I. FORSCHUNGSBERICHT

Lateinische Etymologie

Anlässlich von: **de Vaan, Michiel:** *Etymological Dictionary of Latin and the other Italic Languages.* Leiden Indo-European Etymological Dictionary Series, 7. Edited by **Alexander Lubotsky**. Brill Leiden-Boston, 2008. xiv, 826 Seiten. Gebunden, 248,00 EUR. ISBN: 978-90-04-16797-1.

1. Michiel de Vaan — the author of a number of articles,[1] an important book on Avestan phonology (2003), co-author of an Avestan grammar (de Vaan and Martínez García 2001), and editor of a collection of papers on Germanic (2006) — has contributed this Latin/Italic installment of the Leiden series of etymological dictionaries, a series too well-known in the field to require further introduction. This contribution began as a review of de Vaan's book, and maintains the essential nature of a book review. Yet inevitably, given the nature of Latin etymology and its importance within the field of Indo-European linguistics (among other fields that depend in various ways on the Latin language), the piece began to take on some of the features of a Forschungsbericht; hence some of the extended treatments below. Although it is not my intention here to provide systematic updates to post-2008 scholarship, a number of more recent items will be cited in various connections. I must also state at the outset that the (sometimes lengthy) listings are meant to be illustrative and not exhaustive.

No one will deny the author's talent and industriousness, among other laudable qualities this book makes evident, to be enumerated in due course; and few will deny the utility of the end product, at least in certain respects. But the work is characterized by a number of unfortunate flaws, not all of them to be laid at the author's doorstep, which in my view render this project deeply unsatisfying and in large part a missed opportunity.

---

[1] Including a Latin etymology (2007) and a paper on Indo-European and Latin verbal morphology (2011a). Note also his contribution to Beekes 2011.

The doorstep at which many of these flaws must be laid is that of the publisher. While it is customary to postpone such cavils to the conclusion of a book review, the extent of malfeasance is such that one must address this point *ab initio*, and in some detail. This is, in short, one of the most poorly-edited works of scholarship that I have ever seen — and the atrocious quality of the editing is all the more galling in view of the outrageously high cost of the book (as indeed with all of the other Brill volumes in this series, and nearly all Brill hard-cover productions in recent years).

2. It is difficult even to know where to begin; but let us start with typographical errors, which are legion. It is bad enough that the name of J. B. Hofmann, one of the authors of a previous Latin etymological dictionary (cited in nearly every entry), is consistently misspelled as "Hoffmann" both in the book's introduction and bibliography (pp. 3, 693, 721),[2] and that the great Russian scholar Pokrovskii has been rechristened "Prokrovskii" (*īnsolēscō*). But on top of this, readers must negotiate typographical errors of every conceivable kind at a shocking rate in the dictionary's main text.[3] It is particularly unfortunate when such errors appear in linguistic forms[4] and in reconstructions.[5]

3. Other problems rise above the level of mere proofreading (some of which, of course, should have been done by the author) and copy-editing. At some stage of the

---

[2] The same misspelling in the bibliography of Beekes 2011 (ed. de Vaan), p. 325.

[3] In letters A, B, and C alone (pp. 19-160), there are more than a dozen such problems (not counting other errors to be categorized differently below), including: "yield lose" (*alius*), "do not seems" (*ambi-*), "have been influence" (*arcessō*), "have connect" (*blandus*), "Shrijver" (*calix*), "branche" (*cardō*), "forest animals young" (*catulus*), "was not longer" (*centum*), "faecies" (*-cerda*), "por" (i.e. "pro", *clam*), "dependant" (*cliēns*), "could be represent" (*crās*), "in *d^h*" (i.e. "if *d^h*", *cūdō*), "εγκυτί" (bis, without smooth breathing, *cutis*). Elsewhere, there is a profusion of dittographies: "from from" (*fel*), "in in" (*rītus*), "an an" (*tescum*), "the the" (*vīlis*), etc.

[4] There is, for example, no such form as "*iouvesat*" (sic, for *iovesat*) in the Duenos Inscription (*iūs*), and no such form as "*louiquiod*" (sic, for *loiuquiod*) in the Forum Inscription (*līcium*).

[5] Among many examples that could be cited: read *$g^{wh}e$*- for *g^{wh}* (*focus*), *d^huh_2*- for *duh_2*- and *d^hueh_2*- for *$dueh_2$*- (*foeteō*), *marī*- for *mārī*- (*marītus*), *nūtrīk*- for *nūtrik*- (*nūtrīx*), *uēsno*- for *uesno*- (*vēnus/m,* for Arm. *gin*); further, note both "*$melh_2$*-" and "*$melh_1$*-" s.v. *molō,* and the nonsensical reference to "the *tu*-abstracts *gnātu*- and *gnāti*-" (*nāscor*). Incorrect marking of vowel length is pervasive, and will be discussed in more detail below (**7.**).

editorial process, someone should have caught the fact that *lapit,* listed as a derivative s.v. *lepōs,* actually has its own entry (even though no cross-reference is supplied s.v. *lepōs*), and likewise that *cōleī,* listed as a derivative s.v. *culleus,* also has its own entry (again without cross-reference s.v. *culleus*). And while cross-references among entries are usually well-handled, there are problems here as well: the incomprehensible cross-reference "→ **we/olt(o)r-*" at *voltur* is evidently an error, and the author could at times have been more generous (or more explicit). Some examples:

ambi-: Here only "→ *ante*"; but the (unreferenced) etymological explanation is due to Jasanoff 1976, a reference that is only recoverable s.v. *ambō.*[6]

cōmis: Given the reference to **smei-* 'smile' in the discussion, a cross-reference to *mīrus* is in order.

novus: Here "→ *nunc, nūper*"; but these forms, listed only s.v. *num,* have no entries of their own.

similis: A reference to *dis-* (with prominent mention of *dis-similis*) would have been desirable.

sē-: Surely *dolus* should have been referenced, given the treatment there of *sēdulō.*

soror and *uxor*: Each should have been cross-referenced to the other, given "**sōr, *sr-*" ('woman') mentioned s.v. *soror* and the possibility of this word as part of *uxor* (as de Vaan notes).

4. Nor is there any excuse for the appalling degree of inconsistency (among other problems) with regard to the citation of authors and texts: one and the same author is sometimes (correctly) "Isidore", but also "Isidorus" (e.g. *amma, călidus*) and "Isidor" (e.g. *vērus*); Hesychius is sometimes "Hesych" (*glūten*); inscriptional texts from *CIL* I^2 are sometimes cited in that way (e.g. s.v. *faveō*), but mostly, and without any explanation, via "*CIL*" or "*CIL* 1" (a vacillating reference practice that is sure to confuse non-specialists).[7] Nor are toponyms exempt: "Lacus Fucinus" (*apud*, correctly) becomes "Lacus Fucinius" (*faciō*).

The treatment of material from Festus and Paulus ex Festo is especially unfortunate. These forms are almost always cited indiscriminately as "Paul. *ex F.*", even when the source is actually a fragment of Festus and not the digest of Paulus Diaco-

[6] "Jasanoff 1976", as well as other items cited merely to illustrate editorial or authorial sloppiness (see especially n. 14 and **5.**), are not included in the "References" below; for such works, see de Vaan's bibliography for details.

[7] A particularly confusing instance: "*CIL* I^2" and "*CIL*" side by side (referring to different texts) in the same lemma (*ūtor*); similarly "*CIL* I^2" on p. 14, but "*CIL*" on p. 15, without explanation.

nus.[8] Actual text references to an edition of Festus are almost never provided; but when they are (e.g. s.v. *enubrō*), one finds that the pages given do not correspond to the standard (for now) stand-alone Teubner edition of Lindsay, but rather to — what? A glance at p. 693, where bibliographical abbreviations are expanded, reveals that "Paul. *ex F.*" refers to an unspecified edition (apparently of Pauline excerpts only) identified only by title. Indeed, the problems with this material extend beyond improper citation of the forms that have been provided: there is also too much that has been omitted. S.vv. *dexter* and *sinister*, for example, one misses *dextimum*, *sinistimum* (P.F. 65.5L); these forms, even if secondary, are linguistically interesting (cf. Leumann 1977:499), and have a certain importance otherwise (cf. *sinistimum auspicium*, F. 454.1L). And a truly important form like *suregit* 'surrexit' (see **8.** below, *regō*) is nowhere to be found.[9]

The repeated failure to provide textual references extends beyond Festus and is often acutely frustrating, especially with hapax legomena and other rare material. This unscholarly practice takes many forms (and thus is highly inconsistent, at best): quotation of a passage without textual citation or even any indication of authorship (*at*);[10] quotation with author and work, but no text citation (*cicōnia,* "Pl. *Truc.*"); and quotation with author, but no other information.[11] Most reprehensible of all: citation with incomplete or missing reference from corpora containing data that are difficult to locate: e.g. s.vv. *apud* ("inscr. from the west bank of Lacus Fucinus"),[12] *-gruō* (simplex "only in one gloss"), *rāna* ("found in one gloss"). One is thus grateful when, all too rarely, textual citations are provided — yet these are not reliable: s.v. *deus*, a passage from Lucretius is given in the unmetrical form "*et Manibus dīvīs inferiās mittunt*",[13] with the impossible (for Lucretius) citation "3.5.2"; this turns out to be *et Manibus divis / inferias mittunt,* 3.52-3. And while page references are usually given

[8] "Festus" and "Paul. *ex F.*" are distinguished s.v. *fortis,* but rarely elsewhere: for example, *pesnas* and *pesnis* (s.v. *penna*), both from Festus, are cited as "Paul. *ex F.*".

[9] Other examples appear below (**9.**, *sē*; **14.**, *amō,* with n. 74).

[10] The text in question is Pl. *Per.* 57; this would have cost only eleven characters (including spaces). Another example at n. 19 below (*īra*).

[11] E.g. *calō* ("Varro"), *cor* ("long scansion … in Pl. is uncertain"), *ravus* ("occurs only once in Pl."), *secō* ("Varro mentions …"), *strēna* ("as one Pl. attestation seems to suggest").

[12] This inscription is duly cited s.v. *cippus* as "*CIL* 5" (i.e. *CIL* I^2 5).

[13] Sic, i.e. *Mānibus, īnferiās* (if one is to cite literary passages with macrons — an unnecessary practice, rarely indulged elsewhere in the book; hence another inconsistency that should have been addressed during the editing process).

for citations of secondary literature, there are persistent lapses here as well, which should again have been caught by even the most superficial copy-editing.[14]

5. The lack of appropriate copy-editing (and simple proofreading) is also on view in de Vaan's end-bibliography, where (in addition to problems already noted, cf. **2.** above on "Hoffmann") we find, for example, "Adams 1997" (sic, for 1999), garbled Greek in the entries for Barton and for Vine 1998,[15] Dunkel 1980 cited without a page range, "Jiménez Samudio" (sic, for "Zamudio"; correctly s.v. *ipse*), Livingston 2004 with an incorrect title, and "*požđenija*" (sic, for "*rožđenija*") under Melchert 2005.

The end matter does, however, contain a full word index for all forms cited,[16] as well as for Indo-European reconstructions. The complete index of Latin words, including all cited derivatives, is especially to be commended.[17]

6. The language of the text is English,[18] but only in a manner of speaking. Apart from solecisms like "rather unique" (*praestōlō/or*) or "like" (*frētus,* for "as"), there are well over two dozen instances of non-native English, most of which are merely annoying: few readers will have difficulty interpreting items like "shortly" (p. 13, for "briefly"), "outer-Italic" (*ancus,* for "extra-Italic"), "correspondence" (*brevis,* for "correspondent"), "angriness" (O. *cadeis, ōdī*, for "anger"), "threesyllabic" (*Mārs,* for "trisyllabic") and "foursyllabic" (*columen, gignō,* for "quadrisyllabic"), "gate-keepster" (*ianitrīcēs,* for "gate-keeper"), "illusive" (*opīnor,* for "elusive"), "unvalid" (*peccō,* for "invalid"), "inexistent" (*petō,* for "nonexistent"), "does not allow to decide" (*putō*), or "declination" (*vigeō,* for "declension"). Some examples are perhaps merely typograph-

---

[14] Thus, for some reason, Nussbaum 1986 is often cited without page reference (e.g. *cervus, crābrō, cornū*), as also Nussbaum 1999 (e.g. *claudus*); the latter, as a work that appeared in a volume without word index, is more problematic, and the same applies to Lazzarini-Poccetti 2001, a dense and unindexed work often cited without page reference (e.g. *fingō, fuī,* Ven. **teuta**, *valeō*).

[15] Garbled Greek is a recurring problem in the main text as well: cf. n. 3 above on *cutis*; further such Greek problems appear s.vv. *folium*, *Nerō*, *vīs*, *volup,* and (somewhat differently) *ūnus* (where οΐνη is mis-accented as "οινή").

[16] I happened to note only a few omissions: *damnās* (p. 161, missing on p. 763), *masturbor* (p. 366, missing on p. 746), *perdere* (p. 175, missing on p. 751); there is also the unfortunate error "Palaeo-Umbian" (p. 769).

[17] The lack of a corresponding index of Greek words is one of the defects of Beekes 2010 (in the same series of etymological dictionaries).

[18] British-style — thus, in addition to spellings like "behaviour" and "metathesised", also e.g. "landslip" (*labō*) vs. American Eng. "landslide".

ical errors, e.g. "lithurgical" (*anculus,* for "liturgical"), "firy" (*āter,* for "fiery"), "have the hiccup" (sg. sic, *lūgeō*), "duely" (*regō,* for "duly"); and instances like "spectre" (p. 15, for "spectrum"), "Empirical Latin" (*putus,* cf. s.v. *stilla* for the correct "Imperial Latin"), "ingenuous" (*praestōlō/or* and passim, for "ingenious"), and the Meillet-ism "rests in the air" (*rudis*) provide some welcome comic relief. Others are more troublesome: while a non-standard text citation like "Foruminscr." (*ne-*) is readily interpretable, "Tiburbasis" (*hic,* normally "Tibur Pedestal Inscription") is less so; and one wonders what some readers will make of "a rest" (*fodiō,* for "a relic" or "a remnant") or "at the verge of parting" (*inciēns,* for "at the verge of parturition").

The sorry catalog of slipshod editing sketched in this and the preceding sections (and including some material treated below) ought to be deeply embarrassing for Brill, and cannot be excused — indeed, was no doubt partly caused — by the haste to put this book into print, a well-known feature of the entire series of Leiden etymological dictionaries. I, for one, would gladly have waited another year or so, if that would have sufficed to eliminate some of the editorial defects that disfigure this work. I have already referred (in **1.**) to Brill's pricing schemes, which in my view are deplorable in and of themselves; but coupled with such abysmal production standards, they are positively scandalous.

7. Turning now to another blemish for which the author must shoulder much of the responsibility (as with part of the handling of textual references [**4.**]), a few words must be said about the marking of vowel length. The profusion of erroneous notations (with errors of both omission and commission) is so extreme as to be baffling: how could such a thing have happened in a *Latin etymological dictionary* in the first place, and how then could it have been allowed to reach the stage of print? The problem, in any case, has been described *in extenso* by de Melo (2009), who identifies scores of errors belonging to several categories of forms,[19] as well as a little over one hundred cases of omitted macron in individual words.[20]

---

[19] For example, omitted macron on vowels before *-ns-, -nf-,* and *-nct-* "in around eighty cases", and short vowels improperly marked long in more than twenty instances. For the latter: add "*violēnter*" (s.v. *violō*) to de Melo's list. Note further that the mismarking of *era* 'mistress' as *ēra* (s.v. *īra*) obscures de Vaan's explication of the pun involving *eira* 'anger' at Pl. *Truc.* 262, 264 — though unfortunately, neither the author nor the text reference (typically, cf. **4.**) is actually provided.

[20] De Melo's listing is thorough, but not complete: also e.g. *iniuria* (for *iniūria*, s.v. *iūs*), *lugēre* (bis! for *lūgēre,* s.v. *lūgeō*), *miscere* (for *miscēre,* s.v. *minus*), (sentence-initial) *Olim* (for *Ōlim,* s.v. *olle*), *ramitēs* (for *rāmitēs,* s.v. *rāmus*); and among reconstructed forms, in addition to the items in n. 5 above, also e.g. **lugos-ri-* (*lūgeō,* for **lūgos-ri-*), **pram-ed-s* (*prandium,* for **prām-ed-s*).

In addition to the categories discussed by de Melo, the type "*cūius*" must be mentioned, this being de Vaan's preferred method of marking such forms — yet he is not consistent: we find, for example, *bāiulus* (s.v.), *cāia* and *cāiāre* (s.v. *caedō*), (adj.) *cūius* (s.v.) but *cuiius* (s.v. *quī*), "*āiō* or *aiiō*" (s.v. *aiō*), *pēiie/urāre* beside *pēiūrus* (s.v. *iūs*), *peiior* (s.v.) but *pēior* (s.v. *caedō*), *maior* beside *māiestās* and *māiusculus* (s.v. *magnus*), "*eius* (= *eiius*)" (s.v. *is*). The inconsistency is itself regrettable; but more importantly, as de Vaan himself seems to recognize,[21] the metrically heavy initial syllable in such forms results from the geminate glide (so spelled, i.e. as <ii>, into Imperial times; see Leumann 1977:127 for details). The vowel is in fact short, and notations like "*cūius*", despite their appearance here and in older lexica, are entirely inappropriate. Similarly unfortunate is neut. "*hōc* < *hocc*" (s.v. *hic*), where the vowel was never long (Leumann 1977:220).

8. A fundamental component of such a work is of course the presentation of data, which accounts for the lion's share of many entries, especially when a word calls for little or no etymological commentary. In addition to the lemma itself (with head word, gloss, basic information about part of speech etc., and indication of earliest attestation), each entry, insofar as possible, provides three additional listings: "derivatives" (with related Latin material), a "P[roto-]It[alic]" section (with a Proto-Italic reconstruction and a list of related forms in other Italic languages — these including, for de Vaan, Venetic), and a "PIE" section (with a PIE reconstruction and related material outside Italic). The organization of this material is admirably clear and the presentation is undeniably useful; yet there are many problems.

Consider, for example, the indications of the earliest attestation for Latin words. This information is frequently important for linguistic analysis, and care must be taken to ensure its accuracy. Yet here (as in other respects to be treated below),[22] de Vaan was content to follow the lead of secondary sources, with predictably inaccurate results on occasion.[23] For example:

gingīva: "Cat.+", perhaps following *WH* ("seit Catull."; similarly *EM*), but better Afran.+ (*togat.* 58 Ribb. ex coni., but the emendation is virtually certain; see, in addition to *TLL,* Ribbeck ad loc. and Daviault 1981:158)

---

[21] In addition to "*eius* (= *eiius*)" and his spellings like "*cuiius*", also "*maiior* Pl." (s.v. *magnus*).

[22] See especially **10.**, on Sabellic etymology.

[23] See p. 11 for de Vaan's account of his procedure, involving reliance on *TLL, OLD,* and other sources, with the comment that "[i]n most cases, in fact, it turns out that WH are far more reliable" (i.e. than *TLL* and *OLD*).

grossus: "'thick, unripe' [adj.] (Col.+)", but in fact only 'unripe' in Columella; the sense 'thick' is Late Lat. only (as the *TLL* discussion makes clear)

luō: *luēs* is for some reason cited as "Cic.+", with no mention of the Carm. Arv. attestation (duly mentioned by both *WH* and *EM*)

ruō: *ruīna* is labeled "Lucr.+" (rather Pl.+ [*Epid.* 83], in OLat. possibly also Enn. *Ann.* 243Sk)

As for the choice of which lexemes to include: de Vaan notes (p. 1) that his work "is not a complete etymological dictionary of Latin"; rather, its "main aim is to describe which roots and stems of the vocabulary of Latin and the other Italic languages are likely to have been inherited from Proto-Indo-European". This is consonant, after all, with the other etymological dictionaries in the Leiden series. Yet for the nearly two dozen words for which the entire discussion consists of the pronouncement "No etymology" (or "Etymology unknown" or "No certain cognates"),[24] and for many more with a sentence or two of commentary likewise amounting to "No etymology",[25] no indication is provided (except, in some cases, a page reference to *IEW*) as to why such forms are included in a lexicon that purports to focus on inherited material.

De Vaan explicitly renounces coverage of loanwords in Latin (from Greek, Etruscan, Celtic, etc.), with two exceptions: "possible loanwords from Sabellic", and "probable loanwords from unidentifiable, but possibly old (Mediterranean) donor languages". W. de Melo, in his own review of this work (2009), has lamented this exclusion, on the grounds that the book "cannot be a sufficient etymological work on its own". Indeed, in addition to the secondary references de Vaan provides to works (some of them outdated, by his own admission) that list loanwords from sources like Greek and Etruscan, it would have been preferable if de Vaan had at least listed those words he has excluded because he considered them to be loanwords from such languages; only in this way can one judge the status of missing material. Thus, for example, Lat. *tugurium* 'hut' is nowhere to be found, presumably because it is often considered to be a loan from Etruscan. Yet there is a serious defense of its inherited status in the literature (Baldi 1997), about which one would like to know de Vaan's reaction, and (ideally) his reasons for excluding the word altogether; but even a listing of presumed Etruscan loans with a lemma like "*tugurium* (despite Baldi 1997)" would have sufficed. Nor is his exclusionary policy consistent: thus s.v. *bardus* 'stupid, dull', the entire discussion (apart from references to *WH* and *EM*) consists of the sentence "WH and EM assume a loanword, possibly from Etruscan." I would like to stress, however, that in my view, de Vaan offers many interesting discussions of "Mediterranean"

[24] Thus *cālō, cicātrīx, faex, fāmex, faux,* etc. etc.

[25] Thus *caespes, caliga, culcita, fullō, īlex, inānis,* etc. etc.

loanwords, which, taken together, form one of the main contributions of the work as a whole to Latin lexicography. There is, to be sure, a marked tendency to jump to the assumption of non-Indo-European origin; but that is a Leiden feature, among others to be discussed below (**13.**).

The information provided in the individual lemmata themselves is generally accurate; nevertheless, the following samples illustrate some recurring problems:

aes: "*CIL* 1.383 *aired*", but also AIRID (*CIL* I^2 38)

apīscor: "pf. *coepī* < **co-ēpī*", with no mention of actually-attested *coēpī* (Pl., Lucr., see Leumann 1977:119)

assus: oddly, no mention of *CIL* I^2 560 ASOM (though the phrase ASOM FERO from this text is cited s.v. *ferō*)

ast: also attested in the Duenos Inscription (material from which is otherwise usually provided; but cf. **9.**, *petō*)

audeō: "pf. *ausī*", with no further indication, and without mention of the standard perf. *ausus sum* (even though the active perf. is claimed only by Priscian, citing a fragment of Cato)[26]

bōs: "abl. sg. *bouid CIL* 11.4766", but the normal reference *CIL* I^2 366 should have been used for this form

capillus: in addition to "*capillum* once Pl. apud Nonium", also (acc.pl.) *capilla* DT 190 = Kropp 2008, 1.4.1/1 (cf. below on *medulla*)

catīnus: also *CIL* I^2 480 CATINO (together with gen.sg. STATIA(s), thus very archaic; Wachter 1987:347), which at least shows that the vowel of the second syllable does not have a diphthongal source

clepō: "pf. *clepsī*", but perhaps also *clēpī* (Pac., Cic. *Leg.*), with important morphological implications (Meiser 2003:155 with n. 12, Pike 2009); cf. on *regō* below

dīcō: "inscr. *deicere* SCBac.", but the actual form DEICERENT in that text should have been provided (as de Vaan usually does elsewhere)

faciō: no mention of VOLat. VHE:VHAKED (*CIL* I^2 3, Praenestine fibula),[27] cf. Hartmann 2005:67-106 on the probable genuineness of this text; but the results of Hartmann's study are nowhere taken into account (cf. **9.** and **12.** below [*vetus*] on VOLat. FETVSIA)

fimum: lemmatized as "n.", with a variant "*fimus* [f.]" (sic), yet the discussion refers to the masc. form as older than the neut.; presumably "f." is a typographical er-

[26] See e.g. Flobert 1975:497.

[27] I follow de Vaan (who in turn follows Weiss, cf. 2009:23) in using the term "VOLat." ("Very Old Latin") to refer informally to material from the 6th to 3rd centuries BC.

ror for "m.", and perhaps there was also confusion with the apparent feminine usage at Apuleius *Met.* 7.28.3 (which de Vaan does not mention)

fīnis: no mention of *CIL* I^2 5 (Mars.-Lat.) FINEM (4th/3rd c. BC), relevant for de Vaan's comment that *fīnis* "could reflect *b^{h}iH-n-i-"

fūr: the discussion ignores the possibility that the word might still have been "*fōr*" at the time of Plautus (Gerschner 2002:89)

grossus 'immature fig': "[m. *o*] (Cato+)", but also feminine (Pliny)

hic: various starred **hoi* forms are given, without mention of attested HOI in the Tibur Pedestal Inscription (*CIL* I^2 2658); also missing: in addition to nom.pl. *hīsce* (noted by de Melo 2009), also OLat. directional *hōc* 'hūc' and *hōrsum*

ille: *illinc* is mentioned, but not OLat. *illim*; likewise missing: OLat. *istim* (s.v. *iste*), and there is no trace in the dictionary of *exim, inde/deinde,* nor is *altrim/altrinsecus* found anywhere other than s.v. *secus* (see further **13.** below on these and other adverbial *-im* forms)

iste: no mention of *eāste* (Varro *L.* VII.8, augural formula; cf. Leumann 1977:470f.), and "gen. sg. *istīus*" whitewashes the more complex picture for OLat. and (especially) hexameter poetry (cf. Leumann 1977:479f. on pronominal gen. *-īus* ~ *-ĭus,* including *illĭus, tōtĭus, ūnĭus,* etc.)

iūs: "'**iewos* > **iowos* > *iūs*", but IOVOS and/or IOV̯E[S]A perhaps attested in the Corcolle altar fragments (*CIL* I^2 2833a; Vine 1991, 1993:65ff.); see also in **9.** below (*iūs*)

medulla: especially in view of the proposed Pr.-Ital. background (**(s)meru-lo-,* with question mark), one misses *merilas* (DT 135 = Kropp 2008, 1.4.2/3)[28]

nūgae: abl.pl. NVGES (*CIL* I^2 1861, early 2nd c.) might also have been cited

pānis: "m. *i*", but also n. *pāne* (Pl. *Cur.* 367)

pūmilus: "*CIL poum-*" (without citation!); but this is the older reading of what is probably to be read as *poim-* (i.e. POIMILIONOM, *CIL* I^2 569; see Wachter 1987:163ff.)

regō: "pf. *rēxī*", but no mention of *su(r)regit* 'surrexit' (Andr.; F. 380.32L, P.F. 381.6L); cf. Meiser 2003:153n7 and more recently Pike 2009:208 nn. 10 and 11 (with earlier references), Weiss 2009:412f.

rŭdō: no philological details are provided about the variation in vowel length (which is also ignored in the etymological discussion)

sēmi-: "*sēm-* before vowels, sometimes *sē-* before *m-*"; but this statement accounts directly for none of the derivatives given (nor for compounds of the type

[28] But de Vaan largely ignores post-Ciceronian material (cf. above on *capillus*); for his explicit policy of this sort with regard to "derivatives", see **9.** below.

sēmianimus), and ignores the standard interpretation of forms like *sēmodius* as having arisen via haplology

sīgnum: no mention of important OLat. inscriptional spellings, e.g. *CIL* I^2 42 SEIGNVM, 388 and 2874 SEINO; on SEINO, further **14.** below (*conquinīscō*)

stercus: no mention (or discussion) of OLat. STIRCUS (*CIL* I^2 401)

sūs: only gen. *sŭis* is given, but note *sūis* (or *sŭeris*) at Pl. *Cur.* 323 (see Lanciotti 2008 ad loc.)

urbs: "Lex XII+", but also (Mars.-Lat.) VRBID (*CIL* I^2 5, 4th/3rd c.)

ut: "*utī* Lex XII+", but no mention of OLat. inscriptional VTEI (including SCBac.!), which falsifies the second option in de Vaan's statement that "*utī* may reflect **k^{w}utei* or **k^{w}utī*"

vātēs: "gen. pl. *vātum*" oversimplifies this important part of the formal situation (as also for some other 3rd-declension *i*-stems in *-ēs*); on *vātum* ~ *vātium* (and the general issue) see e.g. Leumann 1977:439, Klingenschmitt 1992:116

9. De Vaan's chronological policy with regard to his lists of Latin "derivatives" is stringent: "The list of derivatives is restricted to words which make their first appearance before Cicero" (p. 11). These are not, then, comprehensive "Histoire des mots" surveys in the manner of *EM*, which remains indispensable at least in this respect. De Vaan goes on to explain, however, that he does admit some forms with various types of linguistic interest attested in Cicero or later; yet there are many omissions that seem difficult to understand. S.v. *catulus*, for example, there is no mention of the interesting "desiderative" verb *catulīre* 'be in heat' (Varro, *R.* 2.9.11), which, together with *equīre* 'id.' (Pliny+),[29] surely represents material of linguistic interest.[30]

It seems clear from his listings of derivatives that de Vaan has also attempted to provide relevant early Latin inscriptional material; this is admirable, but there are deficiencies here as well (a feature that has already surfaced in **8.** above: *aes, assus, ast, bōs,* etc.). The following samples illustrate this point, as well as the range of other omissions (and problems) among pre-Ciceronian derivatives:

abiēs: also *abiegnus* (Enn.+)
alius: adv. *aliās* (Pl.+) should have been mentioned
caedō: also *praecīdāneus* (Cato)

[29] And perhaps also *surīre* (F. 408.14L in app.; nowhere mentioned by de Vaan).

[30] On the traditional comparison of *equīre* and *catulīre* with the Vedic type *putrīyánt-* 'desiring sons', see Thumb-Hauschild 1959:356, and more recently Nussbaum 1975:161n114, Olsen 2004:237n9, Martzloff 2006b:687.

-ce: the discussion mentions Class. *cedo, cette,* but not the early inscriptional forms CEDVAS, CEDVES (*CIL* I^2 2841) (also missing s.v. *duim*)

Cerēs: literary attestations of *Cerus* are cited, but not early inscriptional ones (e.g. *CIL* I^2 445 KERI.POCOLOM)

crepō: 'child's rattle' is an insufficient gloss for the problematic form *crepundia* (also 'trinkets worn around the neck; recognition tokens; swaddling blankets'), which may not even belong with *crepō*; see Leumann 1933:240ff., 1977:331

fodiō: also *fodīna* (Varro+)

iūs: preform "**ieu̯os-dik̂-*" for *iūdex,* but no mention of possible IOVO[SD]ICASE and IOVOSḌ[ICA-] (Corcolle altar fragments, cf. *iūs* in **8.** above)[31]

lavō: "*ēluācrum* 'wash-tub' (Cato)"; but the form (*Ag.* 10.4, in a phrase *lābrum ēluācrum* 'basin for rinsing-out') is adjectival (see Leumann 1977:314 on such OLat. adjectivized instrument nouns)

līra: the frequent *dēlēr-* forms (Laber. etc.) should also have been mentioned (cf. *EM*)

lūdō: de Vaan gives a nom.sg. form "*lūdicer*" for the *o*-stem/*ā*-stem adj., but such a form is not actually attested (neither is *lūdicrus*), though the adj. itself (in other case forms) certainly is (Pl. *Aul.* 626+); more seriously, de Vaan's "*lūdicrē* [adv.] 'playfully' (Enn.+)" probably does not occur in Ennius — see Skutsch 1985:219 ad loc. (*Ann.* 69Sk) on the metrical interpretation of what is better read as neut. (3rd declension) *lūdicrĕ*[32]

merx: no mention of OLat. MIRC-/MIRQ- material (cf. on *stercus* in 8. above), e.g. *CIL* I^2 553 MIRQURIOS (very early Praen., perhaps 5th/4th c. BC), 564 MIRCURIOS, etc. (cf. Vine 1993:163ff., Adams 2007:89ff.)

minae: *ēminēre* is listed, but not *prōminēre* (though both are mentioned in the discussion s.v. *mentum*)

mulier: no mention of MULIAR[(Corcolle altar inscription, see on *iūs* above and in **8.**), cf. Gerschner 2002:91 and *CEL* 3.336f.[33]

multus: no mention of OLat. inscr. *moltātico-* (e.g. *CIL* I^2 383, 2675c MOLTATICOD, 2442 MOLTATICO), or its Class. Lat. suffixal replacement *multātīcius* (Livy+, mainly in formulaic expressions like those used for OLat. *moltātico-*)

nāscor: for *nātiō* in the sense 'birth', de Vaan cites the phrase "*nationu gratia*" (CIL I^2 60), actually written NATIONV CRATIA (cf. Vine 1993:291f. on the complex notation of velars in this text)

---

[31] Cf. also n. 4 above on "*iouvesat*" (sic).

[32] Oddly, de Vaan in fact cites the form as "*lūdicre*" (3rd declension) s.v. *alacer*.

[33] See **12.** below on de Vaan's non-usage of *CEL*.

nex: also *internecīvus* (Cic.+), a form that deserves to be mentioned (beside Lucil. *interneciō,* duly cited), in view of the lack of productivity of denominal *-īvus* forms

pār: compound *com-, dis-parāre* (Pl.+) are cited, but not simplex *parāre* (Pl. *Cur.* 506)

petō: beside *oppetere,* no mention of OPETOIT (Duenos Inscription) and Eichner's famous (though controversial) analysis of this part of the text in this way (1988-90a:213f.)

rapiō: also *rapīna* (Cato+)

ruō: also *ruēs* (Carm. Arv.)

salīva: here *salebra* 'unevenness'; but this is normally — and perhaps correctly — assigned to *saliō* 'jump', and in any event the gloss 'dirty yellow' (provided here for the Pr.-Ital. reconstruction **sal-es-ro-*) has no basis

sē: no mention of *sīs* 'suīs' (Enn., Lucr.) and *sam* 'suam' (P.F. 41.6L), *sōs* 'suōs' (F. 388.4L, P.F. 387.12L), cf. Leumann 1977:465

sem-: beside *simītū,* inscriptional SIMITVR (even though late) should certainly have been cited (as in *WH* and *EM*)

serō 1: Lat. *sēmen,* O. **seemuneí**, and Pael. *semunu* are duly mentioned, but not Lat. *Semunis* (Carm. Arv.)

ūber: here also (as usually thought) the hydronym *Oufens* (also *Ofens, Ufens*; modern *Uffente*) and perhaps the Roman tribal name *Ufentina* (OLat. *Oufentina*); see e.g. Nussbaum 1997:199n90 and more recently Vine-Yokoyama 2010:192 (with further references)

ūtor: *ūsurpare* is listed here as a derivative (with regard to its first member), but the second member is recorded and discussed neither with *rapiō* (as traditionally) nor with *rumpō* (Watkins 1970:323ff.)

ve/ortō: in addition to *prōrsus* et sim., also OLat. *hōrsum* (cf. on *hic* in **8.** above)

vetus: no mention of VOLat. FETVSIA (cf. Hartmann 2005:37-66), even though this is morphologically important; see **12.** below (*vetus*)

via: also adv. *interviās* (Pl., Ter., Turpil.+; cf. Vine 2010:135ff.)

vir: beside *virītim,* also *virītēs* (Gell. 13.23.2, "in libris sacerdotum … et in plerisque antiquis orationibus"), *virītānus* (P.F. 511.13L)

virga: the discussion mentions both *virgultus* and *virgula* as derivatives, yet neither is listed among the "derivatives"

Three additional points may be noted concerning the derivatives.

First, de Vaan is generally conscientious about commenting on linguistically difficult or interesting material among the derivatives; yet there are some lapses. It is odd, for example, that no comment or reference is offered (s.v. *febris*) on the formation of

febrīculōsus (cf. Leumann 1977:341), or that the entry for *īdem* lacks a comment on the formation of *identidem.* S.v. *speciō,* there is no comment on *suspīciō,* even though the difficult vocalism of this form has even led to its being etymologized differently (a point de Vaan does not mention);[34] and the entries for *tegō* and *regō* have nothing to say about the problematic vowel length in *tēgula* and *rēgula* (nor is reference provided, there or elsewhere, to Nielsen 2004, cf. *CEL* 2.333).

Second, the coverage of literary compounds is uneven. For example, *vēlivolus* (Enn., Andr.) is mentioned s.v. *volō,* but not s.v. *vēlum*; *vēlivolāns* (Enn.) is cited in neither place; and many other pre-Ciceronian compounds are simply missing.[35] Most importantly, de Vaan offers no rationale that would explain which compounds will or will not be listed, or will be listed under one lemma as opposed to another.[36]

Third, as is perfectly understandable, there is little attention to onomastic material, with rare exceptions (mainly involving theonyms).[37] Yet this type of data is often linguistically pertinent, and could have been deployed more liberally. S.v. *niger*, for example, there is no mention of the presumed **nigēre* (i.e. **nigēre* : *niger,* like *rubēre*: *ruber,* etc.), inferable from **nigidus* → gentilicium *Nigidius* (Leumann 1977:554).

10. De Vaan's coverage of related material elsewhere in Italic is certainly a boon; but these listings are not entirely to be trusted either, e.g.:[38]

ālium: no mention of ἀλλᾶς '(garlic?) sausage' (Hippon.+), cf. *GEW, DELG,* and Beekes (2010:71) s.v.
alius: "SPic. *alies* … 'another'", but more often taken as part of a naming expression (**tetis** ... **alies**, TE 2)
ars: also SPi. **arítih** (AP 2)
-ce: also SPi. **estufk** (AP 2)

[34] Cf. Weiss 2009:143n48, with reference.

[35] To give a sense of this via Ennius (*Ann.* and *trag.*): missing examples (in addition to *vēlivolāns*) include *altisonus, altitonāns, altivolāns, bellipotēns, belligerāns, blandiloquentia, doctiloquus, sapientipotēns, suāviloquēns, signitenēns.*

[36] Given the productivity of *-fer* compounds (at least in poetic language), it is predictable that e.g. *flammifer* is listed s.v. *flamma* and not *ferō*; but many other forms (as with most of the examples in the preceding note) are less clear-cut.

[37] This is a matter of stated policy: "I also exclude from the discussion all onomastic material of Latin and Sabellic, with a few exceptions" (p. 1).

[38] I forgo commentary on the material from Faliscan and Venetic, both of which have been treated by de Melo (2009).

cēlō, -āre: the Pr.-Ital. thematic reconstruction "**kēl-e/o-*" here is incomprehensible

ex: "SPic. **eh-** [prep. + abl.]", but this evidently refers to the preverb in **ehuelí** (TE 1); the preposition appears as **e** (in the phrase **e : súhúh**, also in TE 1)

fētiālis: also SPi. **fitiasom** (TE 5), as generally assumed

findō: "/fidas/" (sic, for /fidās/) for Hern. **hvidas**

fuī: "Presam. fυfƑοδ", but also, in the same text (and interestingly), the "*scriptio plena*" form fυfυƑοδ

honōs: no mention here (or anywhere) of Pael. *hanustu* (Pg 9)

horior: beside Pael. *herentas* and related forms, also Ἐριέντης (Hsch., cf. Untermann 2000:319)

mūtuus: De Vaan writes (p. 12) that apart from the form πιβε 'drink!', he has "refrained from citing any Sicel forms, since their interpretation still seems too uncertain". That is a defensible position for much of the Sicel inscriptional corpus; but surely the testimony of Varro (quoting Sophron) and Hesychius suffices to allow the inclusion of Sic. μοῖτον[39] — something of a staple in the etymological literature on *mūtuus* and related forms.

nepōs: no non-Latin Italic material is provided, but cf. Steinbauer 1993:288ff. on Etr. *nefts* (probably from Umbrian, and with consequences for the Proto-Italic paradigm of this word)

novus: Lat. *novēnsidēs* is listed as a derivative, but there is no mention of Mars. *nouesede* (VM 5)

opus: "SPic. **opesaúom**", but this is the inaccurate (or at least "informal") reading presented by Untermann (2000:801), whom de Vaan blindly follows;[40] even Marinetti (1985:251) had arrived at **o[‿ -]esagụom**, cf. Rix (2002:70, RI 1) **opesạ[ ]úom**, La Regina (2011:267f., with photograph) **o[-]esagúom**.

poscō: also Pael. *p(e)perci* (Pg 4; Rix 2000:220ff.)

rigeō: either here or s.v. *regō,* something should have been said about O. *recta(s)* 'stiff' (Cm 15)

ruber: also SPi. **rufra** (CH 1)

so-: "SPic. **praistakla-sa** [nom.acc.pl.n.]", but this is only one possible segmentation and grammatical interpretation of this sequence

speciō: U. **speture** (Tab. Ig. IIa 5) is listed, but not its corresponding adj. form **speturie** (IIa 1, 3)

sum: also SPi. **sim** (CH 1), at least according to some interpretations

---

[39] See Vetter 1953:370, s.v., for a conspectus of the evidence.

[40] "All Sabellic forms are cited from Untermann 2000" (p. 12).

The most serious disappointment with regard to the Sabellic material is that — with one general exception — de Vaan was content merely to digest and relay the etymological information provided by Untermann 2000,[41] with scarcely any attempt even to update the bibliographical coverage. Thus, for the latter point, and with reference to etymological proposals concerning South Picene material only, e.g.:

-cellō 1: here perhaps SPi. **qolofítúr** (Vine 2006a)
imāgō: here perhaps SPi. **ímih** (Martzloff 2006a, 2006b:499f.)
nemus, numerus: here perhaps SPi. **nemúneí** (Calderini 2001:286, Martzloff 2006c:83f.)
pius: here perhaps SPi. **puíh** (AP 2), following Adiego Lajara 1992:90ff. — an interpretation that has gained traction post-Untermann 2000, and which would have interesting consequences for the *pius*-Gesetz[42]
pollingō: here perhaps SPi. **vepses** (Martzloff 2006b:352f., 442, 750; 2007)[43]

As for the reliance on Untermann 2000: de Vaan is well aware of Untermann's extreme skepticism about meanings and etymologies, and says (p. 4) that to adjust for this, he will retain "the etymological explanation given … by other contemporary specialists of the Sabellic languages, if a communis opinio could be discerned in the literature". In the absence of his own independent evaluation of Sabellic etymology, this is indeed the next best thing; but one can question some of these choices, mainly of omission. Thus, for example, U. **aviekate** is listed s.v. *avis* with the annotation "analysis uncertain"; there is no mention s.v. *iocus* of the prominent theory[44] according to which its second member belongs (like *iocus*) with PIE **i̯ek-*. Or again: despite Untermann's skepticism, the general approach to U. **eitipes** by Meiser (1986:125-9) and the application of this analysis to SPi. **aitúpas** by Eichner (1993:56 with n. 31) is rather widely accepted;[45] yet neither form is to be found in de Vaan's dictionary.

[41] "For Sabellic, I have relied on Untermann 2000 for the meaning and etymology of words" (p. 3). The one exception: de Vaan has benefited from a number of suggestions provided by Michael Weiss (acknowledged on p. vii and passim), some of them derived from a manuscript version of the book later published as Weiss 2010.

[42] Cf. Vine 2001:121, 2006:501; Martzloff 2006a:108ff., 2006b:491ff.; Weiss 2009:468n15.

[43] Note that "Martzloff 2006b" is a work that de Vaan cites in other connections.

[44] See Untermann 2000:139 (followers listed there include Meiser and Schirmer, as well as Heidermanns, in an unpublished work), and more recently Heidermanns 2002:192f., Martzloff 2006b:349.

[45] See further Vine 1998a:81; Meiser 2003:92, 157, 196n5; Martzloff 2006b:322ff.

These proposals may or may not be correct;[46] yet they certainly deserve mention in an etymological dictionary of Latin "and the other Italic languages".

11. For the listings of related material elsewhere in Indo-European, it was of course necessary to make a judicious selection, and this has on the whole been skillfully carried out. There are, to my mind, a few surprising omissions.[47] But personal taste clearly enters into such decisions, and so there is little that needs to be said on this point.

To de Vaan's credit, he is generally careful to provide relevant material from Anatolian, Tocharian, and Mycenaean Greek, these additions constituting a significant update as compared with *WH* and *EM*.[48] In a few cases, one would have liked to see additional material from Anatolian and Tocharian, e.g.:

calō: also Hitt. *kalliš-^{zi}* 'call'
fētiālis: the same *ti*-stem **d^{h}eh$_1$-ti-* perhaps in Lyd. *ta(a)c-* 'votive tablet, offering' (Melchert 1997:34ff.)
labium: "nominal cognates of **lb-* 'lip' are only found in Germanic", but cf. Watkins 1997 on Luvo-Hitt. *≺lapan(a)-* 'salt-lick'
mēnsis: for the primary *n*-stem underlying the Lat. *s*-stem, see Rieken 2001:77f. on Hitt. *mēi̯an-* 'period of time, season'[49]
po-: also Pr.-Toch. **pä-* (imperatival particle; see recently Malzahn 2010:496f.)
queror: also TB *kwäsnātär* 'laments'
vestis: also TB *yesti* 'garment' (see **12.** below, *vestis*)

Most disappointingly, however, the Mycenaean material has not been carefully handled, also one of the most unfortunate blemishes of Beekes 2010.[50] Apart from material that might have been added,[51] there are at least the following problems:

---

[46] I personally believe the **i̯ek-* analysis of U. **aviekate** to be wrong (Vine forthc.).

[47] E.g., s.v. *mittō,* Go. *maiþms* is absent (interesting in view of SPi. **meitims**, **meitimúm**; Eichner 1988-90b:200); s.v. *iste,* there is no mention of Celtib. *iśTe* (often compared to *iste*).

[48] For the Anatolian material, note also de Vaan 2011b, supplying clarifications about his use of Kloekhorst 2008.

[49] Similarly Kloekhorst (2008:570) on the *n*-stem ("**meh$_1$-on-, *meh$_1$-en-*"), with the comment "a connection with IE **meh$_1$-* 'to measure' seems likely" (though without reference to Rieken).

[50] These points are not unrelated: de Vaan often cites (as "Beekes forthc.") a pre-publication version of Beekes' dictionary (2010), and seems to have copied some of his Mycenaean errors from Beekes; see below.

[51] E.g. Myc. *e-re-ta, e-re-e* (*rēmus*).

arma: "Myc. *a-ra-ro-wo-a*" (sic, for *a-ra-ru-wo-a*);[52] here also "*a-mo* /*armo*/" — but Greek aspiration-anticipation is post-Mycenaean,[53] and the Myc. form probably reflects /*arhmo*/;[54] finally here, de Vaan cites "dat. *a-mo-te-i*" (sic, for *a-mo-te*)[55]

clāvis: *ka-ra-wi-po-ro* is rendered (improperly, i.e. in Greek-alphabet notation and without macron) as "/κλαϝι-φόρος/" (for /*klāwip^{h}oros*/)

īcō: "Myc. *ai-ka-sa-ma* /*aiksma*/" (sic, for acc.pl. /*aiksmāns*/)

sinō: "*ki-ti-je-si* … 'they live'", but probably rather (in context: PY Na 57 *pu$_2$-te-re ki-ti-je-si*) '(the planters) bring into cultivation' (vel sim.)

taxus: "*to-ko-so-wo-ko* /*tokso-worgos*/", but actually (in context: PY An 207) nom.pl. /*tokso-worgoi*/

tīlia: "Myc. /*pterewa*/" (sic — an unorthodox hybrid notation, neither syllabic transcription nor phonemic interpretation); the form in context (KN Se 879, So 894, etc.) is probably gen.sg., thus correctly "Myc. *pte-re-wa* /*ptelewās*/"

vervex: "Myc. /*werwes-ieia*/": apart from the odd hyphen and the failure to provide the actual Myc. syllabic form (*we-we-si-je-ja*), the version given, with ending *-a,* is sg., even though de Vaan's gloss is (correctly) pl.; but the gloss itself ('women who work the wool')[56] is of *Docs.*^{2} vintage, and the word is now understood differently, as 'the women of (i.e., depending on) *we-we-si-jo*', referring to the MN *we-we-si-jo* /*Werwesios*/ (García Ramón 2011:223f., with earlier references)

vetus: Myc. "*we-te-i*" is given as a free form,[57] but this form is only attested in an āmreḍita compound *we-te-i-we-te-i*

12. In a work largely devoid of the early bibliography (for which *WH* continues to be an essential resource), one expects thorough coverage of post-*WH* (and post-*EM*) scholarship. Yet the treatment is far from comprehensive, with many regrettable omissions, even apart from the fact that *CEL* (never cited and thus not listed in the bibliography) has evidently not been consulted — as one can gather, in any case, from

[52] The same error at Beekes 2010:123 (s.v. ἀραρίσκω).

[53] See Nussbaum 1998a:138n136.

[54] Beekes (2010:133, s.v. ἅρμα 1) writes /*arm$^{(h)}$o*/, presumably an error for /*ar$^{(h)}$mo*/.

[55] The same error at Beekes 2010:133 (s.v. ἅρμα 1).

[56] The identical gloss at Beekes 2010:392 (s.v. εἶρος).

[57] So also Beekes (2010:476, s.v. ἔτος 2).

a number of de Vaan's discussions.[58] Among monographic works: one also misses any reference to André 1978, which might have shed light on a number of reduplicated formations.

In addition to bibliographical omissions already mentioned above in other connections, and others to be mentioned in sections **13.** and **14.** below, the following survey (which largely avoids overlap with material available in *CEL*) should suffice to illustrate the extent of the problem:[59]

aestās: a superior account in Nussbaum *1998b:527
arduus: extended discussion in Meiser *1998:109
at: Dunkel 1988 (Lat. *at* passim)
autumnus: Rix 1997, there also for *contemnō, aestumō, cortumiō,* and other forms; on *cortumiō* (Varro *L.* VII.8 [augural formula!], VII.9; absent from de Vaan's dictionary): *CEL* 3.335 and more recently García Ramón 2007
barba: on *barbātus*, the BSl. cognates, and the suffixation: Hajnal 1993:131ff.
blandus: etymological discussion in Meiser *1998:112 (cf. *CEL* 2.320)
careō: Christol 1996 on *cassus* (as well as *assus, nassus/nassum*)
carō: "I find no good evidence pointing to a root noun" — but see Nussbaum *1986:66ff. (on Gk. κήρ)
com-: Haug 2007[60]
cūnctor: "Most cognate IE verbs show an *o*-grade in the root, as does Latin" — yet no citation of Jasanoff (e.g. 2003:72ff., 73n15 on *cūnctor*; see more generally **13.** below)
damnum: *damnās* (so marked) is taken to derive from **damnātos* (as often), but see Gerschner *2002:29 (on possible *damnăs*)
ēbrius (and *sōbrius*): Kim 2000 (important alternative analysis of the PIE root; Lat. *ēbrius, sōbrius* pp. 152, 162ff.)
faux: Winter 1982:183

---

[58] See e.g. de Vaan on *īnstar* (no account taken of *CEL* 1.325 [Puhvel]), *permitiēs* (*CEL* 1.329f. [de Lamberterie]), *legō* (*CEL* 2.327f.), *miser* (*CEL* 2.330 [Janda]), *aeger* (*CEL* 3.320 [Szemerényi]), *ōtium* (*CEL* 3.338 [Rix]), etc.

[59] Some items involve a failure to make full use of sources de Vaan himself otherwise cites; these works are marked (in this section only) with an asterisk. In terms of chronology: de Vaan writes (in his "Preface") that the main body of the text was written during the academic year 2006-2007; and indeed, he cites some material with a publication date of 2007, as well as a good deal of material from 2006 and 2005.

[60] De Vaan 2007 — his interesting etymology of Lat. *adūlāre* — is cited from the same volume.

frequēns: Meiser *2003:46
grātus: Rix 2000 (including *grātēs, grātia*)
hiems: Friedman 2003 (on the PIE background; Lat. *hiems, hībernus* passim)
hōrnus: "loc. sg. **hoi yōroi*" etc.; but a thematic basis is not necessary, see Nikolaev 2003:168, 2010b:19, 39
iste: Penney 2002 (passim, especially on the Sabellic material; 139 on etymology)
iubeō: Willi 2001 (passim), among other works cited at *CEL* 1.325f.
iūs: "*iouistē* Paul. *ex F.*" (macron sic; but cf. Watkins 1975, and the discussion at *CEL* 2.325f.)
iuxtā: "superlative suffix **-ist(H)o-* … is not otherwise found in Latin", but cf. again Watkins 1975 and *sollus* below
lacertus: "The connection with λικερτίζειν … is adopted by WH", without further comment; but see Weiss apud Vine *1999:24n43 for an explicit account
lacruma: Nussbaum *1999:394f.
lessus: Puhvel 1988:526
līber: Brachet 2002 (on *lībertās/lībertus*)
lingua: "Sabellic *f-* [in O. **fangvam**] presupposes *d^h-, which must be due to association with another word in *d^h- (but which?)" — Mancini 1988:228 (cf. O. **fatíum** 'loqui' < *$b^h h_2$-*t-*); different approaches (phonologically-based) in Hamp 1993, Stuart-Smith *2004:82 (cf. Meiser 2007:91)
lōrum: Peters *1980:49f.

sōns: Watkins 1967
tābeō: "the root enlargement reflected in Latin *-b-* could be PIE **b* or **b^{h}*", but cf. Rasmussen 1992[*1999]:557 for an entirely different account (via **-tu̯-*)
temptō: Panagl 1998
ūber: the root etymology in Melchert 1986 deserves to be cited, as well as Nussbaum's discussion of the phonology (*1997:198f.)
unguō: Stüber *1997 (on the morphology of *ungen,* U. **umen**) (but see now Melchert 2007/8)
vesper, ve/ispillō: Katz 2000 (cf. Katz 2010:39n25, with further references)
vestis: Malzahn 2002/3 on TB *yesti* < **wéstoi̯* (missing from de Vaan's list of IE cognates); although de Vaan (on the basis of late Ved. *vastí-*) considers *vestis* "[p]robably an independent formation of Latin", see Malzahn (2002/3:217 with n. 10) on the possible relationship between the TB amphikinetic *ti*-stem and Lat. *vestis*
vetus: no mention of the alternative analysis by Nussbaum (*1986:145n15) in terms of a *u*-stem (cf. **9.** above on VOLat. FETVSIA; on this point recently Vine 2008:29n3, 2009:218, Weiss 2011:352f.)
vir: Pinault *2001:90ff. (on *virāgō*)

13. As for de Vaan's etymological discussions themselves: no one will be surprised at the pervasive appearance of familiar "Leiden School" doctrine; but it is unfortunate (as emphasized already by Katz 2010:35, with reference to this book and to Beekes 2010) that, while professional Indo-Europeanists will be able to make various adjustments, classicists and students — two of the primary groups who will surely make heavy use of this book (and of Beekes 2010) — will not. Thus, to cite the most familiar item of this sort, the denial of PIE **a* recurs in many entries, whence various extreme suggestions,[62] reaching a *reductio ad absurdum* in *patior,* where the morphological difficulties of a comparison with Gk. πῆμα via original **ph$_1$-t-* (> Ital. **pat-*) lead to the outlandish suggestion of a derivation from **pet-* 'to fly, fall'.[63] Similarly,

[62] E.g. *albus*: Hitt. *alpa-* might continue *o*-grade **h$_2$olb^{h}o-* (an idea attributed to A. Lubotsky); *canō*: if Gmc. has **kan-,* "it is a non-IE root"; *saliō*: "Skt. and Toch. cannot go back to *sh$_2$l-. Hence, I regard the reconstruction of the root form as uncertain"; etc.

[63] I.e.: **pet-* 'to fly, fall' → **p(e)t-i-* 'to befall', whence intrans. 'it befalls me' > 'I experience'.

the mere rarity of PIE **b* is sometimes sufficient to lead to the rejection of an IE etymology (e.g. *sēbum*) or to the assumption that a word belongs to a substrate language (e.g. *baculum*) — methodologically questionable argumentation.

For the phonology, it is also not surprising that de Vaan has adopted many of the theories proposed in Schrijver 1991, though sometimes with less consistency than one might like. Thus, for example, de Vaan accepts Schrijver's formulation of "Dybo's Law",[64] and sometimes comments on apparent exceptions (as in *fūmus*) — but sometimes does not: Lat. *sērus* is given a Pr.-Ital. preform **sēro-* and a PIE reconstruction **seh$_1$-ro-,* with no mention of the Dybo's Law violation; and conversely, the connection of *timeō* with the PIE 'stiff' root (**st̥ieH-,* in *LIV*'s version) is rejected because (assuming *s*-mobile) "we would expect PIE *tiH-m- > Lat. **tīm-*"; this is where de Vaan leaves the matter, but one might easily suppose (for example) that an old stative **tiH-m-éh$_1$-* (> **tīmḗ-*) would undergo Dybo's Law, and indeed similar conjectures are offered for other forms with this prosodic structure (see s.v. *cumulus*). One must not assume, however, that de Vaan has accepted all of Schrijver's proposals: noteworthy is de Vaan's rejection (following Meiser 1998:82f.) of the claimed contrasting development of velar **ke-* (> Lat. /ka-/) and palatal **k̂e-* (> Lat. /ke-/; Schrijver 1991:425ff.).[65]

In general, one is grateful for de Vaan's clear and thorough survey, in his "Introduction" (pp. 6-10), of PIE, Proto-Italic, and Latin phonology. It would have been desirable, however, to include more detailed guidance about special Leiden features, including certain notations (and the phonological assumptions that underlie them). The major culprit here is the Leiden-style non-notation of syllabic liquids and nasals and non-syllabic glides. Thus, for example, the PIE reconstruction **h$_1$uh$_2$-ko-* somehow (i.e., without explanation) accounts for the Pr.-Ital. preform **wako-* (underlying Lat. *vacō*), even though such a PIE form would normally (i.e., outside Leiden) be assumed to result in **ūko-*; similarly Lat. *vadum* < **uh$_2$d^h-o-* (s.v. *vādō*). When de Vaan writes (s.v. *flō*) that "LIV reconstructs *b^{h}lh$_1$-ye-, but does not say how **flaje-* > *flā-* arises from this preform", he has fallen prey to his own notational habits: for one thing, *LIV* (in this case Rix himself) reconstructs no such form, saying merely (s.v. **b^{h}leh$_1$-*) that Lat. *flāre* is "[e]her sekundäres *ye*-Präs. als (mit SCHRIJVER 403) Verallgemeinerung der R(z) des Plurals". Insofar as this presumes a *ye*-present built to the zero-grade allomorph of *LIV's* root athematic present "**b^{h}léh$_1$-/b^{h}l̥h$_1$-*", I feel

[64] I.e. (cf. Schrijver 1991:334ff.): some time before the break-up of Proto-Italo-Celtic, long vowels were shortened in pretonic position before resonants (cf. *ferus, vir*).

[65] The matter surfaces passim, sometimes only implicitly (as with de Vaan's alternative explanation for the *a*-vocalism of *candeō*); but see most explicitly s.v. *scabō.*

certain that Rix would have written *b^hḷh_1-i̯e/o-, a form that would regularly (outside Leiden) develop to pre-Lat. *flāi̯e- (not de Vaan's *flaje-).

In terms of morphology: there is likewise, Leiden-style, an aversion to acrostatic formations (cf. de Vaan 2004 on "Narten roots"), in particular to lengthened grades in acrostatic formations, including some heteroclitic types for which this feature has often been postulated:[66] hence the tendency to explain long-vowel forms in any other way, such as via Lachmann's Law for Latin or Winter's Law for Balto-Slavic (see e.g. *edō*); and when all else fails, *ē*-grade forms (and sometimes *ō*-grades) are conjectured to have their sources in (frequently nonexistent) root nouns (see e.g. *cella* and *cēlō, cōnor, sedeō* [*sēdēs*], *sēgnis, tēmētum, vēnor, vēscor*). It is not the idea itself that is objectionable — such root nouns may well be viable sources in some such cases — but rather the repeated failure to acknowledge other possible solutions.[67] This general approach penetrates even into suffixal morphology: thus the Leiden party line follows Pedersen (1926) in interpreting many Latin *ē*-stems as deriving from primordial *-*(e)*h_1-stems (Beekes 2011:199); yet de Vaan himself, after writing "*fidēs* < *$b^h id^h$-eh_1-" (s.v. *fīdō*), acknowledges (adjusting the analysis of Hamp 1999) that a plain hysterokinetic "nom.sg. *$b^h id^h$-ēi, acc.sg. *$b^h id^h$-ei-m would also work". At least the Stang's Law basis of *diēs* (← acc. **diēm*) remains intact; yet Leidenites do not believe in the existence of Lindeman forms outside Vedic (Beekes 2011:139): thus we are told (s.v. *diēs*) that the stem-form *di-* (of *diēs*) arises "analogically from gen.sg. **diwos*" (similarly s.v. *Iūpiter*), even though this oblique stem-form is nowhere attested in Italic, and with no acknowledgment of alternative approaches. Readers must also reckon with de Vaan's IE notations of the type *$h_1$eis-h_2- (*īra*), **le/ouk-s-nh_2-* (*lūna*), etc., based on the assumption of nom.sg. *-h_2 and other zero-grade allomorphs with *-h_2- in the Leiden version of *ā*-stems (Beekes 2011:200). These notations are usually harmless (though see **14.** below on *hara*); still, one wishes that some background had been provided (as with the phonology) about some of the morphological (and morphophonemic) assumptions governing de Vaan's notations and discussions.

The discussion of morphology cannot conclude without noting what seems to me the egregious failure even to cite, much less to reckon with, various views of Jasanoff on matters of verbal morphology:[68] thus, despite the prominence of Latin material in (for example) Jasanoff 2003 (never cited, and thus not to be found in de Vaan's bibliography), no account is taken of Jasanoff's version of the morphology of reduplicated

[66] Thus Beekes recognizes a "static inflection", but without lengthened grade (2011:191); the length in Gk. ἦπαρ is said (without further explanation) to be "analogical" (2011:206); etc.

[67] Cf. again Katz (2010:35) on the deleterious effects of "the deliberate suppression of most other views".

[68] Cf. already **12.** above, on *cūnctor*.

formations like Lat. *sīdō* or *sistō* (2003:128ff.), or his analysis of the root of *spēs* and *prosperus* (2003:108f.), or (s.vv. *fīō, fuī*) his understanding of the root of such forms (**b^{h}uH-,* not **b^{h}u̯eh$_2$-* vel sim.; 1997, cf. 2003:112n52), or his attractive interpretation of the background of Lat. *duim* and similar forms in Faliscan and Sabellic (1991:188n15), which dispenses with the need for an appeal to the root **deuH-* (or its putative source in a *u*-extended form **deh$_3$-u-*);[69] etc. Of less consequence overall, but similarly unsatisfying, is the failure to take the full measure of Dunkel's analyses of IE and Latin particles and related phenomena. Thus, while some of Dunkel's contributions in this area are cited and applied, others are oddly absent: Dunkel 1979 is discussed s.v. *re-,* but there is no mention of Dunkel 2003 (relevant also for *restis*); and the claim is made (s.v. *aut*) that "the adverbs in *-im* continue **-īm* < **-iH + m*", yet the Latin *-im* data themselves are poorly managed (see **8.** above, *ille*), and no account is taken of Dunkel 1997 (especially 67f. on *exim, istim, illim, hinc,* 77f. on *ōlim, interim*).[70]

The most consistently satisfying feature of de Vaan's etymological discussions is his sane and even-handed sifting of previous theories. Time and again, one is struck by de Vaan's eminent good sense in detecting the weaknesses of older ideas, no matter how hoary or popular they may be, and in clarifying the limits of our knowledge. Occasionally, he strikes out on his own to offer a new suggestion, and some (but not all) seem very much worth considering. In the negative column: I find it difficult to accept the idea that *convīcium* (glossed by de Vaan as 'angry noise; mockery') ultimately has anything to do with *vinciō* 'tie', on the grounds that "mockery and scolding can be described as 'encircling' someone". Whatever one thinks about the idea of "mockery" as a form of "encircling", it is not even clear (and de Vaan certainly does not demonstrate) that 'mockery' is the primary sense of the word (as opposed to 'outcry, clamor'); and there is also the troubling near-absence of *n*-less forms of this root in Latin, other than *vicia* 'vetch' (supposedly < **'winding plant'). But de Vaan's cogent analysis of *redimiō* 'encircle (with a garland), bind, wreathe, gird' — usually interpreted as *red-* plus the zero grade of PIE **i̯em-* 'reach, obtain' (not easy semantically) — makes a good case for an original denominative based on **re-* plus (Italic) **demo-/*demi-* or **domo-/*domi-,* to PIE **demh$_2$-* 'overcome, tame' (cf. Lat. *domō*), for which a Nebenbedeutung 'bind' is in fact well-established.

---

[69] Similarly (i.e., without recourse to **deuH-* or **deh$_3$-u-*) Rasmussen 1999:649f. (likewise not cited).

[70] But see now Zehnder (forthc.) on *ōlim*; despite de Vaan (s.v. *olle*), lengthened *ō*-grade here, far from being "highly irregular from a morphological point of view", is readily explained in terms of a vṛddhi derivation **ōl-ó-* (cf. Ved. *ārá-* 'distant', in the frozen adverbial forms *āré* 'in the distance', *ārā́t* 'from a distance').

14. Before concluding, I append some comments on material in individual etymological treatments. This is, once again, a limited personal selection, presented for illustrative purposes.

Abella: "the outcome of PIt. **-ln-* in Oscan is unknown"; but de Vaan elsewhere (for O. **úlleís** etc. s.v. *olle* and for O. **sullus** etc. s.v. *sollus*) assumes (quite reasonably) that **-ln-* > O. /-ll-/.

amō: On **h_2emh_3-* vs. **h_3emh_3-*: perhaps actually **h_1emh_3-* (Nussbaum 2002:190). For *amīcus*: de Vaan may well be correct that this is "decasuative from an ins. in **-ih_1* plus **-ko-*"; but in that case, we are owed some comment on the data often taken[71] to point to a diphthongal source in the second syllable, i.e. relatively early inscriptional spellings with <EI>,[72] evidence for <ei> in the MS tradition of Plautus,[73] and spellings with <e>.[74] Schrijver's analysis in terms of a preform **ama-iko-* (1991:399) — which de Vaan does not mention — at least has the benefit of accounting directly for such data. In the end, *WH* (s.v. *amīcus*) may be right to assert (following Persson) that these facts "sprechen kaum für altes *-ei-*"; but this is an important philological question that de Vaan has totally elided from his treatment.

autumō: no mention here (or anywhere) of the interesting form *negumāre* (Marcius vates); cf. Dunkel 2002:95n36

brūtus: Despite what is said here (with reference to Schrijver 1991:249 for the accentual conditioning), it is not at all certain that a sequence like "**g^wrH-ú-to-*" (de Vaan's notation) would "regularly" be metathesized to **g^wruH-to-*. Laryngeal metathesis is regular for *CHiC/CHuC* sequences, but the status of this process for *CRHiC/CRHuC* sequences remains uncertain.

cōnor: Contra *LIV,* which posits an acrostatic causative à la Klingenschmitt 1978, de Vaan states that "the existence of this type is unwarranted" — a position with which I strongly agree (see recently and in detail 2012). For *cōnor,* one or another type of denominative formation seems probable, as de Vaan discusses (again opting, in the end, for derivation from a root noun, cf. **13.**); but see Vine 1998b:690n21 for a different denominative proposal.

---

[71] So e.g. *EM* (s.v. *amō*), Leumann 1977:64, Wachter 1987:314.

[72] E.g. INIMEICVS (*ILLRP* 1150 = Kropp 2008, 10.1/1; mid to late 2nd c. BC), AMEICITIAM (*CIL* I^2 585.75, 79; Lex Agraria, 111 BC).

[73] *Poen.* 1213 (A), *Rud.* 351 (B).

[74] F. 14.13L (*ameci, amecae* "ab antiquis"), AMECIS (*CIL* IV 3152a; Pompeii, 1st c. AD).

conquinīscō: For the present stem, de Vaan says that the presumed basis *-k^{w}*eg-no-,* whence *-k^{w}*igno-,* should yield *-*quīno-* (remade into -*quīnīscō*). But he continues: "That is, if -*quī*- has long *ī,* which is not certain — the dictionaries give it as short". But since when do we rely on "the dictionaries" for such testimony, as opposed to philological analysis? De Vaan duly cites Leumann 1977:536, but fails to note Leumann's mention (both there and on p. 538) of the MS evidence favoring -*ī*- at Pl. *Cist.* 657 (*quom que mei sciam* pointing to *conqueineiscam*); and since the metrical contexts in Plautus and Pomponius (about which de Vaan is silent) are ambiguous, nothing in the texts, at least, stands in the way of Leumann's *conquīnīscō.* Moreover, even though some modern treatments seem content with the idea that *-k^{w}*ig-no-* (< *-k^{w}*eg-no-*) should end up as -*quĭno-,*[75] this is a phonological development without parallel in Latin. In fact, de Vaan's *-k^{w}*igno-* > *-*quīno-* is *also* irregular (cf. *signum*), but can at least be interpreted in terms of the (probably rustic) pronunciation of such sequences indicated by OLat. SEINO 'signum' (*CIL* I^{2} 388, 2874 [**8.** above], both in Marsian territory). This, in turn, is related to the unresolved question of whether or not lengthening actually occurred before -*gn*-, as Priscian claimed and as some inscriptional evidence suggests, although this is contradicted by the Romance evidence and the treatment of Latin loans in Celtic.[76] Thus de Vaan has hit upon an important issue, in his comment about the vowel length; but his overly brief and philology-free presentation does not begin to do justice to the complex problems that underlie this material.

contrā: De Vaan operates with abl.sg. interpretations for such adverbs (here including masc. abl.sg. for Lat. *contrō-,* O. *contrud*); similarly on *hāc* (s.v. *hic*): "abl.sg.f.", with a gloss 'by this way, in this manner'. But these forms are also directional (thus *hāc* in Plautus frequently 'over here'); for this reason and others, García Ramón's conception of such adverbs as original instrumental forms (1997:131ff., building on an insight of Delbrück) is to be preferred.

crispus: The presumed "Italo-Celtic **kris-po-*" here calls for some comment about the morphology of what is notated as a "*po*-stem".

cūria: If indeed Volsc. *couehriu* belongs here, it undermines the traditional etymology via **ko-wir-* (which de Vaan appears to accept); discussion (with alternative etymology) in Vine 1993:379ff.

---

[75] Thus apparently Meiser 2003:116, following Klingenschmitt 1982:75n17 (the latter with important comments on the unusual suppletive pattern — not noted by de Vaan — involving a primary perfect beside a denominative present).

[76] See on this problem de Melo 2009, Weiss 2009:130f.

eō: Lat. *simītū* is taken here from **sem-eitu-*; but later (s.v. *sem-*), only a zero-grade source **sm̥-* is supplied for all of the forms there cited, including *simītū.*

fimum: Apart from the confusion about gender (**8.** above), the notion that "Lat. *fimus* 'stinking' was probably derived from the verb **-fiō* at a stage when this had already acquired the form **fi-*" is not credible for a form in **-mo-*. (See Leumann 1977:319 and Weiss 2009:286 on the profile of this unproductive formant.)

geminus: De Vaan's PIE preform **iemH-no-* does not match his Pr.-Ital. preform **jemno-* (by what process was the laryngeal lost?), which in turn cannot account directly for the Latin form; but perhaps **jemno-* is merely a typographical error for **jemano-*.

(g)nāvus: "If a development **-ōw-* > **-āw-* is acknowledged, …" — but (despite Schrijver 1991:299ff.) this process (cf. *octāvus*) may be better restricted to non-initial syllables (Meiser 2003:233 with n. 44, Vine 2006b:225n45, Weiss 2009:298n165, 467); in that case, *(g)nāvus* (if it does not continue a zero grade) could be remodeled after *īgnāvus.*

grāmen: The prominent alternative derivation (*EM,* cf. Watkins 2011:33) via **gras-* 'devour' (: Ved. *grásate* etc., cf. *LIV* s.v. *gres-,* n. 1) should at least have been mentioned.

grūs: De Vaan explains this word as "the phonetic result of metathesised **ĝruh$_2$-* in a nom.sg. **ĝrh$_2$-u-s*", but see *brūtus* above for the problematic status of laryngeal metathesis in such a sequence.[77]

hara: "The preform **ĝ^{h}r-h$_2$-* (morphologically difficult) to the root **ĝ^{h}er-* 'to grab' (cf. *cohors*) as given by WH, is impossible; this would yield **hora.* No etymology." But this seriously misrepresents *WH*: their preform is **ĝ$^{h}_{e}$r-ā*, equivalent to the suggestion **ĝ^{ho}rā* in *EM,* where both notations indicate a secondarily syllabified version of **ĝ^{h}r-éh$_2$* (> Lat. ^{x}*gra* or ^{x}*ra*), an entity that might nowadays be notated **ĝ^{h}ṛ(r)-éh$_2$*. Such a resyllabification (**ĝ^{h}r-* → **ĝ^{h}ṛ-,* in prevocalic position) can be justified in various ways, including by a simple analogy to the preconsonantal **ĝ^{h}ṛ-* of **ĝ^{h}ṛ-ti-* (> *-hors*), and possibly also of **ĝ^{h}ṛ-to-* (if Lat. *hortus,* O. **húrz** go back to a zero grade — a serious alternative, as de Vaan argues [s.v. *hortus*], to the *o*-grade that is usually assumed). The development of **ĝ^{h}ṛ(r)-éh$_2$* to *hara,* for its part, may well be perfectly regular (Vine 2011). Note finally that the claimed development to Lat. **hora* is merely an artifact of the misrepresented zero grade coupled with the Leiden-style zero grade allomorph **-h$_2$-* (cf. **13.**).

[77] For the entire family of PIE 'crane' words, see now Gąsiorowski (forthc.).

horior: "since Sabellic is best interpreted as having a suffix *ē* or *ī* …, a PIE *i/ei*-present is the best solution"; but this ignores Pael. *herentas* and related forms, among other Sab. material pointing to an athematic formation (see Untermann 2000:323, Meiser 2003:101n21).

imāgō: Correctly PIE **h₂ei-mo-* s.v. *aemulus,* but here (with impossible hyphenation, given PIE root structure constraints) **h₂eim-elo-* and **h₂eim-o-*. A "pre-Lat. **aim-elo-*" would be reasonable; but these improper PIE notations are non-trivial, in view of de Vaan's discussion of a "noun **imā-*" and Devoto's suggestion of a verb **imāre* "from a root aor. **im-e-* to a root **iem-*", for which "no verbal forms which could be cognate have been discovered" — nor can they be discovered, since **-m-* must be a formative element.

īnsece: De Vaan finds "problematic" the assumption of a reduplicated present **en-si-sk^{w}-e-* (Hackstein 1997:37ff.), "since this would … require syncope in a closed syllable"; but syncope of vowels preceding *s*-clusters with voiceless stop (even followed by liquid) is well-established (Rix 1966:156), as de Vaan himself seems to realize with his presentation of the background of *mīscellus* (s.v. *minor*).[78]

mora: De Vaan writes that *morārī* is either denominative to *mora* "or it could represent an old iterative **morH-eie-* as proposed by Schumacher" (2004:476) — but this is almost the opposite of what Schumacher says: he writes, rather, that the assumption of an iterative would be compelling only if *morārī* had a *to*-participle of the shape ^{x}*moritus,* which it does not.

mox: The idea of a derivation from **mog̑-s(-),* "*o*-grade of the root **mg̑-* of *magnus*", is difficult to credit both formally (no other *o*-grade forms are supplied) and semantically (the suggested starting point '(in) much, many' has more in common with *multus* than with *magnus*).

nōs: The bizarre claim about gen.pl. *nostrum,* i.e. that "after Plautus it was replaced by *nostrī*", contravenes basic facts of Classical Latin grammar, as with the identical claim s.v. *vōs* ("[t]he gen. *vestrum* … was replaced by *vestrī*").[79]

---

[78] For discussion of the process, including a list of examples (note *sēsquipēs* [Pl., Cato+] < **sēmi-sque-,* cf. **en-si-sk^{w}-e-*) and arguments against Meiser's overly restrictive version (1998:66, "wenn die folgende Silbe mit *st(R)-* anlautet"), see Nishimura 2008:137ff.

[79] Perhaps this reflects a misreading of Leumann's phrasing (at 1977:464) concerning the Terentian vs. Plautine usage. Leumann goes on to explain (as would any elementary Latin textbook) the functional distinction, in Classical Latin, between gen.pl. *nostrum/vestrum* (as in partitive usages: *quis vestrum,* etc.) and *nostrī/vestrī* (in other constructions, as in objective genitive expressions: *amor nostrī,* etc.).

nūbō: "A connection with Gr. νύμφη must be dismissed." Why? The reader is owed an explanation, or at least a bibliographical reference.[80]

prope: "The suffix of *propinquus* is not completely clear: was it built as an antonym to *relinquere* 'to leave, abandon'?" — an unworkable theory; among other problems, there is no [x]*propinquere,* and the adjective belonging with *relinquere* is *reliquus,* not [x]*relinquus*. More importantly: readers deserve to be informed about the traditional comparison of Lat. *-inquus* with Gk. -απός (ἀλλοδαπός 'foreign', etc.), Ved. *-añc-* (*pratyáñc-* 'turned towards', etc.), and the suffix of Hitt. *maninku(u̯a)-* 'near', despite Meillet's cogent skepticism.[81]

salīva: De Vaan's morphological comparisons with *-uus* : *-īvus* (as in *irriguus* : *irrigīvus, vacuus* : *vocīvus*) are entirely specious, as these are deverbative formations.

saxum: On the comparison with the root of *secāre* (and Gmc. material like OIc. *sax,* OHG *sahs* 'knife'): "the semantic connection between 'rock' and 'knife' is not evident"; but in fact, there is "a recurring pattern whereby words for 'stone' or 'rock' are based on verbs of 'cutting' or 'splitting'" (Nikolaev 2010a:199, with examples; cf. 2010b:231 on Lat. *saxum* and the Gmc. material). (See also de Melo 2009 on *saxum* in the sense 'flint knife'.)

scrōfa: The suggestion of a non-Latin source form based on the root **skreb^h-* 'dig, scratch' seen in Lat. *scrobis* 'hole, pit' (and comparable Gmc. and BSl. material) is clearly attractive; but the suggestion that Sab. /ŏ/ could have ended up as Lat. /ō/ is not (and no examples for such a correspondence are provided). To be sure, a simple *o*-grade "would be more in line with PIE morphology", but there is also the possibility of a lengthened *ō*-grade feminine (here presumably a concretized abstract) of the type κώμη, λώπη, etc. (Vine 1998b).

sepeliō: "PIE *sepel-ie/o- 'to honour'": differently on the semantics Vine 1988, cf. Martzloff 2006b:696, Weiss 2010:133 (on U. **seples**), and Watkins 2011:78 (s.v. **sep**^{2}-).

sōl: Even Leiden scholars admit lengthened *ō*-grade in certain ablauting formations, including the *l*-stem **h$_2$éb-ōl,* acc. **h$_2$b-él-m̥,* gen. **h$_2$b-l-ós* 'apple' (Beekes 2011:195), cf. de Vaan's *l*-stem **séh$_2$u-l,* obl. **sh$_2$u-én-*.[82] It is unclear why de Vaan opts for the extraordinarily weak solution presented here (**saul* > *sōl* "by

[80] One suspects that de Vaan was following "Beekes *forthc.*" (n. 50 above); cf. Beekes 2010:1026, claiming "Pre-Greek" origin for νύμφη.

[81] See the discussion (with reference to Meillet) by Beekes (2010:72, s.v. ἀλλοδαπός); the comparison is taken seriously (though without endorsement) by Kloekhorst (2008:554, s.v. *maninku(u̯a)-*).

[82] Somewhat differently Beekes 2011:206 (**séh$_2$-ul/*sh$_2$-uén-*).

sporadic development", following Kortlandt), as opposed to the (unmentioned, but widely discussed) alternative assuming a basis in amphikinetic **séh₂u̯ōl,* which can operate with regular laryngeal loss in a nom.sg. **sh₂u̯ōl,* with generalized weak grade of the root.[83]

vēnor: The verb is taken as denominative to an adj. **wēno-* or a noun **wēnā,* "which must themselves be derivatives from a PIE root noun with a long vowel" — the usual gambit (cf. **13.** above). But it is wholly improper to say, as de Vaan does, that this root noun "is also seen (albeit thematized) in Germanic": the Gmc. material (Go. *wens* 'hope' and similar forms) reflects *i*-stems, as such descriptively comparable to the acrostatic type of Gk. δῆρις 'strife' (< **dḗr-i-*), OCS *rěčĭ* 'speech' (: *rekǫ* 'speak'), etc. (Widmer 2004:56). Cf. next item.

vēr: The statement that "an ablaut **ē* : **e* in a n. word seems unlikely" is interpretable only in the context of Leiden morphology, as this very pattern defines a widely-assumed (outside Leiden) type of acrostatic neuter; but see **13.** (and immediately above) on the Leiden antipathy to acrostatic formations with lengthened grade.

verbum: "is *verbum* an early instance of **vor-* > *ver-*?" (i.e. based on a zero grade **wr̥[h₁]-dʰh₁-o-,* as in Gmc. and OPr.) — but this is virtually excluded for a word so well-attested in the early period (Andr.+) and for which there is no other indication of such a background; so explicitly Leumann (1977:47, "kaum *verbum*", as opposed to OLat. *vort-* 'turn', *vorr-* 'sweep'). We must accept the complex ablaut in this word, however it is to be explained.

15. As de Vaan explains in his "Preface", this project was initiated in 1998 by his Leiden colleague Michiel Driessen, who at a certain point abandoned the work, leaving a database for the letters A and B and "sporadic entries elswhere", along with other research results published in a series of articles between 2001 and 2005. After this, "it was decided" that the project would be continued by de Vaan. The dynamics of the decision process are not explained; but we must in any case be grateful that such a gifted scholar took on such a challenge, even if (as some of the above comments suggest) he may have lacked some of the necessary background. I have mentioned, at various points, the features of the book that create a favorable impression: the thorough indexing (**5.**); the careful organization and presentation of the data from Latin (including some archaic inscriptional material), Italic, and other Indo-European languages (**8.**-**11.**); interesting treatments of possible "Mediterranean" loanwords (**8.**); useful introductory material on PIE, Italic, and Latin phonology (**13.**), in addition to

[83] See recently Nikolaev 2010b:51f., 56 (with earlier references at 51n5); and for the laryngeal loss in this context, Hinge 2006:18 (on **ish₁rós*), with earlier references at 18n6.

other helpful features of the "Introduction"; level-headed sifting of previous theories, and a series of attractive new etymological proposals (**13.**). It can fairly be said that we are better off with this dictionary than without it. But the Latin language, and the many scholars and students who make use of it in a wide variety of humanistic disciplines, deserve better than this poorly-edited, incomplete, and highly partisan version of an etymological dictionary.
