidhmu-s*)," but such a formation would be doubly out of place with this verb: OIr. ***réim(m)*** and all of its compounds are consistently *smen*-stem formations (§ 3.1.97(1)), and the suffix **-mu-* occurs almost exclusively with monosyllabic roots ending in a long vowel (§ 2.2.3.10). In this respect Meyer's attempt (1917: 28) to connect OIr. ***comram*** with the simplex ***rám*** [m. *-mu*] 'rowing' ↔ vb. *ráïd* [h.] 'rows, travels (by boat)' (§ 3.1.94(1)) looks better morphologically, but it is not persuasive semantically ('rowing together' → 'competitive rowing, a rowing race' → 'contest'). In fact, OIr. ***comram*** must have been a feminine *mā*-stem rather than a masculine *mu*-stem (the nom.pl. *comrama* could equally well belong to either), to judge by acc.sg. *comraim*,

gen.sg. ***inna comraime***. For this reason must be taken as a compound of ***rím*** [f. *-ā*] 'reckoning', perhaps from the idea of 'settling accounts' in a competitive sense.

4.3.31. *saml-a-*$_{DEP}$ 'liken, compare'

< PCelt. **samal-ā-*$_{DEP}$ ← **sam-al-i-* (> OIr. ***samail***) [f.] 'likeness' < PIE **sm̥h₂-e-l-i-*Ⓐ

← √**semh₂-* 'same' ← √**sem-* 'one, as one'.

(1) PCelt. ***sam-al-i-***:

◊ **samali-* > ***samail*** [f.] 'likeness, comparison; act of likening, comparing'

↔ vb. *samlaithir* [w. *-ā*] 'likens, compares'.

ande-samali-* > ***intṡamail* [f.] 'similitude, resemblance, imitation; act of imitating,'

↔ vb. *in·samlathar* [w. *-ā*] 'imitates, emulates; likens; simulates'.

Comment:

Ⓐ Proto-Celtic **samalis* (> OIr. ***samail***, MW *hafal*, MBret. *haual*, MCo. *haval*) and Lat. *similis* [adj.] 'similar, like' appear to be exact cognates, possibly reflecting PIE **sm̥h₂-el-i-*,[292] **semh₂-el-i-*, or **semh₂-l-i-* (with vowel assimilation of **semali-* > PCelt. **samali-* in the last two). Or, as Joseph (1982: 38f. w. fn.8) has argued, following an analysis of Jochem Schindler, the starting point may be a thematic stem **somh₂o-* (Ved. *samá-*, Gr. ὁμός, Go. (*sa*)*sama*, etc. 'same'), of which the Celtic and Latin forms continue either zero-grade **sm̥h₂e-* or full-grade **semh₂e-*. A preform with athematic base is less attractive, Joseph argues, on the following grounds: (1) athematic **semh₂-* nowhere occurs as a free form; (2) the simplest forerunner of Gr. ὁμαλός 'like, similar' is PIE **somh₂e-lo-*, a *lo*-stem formation built to thematic **somh₂-o-*, though it could also be an alteration of *ἑμαλός < **semh₂-lo-*; but athematic **somh₂-lo-* is excluded since that would

---

[292] So de Bernardo Stempel 1987: 139; Schrijver 1991: 218; de Vaan 2008: 564f. s.v. **similis**.

have produced Gr. ‡ὁμλός by the "Saussure effect";[293] and (3) because of the difference in meaning, the Germanic forms, Go. *simle* 'once' and OE, OHG *simble(s)* 'always', are better taken to reflect **sem-lo-*, a direct derivation of *aniṭ* **sem-* 'one', than **semh$_2$-lo-* from **semh$_2$-* 'same'. For the Italic and Celtic *i*-stem derivative, a zero-grade **sm̥h$_2$e-l-i-* would be the most direct, but full-grade **semh$_2$e-l-i-* > **semali-* would also be possible with the application of Joseph's rule (*op. cit.*) to produce PCelt. **samali-*.

4.3.32. *-(s)cart-a-* 'separate'

< PCelt. **-skart-ā-* ← **skar-to-* 'separation' ← **skar-ā-* 'to separate' ⇐ **skara-* ← PIE √**(s)kerH-* 'separate, divide'.Ⓐ

◊ No simplex in Irish.

(1) PCelt. ****-skar-to-***:

exs-skar-to-* > ***escart* [m./n.?] 'offscouring, refuse'

↔ vb. *as·scarta* [w. *-ā*] 'drives away'.

Comment:

Ⓐ Evidence for simple **skart-* may be seen in MoW *ysgarth*, pl. *ysgarthion* [m.] 'excrement, dung', *ysgarthu* 'to clean, purify' (*ysgarthaf*), OBret. *iscartholion* gl. *stupea* (with prothetic /ĭ-/ before initial **sk-*), and probably in the rare Old Irish noun *scart* 'stalk, stubble; husk, tow (flax fiber)' (← 'that which is separated'). These appear to reflect a *to*-formation **skar-to-* built to the base of OIr. *scaraid* [w. *-ā*] 'separates', MW *yscar* (*yscaraf*) 'to part, separate', OBret. *scarat* gl. *diiudicari*, MBret. *di-scar* 'demolish'. This is an inner-Celtic formation, created after inherited **skara-* < PIE **skerH-* or **skr̥H-* had been reanalyzed as weak **skar-ā-* (see § 3.1.106 comment A), since an old *to*-formation from the inherited *seṭ* root, PIE **skr̥H-tó-*, would be expected to have yielded OIr. ‡*scrăth*.

---

[293] I.e., **H* > ø / **oR__C*: de Saussure 1905: 511 fn.2.

The denominative verb *-scarta* is only found in compounds in Old Irish: *ar·scarta* [w. *-ā*] 'cleans out, clears' (↔ vn. ***(a)irscartad***, ***(a)urscartad***, not attested in our corpus) < **ari-skart-ā-*; **do·uscarta, do·foscarta* [w. *-ā*] 'removes' < **dī-uss-skart-ā-* (↔ vn. ****díuscart*** not attested); and *as·scarta* [w. *-ā*] 'drives away' (↔ vn. ***escart***) < **exs-skart-ā-*. On the other hand, the presence of an asigmatic simplex **kart-ā-* in OIr. *cartaid* [w. *-ā*] 'sends, expels, drives off' (↔ vn. ***cartad***, not attested in our corpus), MW *karth* [m.] 'hemp, tow', MoW *carthu* (*carthaf*), MBret. *karzaff* 'to clean' and a compound **u̯o-kart-ā-* > OIr. *fo·carta* [w. *-ā*] 'clears away, thrusts away', built from a parallel nominal formation **kar-to-*, ultimately from the same PIE root √**(s)kerH-*, makes it conceivable that the *-s-* in these compounds belongs to the preverb **exs-* or **uss-* rather than the verb stem, i.e., **exs-kart-ā-*, **ari-uss-kart-ā-*, **dī-uss-kart-ā-* in the case of the Irish compounds, and **exs-kart-o-* in the case of MoW *ysgarth*, etc.[294] This seems less likely, however, in light of the following: (1) while the forms ***aurscartad*** and ***urscartad*** could be taken to continue **ari-uss-kartă̆tu-*, the corresponding verb *ar·scarta* shows no hint of **uss-* (⁂*ar·**us**carta*) and can only reflect **ari-skart-ā-*, so the *(a)ur-* of these spellings must be unetymological;[295] and (2) in the 3.pl.pres.subj. *a-tam·scartis* 'they may drive me away' (Ml. 59a21) to *as·scarta* 'drives away', the *-s-* follows the 1.sg. infixed pronoun *-tam-* and thus unmistakably belongs to the stem.

4.3.33. *-son-a-* 'strive'

< PCelt. **-son-ā-* ← **son-o-* 'a seeking after(?)' ← PIE √**senh₂-* 'reach, attain'.Ⓐ

◊ No simplex.

---

[294] So argues H. Zimmer 1900: 454–58.

[295] Cp. *GOI* 498 § 823.A.

(1) PCelt. ***-son-o-*** (← PIE *$sonh_2$-):

*$ambi\text{-}\underset{\frown}{u}rit(s)\text{-}sono$- > ***imres(s)an*** [n.] 'contention, strife; act of contending, striving'

↔ vb. *imm·fresna* [w. *-ā*] 'contends, strives'.

Comment:

Ⓐ It appears likely that this formation belongs to the PIE root √*$senh_2$- 'reach, attain', which also lies behind *seinnid* 'follows' and *do·seinn* 'pursues, hunts' (§ 3.1.114). *DIL* (s.v. **imm·fresnai**) offers the alternative possibility of a compound of *snī̆-*, but this is problematic for two reasons: (1) there is no way to derive an *o*-stem noun of the shape ***imres(s)an*** from a starting point of *$ambi\text{-}\underset{\frown}{u}rit\text{-}sn\bar{\imath}$-; and (2) with a root of this shape, we should rather have expected a *mu*-stem verbal noun *$ambi\text{-}\underset{\frown}{u}rit\text{-}sn\bar{\imath}\text{-}mu$- > ⁂*imrisnem*.

Schumacher (2000: 157f.) suggests an iterative 'reach for' → 'strive for victory over', but with a caveat: "It must be said that there is no ultimate proof from Old Irish that we are dealing with an *ī*-verb, since the OIr. 3.sg.pres. *imm·fresnai* is not attested but only inferred by *DIL*. It could also be an *-ā*-verb, in which case the etymology remains unclear." In fact, the spelling of 3.sg.pres. *im·fresna* (Wb. 30c16) would be surprising for an *ī*-verb in an eighth-century manuscript, penned at a time when the quality of final vowels was still kept distinct (cp., e.g., *im·folngi* 'causes', where *-i* is written even after neutral *-l†ng-* < *-*long*-), so the indication is that we are really dealing with an *ā*-conjugation verb and hence a denominative formation *-*son*-*ā*-. The source noun is probably to be found in the *o*-stem *son* that appears in the fixed phrase *ar son* (earlier *for son*)[296] + gen. 'in place of, by way of, in return for, for the sake of, on account of, because of', etc.[297] For the connection with PIE √*$senh_2$- 'reach, attain', English *sake* provides a

---

[296] Meyer, *Wortk.* 201.

[297] This word is certainly to be separated from *son* [m. *-o*] 'sound' < Lat. *sonus* on semantic grounds, as *LÉIA* S-171 s.v. **1 son** points out.

remarkable typological parallel. The synchronic meaning of English 'for the sake of' is very similar to that of Irish *ar son*, and likewise survives only in this fixed expression. Historically, OE *sacu* (≈ OHG *sahha*, ON *sǫk*) meant 'conflict, dispute, (*leg.*) cause, lawsuit' < PGmc. **sak-ō* 'a seeking' → 'accusation, strife', a sense very similar to that of OIr. ***imres(s)an*** 'strife, contention'; and ultimately PIE √**seh*$_2$*ĝ*- 'seek out, follow a track' belongs to the same semantic field as PIE √**senh*$_2$- 'reach, obtain' (cp. OIr. *saigid* 'seeks, strives after' with OIr. *seinnid* 'follows', *do·seinn* 'pursues, hunts').[298] The source noun **son-o-* 'a reaching' → 'a seeking after' probably served as the verbal noun to the denominative verb **son-ā-*, a relationship likewise reflected in ***imres(s)an*** 'strife, contention' < **ambi-u̯rit(s)-son-o-* ↔ vb. *imm·fresna* 'contends, disputes' < **ambi-u̯rit(s)-son-ā-*.

4.3.34. *sreng-a-* 'pulls, draws'

< PCelt. **streng-ā-* ← **streng-o-* (> OIr. ***sreng***) [m./n.?] 'string, cord' ← PIE √**streng*^{h}- 'twist, draw tight'.Ⓐ

(1) PrIr. ****sreng-o-*** < PCelt. **streng-o-*:

◊ [[**srengo-* > ***sreng***Ⓑ [m./n.?] 'string, cord; act of pulling, drawing'

↔ vb. *srengaid* [w. *-ā*] 'pulls, draws'.]]

kom-srengo-* > ***coisreng* [m./n.?] '(drawing together →) bond, obligation'

↔ vb. *con·srenga* [w. *-ā*] 'binds by obligation'.

Comments:

Ⓐ Marstrander (1915: 22; also *DIL* s.v.) took the Irish word to be a borrowing from ON *strengr* 'string, cord', based on the fact that the simplex *sreng* 'string, cord' is only

---

[298] As Watkins (1962: 130 fn.7) notes, the difference between 'seek, pursue' and 'get, accomplish' is simply a matter of whether one views the same action as uncompleted or completed.

attested in Middle Irish and later. However, the related compound verb *con·srenga* 'binds by legal obligation' and its verbal noun *coisreng* < **kom-srengo-*, especially in the term *aire* ***coisring*** 'freeman of **obligation**',[299] were already established as specialized legal terms in the Brehon laws of the seventh and eighth centuries, indicating that the Irish word has a far older history. The shape of the preverb, with **-m-* assimilated to the following **-s-*, supplies further support for an older formation, since *com-*$^{\text{c}}$ + *sreng* > ⁂*comśreng* would be expected of a more recent compound.[300] There is good reason therefore to accept *LÉIA*'s view (S-184f. s.vv. **sreng** and **sreng-**) that this word belongs to the native vocabulary. On the other hand, there is no justification for *LÉIA*'s explicit claim of a direct derivation from PIE √**streng^{h}-* 'twist, draw tight' (→ Gr. στραγγός 'twisted, squeezed', στράγξ 'a drop [← squeezed out]'; PGmc. **strang-a-z* > ON *strangr*, OE *strang* 'strong', PGmc. **strang-i-z* > ON *strengr*, OE *streng* 'string, cord', etc.). While it is conceivable that a Proto-Celtic strong verb **streng-$^{e}/_{o}$-* (> OIr. **sringid*) could have existed at one time, this can only be speculation. The existing verb *srengaid, con·srenga* is a weak *ā*-verb (note the lack of raising in the root vowel and the overt ending *-a* of the 3.sg.pres.conj.) and shows every sign of being a denominative creation from the noun **strengo-* > OIr. ***sreng***, which can also serve as its verbal noun.

Ⓑ Beside the *tu*-stem ***srengad*** [m.] < **sreng-ă̆-tu-*, also absent from our corpus.

---

[299] See Binchy 1941: 70 s.v. **aire coisring**: "The *a.c.*, although a member of the *grád Fhéne* [i.e., the class of commoners], is accorded a special status by his function as head of his kin ..., whom he represents in their dealings with external authorities. He acts as an automatic surety for the observance of their obligations to king and Church by all the members of the joint-family."

[300] See § 2.1.3.3(2) and cp. *GOI* 502f. § 830.A.

4.4. Type 4: Deadjectival/Denominative Formations (V ← Adj/N → VN).

4.4.1. *cert-a-* 'correct, adjudicate'

< PrIr. **kert-ā-* ← **kert-$^{o}/_{ā}$-* (> OIr. *cert*) [adj.] 'right' < Lat. *certus* 'firm, certain'.

◊ Simple verb *certaid* [w. *-ā*] 'puts right, arranges'; no simple verbal noun attested.

(1) PrIr. ***-kert-ā-*** (← adj. **kert-$^{o}/_{ā}$-*):

kom-kertā-* > ***coicert*Ⓐ [f.] 'correction, adjudication; act of correcting, adjudicating'

↔ vb. *con·certa* [w. *-ā*] 'corrects, adjudicates'.

enter-kertā-* > ***etarcert* [f.] 'interpretation, discussion; act of interpreting, discussing'

↔ vb. *eter·certa* [w. *-ā*] 'interprets'.

Comment:

Ⓐ A *tu*-stem verbal noun ***coicertad*** is also attested; see § 4.1.18(1).

4.4.2. *ces(s)-i-* 'pities, has compassion'

< PrIr. **kʷess-ī-* ← PCelt. **kʷet-tu-*(?) (> OIr. *ces*) 'debility, weakness' ← PIE √**kʷet-* 'have pity'.Ⓐ

(1) PICelt. ****kʷess-axtā-*** (← PCelt. **kʷet-tV-*):

◊ **kʷessaxtā-* > ***ces(s)acht*** [f.] 'act of grudging, complaining'

↔ vb. *ceis(s)id* [w. *-ī*] 'complains, grudges; belittles, thinks little of'.

ari-kʷessaxtā-* > ***airchis(s)echt* [f.] 'pity, compassion; pitying'

↔ vb. *ar·ceis(s)i* [w. *-ī*] 'pities, has compassion'.

Comment:

Ⓐ The shape of the root √**kʷet-* is suggested by MW *ar-bet* 'spare, save, deliver' (< **ari-kʷet-*), but no extra-Celtic connections can be found. For the Irish *-s(s)-*, *VKG* (II, 486 § 681) suggests a sigmatic suffix comparable to that proposed for OIr. *cés(s)aid*

[w. -*ā*] 'suffers, endures' (§ 4.1.20 comment A),[301] but in both cases the weak flexion makes a denominative formation *a priori* more likely. A possible source noun may perhaps be found in OIr. *ces*(*s*) 'debility, weakness' (perhaps originally 'pitiable state'?), which probably reflects **k^{w}et-tu-*. The gender and stem class are not certainly established (and no genuinely early forms are attested), but the most frequent spellings, nom./acc./dat.sg. *ces*(*s*) with neutral final (cp. MoIr. ***ceas*** 'grief, affliction') and gen.sg., nom./acc.pl. *ces*(*s*)*a*, are compatible with a *u*-stem; the far less common nom./acc./dat.sg. *ceis* likely arose from secondary palatalization, perhaps with additional influence from the homonym *ce*(*i*)*s* [f. -*ā*] 'spear'. A *to*-formation **k^{w}et-to-* > PCelt. **k^{w}esso-* offered by *EDPC* (123 s.v. ***fare-k^{w}et-**) is unlikely: OIr. *ces*(*s*) 'debility, weakness' shows no signs of *o*-stem inflection, while the form *ces*(*s*)*a* in the genitive singular and nominative and accusative plural rather speaks against it.

4.4.3. *-cobr-a-* 'desire, wish'

< PCelt. **-kubr-ā-* ← **kub-r^{o}/$_{ā}$-* [adj.] 'desirous' < PIE **kup-ró-* ← √**keu̯p-* 'shake (inwardly), tremble'.Ⓐ

◊ No simplex.

(1) PCelt. ****-kub-ro-*** (← adj. **kub-r^{o}/$_{ā}$-*):

ad-kubro-* > ***accobor* [n.] 'desire, wish; act of desiring, wishing'

↔ vb. *ad·cobra* [w. -*ā*] 'desires, wishes'.

(*com-* + ***accobor*** > ***comaccobor*** [n.] '(carnal) desire, concupiscence'.)Ⓑ

Comments:

Ⓐ Cognates are found in Lat. *cup-iō*, *-īre* 'long for, desire', Ved. *kup-yáti* 'is angry'. The

---

[301] The further suggestion that the two verbs belong to the same root, *cés*(*s*)*aid* being from a nasal-present stem and *ceis*(*s*)*id* from a stem without nasal, cannot be maintained: the **-n-* of √**k^{w}end^{h}-* 'endure, suffer' is certainly radical.

form *-c(h)obur* is also attested as the second element of a nominal compound in *mil-chobur* 'bear' ← 'honey-desiring' (cp. Ru. *medvéd'*, OCS *medvědъ* < **medʰu-ēdi-* 'honey-eating'), *ól-chobar* 'drink-desiring' (*Ólchobar*, bishop-king of Cashel [† 796], San.Corm. 1040; cp. LL 344a21–24 = Tec.Corm. 11.9–11, *is col i* ^{n}*dálaib i*^{n} *domai*^{n} ... ***ólc*^{h}*ob*^{ar}** *cen c*^{h}*oir*^{m} — '**fondness of drink** without ale ... is a crime in the gatherings of the world'), and perhaps *Con-chobar* 'dog-desiring' or 'wolf-desiring'(?).[302] At the base of the derivation is a verbal adjective **kupró-* (cp. Osc. *cyprum* 'good' and the Italic theonym *dea Cupra*). Whether the Old Irish weak verb is directly deadjectival in origin and the verbal noun a neuter substantivization thereof, or whether the immediate source of the verb is the neuter abstract (and would thus belong to derivational Type 3), is impossible to tell for certain, but the first scenario is perhaps more likely in light of the fact that no simple neuter abstract **cobur* 'desire' is attested.

Ⓑ The lack of syncope shows a recent formation. It is evidently a calque on Latin *con-cupiscentia* (Wb. 3c2, *nam* ***concupiscentiam*** *nesciebam nisi lex diceret non concupisces* : *.i. isindectsa rafetarsa aspeccad* ***comaccobor*** *hore adrograd* — 'i.e. it is now I know that **concupiscence** is sin because it has been forbidden'; 3c25, *peccatum per mandatum operatum est in me omnem* ***concupiscentiam*** : *.i. ishé inpeccad rogéni anuile* ***comaccobor*** *.i. na* ***comaccobor*** *ararograd irect ragéni peccad in mé* — 'i.e. it is sin which has wrought every **concupiscence**, i.e. any **concupiscence** which had been forbidden in (the) Law sin has wrought it *in me*'), based on the identification of ***accobor*** as an equivalent of Lat. *cupido* (Sg. 62b4; cp. also Wb. 7a3, ***cupio*** *autem uenire ad uos* : *.i. iscían os* ***accobor*** *lemm farríchtu* — 'i.e. I have long had a **desire** to come unto you').

---

[302] Watkins 1962c: 114–16.

4.4.4. *dás(s)-i-* 'go mad'

< PrIr. **dṵāss-ī-* ← PCelt. **dṵās-tV-* < PIE **dʰṵōs-tV-* ←? PIE **dʰṵ-es-* 'breathe'.Ⓐ

(1) PrIr. ****dṵāss-axtā-*** (← PCelt. **dṵās-tV-*):

dṵāssaxtā-* > ***dás(s)acht* [f.] 'madness, insanity; condition of being possessed'

↔ vb. *dáistir* (*imm*) [w. -ī] 'goes mad' (defective, 3.sg.ips. only).

Comment:

Ⓐ The source noun **dās(s)* has disappeared in Irish. It is probably to be related to OE *dwæs*, MLG *dwās* 'foolish, dull (of wits)', MHG *twās*, *dwās* [m.] 'fool, evil spirit', *getwās* [n.] 'ghost, specter', etc., which reflect PGmc. **dwē¹s-* < PIE **dʰṵēs-*. We find a zero-grade form in Gaul. *dusios*, a type of spirit or deity.[303] For the Old Irish base *dās(s)-*, it is possible to reconstruct an old dental-suffixed form, PCelt. **dṵās-tV-* < PIE **dʰṵōs-tV-*. The underlying concept in these words was probably extended in a typologically common fashion from 'breath' → 'spirit, ghost', leading to the mental effects of possession or influence by a spirit. Wider connections are proposed by Stokes (*US* 154 s.v. **dusio-s**), Pedersen (*VKG* II, 32 § 380(1)), Pokorny (*IEW* 268–71 s.v. ***dheu̯es-, dhu̯ĕs-, dheus-, dhŭs-***; also 261–67 s.v. ***4. dheu-, dheu̯ə-***), Vendryes (*LÉIA* D-14 s.v. **dáistir**, with some cautions), and others; they include Gr. θύω 'offer (by burning)', θῡ́ω, θυίω 'rush in, storm, rage', θυ(ι)άς, θυῖα [f.] 'thyiade, Bacchante', θυστάδες · βάκχαι (Hesych.), Lat. *furō, -ere* 'be mad, rage', *furia* [f.] 'fury, rage; Fury', Lith. *dvesiù, dvėsti* 'breathe', *dvãsė, dvasià* [f.] 'spirit, breath', etc., but the entire question is rather vexed. For example, while it is reasonable to assume, based on **θυστάδες**, that a root √**dʰus-* lies behind Gr. θυ(ι)άς, θυῖα, it is not clear if the base of θῡ́ω, θυίω 'rush in, storm, rage' belongs to the same root,[304] nor is it

---

[303] The *dusii* are described as *daemones* by Augustine (Civ.Dei 15.23) and Isodore (Etym. 8.11.103).

[304] *LIV²* places it, along with Ved. *dhāvati* 'rinse, cleanse, polish', *dhūnóti* 'shakes', and others, under ****dʰeu̯H-*** 'rasch hin und her bewegen, schütteln' (149f.).

clear whether θύω 'offer (by burning)' is even related;[305] and the Latin words face the problem of a phonological rule that lowers *-*u*- to *-*o*- in initial open syllables by a following *-*r*- (of whatever source).[306] Pokorny's vast entries display a wide variety of formations and meanings, thought to be based ultimately on a PIE root √*$d^{h}eu̯$-, the semantic core of which centers on the idea of the movement of swirling dust, smoke, or vapor, with extended notions of breath, spirit, fury, frenzy, etc. It is possible, however, that more than one root is ultimately involved — *LIV*² in fact divides the verbs into at least seven separate entries — but the multifarious forms have become hopelessly confused.[307] Irslinger (2002: 201) relates the Celtic and Germanic words to *LIV*²'s ***$d^{h}u̯es$-** '(ein-, aus-)atmen' (160), along with a number of Baltic and Slavic verbs of the semantic field 'breathe, gasp' (e.g., OCS aor. *iz-dъše* 'breathed out, gave up the ghost', Lith. *dvesiù*, *dvėsti* 'breathe, exhale, expire [i.e., die]', Latv. *dušu*, *dust* 'gasp') and Lith. *dvãsė*, *dvasià* [f.] 'spirit, breath'. If this equation is correct, the long vowel of the West Germanic and Celtic forms might be taken to provide evidence of "Narten" ablaut in this root, with WGmc. -*ā*- < PIE *-*ē*- and PCelt. *-*ā*- < PIE *-*ō*-.

4.4.5. *-gaith-a-* 'deceive'

< PCelt. *-*gait-ā*- ← *-*gai-t$^{o}/_{ā}$*- (> OIr. *gáeth*) [adj.] 'clever', etymology uncertain.Ⓐ

◊ Simple abstr. *gáes* [f. m.]Ⓑ 'cleverness'; no simple verb attested.

(1) PCelt. ***-gai-stā-*** (← adj. *-*gai-t$^{o}/_{ā}$*-):

*-*tu-gaistā*- > ***togáes*** [f.] 'deception, deceit; act of deceiving'

↔ vb. *do·gaítha* [w. -*ā*] 'deceives'.

---

[305] Cp. *LIV*², *loc. cit.*, and 158 s.v. ***$d^{h}u̯eh_{2}$-**; and further Beekes 2010: I, 567f. s.vv. **θῡ́ω 1**, **θύω 2**.

[306] Walde-Hofmann 1938: I, 571 s.v. **furō**; Parker 1988: 230.

[307] See further the remarks under § 4.1.35 comment A with fn. 73.

Comments:

Ⓐ Pedersen's hesitant comparison (*VKG* I, 19 § 366) with Ved. *gā́yati* 'sings' would imply a preform **gāi-to-* or **gōi-to-* (← PIE √**geh$_{2/3}$i̯-* 'sing'),[308] which is not without its difficulties given that zero grade (PCelt. **gīto-* < PIE **gih$_{2/3}$-tó-* ⇐ **gh$_{2/3}$i-tó-*) would be expected of a historical *to*-stem; a later formation would have to be assumed. The highly improbable semantics effectively rule out this suggestion. More attractive semantically is Meid's (1965: 126f.) relating of *gáeth* [adj. -$^{o}/_{\bar{a}}$] 'clever, intelligent' to *gáeth* [f. -*ā*] 'wind', both derived from PIE √**ĝ^{h}ei̯-* 'drive, throw' through the concept of moving air, spirit, and mind (cp. Lat. *animus* [m.] 'mind, spirit', *anima* [f.] 'spirit, breath, wind' vs. Gr. ἄνεμος [m.] 'wind', Arm. *hołm* 'id.');[309] further support for the link between active motion and mental alertness in this root is provided by Avestan *zaē-ni-* 'active' next to *zaē-man-* [adj.] 'alert, awake', [n.] 'alertness, wakefulness'. However, the *o*-grade *to*-stem **ĝ^{h}oi̯-to-* that this derivation requires, already somewhat awkward from the point of view of Indo-European morphology, is rendered more doubtful by the consistent spelling of the Old Irish words with *-aí-, -áe-*, never *-oí-, -óe-*: the total absence of the spellings ⁂***góith***, ⁂***góeth***, ⁂***góes*** in Old Irish is significant in view of the fact that the etymologically correct vowel **-a-* or **-o-* tends to be preserved in the earlier language.[310] A Proto-Celtic preform **gai-to-*, without clear Indo-European connections, therefore seems unavoidable.[311]

For the derivational relationship between OIr. *gáeth* [adj.] 'wise, intelligent' and *gáes* [f. m.] 'shrewdness, intelligence', compare OIr. ***bath*** [n.] 'death' and ***bás*** [n.] 'id.' (§ 3.1.9)

---

[308] *LIV*^{2} 183 s.v. ****g$^{(u)}$eH(i̯)-***; the root vowel of ORu. *gaju, gajati* < **géH-i̯$^{e}/_{o}$-* implies a coloring laryngeal.

[309] His equation with Germanic 'ghost'-words (OHG *geist*, OS *gēst*, OE *gāst* 'spirit', etc.) is incorrect, as these go back to PIE √**ĝ^{h}ei̯s-* 'frighten'; see Irslinger 2002: 296 and *LIV*^{2} 175, esp. n.1 s.v. ****ĝ^{h}ei̯sd-***.

[310] *GOI* 42 § 66.

[311] Irslinger 2002: 295f.

and see the discussions by Greene (1963), Meid (1965), and Irslinger (2002: 412f., 415). For the *stV*-suffix, see § 2.2.3.21.

Ⓑ The simple abstract *gáes*, which has no genuine Old Irish attestation, is found in Middle Irish in both masculine and feminine usage; but its compound ***togáes*** 'deception, act of deceiving' is treated as a clear feminine *ā*-stem in the Old Irish Milan glosses, and so also in Middle Irish (apart from being apparently masculine in SR; see *DIL* s.v.). The masculine gender is probably a Middle Irish innovation.

4.4.6. *gós(s)-i-* 'risk'

< PrIr. **gōss-ī-* ← PCelt. **goud-(s)tā-* (> OIr. *gúas*) [f.] 'danger, peril' ← PIE √**ĝʰeu̯-d-* 'pour'.Ⓐ

(1) PICelt. ****gōss-axtā-*** (← PCelt. **goud-tā-*):

◊ **gōssaxtā-* > ***gúas(s)acht*** [f.] 'danger, peril'Ⓑ

↔ vb. *gúais(s)id* [w. *-ī*] 'risks'.

Comments:

Ⓐ Pokorny (*IEW* 448) sets up a root **ĝheu̯-(d-)* 'verschwinden, umkommen' for OIr. *gúas* [f.] 'danger, peril' and other words of the same semantic field (OIr. *gus* [m.] 'risk, death', MW *gwst* [m. f.] 'pain, torment'; OE *gētan* 'to destroy, kill'; Lith. *žūvù, žūti* 'perish', *žudaũ, žudýti* 'kill', etc.), but Irslinger (2002: 351f.) argues that this root is in fact probably the same as PIE √**ĝʰeu̯-* 'pour' (extended **ĝʰeu̯-d-*). The semantic link may be found in OE *gētan* 'to kill' ← 'to shed (blood)' < PGmc. **gaut-eja-* < PIE **ĝʰou̯d-éi̯e/o-* (cp. Go. *giutan*, OHG *giozan*, OE *gēotan* 'to pour' < PGmc. **geut-a-* < PIE **ĝʰeu̯d-e/o-*);[312] in Irish, the idea of '(imminent) bloodshed' became generalized to 'danger, peril'.

Loth (1928: 194, followed by Pokorny, *loc. cit.*) reconstructs an *o*-grade **ĝʰou̯d-tehₓ-* as

---

[312] Seebold 1970: 228f.

the basis of PCelt. **goud-tā-* > PrIr. **gōssā* > OIr. *gúas*. PIE **ĝʰeu̯d-teh₂-* would produce the same outcome, however, and *e*-grade is far more likely in a Celtic *tā*-stem.[313] Meid (1965: 123), noting that the semantics of the *d*-extended Baltic and Germanic forms align with a transitive-causative meaning 'kill', prefers to see a Celtic *stā*-formation **ĝʰeu̯-stā-* (or **ĝʰou̯-stā-*) built to the intransitive simple root. But against this is the final *-st* of MW ***gwst*** [m. f.] 'pain, torment', which points back to a Proto-Insular Celtic formation **gusstV-* and hence a probable Proto-Celtic preform **gud-stV-*.[314] The Welsh word corresponds to OIr. *gus* [m. *-u*] 'risk, death' (and hence reflects PCelt. **gud-stu-*) rather than OIr. *gúas* 'danger, peril', since it is from the zero grade and the absence of lowering by final *ā*-affection shows that the vowel of the suffix was not **-ā-*; it nevertheless provides good evidence of a root-final dental without accompanying transitive-causative semantics in Celtic.

Ⓑ OIr. ***gúas(s)acht*** is not attested in strict verbal-noun usage, but is included among the verbal nouns in *-acht* by Thurneysen (*GOI* 452 § 732) based on its appearance in a *figura etymologica* with its verb *gúais(s)id* 'risks', a syntactic construction that is typical of verbal nouns (§ 1.3.3.3): Hy.Sanc. 3 = *Thes.* II, 350.16, *Dīa dom chobair … ar cech* ***ṅgūasacht nodgūasim*** 'may God help me … against every **danger that I risk**'.

4.4.7. *labr-a-*$_{DEP}$ 'speak, talk'

< PCelt. **labr-ā-* ← **lab-r^{o}/$_{ā}$-* (> OIr. *labar*) [adj.] 'talkative, eloquent' < PIE **l̥b-r^{o}/$_{ā}$-* ← √**leb-* 'lip; move the lips'.Ⓐ

---

[313] Irslinger 2002: 380f.

[314] Cp. Schrijver 1995: 410–15.

(1) PCelt. ***labr-iā-*** (← adj. **lab-r$^{o}/_{ā}$-*):

◊ **labriā-* > ***labrae*** [f.] 'utterance; gift of speech; act of speaking'

↔ vb. *labraithir* [w. *-ā*] 'speaks, talks, utters; speaks of, mentions'.

ari-labriā-* > ***airlabrae* [f.] 'right to speak on behalf of; act of speaking on behalf of'

↔ vb. *ar·labrathar* [w. *-ā*] 'speaks for, pleads on behalf of'.

(*com-*^{c} + ***labrae*** > ***comlabrae*** [f.] 'joint speech, dialogue; act of conversing'.)

Comment:

Ⓐ For comments on the etymology, see § 4.1.64 comment A.

4.4.8. *mesc-a-* 'mix, confuse'

< PCelt. **mixsk-ā-* ← **mixsk-$^{o}/_{ā}$-* (> OIr. *mesc*) [adj.] 'mixed' ← **mik-sk$^{e}/_{o}$-* < PIE **mi̯k̂-sk̂$^{é}/_{ó}$-* ← √**me̯i̯k̂-* 'mix'.Ⓐ

(1) [[PCelt. ****mixsk-ă̆-tu-*** (← vb. stem **mixsk-ā-*):

◊ **mixskă̆tu-* > ***mescad*** [m.] 'act of mixing, confusing'

↔ vb. *mescaid* [w. *-ā*] 'mixes, confuses'.]]

(2) PCelt. ****-mixsk-o-*** (← adj. **mixsk-$^{o}/_{ā}$-*):Ⓑ

kom-mixsko-* > ***cum(m)asc* [m.] 'mixture; act of mixing together, commingling'

↔ vb. *con·mesca* [w. *-ā*] 'mixes together, commingles'.

tarmi-mixsko-* > ***tairmesc*Ⓒ [m.] 'hindrance, obstruction; act of hindering, obstructing'

↔ vb. **tairm(i)·mesca* ⇒ *do·airmesca* [w. *-ā*] 'hinders, obstructs'.

Comments:

Ⓐ A spontaneous conversion from strong thematic class to weak *ā*-class is sometimes assumed for this verb,[315] but such a transfer of verb class without phonological or morphological motivation would be rare. A better account has been recommended more

---

[315] *LÉIA* M-42 s.v. **mesc-**; Schumacher 2000: 184; *LIV*^{2} 428f. s.v. ****me̯i̯k̂-***.

recently by *KPV* (38) and *EDPC* (273 s.v. ***misko-***), which take the weak *ā*-flexion of OIr. *mescaid, ·mesca* (and presumably too MW *ky-mysgu* and MBret. *mesqa*, although the British cognates are ambiguous as to stem class)[316] to be deadjectival, derived in regular fashion from the adjective **mixsk-$^{o}/_{\bar{a}}$-* (> OIr. *mesc*) 'mixed', a post-PIE formation built from the extracted base **miksk-* of the PIE present stem **mik̂-sk̂$^{é}/_{ó}$-*.

Ⓑ It is also conceivable that the *o*-stem verbal noun was built to the verbal stem, whether the strong **mix-sk$^{e}/_{o}$-* or the weak **mixsk-ā-*, but in this case a neuter might rather be expected (see § 2.2.3.1(1) and (3)). Given the masculine gender and the verbal derivation discussed in comment A, a nominalization of the source adjective seems somewhat more likely.

Ⓒ That the preverb is **tarmi-* instead of **tu-ari-* is shown by the unlenited *-m-* of the verbal noun ***tairmesc*** (> MoIr. *tair**m**easc, toir**m**easc*), formed by the coming together of /μ/ + /μ/ in syncope: **tarmi-mixsko-* > **tar'μ'†μ'esk†* > *tar'm'əsk* = OIr. ***tairmesc***. The verb *do·airmesca* was back-formed from prototonic **·tairmesca*, in which the initial *t-* was taken to be the preverb **tu-*.[317]

4.4.9. *sén-a-* 'deny, reject'

< PrIr. **sign-ā-* 'mark with a sign' ← **signo-* (> OIr. *sén*) [n.] 'sign' < Lat. *signum* [n.] 'id.'

(1) PrIr. ****sign-iā-*** (← **signo-*):Ⓐ

◊ **signiā-* > ***sénae*** [f.] 'denial, rejection; act of denying, rejecting, disowning'

↔ vb. *sénaid* [w. *-ā*] 'denies, rejects, disowns'.

(*imm-*$^{\text{'}}$ + ***sénae*** > ***imṡénae*** [f.] 'mutual denial'.)

---

[316] *KPV* 38 fn.20.

[317] *GOI* 531 § 854.B.

Comment:

Ⓐ The meaning of *sénaid* 'rejects, disowns' and its verbal noun ***sénae***, both derived from *sén* < Lat. *signum* 'sign', appears to be a special application of the basic meaning 'marks with a sign'. Whereas the basic noun *sén* only carries the more literal and positive meanings 'sign, portent; incantation, charm; blessing, good luck', and is never used as a verbal noun, its *iā*-stem derivative ***sénae*** < **sign-iā-* was assigned the pejorated meaning 'rejection; act of rejecting', and functions as one of the two verbal nouns of *sénaid*. The other verbal noun, the *tu*-stem ***sénad***, is discussed under § 4.1.94(1).

4.4.10. *-tós(s)-i-* 'pay attention'

< PCelt. **taust-ī-* < **taus-tV-* 'attention' ← PIE √**th₂eu̯s-* 'be silent, listen'.Ⓐ

◊ No simplex.

(1) PrIr. ****-tōss-axtā-*** (← PCelt. **taus-tV-*):

en-tōssaxtā-* > ****étsacht* ⇒ ***éitsecht***Ⓑ [f.] 'sense of hearing; act of hearing, listening'

↔ vb. *in·túaisi* [w. *-ī*] 'listens (to)'.

kom-tōssaxtā-* > ****cotsacht* ⇒ ***coitsecht***Ⓑ [f.] 'attention; act of listening, being attentive'

↔ vb. *con·tóisi, con·túaisi* [w. *-ī*] 'listens, pays attention'.

Comments:

Ⓐ The derivational base of this verb is probably a *tV*-formation **taus-tV-*[318] from the root that underlies OIr. *tó* 'silent; silence' < PCelt. **taus-$^{o}/_{ā}$-* and OIr. *tóe* 'id.' < PCelt. **taus-i$^{o}/_{ā}$-*. Pedersen (*VKG* I, 55 § 37(2); also *CCCG* 8f. § 13(2)) posits an *s*-stem **taus-os, *taus-es-* to account for the co-occurrence of the mono- and disyllabic forms, but there is good reason to follow Uhlich's recommendation (1995: 35f.) of parallel derivations from a thematic adjective and a *i$^{o}/_{ā}$*-adjective: both *tó* and *tóe, túa(e)* appear as nominative

---

[318] *GOI* 44 § 69; *KPV* 622, s.v. ***?*taus-e/o-*** n.(a); *LÉIA* T-99 s.v. **toís-**.

forms; both are used adjectivally as well as substantivally; and the feminine gender of substantival *tóe* is established already in Old Irish (acc.sg. and acc.pl. *tuai* in Milan). The PIE root is reconstructed as *$*th_2eu̯s$-* by Schumacher (2000: 179) to account for both the British forms, MW *taw* [m.] 'silence', *tewi* 'to be quiet, still', *gor-thaw* 'to keep silence', etc. ← *$*th_2eus$-, and Hitt. *tuḫu(š)šiyezzi* 'awaits' ← *$*tuh_2s$- < *$*th_2us$- with regular metathesis, or else reflecting unmetathesized *$*th_2us$- with anaptyxis;[319] this proposal is accepted by *LIV*^{2} (642 s.v. ***$th_2eu̯s$-**).

Ⓑ The palatalization in ***éitsecht*** and ***coitsecht*** also appears in the prototonic forms of the verb (e.g., 3.sg.pres.subj. *·**coitsea**,* Wb. 13a10, 3.pl.ipv. *éitset,* Wb. 13a11), but is not explainable by regular historical processes. There is no good rationale for the assertion of *GOI* (98 § 158), using *éitset* for illustration, that PrIr. *-ō- in a stem syllable seems to have left behind a palatalized cluster after syncope when the following consonant was palatalized, because the Primitive Irish reduction of unstressed long vowels[320] would have completely eradicated any continuing distinction between earlier long *-ō- and inherited short *-ŏ- in internal unstressed syllables, regardless of their morphological status. It is most probable that the palatalization was first brought over into the prototonic verbal forms from the deuterotonic stem to resolve alternations such as *in·tóisi* : *·***étsai**, *con·tóisi* : *·co**tsai** ⇒ *in·tóisi* : *·éitsi*, *con·tóisi* : *·co**itsi**,* and from there it spread to the verbal nouns.

4.5. Type 5: Suppletive Verbal Nouns (V // VN).

4.5.1. *car-a-* 'love'

< PCelt. **kar-ā-* ← **ka-r^{o}/$_{ā}$-* [adj.] 'desirous' < PIE **kh$_2$-ro-* ← PIE √**keh$_2$-* 'like, desire'.Ⓐ

(1) PCelt. ****sterk-ā-*** ← PIE **sterk-* ⇐ √**sterg-* 'care for, pay careful attention to'

or: PCelt. ****serk-ā-*** ← PIE **ser-k-* ← √**ser-* 'put together, bind together'Ⓑ

◊ **sterkā-* or **serkā-*(?) > ***serc(c)*** [f.] 'love, affection'Ⓒ

↔ vb. *caraid* [w. *-ā*] 'loves'.

Comments:

Ⓐ The PIE root √**keh$_2$-* 'desire' lies at the base of verbal **keh$_2$-i^{e}/$_{o}$-* (Ved. pres.part. *kā́yamāna-* 'desiring', GAv. *kaiiā* 'am pleased'), nominal **keh$_2$-mo-* (Skt. *kāma-* 'love, desire', OPers. *kāma-* 'longing, desire'), and adjectival **keh$_2$-ro-* (Lat. *cārus* [adj.] 'dear', PGmc. **hōraz* > Go. *hors*, ON *hórr* [m.] 'adulterer', OE *hōr*, OHG *huor* [n.] 'adultery', Latv. *kārs* 'lustful'). A different base appears in PCelt. **karant-* (in Gaul. CARANT-, OIr. *carae*, gen. *carat* [m.] 'friend', MW *carant* [m.] 'kinsman') and PCelt. **karato-* (in Gaul. CARAT-, OIr. *carth-ach*, MW *cared-ic* [adj.] 'beloved', MW *di-garad* [adj.] 'rejected'); these would appear to point back to old participial formations **karH-nt-* and **karH-to-* respectively, from a pre-Celtic *seṭ* root **karH-*, and thus imply that OIr. *caraid*, MW *caru* 'to love' reflect a primary *ā*-verb.[321] In accordance with this, Hamp (1976b: 6) reconstructs PCelt. **karo-* from PIE **kr̥h$_2$o-*.

Yet it is hard to reconcile pre-Celt. **karH-* with PIE √**keh$_2$-*, even starting from a secondary **keh$_2$r-* extracted by reanalysis of **keh$_2$-ro-* as **keh$_2$r-o-*. Hamp speaks in terms of metathesis, perhaps first in the zero-grade **kh$_2$r-* ⇒ **krh$_2$-* with subsequent spread of the *a*-vocalism, but this somewhat complicated proposal is unnecessary. In light of the

---

[321] Watkins 1962: 185; Hamp 1976b: 4f.

broader Indo-European context, PCelt. **karo-* 'dear' probably simply reflects the zero-grade PIE **kh₂-ro-* corresponding to full-grade PIE **keh₂-ro-* in Lat. *cārus*, etc., and the Celtic verb **kar-ā-* a straightforward deadjectival derivation from it. The primary-type formations **karant-* and **karato-* may be explained as analogically remodeled after the synonymous **amant-* and **amato-* ← **ama-* 'to love' (cp. Lat. *amō, -āre*)[322] < PIE √**h₂emh₃-* 'take hold of'. The close association between these forms is evident in the pairing of OIr. *carae*, gen. *carat* (cp. Gaul. *CARANT-*) 'friend' < PCelt. **karant-* and its antonym *námae*, gen. *námat* (cp. Gaul. *NAMANT-*) 'enemy' < PCelt. **nāmant-* < **n̥-h₂mh₃-n̥t-*.[323]

Ⓑ Two etymologies have been proposed for OIr. ***serc(c)*** 'love'. Pedersen's derivation (*VKG* I, 78 § 49(5); followed by Morris-Jones, *WG* 138) takes the preform to be **sterk-ā-*, from a voiceless-final variant of PIE √**sterg-* 'care for, pay careful attention to' (→ Gr. στέργω 'love, be content', OCS *strěgǫ, strěšti* 'guard').[324] A different derivation is suggested by Pokorny (*IEW* 911 s.v. ***4. ser-***), who compares OIr. ***serc(c)***, MW *serch* [m.] 'love, affection' and MBret. *serch* [f.] 'concubine' < PCelt. **ser-k-ā-* with Germanic forms displaying a dental root extension, ON *serða* 'have sexual relations; esp. sodomize', OHG *sertan* 'have sexual relations', MW *serth* 'vulgar, obscene' ← **ser-t-*, and adduces a West Indo-European *ser-* 'sexual intercourse; woman', ultimately from PIE √**ser-* 'put together, bind together'.

Ⓒ Old Irish ***serc(c)*** occurs in the sense of an ordinary abstract meaning 'love' rather

---

[322] Concerning the first-conjugation class of Lat. *amāre*, see Schrijver 1991: 398f.; Rix 1999: 522–24.

[323] O'Brien 1923: 321f.; Meid 1962: 119; Hamp 1976b: 6f. The long **-ā-* instead of the usual short **-ă-* < **H / #R__C* (cp. OIr. *maith* 'good' < PCelt. **măti-* < PIE **mh₂-ti-*) is due to the unique nature of the negative prefix **n̥-*, which is invariably syllabic, in contrast to the normal behavior of word-initial resonants (Schrijver 1991: 398).

[324] *EDPC* (355 s.v. ***sterkā**) expresses serious doubts about the existence of a variant **sterk-*, but suggests that an unattested root-noun **stērg-s* or **storg-s* could have triggered the devoicing of the final, which then became generalized.

than as a strict verbal noun meaning 'act of loving',[325] although the case is not entirely clear-cut. The following patterns may be discerned from both the Würzburg glosses and *Apgitir Chrábaid*, where the word occurs repeatedly. Its usage is consistent in both texts.

- The functional correspondence of ***serc(c)*** 'love' with the verb *caraid* 'loves' is established by the juxtaposition of Wb. 27d8, *dobiursa teist asmór* ***farsercsi less*** 'I bear witness that **the love of you with him** (= the love he has for you) is great', with 27d9, ***nobcara*** *huili* '**he loves you** all'. Two similar pairings occur in AC: § 8, *ll.*30–32, ***Serc ind dūileman*** ⁊ *frescisiu a ḟlatho* .... *Nach duine didu ad-aigfedar Dia* ⁊ ***nod-cechra*** ... '**Love of the Creator** and hope for His kingdom .... Anyone, therefore, who shall fear God and **who shall love Him** ...'; and § 22, *ll.*121–23, ***serc inna fochaide*** .... ***Mani cartis inna fochaidi*** ... '**love of the tribulations** .... **If the tribulations were not loved** ...'.
- An accompanying genitive noun or possessive pronoun is generally objective in nature: Wb. 4b10, *isuisse* ***asercc*** *dorat mór dimaid duún* '**love of Him** is fitting; He has given us much of good'; AC § 5, *ll.*19–20, *Air lasná bia omun Dé, ni* [*m*]*bia a* ***ṡerc.*** *Lasná bia a* ***ṡerc,*** *ni* [*m*]*bia comalnad a thimnai* 'For he who shall not have fear of God will not have **love for Him.** He who shall not have **love for Him** will not fulfill His commandment'. The originator is usually designated by *la* 'with' (probably in a possessive sense): Wb. 27d8, *dobiursa teist asmór* ***farsercsi less*** 'I bear witness that **the love of you with him** (= the love he has for you) is great'.
- The preposition *do* 'to, for' usually expressed the object of the love:[326] Wb. 12b26, *caritatem autem non habeam* **:** *.i.* ***seircc immircidi dodia*** *'i.e.* a suitable **love for God'**. In

---

[325] See § 1.3.

[326] This is also the conclusion of Uhlich (2008; 2009).

such cases *ó* 'from' may introduce the originator: Wb. 14d30, *doadbadar sunt furóil* ***serce hopool doibsom*** ... 'i.e. here is shown the abundance **of love from Paul to them** ...'.

- When a genitive and *do* occur together, the analysis is ambiguous: Wb. 18b21, *caritas Dei* : *.i.* ***serc dæ dúibsi*** *et* ***farserc si do dia*** — does this mean '**God's love to you** and **your love to God**', with a subjective genitive (mirroring the Latin in context) and *do* + object,[327] or 'the **love of God that you have** and the **love of you that God has**', with objective genitive and possessive *do* essentially equivalent to *la* in Wb. 4b16?[328]
- The verbal idea 'to love' may also be expressed in a periphrastic construction *do·beir* ***seirc*** 'gives love' (with *do* 'to, for' + indirect object): Wb. 15c9, ***nitaibrem seirc*** *donaib rétaib frecndaircib* 'i.e. **we do not give love** to the things present'. ***Serc(c)*** alone functions as the verbal-noun correspondent to this expression in the gloss that immediately follows: 15c10, *nífíu* ***aserc ade*** 'i.e. **love of them** is not worthwhile' = 'it is not worthwhile to love them'. Note the semantic equivalence of this example with the periphrastic phrase in Wb. 10b3, *isdered ṁbetho inso nifíu* ***sercc do thabairt*** *do* ... 'i.e. this is the end of the world, it is not worthwhile **to give love** to it'. Note also that the construction in Wb. 15c10 is syntactically parallel with the verbal-noun construction that follows in the next gloss: 15c11, *is coir immurgu* ***indithem*** *i ssuidib* '**attention** to these, however, is proper' = 'it is proper to pay attention to these, however'.

One may also note the use of ***serc(c)*** in a *figura etymologica* in Old Irish, although the attestation occurs somewhat after our target period: Ml. 65d5, *frisin****seirc rocar*** *crist*

---

[327] This is how the editors of *Thes.* understood it.

[328] Thus Gagnepain 1963: 19; *LÉIA* S-91 s.v. **serc**; cp. Stifter 2006: 138f.

innęclais 'to the **love wherewith** Christ **loved** the Church'. This establishes ***serc(c)*** in its role as verbal noun of *caraid*.

4.5.2. *pridch-a-* 'preach'

< PrIr. **predik-ā-* < Lat. *praedic-ō, -āre* 'proclaim, declare'.

(1) PrIr. ***precept*** < Lat. *praeceptum* [n.] 'teaching, precept':

◊ ***precept*** [f. *-ā*] 'doctrine, teaching; act of preaching'

↔ vb. *pridchaid* [w. *-ā*] 'preaches, teaches'.

CHAPTER 5.

QUESTIONS OF DIACHRONY:

THE CELTIC VERBAL NOUN AND PROTO-INDO-EUROPEAN

Now that we have examined the types of formations that lie behind the early Irish verbal nouns, in the remaining pages of this study we will turn our attention outward to the position of the Insular Celtic verbal noun within a wider Indo-European context.

5.1. Verbal Nouns in Celtic.

Verbal nouns occur in all the Insular Celtic languages — Irish, Scottish Gaelic, Manx, Welsh, Breton, and Cornish — in all their recorded stages. There are, to be sure, some differences in detail and distribution (see, e.g., Schumacher 2000 *passim*), but it is obvious that the verbal-noun systems in all these languages share a common source. The Insular Celtic verbal noun will therefore be considered a single entity for our purposes, and it will be assumed that Old Irish, which provides the earliest exemplification of the system, may be taken to represent the Insular Celtic entity in its essentials.

In the ancient Continental Celtic languages — Gaulish, Lepontic, Galatian, Celtiberian, and one or two other marginally attested dialects — the situation is more difficult to ascertain due to a paucity of good evidence. Several Gaulish words have been identified as possible verbal nouns: **BRIGIOMV*,[1] *DIVERTOMV*, *OCIOMV* (Coligny calendar) and *MOLATUS* (plate of Lezoux). None of these are certain. Duval and Pinault

[1] No direct attestation, but restored based on multiple partial attestations: BRIG,]IG,]RIGIO, and]OMV, which occur in positions exactly parallel to OCIOM and OCIOMV in the month that follows (*RIG* III, 314; Lambert 1994: 213).

(*RIG* III, 422f., 425) take the first three to be *mu*-stem verbal nouns[2] formed from the PIE roots √*$b^hrēg^h$- 'shine, be bright',[3] √*$u̯ert$- 'turn', and a third unknown. However, if these words are nouns, the nominative of non-neuter *n*-stems in *-mū* < PIE **-mō(n)* would seem more likely.[4] With a different analysis, Lambert (1994: 214–16) has suggested that the words are all superlatives, **BRIGIOMV* from adjectival **brigu-* 'short' (< PIE **mr̥ĝʰu-*), *OCIOMV* from **ougo-* 'whole' (≈ OIr. *óg, úag* [adj.] 'id.'), and *DIVERTOMV* from adverbial **u̯er-* 'over, above' (< PIE **uper*), representing **dī-* 'without' + *u̯er-to-mu-* 'highest (point), peak' for the months without a final day. Other suggestions for *DIVERTOMV* include a 1.pl.ipv. meaning 'let us turn aside (to the next month)';[5] or an instrumental */dī-ver-tōmū/*, used adverbially to mean 'without increase' and related to OW *gur tum* 'excess, surplus', reflecting PCelt. **dī-* + **u̯er-tou-mo-*, with **tou-mo-* remodeled from **tou̯H-mn̥-* (< PIE **téu̯h₂-mn̥-*) from the root PIE √**teu̯h₂-* 'swell'.[6] *MOLATUS* is certainly a *tu*-stem noun, but the presumption that it is a verbal noun ('praise' or 'praising') in the grammar of the language cannot yet be proven. In addition to these, Hamp (1990) discerns a Gaulish verbal noun **brigetion-* or **bergetion-* (← PIE √**bʰerĝʰ-* 'be high, rise') in the place name Brigetion, Brigetionem, Bregetio, Βεργιτίων, etc. mentioned in ancient

---

[2] Thurneysen (*GOI* 452 § 733) suggests that, unless these forms have lost earlier **-s*, they may provide evidence of a neuter suffix **-mu*.

[3] But not unproblematically. *LÉIA* (B-89 s.v. **brig-**) reconstructs the etymon as **bheregh-* or **bhregh-*, *IEW* (139f.) as ***bherəĝ-***, ***bhrēĝ-***, and *LIV*[2] (92) as ****bʰreh₁ĝ-***. But Celtic *brig-* appears to be from a zero-grade form *$b^hr̥^{(ə)(h)}ĝ$- which cannot contain a laryngeal. For this reason, *EDPC* (79f. s.v. ***brixtu-**; 63f. s.v. ***berxto-**) questions this root identity, and on the basis of a comparison with PCelt. **berxto-* implied by MW *berth* [adj.] 'beautiful, fine, rich', MBret. *berz*, MoBret. *berzh* [m.] 'prosperity', suggests a different root, PIE √*$b^herĝ^h$- 'enlighten'.

[4] Schumacher 2000: 136.

[5] Lejeune 1995: 95.

[6] S. Zimmer 1997: 353, elaborating on a queried connection by I. Williams 1927: 263. See Delamarre 2003: 145 s.v. **diuertomu** for more on the various suggestions.

sources including Ptolemy (Geogr.), Socrates (Hist.Eccl.), and inscriptions. Given the uncertainties surrounding the Gaulish forms, they will be left out of consideration in the following discussion. The term "Insular Celtic" is used to describe the verbal-noun system that we are able to reconstruct from the evidence; it should not be taken as a presumption that Gaulish did not possess verbal nouns of the same type. We simply do not know.

In Celtiberian the situation is somewhat different. A few dative verbal-noun forms are assured: *uerTaunei, Taunei, Tizaunei, amPiTinCounei,* probably also *masnai* (all Bot. I), and *usimounei* (Bot. IV). Only two distinct stem formations are represented here; *masnai* appears to be from a feminine *nā*-stem built to the PCelt. verbal root **mad-* (→ OIr. *maidid* 'breaks'), while all the others show a zero-grade suffix *-un-*. Opinion differs as to whether this suffix represents the zero grade of an old heteroclitic *u̯er/n*-stem[7] or of a *men*-stem with a positional variant **-mn-* > *-u̯n-*.[8] If the former, these Celtiberian verbal nouns would be related to an old formation found further afield in Indo-Iranian (Ved. *-vane,* Av. *-vanōi*), Greek (Cypr. -ϝεναι), and Hittite (*-wanzi*), but missing from Insular Celtic.[9] Also proposed, but far less certain, is Celtib. *oTanaum* (Bot. I), which has been compared to the Sabellic infinitives in *-um,* such as Osc. ***deicum*** 'to say' (cp. Lat. *dīcere*), *moltaum* 'to fine' (cp. Lat. *multāre*), Umbr. **aferum** 'to surround' (cp. Lat. *ferre*), etc., the reflex of an accusative of a thematic abstract; but it could also be the genitive plural of a feminine *ā*-stem *oTana-*.

[8] Eichner 1989: 35, 44; Stüber 1998: 78f.; Stifter 1997: 219.

[9] For further discussion of these forms, with references, see Ziegler 1997: 634 fn.6.

5.2. Infinitival Formations in Proto-Indo-European?

It has been recognized from the beginnings of Indo-European scholarship[10] that infinitives and supines originate in nominal formations, and that the infinitival suffixes developed from earlier oblique nominal case forms. The following list of formations is not quite exhaustive, but illustrates the variety and distribution of the Indo-European infinitives and supines.

Root: Ved. (acc.) *-am*, (dat.) *-é*, (abl.-gen.) *-aḥ*; Av. (dat.) *-ōi*, (abl.-gen.) *-ō*; Lat. (dat.) *-ī*, (ins.) *-ie(-r)*.[11]

***-se$^{r}/_{n}$-*:** Ved. (loc.) *-sáni*; Gr. (loc.) -εν, -ειν.

***-te$^{r}/_{n}$-*:** Hitt. (all.) *-ānna*;[12] Ved. (loc.) *-táni*; OPers. (dat.) *-tanaiy*.

***-u̯e$^{r}/_{n}$-*:** Hitt. (loc. ⇒) *-wanzi*;[13] Ved. (dat.) *-váne*; Cypr. Gr. (dat. ⇒) -ϝεναι;[14] Celtib. (dat.) *-unei*(?).

***-men-*:** Ved. (dat.) *-mane*; Av. (dat.) ?*-mānē*; Gr. (loc.) -μεν; Celtib. (dat.) *-unei* < **-mnei*(?).

***-es-*:** Ved. (dat.) *-(a)se*; Av. (dat.) *-aŋhē*; Lat. (loc.) *-re* (also [*es*]*-se*, [*vel*]*-le*).

***-t-*:** Av. (dat.) *-tōi*, *-tē*; possibly Slav. (loc.) *-tъ*; Lith. (dat./loc.) *-ti*, *-t*; Latv. (dat./loc.) *-t*; OPru. (loc.) *-t*.[15]

---

[10] Cp. Bopp 1816: 37–58.

[11] Dupraz 2002: 203–16; *-ier* is instrumental **-iē* recharacterized by the passive marker *-r* (cp. Osc. **-fír**, fn. 17).

[12] From **-ā-tna*, with an old allative (or directive) case ending **-h_2e* or **-eh_2* (for the form of which see Nikolaev 2010: 66–68, and esp. fn.25 w. refs.).

[13] From locatival *-i* added to a *t*-extended form **-u̯en-t-*.

[14] -αι has been taken from the aorist infinitive. This suffix is an inner-Greek innovation, extracted from -σαι and -σθαι (see fn. 20 *infra*). Whatever its origin, the distinctiveness of -αι facilitated its spread to other Greek infinitives.

[15] The Balto-Slavic forms are complex and very ambiguous; see Hamp 1985 with further literature.

***-i-*:** Ved. (dat.) *-áye*.

***-u-*:** Av. (dat.) *-uuōi*.

***-ti-*:** Ved. (dat.) *-táye*; Slav. (loc.) *-ti*; Lith. (loc.) *-ti, -tie*; Latv. (loc.) *-ti, -t*;[15] Toch. (dat.) *-tsi*(?).[16]

***-tu-*:** Ved. (acc.) *-tum*, (dat.) *-tave*, (dat. ⇒) *-tavái*, (abl.-gen.) *-tos*; Lith. (acc.) *-tų*; OPru. (acc.) *-tun*, (dat.) *-twei*; OCS (acc.) *-tъ*; Lat. (acc.) *-tum*, (dat./abl.) *-tū*, (dat.) *-tuī*.

***-o-*:** Osc.-Umbr. (acc.) *-om/-um*.

***-lo-*:** Arm. *-l*.

***-tio-*:** Ved. (dat.) *-tyái*.

***-dʰio-*:** Ved. (dat.) *-a-dhyai*, Av. (dat.) *-(a-)dyāi*; Umbr. (ins.) *-f(e)i*, Osc. (ins.) **-fí(-r)**;[17] Toch. (dat.) *-tsi*(?).[18]

***-ono-*:** PGmc. (acc.) *-an* < **-onom*.

***-eneh₂-*:** Gr. (loc.) -(ε)ναι(?).[19]

Other: Gr. -σ(σ)αι, -σθαι.[20]

---

[16] Perhaps reflecting PIE **-ti-ei* < **-téi-ei*; a development from PIE **-dʰiōi* has also been proposed (fn. 18).

[17] The Indo-Iranian and Sabellic formations are clarified by García Ramón (1993) as PIIr. **-dhiāi* < PIE dat. **-dʰiōi* (= **-dʰio+ei*) and PSab. **-fiē* < PIE ins. **-dʰieh₁* (Oscan recharacterized with the passive marker *-r*; cp. Lat. *-ier*, fn. 11). For the source of **-dʰio-*, Haudry (1975: 120f.) suggests a doublet of **-tio-* (cp. the Vedic infinitives in *-tyái* < PIE dat. **-tiōi* beside the gerunds in *-tyā* < PIE ins. **-tieh₁*: García Ramón 1993: 117f.) by the operation of Bartholomae's Law, an explanation cited approvingly by Dupraz (2002: 202).

[18] PIE **-dʰiōi* could perhaps produce Toch. *-tsi*, but the phonological development is *ad hoc* (see Ringe 1996: 79f.); a *ti*-stem dative **-ti-ei* is probably more straightforward (fn. 16 *supra*).

[19] I.e., from PIE **-(e-)neh₂-i*; thus Rix (1992: 238 § 262), who compares the Sanskrit abstracts in *-ánā*, e.g., *van-ánā* 'desire' from √*van-* 'to desire'. Others see a Greek conflation of infinitival -εν and -αι.

[20] Greek -σ(σ)αι and -σθαι have often been assumed to be related to PIIr. **-dhiāi* (> Ved. *-(a-)dhyai*, Av. *-dyāi*), despite some recognized formal problems (see, for example, Haudry 1975; Rix 1992: 238f. §§ 262–263; Sihler 1995: 609f.). In fact, the details appear to be entirely unworkable. PIE **-dʰi-* regularly yields Gr. -σ(σ)-, so the -θ- of Gr. -σθαι would have to come from some other source, probably analogical. Furthermore, Gr. -αι reflects earlier **-ăi*, not a long-vowel diphthong — PIE **-ōi*,

While the origin of many of the forms is evident, less clear is the chronology of the changes that led to their becoming fossilized in the daughter languages. Brugmann (1904: 351f.; 1906: 639f.) assumed that the development towards discrete infinitival formations had already begun, both conceptually and formally, within Proto-Indo-European. Meillet, on the other hand, noting that "toutes les langues n'ont pas un véritable infinitif, et là où il y en a, les formes ne concordent pas, même dans les langues les plus voisines" (1937: 281), maintained that Proto-Indo-European itself did not have an infinitive, but that the existing forms developed independently in the individual dialects after the breakup of the mother tongue. This view is widely held today,[21] and it is often assumed that Celtic preserves a verbal-noun system much like that of Proto-Indo-European.[22]

---

which surely lies behind the Indo-Iranian suffix (fn. 17), would produce Gr. ῳ — so that too would have to be analogical. If both the consonant and the vowel need to be explained away by analogy, then there is a very good chance that the form is simply unrelated.

[21] E.g., Szemerényi 1996: 324; Beekes 1995: 251f.; Sihler 1995: 606–8; Meier-Brügger 2003: 184; Fortson 2010: 107f.

[22] The distinction between an infinitive and a verbal noun is not always clear-cut in the oldest Indo-European languages. This is especially true of Vedic, a fact that figures prominently in the discussion below. In Hittite too, while most grammars distinguish between the infinitive in *-wanzi*, the supine in *-wan*, and the verbal substantive in *-war*, each with a specialized function, it is obvious that these have their basis in frozen case forms of a single paradigm, namely the locative, accusative, and nominative respectively of a *-$\underset{\sim}{u}e^{r}/_{n}$-stem noun.

Infinitives and verbal nouns are in no way mutually exclusive in a language; for example, in addition to its fully developed verbal infinitive, Latin possesses a "verbal noun" — an otherwise ordinary abstract used "verbally" in that sense that it employs logical subject and/or object arguments and occurs in certain typical constructions (cp. Rosén 1981). As discussed in Chapter 1, the verbal noun may be regarded as a verbal abstract used in such a way that its verbal characteristics come to the forefront. An infinitive develops when this specialization is carried to the point that the word loses its identity as part of the nominal system, usually becoming fossilized in both form and syntax in the process, and is absorbed into the verbal system. When this happens, the class of ordinary verbal abstracts may still continue as before in both its general and more "verbal" functions, but now there is a counterpart in the verbal system. The remarkable thing about (Insular) Celtic, in the Indo-European context, is that (for whatever reason) it possesses only verbal nouns with no fully specialized infinitive.

Challenges to this assumption about the position of Celtic have been advanced, however. In particular, Jeffers (1975; 1978), Gippert (1978), and García Ramón (1997) present proposals of the development of the Indo-European infinitive that hold the verbal-noun system of Insular Celtic to be a relatively late innovation. It will be worthwhile therefore to examine these scenarios in light of the present study.

5.2.1. Looking at the distribution of infinitival suffixes in Vedic, Jeffers (1975; 1978) finds evidence for two strata. The earlier stratum, which he calls Type A, comprises stems in *-s-*, *-m-*, *-u̯-*, *-t-*, and heteroclitic *-r/n-*, both simple (*-es-*, *-eu̯-*, *-et-*, *-er/n-*) and complex (*-men-*, *-uen-*, *-sen-*, *-ten-*); these formations are generally of a more limited distribution, take only dative-locative endings, and tend toward a closer association with the finite verb system, such that several of them appear on characterized verbal stems rather than bare roots. They find parallels in Avestan, Hittite, Tocharian, Greek, and the Latin infinitive. The later stratum, which he calls Type B, includes radical, *tu-*, and *ti*-stem verbal-noun formations; these formations are productive, display more robust nominal inflection including accusative, dative, and genitive-ablative forms, show a stronger tendency towards nominal syntax, and are built to bare roots. They have parallels in Avestan, Balto-Slavic, and the Latin supine. He does not postulate a true infinitive for Proto-Indo-European itself, but suggests that only the formations of Type A can be traced back to genuine PIE verbal nouns, while those of Type B were ordinary abstracts in PIE that only later came into infinitival use independently in Indo-Iranian, Balto-Slavic, and Latin.

5.2.2. Gippert's (1978: 281–92) approach is analogous to that of Jeffers, though he gives a slightly different interpretation of the data. His "infinitivische Bildungen" are defined (5f., 294 n.13) as being (a) based on the verb stem, (b) distinguished from finite verbal forms in not assigning person, (c) distinguished from participles in not

differentiating gender and number, and (d) distinguished from verbal nouns (i.e., pure *nomina actionis*, 293 n.10) in lacking a full nominal paradigm, appearing in syntactic contexts incongruous with their case, and governing a case other than the genitive. Like Jeffers, Gippert views the indeclinable infinitives of Indo-Iranian such as Ved. *-dhyai, -sáni, -tvā*, etc. as more archaic formations, and the *ti-* and *tu*-stems as more recent additions to the system. However, instead of seeing only two chronological layers, Gippert proposes a repeating cycle of "restitution" in which earlier formations become fossilized as verbal infinitives and are replaced by newer, productive nominal formations. Because Vedic and Avestan have fossilized infinitives that appear to be archaic, he concludes that the Proto-Indo-European system was not purely nominal and goes on to suggest, based on a tentative equation of PIIr. **-d^{h}i̯āi̯* and Gr. -σ(θ)αι,[23] that one infinitival formation may have already existed in late PIE derived from the dative of a stem in **-dhi-*, and that the other infinitival formations found in the individual Indo-European languages would have arisen through "restitution" from other productive verbal nouns.

5.2.3. García Ramón (1997) distinguishes "echte Infinitive" from "Quasi-Infinitive" based on three diagnostic features: "(A) Form ≠ Funktion und/oder (B) Bildung zu charakterisierten Verbalstämmen und/oder (C) kein erkennbares Nominalsuffix" (51). Only five or six formations in the Ṛg-Veda match these criteria: *-(a)dhyai, -sáni, -táni, -áse, -sé*, and possibly *-váne* (51–55). When a true infinitive in one language coincides with a quasi infinitive in another (or others), he posits a quasi infinitive in Proto-Indo-European. If true infinitives can be found in two (or more) separate languages, he reconstructs a true infinitive for Proto-Indo-European.

---

[23] Citing Haudry 1975; see fn. 20 *supra*.

García Ramón denies the identification of Ved. *-dhyai*, Av. *-dyāi* with Gr. -σ(θ)αι, but finds a correlation between Ved. *-sáni* and the Proto-Greek infinitive in **-sen* attested in Myc. /*-ʰen*/, Gr. -εν. This formative could theoretically reflect either PIE **-s-en*, an *en*-locative of an *s*-stem, or PIE **-sén*, an endingless locative of a $se^{r}/_{n}$-heteroclitic. But, he reasons, the relic status of Ved. *-sáni* makes it unlikely that it continues a doubly marked locative **-s-en-i*, since this would represent a later conflation of the endingless and *i*-locatives; and pointing to the corroborative existence of Hittite abstracts (though not infinitives) in *-eššar/-ešn-*, he concludes that the form must represent an endingless locative in **-sén*. From this convergence of Vedic and Greek, he reconstructs a single "echte Infinitiv" in **-sén(i)* for Proto-Indo-European.

5.2.4. Although the details differ, all of these studies agree on the importance of the mixed system of Indo-Iranian infinitives, especially Vedic. The more verbal of these formations are taken to represent an older stratum of forms that have progressed further along the path towards an infinitive, including some that may date back to Proto-Indo-European, while the more substantival formations are assumed to be post-PIE additions to the system.

It should be noted, however, that the Jeffers' stratification scenario is not quite as neat as he implies. For instance, the Vedic infinitives *-pṛ́ccham, -pṛ́cche* 'to ask', which are Type B formations, are built to the verbal stem *pṛcch-* < PIE **pr̥̂k-sk̂-* instead of the root *pṛ́ś-* (cp. ppp. *pṛṣ-ṭá-*) < PIE **pr̥̂k-*. This type of replacement is, in Jeffers' scheme, typical of an older Type A formation. Further, the Vedic ending *-tavái*, evidently a by-form of the *tu*-stem dative *-tave*[24] and hence belonging to Type B, while still formed from the root instead of the verbal stem, has already become petrified as an infinitive in the Vedic

[24] Forms with *-tavái* have a double accent, e.g., *étavái* 'to go', implying the merger of dative *-tave* with a following tonic particle. Thurneysen (1908) suggests haplology of an earlier emphatic **-tavai váí*.

system and otherwise behaves exactly like the Type A endings *-(a)se*, *-máne*, and *-váne*, including construction with an accusative object (e.g., RV 8.71.15a, *agníṃ* ***dvéṣo yótavái*** *no gṛṇīmasy* 'we praise Agni **to keep the enmity** [acc.] from us').

Indeed, as Disterheft (1980: 107–9) has shown, all morphological types of Vedic infinitives — both the indeclinable non-productive formations and the declinable alike — predominantly govern accusative objects, except when they occur as predicate infinitives, in which case the genitive is far more common; moreover infinitives in purpose clauses govern accusative, genitive, and dative objects, the last of which is never found as a finite direct-object case. She argues therefore that the object case selection is determined mainly by the syntactic construction in which the infinitive occurs, not by its morphological type. Infinitives in *-dhyai* and *-sáni* almost always govern the accusative case simply because they occur in a narrow set of constructions that favor the accusative; by contrast, the variability of object cases found with all other stem types correlates closely with the syntactic constructions in which they occur.

Outside of Vedic, evidence of stratification has been all but eradicated as the infinitives and supines became functionally disconnected from their nominal origins and absorbed into the verbal system before the earliest attestations. Jeffers' attempts at uncovering its traces are not entirely successful. For example, the coincidence of both form and function of the accusative *tu*-stem *-tum* in three isolated branches of Indo-European — as an infinitive in Vedic, later becoming the sole infinitive of Classical Sanskrit, and as a supine in Balto-Slavic and Italic (both Latin and Umbrian)[25] — appears decidedly more like a common inheritance than three independent innovations. His observation (1975: 146) that in early Latin both the supine and the infinitive could be

[25] See Weiss 2009: 444f.

used with a verb of motion,[26] whereas Classical Latin only permits the supine, does not necessarily imply that the latter was more recently pressed into this usage; it may merely indicate that earlier Latin allowed greater variability in this area than later Latin.

Jeffers places significant weight on the fact that the infinitives in most Indo-European languages are formed from a verbal stem rather than the root: "the Vedic infinitives of Type A were at times formed with verbal, i.e. aspectual, stems. This is almost the rule for Type A infinitives in the other dialects where they occur" (1975: 141). The merit of this point for him appears to be predicated to a large degree on an assumption that it is the morphological identity between a deverbative abstract and its source verb that served as the pivot point for its becoming reanalyzed as an infinitive. In the same article (143) he acknowledges two possibilities, either that the verbal stem has been introduced into the root of the infinitive, or that an originally deverbative noun has become reinterpreted as being based on the tense/aspect stem; but in Jeffers (1978: 3–5) he gives explicit preference to the latter: "For the most part, infinitives are products of a formal identification of IE verbal-nouns with finite verbs. Deverbative nouns ... are reinterpreted as verbal forms ... on the analogy of morphologically related finite verb forms or verb stems" (3f.); and further: "Recall that infinitives are verbal nouns which are regrammaticalized on the basis of a formal identification with finite verb forms" (5).

In point of fact, however, the influence is more likely to have gone the other way. This pattern has been seen repeatedly in the foregoing chapters, whereby a noun formation originally built from the root has been remodeled after the verbal stem by reason of nothing more than a semantic and conceptual association with the verb: for example, OIr. ***folog, folach*** 'endurance, act of enduring' ⇒ ***fulang*** through influence of

---

[26] He cites two examples of Plautus: Bacch. 631, *venerat ... aurum* ***petere*** '(he) had come **to ask** for gold, next to Aul. 247, *it* ***petitum*** *... gratiam* '(if a rich man) goes **to ask** for favor'.

the verb *fo·loing, ·fulaing* 'supports, endures' (§ 3.1.77(1)); compare also OIr. ***cumac(c)*** 'power, ability' ⇒ ***cumang*** through influence of the prototonic verb *·cumaing* 'can, is able', etc. Furthermore, both Gippert (1978) and Haspelmath (1989) have documented the typologically common origin of infinitives in the grammaticalization of a purposive dative, which is to say, triggered by a syntactic rather than morphological catalyst. Disterheft (1987) has gone so far as to assert that the relationship between morphology and syntax is always unidirectional: "syntactic rules feed morphology, and not vice versa" (219) — a position that would contradict Jeffers' scenario. However that may be, it is clear from Old Irish that semantic and functional identity can also elicit morphological realignment.

For this reason, the fact that a given infinitival formation is built from the verbal stem is not especially meaningful, even where multiple languages are in agreement, because innovation in this direction is common and could have happened independently at any time in the prehistory of those languages.

The Latin differentiation between the base of the infinitive and that of the supine is also deemed to be significant by Jeffers: "In terms of a synchronic description of Latin, supines such as *ductum* and *monitum* must be considered radical formations in contrast with the corresponding infinitives, *dūcere* and *monēre*, which clearly show verbal stems" (1975: 143).[27] Yet the description of the supine as a "radical formation" is misleading from a historical point of view. Whereas *duc-* can be considered a root formation from the zero grade of PIE **deu̯k-* 'draw', the same cannot be said of *moni-*, which is from

[27] Meillet (1931: 188f.) also notes this opposition and compares it with Vedic in much the same way as Jeffers, assuming that it must have been inherited from Proto-Indo-European.

mon-e-*, an analogical stem ultimately derived from PIE √men-*.[28] The Latin supine is in fact synchronically derived from the stem of the perfect passive participle, a point nicely illustrated by sup. *quaesī-tum* 'to seek' next to ppp. *quaesī-tus*, as against the *tu*-stem formation from the root, *quaes-tus* 'pursuit of income';[29] and similarly, sup. *ad-i-tum* 'to approach' and ppp. *ad-i-tus* both have short *-ĭ-* from the zero-grade root, which from a historical standpoint is only correct in the *to*-participle **h₁i-tó-*, while the original full-grade root of the *tu*-stem is probably to be seen in the Old Latin relic *sim-ī-tū* [adv.] 'at the same time' < **-h₁éi̯-tu-*.[30] Thus the supine too has undergone analogical reshaping, but the influence is from the perfect passive participle instead of the present stem.[31]

Indeed, all of Jeffers' arguments are susceptible of alternative explanations, so that one cannot be confident that the stratification he discerns in Vedic is not better explained as the product of internal Indo-Iranian processes.

In this regard Gippert's solution has more to recommend it, both because the cyclical nature of the process of fossilization and rederivation that he proposes would naturally result in a mixed system of more and less infinitival forms in co-existence, as in fact we see in Vedic, and because the source of the fossilization is to be found in typologically natural syntactic processes. However, his reconstruction of Proto-Indo-European relies heavily on the Indo-Iranian evidence, which may or may not actually

---

[28] Possibly representing the thematic stem from which the causative was formed, assuming the underlying segmentation **mon-é-i̯ᵉ/₀-* is correct (Cowgill 1979: 39). But otherwise Schumacher (2000: 96–98), arguing that the segmentation must actually be **mon-éi̯-ᵉ/₀-* (further details at Ch. 2, fn. 62 *supra*), and that the Italo-Celtic participles in **-e-to-* arose through analogy with the *ā*-verbs: pres. **-ā-i̯ᵉ/₀-* : part. **-ā-to-* :: pres. **-éi̯ᵉ/₀-* : part. X = **-e-to-*.

[29] See Weiss 2009: 445.

[30] A preform **semi-itu-* is also possible (Weiss 2009: 429 fn.18).

[31] With the exception of the historically expected sup. *stātum* < **stéh₂-tu-* next to ppp. *stătus* < **sth₂-tó-*.

reflect the PIE state of affairs; the evidence is too meager to be conclusive. Even if PIIr. *-$d^{h}i\hat{a}i$ and Gr. -σ(θ)αι could be traced back to a common dative etymon, we would still be justified in wondering whether its status as an "infinitivische Bildung" is really of PIE date, since it is clear that the same sort of petrification process occurred repeatedly and independently across the Indo-European *Sprachgebiet* in the post-PIE development of the other formations that eventually became infinitives.

Finally, while García Ramón's comparative methodology is unobjectionable in principle, his conclusion that Proto-Indo-European possessed a fully developed infinitive, based on the correspondence of just two languages, is not inescapable in the face of the sheer variety of infinitival formations that exist across the gamut of Indo-European. If late Proto-Indo-European had already possessed a true infinitive in *-*sén*(*i*), it is not obvious why all the branches except Indo-Iranian and Greek would have abandoned it only to replace it subsequently with one or another of the unsystematic assortment of infinitival formations that had existed alongside it. The scenario is not impossible, of course; one need look no further than Classical Sanskrit for an actual example in which the several true infinitives of Vedic were all abandoned in favor of the comparatively minor *tum*-formation. Yet it would be at least moderately surprising if this were the normal pattern across Indo-European. On the other hand, if the system of late PIE had consisted only of an assortment of verbal-noun formations, it would not be very surprising that two of the daughter languages might coincidentally happen to select the same case form for an infinitive.

5.3. The Celtic Evidence.

All of the above studies also agree that the Insular Celtic verbal noun does not fit well into the scenarios they present and must be a relatively late innovation, although only García Ramón attempts to show just how the Celtic situation might have arisen. A

careful evaluation of the Celtic evidence, however, reveals a different picture. It is, in fact, extremely difficult to reconcile the Insular Celtic verbal noun with the hypothesis of a late innovation.

It is universally acknowledged that the Indo-European infinitives are fossilized case-forms of older verbal abstracts; only the chronology of these changes, and how the Insular Celtic verbal noun fits within this chronology, are under debate. This being so, one foundational point should not be passed over: whatever the differences in individual stem formations between the Insular Celtic verbal nouns and the infinitives elsewhere in Indo-European (and there are in fact many commonalities, as shown in Chapter 2), the fact remains that the Irish and British languages possess full verbal abstracts in the precise grammatical function where other Indo-European languages retain only frozen reflexes of verbal abstracts. Since in principle a system of infinitives ultimately stems from a system of verbal nouns, it is uneconomical in regards to Celtic to assume that Proto-Indo-European had already developed infinitival formations, perhaps even a genuine infinitive, that were inherited by Proto-Celtic in the first instance, but then supplanted much later in Insular Celtic by a major step backwards along this path of progression.

Jeffers suggests (1978: 8–10; so also Lehmann & Lehmann 1975: 13, 118) that typology may have played a role in the loss of certain inherited syntactic constructions that used participles, gerunds, and perhaps even genuine infinitives in Proto-Indo-European, and their replacement by verbal abstracts in Celtic. Citing Ancient Egyptian, Squamish, and Tahitian as examples, he notes the proclivity of languages with VSO word order to utilize nominal complements rather than non-finite verbals. Yet his solution suffers from a lack of concrete evidence that this kind of restructuring is actually what took place in Celtic, and the appeal to typology cannot be regarded as

weighty. The extent to which typological pressure may alter the shape of a language is debated, but Harris (1984) is probably correct in his contention that the pressure toward typological consistency provides no more than a ready channel by which syntactic drift may run when a change is independently motivated, but itself rarely provides the prime motivation for such a change. Linguistic typology alone would hardly seem capable of precipitating the wholesale abandonment of a system in which the formal relationship between a verb and its infinitive is relatively regular and transparent, in favor of a rather chaotic mixture of heterogeneous formations and often unpredictable relationships such as that exhibited by the Irish and British verbal nouns. At best one might argue that the shift to VSO word order could have helped preserve a verbal-noun system that was already in place in Celtic, but it would hardly suffice to motivate its emergence in the first instance.

It is an observable fact that the workings of productivity tend towards an increase of uniformity and regularity in a system, as an innovative feature attaches itself to new forms and encroaches upon existing forms. If robust enough, a single productive formation can entirely replace a variety of inherited formations, leaving little trace of their former existence. This trend towards greater uniformity is well documented in the development of the Indo-European infinitives. It is most directly observable in the dramatic change that occurred between Vedic and Classical Sanskrit, where the earlier mixed system was completely replaced by the single infinitive in *-tum*, and may also be assumed for Iranian from a comparison of the early eastern dialect of Old Avestan, which, like Vedic, possessed several infinitives, with the later western dialect of Old Persian, which had only a single regular infinitive in *-tanaiy*, historically the dative of a stem in **-te^{r}/$_{n}$-*. The same pattern is also indirectly recoverable from a general comparison of all the Indo-European infinitives. Each language may possess one, two,

or even several formations, but from the overall diversity it is clear that the Proto-Indo-European system, whatever its precise character, must have been more complex than that of any one of the daughter languages.

An important issue in ascertaining the contribution of the Celtic languages to the question is the testimony of the Continental Celtic languages, which are attested several centuries earlier than Insular Celtic and show potentially significant differences. García Ramón (1997: 60f.) and others[32] point to the Celtiberian forms in *-unei*, dating from centuries before the earliest Irish attestations, as evidence for a Proto-Celtic infinitive, since they appear to exhibit two infinitival characteristics: formation to a characterized present stem in Bot. I, A.6, *a*]*mPi**TinCo**unei /ambi-**dingo**unei/*, plausibly explained as the *n*-infixed present stem PCelt. **di-n-g-$^{e}/_{o}$-* of OIr. *dingid* 'presses, crushes', reflecting PIE **d^{h}i-n-$\hat{g}^{h}$-* ← √**d^{h}ei̯$\hat{g}^{h}$-* 'build, form, mold' (cp. Lat. *fingō* 'mold, fashion'); and the dative form appearing in a non-dative syntactic position, assuming Bot. I, A.2, *neCue* : *To*[: ***u**]**erTaunei***[33] : *liTom* : *neCue* : ***Taunei*** : *liTom* : *neCue* : *masnai* : ***Tizaunei*** : *liTom*, is correctly interpreted as a series of impersonal constructions, i.e., '[it is] neither permitted [?*To*]*uerTaunei*, nor permitted *Taunei*, nor permitted *masnai Tizaunei*',[34] since verbal nouns might be expected to have been in the nominative (McCone 2006: 37). Because these apparently infinitival forms are attested earlier than the verbal nouns of Insular Celtic, the latter are presumed to be more recent replacements. García Ramón (1994: 52; 1997: 57 fn.36) advances two putative examples: Celtib. */-sā-unei/* of *Tizaunei* 'to harm', to which Irish answers with ***sáith*** [**-ti-*] 'completeness, sufficiency', and Celtib.

---

[32] E.g., Ziegler 1997: 642f.

[33] Schumacher (*KPV* 724f. fn.12) takes this to be *to*[*u*]*ertaunei*, a compound with two preverbs, **to-u̯er-*.

[34] García Ramón (1997: 61) translates: 'weder ist es erlaubt [etwas] daraufzutun, noch ist es erlaubt hinzutun, noch ist es erlaubt, durch Brechen [: Gewalt] Schaden anzurichten'.

/-*dingo-unei*/ of *amPiTinCounei* 'to build around' *vel sim.*, next to Irish ***dingin*** [*-*en-o/i*-] and ***dinge*** [*-*i̯o*-] 'act of pressing'.

Several problems of detail present themselves. Of no major importance to the argument is the fact that OIr. *sáith* is not from a *ti*-stem **sā-ti*- but reflects a *tā*-stem **sā-tā*- > *sáth* ⇒ *sáith* through replacement of the nominative by the dative.[35] In regard to the verb, the base of *Tizaunei* could conceivably be either /*sā*-/[36] or /*da*-/.[37] Stüber (1998: 79) furthermore suggests that *amPiTinCounei* is not a compound of **di-n-g-*$^{e}/_{o}$- but belongs to the root √**tenk*- (or √**temk*-, *LIV*[2] 625f.) 'thicken, make solid' (OIr. *con·téici* 'congeals', Ved. *tanákti* 'coagulates'), arguing that otherwise the form should be expected to be **amPizinCounei*, with lenition of root initial *d*- > *z*- between vowels.[38] But in the event that -*TinCounei* does represent /*-dingo-unei*/, there is no chance that either ***dingin*** or ***dinge*** could have directly replaced it in Irish: both forms are transparently Middle Irish and have no good claim to being old. MIr. ***dingin*** (dat.sg.) is a *hapax legomenon*[39] that certainly does not represent PCelt. **ding-en-o/i*-: **ding-en-o*- would have produced a dative of the shape ⁑*dingiun*, and a verbal-noun stem in **-en-i*- is entirely without support. This form is best understood to be an isolated reanalysis of ***dinge*** as an *n*-stem (= specious OIr. ***dingiu*), which could only have occurred after final unstressed vowels had fallen together as [ə] in Middle Irish. Moreover, MIr. ***dinge*** is surely a replacement

---

[35] *LÉIA* S-15 s.v. **sáith**; Ziegler 1997: 639 fn.15.

[36] So also Meid 1994: 18; Ziegler 1997: 634 fn.7.

[37] As per Eichner 1989: 144; *KPV* 724–27; McCone 2006: 37.

[38] *KPV* (277f. n.(a) s.v. ***di-n-g-e/o-***; 726) objects, however, that since lenition was allophonic, it need not have been consistently reflected in spelling; it is also missing from the subjunctive *amPiTiseTi* /*ambi-dixseti*/. Lacking the internal nasal, the latter cannot be from √**tenk*-/**temk*-.

[39] FMB 48.2.

of OIr. **dige* < **dig-io-* (or **dig-iā-* — the gender is unclear, § 3.1.32(1)) with analogical intrusion of *-n-* from the verbal stem. This is made clear by the Old Irish compound ***fortige*** 'act of oppressing' < **u̯or-dig-io/ā-* attested in the ninth-century Milan glosses, which likewise has a Middle Irish doublet ***fordinge***, reshaped by influence of the verb, *for·ding* 'crushes, oppresses'.[40]

If Irish were a direct descendant of Celtiberian, one would be compelled to accept the inevitability of such replacements. But it is not. The two dialects are descended separately from a mutual Proto-Celtic ancestor, so in theory the innovation could have gone either way. When evaluating the Celtiberian evidence, it must be borne in mind that, although it is conservative in many respects and attested some centuries before the earliest written Irish, the stage of the language represented by the Celtiberian inscriptions still does not date to deep antiquity. By way of comparison, the time period overlaps with the beginnings of Classical Latin, and postdates Classical Greek by some two or three centuries. It undoubtedly postdates the Proto-Celtic unity by many centuries (although the time of latter is not securely recoverable in our current state of knowledge).[41] It cannot simply be assumed that Celtiberian reflects the Proto-Celtic state of affairs.[42]

Indeed, the replacements necessitated by the view that Insular Celtic is the innovator are the opposite of what one might anticipate. A collection of varied and

---

[40] *LÉIA* D-92, s.v. **ding-**. It is not true therefore that "in allen inselkeltischen Fortsetzern ist das ursprüngliche *n*-Infix zum festen Bestandteil der Wurzel geworden" (Ziegler 1997: 640 fn.16).

[41] A reasonable estimate for the separation of Celtiberian from Proto-Celtic is in the early first millennium B.C. (Eska 2008: 165; cp. also Gray & Atkinson 2003).

[42] Cp. Penney's (2000: 35) critique of Ziegler (1997): "it is not clear that one can simply assume that this provides evidence for the Common Celtic stage of development; Celtiberian is not identical with Common Celtic, nor is it the ancestor of Insular Celtic, and separate paths of development must surely be allowed as a possibility."

derivationally unpredictable abstract formations such as **sā-tā-*, **dig-i̯o/ā-*, etc., would be far more likely to have been replaced by a uniform productive infinitival suffix *-unei* attached to the verbal stem (*/dī-sā-unei/*, */ambi-dingo-unei/*, */(u̯er-)da-unei/*, etc.) than the other way around. In this respect, therefore, Celtiberian would appear to be further advanced in its development than Insular Celtic.

The alignment of **dige* and ***fortige*** ← PIE **dʰiĝʰ-* with the *n*-present verbs *dingid* and *for·ding* ← PIE **dʰi-n-ĝʰ-* illustrates a more general pattern that presents perhaps the most serious obstacle to the idea that the Insular Celtic verbal noun may be an innovation. The pairing of root-based verbal-noun formations with verbs of various characterized stem formations is a known feature of both British and Irish.[43] This non-derivational relationship, represented by our Type 1 (**V ← √ → VN**), is the historical norm, as shown repeatedly throughout Chapter 3. By contrast, deverbative verbal nouns, represented by our Type 2 (**V → VN**), are effectively restricted to secondary verbs, with the exception of a few historically primary verbs that have transferred to the weak flexion.[44] The most obvious explanation for this conspicuous distribution is that it is inherited.

The strata that are still evident in Old Irish chronicle the general derivational history of the Celtic verbal nouns. The oldest layer is represented by the primary verbs and verbal nouns.[45] The systematic association between these formations must have originated at a time when the characterized present stems of the verb were still derivationally rather than paradigmatically related to the aorist root, and hence were

---

[43] Cp. Schumacher 2000: 13. Productive processes have obscured the pattern in Middle Welsh to a greater degree than in Old Irish (30f.).

[44] See § 2.1.5(c).

[45] See § 2.2.2.1.

parallel formations with nouns. These beginnings can hardly be assigned to a period later than Proto-Indo-European itself. From the evidence presented by the Old Irish weak verbs, it appears that the source nouns of early denominative verbs would usually also function as their verbal nouns. Whether deverbative verbal nouns were also regularly created alongside these source nouns in the earliest times is not entirely certain, but the fact that the late productive stem formative *-*tu*- happens to correspond to one of the most common and widespread formatives among the Indo-European infinitives and supines may give some indication that they were. At any rate, by the time of Old Irish, the deverbative *tu*-stems are in the process of overtaking the source nouns. Primary verbal nouns have sometimes been influenced by the verbal stem, and other levelings have also taken place, as noted throughout the preceding chapters, but the general pattern remains clearly discernible in Old Irish.

A weakness in Jeffers' (1978) treatment of the Old Irish verbal nouns is his failure to perceive the chronological layers implied in the Insular Celtic strong and weak formational patterns. So, for example, he takes the prominence of secondary *-*tu*- in Irish as sufficient reason to discount its value as a primary suffix:

> OIr verbal-nouns formed with suffixes which reflect the PIE formative -*tu* are almost exclusively attached to denominative verbs, which, for the most part, are Irish creations (Watkins 1956). Consequently, the success of this suffix as a verbal-noun formative must be seen as a language specific development, possibly resulting from the analogical extension of a pattern established for one or some small set of primary verbs in *a*- to which a verbal-noun in -*tu* came to be attached. (1978: 3.)[46]

It is true that the historical suffix *-*tu*- and its reflex -*d* were enormously productive in Irish and ultimately spread to most of the weak verbs, accounting for its numerical dominance in that category; and it is not unreasonable to suggest that the pattern could

---

[46] Followed by Ziegler 1997: 641–43.

have been modeled on one or more primary *a*-verbs that might have had this suffix, although this is impossible to verify historically. These details, however, have nothing to say about whether or not the Irish verbal-noun formative **-tu-* is old. For reliable information about the inherited formatives, one must look instead to the primary verbal nouns. There are, in fact, several *tu*-stems to be found among them: OIr. ***-ét*** 'act of taking' < PCelt. **-em-tu-* < PIE **$h_1$em-tu-* or PCelt. **-am-tu-* < PIE **h_1m̥-tu-* (§ 3.1.38(1)); OIr. ***fius(s)*** 'knowledge, act of finding out' < PIE **u̯id-tu-* (§ 3.1.46(1)); OIr. ***-lúd*** 'act of escaping' < PCelt. **-lū-tu-* < PIE **luH-tu-* (§ 3.1.75(1)); ***mes(s)*** 'judgment, act of judging' < PIE **med-tu-* (§ 3.1.83(1)); OIr. ***-rius(s)*** 'act of running' < PIE **ret-tu-* (§ 3.1.100(3)). None of these formations have any obvious connection with the secondary *tu*-stem verbal nouns. Their derivational features are essentially identical to — and chronologically indistinguishable from — other primary verbal-noun formations such as the stems in **-men-* (***maidm*** 'act of breaking' < PIE **mad-men-*, § 3.1.80(1); ***naidm*** 'act of binding' < PIE **nHd-men-*, § 3.1.87(1), etc.). They show every appearance of being inherited.

5.4. The Implications for Proto-Indo-European.

5.4.1. Given this remarkably archaic aspect presented by the Old Irish primary verbal nouns, it no longer seems possible to dismiss them as a secondary innovation. This point must be emphasized, because the Celtic evidence is difficult to reconcile with the hypothesis that Proto-Indo-European possessed full-fledged infinitives, or even quasi-infinitival formations. We are inevitably brought back to the conclusion that the traditional view is correct: Proto-Indo-European must have employed a system of more or less pure verbal nouns that had not yet been integrated into the verbal paradigm. We may reconstruct some key features of this system along the following lines.

The number of stem classes to which the verbal nouns belonged must have been quite large. There is no reason to assume that Vedic and Avestan have preserved them

all, since on the one hand a partial restriction of the possibilities has already taken place in these languages, while on the other hand Osco-Umbrian, Germanic, Armenian, and of course Celtic show additional stem types. At least some of the latter formations may be inherited, though it is not possible to know in every case. It seems certain that a given verb could have more than one verbal noun, the different formations presumably conveying distinctions of nuance. Vedic and Avestan commonly show multiple infinitival formations in a single verb, the most common verbs often tending to show the greatest number;[47] the coexistence of heterogeneous formations among the infinitives and supines of various languages within several Indo-European branches, including Anatolian, Greek, Italic, and Balto-Slavic, support this. In Old Irish too, as we have seen, a verb may have more than one concurrent verbal noun (though most often only one form prevails), and it is rather commonplace for the stem of the simplex to differ from that of the related compounds, and for the compounds to display more than one stem type.

The verbal nouns must have originally been related to the verb through the root rather than derived from a characterized stem. This is suggested not only by the Insular Celtic evidence but partly also by Vedic (e.g., inf. *jav-ase* 'to rush' < PIE **ĝeu̯H-es-* vs. pres. *junắ-ti* 'rushes' < PIE **ĝu-ne-H-*; inf. *par-ṣáṇi* 'to pass' < PIE **per-sen-* vs. pres. *pípar-ti* 'passes' < PIE **pi-per-*) and Avestan (e.g., OAv. inf. *dā-uuōi* 'to give' < PIE **deh$_3$-u̯ei̯* vs. pres. *dadā̰-itī* 'gives' < PIE **de-deh$_3$-*). It is impossible to tell whether or not suppletive verbal nouns existed in Proto-Indo-European, since these are found only in Insular Celtic, mostly in Irish. This could be an innovation, but it is also possible that the processes which gave rise to regular infinitives everywhere else in Indo-European have

[47] For example, Macdonnell's (1916: 369–435) list of verbs gives eight infinitives for *dā-* 'give', seven for *dhā-* 'put', six for *gam-* 'go', five for *bhṛ-* 'bear', four each for *kṛ-* 'make' and *tṝ-* 'cross', etc.

eliminated the evidence.

Because infinitives are so widespread in Indo-European, it is logical to assume that there must have been grammatical constructions already present in the late proto-language that tended to encourage the development of an infinitive in the later dialects. The fact that a number of infinitives reflect frozen datives of verbal nouns makes the dative of purpose ('[prepare] for sacrifice' → '[prepare] to sacrifice') an obvious candidate,[48] and one might also include the dative complement of an adjective ('ready for sacrifice' → 'ready to sacrifice'). Such expressions still utilize pure verbal nouns in the Insular Celtic languages (e.g., CCC 1.4, *In·laat .ix. cairptiu dia* ***tophfunn*** 'they harness nine chariots for their **hunting**' = 'to hunt them [i.e., birds]'; Wb. 26a30, *bid loor dobar* ***niráil***, 'it will be enough for your **commendation**' = 'enough to commend you'), so the situation can hardly have advanced beyond this point before the dialects that were to become Celtic had separated from Proto-Indo-European. The existence of old accusatives and locatives among the infinitives also points to the accusative of goal and locatival expressions perhaps denoting the attainment of a goal ('[go/come] to the sacrifice' → '[go/come] to sacrifice'). Less obvious perhaps as a source of an infinitive is the instrumental case, since its meaning is more suited to expressing circumstance than purpose or goal; yet García Ramón (1993: 113–16) has documented several examples in Vedic and Avestan where the instrumental case form of a verbal noun is used in a final sense, sometimes in direct parallel with a dative infinitive of the same verb, thus showing a semantic development '[come] with sacrifice' → '[come] to sacrifice'. The frequent and widespread use of such constructions, and the verbal-type meaning that they entail, could have provided the catalyst for the subsequent emergence of the

---

[48] As noted above (§ 5.2.4), both Gippert (1978) and Haspelmath (1989) take this as a typological starting point for the infinitive.

infinitives, as individual case forms became frozen and grammaticalized, took on more verbal characteristics (adoption of characterized tense stems, government of accusative objects, etc.), and ultimately were absorbed fully into the verbal paradigm. The pervasive lack of general agreement among the infinitival constructions of the dialects is good evidence that these were parallel developments, each dialect selecting different case forms from the existing array and implementing them in different ways.

Disterheft (1997b) sets out five stages of Indo-European infinitival development that range on a continuum from highly nominal at one end to highly verbal at the other: I. indeterminate infinitives, i.e., verbal nouns as "incipient infinitives" that are morphosyntactically indistinguishable from ordinary abstracts; II. acquisition of verbal syntax, such as marking an object with a case appropriate to that governed by the verb rather than with the genitive, subject and object raising, etc.; III. acquisition of verbal morphology; IV. morphologically unique infinitives, i.e., regularized verbal formations that no longer have any nominal association; and V. acquisition of tense and aspect. These stages of development are found in various guises across Indo-European. Importantly, as Disterheft stresses (121), these developments are not necessarily uniform even within a single language, so that more and less advanced stages may be found to exist side by side in contemporaneous usage.

Vedic shows the greatest mixture, with elements of stages I through III and the beginnings of stage IV (i.e., with some fixed forms, which are not however regularized in the system). Certain suffixes still largely retain their nominal morphology and syntax, while others have already become invariable, sometimes, though inconsistently, built to the verbal stem, and sometimes, though also inconsistently, governing accusative objects. Rather than providing evidence that the more nominal forms were adopted later, as Jeffers *et al.* conclude, these strata are better understood as the product of

internal Indo-Iranian processes which resulted in certain suffixes being grammaticalized as infinitival sooner than others. Classical Sanskrit has abandoned the earlier diversified system and ultimately settled on the single uniform stage IV infinitive in *-tum* with verbal syntax; exceptionally, however, this form is still built from the full-grade root rather than the verbal stem. Most of the other Indo-European infinitives belong to stage IV, with verbal syntax and formations from verbal stems. The Balto-Slavic supine in **-tum* (> OCS *-tъ*, dialectal Lith. *-tų*) is formed synchronically from the same stem as the infinitive, but vestiges of its nominal origin are still seen in the fact that it governs the genitive (e.g., OCS *idǫ* ***rybъ*** [gen.] ***lovitъ*** 'I go **for catching of fish**' = 'to catch fish'). Greek and Latin both exhibit a stage V system with regularized formations and features of tense and voice. Even Celtiberian shows evidence of having developed, or started to develop, an infinitive, though there is not enough evidence to determine its precise scope and nature. Thus Insular Celtic alone appears to have retained something like the parent system.[49]

5.4.2. It would be absurd, of course, to claim that Insular Celtic has preserved the inherited system without alterations. We may draw attention to a number of features that are certainly, or probably, (Insular) Celtic innovations.

Certain verbal-noun stem formations reconstructible from other Indo-European languages are not evident in Celtic. Heteroclitic $^{r}/_{n}$-stems have all but disappeared, usually in favor of the *n*-stems,[50] and the suffixes **-ten-*, **-sen-*, and **-u̯en-* also appear to

---

[49] Disterheft's insistence on the order of the progression (*loc. cit.*; 1987) is not backed up by the Insular Celtic data. While belonging mainly to stage I, the Insular Celtic verbal noun shows certain Stage III elements in the regular affixation of preverbs that mirror those of the verb (§ 1.3.1) and the occasional reshaping to match the prototonic verbal stem, but has not acquired the verbal syntax of Stage II. As shown in § 1.4, the Old Irish raising phenomena that Disterheft advocates are illusory.

[50] Cp. Stüber 1998: 84 on *arbar* [n.] 'grain' (dat.sg. *arbaimm*, dat.pl. *arbannaib*, gen.pl. *arbann*), the only heteroclitic to survive in Celtic.

have vanished, except perhaps for the last one, if it still survives in the Celtiberian infinitive in *-unei* (see § 5.1). While *s*-stems endure as a noun class in Old Irish (e.g., *tech* 'house' < **teg-os*, pl. *tige* < **teg-es-a*), this formation is now missing from the verbal nouns, unless the plurals of some *o*-stems in a final guttural preserve a trace of them (§ 2.2.3.1(1)); but among these forms there are no correspondences to be found with the Indo-Iranian infinitives in *-(a)se*, and only one correspondence with an *s*-stem elsewhere, in Gr. τεῖχος, -εος [n.] 'wall' < PIE **dʰeiĝʰ-es-* next to OIr. (***cum-*)*tach*** [n.] 'construction'. On the other hand, *i*-stems, *u*-stems, *ti*-stems, *tu*-stems, and *men*-stems have parallels elsewhere, and the last three in particular are widespread.

Other Insular Celtic verbal nouns display formations that are rare or nonexistent among the Indo-European infinitives. A parallel to the *nā*-stems may exist in Gr. -(ε)ναι, assuming this reflects PIE *-(*e-*)*neh₂-i*.[51] Thematic formations make up a large portion of the Insular Celtic verbal nouns, a situation that is not generally reflected elsewhere in Indo-European. The simple thematic suffix (§ 2.2.3.1) has a parallel only in the Osco-Umbrian infinitive in *-om/-um* (from the accusative). These might represent an inherited verbal-noun category, but they could just as easily be innovatory as Jeffers (1975: 146) assumes. If the latter, this formation may be a secondary thematization of PIE root verbal nouns, which are attested in the Indo-Iranian root infinitives and perhaps in the Latin medio-passive infinitive in *-ī*. Several correspondences with Vedic may be cited (though sometimes with mismatched root grades that may be attributed to divergent leveling processes in the separate languages): OIr. (***a*-)*pad*** [n.] 'proclamation, act of proclaiming' < PCelt. **-boud-o-* ← PIE **bʰeu̯dʰ-* (§ 3.1.15(1)) next to Ved. *-búdh-e* 'to be awake' < PIE **bʰudʰ-*; OIr. (***díu-*)*nach*** [n.] 'act of washing' < PCelt. **-nig-o-* or **-nēg-o-* ←

---

[51] See fn. 19 above.

PIE *nig^w- or *$ne\underset{\cdot}{i}g^w$-[52] (§ 3.1.89(2)) next to Ved. *-nij-e* 'to wash' < PIE *nig^w-; OIr. (***fui-, tói-)ned*** [m./n.?] 'setting (of the sun)' < PCelt. *(*-ni-)sed-o-* ← PIE **sed-* (§ 3.1.112(3)) next to Ved. *-sád-am, -sád-e* 'to sit' < PIE **sed-*; to which may be added OIr. (***imchom-, aithchom-, tochm-, frecm-)arc*** [n.] 'act of asking, inquiring' < PCelt. *(*ϕ*)*ark-o-* ← PIE *$p\underset{\cdot}{r}\hat{k}$- (§ 3.1.8(1)) next to Ved. *-pṛ́cch-am, -pṛ́cch-e* 'to ask' remodeled from *-*pṛ́ś-am*, *-*pṛ́ś-e* < PIE *$p\underset{\cdot}{r}\hat{k}$-. It is also significant that the same sort of patterns with regard to compounding exhibited by the Celtic *o*-stem verbal nouns (§ 2.2.3.1(1)) are paralleled by the Vedic root infinitives: by far most Vedic root infinitives occur in compound formations, and, conversely, the majority of compound infinitives in Vedic are root infinitives. If we extend the assumption of secondary thematization to include feminine abstracts in *-*ā*-, we find another correspondence between OIr. (***co-, es-, fo-)sar*** [f.] 'strewing, arrangement, etc.' < PCelt. **star-ā-* ← PIE *$st\underset{\cdot}{r}h_3$- (§ 3.1.115(2)) and Ved. *-stír-e* 'to strew' < PIE *$st\underset{\cdot}{r}h_3$-.

As noted in § 2.2.3.6, PIE *-(*i*)$\underset{\cdot}{i}o$- and its feminine counterpart *-(*i*)$\underset{\cdot}{i}\bar{a}$- are in origin compound suffixes arising from early thematization of existing nouns with *-*i*- in the stem or ending. That this pattern continued to repeat itself in Celtic is demonstrated by the numerous *io*-stem verbal nouns of *n*-present verbs that arose through the addition of the thematic vowel to the stem ending in *-*iH*-. It is not unreasonable therefore to speculate that other *io*- and *iā*-stem verbal nouns could represent later thematizations of inherited *i*-stem verbal nouns. This cannot easily be confirmed, however, as Vedic is the only language that preserves any *i*-stem infinitives, and none of the few forms that exist — hardly more than a handful in number — correspond to any of the Old Irish *io*- and

---

[52] PCelt. *-*g*-, instead of historically regular *-*b*- < PIE *-g^w-, comes from either the verb *$nig\text{-}\underset{\cdot}{i}^e/_o$- or the simple verbal noun *$nig\text{-}\underset{\cdot}{i}\bar{a}$-, where PIE *$g^w\underset{\cdot}{i}$ had already been delabialized to PCelt. *$g\underset{\cdot}{i}$ before the development of *-g^w- > *-*b*- (§ 3.1.89 comments A and C).

iā-stem verbal nouns.

Celtic zero-grade *to*- and *tā*-stem verbal nouns are generally regarded as reflecting substantivized verbal *to*-adjectives.[53] The same may perhaps be assumed for the forms in *-*eto*-, although the semantics specific to these formations render this more difficult.[54] Such substantivization of verbal adjectives appears to have been a productive means of creating new verbal nouns at some point in the history of Celtic; and a parallel may perhaps be seen the relationship between the Germanic infinitive in *-ono-m* and the strong-verb past participle in *-*ono*-,[55] but the details are obscure.[56] On the other hand, one may wonder whether some *to*- and *tā*-stem verbal nouns — in particular the formations in *-*eto*- (i.e., OIr. ***dliged*** 'entitlement, condition of being entitled' < **dlig-eto-*, § 3.1.33(1), and ***teiched*** 'flight, act of fleeing' < **tek*^{w}*-eto-*, § 3.1.127(1)) — could have been created — or renewed — by adding the thematic suffix to an existing *t*-stem noun. This seems impossible to confirm, however, in the absence of good comparanda.[57]

---

[53] Cp. Irslinger 2002: 309, 379.

[54] See Vine 1998: 66 and § 2.2.3.14 *supra*.

[55] Also, marginally, *-*eno*- (Go. *fulgins* 'hidden' < PGmc. **fulg-ina-z*) in common with the Slavic past passive participle (e.g., OCS *nes-enъ* 'carried'< PSlav. **nes-eno*); see § 2.2.3.11.

[56] The past participle shows zero grade of the root, in keeping with an old verbal adjective, but has inserted the thematic vowel: e.g., PGmc. **bit-ana-* 'bitten' ⇐ **bit-na-* < PIE **b*^{h}*id-nó-*. On the other hand, the infinitive is formed to the verbal present stem, with full grade of the root and the thematic vowel: PGmc. **bīt-anan* 'to bite' ← **bīt-*$^{e}/_{a}$*-* < PIE **b*^{h}*e̯id-*$^{e}/_{o}$*-*. This appears to be a case of cross-contamination: the infinitive originated in a substantivization of the past participle, built secondarily to the verb's thematic present stem, while the past participle in turn has adopted the thematic vowel from the infinitive. How exactly this situation came about "remains a minor unsolved problem" (Ringe 2006: 194).

[57] Irslinger (2002: 46f.) lists several Gaulish forms in *-*et*-, including PNN *CINGES, CINGETIUS, CINGETORIX* < PCelt. **keng-et-* 'stepping, striding' (→ 'one who steps out, attacks; a warrior', D. E. Evans 1967: 177f.); *ORGETIUS, ORGETORIX* < PCelt. **org-et-* 'striking' (→ 'one who strikes, kills; a warrior', D. E. Evans 1967: 239f.); tribal names *CALETES* < PCelt. **kal-et-*; and *NEMETES* < PCelt. **nem-et-*, etc.; next to corresponding thematic formations in *-*eto*-: Gaul. LNN νεμετον, *-NEMETUM*, OIr. *nemed* [n.] 'hallowed place'< PCelt. **nem-eto-*; and OIr. *calad* [adj.] 'hard' < PCelt. **kal-et*$^{o}/_{ā}$*-*. However, these

Formations in *-*aglā* and *-*axtā* are uniquely Celtic.[58] The remaining Old Irish verbal-noun stem formations (*-*en*-, *-*mā*-, *-*ni*-, *-*sto*-, *-*stā*-, *-*tion*-, *-*tlo*-, *-*tlā*-, *-*tro*-) have nominal — but not infinitival — counterparts elsewhere in Indo-European; these were described in Chapter 2. It is not possible to state absolutely which of these might have formed verbal nouns in Proto-Indo-European and which must be innovations, since the case can only be argued from the silence of the comparative evidence. There can be no doubt, however, that individual stem formations in the Celtic languages did change over the centuries, some spreading at the expense of others,[59] some falling into disuse, and others being created anew. Yet these were more or less cosmetic changes that did not result in a significant restructuring of the system as a whole.

5.4.3. Our survey will not be complete without a word or two on the question of Italo-Celtic, especially since the idea of a separate Proto-Italo-Celtic node on the Indo-European *Stammbaum* appears to have received new life in recent years.[60] The survival of an inherited verbal-noun system in Celtic would necessarily imply that the system also existed in Proto-Italo-Celtic. In the end, however, a comparison of the known details sheds little light on the matter.

In terms of morphology, two Insular Celtic verbal-noun formations have particularly notable correlates in Italic. First, the compound formation *-*ti-Hon*- of the Old Irish verbal-noun suffix -*tiu*, -*ten* corresponds directly with the Italic abstract suffix

---

thematic formations appear to be adjectival in origin, and no thematic formations in *-*eto*- corresponding to verbal abstracts in *-*et*- appear to be quotable.

[58] Stems in *-*mu*-, it should be noted, are not unique to Celtic, although they enjoyed the greatest productivity there; see § 2.2.3.10.

[59] Hamp (1983; 1994: 169f.; cp. Irslinger 2002: 381), for example, suggests replacements of *-*ti*- with *-*tu*- in some zero-grade *tu*-stems, and the analogical creation of new full-grade *tā*-stems.

[60] See, for example, Schrijver 2006: 48–53; Kortlandt 1981; 2007: 149–57; de Vaan 2008: 5.

of Lat. *-tiō, -tiōnis*, Osc. **-tiuf**, (acc.) *-tinom*, Umbr. (abl.) **-tine**. However, as noted in § 2.2.3.22, the possible existence of Armenian primary *-t'iwn* and the apparent continuation of ablaut in the Sabellic forms, reflecting **-ti-**Hō*** (+ *-n-s*) in the nominative and **-ti-**Hn-*** in the oblique, may well imply a (late) Proto-Indo-European date for the formation. Even so, the fact that it flourishes in both Italic and Celtic is arguably more than a simple coincidence — although areal linguistic contact could as readily account for this communal feature as genetic inheritance. Second, as noted in the previous section, the Insular Celtic *o*-stem verbal nouns have a parallel in the Sabellic infinitive in *-om/-um*, a formation moreover that is found in no other Indo-European infinitives. Of course, given the pervasive productivity of thematic stems in general, these entities, if not inherited, could theoretically reflect independent developments in Insular Celtic and Sabellic; but given the fact that this verbal-noun formation occurs uniquely in these two dialect groups, here too the distribution would appear to be something better than random chance. An Italo-Celtic innovation is conceivable, but not inescapable.

Aside from these formations, however, there would seem to be little in common between the non-finite verbal systems of the two language groups. In some ways they could hardly be further apart. The verbal noun of Insular Celtic and the strongly "verbal" infinitive of Latin represent the two opposite ends of the spectrum described above in § 5.4.1.

At the same time, there is nothing here that would refute the theory of an early Italo-Celtic unity. One would simply have to conclude that the Italic infinitives did not develop until after Italic and Celtic split — an assumption that is necessary in any case, given the wide formal divergence within Italic between the Latin and Sabellic infinitives. On the other hand, given that the Latin infinitives in *-re* reflect old *s*-stems, the loss of *s*-stem verbal nouns in Celtic (at least Insular Celtic; there is no information on Gaulish

or Celtiberian) would have to be an innovation of this branch. That too is to be expected; because a separate noun declension reflecting the historical *s*-stem class is still preserved in Irish,[61] its disappearance from the verbal nouns could conceivably be quite late.

* * *

More work remains to be done in sorting out the origins and development of the Indo-European infinitives, and some of the above details will no doubt require modification. The primary purpose here has been to demonstrate from the internal evidence that the Celtic verbal-noun system is remarkably archaic in some of its features, and therefore cannot easily be dismissed as a late innovation. A reconstruction of the Proto-Indo-European system, if it is to be dependable, must incorporate the testimony of the Insular Celtic languages.

---

[61] The **-s-* itself was lenited in Proto-Insular Celtic and subsequently disappeared, but the unique declensional pattern that remained behind continued.
