Foreword

During the course of 1993, I became interested in the problem of how to explain the vocalism of Aeolic ὄρπετον 'creature', vis-à-vis its Homeric parallel ἑρπετόν — in itself, or so it seemed at first, no more than a minor puzzle of Greek morphology. It soon became clear, however, that the solution to this puzzle would have to depend on a thorough account of Greek deverbative formations in -ετος (neut. -ετον), a type of formation that had been seriously neglected in previous treatments of Greek derivational morphology; and the same neglect attached, a fortiori, to the Indo-European morpheme **-eto-* (or **-etó-*) that resulted in Greek -ετος (among other Greek reflexes) and cognate formations elsewhere. In April of 1994 (before the Department of Linguistics at the University of Pennsylvania) and again in May (at the 13th East Coast Indo-European Conference; University of Texas/Austin), I had occasion to present my views about the solution to the problem of Aeolic ὄρπετον, together with a sketch of related problems surrounding **-eto-* in Greek and Indo-European. In continuing to flesh out various issues, and to incorporate the results of more recent research, I was fortunate in having several more opportunities to present this material, in December of 1994 (before the Department of Linguistics at the University of Wisconsin), January of 1995 (before the Department of Classics at UCLA), and June of 1996 (at the 15th East Coast Indo-European Conference; Yale University). I am happy to be able to thank the audiences at all of these gatherings for their important comments and suggestions, from which I have benefited immensely. Since, moreover, the final product has ended up bursting the bounds of an ordinary journal article, I am especially grateful to Wolfgang Meid for his willingness to publish this material as part of the Innsbrucker Beiträge.

Los Angeles, June 1998 — Brent Vine

Aeolic ὄρπετον and Deverbative **-etó-* in Greek and Indo-European

1. *Aeolic ὄρπετον: Introductory*

An Aeolic form ὄρπετον 'creature' is attested at Sappho 130 LP (= Voigt = Campbell), in the famous description of love as a "bitter-sweet, irresistible creature" (γλυκύπικρον ἀμάχανον ὄρπετον); the form also appears in a Theocritean Sapphic imitation (29.13). Although the precise zoological referent of Sappho's "creature" remains uncertain,[1] the word is evidently in some way closely related to Att.-Ion. (Hom.+) ἑρπετόν '(walking, crawling) creature; reptile, esp. snake'.[2] This form, in turn, is clearly a substantivization (i.e. 'moving/creeping [thing]') of a deverbative adjective in -ετος derived from ἕρπω 'move (slowly)', a plain thematic verb pointing to IE **sérp-e/o-*, cognate with Lat. *serpere* 'creep' and Ved. *sárpati* 'id.'.[3]

Given the comparison with ἑρπετόν and ἕρπω, Aeol. ὄρπετον should reflect either *o*-grade **sorp-eto-* or zero-grade **sr̥p-eto-*.[4] The latter interpretation is standard in the older handbooks[5] and continues to be assumed;[6] and the zero grade has been explicitly compared with the late Vedic thematic aorist *asr̥pat* (AV, Br.+).[7] Indeed, in view of the paucity of thematic

---

[1] See MACLACHLAN 1989 (with earlier references), arguing for 'bee' (but cf. next footnote).

[2] On the semantics, see CALAME 1983:577f. ("pas uniquement le reptile, mais ... tout animal qui se déplace en marchant").

[3] The adjectival ἑρπετά at Alcman 89.3 (= Calame 159.3), in a phrase φῦλα τ' ἑρπέτ', is usually emended away with recourse to PFEIFFER's conjecture ὕλα, on the grounds that adjectival use of ἑρπετός is not otherwise attested until extremely late (see CALAME ad loc., 1983:577); but since adjectival origin for ἑρπετόν is assured, this usage (assuming a 7th-century dating for Alcman) seems a credible archaism that need not be rejected out of hand.

[4] The convenient notation "**-eto-*" is used without prejudice to further segmentations like **-e-to-* or **-et-o-*, more on which below (passim, esp. §**2.12** with n. 99).

[5] E.g. HOFFMANN (1893:357, 363), SCHWYZER (1939:502), BUCK (1955:343), HAMM (1957:28, 70).

[6] Now also SIHLER (1995:628).

[7] Cf. FRISK (GEW s.v. ἕρπω): "Die Schwundstufe in äol. ὄρπετον findet sich in dem aind. thematischen Wurzelaorist *á-sr̥p-at* wieder", similarly CHANTRAINE (DELG s.v. ἕρπω).

aorists securely reconstructable for the protolanguage,[8] a possibly inherited thematic aorist stem **sr̥p-é/ó-* (based on the comparison between Aeol. ὄρπετον and Ved. *asr̥pat*) would be of some morphological interest, especially since Gk. ἕρπω has no old aorist of its own (Att. aor. ἑρπύσαι, after ἑρπύζω; otherwise suppletive). Additional support for the zero grade has been sought in a gloss ἁρπετόν (Hsch.), which would show the non-Aeolic outcome of a **sr̥p-eto-*.[9]

A form like Hom. ἑλετός 'able to be taken', which appears to be based on a thematic aorist stem (ἑλε/o- 'take'), seems to provide at least superficial support for the traditional derivation of Aeol. ὄρπετον from an aorist stem. But, to begin with, the rather different meaning of ἑλετός is noteworthy: not just passive (as might be expected for a transitive verb of action) and past or aoristic (i.e. 'taken', vs. 'moving/creeping'), but with an additional semantic nuance wholly absent from ἑρπετόν/ὄρπετον ('that can be taken, takeable'). Moreover, it is not apparent why ἑρπετόν and the otherwise synonymous and suffixally identical Aeol. ὄρπετον should be derived not only from two different stem-forms (an unattractive assumption from the start), but precisely from these two different tense-stems. It becomes necessary, then, to examine more carefully the morphology of Greek deverbative formations in -ετος. While these have been generally neglected,[10] the type with full-grade root (cf. ἑρπετόν) has received somewhat more attention than the zero-grade type, to which the present study is mainly devoted.

2. *Greek deverbative "-ετος" and Indo-European *-etó-*

2.1. denominative -ετος

The task of assessing the morphology of Gk. -ετος is complicated by the fact that the somewhat diverse -ετος formations remain largely undifferentiated in the standard handbook treatments.[11] There is almost no attempt to distinguish among differences in attestation pattern from one period of the language to another, or even between -ετος forms that may be denominative as opposed to deverbative, or among various types of semantic differences the forms show. So far, however, the following two distinct -ετος types have been delineated with a fair degree of clarity; neither appears to be deverbative:

(i) nouns with "augmentative" -ετος (built to nominal stems), of the type (Hom.+) αἰετός 'eagle' (from a proximate **au̯i̯-etós*, lit. 'big bird';[12] in such cases evidently **-eto-*, with further segmentation uncertain; see n. 13 directly below for the accent), similarly the set of related Homeric terms νιφετός 'snow-storm' (to νίφα [acc.] 'snow') and πυρετός 'severe heat' (to πῦρ 'fire'), whence, analogically (in the absence of a nominal basis), ὑετός '(heavy) rain, rain-storm' (cf. ὕει 'it is raining' and νείφει 'it is snowing') and the **βρεμετός 'thunder' implied by Hom. ἐριβρεμέτης 'loud-thundering' (LEUKART 1994:125).[13] The idea that νιφετός is a deverbative abstract or action-noun[14] has nothing to recommend it: the "νίφω" of Hom. νῐφέμεν (M 280) et sim. is a rendition of full-grade νείφε/o-, and provides no source within Greek for deriving νῐφετός.[15]

---

[8] On this point e.g. SZEMERÉNYI 1996:281, HARÐARSON 1993a:155; in more detail CARDONA (1960), WATKINS (1969:63ff., 100ff.), HOLLIFIELD (1977:57).

[9] E.g. BUCK (loc. cit., n. 5 above): "ὄρπετον (cf. ἁρπετόν Hesych., from weak grade of ἕρπω) = ἑρπετόν". I return to ἁρπετόν in §3 below.

[10] Recent exceptions are LEUKART 1994 (passim) and RUIJGH 1997:272 (with n. 33), both of which came to my attention after most of the present work was drafted (see the "Foreword").

[11] See esp. CHANTRAINE 1933:299f., SCHWYZER 1939:501f., BUCK-PETERSON 1948:469ff., RISCH 1974:21.

[12] Cf. SCHINDLER (1969:147) and PETERS (1980:12, 217n168), with discussion of more controversial Celtic and Albanian material.

[13] On this "augmentative" formation see SCHWYZER (1939:501) and esp. SOLTA 1963 ("elativ-intensives, amplifikatives Suffix"), following SCHULZE (1933:75n5). SOLTA observes (1963:169n4) that the Gk. nouns in -ετος are all oxytone; although the observation is not quite accurate, the rare cases with root accent can be explained secondarily (cf. §**2.18** with n. 176 below). Thus, assuming an original accentuation **-etó-*, αἰετός (without the effect of Wheeler's Law) would presumably be analogical after forms like νιφετός (whence also πυρετός, ὑετός [ῡ]). (For more complex speculations about the original accentuation [assuming proparoxytone **-ét(o)-*] see now LEUKART 1994:290n391 and RUIJGH 1997:272n34.)

[14] Cf. BUCK-PETERSON ("-τος is found in abstracts, e.g. Hom. ὑετός 'rain' : ὗω, νιφετός 'snowstorm' : νίφω", 1948:470), and esp. WAANDERS, RUIJGH, SCHRIJVER and others, as discussed in §§**2.2**, **2.3**, **2.8**, **2.10.5** below.

[15] Whatever the antiquity, in Indo-European terms, of zero-grade formations like OIr. *snigid* 'drips', or the nasal present of Lat. *ninguit*, Li. *sniñga* 'it is snowing', these have no direct bearing on Gk. νῐφετός, which can hardly be separated (especially in the absence of any zero-grade verbal forms in Greek) from the consistent nominal zero grade in νῖφα

Taking νιφετός as created analogically after a deverbal action-noun ὑετός confers no advantage: indeed, it fails to account for the "augmentative" semantics clearly present not only in νιφετός, but also in the isolated and certainly denominative αἰετός. And at least for the set νιφετός/ὑετός/πυρετός, the priority of νιφετός helps explain the accent of the other two (cf. n. 13), which would otherwise be anomalous.

(ii) a deadjectival *-*et(o)*- with "Caland-system" associations: Hom. πάχετος 'thick; thickness', περιμήκετος 'very tall/long' (PETERS 1980:179n131, building on SOLTA 1963), compared by PETERS to a parallel *-*ed(o)*-, likewise with Caland associations.

2.2. *(-$H_{2/3}$)-eto-* > -ατος/-οτος (F. WAANDERS)

A significant contribution to the analysis of Gk. -ετος was made by F. WAANDERS (1974), who observed that in principle, roots with final *-h_2 and *-h_3 could produce "-ετος" forms showing the effects of laryngeal coloring on the first vowel of the suffix, resulting in actual forms in -ατος and -οτος, respectively: thus, according to WAANDERS, certain forms built to *TERh_2/h_3* roots, like κάματος 'fatigue, toil' and βίοτος 'life', are best analyzed as *$*ḱm̥h_2$-eto-* and *$*g^wih_3$-eto-*, respectively.[16] Apart from this phonological distinction, WAANDERS did not differentiate carefully among various -ετος types: a broad sampling of such forms, from all periods of the language, was assembled mainly to demonstrate the existence of an "-ετος" suffix (in Greek terms), or a suffix "*$*-eto-/*-eteh_2$-*" (in Indo-European terms), which would then be susceptible to the phonological treatment WAANDERS sought to demonstrate. He was inclined, however, to regard this suffix as "primarily deriving (action?) nouns from zero-grade roots" (1974:4); note, however, the arguments against this conception just provided (§**2.1**(i), with special reference, in connection with denominative "augmentative" formations, to SOLTA 1963, a study not cited by WAANDERS); additional arguments will be found below (§**2.8**, and in connection with individual forms).

Of course, forms like κάματος are generally explained in an entirely different way: they are said to show an irregular disyllabic reflex (in this case αRα, in others εRε, oRo, oRι etc.) of the interconsonantal sequence R̥H, vis-à-vis the regular monosyllabic outcome with long vowel (in this case Rᾱ, as in Dor. κμᾱτός), with the disyllabic outcome attributed to special factors (such as a secondary accent: thus, to take the paradigm example of θνητός [Dor. θνᾱτός] vs. θάνατος, *$*dh(u̯)n̥h_2$-tó-* > θνᾱτός vs. *$*dh(u̯)n̥h_2$-to-* > θάνατος) or to unknown causes.[17] Similarly, some WAANDERS-type forms have been taken as analogical creations (thus e.g. LINDEMAN [1987:61, 1997:93] for the βιŏ- of βίοτος, according to a proportion δω- (δίδωμι) : δŏ- (δοτός) = βιω- (ἐβίων) : x, x = βιŏ-; a different analogical account by PETERS, n. 168 below).

2.3. ἀκάματος etc. as bahuvrīhis with second-member action nouns (C. J. RUIJGH)

In a number of articles,[18] C. J. RUIJGH has indicated his acceptance in principle of WAANDERS' analysis,[19] and has provided a more explicit morphological account of some of the forms in question. According to RUIJGH, a noun like κάματος 'fatigue' is a "nom d'action" < *$*ḱm̥h_2$-eto-*, to which he compares, as a prototype for such formations, νιφετός. The corresponding negative ἀκάματος 'infatigable' is to be understood as a possessive compound with second-member action noun, thus literally 'qui n'a pas de fatigue'; similarly θάνατος 'death' vis-à-vis ἀθάνατος 'immortal' (lit.

(Hes. *Op.* 535), Hom. νῐφόειις, νῐφάδες, ἀγάννῐφος, etc.; on νιφετός to νίφα (and not νείφει) see also SOLTA 1963:170, together with other clearly denominative examples.

[16] Thus, as WAANDERS notes (1974:5), the lack of coloring across the morpheme boundary in paradigmatic forms of the type ἔθανον, ἔκαμον is evidently analogical. A similar conception was arrived at independently by BEEKES (see 1976:9), and was applied by WAANDERS in a subsequent study (1983) to Gk. τελετή (cf. §§**2.4**(iv), **2.16.2** below).

[17] For discussion and references, see e.g. MAYRHOFER 1986:129, BEEKES 1988:74, HARÐARSON 1993a:164f., FORTSON 1993; note also the account by HOENIGSWALD (1988, esp. 207f. on κάματος/κμᾱτός).

[18] See esp. RUIJGH 1980:195n33, more recently 1988:452, 1992:80n17, 85n27, 1997:272.

[19] Cf. also, among others, BEEKES (1976; more recently, e.g. 1988:74, citing κάματος < *$*ḱm̥h_2$-etos*), KLEIN 1988:268 (βίοτος < *$*g^wih_3$-etos,* "built exactly like its antonym *$*dhn̥H_2$-etos* 'death' (> *thánatos*)"); βίοτος < *$*g^wih_3$-eto-* also HARÐARSON 1993b:166n36, SIHLER 1995:47, 108, 161, 628 (here also θάνατος < *$*g^whn̥h_2$-eto-*).

'qui n'a pas la mort').[20] Thus e.g. νήγρετος 'qu'on ne peut pas réveiller' and ἀνώμοτος 'qui n'a pas juré' presuppose, for RUIJGH, corresponding "noms d'action" *ἔγρετος (or *ἐγρετός, cf. n. 49) < *h_1gr-*eto*- and *ὅμοτος < *$h_3m̥h_3$-*eto*-. I return to this analysis in §**2.8** below.

2.4. preliminary exclusion of irrelevant, ambiguous and opaque data

At least for a first pass at understanding the morphology of deverbative -ετος, it should be clear from the foregoing survey that one must provisionally exclude (partly for heuristic purposes) the following items (although we will return to some of this material later):

(i) the denominative "augmentative" type (§**2.1**(i));

(ii) the denominative type with "Caland" associations (§**2.1**(ii));

(iii) other forms likely to be of denominative origin (e.g. Hes.+ συρφετός 'rubbish; rabble', cf. σύρφαξ 'rabble', σύρφη· φρύγανα Hsch., to σύρω 'drag, sweep'), and esp. such forms with *o*-grade (τοκετός [Hippoc.+] 'childbirth', cf. τόκος 'id.'; φλογετός [Gloss.] 'heat, burning', cf. φλόξ 'flame', as well as πυρετός), cf. SOLTA 1963:170, WAANDERS 1974:4, and (v) below (ὀχετός);

(iv) "WAANDERS-type" forms with root-final laryngeal (§**2.2**), including ambiguous forms with root-final first laryngeal (even with possible full grade) of the type ἔμετος 'vomiting' (*$u̯(e)mh_1$-*to*- ? *$u̯(e)mh_1$-*eto*- ?), τελετή '(religious) performance, initiation' (< *$tl̥h_1$-*eteh*$_2$ according to WAANDERS 1983:18, 232 and RUIJGH 1988:452, but multiply ambiguous), ἀλετός 'grinding' (*$h_2l̥h_1$*etos*, WAANDERS 1974:5),[21] σκελετός 'dried body, mummy, skeleton' and adj. 'dried up' (*$skl̥h_1$*etos*, WAANDERS 1974:6);[22]

[20] Nearly identical analysis for κάματος/ἀκάματος and θάνατος/ἀθάνατος by RASMUSSEN (1992b:82n4), except that the action nouns are taken to be root-stressed substantivizations of the *tó*-participles (cf. §**2.2** above).

[21] For ἀλετός (not attested until Plutarch), cf. ἀλητός 'id.' (Babr.), as well as ἄλεσις/ἄλησις 'id.' (Gp.), and other similar pairs (τυπετός/τυπητός 'beating the breast', ἀμάχετος/ἀμάχητος etc., cf. n. 171 below).

[22] The forms based on *TERh*$_1$ roots are particularly problematic, given ongoing disagreement as to the regular outcome in Greek of zero-grade *TR̥h*$_1$*V* (> ΤεRε vs. ΤαRε, the former falling together with the presumed outcome, according to some, of secondarily-stressed *TŔ̥h*$_1$*T*; for recent discussions see HARÐARSON 1993a:157ff. [with earlier references], SIHLER 1995:107f.). Despite WAANDERS (1974:5 with n. 4), Cret. βιετος is not likely to derive from a variant *g^wih_1- (beside *g^wih_3-), the existence of which is sometimes claimed for this root (e.g. CHANTRAINE 1961:13, BEEKES 1969:248f.) on the basis of no very good evidence; for Gk. ζῆν etc., see KLEIN 1988:265n11, after THURNEYSEN.

(v) forms with unclear derivational basis, e.g. ὀχετός 'canal, ditch' (Pi.+, but presupposed by Hom. ὀχετεύω 'divert with a canal'), either denominative ("augmentative"?) to ὄχος 'a support', or deverbative to ὀχέω 'hold, carry';

(vi) miscellaneous etymologically opaque and derivationally unclear forms, as in several well-known Homeric nouns and epithets of indeterminate meaning: ἀφυσγετός (Λ 495) 'rubbish, debris' (?),[23] ἀτρύγετος '?' (epithet of the sea and the ether),[24] ἀμαιμάκετος '?',[25] τηλύγετος '?';[26] still more difficult is the isolated Τηΰγετος (ζ 103). For further details, see provisionally FRISK GEW and CHANTRAINE DELG s.vv., as well as the discussion by SOLTA (1963:170 with n. 11); I return to two of these forms below (§**2.17**, with further references).

On ἀριδείκετος (which, despite certain ambiguities, need not be excluded from consideration), see directly below (§**2.5**(i), with n. 28). As for Mycenaean: in view of well-known phonological and etymological indeterminacies, little can be gleaned from most of the numerous forms (as often, mainly onomastic) in *-(C)e-to, -(C)e-ta* etc., although some may well continue one or another formation in *-*eto*-, as will be discussed below (§**2.10.3**) for one such item.

2.5. Homeric data

These considerations leave the following residue of Homeric forms, here categorized in terms of their apparent derivational basis (i.e. present

[23] Cf. Hes. συρφετός, (iii) above; the traditional derivation from ἀφύσσω 'draw, drain (a liquid)' poses numerous difficulties.

[24] Traditionally 'barren', cf. τρυγάω 'bear fruit'; but the derivational relationship with τρυγάω remains unclear.

[25] Traditionally 'irresistible' (cf. ἄμαχος 'unconquered, unconquerable'), but other interpretations are equally possible; "Da das Wort wahrscheinlich schon den Rhapsoden nicht recht verständlich war, wurde es in verschiedenen Zusammenhängen ziemlich willkürlich gebraucht" (FRISK GEW s.v.). See more recently TICHY 1983:315, LEUKART 1986:344.

[26] "expressiv-familiäres Beiwort von Kindern, unbekannter Bed." (FRISK GEW s.v.).

stem vs. aorist stem, cf. the traditional claims [§1] concerning ἑρπετόν vs. ὅρπετον):

2.5.1. forms (mostly full-grade) with comparable present stem

a. παλιν-άγρετος '(that can be) taken back' (A 526), αὐτ-άγρετος '(that can be) self-chosen' (π 148, hMerc. 474 = 489) (: ἀγρέω 'seize')

ἐξ-αίρετος 'taken out'[27] (B 227, δ 643) (: αἱρέω 'seize')

ἀρι-δείκετος 'very renowned' (9x Hom., 6 in a repeated line) (if 'well-received': to δέκομαι 'receive [kindly]', i.e. *ἀρι-δέκετος with metrical lengthening)[28]

πολυ-εύχετος 'much wished-for' (hCer. 165) (: εὔχομαι 'pray')

(-)κλειτός (< *(-)κλεϝετός) '(-)renowned' (κλειτός 10x *Il.* + repetitions; δουρί-κλειτος 8x Hom., formulaic; also Κλεῖτος 3x Hom., cf. the possible κλεῖτος (neut.) 'fame' at Alcm. 122 [= Calame 165]) (: κλέ(ι)ω 'celebrate', mid. κλέομαι[29])

b. ἑρπετόν 'moving/creeping (thing)' (ἑρπετά δ 418) (: ἕρπω 'move, creep')

ἀ-λάμπετος 'not shining' (hHom. 32.5) (: λάμπω 'shine')

[27] More on the meanings of ἐξαίρετος, αὐτάγρετος (and other forms in this section) in §**2.6** directly below.

[28] So goes the standard interpretation, after SCHULZE (recently e.g. HARÐARSON 1993a:62n19, DUNKEL 1995:10); but the alternative analysis *-*deiḱ-eto-* (to **deiḱ-* 'show') is equally plausible, if not for the absence of other evidence for thematic **déiḱ-e/o-* (OLat. *deicō* etc.) in Greek. Such a form could well be preserved, nonetheless, in an isolated epithet of this kind, and the nasal present of Gk. δείκνυμι is in any case secondary. The semantics of this interpretation are treated below (§**2.6.3**), as also a possible comparison with SPi. *deiktam* (n. 46).

[29] On the derivational pattern κλειτός : κλεῖτος (neut.), see NUSSBAUM 1998:525f. As for κλέ(ι)ω, this is often taken as denominative to κλέος; but the presumed **kleu̯es-i̯ō* accounts better for κλείω than for κλέω/κλέομαι, which could still continue a primary thematic **kléu̯-e-(tor)* (thus e.g. CHANTRAINE 1958:346, see FRISK GEW s.v. κλέος for discussion and further references). For more on κλέω/κλέομαι, see Appendix 1.

2.5.2. forms (mostly zero-grade) with comparable aorist stem

ἑλετός 'that can be taken/caught' (I 409[30]) (: ἑλεῖν 'seize')

ἄ-σπετος 'not to be told, unspeakable' (15x *Il.*, 12x *Od.*); cf. *θέσ-σπετος presupposed by Hom. θεσπέσιος 'worthy of being spoken by a god' (> more generally 'divine') (: ἐνισπεῖν 'tell')[31]

νήγρετος 'that cannot be awakened' (ν 74, 80; hVen. 177) (: ἔγρετο 'was awake')

ἄ-σχετος, ἀά-σχετος[32] 'that cannot be restrained' (3x *Il.*, 4x *Od.*); ἀν-σχετός (= Att.-Ion. [Aesch., Hdt. +] ἀνα-σχετός) 'that can be undergone, endured' (β 63)[33] (: σχεῖν 'hold')

Another Homeric form of this sort is presupposed by ἀπερείσιος/ἀπειρέσιος (cf. θεσπέσιος above), to be discussed in §**2.9.4** below.

2.6. preliminary observations on the full-grade type

2.6.1. formal and semantic features

To begin with §**2.5.1**(a) (i.e. items not obviously based on aorist stems, and which are at least partly transitively-valued): the consistent passive meaning of the resulting -ετος forms is particularly noteworthy. All of the forms, moreover, are exclusively either prefixed or compounded (i.e. appear as second members of compounds), with the sole exception of (-)κλειτός, which nevertheless appears regularly in formations like δουρί-κλειτος 'renowned for the spear', ἀγα-κλειτός, πολύ-κλειτος (Pi.+) 'much-renowned' etc., beside simplex κλειτός. Note finally the onomastic

[30] With negative (I 408-9 ἀνδρὸς δὲ ψυχὴ πάλιν ἐλθεῖν οὔτε λεϊστὴ / οὔθ' ἑλετή), cf. ἀν-σχετός (with n. 33) below.

[31] On the meanings of θεσπέσιος and ἄσπετος see FORD 1992:181ff., 192, and for a detailed account of the derivational history of θεσπέσιος, θεσπι-/θέσπις, θέσφατος, θέσκελος (all ultimately based on *θέσ-σπ-ετος) see HAMP 1984:50f.

[32] On the apparent diectasis in ἀάσχετος, as well as the possible equation with YAv. *azgata-*, see §**2.10.1** below.

[33] In both Hom. and Att.-Ion. virtually always with negative, thus '[un]endurable, [in]supportable, [in]tolerable', cf. β 63 οὐ γὰρ ἔτ' ἀνσχετὰ ἔργα.

use of -κλειτός ('Ηράκλειτος etc.), which recalls the near-synonymous (and evidently archaic) traditional epithet ἀρι-δείκετος.[34] Similarly "positive" semantics are also seen in both πολυ-εύχετος and ἐξ-αίρετος ('taken out' apparently in the sense of 'special, extraordinary, choice' [κοῦροι Ἰθάκης δ 643], esp. in the context of booty [γυναῖκες B 227, and common later, Aesch./Hdt.+]; the semantic analysis of these forms is considered in more detail below).

2.6.2. comparison with Indo-Iranian material (Ved. *darśatá-* etc.)

Much the same profile appears in a corresponding Indo-Iranian formation long acknowledged[35] to be cognate with this Greek type, i.e. the Vedic and Avestan forms with "gerundivisch" meaning[36] of the sort RV *darśatá-* 'zu sehen, sehenswert, schön' (Av. *darəsata-*)[37] and *viśvá-darśata-* 'überall sichtbar', *yajatá-* 'verehrungswürdig' (GAv. *yazata-* m. 'Verehrungswürdiger'), *pacatá-* 'gar gekocht', *bharatá-* (onomastic, perh. originally '[*zu unterhalten] zu pflegen' (?)).[38] The formal and semantic agreement between the Greek "ἀριδείκετος" and Vedic "*(-)darśatá-*" types — neither of which is productive in its tradition — plausibly supports the Indo-European age of the formation.[39] It can be noted in passing that material elsewhere in Indo-European sometimes adduced in comparison (most of it appearing already in BRUGMANN 1889, loc. cit.) belongs rather to the sphere of nominal derivation (as discussed in detail by SOLTA 1963),[40] or is otherwise problematic.[41]

---

[34] I am not persuaded by the arguments of DOBIAS-LALOU (1993:112) that Cyren. names in Κλητο-, -κλητα derive not from **kleu̯-eto-*, but from **kl̥h₁-tó-* (to **kelh₁-* 'call'). On onomastic usages of -ετος (Λάμπετος, Ἔχετος etc.) see further SOLTA (1963:172n15), with references.

[35] At least since BRUGMANN 1876:330 (though with an unworkable conception [inherited from BOPP and BENFEY] involving comparison with *-nt-* participles, no longer found in the detailed treatment in 1889:206ff.); see SCHWYZER 1939:502n2 for other early literature.

[36] Thus BRUGMANN 1906:401, WACKERNAGEL-DEBRUNNER 1954:168 (§71), with further references; see now also MAYRHOFER EWAia (Lief. 15:394, s.v. *yajatá-*).

[37] SCHWYZER (1939:502, similarly EULER 1995:140n6) compares Gk. Δέρκετος (e.g. FRASER and MATTHEWS 1987, s.v. [IG v².293.28, Crete]), presumably 'Beau', cf. also δυσδέρκετος 'ugly to look at' (Opp. *C.* 2.607); since -ετο- is not productive in adjectival formations it seems possible that (-)δέρκετος : Ir. **darśata-* form an old word-equation, although the nature of the evidence renders this rather less than certain. (Little is to be made of the theonym DERCETIUS [CIL II 5809, Spain) or the mountain of the same name, on which see HOLDER 1896 s.v.) The tentative suggestion of RISCH (1974:21n20) that Hom. -δεικετος (in ἀριδείκετος) is an alteration of an earlier *-δερκετος is unnecessary.

[38] On the semantics of the last item see MAYRHOFER EWAia (Lief. 14:250, s.v.), and see WACKERNAGEL-DEBRUNNER (loc. cit.) for various problematic forms (recently NARTEN 1993:322 on the possible RV *tanyatá-* 'donnernd'). Apart from plain thematic stems, the formation appears extended to **-i̯e/o-* stems in RV *haryatá-* 'begehrenswert, erwünscht' and AV *paśyatá-* 'sichtbar' (cf. also *tanyatá-*); note further the extension to an athematic nasal-infix stem in YAv. *surunuuata-* 'hörbar' (Y. 57.3, Yt. 3.18, 5.9, following e.g. BARTHOLOMAE 1904:1649, WACKERNAGEL-DEBRUNNER 1954:169, HOFFMANN-FORSSMAN 1996:246; differently SKJÆRVØ 1994:211n27, who attempts to align *surunuuata-* in these passages with the homophonous pres. ptcple. stem appearing in Y. 35.4 *surunuuatascā asurunuuatascā*).

[39] Given the general lack of compounding in most of the Vedic forms, and the "positive" sense of most of them, Greek prefixations as in ἀρι-δείκετος, πολυ-εύχετος could be viewed as secondary reinforcements of an original positive sense, in which case uncompounded κλειτός (NB: precisely 'celebrated', vs. κλυτός originally 'heard (of)', cf. Ved. *śrutá-*) could reflect an archaism.

[40] Here e.g. the forms with *o*-grade of the suffix (Go. *liuhaþ* 'light', OCS *životŭ* 'life' etc.; on this formation see recently LEUKART 1994:169) or with *o*-grade alternating with *e*-grade (Alb. *det* 'depths' < **dheub-eto-* or **dheub-oto-* [HULD 1984:50, 156] beside OSax. *diupitha*), or forms correlated with the instrument suffix **-to-* (thus Li. *lópeta,* OCS *lopata* beside OPr. *lopto* 'shovel', see TOPOROV 1990:359), or the comparison with Celt. superlative *-etos* (Gaul. *decametos* 'tenth' etc., cf. also the British Celt. equative suffix, W. *-hed* etc.; see recently BAMMESBERGER 1995:458n6); on **-o-to-, *-ā-to-, *-o-tā(t)-* etc. see now also HAJNAL 1993a, BEEKES 1994:3f., and somewhat differently (via thematizations of original **-e/ot-*) RASMUSSEN 1994:326f.

[41] E.g. the **nem-eto-* of Celtic (OIr. *nemed* 'hallowed object or being', Gaul. *Nemeto-*, see WATKINS 1981:241ff. = 1994:666ff., 1995:121) is not entirely clear semantically, even granting the traditional derivation from the "reciprocal" root **nem-* 'distribute; take' (Gk. νέμω, Go. *niman* etc.), and could in theory reflect a Caland **nem-et(o)-* (cf. §**2.1**(ii) above) in view of what appear to be Caland (or Caland-like) alternants **ném-es-* (Ved. *nā́mas-*/Av. *nəmah-*, Gk. νέμος, Lat. *nemus*) : **nem-ró-* (Ved. *namrá-*/YAv. *namra.vac-*) : **nem-i-X* (YAv. *nąmii-X*) : **nem-isto-* (GAv. *nąmišta-*), see MAYRHOFER EWAia (Lief. 11:17, s.v. *namrá-*); differently RASMUSSEN 1994:327 via athematic **-et-* (cf. preceding fn.). The Italic participial forms in **-eto-* associated with *ē*-verbs (U. **vufetes**, Lat. *tacitus* etc., for the comparison with Ved. *darśatá-* etc., e.g. BRUGMANN 1906:401) are derivationally unrelated to the **-etó-* formation(s) under consideration (see rather JASANOFF 1978:66f. on **moneto-, *taketo-* etc.). Certain other Italic forms are derivationally and etymologically unclear, e.g. the possible **u̯ep-eto-/*u̯op-eto-* in SPi. *vepet-*, Ven. *.e.kvopetaris* (KLINGENSCHMITT 1992:98n19, cf. EICHNER 1993:65n58 ["erscheint mir plausibel"]) — an unorthodox interpretation of both forms (e.g. SPi. *vepet-/lepet-* usually placed with Gk. λέπας 'crag', Lat. *lapid-* 'stone') and with uncertain root etymology in any case (KLINGENSCHMITT tentatively compares Skt. *vápra-* 'Erdaufwurf'); but cf. Appendix

2.6.3. anomalousness of -άγρετος; semantic analysis of other forms

The comparison of παλινάγρετος etc. (§**2.5**(i)a.) with Ved. *darśatá-* etc. leads to a reconsideration of the semantics of the Greek forms, several of which emerge as problematic. Indeed, -άγρετος '(that can be) taken' itself seems to be anomalous, as compared to the remaining items: it contains a "potential" meaning like that found with ἑλετός 'that can be taken' etc. (§**2.5**(ii)), and does not partake of the "positive" connotation evident in the others ('choice', 'renowned', 'wished for', 'celebrated'); further discussion of the form and meaning of -άγρετος is reserved for §**2.14** below. As for ἐξαίρετος: the traditional conception (lit. 'taken out, selected, chosen' > 'choice, select') is certainly possible; but a semantic interpretation more closely comparable to Ved. *darśatá-* 'worthy of being seen, good to look at', *yajatá-* 'worthy of (being) worship(ped)' etc. provides a simpler and more appealing account, i.e. 'worth being taken out, good to take' > 'choice' (booty etc.).[42] On the formal side, we may note in passing that both -άγρετος (: ἀγρέω) and -αίρετος (: αἱρέω) show an anomalous derivational pattern, vis-à-vis both ἀριδείκετος etc. and Ved. *darśatá-* etc., all of which are found beside plain thematic verb stems (vs. ἀγρέω, αἱρέω)[43]; this problem is most conveniently discussed together with the unexpected meaning of -άγρετος (§**2.14**). Like (ἐξ)αίρετος, both (πολυ)εύχετος and (ἀγα)κλειτός lend themselves readily to reanalysis in terms of the type *darśatá-*, i.e. '(well) worth being asked for, good to ask for' (> 'much-desired'), '(well) worth hearing about' (> 'celebrated'). The hitherto controversial semantic interpretation of (ἀρι)δείκετος, finally, can perhaps be

3 on some other Italic **-eto-* forms. Left aside here, finally, are theories according to which *tó*-participles belonging to stative formations in **-eh₁-* might have developed allomorphs with the shape **-h₁-tó-*, as recently claimed for Lat. *-idus* (OLSEN 1994) and for certain Tocharian data (RINGE 1996:57f.). While such a **-h₁-tó-* could yield Gk. -ετος under the right circumstances, supportive correlations between existing -ετος forms and Greek avatars of stative **-eh₁-* appear to be entirely lacking.

[42] Apart from post-Homeric uses of ἐξαίρετος with reference to booty, at least some other early usages generally thought to mean simply 'chosen' can also be interpreted in this way: thus when Pindar refers to himself (fr. 61.18-19) as ἐξαίρετο[ν] κάρυκα σοφῶν ἐπέων, he is not merely the Muse's 'chosen messenger of wise words' (thus recently SPISAK 1994:293), but more pointedly the messenger who is 'worthy of being chosen', 'good to choose' (from various points of view, esp. the Muse's).

[43] CHANTRAINE (1958:347) notes the difference in formation for αἱρέω vs. ἐξαίρετος ("αἱρεῖ ..., αἱρήσει ..., mais ἐξαίρετοι (B 228) est obscur").

clarified by applying the same conception. The traditional interpretation via metrically-lengthened *ἀρι-δέκετος (: δέχομαι) (cf. §**2.5**(i)a. above, with n. 28) arrives at a base meaning 'sehr gegrüßt'.[44] In view of the semantic value of *darśatá-* etc., this can at least be adjusted to something like 'well worth being welcomed/received/greeted' > 'well known, highly respected'. This development, however, is rather less natural than that suggested by TICHY (1979:175, arguing for **deiḱ-*), namely 'sehr zeigenswert > sehr beachtenswert, hoch angesehen'; although TICHY does not mention the comparison, meanings of the sort 'sehr zeigenswert, sehr beachtenswert' correspond precisely to what would be expected on the basis of Ved. *darśatá-* etc. A final point concerns the accompanying genitive that appears in all but one of the attestations, including the formulaic πάντων ἀριδείκετε λαῶν#.[45] Although both FORSSMAN and TICHY take this to be a genitive of agent, there may be grounds to prefer the more traditional interpretation (cf. SCHWYZER-DEBRUNNER 1950:116, CHANTRAINE 1953:60) as adnominal partitive genitive of the type δῖα γυναικῶν, δῖα θεάων etc., comparable to the partitive genitive with superlative (ἄριστον / ἀνδρῶν ἠδὲ θεῶν T 95-6 etc.), on which see further §**2.10.1** and n. 68 below.[46]

2.6.4. anomalousness of ἑρπετόν and ἀλάμπετος

In contrast to ἀριδείκετος etc., ἑρπετόν (a hapax in the *Odyssey*) falls outside this pattern. The adjective ('moving/creeping') that underlies the substantivization ('moving/creeping [thing]') is based on an intransitive, and so amounts to a kind of quasi-participle with active diathesis (vs. παλιν-άγρετος etc., as well as Ved. *darśatá-* etc.). The form does not appear with prefix or as a second member of compounds, plays almost no

[44] FORSSMAN (1978:20) arrives at the same meaning via a Nebenbedeutung 'grüßen' of **deiḱ-* itself, as in δεικνύμενος and δεικανάομαι; see, however, the arguments against this approach by HARÐARSON (1993a:62n19), who favors the traditional *ἀρι-δέκετος.

[45] θ 382, 401, ι 2, λ 355, 378, ν 38, similarly Ξ 320 (πάντων ἀριδείκετον ἀνδρῶν#), Λ 248 (Κόων ἀριδείκετος ἀνδρῶν#); further πάντων ἀριδείκετ' ἀνάκτῶν# Hes. *Th.* 543. On the formulaic nature of this material, and its relationship with other formulas, see WATKINS 1976b:438 = 1994:238.

[46] Here may be added, with the usual disclaimers regarding the indeterminacies associated with the South Picene material, the speculation that *deiktam* (CH. 1) reflects a syncopated (Ital.) **deik-etā,* in formation ultimately comparable to (ἀρι)δείκετος (cf. MARINETTI's observation [1985:115] on the unexpected full grade in *deiktam*). Cf. also n. 198 below.

role in onomastic formations or epithets,[47] and has no discernible "positive" sense. Rather similar is the second item in §**2.5**(i)b., i.e. ἀ-λάμπετος: though it does have a negative prefix (like most of the items in §**2.5**(ii), as discussed directly below), the basis is intransitive, and the form amounts to a quasi-participle '[not] shining', semantically comparable to ἑρπετόν 'moving/creeping (thing)'.[48]

2.7. preliminary observations on the zero-grade type

The forms that seem, on the face of it, to be aorist-based (§**2.5**(ii)) are again passively-valued, but they incorporate an additional semantic feature ('[un-]X-able') of the type already noted above (§**1**) in connection with ἑλετός, and to which I return below (§§**2.10.2**, **2.11**). All of the forms appear either with negative prefix **ŋ-* (thus 'not to be X-ed, that cannot be X-ed'), or, in the case of ἀνσχετός and ἑλετός, as "virtual negatives" with οὐ; and all forms except ἑλετός are built to what appear to be thematic aorist stems with canonical zero grade. We can now anticipate briefly part of the solution to the problem concerning Aeol. ὄρπετον: the word clearly has no formal or functional connection to this archaic core of material with zero-grade root and **-eto-* suffix. But before attempting to provide, in §**3**, a satisfactory account of the vocalism of ὄρπετον vis-à-vis ἑρπετόν, the remaining sub-sections of §**2** explore in more detail **-eto-* forms in Greek and Indo-European, with special attention to the zero-grade type.

2.8. ἀκάματος etc. as verbal adjectives in **-eto-* (i.e. not based on action nouns)

The consistent use of negative prefix in forms like ἄσχετος and ἄσπετος, together with their characteristic semantic force ('un-X-able'), strongly suggests that the same analysis should indeed be extended to such "WAANDERS-type" forms as ἀκάματος and ἀθάνατος, although the morphological analysis proposed by RUIJGH (cf. §**2.3**) seems unlikely to be correct. To begin with, the idea that κάματος and θάνατος are "noms d'action" in **-eto-* cannot be supported with reference to νιφετός (cf. §**2.1**(i); note also the difference in accent, together with the undesirable accented zero grade of κάματος etc., more on which below, §**2.18**).[49] Nor is it likely that, just as νήγρετος, according to RUIJGH, presupposes an action noun **ἔγρετος (or **ἐγρετός), the other negatives ἄσπετος and ἄσχετος likewise presuppose corresponding action nouns *σπέτος and *σχέτος; like **ἔγρετος, such forms are entirely unattested.[50] The salient morphological fact about ἄσπετος, ἄσχετος, νήγρετος, ἀκάματος and ἀθάνατος — apart from their prefixation — is that all of these forms are either transparently (in the case of ἄσπετος, ἄσχετος, νήγρετος) or probably (in the case of ἀκάματος and ἀθάνατος) based on zero-grade stems associated with verbal roots, in suffixed formations with adjectival meaning; they therefore most likely reflect some sort of verbal adjective.[51] Although the zero-grade

[47] Early Cret. 'Ερπετιδαμο (SEG 26.1050) is "un hapax absolu" which remains "intraduisible" (MASSON 1976:171), despite its relatively clear formation (on which see now DUNKEL 1992:215, 221).

[48] On Λαμπετ-, λαμπετόωντι see §**2.13** below.

[49] While WAANDERS is not explicit about the accentuation of these alleged action nouns, RUIJGH seems clearly to assume end stress (e.g. 1980:195n33 on **bhə₂-etó-s*), but does not explain the accentuation of θάνατος and κάματος.

[50] Cf. rather ἔγερσις (Emped.+) 'a waking', and ἕξις (Pl., Hippoc.+), σχέσις (Aesch.+), -σχεσίη (Hom.+) (all roughly 'a holding' > 'condition' etc.). As for ἀνώμοτος (cf. §**2.3**), its meaning (simply 'unsworn' in various senses, esp. 'not bound by oath'; not 'unswearable' vel sim.) suggests that it does not belong here in any case. The form (not attested until Euripides) is presumably of the type ἀνώνυμος (for older νώνυμος), ἀνωφελής (for *νωφελής, cf. Myc. *no-pe-re-a₂*), replacing a *νώμοτος; it seems simplest to take this as the (regular or analogical) result of a (negated) *tó*-participle **ŋ̥-h₃m̥h₃-to-*, for which cf. RV **āntá-* 'geschworen' (in *āntaka-drúh-*), MS+ *sám-ānta-* 'das gemeinsam Beschworene' (MAYRHOFER EWAia, Lief. 2:97, s.v. *AM*[I]). WAANDERS (1974:5f.) adduces, as further possible examples of this alleged action noun type, two additional forms that must have zero-grade roots before the suffix. Neither is convincing: πότος (m.) 'drinking, carousing, drinking-bout' (Cratin.+), rather than reflecting an archaic action noun **ph₃-eto-*, is more likely to be a secondary τόμος-type concretization beside the verbal adjective (< **ph₃-tó-*), substantivized in Hom.+ ποτόν 'drink' (cf. MEIER-BRÜGGER 1989:139), and appearing as such in ποτός 'drunk, for drinking' (trag., Thuc.+). As for the gloss πάτος· τροφή (Schol. Ar. *Pl.* 1185, allegedly an action noun **ph₂-eto-* to the root of Lat. *pāscō* etc.), this could easily, as WAANDERS himself admits, be a "Rückbildung" of one sort or another (thus FRISK GEW s.v. πατέομαι), depending on its gender (which is after all unknown), or it could well be the same word as πάτος 'path' (see LSJ s.v.).

[51] For **-eto-* forms (both full-grade and zero-grade) as essentially verbal adjectives, see also JOSEPH and KLEIN 1981:299, LEUKART 1994 passim. I return to κάματος and θάνατος in §**2.18**.

stems are in these cases synchronically comparable to thematic aorist stems, verbal adjectives would be root formations; one may thus doubt, in principle, the derivational nature of the correspondence with thematic aorists, especially given evidence presented in the next section.

2.9. forms lacking correlation with thematic aorist

In contrast with synchronically relatable sets like (ἀ)θάνατος : θανεῖν, other isolated Greek forms of the ἀθάνατος type show no correlation with thematic aorist stems as such:

2.9.1. *ἀκάρατος

According to NUSSBAUM's attractive analysis (1986:68), ἀκήρατος (Hom.+), glossed by NUSSBAUM as 'unharmed', is a remodeling of an *ἀκάρατος (to the *$\acute{k}erh_2$- of RV *śṛṇā́ti* 'smashes', Gk. κεραΐζω 'slaughter' etc.) after ἀκήριος 'id.' (Hom.+).[52] NUSSBAUM compares the zero-grade *tó*-participle seen in RV *śūrtá-* 'smashed', Av. *asarəta-* 'unbroken', evidently following the traditional analysis of (ἀ)κάματος, (ἀ)θάνατος et sim. as phonological variants of Dor. κμᾱτός, θνᾱτός etc. (cf. §**2.2** above); but comparison with ἄσχετος etc. suggests the alternative conception *η-$\acute{k}rh_2$-*eto*-.[53] Greek otherwise attests no zero grade to this root, all forms (aor. κεραΐσαι etc.) being based on the full grade seen in κεραΐζω. There is thus no justification for positing an old thematic aorist *$\acute{k}rh_2$-*é/ó*-, which nothing else in Greek (or elsewhere) supports directly. In view of the close derivational association generally posited between the (weak stem of the) athematic root aorist and the thematic aorist,[54] one could point to the root aorist seen in AV *aśarīt,* OIr. *do-cer* 'fell', and imagine that the *$\acute{k}rh_2$-*e*-apparently implied by *ἀκάρατος (cf. ἄσχετος : σχε/ο- etc.) continues directly a trace of the weak stem of the old root aorist, or else a new thematic aorist derived from it, both of which otherwise fail to surface as such in Greek. But descriptively speaking, one simply finds what appear to be parallel verbal adjectives *$\acute{k}rh_2$-*tó*- (RV *śūrtá-* [cf. also MS *-śīrta-*, AV+ *śīrṇá-*], Av. *asarəta-*) beside *-$\acute{k}rh_2$-*eto*- (*ἀκάρατος), recovering the pattern seen in pairs like κμᾱτός : ἀκάματος and θνᾱτός : ἀθάνατος, according to the interpretation of these forms that does not assume a unitary suffix *-*tó*-.

2.9.2. ἄατος

Another isolated form for which a similar analysis seems attractive is Hom. ἄατος 'insatiable' (not noted in WAANDERS' list of "[w]ords which probably contained the *-*eto-/-eteh*$_2$- suffix, preceded by a laryngeal", 1974:5f.). In view of the characteristic semantic value ('not to be sated'), the form could reflect *η-*sh*$_2$-*eto*-, rather than the *η-*sh*$_2$-*to*- generally assumed (which should mean, at least part of the time, simply 'not sated'), on the basis of a range of cognates derived from (or implying) zero-grade *sh*$_2$-*tó*- (Go. *saþs,* Lat. *satis* etc.) or full-grade *seh*$_2$-*to*- (Go. *soþa,* OIr. *sá(i)th,* Li. *sotùs* etc.) and their derivatives (*sh*$_2$-*ti̯o*- etc.), meaning 'full, sated', 'one's fill', etc. (see WATKINS 1979 = 1994:191ff. on the set, and specifically on OIr. *saithe* 'swarm' < *'satiety').[55] One could again, as with *ἀκάρατος, point to an archaic-looking athematic root aorist[56] (Hom. ἄμεναι, subj. ἔωμεν, beside *s*-aor. ἆσαι); nevertheless, as also with *ἀκάρατος, there is no actual evidence for a thematic aorist as such. Thus, as for *ἀκάρατος : *$\acute{k}rh_2$-*tó*-, it seems preferable to consider ἄατος beside *sh*$_2$-*tó*- as parallel verbal adjectives built to the verbal root *seh*$_2$- 'sate; sate oneself' (originally athematic, as in Toch. B infin. *soytsi,* 3pl. *soyeṃ;*

[52] Hom. ἀκήρατος is not, in any case, "from κηραίνω" [trag.+] (thus JANKO 1992:282, ad O 494-9).

[53] The meaning 'unharmed' (instead of, say, 'that cannot be harmed') appears clearly in O 498 and ρ 532, and could also be ascribed to the influence of ἀκήριος 'unharmed'. But a meaning 'pure' appears in the third Homeric attestation (Ω 303, with ὕδωρ), and is well-attested after Homer in similar usages ('undefiled, inviolate, incorruptible' etc.). Although NUSSBAUM (1986:68n55) rightly points out that such meanings could show influence from similar forms derived from κεράννυμι 'mix', a sense 'pure, inviolate etc.' could continue the expected meaning of an original *η-$\acute{k}rh_2$-*eto*-, i.e. 'that cannot be broken, destroyed' (> 'that cannot be broken down' [i.e. 'pure'], 'that cannot be corrupted', etc.).

[54] E.g. CHANTRAINE 1961:172, RIX 1976:215f., HARÐARSON 1993a:155ff.

[55] If Hom. ἄητος (θάρσος ἄητον Φ 395) does indeed belong here (as suggested by glosses of the sort ἄητοι· ἀκόρεστοι, ἄπληστοι Hsch., see FRISK GEW s.v.), the form would not be a variant of ἄατος with some sort of "secondary lengthening" of the second vowel (thus FRISK), but rather the regular reflex of a *η-*seh*$_2$-*to*- 'without one's fill' (cf. Go. *soþa* etc.), distinct from ἄατος < *η-*sh*$_2$-*eto*- 'not sate-able'.

[56] Or perhaps, with HARÐARSON (1993a:207), actually an "*-*eh*$_1$- aorist" *sh$_2$-*eh*$_1$-, in view of the intransitive meaning.

renewed as *sh_2-i̯e/o-* or *sh_2-ei̯e/o-* in Greek, Hes. *Sc.* 101 ἄεται/ἄαται, ἆται· πληροῦται Hsch.).[57]

2.9.3. ἄφατος

Although not isolated in the same sense as the examples above, a "latent" form of this type may appear in ἄφατος 'unsaid; unspeakable', otherwise assumed to continue the plain *tó*-participle as in φατός < *bhh_2-tó-*. In the meaning 'unsaid, unnamed', ἄφατος is indeed best taken as a negative pendant to φατός, and this usage is clearly old, although rare (e.g. Hes. *Op.* 3 ἄνδρες ... ἄφατοι τε φατοί τε).[58] Far more common is the meaning 'unspeakable, ineffable' (likewise old: Hes. *Sc.* 230, Pi., trag.+), which could continue a parallel *$*n̥-bhh_2$-eto-;* such a form would have fallen together with *$*n̥-bhh_2$-to-*, thereby leading, in effect, to homonyms "ἄφατος[1]" 'unsaid' and "ἄφατος[2]" 'unspeakable'.[59] Here again, as with *ἀκάρατος and ἄατος, there is no correlation with a thematic aorist.

2.9.4. *ἀπέρετος

Unambiguous phonologically (i.e. not a "WAANDERS-type" form) is Hom. ἀπερείσιος/ἀπειρέσιος 'boundless, limitless', generally agreed to reflect metrically-lengthened variants of an adj. *ἀπερέσιος, presupposing a form *ἀ-πέρ-ετος (cf. ἀμβρόσιος : ἄμβροτος), itself based on πείρω 'penetrate, pierce' (*s*-aor. πεῖραι). Although the general similarity with the type ἄσχετος etc. is undeniable, as is the absence of any correlation with a thematic aorist, this formation shows several noteworthy features. Semantically, *ἀ-πέρ-ετος is easiest to derive from 'un-traverse-able, that cannot be traveled (across, through)', which displays a striking semantic distance from πείρω itself, but considerable similarity with related *o*-grade formations (in both Gk. and elsewhere: Hom.+ πόρος 'ford, passage', Pi.+ ἄπορος 'trackless, impassable', Go. *faran* 'travel' etc.). Thus the formation of *ἀ-πέρ-ετος is likely to go back to a relatively remote period, and to be derivationally independent from πείρω. Also noteworthy is the full-grade form of the root — unparalleled for the negative type ἄσχετος, ἄσπετος etc. — and the absence of (at least unambiguous reflexes of) a parallel zero-grade *tó*-participle **$p_r̥$-tó-* (see below [n. 66] on Lat. *porta*). In theory, an original canonic *$*n̥-pr-etos$* > (Pr.-Gk.) *$*ápretos$* (cf. ἄσχετος etc.) could have been remodeled to *$*apéretos$* after pres. *$*pér-i̯e-$* (> πείρω), aor. *$*pér-s-$* (> πεῖραι), at a time when this still meant something like *'travel'. It is nevertheless possible (and perhaps more likely, given the evident antiquity of *ἀ-πέρ-ετος) that the full grade was there from the start; this might in fact be expected, since the verb may continue an athematic *$*pór-/*pér-$* (with acrostatic inflection), of the type elucidated by JASANOFF (1979 and later publications, see recently 1994:158ff., 1998:304f.). Verbs of this class seem in general not to have had old zero-grade *tó*-participles (cf. above on the lack of a parallel **$p_r̥$-tó-*), although the degree to which this behavior may be systematic is difficult to judge, given the restricted nature of the category. Thus, apart from cases in which root-structure considerations would disfavor the formation of a zero-grade *tó*-participle in any case (e.g. *$*bhódh(H)-/*bhédh(H)-$* 'dig': OCS *bodǫ* 'stab' etc., cf. Lat. *fossus* after pres. *fodiō*), the other six items judged to be relatively clear-cut members of this class by JASANOFF (1994:158f.) either show *tó*-participles that are relatively late formations (in most cases clearly einzelsprachlich) with full-grade root vocalism, or lack such forms altogether (although zero-grade forms of other sorts are certainly attested for some of these roots):

*$*mólh_2$-/*mélh_2$-* 'grind' (Go. *malan* etc.)[60] : *$*mḷh_2$-tó-* (Celt. and Ba. only: W. *blawd,* OCo. *blot* 'flour' etc., beside "neo-anit" *$*mḷ$-to-* in OIr.

[57] See HARÐARSON loc. cit. (preceding fn.) for Gk. ἄεται etc. A possible alternative analysis of ἄατος as *$*-sh_2$-et(o)-*, i.e. with Caland deadjectival *$*-et(o)-$* (cf. §**2.1**(ii) above), is not attractive, since the Caland set seen in ἄδος Λ 88 (if neut.) : ἀδινός : ἀδρός (cf. also M. PETERS ad IC 33.G30 [1987, 237f.] on Hom. ἀδηκότες and the possibility of a stative *$*hăd-ē-$*) is limited to the Greek *d*-extended stem *$*sh_2$-d-*, and is likely to be a Greek innovation in any case (perhaps ultimately based on ἄδην/ἄδην 'sufficiently' [Hom.+], which, as a frozen acc. of a *ἄδη, would not itself be particularly appropriate to an old Caland system).

[58] On the Hesiod passage (likewise with ῥητοί τ' ἄρρητοί τε in the next line) and the antiquity of the figure "Argument plus Negated Argument" see WATKINS 1995:44 (with reference to HUMBACH 1959), 98f., 208f. With -φατός continuing a plain *tó*-participle: also παλαίφατος 'spoken long ago, proverbial'.

[59] RUIJGH (1988:452n25) arrives at a similar conception of ἄφατος (< *$*n̥-phə_2$-eto-*, in his pre-Gk. notation), but operates, once again, with an otherwise nonexistent "nom d'action" **φάτος < *$*phə_2$-eto-*. The possibility that traces of *$*(n̥-)bhh_2$-eto-* may be preserved in Latin is discussed below (§**2.15**).

[60] On the laryngeal color see JASANOFF 1994:158n15.

-mleth 'ground', on which see McCONE 1991:106; Li. *mĩltai* 'meal'),[61] but perhaps also **melh₂-eto-* (Lat. *molitum,* Fal. *melatom* or *meletom,* cf. JOSEPH and KLEIN 1981, SIHLER 1995:629; less clearly U. **maletu** vis-à-vis **kumates**/*comatir,* cf. MEISER 1986:177, 211f.);

**ḱónk-/[*ḱénk-][62]* 'hang' (Go. *hahan* etc.) : ***ḱn̥k-tó-* (cf. Skt. *śaṅkita-* [Ep.+], Lat. *cūnctārī* 'hesitate' < iterative **concitārī* [cf. LEUMANN 1977:96]);

**ghróbh-/*ghrébh-* 'dig' (Go. *graban* etc.) : ***ghr̥bh-tó-;*[63]

**bhór-/*bhér-* 'hit' (OCS *borjǫ* etc.) : ***bhr̥-tó-* (unless Li. *bùrtai* 'lot, magic', *bùrti* 'conjure' [allegedly from a meaning 'notch'] belongs here, and reflects something old; note also Lat. *feriō* with suppletive perfectum);

**spónd-/*spénd-* 'libate' (Hitt. *išpanti* etc.) : ***spn̥d-tó-* (cf. Lat. *spōnsus* with vocalism of pres. and/or perf. *(-)spond-,* on which see NUSSBAUM 1994:181n64; similarly U. *spefa* 'offering cake' with *e*-grade **spend-tā* after a presumed pres. *spend-* [UNTERMANN 1993:315f.], if it belongs here at all);[64]

**ǵhóngh-/*ǵhéngh-* 'stride' (Go. *gaggan* etc.) : ***ǵhn̥gh-tó-* (but cf. **[ǵh]engh-et(-)o-* in Gaul. *Cingeto-,* assuming an "Anlautdublette" in this and OIr. *cingid* 'steps', *cing* (gen. *cinged*) 'hero' etc., as e.g. IEW 439).

It may be, then, that such verbs resorted to full-grade verbal adjectives with some regularity, perhaps even with a tendency toward **-etó-* (cf. **melh₂-etó-, *ḱonk-etó-* underlying Skt. *śaṅkita-* and **ḱonk-et-āi̯e/o-* in Lat. *cūnctārī* [cf. §**2.13**], and possibly **[ǵh]engh-etó-* in Celtic[65]), in which

[61] On this Celt.-Ba. isogloss: SCHMIDT 1985:26. Note also **mḷh₂-nó-* (AV *mūrṇá-*), but see MEISER 1993:286n34 (with reference to **pl̥h₁-nó-*) for a possible semantic differentiation between **-nó-* and **-tó-* verbal adjectives.

[62] See MELCHERT 1994:139 on the absence of *e*-grade forms.

[63] Ved. *gr̥bhītá-* rather to **ghrebhH-* 'seize'.

[64] Contrast U. **spafu** (Tab. Ig. Va20, **spafu fust**), which could in theory reflect a zero-grade **spn̥d-tó-* (thus MEISER 1986:70); but the form is probably to be interpreted in an entirely different way (error for **spa<t>u fust**), as persuasively argued by UNTERMANN (1993:316f.).

[65] Differently RASMUSSEN (1994:327, cf. nn. 40, 41 above), in terms of an archaic *"s/t-*stem" **ghéngh-es/t-* (cf. Ved. *jáṃhas-*). Beside *Cingeto-* note also Gaul. *Orgeto-,* belonging with OIr. *orcaid* 'slays' (verbal adj. *-ort*), again with unexpected *o*-grade, whether this belongs with Arm. *harkanem* 'strike' or Hitt. *ḫark-* 'perish' (see KLINGENSCHMITT 1982:214ff., esp. 216 on the *o*-grade).

case the full grade of **ἀ-πέρ-ετο-* to **pór-/*pér-,* while descriptively anomalous from the point of view of ἄσχετος et al., is a significant and predictable feature from a voreinzelsprachlich point of view.[66]

Finally, the isolated Hom. ἀᾱ́ατος and ἀᾱ́ᾱτος may well continue **-eto-* formations; but these forms pose complex difficulties best relegated to an Appendix (2).

2.10. on the antiquity of the zero-grade type

The above discussion (especially concerning isolated forms) suggests that from a historical point of view, the zero-grade **n̥-R(ø)-eto-* type (ἄσχετος etc.) has as much claim to antiquity as the full-grade ἀριδείκετος type, despite the traditional comparison of the latter with a comparable Indo-Iranian formation, as already noted. The relative antiquity of the zero-grade type can be further supported by the considerations in the following sub-sections.

2.10.1. ἄσχετος : Av. *azgata-* (?); ἀάσχετος

A possible candidate for an actual word-equation involves a zero-grade form, namely Gk. ἄσχετος (§**2.5.2**) : YAv. *azgata-* 'invincible' (Yt. 13.107, *yō azgatō*[67] *arəziiaiiå* 'the one who is invincible in [lit. of][68] battle') < **n̥-sǵh-eto-* and/or **n̥-sgh-eto-*. Although the Avestan form goes unmentioned by BOISACQ, FRISK (GEW), and CHANTRAINE (DELG), the equation was asserted earlier by BARTHOLOMAE (1904:228), BRUGMANN (1906:401), and SCHWYZER (1939:432), and has been taken up more recently by RISCH (1974:21, with query), SIHLER (1995:628), RASMUSSEN (1995:97, "Relikttyp") and (apparently) BADER (1997:36n35). There is, however, the not inconsiderable difficulty that the velar of IIr. **sagh-* (in

[66] If this is correct, then beside the zero-grade **pr̥-tu-* of Lat. *portus* 'door; harbor', OHG *furt* 'ford', Av. *pərətu-* 'bridge' etc., the otherwise ambiguous Lat. *portāre* 'transport' and *porta* 'gate' (**pr̥-t-* or **por-t-*) should be taken to continue *o*-grade **por-to-,* or conceivably even **por-etó-* (> **por-et-āi̯e/o-*); cf. U. *peretom* (**per-eto-* ?), §**2.12** below, and esp. Appendix 3 on Lat. *porta/portāre.*

[67] F_1, with no variants of any consequence.

[68] Note the adnominal genitive with *azgatō,* cf. πάντων ἀριδείκετε λαῶν (§**2.6.3**) and further §**2.11** below.

Ved. *sagh-* 'ertragen, vertragen' and, apparently, Av. *azgata-*) does not match the palatal of IIr. **saǰh-* (Ved. *sah-* 'prevail', Av. *hazah-* 'power' etc.), such that, despite earlier assumptions, the two roots are no longer regarded as mere variants (see MAYRHOFER EWAia, Lief. 19:686). In view of the attractiveness of the semantic match (more on which below), one could attempt to maintain the equation, for example, by positing a secondary development of IIr. **azǰhata-* to **azghata-* in Avestan, or by claiming that the isolated Homeric epithets ἄσχετος and ἀάσχετος in fact derive (at least in part) from an IE **segh-* (as in *azgata-*), and not the **segʰ-* of ἔχω etc., as ordinarily assumed. In favor of the second option are the facts that Av. *azgata-* (and thus, in principle, also ἄσχετος) can be explained on the basis of an original sense *'unerträglich' (see MAYRHOFER loc. cit., with references) — cf. the meaning of Ved. *sagh-* — and that ἀάσχετος (and once also ἄσχετος) actually means something quite similar. Given the various indeterminacies, however, it seems most prudent neither to insist on the equation nor to deny it outright. At worst, the Iranian and Greek forms would be unrelated — but nevertheless isolated and archaic — zero-grade formations in **-eto-*.

If Hom. ἄσχετος/ἀάσχετος do not reflect a conflation of IE **segh-* and **segʰ-*, one can at least say that the behavior of both forms in the text of Homer tends to support the antiquity of the formation, assuming a basis in **segʰ-* 'prevail', as a result of the following considerations. The difficult "distraction" in ἀάσχετος (E 892, Ω 708) has been variously explained;[69] despite MOORHOUSE ("not convincing" [1959:49], without further comment), the most attractive account is that of SCHULZE (1892:495n1), recently defended by MÜHLESTEIN (1987:235). According to SCHULZE, ἀάσχετος continues **n̥-sm̥-sgʰ-e-to-*, and means precisely 'non con-tin-endus, un-con-tain-able' — hence the usage at Ω 708 (referring to the Trojans mourning the death of Hector) πάντας γὰρ ἀάσχετον ἵκετο πένθος "car un chagrin irrépressible les avait frappés" (MÜHLESTEIN). Pace MÜHLESTEIN, the second attestation of ἀάσχετος does not directly support this interpretation, but in order to understand this passage it is first necessary to examine the behavior of ἄσχετος (not treated in detail by MÜHLESTEIN). In all instances but one, the word appears in the formulaic phrase μένος ἄσχετος, always at the penthemimeral caesura, including a thrice-repeated vocative referring to Telemachus as a fixed epithet (each time uttered by Antinous):

[69] See CHANTRAINE 1958:83 (with references in n. 1) and DELG s.v. ἔχω; detailed survey in MOORHOUSE 1959:49f.

... μένος ἄσχετοι υἷες Ἀχαιῶν# (γ 104)
... μένος ἄσχετος ... Κύκλωψ# (υ 19)
#Τηλέμαχ' ὑψαγόρη, μένος ἄσχετε, ... (β 85, 303 = ρ 406)

Thus ἄσχετος (μένος) means precisely 'irresistible, invincible, indomitable (in spirit/mental power)' < **n̥-sgʰ-eto-*, as applied especially to warriors (υἷες Ἀχαιῶν) and (aspiring) heroes (Telemachus, and — perhaps with some irony — the Cyclops).[70] This is in contrast to the attributive usage ἀάσχετον πένθος 'irrepressible/uncontainable grief' < **n̥-sm̥-sgʰ-eto-*, to which can be compared the almost identical negative sequence (Hom.+) οὐκ ἀν(α)σχετός 'not endurable' (**§2.5.2** above with n. 33). Nevertheless, as MÜHLESTEIN observes, "Le poète choisit l'un ou l'autre selon les besoins du mètre ... Sans doute lui déjà les prenait pour deux variantes d'un seul mot". Hence the second attestation of ἀάσχετος is an improper conflation of ἀάσχετον πένθος with the μένος ἄσχετος formula (E 892 μητρὸς τοι μένος ἐστὶν ἀάσχετον), while the remaining attestation of ἄσχετος is an improper conflation of the μένος ἄσχετος formula with ἀάσχετον πένθος (Π 548-9 ... Τρῶας ... λάβε πένθος / ἄσχετον); in both cases, and in these cases only, the "incorrect" ἀάσχετον/ἄσχετον is buttressed by the phrase οὐκ ἐπιεικτόν 'invincible, unyielding' (itself partly ambiguous, on which see MÜHLESTEIN for details; more recently WATKINS 1995:417). The Homeric data, then, indicate that while the compounds ἀάσχετος and (οὐκ) ἀν(α)σχετός show meanings most easily relatable to σχε/o- 'hold, restrain etc.', it is precisely the evidently archaic formula μένος ἄσχετος that can be claimed to preserve the inherited meaning of IE **segʰ-* 'einen im Kampf überwältigen, durch Kampf über etwas Meister werden' still attested in Mycenaean[71] (in these terms MEIER[-BRÜGGER] 1976, cf. WATKINS 1995:414n2).

2.10.2. on the "potential" meaning of (zero-grade) **-eto-*

It is convenient, at this point, to comment on the type of meaning shown by the zero-grade **-eto-* forms. As is well known, many Greek reflexes of **-tó-* verbal adjectives incorporate, at least optionally, a so-called "potential" meaning, especially characteristic with negative compounds:

[70] Cf. similarly ταύρου ἐπιβρύχεω μένος ἄσχετου ὅσσαν ἀγαύρου (Hes. *Th.* 832).
[71] There possibly already as an archaism, on which see LEUKART 1994:39.

thus ἄρρητος both 'unsaid' and 'unspeakable', etc.[72] Even if some rare instances seem to require such a sense already for the protolanguage (e.g. **n̥-gʷʰḫi-to-* 'imperishable'),[73] this type of meaning is not ordinarily considered part of the semantic make-up of IE **-tó-*, which is normally assumed to have an "original lack of voice differentiation", with "a tendency to restrict the formation to passive use" that surfaces "[i]n the later history of the languages" (to quote SZEMERÉNYI 1996:323). Thus Lat. *invīsus* essentially means 'unseen' (not 'invisible', except as an accessory or contextual meaning, although such meanings can be relatively common in some cases: e.g. *invictus* 'unconquered', but also 'invincible'), and active usage is restricted to deponent participles and a few relic forms of the type *īnfēnsus* 'hostile' (on which see SIHLER 1995:622). Nevertheless, the presence of this passive potential meaning for both ἄσχετος and Av. *azgata-* (and this meaning exclusively for ἄσχετος), as well as the exclusive appearance of this meaning in comparable zero-grade forms, most of which are isolated within Greek (ἄσπετος, νήγρετος, ἄατος, similarly ἀκάματος, ἀθάνατος, *ἀ-πέρ-ετος), may point to the archaic status of this sense for **n̥-R(ø)-eto-* formations generally. Although this "potential" meaning is a natural enough development that could have arisen on its own in Greek *tó*-participles, an inherited core of **n̥-R(ø)-eto-* forms with such meaning ('that cannot be X-ed, un-X-able' etc.) could have contributed to the spread of such interpretations among similar forms based on *tó*-participles, including non-negated ones, especially in view of ambiguous cases like ἄφατος (**§2.9.3**) (cf. ἄρρητος above). It is particularly suggestive that, as SIHLER has noted (1995:622f.), Greek forms based on **-tó-* showing the function of "possibility or necessity" are "chiefly post-Hom[eric]"; yet this distribution is most conspicuous for non-negated forms (thus βρωτός 'to be eaten, edible' [Archestr.] ~ substantivized βρωτόν 'meat' [Xen.+]), whereas negated forms are well-attested earlier,[74] and the negated compounds with **-etó-* in this meaning are evidently older still, being found, for the most part, as fixed epithets in Homer (cf. above on ἄσχετος).[75]

[72] See e.g. MEILLET 1929:638 (in a characteristically lucid and still valuable discussion), SCHWYZER 1939:501f., AMMANN 1956 (esp. 14ff. on "Adjektive der 'passiven Möglichkeit'"); more recently SIHLER 1995:623.

[73] On such negated forms as characteristic of IE poetic language specifically, see recently IVANOV 1995:13 (in the context of a broader typological discussion; note esp. 16ff. on SPITZER's analysis of French *in-...-able* formations).

[74] Thus φυκτός 'escapable, escape-worthy' (3x Hom.) always negated (οὐκέτι φυκτὰ Π 128, θ 299, ξ 489), similarly φατός 'speakable, effable', cf. §**2.9.3** above (οὐ φαταὶ Hes. *Sc.* 230, οὐ φατὸν Pi. *O.* 6.37, etc.).

2.10.3. Hsch. ἀυϊδέτου, Myc. *o-wi-de-ta-i*

Among both full-grade and zero-grade forms, the most isolated and possibly the earliest-attested **-eto-* form in Greek is a zero-grade form. As JACOBSOHN plausibly suggested (1924:307n2), the Hesychian gloss ἀυϊδέτου· ἀφανοῦς, ἀοράτου may stand for an Aeolic (gen.sg.) ἀϝιδετω, to be ascribed to an early stage of Aeolic (JACOBSOHN presumed Lesbian) poetry, in view of the treatment of the internal digamma.[76] Such a form could continue an adj. **n̥-u̯id-eto-* 'invisible, that cannot be seen' (vs. plain **n̥-u̯id-to-*, in ἄιστος [Hom.+] 'unseen'). Moreover, the same form may well appear in Mycenaean. The notoriously difficult *o-wi-de-ta-i*, prominently attested in one of the Pylos ritual-offering tablets (PY Un 718 = Docs.[2] 171, pp. 282, 458), has elicited numerous attempts at interpretation, all of them impossible, farfetched, or otherwise unsatisfying (see AURA JORRO 1993:58, s.v., and more recently LEUKART 1994:87f.). Broadly speaking, these fall into two classes, according to which (i) the word is a (masc. *a*-stem) compound containing */ou̯i-/* 'sheep' as its first member and referring to a group of priests or functionaries (thus 'sheep-binders' or 'sheep-flayers', depending on one's preference between δέω and δέρω for the interpretation of the second member), or (ii) (in view of the seductively similar sequence *o-wi-de* PY Eq 213.1, Ta 711.1) the word is a verb phrase containing a form of ἰδεῖν, the most popular variant of this approach being */hō u̯idesthai/* 'ὡς ϝιδέσθαι, as far as can be seen'.[77] A glance at the attestations (see below for the second instance) immediately reveals how poorly both approaches fit the context. The first paragraph of the Pylos text reads as follows:

[75] For a somewhat similar conception of the secondary semantic development of forms like ἄφυκτος 'inevitable, inescapable', see RUIJGH 1988:452n25.

[76] This (at least potentially) Lesbian form is noted neither by BOWIE (1981:77ff.) nor BLÜMEL (1982:82, 85f.) in their treatments of medial digamma in Lesbian/Aeolic. One could as easily, however, think in terms of Old Laconian poetry, cf. Alcm. 1.63 ἀυηρομέναι (Calame 3.63 ἀϝηρομέναι [papyr. ἀυειρ-]) and HIERSCHE 1978.

[77] A more elaborate variant of the second type is due to PERPILLOU (1984): ὡς ϝίδῃ (3sg. subj.) τᾶhι (*ko-to-na*), 'en sorte que (le dieu) reçoive ainsi (son dû)'.

.1 *sa-ra-pe-da , po-se-da-o-ni , do-so-mo*
.2 *o-wi-de-ta-i , do-so-mo , to-so , e-ke-ra$_2$-wo*
.3 *do-se* , GRA 4 VIN 3 BOS^{m} 1
.4 *tu-ro$_2$* , TURO$_2$ 10 *ko-wo* , *153 1
.5 *me-ri-to* , V 3

Despite the adherents of approach (i) (cf. AURA JORRO: 'Probablemente apel. de pers. masc. Dat. pl., mejor que teónimo'), it is clearly most appealing to take *o-wi-de-ta-i* as a (dat.pl. fem.) theonym coordinated with (dat.sg.) *po-se-da-o-ni,* in the absolutely parallel sequences *po-se-da-o-ni do-so-mo / o-wi-de-ta-i do-so-mo* (lines 1-2) 'a contribution to Poseidon, (and) a contribution to the Xs', directly before the enumeration of substances to be offered (lines 2ff.: 'E. will give so much: GRA 4 [etc.]'). One is naturally reluctant to lengthen without good cause the list of otherwise unknown (or poorly-known) Mycenaean divinities, but it is all but unavoidable, under these textual conditions and in view of the evidently old term ἀϝιδετο-, to interpret *o-wi-de-ta-i* as a theonym referring to (female) divinities (associated with Poseidon) known as 'the Invisible Ones, the Ones Who Cannot Be Seen', i.e. */owidetā(h)i/.*[78] What is most damaging to adherents of approach (ii) is the almost certain appearance of the same form *]o-wi-de-ta[-i* on the basket label PY Wa 731, likewise together with *do-so-mo,* a circumstance that poses virtually insuperable problems for those wishing to see in *o-wi-de-ta-i* a verb phrase (despite PERPILLOU's elaborate, but ultimately unconvincing, attempt to resolve this difficulty).[79]

[78] Although a proper treatment must be left to historians of Greek religion, an identification with the Nereids seems probable: their primary attribute in Homer, appearing in a formulaic line enclosing their catalogue (Σ 37-49, thus an archaic piece of ring composition [WATKINS 1995:34ff.]), is precisely the fact that they dwell κατὰ βένθος ἁλὸς (Σ 37-8 θεαὶ ... / πᾶσαι ὅσαι κατὰ βένθος ἁλὸς Νηρηΐδες ἦσαν, cf. 49 ἄλλαι θ' αἳ κατὰ βένθος ἁλὸς Νηρηΐδες ἦσαν) — *ceteris verbis,* they cannot be seen.

[79] After the above analysis had been worked out during the course of 1994 (see the "Foreword" to this work), the collection edited by DUNKEL et al. (1994) became available to me, in which I found that R. LANSZWEERT had arrived independently at an almost identical account (1994:191n32): he sees in Myc. *o-wi-de-ta-i* "einer Bezeichnung für Opferempfängerinnen, unmittelbar nach Poseidon aufgeführt", noting further that "im 1. Jt. v. Chr. wurde Poseidon zusammen mit den hübschen Nereiden verehrt". Though I note with pleasure the convergence of our views regarding the general interpretation of Myc. *o-wi-de-ta-i,* I cannot accept LANSZWEERT'S semantic and morphological analysis in terms of a **sm̥-u̯id-eto-* 'zu sehen, hübsch', which he attempts to support (improperly, given the

The treatment **n̥-* > Myc. *o-* before labial can be viewed as regular: although the labial assimilation rule for the vocalization of **n̥* as Myc. */o/* is generally stated in terms of preceding labials as the conditioning factor (thus e.g. LEJEUNE 1972:198 [§202], citing *pe-mo, e-ne-wo-* etc. vs. ***a-ki-ti-to, a-no-we*** etc., similarly LEUKART 1994:110n216, SIHLER 1995:98), there is no reason not to assume the same treatment, at least optionally, for a directly following labial as well.[80] The objection that predictable analogical pressure from forms with **n̥-* before non-labial might lead to */awideto-/* (and */amrijo-/,* if this interpretation is correct)[81] can be met in a variety of ways: one could appeal either to whatever mechanism is chosen to explain similar variations elsewhere of the type Myc. *pe-ma/pe-mo* ("normal" vs. "special", etc.), or to the possibility that an alternative treatment could be preserved as an archaism in theonyms.

zero grade of *o-wi-de-ta-i*) via comparison with Ved. *darśatá-* 'sichtbar, schön' (cf. **§2.6.2** above). It is far more likely that the isolated zero grades *o-wi-de-ta-i* and Hsch. ἀϝιδετο- (the latter of which, to be sure, LANSZWEERT also cites, with correct preform **n̥-u̯id-eto-*) continue the same formation, i.e. of the type ἄσχετος etc. On the phonological treatment of the prefix in the Mycenaean form, see the discussion directly following.

[80] For a possible phonetic parallel, also involving **n̥-*, note the suggestion of C. REISS apud MELCHERT 1994:214 on Pal. *ūmmaya-* 'immature' (: Hitt. *am(m)iyant-*). Note that this interpretation of Myc. *o-(w-)* < **n̥-(u̯-)* removes the principal difficulty with the traditional interpretation of *e-ne-wo-* etc. as phonologically regular (see the recent discussion of this problem by B. FORTSON, 1993:86f.). A systematic application of the presumed treatment **n̥-* > Myc. *o-* (before labial) to other Mycenaean vocables goes beyond the scope of this paper; suggestive, however, is the m. dat.pl. *o-mi-ri-jo-i* (KN Fh 356 [= CHADWICK et al. 1986:137, no. 356]), also in a ritual context (*o-mi-ri-jo-i* OLE 1[): this might reflect a theonym or epithet (dat.pl.) */omrioihi/* 'to/for the Immortal Ones', i.e. */omrio-/* < **n̥-mr-i̯io-* or **n̥-mr-ih$_2$o-* (cf. ἄμβροτος < **n̥-mr̥-to-*), under the assumption (which nothing contradicts thus far except the presumed parallelism with *a-di-ri-ja-pi,* showing */-ndr-/* < **-nr-*) that Mycenaean preserves **(-)mr-* without *b*-epenthesis, as has been claimed on the basis of other evidence (see LEJEUNE 1972:154 [§153 with n. 2], and esp. HAJNAL 1993b:121f. on Myc. *i-mi-ri-jo* = later Ἴμβριος, and Thessalian relic-forms of the type Φιλομροτοι). For difficulties with the prevailing interpretation of *o-mi-ri-jo-i* ('rain gods' or their associated cult functionaries, cf. Ζεὺς Ὄμβριος), see the references provided by AURA JORRO (1993:24, s.v.), CHANTRAINE (DELG s.v. ὄμβρος; "cette interprétation du mot mycénien reste plus que douteuse"), and HAJNAL (1993b:122n36); and for IE collocations involving **n̥-mr̥-(to-)* in a sacral/divine context, see now WATKINS 1995:392f.

[81] Cf. Hom. ἄμοτον (< **n̥-mn̥-to-*), ἄμβροτος perhaps for **ὄμοτον, **ὄμβροτος (FORSSMAN 1986:333f. with nn. 16 and 17).

2.10.4. Ved. *vratá-*, Av. *uruuata-*

Indo-Iranian itself may well have inherited an isolated zero-grade form **u̯r̥h₁-etó-* (to **u̯erh₁-* 'speak': Gk. [fut.] ἐρέω etc.), according to the most plausible analysis of RV *vratá-*, Av. *uruuata-* 'vow, obligation, observance etc.' (BEEKES 1969:238, 1976:18).[82] Beside IIr. **vratá-* < **u̯r̥h₁-etó-*, cf. plain **u̯r̥h₁-tó-* in Gk. ῥητός 'spoken', Av. *uruuāta-* (substantivized neut., meaning = *uruuata-*).

The phonological development of **u̯r̥h₁-etó-*, to be sure, is not straightforward, since laryngeal loss in such a form (as has apparently taken place in RV *vratá-* and Av. *uruuata-*, under the assumption of this preform) is not expected. On the other hand, laryngeal loss is precisely to be expected in reduplicated or compounded forms, such as a hypothetical negative compound **n̥-u̯r̥h₁-eto-* (roughly 'not to be spoken') > **n̥-u̯r-eto-*, cf. in general the pattern ἄσχετος, ἄσπετος etc.[83] It is not, then, unthinkable that IIr. **u̯ratá-* reflects an early substantivization (roughly 'that which is [to be] spoken'), ultimately decompositional to a form like **au̯rata-* (or at least patterned after such a form). Nor would it be surprising if, once the substantivized **u̯ratá-* became established, an original **au̯rata-* were then reinterpreted as a bahuvrīhi ("lacking **u̯ratá-*"). Precisely this form could be attested in Ved. *avratá-* 'gelübdelos' vel sim. (RV 12x, with synchronically regular bahuvrīhi accent), among a large number of other compounds with *-vrata-* as second member attested in the Rig-Veda.[84] It thus becomes possible, in this way, to make both phonological and morphological sense out of IIr. **u̯ratá-*, the formation of which has otherwise been conspicuously opaque.[85]

2.10.5. Lat. *cognitus*

An additional isolated zero-grade form may appear in Latin. The difficult problems posed by Lat. *-gnitus* (of *cognitus*, perf. ptcple. to *cognōscō* 'learn'), as well as numerous attempts at solution, have recently been discussed *in extenso* by SCHRIJVER (1991:199ff.), and need not be recapitulated here. SCHRIJVER ultimately attempts to defend — with some diffidence — the suggested comparison (ERNOUT-MEILLET DELL, s.v. *nōscō*) with Gk. compounded -γνώς (Hom. ἀγνώς 'unknown', Pi. ἀριγνώς 'well-known', etc.). While this has the advantage, as SCHRIJVER observes, of explaining the appearance of compounded *-gnitus*, it requires an unmotivated thematization (based on the weak stem, thus e.g. acc. **-ǵn̥h₃-et-m̥* > **-ǵn̥h₃eto-*) of a formation not otherwise known to have existed in Latin, where, as it happens, athematic *t*-stems have generally survived intact (*pedes, teges*, etc.), including various compound types (*comes, antistes, locuplēs, sacerdōs*, etc.). SCHRIJVER himself (1991:202) offers what may be, in view of the above discussion, a more plausible alternative, in terms of a "substantive" **ǵn̥h₃-eto-*, to which he compares "the Greek type νιφετός", together with the idea that "[t]hese substantives are often used as the second member of compounds", as in ἄσχετος or ἀθάνατος. The RUIJGHian conception of alleged second-member "substantives" and their relationship with νιφετός (§**2.3**) can again be dispensed with (cf. §§**2.1**(i) and **2.8** above): beside **ǵn̥h₃-tó-* (> Lat. **(g)nātus* replaced by *(g)nōtus*), Lat. *cognitus* could simply reflect a parallel verbal adjective **-ǵn̥h₃-etó-* (> Pr.-Ital. **-genoto-* > Lat. *-gnitus* regularly [with syncope and vowel weakening], as SCHRIJVER notes), formally comparable to parallel verbal adjectives of the type **u̯id-tó-* : **-u̯id-eto-* etc. already seen.[86] Alternatively, the

[82] The etymology depends, to be sure, on one's understanding of the original meaning of the term, which has not been without controversy; for references and discussion, see MAYRHOFER KEWA s.v. *vratám* and EWAia s.v. *vratá-* (Lief. 18:594f.). OLSEN's alternative phonological conception (1994:267) *vratá-* < **u̯reh₁-tó-* (followed by RASMUSSEN, in an earlier discussion, 1992a:24f.) depends on an uncertain interpretation via laryngeal "pre-aspiration" (with aspiration as such not even present in the outcome) and on an otherwise unmotivated Schwebeablaut (as RASMUSSEN explicitly admits: "odd Schwebeablaut-looking vocalization", "Schwebeablaut variant **u̯reh₁-* for which there is no other basis"). The traditional comparison of Ved. *vratá-*, Av. *uruuata-* with ORuss. *rota* (Russ. dial. *rotá*) 'oath', SCr. *ròta* 'pledge' etc. (see e.g. BRUGMANN 1906:401, FRISK GEW s.v. 2. εἴρω) remains uncertain, despite the existence of some other nominal **-oto-* forms, n. 40 above (in terms of a "**wr-otā-*" see ANTTILA 1969:115, with references), or could be salvaged (as RASMUSSEN notes) by taking the word as an Iranian loan; for still other possibilities, see TRUBAČEV 1971:507, s.v. *rota*.

[83] On the laryngeal loss in such forms (of the type **ǵi-ǵn[h₁]-e-*, **neu̯o-ǵn[h₁]-o-*, etc.), see MAYRHOFER 1986:129, 140; recent discussion in BECKWITH 1994:27ff. (with further references), cf. RIX 1995:407 (with n. 39) and JASANOFF 1997:180f.

[84] Of these, the most frequent (besides *avratá-*) are *dhṛtávrata-* (18x), *śúcivrata-* (8x), *vívrata-* (7x), *máhivrata-* (5x), *suvratá-* (5x), *ánuvrata-* (4x), *ápavrata-* (4x), *anyávrata-* (3x); some eight other *°vrata-* forms are attested once or twice each.

[85] Thus recently e.g. OETTINGER (1992:139n14): "... *vratá-* n. 'Observanz, Gelübde', dessen Morphologie aber unklar ist".

[86] This **-ǵn̥h₃-etó-* can have nothing to do with the **-e(-)to-* otherwise characteristic of Lat. derived *ē*-verbs (**mon-eto-*, **tak-eto-* etc., following JASANOFF, cf. n. 41 above).

significant fact that *-gnitus* only appears in a compounded form could be used to support an analysis via regular laryngeal loss (cf. §**2.10.4**), in theory beginning with a negative **n̥-ǵn[h₃]-eto-* 'not to be known, unknowable' (> Lat. **ignitus*, replaced by *ignōtus*), whence a pendant "positive" term built with the perfective particle **ḱom-* (either directly from an old **ḱom-ǵn[h₃]-eto-* '[clearly] known, [absolutely] knowable', or perhaps more likely as a later Konträrbildung **kogneto-* beside the negative **i(n)gneto-*). This *cognitus* would then have become integrated into the perfectum of *nōscō* (see e.g. ERNOUT-THOMAS 1953:219 on the perfectivizing pattern in *nōscō/cognōvī*, with secondary *cognōscō*).[87] (Another possible instance of a zero-grade **-eto-* form in Latin is discussed in §**2.15** below.)

2.10.6. formal considerations

The relative antiquity of the zero-grade type, finally, can also be supported on the basis of formal considerations: a **derḱ-etó-* or **derḱ-e-tó-*, with double or triple full grade (depending on one's conception), is evidently easier to understand as a renewal or extension of a zero-grade **(-)dr̥ḱ-etó-* rather than the other way around. This is especially the case since a verbal adjective with zero-grade root like **dr̥ḱ-etó-* would seem to be most closely related to zero-grade verbal adjectives like **dr̥ḱ-tó-* (cf. above on RV *śūrtá-* : Hom. *ἀκάρατος, κμᾱτός : ἀκάματος, θνᾱτός : ἀθάνατος, ῥητός : RV *vratá-* etc.), while **-tó-* is essentially alien to forms more or less transparently related to present-system thematic full grades, of the type ἀριδείκετος, *darśatá-, yajatá-* etc.

2.11. formal and semantic conclusions on the zero-grade type

While the conclusions to be drawn from the above must remain somewhat tentative, it seems reasonable to suppose that the oldest state of affairs involved correlations of the type

**(-)u̯r̥h₁-eto-* (RV *vratá-*, Av. *uruuata-*) : **u̯r̥h₁-tó-* (ῥητός)
**-u̯id-eto-* (Myc. *o-wi-de-ta-i*) : **u̯id-tó-* (ἄιστος)
**-ḱm̥h₂-eto-* (Hom. ἀκάματος) : **ḱm̥h₂-tó-* (Dor. κμᾱτός)
**-ḱr̥h₂-eto-* (Hom. *ἀκάρατος) : **ḱr̥h₂-tó-* (RV *śūrtá-*)

[87] A negative **ignitus* would have had no foothold in the conjugation of *ignōscō* 'pardon, forgive', in view of the semantic differentiation of this verb from plain *nōscō*.

**-sh₂-eto-* (Hom. ἄατος) : **sh₂-tó-* (cf. Go. *saþs*)

in which the forms in **-etó-* (cf. RV *vratá-, darśatá-* for the accentuation) seem to be variants of **-tó-* verbal adjectives. Cases like ἄσχετος, Av. *azgata-* and ἄσπετος, for which there is no corresponding zero-grade *tó*-participle, are only apparent exceptions: the lack of actual forms **sǵh-tó-*[88] and **sku̯-tó-* (beside **n̥-sǵh-eto-* and **n̥-sku̯-eto-*) can be ascribed to considerations of root structure.[89]

As for the semantic nuance carried by **-etó-* (vs. **-tó-*): this is difficult to specify, and the full picture would need to include the full-grade forms in any case (to be discussed in the next section). One can at least observe, at this point, that virtually all of the zero-grade forms are attested in negative compounds, with the characteristic meaning already discussed in §**2.10.2** ('not to be X-ed', 'un-X-able'). The most conspicuous exception to this pattern so far is IIr. **u̯ratá-* 'vow, ordained observance, covenant, commandment, etc.', the semantic analysis of which can perhaps be clarified with reference, first of all, to the formal analysis proposed in §**2.10.4** above, and to the general semantic conception of the zero-grade forms being developed here. One of the fundamental obstacles to the otherwise attractive connection of IIr. **u̯ratá-* with IE **u̯erh₁-* 'speak' has been the inability to account for nuances of the sort 'vow, command, covenant' and the like: if the form is essentially a verbal adjective, a substantivization might be expected to mean simply 'that which is spoken' (> 'word, speech' vel sim.). If, however, the substantivization reflected in **u̯ratá-* is essentially decompositional to a negative compound of the type IIr. **au̯ratá-* (§**2.10.4**),[90] the predicted meaning would be 'that which *is to be* spoken' or 'that which *must be* spoken', whence 'vow' and similar senses. One can note further, in this connection, that IE **u̯erh₁-* itself incorporates pregnant senses appropriate to formal, and especially "covenanted", utterances: see WATKINS 1995:83f. on IE formulas with **u̯erh₁-* expressing "the covenant

[88] Cf. full-grade renewals like ἀνεκτός (= ἀν(α)σχετός), Ved. *sāḍhá-* (Class. *soḍha-*), of the general type ("ideal" **pkʷ-tó-* >) **pekʷ-t/u̯ó-* (πεπτός, Lat. *coctus* [< **kuekto-*, with vocalism adjusted after pres. *coquō;* NUSSBAUM 1994:180n63], Ved. *pakvá-*), etc.

[89] Somewhat similarly HACKSTEIN 1992:140n7 (though with the assumption that ἄσχετος and ἄσπετος are "postverbale Nominalbildungen" beside σχ-ε/o- and σπ-ε/o-).

[90] Not, as already noted, RV *avratá-* itself ('dem Dienste der Götter nicht ergeben (vratá), gottlos' [GRASSMANN 1873 s.v.], thus semantically created or adjusted on the basis of *vratá-*).

of the spoken word", including the verbal adjective *$\mu r̥h_1$-tó- in the sense of "the covenant [of] the all-powerful spoken word, ... literally 'spoken'".

The Homeric hapax ἐλετός (**§2.5.2**) likewise gives the impression of being an isolated unprefixed verbal adjective in *-*etó*-. Note, moreover, that the traditional idea that ἐλετός is a secondary creation after -αιρετος[91] falters on the lack of semantic relationship between ἐλετός 'that can be caught/taken' and -αίρετος (cf., for the time being, **§2.6.1** above on ἐξαίρετος 'choice'; further discussion in **§2.14.1** below). Nevertheless, ἐλετός, with its odd full grade vis-à-vis its "potential" meaning (cf. **§2.7**), does give the impression of having being adjusted secondarily after the full-grade aor. ἑλεῖν.[92] Given the "virtual negative" usage of ἐλετός (**§2.5.2**, with n. 30), it becomes attractive to take the form as a substitute for an original negative *$n̥$-$sl̥h_1$-*eto*-;[93] this would have yielded either **ahaleto*- or **aheleto*-, in the first instance, whence Ion. **ἠλετο- (ripe for remodeling after ἑλεῖν), or, at best (assuming **aheleto*-), a metrically inconvenient adjustment **ἀνελετο-, from which (οὐ) ἑλετο- could readily have been abstracted (again with inevitable support from ἑλεῖν). The absence of a simple *tó*-form *$sl̥h_1$-*tó*- 'taken' (> **λητός, with anomalous stem-form vis-à-vis ἑλε/ο-) need not be considered surprising.

It may be suggested, finally (and in a more speculative vein), that the negative compounds in *-*eto*- may have had a semantic affinity with "intensive" expressions, such as superlatives: thus, for example, 'the one who is invincible' may amount to 'the [truly] invincible one' or 'the one who is [most] invincible' — hence, perhaps, an argument favoring the partitive interpretation of associated adnominal genitives, cf. Av. *yō azgatō arəziiaiiå* (**§2.10.1**), and (mutatis mutandis, involving a full-grade form with meliorative value [**§2.12**]) πάντων ἀριδείκετε λαῶν (**§2.6.3**).[94] Indeed, this conception of the "intensive" value of (verbal) *-*eto*- is not so very different from that of SOLTA (1963), in his analysis of (nominal) *-*eto*- in augmentative (νιφετός etc.) and ordinal/superlative (Gaul. *decametos* etc.) values, although the precise derivational relationships between

[91] Cf. CHANTRAINE 1933:299 ("ἐλετός ... a peut-être emprunté sa finale à αἱρετός").

[92] On full-grade *$selh_1$- in ἑλεῖν see HARÐARSON 1993a:156.

[93] Cf. ἄσχετος/οὐ ... ἀνσχετά (**§2.5.2** with n. 33), and further οὐ ... παλινάγρετον (**§2.14.2** below).

[94] On such superlative expressions without overt superlative, see recently WATKINS 1995:244f.

verbal and nominal *-*eto*- (if these formants are indeed cognate in some sense) cannot be explored here.[95]

2.12. formal and semantic conclusions on the full-grade type

The semantic interpretation of the full-grade type (ἀριδείκετος, *darśatá*- etc.) remains somewhat elusive, although the typical "gerundivisch" meaning (especially clear in the Indo-Iranian material, cf. **§2.6.2**) seems relatable to the "potential" meaning already discussed for the zero-grade forms: thus *derḱ-etó- ultimately '*to be* looked at', cf. *$n̥$-sǵh-eto*- 'not *to be* overcome', etc. Rather strikingly, the full-grade forms seem generally to have developed meliorative or positive senses, thus *darśatá*- '*good* to look at', etc.; it has already been observed (n. 39) that this may be a relatively archaic feature, possibly observable as such, among the Greek data, in κλειτός, with most of the remaining forms secondarily reinforced, as it were, via prefixation (ἀρι-, ἀγα-, πολυ- etc.).

Also noteworthy is a certain tendency toward substantivization, including onomastic use; while this occurs with the zero-grade type as well (IIr. *μratá*-, above; further examples below), it seems especially characteristic of the full-grade type: cf. Hom. Κλεῖτος and Alcm. κλεῖτος, Hom. κάπετος (later σκάπετος) 'grave, pit' (cf. σκάπτω 'dig', hMerc.+), Skt. *Bharatá*-, *Bhā́rata*-, etc. In this connection should be noted the remarkable set of Umbrian participial terms denoting the commission of 'sin, transgression, offense' and the like, in the formulaic sequence *uasetomest, pesetomest, peretomest, frosetomest, daetomest* traditionally interpreted '[if] there has been [any] omission, sin, transgression, damage, delinquency' (Tab. Ig. VIb30, similarly VIa27, 37, 47). Since most of these forms, to the extent that they can be etymologized, cannot be correlated with *ē*-verbs,[96]

[95] Insofar as "verbal *-*eto*-" is essentially a deradical formation (according to the conception elaborated here of *-*eto*- as a formant of verbal adjectives), it seems possible that a pivotal role could have been played by root nouns, as can perhaps be seen somewhat dimly in νιφετός (: νίφα) itself (cf. Skt. *snigdha*- 'sticky').

[96] A possible exception is *uasetom* (thus conceivably *μak-ēto*-, like U. *uirseto* < *μid-ēto*-) with parallel *s*-stem in *uas* 'flaw' (**uakos*), with a pattern like that seen in *decus/decet* (thus recently WATKINS 1995:221n14), and cf. further Lat. *vacēfit* (Lucr. 6.1005, 1017) 'becomes empty', perf. *vacuī* (Val. Max., Quintil. maj., Tertull.) and Romance **vacitus*, as if pointing to a stative **vacēre* 'be empty' beside *vacāre*; but the Lat. *ē*-forms, at any rate, can be secondary, and the picture is further complicated by Hitt. *wakka*- 'be lacking'.

there is a strong possibility that they show unsyncopated *-*ĕto*- (or *-*ito*-), as is usually assumed,[97] in which case it is likely that one or more may continue a substantivized use of an *-*etó*- verbal adjective, although the "negative" meaning of these terms is rather strikingly at odds with the type *darśatá*- etc., being more reminiscent of certain of the negative zero-grade forms ('unspeakable' > 'horrible' etc.). Given, however, the highly stylized nature of the formula in question (with, as often in Umbrian, various stylistically concatenating features like assonance, alliteration, homoeoteleuton), this could well reflect a secondary and relatively artificial development, involving the extension of a pattern that began with a small core of forms, or even a single form. There are in fact some reasons to believe that *peretom* may have been such a form, although further discussion of this problem is best left to Appendix 3, on Lat. *porta/portāre* and related forms.

Relatively rarely, for both the zero-grade and full-grade types, an *-*etó*- form appears to be merely synonymous with a corresponding *-*tó*- form (whether attested or not), although this need not (indeed, cannot, strictly speaking) reflect the original situation. Thus YAv. *γəmata*- 'gekommen' (cf. OP *ha*^{n}*-gmata*- 'zusammengekommen', with *(-)gmata*- continued in Mid. and Mod. Persian) seems to have no perceptible difference in meaning from Av. *gata*- (cf. Ved. *gatá*-), although an original distinction of some sort cannot be ruled out (cf. HOFFMANN-FORSSMAN 1996:246, Y. 44.8 *āgəmaṯ.tā* perhaps 'erreichbar'). In some cases, a distinction is subtle, but still perceptible: RV *pacatá*- is not a mere synonym of *pakvá*-, but appears substantivized in two of its three occurrences (1.61.7c, 10.116.8b, vs. 3.28.2a), a usage ('to be cooked, good to cook' > 'something [good] to cook') almost entirely alien to the far more frequent *pakvá*-.[98]

From a formal point of view, the full-grade type, which seems on the face of it to be closely associated with full-grade thematic stems (*darsatá*- : δέρκομαι, etc.), could have resulted from metanalysis of *-*eto*- as *-*e(/o)-to*-, a process in which, in addition to the parallel plain thematic

[97] On the failure of syncope in these cases see JOSEPH and KLEIN 1981:298nn22 and 23, following VON PLANTA 1892:215; recent discussion in KATZ 1996: n. 47 (the problem is not treated in MEISER 1986).

[98] The distinction is especially clear in the usage of both words in adjacent stanzas at 10.116.7 and 8, cf. 7c *túbhyaṃ sutó maghavan túbhyaṃ pakvò* 'Für dich ist er ausgepreßt, Gabenreicher, für dich ist (der Kuchen) gebacken', vs. 8b *cáno dadhiṣva pacatótá sómam* 'habe deine Lust an dem Gekochtem und dem Soma!' (GELDNER). For comparison of substantivized *pacatá*- with U. *peretom* etc., see already JOSEPH and KLEIN 1981:298n22.

presents themselves, several types of formations (such as *tudáti*-presents, thematic aorists, iterative-causative *-*eto*- participles [cf. n. 41 above]) could have played a role. It may be useful to consider, in these terms, the form ἄσπετος (**§2.5.2**). If it is the case that what appears to be a synchronic correlation of some zero-grade *-*eto*- forms with thematic aorists is in fact secondary, since at least a few evidently old forms lack such a correlation entirely (**§2.9**, e.g. *ἀ-πέρ-ετος beside *s*-aor. πεῖραι), then an old *$\underset{\circ}{n}$-sk^{w}-eto- would have nothing directly to do with the thematic aorist stem *sk^{w}-é/ó- (ἐνισπεῖν, Lat. *inquam* etc.). Rather different, however, would be OIr. *scél* 'tidings' (W. *chwedl*) < *sk^{w}-e-tlo-, where the instrument suffix *-*tlo*- appears in a form *-*e-tlo*- which is inseparable from thematic stems like *sk^{w}-é/ó-, as also full-grade thematic stems with similar pendant instrument-nouns, of the type *$\underset{\circ}{u}$égh-e-tlo-, *ségh-e-tlo-, etc. (see my analysis of such forms, 1993:122ff.). Now *sk^{w}-é/ó- itself, whatever its antiquity (cf. n. 8 above), appears beside an inherited full-grade thematic *sékw-e/o- (ἐν(ν)έπω, Lat. *insece,* Lith. (dial.) *sekù/sèkti* etc.). Under circumstances like these, an original *-sk^{w}-eto- might well have been reanalyzed as *-sk^{w}-e-to-, whence also (given *sék^{w}-e/o-) new full-grade formations of the type *sek^{w}-e-to-. The secondary nature of such full-grade forms is also suggested by their accentuation (cf. *darśatá*-, κλειτός): rather than retaining their original root accent, such forms, as verbal adjectives, would not unnaturally have emulated the suffix accent which is at least underlying in forms like *-sk^{w}-eto- (i.e. underlyingly simplex *sk^{w}-etó-), perhaps visible indirectly in IIr. *$\underset{\circ}{u}$ratá-, and in any case inferable from plain *-*tó*-.[99]

Even if the full-grade type is in some sense secondary (for example, along the lines just sketched), the formation itself is nevertheless likely to be relatively old. In addition to general considerations arising from the Greek-Vedic comparison (**§2.6**), this perspective emerges from an exami-

[99] The scheme just outlined begs the question of how to interpret the make-up of the original formant *-*etó*- itself (before being reanalyzed as *-*e-tó*-). Given the speculative nature of some of the constructs involved, and the relative scantiness of the data, there is little that can (or perhaps should) be said at this point. If, however, *-*etó*- may in some fundamental way reflect an "intensive" or "intensifying" formant (cf. **§2.11**, and see OETTINGER 1992 for a recent attempt to reconstruct an IE "intensive" formation), it is not clear to me that *-*etó*- needs to be assigned an explicit internal structure, at least of the usual sort (i.e. *-*etó*- or *-*et-ó*-). As an "intensive" version of plain *-*tó*-, *-*etó*- might just as usefully be conceived of as a "vṛddhi-ized" version of *-*tó*-, along the lines of *$\underset{\circ}{d}$eiu̯(o)- <--- *diu̯- and the like (though not necessarily with the same assumptions concerning thematization).

nation of the isolated verbal formation seen in Homeric forms of the type εὐχετάομαι, λαμπετόωντι, ναιετάω, to which we turn in the next section.

2.13. *-*etó*- and iterative-intensive *-*et-āi̯e/o*-

2.13.1. εὐχετάομαι, λαμπτετόωντι

It is generally agreed[100] that εὐχετάομαι and λαμπετόωντι cannot be simple denominatives to agent nouns in -της or abstracts in -τή (εὐχέτης only Eustath.+, †λαμπέτης unattested; no abstracts †εὐχετή, †λαμπετή). As for λαμπετόωντι (A 104 ὅσσε δέ οἱ πυρὶ λαμπετόωντι ἐΐκτην, similarly δ 662), LEUMANN (1950:181f., after MEISTER; followed by TUCKER 1990:221f.) claimed this verb to have arisen from a false interpretation of passages like N 474 (with λάμπετον 3du. pres.: ὀφθαλμὼ δ' ἄρα οἱ πυρὶ λάμπετον), whence an adjective *λάμπετος in phrases like πῦρ λάμπετον. But hHom. ἀλάμπετος (not mentioned by LEUMANN) could easily be a secondary creation based on such a *λάμπετος, or rather *λαμπετός (cf. onomastic Λάμπετος, Λαμπετίη etc.), whence an iterative-intensive *λαμπετᾱi̯ε-, without the need for the rather complex series of misinterpretations required by LEUMANN's account.[101] Still more complex (and wholly unconvincing) developments, with multiple intermediate steps ("Natürlich können Zwischenformen verloren gegangen sein", 1950:187), are needed to account for εὐχετάομαι as an artificial creation (see esp. 1950:184ff.). But hCer. πολυεύχετος (also not mentioned by LEUMANN) could again be a renewal of simplex *εὐχετός, whence iterative-intensive *εὐχετᾱi̯ε-. Such a derivation is difficult to support in semantic terms, since Hom. εὐχετάομαι has evidently undergone considerable influence from εὔχομαι. Nevertheless, the two are not mere synonyms, as observed by MUELLNER (1976:59 with n. 82). Especially characteristic of εὐχετάομαι is a usage (appearing as a line-final formula) corresponding to

[100] See e.g. SCHWYZER 1939:705, CHANTRAINE 1958:358, SOLTA 1963:177f.; differently LEUKART 1994:171f.

[101] Aptly described by TUCKER (1990:221) as "a deverbative process of an extremely unusual kind". She defends the analysis of λαμπετόωντι as an artificial creation (as also of εὐχετάομαι, cf. below) on the basis of the nature of the attestations (i.e. the limited appearance in early epic [and some later imitations] of a few stereotyped forms); but this profile is also consistent with archaism, as is the appearance of λαμπετόωντα (ἄστρα) in Hesiod (*Th.* 110).

MUELLNER's "secular" meaning of εὔχομαι ('say [proudly, accurately, contentiously]'), but asserting, more specifically, comparison with a god: thus ... θεῷ ὣς εὐχετόωντο# X 394 (Achilles on the death of Hector, see MUELLNER 1976:50 on this passage, and more recently WATKINS 1995:510), cf. θ 467 = ο 181 ... θεῷ ὣς εὐχετοώμην#. An original *εὐχετός of the type *darśatá-* 'sehenswert' would have meant, in the terms of MUELLNER's definition, 'well worth being spoken about (esp. proudly, accurately)', which would provide a good basis for this characteristic (and possibly quite old) usage of εὐχετάομαι.

Such iterative-intensives in *-*et-āi̯e/o-*, based on corresponding verbal adjectives in *-*etó-*,[102] would be parallel to similar formations in *-*t-āi̯e/o-* (especially characteristic of Italic: Lat. *gestāre* etc.) based on "plain" verbal adjectives in *-*tó-*.[103] The antiquity of this *-*et-āi̯e/o-* formation would be supported not only by its residual status in Greek, but also by the possibility that the same formation appears in Italic, in the type Lat. *agitāre* (cf. also U. *frosetom* [**§2.12** above], substantivized ptcple. of an iterative **frosetā-*, to a verb corresponding to Lat. *fraudāre* [MEISER 1986:242]). SOLTA (1963:178) had already observed, on the basis of these two types (i.e. εὐχετάομαι/*agitāre*): "auch in der Verbalbildung ein iterativ-intensives *-t-* Suffix vorkommt"; but this rather vague construct could thus be replaced with a more familiar derivational system based on verbal adjectives (even if some of the derivational details remain obscure). This would imply, in turn, the prior existence in Italic of the full-grade thematic type *darśatá-*/κλειτός (cf. **§2.12** above on U. *uasetom* etc., and further Appendix 3), which must therefore be considered relatively old, even if in origin it reflects a secondary development from the zero-grade type (cf. **§§2.10.6, 2.12** above).[104]

[102] Thus also perhaps μελετάω (Hes.+) 'practice, exercise, train' to a **melh₁-etó-*, with μελετή (Hes.+) 'study, training etc.' either an abstract based on this (cf. γενετή, τελετή, ἀρετή, **§2.16** below), or (perhaps more likely) back-formed after μελετάω; but lack of clarity about the etymology (cf. μέλει 'it is a concern', with no clear external comparanda) renders the semantic analysis difficult.

[103] The status of *-*t-āi̯e/o-* formations in Greek is considerably more complex, on which see TUCKER 1990:222ff.

[104] See Appendix 3 for further discussion of the type *agitāre* and potentially related Italic material.

2.13.2. ναιετάω

Hom. ναιετάω (vis-à-vis ναίω) presents a more complex picture than εὐχετάομαῖ (vis-à-vis εὔχομαι), but one similar in general outline; moreover, the above conception provides an attractive solution to a long-standing problem with the semantics of this verb, described by FRISK (GEW s.v. ναίω) as follows: "ναιετάω ... 'wohnen, bewohnen', auch 'gelegen sein', bes. in εὖ ναιετάων 'wohl gelegen, wohnlich' (ep. lyr. seit Il.)", and further: "Die Bed. 'gelegen sein', öfters bei ναιετάω, bes. in εὖ ναιετάων, vereinzelt bei ναίω, ist nicht befriedigend erklärt". For ναιετάω, LEUMANN persuasively argues (1950:183f.) that denominative formation from an agent noun ναιέτης (cf. περιναιέται 'neighbors' Ω 488, ναέτης 'inhabitant' Simon.+) is again highly unlikely (cf. rather the expected formation in Hom. Νάστης and Hsch. νάστης· οἰκιστής, and probably also μετανάστης 'immigrant' [cf. VON KAMPTZ 1982:145, LEUKART 1994:66, 172, 268f.]; thus περιναιέται etc. back-formed to ναιετάω). At best, περιναιετάουσι (β 66+) could be based on περιναιέται (TUCKER 1990:243, followed by PINAULT 1991:214), but this will not, despite TUCKER, account well for simplex ναιετάω, and fails utterly to account for the stereotyped and semantically deviant usage εὖ ναιετάων (which TUCKER does not mention). LEUMANN's own account of ναιετάω (1950:191ff.) depends on a highly improbable misinterpretation-theory involving a single ambiguous passage (Γ 387). The various other proposals made so far (see FRISK GEW and CHANTRAINE DELG, both s.v. ναίω, for details) are likewise implausible in themselves, but more importantly, they fail to provide any systematic accounting of the semantic difference between ναίω and ναιετάω that correlates with their formal make-up, including the evidently archaic sequence εὖ ναιετάων (CHANTRAINE: "expression remarquable"), which must be taken as a significant datum. (Cf. LEUMANN's thorough survey of Homeric usage, esp. 192f. on εὖ ναιετάων: "etwa 'wohnlich', von Städten und Häusern", thus Z 415 πόλιν ... εὖ ναιετάουσαν, B 648 πόλεις εὖ ναιεταούσας, and the repeated phrases δόμους εὖ ναιετάοντας B 370 etc., μεγάρων εὖ ναιεταόντων β 400 etc.[105]) If one begins with a full-grade thematic **-i̯e/o-* present **nasi̯-ō* 'dwell (in)' (> ναίω, cf. aor. νάσσαι), the **-etó-* verbal adjective **nasi̯-etó-* > *ναιετός (of the type *darśatá-* '(well) worth seeing, good to look at') would mean precisely 'good to live in, (highly) liveable', whence *ναιετᾱι̯ε- 'be good to live in', still attested in an essentially adjectival formulaic usage (εὖ ναι-ετάων). In passages like Δ 45 (αἳ γὰρ ὑπ' ἠελίῳ ... / ναιετάουσι πόληες), in which a finite form of the verb co-occurs with a locative phrase (note here the use with πόληες, cf. above on εὖ ναιετάων), an original sense like 'cities (which are) good to live in' could easily have been weakened to a mere statement of location, i.e. 'be (well-)situated' > 'be located/lying' etc.; the stage would thus be set for ναιετάω to mimic the usage of ναίω 'inhabit', whence, finally, such striking collocations as that noted by LEUMANN (1950:192), ι 21/23 (Odysseus): ναιετάω δ' Ἰθάκην ... / ... ἀμφὶ δὲ νῆσοι / πολλαὶ ναιετάουσι, generally interpreted as "I live in Ithaca, ... and many islands are situated around (it)", but perhaps still "and around (it) are many islands good to live in").[106] Whether or not one needs to posit the existence of an intermediate "reinforced" *εὐναίετος (perhaps consequent on a weakening of *ναιετός 'highly liveable' to 'liveable', after ναίω and then ναιετάω 'live in'), the phraseological pattern εὖ ναιετάων would be of essentially the same "reinforced" type as in ἀρι-δείκετος, πολυ-εύχετος (cf. n. 39 and **§2.12**). Thus, despite LEUMANN's later assertion that the formations seen in *agitāre* and ναιετάω are only superficially similar (1977:549, naturally with reference to his own earlier analysis of ναιετάω), these formations may actually be cognate, as seen already by SOLTA. Note finally that **nasi̯-etó-* recovers precisely the type RV *haryatá-*, AV *paśyatá-* (cf. n. 38); although the extension of the full-grade type to **-i̯e/o-* stems could well be an independent development in both branches, the isolation of Gk. *ναιετός, together with the fact that *haryatá-* is well-established in the Rig-Veda (esp. as an epithet of *sóma-* and *vájra-*), may indicate that this type of formation is relatively old.[107]

[105] It is important to note that although ναιετάω is well-established in Hesiod, in formulae that largely recover Homeric patterns (note esp. ναιετάοντες# *Th.* 621, ναιετάουσιν# *Th.* 564, 592), εὖ ναιετάων itself is no longer found.

[106] Somewhat similar remarks on the semantics of ναιετάω by M. CASEVITZ (1985:87n2), who observes as an afterthought: "On peut aussi penser à *ναιετός qui aurait indifféremment le sens actif ou passif".

[107] On the possibility that Myc. *Na-e-si-jo* may imply a derivation from a **naii̯et-*, see now LEUKART 1994:172 with n. 116. (LEUKART operates on the basis of a **naii̯etās,* but a **naii̯etos* is equally possible.)

2.14. -αίρετος and -άγρετος

We are now in a position to address the problematic forms ἐξ-αίρετος (: αἱρέω) and παλιν-/αὐτ-άγρετος (: ἀγρέω) (§**2.5.1**(a), cf. §**2.6.3**).

2.14.1. -αίρετος and the etymology of αἱρέω

As already noted (§**2.6.3**), the meaning of ἐξ-αίρετος ('choice, select', typically referring to booty, B 227+) is best understood in terms of a *darśatá-* formation, i.e. 'good to take (out), worth taking'. If the formation is old (as the Homeric usage suggests), -αίρετος should be based on a present stem *αἱρε/o- (as if to a verb *αἵρω), cf. *ναιετός and ναίω above. Just as *ναιετός/ναίω corresponds formally to the *-*i̯e/o-* type seen in Ved. *haryatá-/háryati, paśyatá-/pásyati,* so -αίρετος can derive from a *-*i̯e/o-* present *αἱρε/o- 'take, capture' < **sr̥-i̯e/o-;* this in turn has consequences for the etymology of αἱρέω, which has remained obscure. The difficulty arises from taking αἱρε- as an underived stem, which yields no serviceable comparanda whether the formation is primary (cf. CHANTRAINE [1961:233]: "verbe radical") or denominative (cf. TUCKER [1990:22]: "no base-word is preserved").[108] If one begins, however, with -αίρετος,[109] then the analysis in terms of a *-*i̯e/o-* present **sr̥-i̯e/o-* becomes available, and αἱρέω itself would be taken as secondary (more on which below). For **sr̥-i̯e/o-*, moreover, there exists an attractive comparandum in the archaic neuter *u*-stem **sór-u* (of the type **dór-u* 'wood', **h₂ói̯-u* 'life, vital force', **són-u* 'back, top' etc.) reconstructed by WATKINS (1976a) on the basis of Hitt. *ša-a-ru* 'booty' (with denominative *šaruwai-* 'plunder') and Celtic forms pointing to a thematized *e*-grade **ser-u̯o/ā-* (W. *herw* 'raid; outlawry', OIr. *serb* 'theft').[110] Although these *o/e* neuters tend not to have clear verbal bases, the semantic relationship envisaged here between **ser-* 'take, seize, capture' and a neut. result noun **sór-u* 'that which is seized/captured; booty' is certainly not contradicted by any members of this class.[111] Beyond the typical use of ἐξαίρετος to refer to booty, the similar behavior of αἱρέω in general — clearly a fundamental part of its Grundbedeutung — hardly requires detailed demonstration.[112]

The -έω inflection of αἱρέω (vs. the *αἵρω implied by -αίρετος, according to the above analysis) can perhaps be ascribed to the influence of ἀγρέω (cf. Myc. 3sg. aor. or fut. *a-ke-re-se*),[113] in view of well-known remodelings involving contaminations between these two verbs (including aor. ἑλεῖν) of the type Cret. "αἱλέω" (ἀναιληθθαι etc.), Pamphyl. "ἀγλέω" (ἀνηαγλεσθω), Thess. "ἀγγρέω" (ἐφανγρενθειν etc.); cf. also ζωγρέω : Π 331 ζωὸν ἕλε, and Ἐξαίγρετος directly following.[114] In terms of epic diction, there is also the parallelism between the comparably isolated formations Hom. ἐξ-αίρετος and παλιν-/αὐτ-άγρετος (and later αὐθαίρετος, Ἐξαίγρετος etc., see FRISK GEW s.v. ἄγρα, with references[115]) — i.e., the two -ετος forms listed in §**2.5.1**(a) that stand beside -έω verbs instead of plain thematic presents, thus presenting a morphological anomaly vis-à-vis -δείκετος, -εύχετος, Ved. *darśatá-*, etc.

---

[108] However the Att. aor. pass. ἠρέθην is to be explained, the form suggests that αἱρέω is not a simple denominative.

[109] The same starting-point (though with a different analysis) was envisaged also by MCKENZIE (see FRISK GEW s.v. αἱρέω).

[110] Despite WEITENBERG (1984:172, with further references), there is no good reason to take **sór-u* as a substantivized *u*-adjective; and despite the semantic framework elaborated by BADER (1978) involving relationships between the notions 'protect' and 'raid', her proposed derivation of Hitt. *ša-a-ru* and the Celtic material from **s(u̯)er-* 'guard, protect' (1978:217) remains difficult to motivate both semantically and morphologically.

[111] Michael WEISS reminds me that this pattern would be similar to that in **dór-u* 'wood' : **der-* 'split' (if this connection is correct; cf. THIEME's interpretation of Ved. *rudrá-* in terms of **[d]ru-dra-* 'bäumezerbrechend' [1978:43n34], with a kind of *figura etymologica*). As pointed out to me by Craig MELCHERT, possible morphological parallels to the pattern **ser-* 'take' : Hitt. *šāru-* could be seen in Hitt. *šappu-* 'horn' or 'snout' to *šapp-* 'hit' (if this does not have inherent **a*), and, if it is neuter, *ḫappu-* ('means of attaching cattle within a pen or corral', PUHVEL 1991:130, s.v.) to *ḫap(p)-* 'join, attach' (cf. PUHVEL 1991:114, s.v.), although these could be relatively late creations vis-à-vis *šāru-*, whose verbal basis is no longer attested in Hittite.

[112] E.g. (specifically with reference to booty) Ω 579 ἧρεον ... ἀπερείσι' ἄποινα, T 412 Τρῶες ἀπ' ὤμοιιν Πατρόκλου τεύχε' ἔλοντο (cf. Π 663); more generally (military capture) e.g. N 41-2 (νῆας, cf. Σ 260), B 141 = I 28 (Τροίην, cf. B 37, 329), O 558 (Ἴλιον), Π 330-1 (Αἴας δὲ Κλεόβουλον ... / ζωὸν ἕλε), etc.

[113] See TUCKER 1990:168 for a possible derivational source for ἀγρέω (denominative, not directly to ἄγρα 'hunting', but based on the second member of adj. compounds of the type Hom. πάναγρο- 'catching all'); another possibility in n. 118 below.

[114] On αἱρέω X ἀγρέω contamination see recently LEUKART 1994:74n87.

[115] Note also ἐξαιρετός Hdt. 2.121.a in the meaning 'removable', comparable to -άγρετος (but not Hom. and later ἐξαίρετος 'choice').

2.14.2. -άγρετος

The anomaly just mentioned was removed in the case of -αίρετος by analyzing this form as based on a *-i̯e/o- stem, comparable in formation to Ved. *haryatá-*. The solution for -άγρετος : ἀγρέω is different, and begins from the contrast in meaning between -άγρετος on the one hand, and the other -ετος forms clearly correlated with present stems (as well as the comparable Vedic type). Consider the oldest instance of -άγρετος, i.e. παλινάγρετος (A 526); Zeus assures Thetis (526-7): οὐ γὰρ ἐμὸν παλινάγρετον οὐδ' ἀπατηλὸν / οὐδ' ἀτελεύτητον, ὅ τί κεν κεφαλῇ κατανεύσω. Thus παλινάγρετος means precisely not 'good to take back' (cf. -δείκετος 'worth showing', κλειτός 'good to hear', *ναιετός 'good to live in', -αίρετος 'worth taking', *darśatá-* 'good to look at', *yajatá-* 'worthy of worship' etc.), but rather, in a "virtual negative" construction with οὐ, 'that can(not) be taken back'[116] — i.e., a meaning appropriate to a zero-grade formation of the type ἄσχετος/ἀνσχετός, ἄσπετος etc.[117] Thus -άγρετος has no direct derivational relationship to ἀγρέω, but must be based on a verbal adjective *(-)ἀγρ-ετο-, which, in view of the likelihood of zero-grade formation, could go back to a **(-)h₂gr-etó-*.[118] The absence of an actual prefixed negative **n̥-h₂gr-eto-* 'that cannot be taken' is perhaps not surprising, since the resulting (Ion.) †νήγρετος 'that cannot be taken' would have fallen together inconveniently with Hom. νήγρετος 'that cannot be awakened' < **n̥-h₁gr-eto-* (§**2.5.2**).

[116] For the phraseology (οὐ ... παλινάγρετον οὐδ' ... / οὐδ' ...), cf. πάλιν ... οὔτε ... / οὔθ' ἑλετή (§§**2.5.2** with n. 30, **2.11**), and further οὐ ... ἀνσχετά (n. 33).

[117] Likewise αὐτάγρετος 'that can be taken by/for oneself' (π 148, hMerc. 474 = 489): without negative, but with a passive "potential" meaning appropriate to a zero-grade formation.

[118] Cf. the possible **h₂gér-i̯e/o-* in ἀγείρω 'gather, collect' (cf. Myc. [aor.] *a-ke-ra₂-te;* for -άγρετος : ἀγείρω [MCKENZIE] see FRISK GEW and CHANTRAINE DELG s.v. ἄγρα, and on Myc. *a-ke-ra₂-te* see recently LEUKART 1994:266n342, with further references, to which add DUNKEL 1995:3f., HAJNAL 1995:49f.). As an alternative to denominative origin for ἀγρέω (cf. n. 113 above), one could consider a zero-grade non-causative **-éi̯e/o-* formation of the type Ved. *hváyati, spṛháyati* etc., often found beside full-grade thematic presents (*hávate,* σπέρχομαι etc.; see recently GARCÍA RAMÓN 1993:118f.): thus ἀγρέω (**h₂gr-éi̯e/o-*) : ἀγείρω (**h₂gér-i̯e/o-*).

2.15. Lat. *fatērī* and *īnfitiās (īre)*

Another isolated zero-grade **-eto-* form of the type *(co)gnitus* may underlie Lat. *fatērī* 'confess' and *īnfitiās* (in the expression *īnfitiās īre* 'deny'). In addition to points of contact between these forms and *(co)gnitus,* as well as other material discussed above, part of the interest of the following somewhat involved (and partly speculative) discussion lies in the possibility of supporting a word-equation for a zero-grade **-eto-* form (cf. §**2.10.1** on Gk. ἄσχετος and Av. *azgata-*).

Beside the root present *fārī* 'speak' (: Gk. φημί etc.), the obviously related verb *fatērī* 'confess, admit' is said to derive from a nominal or adjectival **bhh₂-tó-* (recently e.g. GARCÍA RAMÓN 1993:117). The same formation appears in the Oscan infinitive **fatíum** (Ve 4), generally glossed 'fari' (more on this point below), but the nature of the formation itself has been the subject of some disagreement. According to WATKINS (1973:68 = 1994:163), the zero-grade *ē*-verbs *nitēre* 'shine', *pūtēre* 'stink', *silēre* 'be silent' and *fatērī* all derive from "old lost nominal forms" in **-to-*, i.e. **ni-to-, *pū-to-, *si-lo-* and **bhh₂-to-;* these continue a type he refers to as "adjective-verbs", which belong to the general class of denominative statives. This account works well for *nitēre, pūtēre,* and *silēre,* which have all the other earmarks of this class, beginning with appropriate deadjectival stative meanings (**ni-to-* presumably 'bright' > **ni-t-ē-* 'be bright, shine', etc.; note also the lack of a perf. ptcple. stem for all three), and including typical parallel formations (*nitēscere, pūtēscere, silēscere; nitor, pūtor; nitidus, pūtidus*). But *fatērī* strikingly fails to conform to this profile: the meaning is not clearly "stative", and there is no trace of forms like **fatēscor, *fator, *fatidus.* Moreover, the precise derivational pattern allegedly seen in *fatērī* is not unambiguously paralleled elsewhere in Latin. Among other **-t-ē-* verbs with *-t-* that may be segmentable (apart from *nitēre* and *pūtēre*), perhaps *latēre* 'be hidden' is the best candidate for a similar derivation, i.e. based on a *tó*-participle **lh₂-tó-* 'hidden' (> **la-t-ē-* 'be hidden'); but the idea that *-t-* is actually a root-enlargement is difficult to exclude (given **leh₂-dh-* in Greek: λήθω 'escape notice' etc.), and the clear stative semantics of *latēre,* in any case, are not directly comparable to *fatērī* (see HOCQUARD 1976:120ff. for discussion). Other possible cases (*foetēre, paenitēre*) are still more obscure derivationally and/or etymologically, but are ultimately of little comparative value, given their divergence in root vocalism (note the clear full grade in *foetēre,* however it is to be interpreted) and formation (thus *paenitēre* clearly with some sort of sec-

ondary derivation).[119] The anomalousness of the *ē*-inflection, then, is quite intractable, and under these circumstances it becomes possible to view this feature as having arisen secondarily (more on which below).

For the presumed basis **bhh₂-to-*, WATKINS himself compared Gk. φατός, implying that *fatērī* derives not from an ordinary adjective, but from a verbal adjective (similarly SCHRIJVER 1991:96),[120] and therefore belongs (at least partly) to the class of "deverbative statives" (on which see now NUSSBAUM 1994).[121] It is often assumed that the verbal adjective in question actually survives in Latin, in an archaic **infitus,* or perhaps better (in more archaic guise) **enfato-* (= Gk. ἄφατος), generally taken[122] to be the derivational basis of *Īnfitiās,* in the idiom noted above meaning 'deny' (lit. 'go [a] denying', cf. FORSSMAN 1974, WATKINS 1975 = 1994:189ff.). It is worth looking more closely, however, at the derivational history of *Īnfitiās,* which FORSSMAN and WATKINS interpret in an entirely different way. According to a conception developed by FORSSMAN (followed by WATKINS), *Īnfitiās* would continue an inherited **n̥-bhh₂-tio-,* with the suffix **-tio-/*-tieh₂-* seen in comparable syntagms of the type Hom. ἐξεσίην ἐλθεῖν 'go (on) a mission' and Ved. *mantraśrútyam car-* 'go a-mantra-hearing'. But it is significant, in this connection, that WATKINS has insisted on the semantic isolation of *Īnfitiās* (vis-à-vis *fatērī, fārī* and Gk. ἀφασία), and has argued persuasively (contra FORSSMAN) that the equation of *Īnfitiās* with ἀφασία/ἀ(μ)φασίη is nothing more than a "Scheingleichung" (1975:92, 107n1 = 1994:192, 207n1). There is thus no reason to assume that *Īnfitiās īre* is particularly more archaic than other such expressions with comparable textual profiles in OLat. (e.g. *suppetiās īre* 'go to the aid of'). Further, *Īnfitiās* should in principle belong rather to the class of compound deverbal nouns of the type *exsequiae, Īnsidiae* (and, indeed, *suppetiae*) etc. (LEUMANN 1977:292); and in this case, the most likely source (whether immediate or more remote)[123] is precisely a deverbal adjective **infito-* (or earlier **enfato-*).[124] Finally, setting up an old **n̥-bhh₂-tio-* for *Īnfitiās* requires separating *Īnfitiās* from *fatērī* (and O. **fatíum**), which is not necessarily desirable: apart from the question of derivational economy, *Īnfitiās* and *fatērī* present something like two different angles of the same semantic problem, which (apart from the bizarre *ē*-inflection of *fatērī* and O. **fatíum**) turns out to be the principal obstacle to the claim that an ordinary verbal adjective **bhh₂-tó-* is at the bottom of these two forms: a meaning like 'confess (esp. wrongdoing), admit, assent etc.' (as in *fatērī*) is in an obvious sense a kind of converse of 'deny'/'denial' (*Īnfitiās*), and neither is easy to derive in any direct way from a **bhh₂-tó-* 'said' or its negated version **n̥-bhh₂-to-* 'unsaid'. To this must be added the semantic problem that O. **fatíum** allegedly means simply 'speak'.

We thus arrive at a point where it may be attractive to consider instead, as alternative starting points, either an inherited **n̥-bhh₂-eto-* 'not to be spoken' (of the type **n̥-sǵh-eto-* etc.), which would likewise yield the requisite **enfato-*,[125] and/or its simplex (or decompositional) version **bhh₂-eto-* 'to be spoken' or (as substantivized) 'something to be spoken' (of the type possibly seen in Ved. *vratá-*, §**2.10.4**).[126] Unfortunately, the mystery surrounding the *ē*-inflection prevents us from specifying the semantic details of the derivational process. But a starting point in '(not) to be spoken' at least brings us appreciably closer to being able to understand

[119] Similarly, even if U. **kutef** 'murmuring' (vel sim.) reflects (as traditionally assumed) an *ē*-verb **kau̯(e)tē-* built to a form comparable to Lat. *cautus,* the full grade implies a derivational process that is again not strictly comparable to that seen in *fatērī* and O. **fatíum**.

[120] This conception goes back at least to OSTHOFF (references and discussion in MIGNOT 1969:91 and HOCQUARD 1976:121); for O. **fatíum** in these terms, e.g. BUCK 1928:191.

[121] The participle *fassus* would then have been formed to the new present stem *fat-,* according to a pattern well-established for both of the major types of derived *ē*-verbs, i.e. statives (see HOCQUARD 1976:324 [*fassus*], 333 [*maestus* etc.]) and causatives (see NUSSBAUM 1994 [*doctus, lūctus, pollūctus*]), as well as other classes more generally. There is thus no need, pace ERNOUT-MEILLET (DELL s.v. *fateor*), to invoke an unattested agent-noun **X-fat-s.*

[122] So e.g. WALDE-HOFMANN s.v. *fateor,* OLD s.v. *infitiās.*

[123] Cf. LEUMANN's comment (loc. cit.) on forms of this type: "Ein adjektivisches Zwischenglied ist entweder vorhanden oder vorauszusetzen".

[124] Even if one wishes to set up a more immediate deverbal source **infītēre* (cf. *invidia* beside *invidus* and *invidēre,* as well as the infectum stems beside all other such forms: *exsequiae/sequī, īnsidiae/sedēre, suppetiae/petere,* etc.), which could even be faintly attested in glosses (see WALDE-HOFMANN s.v. *fateor* for *infitentēs* 'ἀρνούμενοι' and its reflection in Paulus ex Festo), the impossibility of verbal compounding with **n̥-* (LEUMANN 1977:565, including *infitentēs*) would still require a basis in a nominal or adjectival form, such as **enfato-*.

[125] In a sense, this first option is merely a notational variant of the "transformational" account of the meaning 'deny' proposed by WATKINS, which operates, in a similar way, with an inherited collocation of 'not' + 'speak'.

[126] Note that the Latin result of inherited **bhh₂-eto-* 'to be spoken' and **bhh₂-tó-* 'spoken' would have been the same (i.e. **făto-*), which may help explain why the latter was replaced by full-grade **bheh₂-to-* (Lat. *fātum* 'fate' and perf. ptcple. to *fārī*).

meanings like 'confess' and 'deny'. It is possible, in fact, that the positive and negative senses should be considered more closely in tandem: beyond predictable collocations involving confession and denial,[127] and despite the statistical predominance of simplex *fateor* in the early period (cf. FLOBERT 1975:54), ERNOUT-MEILLET (DELL s.v. *fateor*) may be correct in claiming that "[l]'importance des formes à préverbes donne lieu de croire que l'original de *con-fiteor, pro-fiteor* a précédé *fateor*". We might thus have had an original contrast between, say, inherited **enfato-* 'not to be spoken' and Oppositionsbildungen **kom-fato-/*pro-fato-* 'to be asserted/spoken out'; cf. similar remarks on *cognitus* at the end of §**2.10.5**.

There are two further points to be considered. The first concerns the meaning 'speak' of O. **fatíum**, at least according to its traditional gloss. If that is what the form means, one might well be favorably inclined to operate with a plain **bhh₂-tó-* for this form and Lat. *fatērī/īnfitiās*, despite the semantic difficulties this poses on the Latin side. But in fact, a meaning 'speak' for O. **fatíum** is hardly necessary, and perhaps not even attractive, for the following reasons. The word is attested twice in the same text, which is a curse tablet, and in almost identical phrases: **nep fatíum nep deíkum pútíans** (Ve 4.6, 'nec fari nec dicere possint'), **nep deíkum nep fatíum pútíad** (Ve 4.8, 'nec dicere nec fari possit'). The imprecation that one's adversaries should be prevented from 'speaking' is of course a commonplace in ancient curse texts, particularly associated with judicial contexts in which a defendant attempts to prevent his accusers from testifying against him,[128] and this background to the Oscan text in question was evident to VETTER himself (1953:32, ad 4.6). It is thus perfectly possible, and perhaps likely, that far from being a mere synonym of **deíkum** 'dicere', **fatíum** may have expressed rather (at least originally) something like 'give testimony, make assertions about, act as an informant', not far removed from *fateor* in senses like 'assert, acknowledge, assent'.[129]

Secondly (and penultimately), we may add brief remarks concerning possible secondary sources for the *ē*-inflection. If, for example, the **enfato-* or **fato-* discussed above ended up, in the first instance, as an *ā*-verb (a normal derivational process), one could speculate that frequent collocations with *ē*-verbs or semantic/syntactic analogies after *ē*-verbs could have led to secondary *ē*-inflection for an original **(en)fatā(i̯e)-*.[130] Given the formal agreement of the Latin and Oscan stems in this regard, it would be most economical to assume that this process occurred very early, although it could conceivably have occurred independently in Oscan and Latin. Under the circumstances, the best one can do is to indicate certain suggestive synchronic facts. For Latin, it seems striking that the best-attested "locutiones" and "iuncturae" for *fateor* (see TLL s.v., 6¹.341.13, 342.74ff.) involve collocations with impersonal *ē*-verbs (*oportet, pudet, piget* + *fateri*), and that other characteristic locutions involve *ē*-verbs as well (thus *audere fateri, debere fateri*).[131] There is also a certain degree of semantic and syntactic overlap between the meaning and usage of *fateri* and that of *censere* in senses like 'declare, acknowledge, assent'. On the Oscan side, in the sequence **nep deíkum nep fatíum**, which (in view of the Latin parallel cited in n. 129) may reflect a formulaic ordering (as opposed to the reversed sequence **nep fatíum nep deíkum**), the infinitive **fatíum** depends on the directly-following *ē*-verb **pútíad**.

To conclude: there is at least a possibility that the Latin material discussed above in terms of a verbal adjective **(en)fato-* is to be correlated historically with the **(n̥-)bhh₂-eto-* that may underlie what was referred to earlier as ἄφατος² in Greek (§**2.9.3**). This possibility, of course, must be offered with all due reserve, given indeterminacies on both sides of the equation.[132]

2.16. other isolated forms (phonologically ambiguous)

It is convenient to address, at this point, four other isolated and possibly old Greek forms (the first with possible cognates) that could also be

[127] With *fateri/infitias ire* e.g. Pl. *Cist.* 654 (*quae dudum fassast mihi, quaene infitias eat?*).

[128] See recently GAGER 1992, esp. Ch. 3 ("Tongue-Tied in Court: Legal and Political Disputes"), 116ff.

[129] Mutatis mutandis, similar remarks apply to the hapax *sermōnāre* 'engage in discourse with someone, *sermocinari*' in the Latin parallel NEC LOQUI NEC SERMONARE POTEST/NEC LOQUI NEC SERMONARE POSSIT (CIL I² 1012, also a curse tablet).

[130] Naturally, the rare glosses of the type *fatantur* 'multa fantur' (P.F. 88.11 M = 78.22 L) are normally (and probably correctly) interpreted in terms of a frequentative *fātārī* to *fārī*.

[131] Cf. also *fateri* with *merere/mereri*, e.g. Pl. *Mil.* 547 *meruisse equidem me maxumam fateor malum*, Ov. *Met.* 8.127 *nam fateor, merui et sum digna perire.*

[132] One wonders, in any case, whether the possible association between **-etó-* and verbs of speaking (**u̯r̥h₁-etó-, *(n̥-)bhh₂-eto-*, ἄσπετος), as well as verbs of perception more generally (κλειτός, Av. *surunuuata-;* Myc. *o-wi-de-ta-i* [cf. also *βλεπετός presupposed by Hsch. βλεπετύζει], Ved. *darśatá-* and *paśyatá-;* Lat. *cognitus*), may reflect something old; cf. OETTINGER 1992:144, 148ff. on comparable semantic convergences among reflexes of the intensive formation there described.

interpreted in terms of *-*etó*-. All of these forms, however, are to some extent phonologically (and therefore morphologically) ambiguous: the first three involve *TeRh*$_1$- structures with ambiguities as described in §**2.4**(iv) (with n. 22), while the fourth form is not unambiguously set (but might also derive from a *TeRh*$_1$- root). The interpretation of these forms in terms of *-*etó*- formations (as opposed to the plain *-*to*- forms usually supposed for them) arises primarily from semantic considerations.

2.16.1. γενετή, Lat. *Genita*, O. **genetaí**

Hom.+ γενετή 'birth'[133], despite its accentuation (cf. the *e*-grade action-noun type ἀήτη 'gale' [< *$h_2u̯éh_1$-*teh*$_2$ 'blowing']), is generally assumed to continue a full-grade formation in *-*to*-/*-*teh*$_2$-. According to WAANDERS, however, the form derives from a zero-grade *-*etó*- form *$ǵn̥h_1$-*etéh*$_2$ (1974:5). In terms of the conception developed above, such a form would not be a basic action noun (as in WAANDERS's analysis), but an abstract based on a verbal adjective *$ǵn̥h_1$-*etó*- or *$ǵenh_1$-*etó*-, which would stand beside the simple *tó*-form *$ǵn̥h_1$-*tó*- 'born' (Ved. *jātá*-, -γνητος, Lat. *(g)nātus* etc.). Even if (cf. n. 22) such a prevocalic laryngeal zero grade yielded Gk. **γανετή, such a form could have been remodeled relatively easily after synchronic *e*-grades γεν(ε-) (including secondary ones, according to the standard interpretation of e.g. γένεσις). Nevertheless, although the case is ultimately ambiguous (including the possibility of a full-grade *-*to*-/*-*teh*$_2$- formation), evidence from possibly cognate material in Italic favors a full-grade *$ǵenh_1$-*etó*- (of the type Ved. *darśatá*-).

The Latin theonym *Genita Māna* (Plin. *Nat.* 29.58, lit. 'good birth'; cf. Γενετυλλίς) preserves an abstract *genita* likely to be cognate with γενετή (as widely assumed)[134]; the relative antiquity of this *genita* 'birth' (esp. 'divine birth', on which further below) is supported by its derivative *genitālis* (already Enn. *Ann.* 110 Sk *cum dis genitalibus*).[135] While Lat. *Genita* could have either full-grade or zero-grade root (assuming *-*eto*- suffix for both, and for the zero grade a development *CṇHV* > Lat. *CenV* [SCHRIJVER 1991:218ff.]), the same is not true of O. **genetaí** (dat. **deívaí.genetaí** [cf. *Genita Māna*] Ve 147.A 15, B 18 ["Agnone" tablet]): in view of the regular Oscan treatment of *$n̥$ in initial syllables (> */an/*), **genetaí** must reflect a full grade (thus recently MEISER 1986:69n3, EICHNER 1993:87n153), if taken at face value. In theory, one could support a zero-grade interpretation by claiming that the form was borrowed from Latin, but this would not be an attractive assumption for the text in question. Another strategy (cf. **γανετή above) would begin with a lautgesetzlich */ganetā/* remodeled to */genetā/* after full-grade forms comparable to Lat. *genō, genus, genitor,* etc. (at least under the assumption that syncope would not have occurred in such a form, which is hardly certain). The full-grade interpretation, however, is clearly the simplest. Note further that a Pr.-Ital. *genatā* < *$ǵenh_1$-*teh*$_2$ should yield O. ***genat***- or (with syncope) ***gent***-; thus O. **genet-**, under these morphological conditions, would require, once again, either that the form is borrowed from Latin (thus tentatively RINGE 1988:423n29), or else the assumption of a sporadic (and very early) vowel assimilation, of a type attested in Latin (as indeed in *genetīvus,* cf. also *sepelīre, vegetus* etc.; LEUMANN 1977:84, 100), but not with certainty in Oscan. The vocalism of the Oscan form could thus be used either to support the idea of a borrowing from Latin (cf. above), or else a suffixal *-*eto*- rather than *-*to*-.

The standard belief (e.g. SCHWYZER 1929:22, recently SCHRIJVER 1991:92, SIHLER 1995:624) that Lat. *genitus* (perf. ptcple. to *gignō*) is a relatively recent formation modeled on full grades (cf. perf. act. *genuī*, agent noun *genitor*) is appealing only under the assumption that the plain *tó*-form appearing in *(g)nātus* is the only verbal adjective that could have stood beside Lat. *gignō* (OLat. *genō*); but this assumption need not be correct if there existed a parallel verbal adjective type in *-*etó*-. Indeed, the idea of a recent creation is not favored by the relatively early attestation of *genitus* (Accius+: *O Dionyse ... Semela genitus,*[136] Acc. 240-1 Ribb.), nor by the existence of the early derivative *genetīvus* (cf. *Apollinis Genetivi ara,* Cato ap. Macr. *Sat.* 3.6.5), of the type *[captus >] captīvus,* nor by the absence of good parallels for such a remodeling.[137] Thus *genitus* could

[133] In Homer only in the phrase ἐκ γενετῆς 'from birth' (Ω 535, σ 6, hMerc. 440; later also with ἀπό), whence the traditional gloss 'time of birth' for γενετή (thus e.g. WAANDERS 1974:5), on which further below; note also the divine epithet Γενετυλλίς (Aphrodite as protectress at the hour of birth).

[134] See HUMBACH 1955, adding W. *geneth* 'girl' (cf. Gaul. *geneta*) and Germ. *Kind* (although the latter, at least, is probably better explained otherwise, cf. n. 162 below and [differently] HAMP 1973:160ff., 1982:77).

[135] See SKUTSCH ad loc. (1985:262) on the derivation of *genitālis* from the abstract seen in *Genita* and γενετή, as well as on the birth-protecting *di genitales* more generally.

[136] Or ... *genitus Semela,* see D'ANTO' 1980:301 (ad loc.) for references and discussion.

[137] Nothing comparable is found for the other reduplicated thematic verbs (*bibō, sistō, serō, sīdō* etc., on which see JASANOFF 1994:161f.), and other full-grade participles to

continue directly the verbal adjective underlying the abstract seen in *Genita/genitālis,* O. **genetaí**, Gk. γενετή; for the reasons already discussed, this would best be taken as a full-grade **ǵenh₁-etó-*.

If this is so, then the patterns *(g)nāscor* 'be born' : *(g)nātus* and *gignō/genō* 'beget' : *genitus* may reflect an old contrast, with both participles continuing inherited forms. This in turn may provide an approach to the meaning of **ǵenh₁-etó-* (vis-à-vis **ǵn̥h₁-tó-*). As observed by ERNOUT-MEILLET (DELL p. 272, s.v. *genō*), the set of Latin terms based on **ǵenh₁-* to which *genitus* belongs (i.e. *gignō/genō, gēns, genius, ingenuus, ingenium* etc.) "maintient l'idée de 'descendance', et, en particulier, de 'descendance authentique', de 'parenté reconnue', par suite de 'groupe social fondé sur la parenté"; in contrast, the set *nāscor, nātus, nātiō, nātūra* etc. "exprime plutôt le fait de la 'naissance'". Thus **ǵn̥h₁-tó-* provides a simple verbal adjective 'born', whereas **ǵenh₁-etó-* could have had, very roughly (in terms of the meaning appropriate to a formation of the type Ved. *darśatá-*, as discussed above), various meliorative senses deriving from an original '(good) to be born, worth bearing' etc., whence 'born well (= at a good time, easily; divinely, auspiciously; etc.)', or 'born legitimately (in direct succession, etc.)'. Abstract nominalizations would properly mean '(good/easy; divine, auspicious etc.) birth', cf. Γενετυλλίς, (*Apollō*) *Genetīvus, Genita* (*Māna*)[138], *genitālis* (*di genitales*).[139] Precisely this sort of meaning is found also with γενετή, which means not 'time of birth', but rather 'auspicious (esp. divine or divinely-favored) birth', as emerges clearly in three of the four occurrences in early epic:

... Πηλῆϊ θεοὶ δόσαν ἀγλαὰ δῶρα / ἐκ γενετῆς· (Ω 534-5)
ἦ σοί γ' ἐκ γενετῆς τάδ' ἅμ' ἕσπετο θαυματὰ ἔργα (hMerc. 440)
Φόρκυϊ δ' αὖ Κητὼ Γραίας τέκε καλλιπαρήους / ἐκ γενετῆς πολιάς (Hes. *Th.* 270-1)

The fourth occurrence (σ 6), referring to the beggar Iros, is clearly a debased and perhaps humorously distorted version of this pattern: note the play on human vs. divine names (including a pun of some sort on the apparently significant name Iros — cf. Hes. Γραίας), and the famously "illogical" or "irrational" epithet with which Iros' mother is provided (σ 5-6 Ἀρναῖος δ' ὄνομ' ἔσκε· τὸ γὰρ θέτο πότνια μήτηρ / ἐκ γενετῆς· Ἶρον δὲ νέοι κίκλησκον ἅπαντες; cf. the continuation of the Hesiod passage just cited [*Th.* 271-2] ... τὰς δὴ Γραίας καλέουσιν / ἀθάνατοί τε θεοὶ χαμαὶ ἐρχόμενοί τ' ἄνθρωποι).[140]

Note finally that an inherited **ǵenh₁-etó-* would be morphologically significant, in contrast with previously-cited instances of the type Ved. *darśatá-* and its Greek counterparts, all lacking word-equations and generally found beside thematic presents (cf. §**2.12** above). Since there is no good evidence for an old thematic **ǵénh₁-e/o-* (beside **ǵí-ǵn[h₁]-e/o-* [γίγνομαι, Lat. *gignō*] and **ǵn̥h₁-i̯é/ó-* [Ved. *jā́yate,* OIr. *gainethar*]),[141] an inherited **ǵenh₁-etó-* would derive from an older stratum of root formations, as indeed would be expected for a verbal adjective; forms like **derḱ-etó-, *deiḱ-etó-* could in origin be interpreted the same way, although correlations with thematic stems (**dérḱ-e/o-* : **derḱ-etó-* etc.) would then have led to a secondary phase of development, as seen in formations of the type **spéḱ-i̯e/o-* : **speḱ-i̯-etó-* etc. (similarly **ḱleu̯-etó-* beside **ḱléu̯-e/o-*, the latter perhaps in origin a root aorist subjunctive, cf. Appendix 1).

2.16.2. τελετή

As demonstrated by WAANDERS (1983, esp. 13f., 156ff., 289n5), τελετή (Pi.+) has a general meaning 'religious (ritual) performance', often referring to mysteries, and a frequent specialized meaning 'initiation'. As already noted (§**2.4**(iv)), WAANDERS (followed by RUIJGH) understands τελετή as an action noun **tl̥h₁-eteh₂* (according to the morphological analysis developed in his 1974 paper) based on τελέω, which WAANDERS (1983 passim, esp. 18 for athematic **télh₁-mi*) takes to be a primary verb with a basic meaning 'carry out, perform, execute'. Morphological arguments

TERH and *TETH* roots (*vomitus, domitus, sonitus, vetitus* [OL *votitus*], *molitus* etc.) do not share the vocalism of *genitus,* and have different explanations in any case (cf. §**2.9.4** above on *molitus,* and in general SCHRIJVER 1991:392ff. on *vomitus* etc.).

[138] Note *Māna* as reinforcing element of the type ἀρι-δείκετος, πολυ-εύχετος etc.

[139] Similarly *genitus* (referring to divine birth) in the Accius passage cited above.

[140] On πότνια μήτηρ in the Iros passage, see recently LOWENSTAM 1993, Ch. 1 (esp. 17-26). Even if LOWENSTAM's interpretation of πότνια in this collocation ("wedded" vs. "lordly" vel sim.) correctly removes the "illogicality", the incongruity vis-à-vis the other personages to which the epithet is applied still remains, and the incongruity is heightened by the associations among these "birth" passages using ἐκ γενετῆς. On the "mock-heroic" nature of the Iros passage (specifically with reference to the etymology of his name), see recently WATKINS 1995:36 with n. 13, 156.

[141] OLat. *genō* is likely to be a recent formation, perhaps related to a root aorist (cf. subj. *genat;* for *genō* as recent see LEUMANN 1977:532, SCHRIJVER 1991:412); for Ved. *jánati* see the references in MAYRHOFER EWAia (Lief. 8:567f., s.v. *JAN*[I]).

against this conception of primary action nouns in **-eto-/*-eteh$_2$* have already been presented; note in addition that such a framework does not predict the actual meaning of τελετή, which on that account should mean simply 'performance, execution' or the like. If, however, one begins with a verbal adjective **tl̥h$_1$-etó-* (presumably beside a simple **tl̥h$_1$-tó-* 'performed, executed'), this would have meant roughly 'to be performed', whence an abstract/collective **tl̥h$_1$-etéh$_2$* 'that which is to be performed', i.e. 'ritual performance'.[142] Again, according to one school of thought concerning the development of pre-vocalic sequences *TR̥h$_1$* in Greek (§**2.4**(iv) with n. 22), this would have resulted in a *ταλετός/*ταλετή, which would have been adjusted to τελετ- after full grades; alternatively, one could just as easily (and perhaps preferably) operate with a full-grade **-etó-* formation **telh$_1$-etó-* 'to be performed, good/proper to perform', whence abstract or collective **telh$_1$-etéh$_2$* 'proper performance, (religious) rites' etc.[143]

2.16.3. σκελετός

σκελετός 'dried body, mummy, skeleton' (Phryn. Com., Pl. Com.+), to σκέλλομαι 'be parched, withered', is evidently, despite WAANDERS, not an action noun, nor easily derivable from one. The form could reflect a substantivization of a **skl̥h$_1$-etó-* '(semi-animate thing) to be dried out' > σκελετός (either directly, or, again, analogically via a *σκαλετός), i.e. 'the dried out/withered thing par excellence' ('mummy' or 'skeleton'), beside plain **skl̥h$_1$-ró-* (σκληρός 'dry, hard'). Also possible is a full-grade **skelh$_1$-etó-*, though presumably with mostly "gerundivisch" meaning (as partly in some *darśatá-* forms), and apparently lacking anything more than a faint "meliorative" connotation ('worthy of being dried out').[144]

[142] I prefer to leave open the question of the root etymology of **telh$_1$-;* via "French" segmentation, WAANDERS takes this to be merely a parallel enlarged **tel-h$_1$-* beside **tel-h$_2$-* 'bear' (thus roughly 'carry' vs. 'carry out'), but this raises as many questions as it answers.

[143] In this event, **telh$_1$-etó-* would be an archaic root formation (cf. above on athematic **télh$_1$-mi*) like **génh$_1$-etó-* (§**2.16.1** ad fin.).

[144] The attestation of σκελετός at Pl. Com. 184.3 Kock = 200.3 K-A is generally taken as an appositional use of the noun (thus FRISK GEW s.v. σκέλλομαι), given its appearance in conjunction with a personal name; but the word appears in a line otherwise consisting of an adjective and an adjectival participial phrase (184.2-3 ... Κινησίας / σκελετός, ἄπυγος, καλάμινα σκέλη φορῶν), and so could in theory continue the original adj. **sk(e)lh$_1$-etó-*. (Pure attributive usage is otherwise attested only late.)

2.16.4. ἀρετή

One can also reconsider, in similar terms, the problem of Gk. ἀρετή 'excellence, valor' (Hom.+), the formation of which remains unclear. The traditional comparison with ἀρείων 'better, stronger etc.' (superl. ἄριστος) apparently points to a root **h$_2$erh$_1$-*,[145] but in this case — especially since the meaning of the root has not been delimited with much clarity — there is no way to evaluate whether ἀρετή results from **h$_2$erh$_1$-téh$_2$, *h$_2$erh$_1$-etéh$_2$,* or **h$_2$r̥h$_1$-etéh$_2$*. There is, however, an alternative etymological interpretation, and a not implausible one, arising from the general conception of ἀρετή as 'Fügung, Fug', based on the **h$_2$er-* of ἀραρίσκω (see the semantic analysis in these terms by BRANDENSTEIN, 1949:81).[146] If this is the correct root etymology, anit **h$_2$er-* would disambiguate the suffix formation, which would have to be taken as ultimately based on **-etó-*, and not **-tó-*. According to such an account, then, ἀρετή could reflect a feminine abstract (or perhaps collective) based on a **h$_2$(e)r-etó-* 'good to join/articulate' (vel sim.) > 'well-proportioned, well-coordinated etc.', whence an abstract/collective with meanings like 'excellence, beauty, prowess etc.'; this would stand beside plain **h$_2$r̥-tó-* 'gefügt' in Ved. *ṛtá-* 'truth, (world) order etc.' = Av. *aša-* (cf. MAYRHOFER EWAia, Lief. 4:255 s.v. *ṛtá-*, BIELMEIER 1992:42f.),[147] and also the pendant archaic collective **h$_2$r̥-téh$_2$* 'das Geordnete in seiner Gesamtheit' identified by TICHY (1986) on the basis of Ved. *ṛtā́van-* (and related Iranian material, cf. MAYRHOFER EWAia, Lief. 4:256 s.v. *ṛtā́van-*). There is now, finally, the possibility raised by Hitt. *āra* 'fitting', *arā-* 'companion' that the root in question is in fact to be reconstructed **ar-* and not **h$_2$er-;*[148] this would not, however, adversely affect the above hypothesis (except to point in the direction of a

[145] Thus Myc. *a-ro$_2$-e* presumably with regular laryngeal loss (on this process, see PETERS 1980:81n38, with references); ἀρέσκω 'be pleasing' may also belong here, but see SIHLER (1995:362) on the difficulties involved (**h$_2$r̥h$_1$-ské/ó-* > **(ἀ)ρησκε-).

[146] For Greek, note the suggestive iunctura ἀρετᾶς μέγαν ... κόσμον (Simon. 531 LP); elsewhere, a similar development seems to have occurred in Tocharian — taking A *ārwar,* B *ārwer* (adv.) 'ready, prepared' from this root (< *'fit[tingly]') — where B *arwāre* (adj.) means not only 'ready', but also 'noble' (= Skt. *ājāneya-*).

[147] **h$_2$r̥-tó-* 'gefügt' perhaps also implied by Gk. ἀρτέομαι (Hdt.+) 'prepare'; note also PIRART's analysis of 'Αρταῖοι 'Persians' (Hdt.) in terms of the **h$_2$r̥-tó-* underlying Ved. *ṛtá-* etc. (1995).

[148] Thus recently e.g. DUNKEL 1995:1n2, see BECKWITH 1996:151ff. and KATZ 1996: n. 50 for references and discussion.

full-grade root, given well-known problems with the status of zero grades to roots with basic **a*).[149]

2.17. Hom. ἀτρύγετος and τηλύγετος

We return, at this point, to two of the obscure Homeric terms noted in §**2.4**(vi):

2.17.1. Hom. ἀτρύγετος

Hom. ἀτρύγετος (epithet of the sea and the ether)[150] has been explained by LEUKART (1986, 1994:125n2) as a possessive compound 'mit (viel) Geräusch', with first member either (psilotic) "α copulativum" (< **sm̥-*) or zero-grade ἀ- (**n̥-*) from ἐν (**en-*), and second member *τρυγετός 'Rauschen, Getöse, Brandung' of the type νιφετός, ὑετός etc., based on the stem τρυγ- of τρύζω 'murmur, coo, squeak, squirt noisily (etc.)'.[151] This account is in some ways attractive, and could well be correct; but the above discussion (together with other considerations to be noted below) leaves room for doubt. It is noteworthy, to begin with, that despite the relative profusion of terms like νιφετός referring to the natural environment, including water (LEUKART cites παγετός 'ice, frost'; cf. also n. 170 below on βροχετός, σταγετός, λαιλαπετός), no such term has beside it a comparable possessive adjective (†ἀπάγετος 'full of ice' vel sim.). Apart from the extremely difficult ἀμαιμάκετος (which LEUKART interprets in the same way), and apart from prefixed intensifiers (of the type seen in ἀρι-δείκετος, ἀγα-κλειτός etc.), the only roughly comparable form seems to be ἀάσχετος (in SCHULZE's interpretation, cf. §**2.10.1**), which, like (οὐκ) ἀνσχετός, is clearly secondary to ἄσχετος. Thus, if ἀτρύγετος is an old epithet (as it gives every appearance of being), it is more likely to conform structurally to the type ἄσχετος, and thus to continue a verbal

[149] Some other phonologically ambiguous cases in Greek (cf. §**2.4**(iv)) might well be verbal action nouns, of the *e*-grade ἀήτη type (§**2.16.1**, cf. CHANTRAINE 1933:300, WAANDERS 1974:2); thus e.g. ἔμετος 'vomiting' < **yémh₁-to-* (note the root accent, vs. σκελετός, ἀρετή).

[150] Recent discussions, with references, in LfgrE s.v. (Y. GERHARD, 1978), HEUBECK et al. 1988:84 (ad δ 71-3 [S. WEST]), EDWARDS 1991:104 (ad P 424-5), JANKO 1992:183 (ad Ξ 203-4).

[151] This interpretation is accepted by JANKO (preceding footnote).

adjective with a meaning 'that cannot be X-ed' (based on a zero-grade verbal root). A second objection arises from the often-noted problem that the meaning of the epithet should apply with equal naturalness to both the sea and the ether: although the association with αἰθήρ appears only once in Homer (P 425 δι' αἰθέρος ἀτρυγέτοιο#), the appearance of the same formula elsewhere in early epic[152] makes clear that this is an "under-represented formula" (thus EDWARDS loc. cit.). Nevertheless, according to LEUKART (1986:344f.), the meaning 'mit (viel) Geräusch' has nothing specifically to do with αἰθήρ, but is merely an episodic, accessory notion related to the context of P 424-5: ὀρυμαγδὸς / χάλκεον οὐρανὸν ἶκε δι' αἰθέρος ἀτρυγέτοιο, i.e. "Das Kampfesgetöse steigt durch den (in außergewöhnlicher Weise) geräuschvoll werdenden Äther bis zum (ehernen) Himmel". Although LEUKART does not mention this, one of the other early attestations could be interpreted in a similar way (hCer. 67 τῆς ἀδινὴν ὄπ' ἄκουσα δι' αἰθέρος ἀτρυγέτοιο; nothing similar at hCer. 457, and the Hesiod context is broken). But to separate the meaning of ἀτρύγετος from αἰθήρ in this rather artificial way is surely unattractive for such an evidently old association. LEUKART, finally, is hard pressed to explain (1986:345) how the relatively transparent (in his interpretation) meaning of ἀτρύγετος (at least with respect to the sea) could have become so thoroughly obscure so early.

Among the many alternative explanations proposed (see the survey in LfgrE), the most promising seems to me that arrived at independently by D. JONES (1953:49-51) and A. CARNOY (1955:7): on the basis of the rare τρύγη 'Trockenheit, Dürre' (Nic. *Th.* 368 τρύγη δ' ἐν πυθμένι λίμνης), they take ἀτρύγετος to mean 'not drying up' (or, to rephrase this in terms of the above discussion of **-etó-*, 'that cannot be dried up'). This τρύγη is generally thought to be a secondary sense of τρύγη 'harvest, vintage' (: τρυγάω), which is certainly possible (as JONES himself admits); and LEUKART (1986:344n8) believes this meaning to have been extracted from an early (and in his view false) interpretation 'nicht austrocknend' of ἀτρύγετος itself. Nevertheless, the existence of a rather wide range of similar material in glosses of the type ἔτρυγεν· ἐξηράνθη, ἐπὶ λίμνης Hsch. (see JONES 1953:50 and FRISK GEW s.v. τρυγάω for τρύγει/τρυγεῖ, τρύσκει = ξηραίνει, -εται, τρυγητός = ξηρασία) suggests that a verbal

[152] Note esp. hCer. 67 (δι' αἰθέρος ἀτρυγέτοιο#) and 457 (ἀπ' αἰθέρος ἀτρυγέτοιο#), Hes. fr. 150.35 (διά τ' αἰθέρος ἀτρυγέτοιο#); cf. also Stesich. 209.4 *PMG* = Campbell (δι' αἰθέρο[ς ἀτ]ρυγέτας).

stem **tr(e)ug-* 'dry' (whence **n̥-trug-eto-* 'un-dry-able') could well have existed independently of ἀτρύγετος.[153] According to GERHARD (LfgrE), this account is excluded, for the reason that a meaning like 'that cannot be dried out' does not apply to αἰθήρ. But this may not be a valid objection: the αἰθήρ 'upper air' is after all the domain of clouds (see JANKO 1992:196 ad Ξ 286-8), from which emanate rain and storms,[154] among other forms of moisture.[155] Thus the application to αἰθήρ might still, as JONES suggested, be secondary, and yet at the same time semantically defensible.

2.17.2. Hom. τηλύγετος

The most recent detailed study of Hom. τηλύγετος[156] is due to M. JANDA (1988): inspired by LEUKART's interpretation of -τρύγετος via τρύζω, JANDA sees in τηλύγετος a haplologized *τηλε-λύγετος, with second member based on λύζω 'have the hiccups; sob'; the form would thus mean either 'fernhin Schluchzen habend', or (as JANDA prefers) 'in der Ferne schluchzend' — a not implausible designation for small children, with apparent support from two Homeric attestations referring to children separated from a parent (Γ 174f., I 142f.). The formal analysis in terms of a τη[λε]-λυγ- with haplology is extremely attractive (the pattern is of course well-attested: κελαι[νο]νεφής etc.), but the semantic analysis is open to question. One could certainly posit the existence of a noun *λυγετός '(loud) sobbing' (cf. adv. λύγδην 'with sobs', and LEUKART's discussion [1986:344] of several other "Geräuschbezeichnungen" with -ετος); but one is reluctant to believe that the essential Homeric attribute of a beloved child is its propensity for 'sobbing (when) at a distance (from parents)'. And since children are apt to be described with endearing terminology when they are apart from a parent in any case, the passages adduced by JANDA in which τηλύγετος occurs in the context of a separation provide little real support for this analysis. The idea of 'one who sobs at a distance', moreover, is distinctly inappropriate for some passages, so that one is forced to assume some sort of early generalization to a meaning like 'spoiled', although attempts to specify a consistent meaning of this sort have met with little success. Thus at N 470, Idomeneus stands his ground, since the impulse to flee does not seize him 'like a (spoiled? cowardly?) "child"' (τηλύγετον ὥς#). This last passage points up a further difficulty, namely that the term does not in fact regularly refer to small children; if anything, the offspring in question are more consistently young adults, including warriors: thus strikingly, in addition to N 470, also δ 11 (τηλύγετος ... κρατερὸς Μεγαπένθης), I 482 (in a simile referring to Phoinix as a young man accepted by Peleus), π 19 (in a simile, applied to Telemachus, referring to a father's return to a son after ten years), and E 153 (the young warriors Xanthos and Thoon, slain by Diomedes). This last passage may be particularly significant for the interpretation of the term (E 152ff.):

> βῆ [sc. Διομήδης] δὲ μετὰ Ξάνθον τε Θόωνά τε, Φαίνοπος υἷε,
> ἄμφω τηλυγέτω· ὁ δὲ τείρετο γήραϊ λυγρῷ,
> υἱὸν δ' οὐ τέκετ' ἄλλον ἐπὶ κτεάτεσσι λιπέσθαι.
> ἔνθ' ὅ γε τοὺς ἐνάριζε, φίλον δ' ἐξαίνυτο θυμὸν
> ἀμφοτέρω, πατέρι δὲ γόον καὶ κήδεα λυγρὰ
> λεῖπ'

The unmistakable association of τηλύγετος and λυγρός may be more than a mere pun: in particular, the expression of line 153 (with τηλύγετος) suggests that the pathos of the contrast (ὁ δὲ) between Phainops (τείρετο γήραϊ λυγρῷ) and his two sons (τηλυγέτω) is to be interpreted in terms of the actual diction of the line, which implies an association between τηλύγετος and λυγρός; the same pattern is reinforced in line 156, where ἀμφοτέρω, πατέρι δὲ ... λυγρὰ parallels ἄμφω τηλυγέτω· ὁ δὲ ... λυγρῷ. Since λυγρός and λευγαλέος are best interpreted, from a morphological point of view, as Caland alternants,[157] we may reconstruct a Caland abstract *λύγετος 'misery, pain, destruction (etc.)' (: λυγρός) of the type πάχετος (: παχύς), μήκετος (: μακρός) (cf. §**2.1**(ii)). The possessive compound *τηλε-λύγε-

[153] Both JONES and CARNOY take τρύγη and/or τρύγει/τρυγεῖ etc. to be cognate with the Gmc. **dreug-* presupposed by Germ. *trocken*, Eng. *dry* (*drain, drought* etc.), under the assumption that τρυγ- is a "Pelasgian" vocable, as would be required because of the disparity in consonantism (cf. πύργος 'tower, fortress' : Gmc. **burg-* 'id.'). Such a source is not unthinkable for a term whose primary reference may have been marine; moreover, although not noted by JONES or CARNOY, the dental formation of *drought* (OE *drūgoþ, drūgaþ*) vis-à-vis ἀτρύγετος is at least suggestive.

[154] E.g. Π 364-5 νέφος ἔρχεται οὐρανὸν εἴσω / αἰθέρος ἐκ δίης, ὅτε τε Ζεὺς λαίλαπα τείνῃ.

[155] E.g. Λ 53-4 κατὰ δ' ὑψόθεν ἦκεν ἐέρσας / αἵματι μυδαλέας ἐξ αἰθέρος.

[156] Traditionally 'darling, cherished, spoiled (child)' or the like, formulaic with μοῦνος; discussion and references in KIRK 1985:290 (ad Γ 174-5), HEUBECK et al. 1988:194 (ad δ 11 [S. WEST]), JANKO 1992:107 (ad N 470), HAINSWORTH 1993:76, 125 (ad I 143, 482).

[157] Of these, λυγρός itself may be quite old, given the probable equation with Toch. B *lakle* 'pain, suffering' (recently e.g. PINAULT 1989:42, HACKSTEIN 1995:21, RINGE 1996:127).

τος would thus mean 'having misery/pain (etc.) at a distance', i.e. one who is sheltered or protected from harm — a designation equally applicable to children and young adults (the latter including inexperienced warriors).[158]

2.18. κάματος, θάνατος; βίοτος

Before returning to Gk. deverbative -ετος and the problem specific to Aeol. ὄρπετον, we can reconsider the problem of Gk. κάματος and θάνατος. Under the assumption that these reflect *-*eto*- (and not *-*to*-, cf. §2.2), there exists the formal possibility of explaining these forms as substantivizations (with retracted accent) of original verbal adjectives *$\acute{k}m̥h_2$-*etó*- and *$dh(u̯)n̥h_2$-*etó*-, in the manner of Ved. *vratá*- < *$u̯r̥h_1$-*etó*-. But this is unattractive for several reasons. To begin with, not only is there no evidence for the actual existence of such adj. forms (> Gk. †καματός, †θανατός), but there is no reason to think that such forms ever existed: κάματος and θάνατος are not isolated (like IIr. *$u̯ratá$-), and cannot be separated from the negative compound formations ἀκάματος 'inexhaustible' and ἀθάνατος 'immortal', comparable to ἄσχετος 'irresistible' (but no †σχετός), ἄσπετος 'unspeakable' (but no †σπετός), ἄατος 'insatiable' (but no †ἀτός/†ἀτός), etc. It seems significant, in this connection, that all καματ- and θανατ- derivatives (καματώδης, θανατώδης etc.) are post-Homeric, which further supports the idea that καματ- and θανατ- themselves (as opposed to ἀκαματ- and ἀθανατ-) are not terribly old. Secondly, abstract meanings like 'toil' and 'death' are difficult to derive from substantivized verbal adjectives of the type †καματός and †θανατός; for this point, one may compare the type *pacatá*-: whether one conceives of this as a full-grade *pek^w-*etó*- of the *darśatá*- type (thus originally 'good to cook, cookable etc.') or, in view of the root structure, as a substitute for an "ideal" zero-grade *pk^w-*etó*- (thus originally 'to be cooked' or the like), the substantivized result is '(cooked) food', not an abstract 'cooking', 'cuisine', etc. It thus seems attractive to explain κάματος and θάνατος as decompositional to ἀκάματος and ἀθάνατος, respectively, which can also be supported on the basis of the textual behavior of these

[158] It is conceivable that the Telemachus passage (π 19) preserves a contrast similar to that seen in τηλυγέτω ... λυγρῷ: thus the beloved son is τηλύγετον ('sheltered from unpleasantness'), whereas his father, in contrast, ἔπ' ἄλγεα πολλὰ μογήσῃ ('has undergone much hardship').

terms. In nine of its ten occurrences in Homer, ἀκάματος is an epithet of fire, in the line-final formula ἀκάματον πῦρ 'inexhaustible (= inextinguishable) fire'[159]; in contrast with the rather varied usage of κάματος 'fatigue; toil', the fixed behavior of ἀκάματος, as well as its semantic distance from κάματος, together support the idea that ἀκάματος is more archaic than κάματος, and similar arguments could be made for the heavily formulaic epithet ἀθάνατος (ca. 98x *Il.*) vis-à-vis θάνατος (ca. 66x *Il.*). Thus an original *$n̥$-$km̥h_2$-*eto*- 'inexhaustible' > ἀκάματος (cf. *$km̥h_2$-*tó*- 'exhausted' > κμητός) could have been reinterpreted (partly under the influence of νόστος-type action nouns) as a bahuvrīhi 'lacking fatigue/exhaustion', whence a "κάματος" 'fatigue; toil', and similarly for ἀθάνατος (roughly 'un-die-able', however the root etymology and concomitant semantics are to be recosntructed, vs. θνητός 'dead') > secondary θάνατος 'death'. In this way the anomalous root stress of κάματος and θάνατος, in what otherwise appear to be zero-grade formations, ceases to be problematic, as it would be for the view according to which these forms continue the original action nouns underlying the bahuvrīhis ἀκάματος and ἀθάνατος (WAANDERS, RUIJGH).[160]

Also problematic is the more traditional account (cf. §2.2) according to which κάματος and θάνατος show a treatment *CáRa(C)* for *$C\acute{R}̥h_2(C)$* resulting from a secondary root stress, as opposed to the unstressed treatment *Crā(C)* (Dor. κμᾱτός, θνᾱτός), as argued recently by HARÐARSON (1993a:164f.). Note first of all that the alleged shift from original *$\acute{k}m̥h_2$-*tó*- (etc.) to *$\acute{k}m̥\acute{h}_2$-*to*-, in a non-ablauting thematic formation, can have nothing to do with similar shifts well-attested in ablauting nominal paradigms.[161] Instead, one would need to assume that the stress retraction is

[159] See FORD 1992:192 for a recent discussion of this formula.

[160] Cf. recently JASANOFF (1997:181n19): "accented zero grades were infrequent and for the most part secondary in Proto-Indo-European" (see RASMUSSEN 1995 on one type of secondary stressed zero grade); somewhat differently FORTSON 1993:79, though still cautious for PIE (as opposed to "the pre-break-up stage of the language").

[161] On the dynamics of such processes resulting in secondarily stressed nominal zero grades see PETERS 1993 on Gk. ἄρσην, Ved. *vr̥ṣan*- etc. Virtually all of the alleged examples of secondarily-stressed zero grades adduced by HARÐARSON, in both Greek and elsewhere, belong to paradigms with mobile accent, or lend themselves to other interpretations: in a thematic context, note e.g. Lat. *palma*, Gk. παλάμη '(flat of the) hand' < *$p\acute{l}̥h_2$-*meh*$_2$, where one can operate, unlike *-*tó*-, with an ablauting formation (cf. HAMP 1982[1983]; different explanation, via original athematic *m*-stem *$p\acute{l}̥h_2$-*em*-, in SCHRIJVER 1991:210); otherwise e.g. Lat. *partus* 'birth' < *paratu- < *$p\acute{r}̥h_3$-*tu*- (HARÐARSON), but

related to the substantivization of an original verbal adjective. While stress shifts associated with substantivization can be paralleled in Greek *in general* (see e.g. SCHWYZER 1939:379ff.), this is not an attractive account for substantivized *tó*-participles: simple substantivizations tend to remain oxytone (thus στρατός 'army', βροτός 'mortal', ποτόν 'drink' etc.), whereas verbal abstracts (cf. the meanings of κάματος and θάνατος) built with a suffix **-to-* as a rule have full grade, whether *o*-grade (as in the more common νόστος-type) or *e*-grade (as in the type ἀήτη, §**2.16.1** above).[162] This being the case, if one wished to consider κάματος and θάνατος to be formations built with **-to-* (and not **-eto-*), it would be more attractive to take them as original full-grade ἀήτη-forms *κέματος and *θένατος,[163] which would almost inevitably have been remodeled to κάματος and θάνατος.[164] Nevertheless, and to some extent regardless of how one construes the historical background of verbal abstracts in **-to-*, the decompositional analysis based on ἀκάματος and ἀθάνατος seems preferable, partly in view of arguments provided above, and partly for another reason. It is highly suspicious that apart from κάματος and θάνατος, there are no other root-stressed abstracts to $CeRh_2$- roots beside *tó*-participles (e.g. τλητός 'endured', but no †τέλατος or †τάλατος 'endurance, forbearance, patience

par- more likely based on pres. *pariō* (SCHRIJVER 1991:211, 219); γένεσις is susceptible of many interpretations (cf. Hom.+ νέμεσις, Hes.+ Λάχεσις [later ζεῦξις, εὕρεσις etc.], and even the type RV *dṛśatí-* 'sight, appearance', cf. *darśatá-* [thus conceivably **gn̥h₁-eti-*]); etc.

[162] Full grade is also expected for archaic result nouns built on *tó*-participles, of the type (neut.) **Kléu̯-to-* 'sound', **génh₁-to-* 'offspring'. HARÐARSON's appeal to Gmc. forms like Go. *kunþs*, OHG *kund* 'known' < **gn̥h₃-to-* (1993a:165) is not probative: these forms have little bearing on the behavior of **-to-* in Greek κάματος and θάνατος, especially since they are verbal adjectives themselves (not abstracts or action nouns), for which reason the explanation for their secondary root stress (see e.g. PROKOSCH 1939:190) is likely to have nothing in common with the substantivization-retraction presumed for κάματος and θάνατος (under this sort of account).

[163] Thus e.g. SIHLER 1988:554, following COWGILL (differently SIHLER 1995:628); *o*-grade νόστος-forms could not be involved directly, since the laryngeals would have been lost in this environment by "Saussure's law" (cf. τόλμη etc.), whence †κόμτος, †θόντος (cf. WEISS 1996:673).

[164] Another variant has recently been articulated by RIX (1991:229), according to whom "Verbalabstrakt[a] des Typs griech. νόστος 'Heimkehr', θάνατος **dhu̯n̥h₂-to-s* 'Tod'" are "wohl durch Akzentwechsel aus den Verbaladjektiva auf **-to-* hervorgegangen", except that *e*-grade is secondarily inserted for roots containing two obstruents, and the *o*-grade of forms like νόστος is itself secondary, after accented thematic abstracts of the λόγος type.

vel sim.'; ἄδμητος 'untamed' : ἀδάματος 'untamable' [cf. n. 171 below] but no †δάματος 'taming, mastery vel sim.', etc.).[165] Thus the only alleged cases of this formation, i.e. κάματος and θάνατος, happen to appear precisely beside pendant negative compounds ἀκάματος and ἀθάνατος; this key descriptive fact at least serves to undermine the otherwise ingenious defense of κάματος < (secondarily stressed) **ḱn̥h₂-to-* recently mounted by M. WEISS.[166]

This is not to deny the validity in some cases of the *CáRa(C)* for *CR̥h₂(C)* treatment itself, as for example in HARÐARSON's account of certain Greek aorist forms derived from the weak stem-form of *CeRH-* root aorists: there, it should be noted (in direct contrast to κάματος and θάνατος), the secondarily-stressed zero grades have both an easily-definable formal background (i.e. unaugmented root aorist injunctives) involving a paradigm with original mobile accent, and no resulting semantic difference from other ordinary aorists.[167]

Despite the above remarks on κάματος and θάνατος, together with the recent tendency to consider βίοτος in the same terms, βίοτος is not likely to be decompositional to ἀβίοτος, which does not appear until Euripides. Thus βίοτος is the primary explanandum, and in view of its accent, a WAANDERS-style preform of the sort **gʷih₃-etó-* (cf. §§**2.2**, **2.3** with n. 19) does not in fact seem likely. Note also that those who feel comfortable operating with secondarily stressed substantivizations like **ḱn̥h₂-to-* (> κάματος, cf. above) cannot derive βίοτος directly from a **gʷíh₃-to-* (> **βῑτο- or **βιωτο-/**ζωτο-, depending on one's assumptions about the treatment of medial **-ih₃-* in Greek). There are a number of ways in which

[165] Similarly for other root shapes (φυκτός 'avoided' but no †φύκτος 'aversion etc.'), although some types are ambiguous (thus for $CeRh_1$- roots: e.g. κλητός 'called' but no [secondary zero-grade] †κέλετος or †κάλατος 'calling'; ἔμετος 'vomiting' thus rather with full grade, cf. n. 149 above).

[166] Loc. cit. (n. 163 above). Even if one accepts the idea that the voice-indifference of a PIE **ḱn̥h₂-tó-* could have led to a nominalization of the "active" meaning 'wearing out' > 'wearing out (force)', i.e. 'toil', it is harder to grant that "[t]hese secondarily accented, nominalized *-to-* verbal adjectives filled a hole in the derivational system left by the elimination of νόστος-type nouns built to laryngeal final roots" (given the operation of Saussure's law, n. 163), since κάματος and θάνατος appear to be the only cases of this type.

[167] For a recent discussion of the "double treatment" in terms of autosegmental phonology, see FORTSON 1993.

βίοτος can be explained, and the complex problems posed by this much-discussed form must be left aside here.[168]

2.19. post-Homeric data and "quasi-participial" -ετος

We may now return to the problem concerning Aeol. ὄρπετον, for which we must first briefly survey relevant post-Homeric data. These show the following two main trends, apart from further examples like those already seen,[169] extensions therefrom,[170] and several new forms that may reflect secondary adjustments of historically different material[171]:

(i) a spread of forms without prefix: thus beside Hom. ἐξαίρετος also αἱρετός (Aesch.+); further αἰνετός (Cratin.+) '(to be) praised', εὑρετός (Soph.+) '(to be) discovered';

(ii) a spread of the "quasi-participial" type (**§2.6.4**),[172] along two parameters:

(a) new examples of the intransitive type ἑρπετόν 'creeping (thing)', ἀλάμπετος 'not shining' (§§**2.5.1**(b), **2.6.4**): e.g. μενετός 'waiting, patient' (Thuc.+); river and stream names Ῥειτοί/Ῥειτά, Ῥεῖτος[173] 'The Flowing One(s)' (Thuc.+) < *ῥεϝ-ετο-[174];

[168] See in general KLEIN 1988:268f., with the references in 269n19 (to which add LINDEMAN, §**2.2** above). Despite HARÐARSON (1993b:166n36), the conception held by PETERS ("< *g^{u}éi̯h$_3$-to-s* mit analogischem *bi-* nach *ebíōn*", 1976:159n10) seems to me the most promising approach at present.

[169] Soph. διαίρετος, Bacchyl. αὐθαίρετος like Hom. ἐξαίρετος/αὐτάγρετος, Aesch. ἀπεύχετος like hHom. πολυεύχετος, etc.

[170] Cf. SOLTA 1963:170 and WAANDERS 1974:4n4 on various semantic groupings in the material, especially characteristic of the "meteorological" terms: thus for παγετός 'ice, frost', βροχετός 'wetting, rain', σταγετός 'dripping', λαιλαπετός 'hurricane' cf. Hom. νιφετός, ὑετός, *βρεμετός; for φλογετός (§**2.4**(iii) above) cf. Hom. πυρετός; etc.

[171] E.g. ἀδάματος (trag.) 'unbroken, indomitable', in theory from an original **n̥-dm̥h$_2$-eto-*, but perhaps a secondary reshaping (after *s*-aor. ἐδάμασα and Hom. ἀθάνατος etc.) of Hom. ἀδάμαστος 'id.', cf. also ἀκόρεστος/ἀκόρετος (trag.) 'insatiate', and further ἀκόρετος/ἀκόρητος : ἀμάχετος/ἀμάχητος (trag.) 'unconquerable'; detailed discussion of ἀδάμα(σ)τος in JOSEPH 1980:219ff.

[172] Or (as described by TICHY 1983:315n235) simply "Nomen agentis" type.

[173] For the accent retraction cf. Hom. Κλεῖτος, later Λάμπετος, etc.

[174] KRAHE (1954:89) aligns this name with a series of other hydronyms (esp. in Greece and Illyria) with suffix **-Vto-*; while this may have a certain descriptive validity, the name

(b) transitive revaluations of passively-valued forms, e.g. αὐτάγρετος 'choosing for oneself' (Semon. 1.19, vs. Hom. 'that can be chosen by oneself', cf. n. 117 above), similarly Att. αὐθαίρετος both trans. and intrans. (vs. Hom. -αίρετος, cf. §**2.14.1**); ἀτίετος both 'dishonored' and transitively 'dishonoring, disregarding' (Aesch., Eur.).

Although forms with negative prefix continue to be found,[175] forms built to what appears to be a thematic aorist stem (i.e. of the type ἐλετός, ἄσπετος, ἄσχετος etc.) are conspicuous by their almost complete absence. One finds only δακετόν/δάκετον (Ar., Theophr.+) 'venomous animal' (: δακεῖν 'bite'), and the difficult compound κρησφύγετον (Herod.+) 'place of refuge' (: φυγεῖν 'flee'). The relatively late δακετόν looks suspiciously as if it were patterned after its virtual synonym ἑρπετόν (cf. n. 170 above), with influence in the direction of what appears to be the aorist stem (i.e. > δακετόν, not *δακνετόν) from the earlier-attested δάκος (Pi.+) 'bite' in its concretized meaning 'biting animal' (Aesch.+); much the same process clearly occurred somewhat later — i.e. at that point with influence from both ἑρπετόν and δακετόν/δάκετον — in κινώπετον '(venomous) serpent' (Call., Nic.), beside the much better-attested root noun κνώψ 'biting animal' (Nic.), on which see SCHINDLER 1972:88.[176] Thus, to return to the

in question has an equal or greater claim to the above inner-Greek account. A *ῥεϝ-ετο-, moreover, may be relatively old within Greek: the *s*-stem adj. ἐϋρρεής (Hom. only gen.sg. ἐϋ ρρεῖος, in an evidently archaic formula ἐϋρρεῖος ποταμοῖο#, 5x *Iliad*) has a later variant ἐϋρρείτης (Z 34, ξ 257, cf. JANKO 1992:216 ad Ξ 433-4), which could have been formed under influence from a thematic *-ρειτός (cf. LEUKART 1994:125, 290ff. on the secondary derivation -βρεμέτης <--- *βρεμετός, -γενέτης <--- γενετή etc.), whether of the quasi-participial type attested later, or conceivably of the type (-)κλειτός (thus **sreu̯-etó-* 'good to flow = smoothly flowing' vel sim. > *ἐϋρρεῖτος, cf. ἀγα-κλειτός, *εὐ-ναίετος etc.). The derivational possibilities, however, are complicated by the existence of an athematic **sreu̯-ét-* (Ved. *sravát-* 'stream'; cf. also RASMUSSEN 1994:327n8 and nn. 40, 41 above).

[175] In addition to ἀτίετος above, also ἀγάμετος (Soph.) 'unmarried', ἀδαίετος (Ap. Rhod.) 'undivided'.

[176] For the pattern (roughly) "ἑρπετόν X δάκος > δάκετον/δακετόν", cf. πάγος (Aesch.+) 'ice, frost' : πάγετος/παγετός 'id.' (Pi.+) and νιφετός; similarly πνῖγος [Aristoph.+] 'choking, stifling (of heat)' : πνιγετός 'id.' (Ptol.) and πυρετός. Such cases with accentual variation were explained by WHEELER (1885:116f.) on the basis of the inherited contrast between adjective (or agent noun) and action noun, as in pairs like δολιχός 'long' : δόλιχος '(the long) race-course' etc.; hence, according to WHEELER, παγετός (sc. καιρός) 'Winter, das gefrorene' vs. πάγετος 'das Frieren'. While this distinction may well have been operative in some cases — especially, as it seems, in the minds of some grammarians

traditional claims about Aeol. ὄρπετον: δακετόν can provide no independent evidence for a formation comparable to ἑρπετόν but instead based on an aorist stem. As for κρησφύγετον, its probable derivation via not only compounding but also a kind of univerbation[177] renders extremely difficult the analysis of the second member -φυγετο-; but in theory, κρησφύγετον 'place of refuge' could be a substantivization of an adjective *κρησ-φύγετος 'destruction-escaping' (see NUSSBAUM loc. cit. for κρησ- 'destruction'), formed after an *ἀφύγετος 'inescapable' (replaced by ἄφυκτος), in the manner of *θέσ-σπετος : ἄσπετος (**§2.5.2**). Thus the independent value of this -φυγετο-, as a form that would support the putative derivation of ὄρπετον from a thematic aorist stem, is again rather limited.

In the highly unlikely event that Aeol. ὄρπετον and Hom.+ ἑρπετόν actually continue distinct formations (**§1.**), the distribution and history of Gk. deverbative -ετος, as outlined in **§2.**, serve to demonstrate that ὄρπετον is not likely to be based on a thematic aorist stem (and therefore has nothing whatsoever to do with Ved. *asr̥pat*). The zero-grade type in *-*etó*-, attested as an archaism in Homer (with possible traces in Mycenaean [**§2.10.3**] and elsewhere [**§§2.10.1, 2.10.4, 2.10.5, 2.15**]), has no direct derivational relationship with the thematic aorist (**§2.9**), and differs both chronologically and semantically (**§2.10.2**) from ὄρπετον (Sa.)/ἑρπετόν (*Od.* 1x+), forms that are best aligned with the later stratum of "quasi-participial" forms like ἀλάμπετος, μενετός and others, as discussed above (**§§2.6.4, 2.19**(ii)); the latter formation, generally based on thematic present stems, is itself distinct from the evidently more archaic full-grade formation seen in the Homeric type ἀριδείκετος, κλειτός etc. (comparable to the IIr. type seen in RV *darśatá-* etc., **§2.6.2**), with subtype -αίρετος, *ναιετός (**§§2.13.2, 2.14.1**) likewise comparable to material in Indo-Iranian (Ved. *haryatá-, paśyatá-*). There is every reason to believe, then, that Aeol. ὄρπετον continues a formation of essentially the same type

(on which see WHEELER's interesting remarks, op. cit. 117n1) — the texts provide no real justification for such a semantic distinction, the forms in question being essentially nominal from the beginning, essentially as in Hom. νιφετός. Under the circumstances, then, one might just as naturally ascribe accentual variants like δάκετον (beside δακετόν) and πάγετος (beside παγετός) to the influence of thier root-stressed base forms δάκος and πάγος.

[177] See the persuasive analysis of κρησφύγετον by NUSSBAUM (1986:63ff., based on the Homeric expression κῆρα φυγεῖν 'escape death', but with a different analysis of κρησ-), with extensive discussion and references.

as ἑρπετόν. The problem that remains is how best to account for the vocalism of Aeol. ὄρπετον under this assumption.

3. *Aeolic ὄρπετον: Conclusions*

If, as I have tried to show, it is necessary to consider both ἑρπετόν and ὄρπετον to be based on thematic present stems, and if, as is generally assumed (cf. §1), ὄρπετον continues a zero grade, we arrive at two present-stem allomorphs **serp-* and **sr̥p-*. There is, however, no evidence whatsoever for a zero-grade **sr̥p-*: the plain thematic present attested in Gk. ἕρπω, Lat. *serpō*, Ved. *sárpati*[178] provides no support for alternative formations with zero grade, such as a *tudáti*-present **sr̥p-é/ó-*,[179] a zero-grade **-i̯e/o-*present **sr̥p-i̯é/ó-*, an athematic **sérp-ti* with weak stem **sr̥p-´*, an acrostatic **sér̄p-ti* with weak-stem replacement **sr̥p-* for **sérp-* (cf. Ved. 3pl. *stuvánti* for **stávati* 'praise'), etc.[180] It is also necessary to dispose of the last remaining vestige of evidence in favor of a zero-grade interpretation for ὄρπετον, namely the gloss ἀρπετόν (cf. §1). The form of the entry as printed by LSJ ("ἀρπετόν· ἀκόμιστον Hsch.") does not inspire confidence: ἀρπετόν here would reflect a form of an adjective *ἀρπετός (perhaps not in itself a problem [cf. n. 3], although still not directly comparable to ὄρπετον), but more importantly, it is not immediately clear what relevance the definition provided (ἀκόμιστος 'slovenly, untended') has to the word that appears in ὄρπετον and ἑρπετόν, unless one operates with metaphorical interpretations on the order of Eng. locutions like 'crawling with (vermin etc.)' > 'slovenly'. The entire gloss, however, is simply corrupt, as evident from the fuller form of the entry printed by LATTE

[178] Note also the *e*-grade in Alb. *gjarpër* 'snake' < **serpen-*.

[179] A formal type not represented in Greek by any clearly inherited instance (see recently HARÐARSON 1993b:161 with n. 10).

[180] In view of the spread of the *s*-perfectum in Latin, the last-mentioned possibility finds no particular support in perf. *serpsī*, even if there is some valid correlation between lengthened-grade *s*-aorist and acrostatic presents (see in general STRUNK 1985, and further WEISS 1993:178ff. on the possibility of an old lengthened-grade preterite to acrostatic presents). Nor can Lat. *rēpō* 'creep, crawl' be used to the same effect, since the connection sometimes made for this verb with *serpō* via enlarged stems **ser-p-/*sr-ep-* (see e.g. ERNOUT-MEILLET DELL s.v. *serpō*) has little in its favor, and several counts against it — note esp. the consistent initial *r-* in the Baltic cognates (Li. *replióti* 'move on all fours' etc.), where **sr-* should be preserved; for *rēpō*, see rather SCHRIJVER 1991:140 (**Hreh₁p-*).

(1953:251): †ἀρπετόν· ἀκόμιστον. ἢ ἰκτῖνον. Κρῆτες. As seen already by SOPING (see LATTE's apparatus), the sequence ἀρπετόν· ἀκόμιστον probably stands for something like "ἄρπην· τὸν ἀετόν", cf. the immediately following entry, which begins "ἄρπη· εἶδος ὀρνέου"; thus, despite continued silence on ἀρπετόν in LSJ Supp.[2] (1996), Hsch. ἀρπετόν almost certainly has nothing whatsoever to do with either ἑρπετόν or ὄρπετον.

It appears necessary, therefore, to entertain the alternative phonological interpretation of ὄρπετον, i.e. that it shows an actual *o*-grade.[181] This approach, at first sight, appears to be equally fruitless, in the absence of evidence for old verbal *o*-grade formations (causative **sorp-éi̯e/o-*, iterative-intensive **sorp-éh₂i̯e/o-*, etc.), or for an ablauting paradigm incorporating an *o*-grade. To be sure, a hypothetical **sórp-/*sérp-* could recover the acrostatic athematic type with *ó/é*-ablaut (JASANOFF 1979, cf. §**2.9.4** above), which includes verbs of motion among its representatives. But even though many such *ó/é*-verbs are attested mainly in the guise of plain thematics (i.e. with almost consistent *e*-grade), it is disquieting, in the present case, that evidence for an *o*-grade would appear only in Aeol. ὄρπετον itself, and that there is no evidence for athematic inflection of any kind; an interpretation of this sort for the *o*-grade of ὄρπετον, then, would have to be considered, at best, a remote possibility.

A better solution to this conundrum is that the *o*-vocalism of ὄρπετον should be taken as secondary; and according to a familiar principle, the original form (i.e. an Aeol. *ἔρπετον = Hom.+ ἑρπετόν) must have undergone influence from a related nominal form with *o*-grade.[182] As it happens, a **sorp-ó-* 'creeper' (i.e. with essentially the same meaning as ἑρπετόν) probably underlies not only Ved. *sarpá-* 'serpent', but also, closer to hand, Hom.+ ὄρπηξ (= Aeol. [including Sappho] ὄρπᾱξ) 'shoot, sapling' < *'creeper'.[183] Thus, despite the customary reluctance to traffic in contamination analyses, the morphological facts of the case render ὄρπετον a rather good candidate for such an explanation, and serve to buttress what is after all the most plausible etymology of ὄρπηξ, despite doubts occasioned by the

[181] This possibility was raised, as a theoretical alternative, by BECHTEL (1921:60), and explicitly rejected by SCHWYZER (1939:502n3).

[182] KLINGENSCHMITT assumes the same sort of explanation for the *o*-grade of **μop-eto-* (Ven. *.e.kvopetaris*) beside **μep-eto-* (SPi. *vepet-*), although the etymological analyses are uncertain (cf. n. 41 above, as well as §**2.4**(iii) on the type τόκος : τοκετός).

[183] For *ὄρπ-ᾱκ- <--- *ὀρπο- cf. θύνναξ/θύννος, νέαξ/νέος, πλούταξ/πλοῦτος etc. (CHANTRAINE 1933:380ff., LANSZWEERT 1994:194n40).

profusion of alternative proposals (see FRISK GEW and CHANTRAINE DELG s.v.).

Appendix 1: Gk. κλέω/κλέομαι

Insofar as (-)κλειτός (§**2.5.1**) is an isolated deverbative formation most closely aligned with other forms that appear beside full-grade thematic stems (ἀρι-δείκετος : δέκομαι [or **déiḱ-e/o-*], πολυ-εύχετος : εὔχομαι), it would tend to support the primary interpretation of κλέω/κλέομαι (cf. n. 29). Nevertheless, such a "thematic" **ḱléu̯-e-(tor)* (cf. OCS *slovǫ* 'I am called') is probably to be viewed as only relatively old: according to a pattern of secondary derivation that has lately emerged with some clarity, a **ḱléu̯-e-(tor)* could have developed as a "reassigned" athematic root aorist subjunctive (cf. RV *śrávat,* and §**2.16.1** ad fin.).[184] In this case, a devolopment of this sort could be related to the use of future or potential expressions such as 'X shall be celebrated' (or, so to say, 'to X κλέος ἔσται'), cf. Enn. *Ann.* 12-13 Sk *poemata nostra / ... <clara> cluebunt;* indeed, the stative formation of *cluēre,* which may also be relatively old,[185] may reflect a similar strategy.[186] In view of this morphological and semantic background, then, the future time reference of pres. κλέονται at Pi. *I.* 5.27f., bolstered or specified with the help of an accompanying adverbial expression, seems particularly striking (κλέονται δ' ἔν τε φορμίγγεσσιν ... μυρίον χρόνον), and could conceivably reflect an archaism.

Appendix 2: Gk. ἀάατος/ἀάᾱτος

As noted above (§**2.9.4**, ad fin.), the isolated Hom. ἀάατος (χ 5, φ 91) and ἀάᾱτος (Ξ 271) could in theory continue zero-grade **-eto-* forms of the ἀθάνατος type, i.e. based on a root with final **-h_2*. Unfortunately, the form (under the assumption that we are in fact dealing, at bottom, with a single form) is of uncertain meaning and etymology; and the problem is rendered especially difficult since the *Odyssey* usages (with ἄεθλος, thus traditionally 'unimpeachable, decisive' or the like) and the *Iliad* usage (with Στύγος ὕδωρ, thus traditionally 'irrevocable, inviolable' or the like) do not appear to coincide, at least on the surface. Although it is now generally assumed that the form belongs somehow with ἄτη 'deceit, punishment' and ἀάω 'injure, harm' (recently e.g. JANKO 1992:195 ad Ξ 271-4, CHADWICK 1996:31), the background of these forms is itself far from clear. The problems surrounding these forms have been much discussed, and there is no question of undertaking a full-scale reanalysis here. There is space, however, to comment briefly on several recent approaches, especially insofar as they concern ἀάατος/ἀάᾱτος and the possibility of a zero-grade formation in **-eto-*.

M. MEIER-BRÜGGER, arguing against the connection with ἄτη, has recently (1994:227ff., cf. 1992:116) proposed a new account of ἀάατος/ἀάᾱτος that is not unattractive in terms of semantics: interpreting as 'keine Erfolgschancen habend', MEIER-BRÜGGER etymologizes in terms of the **senh$_2$-* of Hitt. *šanḫzi* 'seeks', Ved. *sani-* 'gain' etc. For the formation, MEIER-BRÜGGER himself compares ἀθάνατος and ἀκάματος; he nevertheless sets up a pre-form **ṇ́-sn̥h$_2$-to-*, ultimately based on an abstract **sń̥h$_2$-to-* with retracted accent, of the type allegedly seen in θάνατος and κάματος, following the interpretation of ἀθάνατος/ἀκάματος as possessive compounds meaning "keinen Tod bzw. keine Ermattung habend". He then observes (1994:228f.) that this analysis requires the assumption of a development *C^{o}RV$_i$C* for stressed *CR̥H$_i$C,* although he notes the alternative possibility (citing WAANDERS and RUIJGH) of a conception in terms of an **-eto-* abstract instead of a **-to-* abstract. In either case, however, there is a fundamental formal difficulty that MEIER-BRÜGGER fails to note, namely that both **-sń̥h$_2$-to-* and **-sn̥h$_2$-eto-* would seem to predict a development to Pr.-Gk. ***-hanato-* (cf. ἀκάματος etc.), not **-haato-*, at least according to the usual conception of the prevocalic treatment of syllabic resonant followed by laryngeal (e.g. RIX 1976:74, **é-ḱm̥h$_2$-ont* > ἔκαμον etc.). But in his 1994 paper (delivered in 1992), and more fully in his contemporaneous study of Gk. γῆ and γαῖα (1992),[187] MEIER-BRÜGGER suggests that the retention of nasality in a form like ἔκαμον is due to analogy from full grades

[184] Cf. similar analyses of εὔχομαι (: root aor. εὖκτο, GAv. *aogədā,* Ved. [3pl.] *óhate*), δέχομαι (: Ved. *dāṣṭi*), φέβομαι (: Li. *bégu,* OCS *bĕgǫ*) etc. proposed by NARTEN, TICHY, STRUNK and others, as recently discussed by ISEBAERT 1992:195 and DUNKEL 1998:91f. (both with references); similarly MEISER 1993:299n80 on εἴδομαι.

[185] Cf. SPi. *kduiú* (RIX 1994), as well as Latv. *sluvêt* 'be celebrated' vs. OCS *slovǫ.*

[186] Alo perhaps ultimately comparable might be RV *śróṣamāṇa-,* Toch. A *klyoṣtär*/B *klyauṣtär,* whether this is based on an *s*-aorist subjunctive or else somehow related to desiderative or "prospective" formations (for recent discussions, with references, see HACKSTEIN 1995:323f., RASMUSSEN 1997:258f.).

[187] For an entirely different account, see now PETERS 1994.

in *-Vm-*, with the "regular" treatment appearing, for example, in γῆ (i.e. **ǵm̥h₁-éh₂- ≥ *gm̥h₁áh₂- > gah₁áh₂-* [cf. τατός < **tn̥-tó-* etc.] > **gaā́-*). In this way, one could arrive at a **-haato-* (from either **-sḿ̥h₂-to-* or **-sm̥h₂-eto-*) directly. But despite the extreme isolation of ἀᾱ́ατος/ἀᾱ́ᾱτος, one is reluctant to believe that this epithet and γῆ/γαῖα are the only forms that preserve this primordially "regular" treatment, which has been so thoroughly replaced everywhere else in Greek. There is finally the somewhat troubling fact that while Greek appears to preserve an aniṭ version of the same root in ἄνυμι/ἀνύω 'accomplish' (cf. Ved. *sanóti*), there is no other evidence for seṭ **senh₂-* in Greek (barring recent claims to this effect).[188]

A far more detailed account, encompassing many particulars associated not only with ἀᾱ́ατος/ἀᾱ́ᾱτος but also ἄτη and ἀάω (as well as presumed cognates, principally Hitt. *wašt(a)-* 'sin' and derivatives, and the Gmc. **wamma-* 'blot, crime' of Go./OE *wamm*, OIc. *vamm* etc.), has been offered by J. CATSANICOS (1991), and has begun to find some favor.[189] Once again, despite semantic attractions (partly arising from many suggestive parallels CATSANICOS attempts to draw between Homeric and Hittite usages of the vocables involved), it must be admitted that in formal terms, CATSANICOS's reconstructed **h₂u̯em(s)-* works rather better for Germanic and Anatolian than it does for Greek. Not only does a full-grade **h₂u̯em-* (> ἀ(ϝ)εμ-) or **[h₂]u̯om-* (> [ἀ]ϝομ-) never surface, but all forms are derived from an irregularly vocalized preconsonantal zero grade **h₂u̯m̥-*, for which no good explanation is provided. In ἀᾱ́ατος/ἀᾱ́ᾱτος itself (1991:45-55), CATSANICOS sees (49ff.) a *tó*-participle with "intensive reduplication" **h₂u̯e-h₂u̯m̥-to-* (> ἀ(ϝ)ᾱ́(ϝ)ατος directly); apart from the unexplained vocalization already noted, this is a formation which in morphological terms is wholly untenable, and which CATSANICOS is unable to justify or parallel.[190] Indeed, it was already suspect that beside pres. ἀᾶται, CATSANICOS took the *s*-aor. forms (Hom. ἀάσατο etc.) to be built

[188] See LEUKART 1994:71n79 on aor. ἤνεσα < (unaugmented) **ἔνασα*, whence (with metathesis) **ἄνεσα*. But (among other problems) the metathetic process there invoked (Hom. λο(ϝ)ε- < **λεϝο-* etc.) is otherwise attested only with cases involving vocalized **-h₃*.

[189] Unconditional endorsement by MELCHERT: "Catsanicos (1991) has shown conclusively that Hitt. *wašt(a)-* 'miss the mark; sin' is related to Grk. ἀάτη 'error; sin' etc." (1994:50); accepted also by LINDEMAN (1997:96), suggesting a minor adjustment (1997:137).

[190] None of the forms cited at 1991:49n4 is comparable.

on an otherwise unattested root athematic middle ***(e-)h₂u̯m̥-to* (there being no trace of **-h₂u̯em-s-* or **-h₂u̯ēms-*).

Finally, J. PUHVEL (1992), arguing against CATSANICOS, attempts to derive ἄτη (ἀϝάτᾱ) and ἀᾱ́ατος/ἀᾱ́ᾱτος from forms like **h₂u̯h₂-tā* and **-h₂u̯h₂-to-*, again with what must be viewed as irregular vocalizations.[191] It seems eminently simpler and more appealing to begin with a full-grade **h₂eu̯h₂-*, which can directly account for ἀϝάτᾱ (< **h₂éu̯h₂-teh₂*, i.e. an *e*-grade action noun of the ἀήτη type),[192] as well as the *s*-aor. ἀ(ϝ)ασ- (< **h₂éu̯h₂-s-*), which, as CATSANICOS demonstrates quite convincingly, is basic to the whole Greek system.[193] It is almost predictable, under these circumstances, that a *tó*-participle **h₂uh₂-tó-* (presumably > **ἀϋτό-, cf. PETERS 1980:16f. on ἀϋτμή) would have been adjusted to **ἀ(ϝ)ατό-*, the form attested in (neg.) ἀναατορ '(unharmed, i.e.) with impunity' (DGE 424 = BUCK 1955:262, no. 65; Elean, 4th c.) and (with contraction) ἄνᾱτος (Aesch.+), ἀπᾱτος 'id.' (Cret., Leg. Gort.). Note finally that a scenario of this sort would be distinctly benefited by positing an archaic negative **n̥-h₂uh₂-eto-* 'inviolable', since, whatever the regular outcome of such a form might have been,[194] it would surely have resulted in a -(ϝ)ατος that would have provided support for a remade plain *tó*-participle **ἀ(ϝ)ατό-*. In some such way as this, then, ἀᾱ́ατος/ἀᾱ́ᾱτος stands a good chance of being a form of precisely the type ἀθάνατος/ἀκάματος, even if this requires separating ἀᾱ́ατος/ἀᾱ́ᾱτος from the Anatolian and Germanic comparanda adduced by CATSANICOS.

Appendix 3: Lat. *porta/portāre* and related forms

Whereas Lat. *portus* 'door; harbor' can be directly equated with *u*-stem formations elsewhere (as noted above, n. 66), Lat. *porta* 'gate'

[191] Similarly already WAANDERS 1974:5 (ἀϝάτᾱ < **h₂u̯h₂-eteh₂*), commenting (5n3) on the irregular vocalization.

[192] Not *o*-grade **h₂ou̯h₂-teh₂* (WAANDERS 1974:5n4, tentatively), for which laryngeal loss would be expected (cf. n. 163 above).

[193] As CATSANICOS shows, pres. ἀάω/ἀάομαι is derived secondarily from the *s*-aorist (1991:54 with n. 6). Likewise easily secondary (despite CATSANICOS) is ἀάσκει· βλάπτει, φθείρει Hsch.

[194] E.g. **νᾱυ(ϝ)ατο-*, **νᾱ́(ϝ)ατο-* vel sim., whence (more or less regularly, cf. ἀνώνυμος etc.) ἀ(ν)ᾱ́(ϝ)ατος; a precisely comparable form does not come to mind. See now BADER 1997:32ff. (esp. 35f.) for a somewhat similar analysis in terms of a **νᾱ́ατος*.

(generally assumed to continue a zero-grade **pr̥-tā*, explicitly e.g. WALDE-HOFMANN-LEW s.v.) appears to be isolated. For its part, the *ā*-verb *portāre* 'transport'[195] has a traditional explanation that is difficult to credit: it is taken to reflect a **poritāre*,[196] an iterative/factitive built on **poritus*, this being the perf. ptcple. to a lost causative **poreō*.[197] That Latin iterative/factitives can be built to participles of verbs no longer attested is not at issue: see e.g. LEUMANN 1977:547, citing (among other forms) Lat. *cūnctārī* (cf. §**2.9.4** above). But the status of **pór-/*pér-* as an acrostatic *o/e*-verb and the possibility that this type systematically avoids zero-grade verbal adjectives in **-tó-* (cf. §**2.9.4** on *ἀ-πέρ-ετος) has several consequences for the traditional accounts of *porta* and *portāre*: the alleged zero grade of *porta* is no longer favored, and the *o*-grade causative posited for *portāre*, entirely unsupported otherwise, becomes dispensable. Moreover, both *porta* (hitherto oddly isolated) and *portāre* can be aligned with each other in a straightforward way, under the assumption of an original (and relatively old) verbal adjective **por-eto-* 'to be gone through' (cf. **n̥-per-eto-* 'not to be gone through' > *ἀ-πέρ-ετος): *porta* would continue an abstract **por-etā* (lit. 'passage(way)', concretized from 'passage'), while *portāre* 'transport' (< *'cause to go through') could be a factitive **por-et-āi̯e/o-* based on the same verbal adjective **por-eto-*.

For U. *peretom* (§**2.12**), an *e*-grade **per-eto-* (cf. *ἀ-πέρ-ετος) might be as satisfactory as the traditional **per-(e)i-to-* 'gone through' (cf. Lat. *pereō*), although the semantics are difficult to specify. On its own, a substantivized **per-eto-* could perhaps have ended up signifying that which has 'gone through' or 'progressed' *in malam partem* (e.g. 'too far'), rather like Eng. *transgression*. Alternatively, one could begin with a negative **n̥-per-eto-* comparable to *ἀ-πέρ-ετος (> U. **apereto-*, cf. the traditional phraseology *uirseto auirseto* 'seen [or] unseen', used in the same passage) in a meaning like 'un-transgress-able', i.e. 'beyond which one cannot go' (= proper behavior or the like), whence a decompositional substantivization *pereto-* 'transgression'. This could then have served as a model for *pesetom* (cf. the typically Umbrian alliterating/assonating sequence *pesetomest peretomest*, on which see recently WATKINS 1995:220) and one or more of the other associated terms with this sort of meaning, thereby accounting for the otherwise unexpected "negative" sense found in such forms.

It is worth considering, finally, one further possible instance of an archaic **-eto-* form in Italic. U. **eitipes** 'they resolved, decreed, enacted, *egerunt*' is traditionally taken from a compound **eito(m)-hab-*, although the interpretation of the first member is controversial. H. EICHNER (1993:51n19, 56 with n. 31, based on an idea attributed to G. MEISER) has recently compared SPi. *aitúpas* (assuming a work division *pid()aitúpas* in TE. 5), interpreting the first compound member **ait(o)-* as from **agit(o)-*, based on an iterative-intensive comparable to Lat. *agitāre*, "etwa mit Annahme von Haplologie **agitāta°* > **agita°*". Haplology, however, could be dispensed with under the assumption of an archaic **ag-eto-* (whence **ag-et-āi̯e/o-*). For Umbrian (and in principle also South Picene) */ait-/* < **aget-* (as opposed to the **agit-* generally assumed for the Italic iterative-intensive) cf. U. **aitu**/*aitu* < **ag-e-tōd* (MEISER 1986:124f., 205).[198] A possible consequence of this analysis would be that at least *agitāre* (essentially 'set in motion') is relatively old, i.e. as a factitive of **ag-eto-* 'to be driven/done' (cf. **por-et-āi̯e/o-* above), and not (as traditionally) a late creation via the semi-productive *-itāre* abstracted from the type *habitus/habitāre*. And this, in turn, suggests an origin for the Latin iteratives in *-itāre* that may be more complex than is usually assumed, although this is a problem too involved to be pursued here.

Appendix 4: Gk. ἁρπάζω and related forms

A further — and desirable — consequence of the etymology of αἱρέω proposed above (§**2.14.1**) concerns the apparent stem "ἁρπ-" of ἁρπάζω 'grasp, seize, plunder' and related forms (ἁρπαγή 'robbery, seizure', ἁρπαγμός 'robbery, plunder', ἅρπαξ 'rapacity [Hes. *Op.* 356]; rapacious; robber' etc.). The traditional connection of these words (see e.g. FRISK GEW s.v. ἁρπάζω) with ἅρπη 'sickle' (cf. OCS *srŭpŭ* 'id.', Lat.

[195] Also U. **purta-**/*porta-* 'bring' (Tab. Ig. Ib+, and probably not borrowed from Latin, despite ERNOUT-MEILLET DELL s.v. *portō* and others; cf. LEUMANN 1977:548 and, on the semantics of the Umbrian verb, PROSDOCIMI apud MEISER 1986:195 and MEISER 1986:195n1).

[196] Thus e.g. WALDE-HOFMANN LEW s.v. *portō*, IEW 816, LEUMANN 1977:96, 541.

[197] In view of the semantics, *portāre* cannot be a denominative to *porta* (and is not so taken by MIGNOT 1969, who omits the form from his listing, 370ff.).

[198] The different treatment of the post-syncope sequence /-kt-/ in SPi. *deiktam* hypothesized above (n. 46) might or might not be problematic for this interpretation, depending on as yet unverifiable assumptions about syncope, assimilation and palatalization in South Picene.

sarpere 'prune', IE **serp-* [on which SCHRIJVER 1991:493]) has never been semantically satisfactory. The ubiquity, in Greek, of the stem-form ἁρ-παγ-,[199] together with the proposed identification of a basic *ἁρ-(ι̯ω) 'grasp, seize, plunder', now provides a principled basis for a reinterpretation ἁρ-παγ-, presumably to be interpreted **sr̥-ph$_2$ǵ-* (cf. πήγνυμι 'fix, fasten', πάγη 'snare' etc.), although detailed morphological analysis must be left aside here.[200]

[199] There is no good evidence for connecting ἅρπη 'bird of prey' (rather = ἅρπη 'sickle', with reference to talons), Ἅρπυιαι/Aegin. Ἀρεπυιᾶ 'demonic creatures' (perhaps to ἐρέπτομαι 'feed on', or else pre-Greek, e.g. with BEEKES 1998:25f., following SZEMERÉNYI), ἁρπαλέος 'grasping; pleasant' (dissimilated from *ἀλπαλέος; the meaning 'grasping' is clearly secondary, see the recent discussion by BROWN 1995:372f.), ἁρπεδόνη 'cord' (perhaps to ῥάπτω 'throw', Li. *vefpti* 'spin'), etc.

[200] The same **-ph$_2$ǵ-* also in ἅπαξ 'once', although the morphological similarity with ἅρ-παξ may only be superficial, given the adverbial meaning of ἅπαξ. For the morphology of ἅρπαξ (Hes.+) cf. rather, perhaps, χέρνιψ (Hom.+) 'water (for *hand-washing*)', and, provisionally, the discussion of SCHINDLER 1972:82.
