CHAPTER 10

Latin edepol *'by Pollux!'* *Background of a Latin* Aduerbium Iuratiuum

Brent Vine

10.1 Introduction

10.1.1 Interjections and Other 'Marginal' Word Types

A truism of modern linguistics, probably with little currency among Classicists, is that 'marginal' word types – such as interjections, exclamations and ideophones – are worthy subjects of analysis that often display features of great linguistic interest. A famous example in English is the morphologically and phonologically complex patterning of so-called 'expletive infixation', as in expressions like 'Un-bloody-believable!' (or its more colourful counterpart with infixed 'f-word'; see the classic study of McCarthy 1982). For ideophones (words evocative of sounds, appearance, movement and many other perceptual and behavioural notions), Japanese, for example, is exceedingly rich in this sort of vocabulary, which in that language displays a characteristic reduplicative structure, for example, *chira-chira* (describes flickering or fluttering), *gocha-gocha* (describes a jumble of things), *koso-koso* (describes stealthy movement), *zaku-zaku* (describes chopping sounds or the sound of walking on gravel) and hundreds more. (On the typology of ideophones and their interest for linguistic theory, see Voeltz and Kilian-Hatz 2001.) And some readers may be surprised to learn that it is even possible to reconstruct an interjection for Proto-Indo-European (PIE): on PIE **u̯ai* (expressing anguish; cf. Hittite/Luvian *(ú)wāin*, Latin *uae*, Germanic **wai* (as in Gothic *wai*, Old Norse *vei*, English *woe*, etc.), among other forms), see Watkins 2013: 250–1 and Barðdal et al. 2013.

10.1.2 Latin Interjections

Latin has a rich system of interjections, most prominent (as expected for such a conversational element) in dramatic literature, both tragedy and comedy. Some of the best-attested 'native' forms would include *ah*, *attat*,

https://doi.org/10.1017/9781108671132.012 Published online by Cambridge University Press

au, *eccam/eccum*, *ei*, *eho*, *em*, *ehem*, *fu*, *heia*, *hahahai*, *hem*, *eheu/heu/heus*, *hui*, *o(h)*, *oiei*, *st*, *tat*, *tatae*, *uae*, *uah*; and there are also forms borrowed from Greek, such as *babae*, *eu* and others. Somewhat different is a lexicalised type, based on standard vocabulary: thus, for example, the neuter adjectival form *malum* (cf. *malus*, *mala*, *malum* 'bad') can be used as an enclitic particle (often following interrogative words) expressing annoyance, often translatable as 'damn it!'. Similarly, *hodiē* 'today' can be used as an intensifier, in that usage entirely without temporal reference. Most familiar, perhaps, is the imperatival particle *age* (literally 'do [it]!', 2 sg. present imperative of *agō*), used to introduce other imperatives, and thus with a meaning like 'Come on!'. (On all this material, see Hofmann 1951: 9–41, Hofmann and Ricotilli 2003: 103–54 and Luck 1964. On interjections and other forms of emotive language within the context of Hofmann's understanding of Latin *Umgangssprache*, see Chahoud 2010: 47–50. While most of the material previously cited and discussed further in this chapter is most prominent in early Latin drama, many forms continue to be used in the later language; see, for example, Holford-Strevens 2010: 333 on the (partly innovatory) behaviour of interjectional *malum* in classical Latin.)

As a sample of the potential linguistic interest of such material, consider the particle *em.* Functionally, this word can appear with an accusative (as if governing a direct object, e.g. Ter. *Eu.* 459, *em alterum* 'What about the other one'), but otherwise introduces a range of exclamatory expressions (e.g. Ter. *Hec.* 63, *em duxit* 'guess what? He *did* get married!'); and in its dramatic context the word may often have been accompanied by a gesture (e.g. Ter. *Eu.* 237–8, *em quo redactus sum* 'Just look what I've been reduced to!'; see further Biville 1996: 211–12 on this feature of *em*). Despite Barsby's assertion that the 'etymology is uncertain' (1999: 129, *ad* 237), the word is surely a 2 sg. imperative related to *emō* 'buy' (originally *'take', cf. the cognates with this meaning listed in *LIV* s.v. *$*h_1$em-*), the only real question being whether the form is a truncated 3rd conjugation present imperative (< *$*h_1$ém-e*) of the type *dīc* 'say!', *dūc* 'lead!', etc. (Weiss 2020: 158), or rather a root aorist imperative (< *$*h_1$ém*) of the type *-do* (< *$*déh_3$*) in Lat. *cedo* 'give [it] here!' (Meiser 2003: 62). Either way, the form is interesting not only morphologically, but also as a semantic archaism, preserving a vestige of the original meaning 'take' – thus originally something like 'take [that]!', 'get [this]!', etc.

10.1.3 Interjections Based on Theonyms

A prominent subset, particularly pervasive in Roman comedy, consists of interjections based on theonyms (or 'oaths'), such as *ēcastor* and *mēcastor*

https://doi.org/10.1017/9781108671132.012 Published online by Cambridge University Press

'by Castor!', *hercle* and *mehercle* 'by Hercules!', *edepol* and *pol* 'by Pollux!', *ēdī* and *mēdī* 'by Jupiter!' (or 'by the gods!'). Since antiquity, questions have been raised about how to describe and categorise these items: thus Priscian, distinguishing them from other interjections, labelled them 'adverbia iurativa' (15.6.34 = 3.85.22 K); and Pinkster (1972: 141–2), commenting on the properties of such forms, observed that their syntax 'has still to be studied'. (Priscian's categorisation is ultimately based on Greek predecessors; see Pinkster 1972: 41 n. 10, with reference to Dionysius Thrax.)

The idiomatic usage of such items in context is less specific than the previously mentioned literal glosses may indicate: these words provide a colloquial way of strengthening a statement (or question), with varied translation values such as 'really', 'heaven knows', 'don't you think?', 'come on!', 'for goodness' sake', 'damn it, …' and more. A few examples with *edepol*:

> timeo, totus torpeo. | non edepol nunc ubi terrarum sim scio (Pl. *Am.* 335–6)
> I'm frightened, I'm totally paralysed. Right now I don't have the slightest idea where on earth I am.

> certe edepol equidem te ciuem sine mala omni malitia
> semper sum arbitratus et nunc arbitror. (Pl. *Aul.* 215–16)
> As for me, heaven knows I've certainly always thought you were a citizen without a trace of wickedness, and I still think so.

> quaeso edepol, Bacchis, quod mihi's pollicita tute ut serues. (Ter. *Hec.* 786)
> Bacchis, I beg you, for goodness' sake, to keep the promise you made me.

> neque edepol quid nunc consili capiam scio | de uirgine istac. (Ter. *Eu.* 867–8)
> Nor do I have the faintest idea what I should do about the girl.

Some forms of this kind are also sociolinguistically interesting in terms of gender linguistics, as already seen by Varro (ap. Gel. 11.6) and as studied more recently (e.g. Adams 1984: 47–54, Dutsch 2008: 7–8, with earlier literature cited at Adams 1984: 48 n. 23, Dutsch 2008: 7 n. 19, among which note especially Ullman 1943). It is not uncommon to find simple characterisations (inspired by Varro's testimony), to the effect that *edepol* is 'used by both sexes, whereas only women swear by Castor (*ecastor*, *mecastor*)' (Christenson 2000: 171 ad 182) and that *hercle* 'is used only by men', with rare exceptions (id. 200 ad 299). But the reality is far more complex; on *pol* and *edepol* (which are not in fact uniform in usage), see (in addition to the earlier literature) Adams 1984: 50–3 and Barsby 1999: 247 (ad 867), including

https://doi.org/10.1017/9781108671132.012 Published online by Cambridge University Press

distinctions between Plautine and Terentian patterns. On the afterlife of *pol* and *edepol*: Adams 1984: 52 (both 'seem to have become obsolete after the early Republic').

In terms of syntax (cf. Pinkster's comment cited p. 208), there is also an interesting (though rare) 'tmetic' or 'infixing' behaviour attested for *pol* and *ēcastor* (cf. 'expletive infixation', section 10.1.1), found with adverbs and adjectives formed with the productive intensifying prefix *per-*, as in the following cases involving *persaepe* 'quite often, very often', *perquam* 'exceedingly' and *perscītus* 'very clever; very cute':

> Per pol saepe peccas. (Pl. *Cas*. 370)
> You're really making quite a lot of mistakes.

> Per pol quam paucos reperias meretricibus
> fidelis euenire amatores, Syra. (Ter. *Hec*. 58–9)
> Heaven knows you can find hardly any lovers, Syra, who turn out to be faithful to their mistresses.

> Per ecastor scitus puer est natus Pamphilo. (Ter. *An*. 489)
> Wow, that's a really cute baby boy that Pamphilus has!

A somewhat different type of interest (incorporating both morphological and sociolinguistic elements, ultimately also with possible literary-historical import) attaches to *hercle*, if (as is often supposed, e.g. Leumann 1977: 107) the form reflects a vocative based on an *o*-stem (i.e. second-declension) version of the theonym, as if Lat. *Herc(u)lus*. The evident problem is that Latin has no such form (as opposed to the usual third declension *Herculēs*, gen. *-is*). Yet this *is* the regular form in Sabellic languages, as in Oscan **Hereklúí**, ηερεκλωι and Vestinian *Herclo* (all *o*-stem dat. sg.; similarly Εὐκλῆς versus. *o*-stem Oscan **Evklúí**, see Untermann 2000: 244, 319). (Whether Latin HERCELE (*CIL* I².551, Praeneste) shows the same form is uncertain; see Wachter 1987: 133–4.) A standard claim in discussions of the background of Roman comedy alleges the probable influence of the Oscan *fabula Atellana* or 'Atellan farce' (e.g. Beare 1930, 1964: 137–42), which lives on, in some form, in the Latin literary works in that genre by Pomponius and Novius in the 1st century BC (Beare 1964: 143–8, see more recently Karakasis 2005: 234–46 on 'Terence, Plautus and the *Atellana*'). Yet actual linguistic inheritances from the Oscan plays are few and far between (Beare 1930: 168 on Oscan generally and 1964: 138 on Oscan *Casnar*; see Adams 2004 on this word), which renders a form like *hercle* of some interest in exploring the native Italic contribution to Roman comedy.

https://doi.org/10.1017/9781108671132.012 Published online by Cambridge University Press

The present study, then, addresses Lat. *edepol* and *pol*, specifically with regard to a series of etymological, phonological and morphological problems surrounding those forms.

10.2 Lat. *edepol*: Preliminary Background

We begin with a few remarks on the status of *edepol* as an early Latin word. Apart from the nearly 390 occurrences in Plautus and Terence, the word's meagre attestation otherwise (about 20×) is essentially restricted to republican drama, especially other *fabulae palliatae* (Caecilius 2×, Naevius 1×, Turpilius 3×) and the late republican revivals of Atellane farce (Novius 1×). Other appearances are either explicitly attributed to Plautus (Festus 1×, Servius 1×) or Caecilius (Cicero 1×), involve comic iambic fragments of unknown origin (as in another instance in Cicero), or seem inspired by comic drama (as with two iambic senarii in Varro's *Menippean Satires*). This is, then, a word that is most at home in comic drama, with virtually no afterlife once that genre disappears from the literary record. Interestingly, the situation with the shortened form *pol* is somewhat different. Once again, the lion's share of attestations is found in Plautus and Terence (about 300 instances); but the remaining thirty-some occurrences have a broader profile, including (as with *edepol*) not only Atellane farce (Pomponius 3×) but also early epic (Ennius' *Annals* 1×), tragedy (Ennius 1×, Livius Andronicus 1×) and *fabulae togatae* (Titinius 4×, Afranius 1×). Moreover, some additional instances, both in prose (Cicero 2×, Apuleius *Met.* 2×) and poetry (Horace 2×, App. Vergil. 1×), share the feature of occurring in quoted speech. This is therefore a word that belongs to spoken language, with a profile that is broader than that of *edepol* both in terms of genre and chronology. (For some additional detail, especially concerning the distribution of male versus female usage between *edepol* and *pol*, see Ullman 1943: 88–9.)

The background of *edepol* as an imprecation to Pollux has been clear since Varro (ap. Gel. 11.6). Alternative etymologies – such as Speyer's '*[m]ed Apoll[o]*' and others (details in *LEW* s.v. *ēcastor*) – can be discarded; but they point to indeterminacies and problems that have remained neglected.

The modern understanding of *edepol* assumes a three-part univerbated structure, which can be sketched as follows: *e-* is a particle of some kind; *-de-* is a shortened form of the word for 'god' (classical Latin *deus*), or is somehow related to this word; and *-pol* is a shortened form of *Pollūx* (or older *Pollūcēs*), a name ultimately borrowed from Gk. Πολυδεύκης. (On the background of *edepol*, see *LEW* and *DELL* s.v. *ēcastor*; *edepol* is absent from *EDLIL*. For a recent thorough treatment of 'univerbation',

https://doi.org/10.1017/9781108671132.012 Published online by Cambridge University Press

with special attention to Latin (though without consideration of *edepol*), see Opfermann 2016.)

This general conception is in my view essentially correct. Yet each element incorporates interesting problems that call for refinement of the analysis (discussed in sections 10.3, 10.4 and 10.5), and there is also an issue concerning the word as a whole (treated in section 10.6).

10.3 The *e-* of *edepol*

10.3.1 The Etymology of e-

Two types of comparanda have been suggested for the **ĕ-* of Lat. *edepol*: (1) the initial syllable of Oscan *etanto* and Umbrian **etantu** 'so much, so great' (versus Lat. *tantus* 'id.'), and (2) the initial syllable of Lat. *equidem*, a variant (mainly with first-person usage) of the enclitic particle *quidem* 'in fact, indeed' (thus *equidem* 'for my part, as for me, as far as I'm concerned'; cf. Pl. *Aul.* 215 in 10.1.3). (For these comparanda, see e.g. *DELL* s.v. *ēcastor*; for *quidem* and *equidem*, see Solodow 1978.)

The first of these comparisons is not attractive: Oscan *etanto* and Umbrian **etantu** are built with an anaphoric particle PIE **é* (*LIPP* 2.179), ultimately related to the anaphoric pronoun **é–*; and this particle typically combines with other pronominal or deictic material, for example, **e* + PIE demonstrative **tó-* 'that', as in the Armenian complementiser *et'e* 'that' or the Russian demonstrative adjective *ètot* 'this, that'; or **e* + the PIE deictic pronoun **k̂ó-* (itself derived from the PIE deictic particle **k̂e*), as in Gk. ἐκεῖ (versus κεῖ) 'there' or Old Church Slavonic *(j)ese* 'see here!'. This particle **é* does not, however, combine with nouns, much less vocatives of nouns.

Comparison with *equidem* is more promising; but the background of *equidem* is itself problematic. Here again, there are two main theories (see *LEW* and *DELL* s.v. *quidem*, Solodow 1978: 19–20; regrettably, both *quidem* and *equidem* are absent from *EDLIL*): *equidem* results either (1) from a univerbated sequence *eg(o) quidem*, or else (2) the *e-* of *equidem* is a particle. (I leave aside here a more marginal theory, involving metanalysis of a negative expression **nōne quidem* 'certainly not'; see *LIPP* 2.449 n. 4, 533, with this theory judged '[w]eniger wahrscheinlich'.)

The derivation of *equidem* from a sequence *eg(o) quidem* seems appealing, at least superficially, given the word's prominent first-person usage; but this account is not compelling. To begin with, second- and third-person usage of *equidem* is in fact well-attested (especially in Plautus and Terence), and may be an archaism; if so, the predominance of first-person behaviour

https://doi.org/10.1017/9781108671132.012 Published online by Cambridge University Press

in classical Latin may be secondary (Solodow 1978: 22–4). There is, moreover, a purely phonological problem: syncopated **eg'quidem* (as must be assumed under this theory) should have yielded †*ecquidem* (like *ecquid* 'anything at all?' < **ed k^{w}id*, similarly *ecce* 'look here!' < **ed ke*; see on these forms *LIPP* 2.190–1).

The second approach to *equidem*, involving a particle '*e-*' + *quidem*, is much more attractive; but which particle? Yet again, there are two main possibilities: (1) either the same anaphoric **é* already seen in Oscan *etanto* and Umbrian **etantu** (so, tentatively, *LIPP* 2.179, 181), or else (2) a shortened version of a particle '**ē*' (so, as a possibility, *DELL* s.v. *quidem*). Fortunately, given our primary concern with *edepol* (and not *equidem*), there is no need to settle this question with regard to *equidem* itself (although we will have occasion to return to this problem shortly); the main point for present purposes is that the second option works best for the *e-* of *edepol*, given the unequivocal evidence for *ē-* in *ēcastor*. We must now consider the etymological background of this particle '**ē*'.

According to Dunkel's plausible reconstruction (*LIPP* 2.208, cf. earlier Dunkel 1997: 21–2), the particle in question can be given a basic PIE form **eh$_1$* (alternating with **oh$_1$*); in addition to Latin *ē-* (the phonologically regular outcome of PIE **eh$_1$*), this form appears also as Luvian *a-*, Vedic Sanskrit *á́* and Greek ἠ- (as in ἠδέ, ἤδη, ἠμέν, among other forms). It may in fact reflect **é-h$_1$*, that is, the instrumental singular form of the anaphoric pronoun **é-* already mentioned, thus with an original meaning like 'auf diese (schon erwähnte) Weise'. As for the usage of the particle itself: its major functions are described by Dunkel as follows (*LIPP* 2.218): 'Als asseverative, d.h. emotional-exklamatorische Satzpartikel steht **eh$_1$* am Satzanfang, wo es Postpositive und Enklitika stützen kann. Dort bekräftigt **eh$_1$* den ganzen Satzinhalt (etwa 'in der Tat, wahrlich, wirklich'), erheischt Aufmerksamkeit ('He!') oder markiert Zustimmung ('jawohl') …'. All of this is already strikingly reminiscent of *edepol* and similar forms. But what is particularly important for us here is Dunkel's notice of an idiomatic use of this particle with the vocative of theonyms (*LIPP* 2.211–12), as in Rig-Vedic *á́ … indra* 'O … Indra', but also more generally *á́ (no) deva* 'O god!' and *á́ devāsas* 'O gods!', with *á́ deva*/*á́ devāsas* having led to a delocutive hypostasis *á́deva-* 'devout' < *'one who says "*á́ deva*"'. Together with corresponding Latin material – that is, *ēdī* 'O god(s)!' < **eh$_1$ dei̯u̯e/dei̯u̯oi̯* and, indeed, *edepol* < **eh$_1$ dei̯u̯e poldou̯ks* (Dunkel's purely schematic reconstruction, which elides many details, more on which further in this chapter) – there is even the possibility that the cognate Vedic and Latin forms point to an inherited PIE syntagm **eh$_1$ dei̯u̯e* 'O heavenly/divine one!'. In Dunkel's

https://doi.org/10.1017/9781108671132.012 Published online by Cambridge University Press

conception, this usage was extended in Latin to other theonyms (much like the extension to Indra in Vedic Sanskrit): hence *ēcastor* as well as *ēiūnō* 'by Juno!' (Char. gramm. GL 1.198.18), *ēquirīne* 'by Quirinus!' (Paul. Fest. p. 71.17 L) and (in the famous 'Carmen Arvale', *CIL* 1^2.2) E NOS LASES IVVATE … E NOS MARMOR IVVATO 'O Lares, help us! … O Mars, help us!'. (Strictly speaking, vowel length in inscriptional and gloss forms is indeterminate; but Lat. *ēcastor* guarantees *ē-* as the basic form. Recently on E NOS, Willi 2017: 176–7, 212, with rich bibliography, to which Karaseva 2009 can be added; we return briefly to this sequence in the next section.)

*10.3.2 The Shortening *ē- > ĕ-*

If, as described in section 10.3.1, the most attractive approach to the etymology of *e-* in *edepol* operates with a PIE particle $*eh_1$, whence regularly the *ē-* of *ēcastor* (and cognate long-vowel material such as Vedic *ā́* and Greek ἠ-), what remains without explanation is the shortening of this *ē-* to *ĕ-* in *edepol* (versus *ē-* in *ēcastor*). This feature has never been explained, beyond vague comparisons with Lat. *equidem*, where (as we have seen) a similar shortening is sometimes envisioned.

Dunkel's treatment of *edepol* provides no explanation for the shortening, beyond a reference to 'Reduktion des Wortkörpers im Vokativ' (*LIPP* 2.211 n. 18) and typological remarks on reductions in theonyms based on univerbated vocative expressions (e.g. Thessalian Ἄπλουν 'Apollo', based on voc. Ἄπλον, a syncopated allegro-form), on which see also Dunkel 1998: 80 (with references and additional examples at 80 n. 21). On reductions in vocative theonyms, compare already Horn 1924: 69 (citing the Modern Greek interjection διάλε 'hell!' < διάβολε 'the devil!').

In assessing the possibility of original **ē-* in Lat. *equidem*, Dunkel objects that this 'setzt paradoxerweise eine proklitische Kürzung vor einem Enklitikon voraus' (*LIPP* 2.449 n. 4); yet this is an existing Latin process, already raised (as a possibility) for *edepol* (*DELL* s.v. *ēcastor*). The process in question is so-called 'Kürzung durch Tonanschluss' ('shortening through enclisis'), treated in most handbooks of Latin historical grammar (e.g. Leumann 1977: 110–11, citing older literature, especially the extended study of Vollmer 1917; also Sommer and Pfister 1977: 106, Meiser 1998 78, Weiss 2020: 140), as well as in metrical handbooks. (Among the latter, note especially the detailed survey by Questa, 2007: 153–71 = (Part 1) Ch. VI, 'Abbreviamento per enclisi'.) In the concise description by Weiss: 'The final heavy syllable of a word may occupy the metrical position of a light syllable when a clitic follows.' There are, further, two subtypes.

https://doi.org/10.1017/9781108671132.012 Published online by Cambridge University Press

The first involves metrical variants (spelled by convention as one word) in verse; for example, with enclitic *quidem*: *tŭquidem* 'you indeed' (versus *tū quidem*), *sĭquidem* 'if indeed' (versus *sī quidem*), *quandŏquidem* 'when indeed, whenever' (versus *quandō quidem*), etc. (On *quidem* as a left-leaning enclitic, see Fortson 2008: 51, 196.) Second, there are several lexicalised items, that is, individual words (invariable in form) that appear to have undergone the shortening process prehistorically: thus **k^{w}am-sei̯* 'as if' (cf. QVANSEI, *CIL* I^{2}.585.27 (Lex Agr.)) should have resulted, in the first instance, in **k^{w}āsei̯*, but its phonologically regular outcome †*quāsī* is unattested – rather, Latin shows shortened *quăsī* (as in Lucretius) and classical *quăsĭ* (by iambic shortening). Similarly, *hŏdiē* can reflect an instance of the process, assuming derivation from **hō(d)-diu̯ē(d)* (so e.g. Leumann 1977: 110). And, as noted previously (section 10.3.1), *equidem* may reflect **ē-quidem* (cf. *tŭquidem* etc. mentioned earlier), and would thus represent another lexicalised instance (see Questa 2007: 153 n. 1).

As Weiss observes (2020: 140 n. 25), '[t]he exact limits and nature (linguistic or metrical?) of *Kürzung durch Tonanschluss* are unclear and require further investigation'; likewise Questa, stating bluntly (2007: 153) that '[q]uesto fenomeno è oscura e complesso'. (Along similar lines: Fortson 2008: 255 with n. 66.) There is no space here to conduct the 'further investigation' that is so sorely needed. For our purposes, however, it is clear that, given the descriptive nature of the phenomenon, it can legitimately be applied to *edepol*, as a lexicalised item comparable to forms of the type *quasi*, *hodiē* and (probably) *equidem*. In that connection, it is significant that the initial syllable of *edepol* is invariably light: the form is never attested as †*ēdepol* (nor is †*mēdepol* ever found), like *equidem* (never †*ēquidem*), *quasī*/*quasi* (never †*quāsi*) and *hodiē* (never †*hōdiē*). This is in marked contrast to *ēcastor* (the normal form), although *ĕcastor* is attested 4× (out of 54 Pl. and Ter.), that is, Pl. *Mos.* 273, *Truc.* 107, 583 and Ter. *An.* 489. As already seen, however, by Vollmer (1917: 25 n. 1), all four instances are easily explicable via iambic shortening. Thus it is clear that *ēcastor* is basic and that (predictably) the rare *ĕcastor* has nothing to do with 'shortening through enclisis', since *-castor* is the invoked theonym itself and lacks enclitic status. (The metrical contexts for *ēdī* (3.1; Titin. *togat.* 12b, 111) are unfortunately ambiguous, but the form is probably to be interpreted in that way, that is, with *ē-*; similarly for *ēiūnō*, *ēquirīne* (3.1), attested only in the grammatical tradition.)

As a speculative aside, we return briefly to 'E' in the Carmen Arvale (section 10.3.1). Here, in contrast to *ēcastor* but in a way that is similar to *edepol*, 1st pl. *nōs* 'us' (in E NOS LASES … E NOS MARMOR) is indeed a second-position enclitic. (On the 'Wackernagel' behaviour of Latin pronouns, see Adams

https://doi.org/10.1017/9781108671132.012 Published online by Cambridge University Press

1994a: 1–2, 5, 91 n. 5 and 1994b, with further references.) It thus seems plausible that the particle **ē(-)* in this syntactic context has undergone 'shortening through enclisis', with E NOS reflecting /ĕ-nōs/.

It emerges, then, that in *ĕdepol* (with **ē-* > *ĕ-* accounted for via 'shortening through enclisis'), *-dĕ-* has enclitic status: it is not the theonym itself, but rather appositional or attributive to the following theonym in a fixed two-member vocative phrase, functionally like a vocative form of classical Latin *dīvus/dīus*. What can be said more precisely about the background of *-dĕ-* itself?

10.4 The *-de-* of *edepol*

There is general agreement about the problematic nature of the *-de-* of *edepol*, and also about its presumed source: thus according to Meillet (*DELL* s.v. *ēcastor*), 'le *-dĕ-* de *edepol* est embarrassant; il s'y cache peut-être une forme très réduite du vocatif de *deiuos*, *deiue*'; similarly Hofmann (1951: 30 (Hofmann and Ricottilli 2003: 138), repeated in *LEW* s.v. *ēcastor*), referring to the same sort of vocative: 'weitgehend gekürzt infolge Funktionslösigkeit'. But the exact vocative source form has not been convincingly identified, and the nature of the 'reduction' or 'shortening' has never been explained, beyond vague typological comparisons of the type already cited at section 10.3.2. What is immediately clear is that *-de-* cannot be a vocative form – even a reduced one – of classical Latin *deus* 'god' itself: this would be both functionally inappropriate (as already noted) and formally anomalous; see Dickey 2002: 242–3 on the avoidance of vocatives to nouns in *-eus/-ius*, including *deus*.

The only explicit formulation of the preform of *-de-* is Hofmann's '**de[iu̯]e*' (in his notation). But this is a highly improbable discontinuous truncation, applying to the glide portion of the old initial-syllable diphthong and the onset consonant of the following syllable – a type of reduction that to the best of my knowledge is entirely lacking in typological support. (Such a process is no more credible if conceived of as a rule of 'allegro phonology', since diachronic allegro developments are structurally similar to lento ones; see Dressler 1975: 227.) In view of *ēdī* < (univerbated) **é–deiu̯e/u̯oi̯]* (section 10.3.1), *-de-* (of *edepol*) is more likely to correspond essentially to this type of truncation. Further, Hofmann's formulation also assumes that the shortening goes back to the 'diphthong stage', that is, **ē–deiu̯e-pol* (cf. DEIVOS in the Duenos Inscription, *CIL* 1^2.4 (c. 6th century BC)); this is possible, but not necessary, as we will see shortly.

The development of **deiu̯os* into both classical Latin *deus* and *dīvus/dīus* (by phonologically induced paradigm split) is famously complex (Weiss

https://doi.org/10.1017/9781108671132.012 Published online by Cambridge University Press

2020: 242–3; see Nussbaum 1999: §4 for many additional details). Most important here, however, is the early monophthongisation *$e\underline{i}$ > *$\underline{e}$ (preceding $\underline{u}$-loss), whence nom. sg. *$de\underline{i}\underline{u}os$ > *$d\underline{e}\underline{u}os$, voc. sg. *$de\underline{i}\underline{u}e$ > *$d\underline{e}\underline{u}e$, nom. pl. *$de\underline{i}\underline{u}o\underline{i}$ > *$d\underline{e}\underline{u}\underline{e}$ (with regular treatment *$-o\underline{i}\#$ > *$-\underline{e}\#$, preceding *$-\underline{e}\#$ > *$-\bar{\imath}\#$), etc. Moreover, in addition to the alternatives voc. sg. *$de\underline{i}\underline{u}e$ (with intact diphthong) or *$d\underline{e}\underline{u}e$ (with monophthongisation), another variable concerns the relative chronology of the truncation with respect to other developments; in principle, then, there are several (perhaps equally viable) scenarios for the development of the first two members of the original sequence *$\bar{e}$ $de\underline{i}\underline{u}e$ *pol* to the *ědě-* of *edepol*. (I return to *-pol* (and *pol*) in section 10.5.)

Under the assumption that vocative sg. *$de\underline{i}\underline{u}e$ underwent truncation of its second syllable (as in *ēdī*), as a vocative shortening in a (univerbated) theonym (cf. section 10.3.2), this could have occurred either at the diphthongal stage (*$de\underline{i}\underline{u}e$ > *$de\underline{i}$) or following monophthongisation (*$d\underline{e}\underline{u}e$ > *$d\underline{e}$). Alternatively, at a somewhat later period, without truncation but with regular $\underline{u}$-loss and contraction, one could envision a development *$d\underline{e}\underline{u}e$ > *$d\bar{e}e$ > *$d\underline{e}$ (similarly Gagnér 1920: 44). Schematically, then, the remaining developments (whether beginning from truncation and monophthongisation or monophthongisation with $\underline{u}$-loss and contraction) can be conceived as follows: *$\bar{e}$-$d\underline{e}$-*pol* (most likely *$\acute{e}$-$d\underline{e}$-*pol*, at an early stage with word-initial accent) > *$\acute{e}$- $d\underline{e}$-*pol* by 'shortening with enclisis' (section 10.3.2), which would in any event have called for initial accent; then *$\acute{e}$-$d\underline{e}$-*pol* > $\acute{e}$-*dě-pol*. This two-stage sequence, however, may artificially disaggregate what could well have been essentially simultaneous events: 'shortening with enclisis' incorporates univerbation (cf. section 10.3.2 again on notations like '*tŭquidem*'); and univerbation may in turn incorporate the (post-tonic) shortening *$-d\underline{e}$- > *$-d\check{e}$-. As for this shortening: it can be interpreted in various ways. It can be considered, for one thing, a natural result of the univerbation, which typically carries with it concomitant reductions (cf. the syllabic truncation (*$de\underline{i}\underline{u}e$ > *$de\underline{i}$ or *$d\underline{e}\underline{u}e$ > *$d\underline{e}$) itself), which can certainly include vowel-shortening. (For a recent discussion of reductions arising from univerbation, with many examples from ancient Indo-European languages, see Hackstein 2014.) Secondly, the enclitic syllable directly following the initial (accented) syllable with [ĕ] might naturally be susceptible to a vowel-harmony process (here involving vowel quantity), which again can be viewed as a natural accompaniment to the univerbation. Finally, as suggested to me by David Goldstein (University of California, Los Angeles), 'shortening with enclisis' might have operated iteratively: after applying to *$\bar{e}$- (with enclitic *$-d\underline{e}$-), whence *$\acute{e}$-$d\underline{e}$-, the process would then have operated on *$-d\underline{e}$- (with

https://doi.org/10.1017/9781108671132.012 Published online by Cambridge University Press

-pol now enclitic, as a result of the univerbation), whence *ĕ̆-dĕ̆-pol*. (On iterative phonological rules, see e.g. Hayes 2009: 278.)

If something like the above scenario is correct, then *-dĕ̆-* of *edepol* preserves a unique trace of the oldest Latin vocative of **deiu̯os*, that is, **deiu̯e* (whence truncated **dei̯-* or **dē̆-*). At the time of the formation of (the precursor of) Lat. *edepol*, the paradigm split of **deiu̯os* had probably not yet occurred. In terms of its function, however, this element belongs with classical Latin *dīvus/dīus* and not *deus* (as already seen by Gagnér 1920: 43). Later vocative forms based on *dīvus* and *dīus* themselves are artificial creations, as with *dīe* (Enn. *Ann.* 106 Sk.) or *dīue* (Hor. *Carm.* 4.6.1).

10.5 The *-pol* of *edepol*

There can be no doubt that *-pol* (cf. also plain *pol*, already seen in section 10.1.3) is a hypocoristic shortening of the name of the divinity Pollux (e.g. Horn 1924: 69, *DELL* s.v. *ēcastor*). There is, however, a loose end in the analysis of *-pol* and *pol*, concerning the often-alleged metrical variants *edepōl* (as sometimes notated) or (as a better way of indicating the heavy syllable) *edepoll* (Meister 1916: 1.121 n. 2, Gagnér 1920: 14–19, *LIPP* 2.211) and *pōl* or *poll* (Questa 2007: 20 n. 6). In fact, these forms are far from certain.

Two of the four alleged instances of '*edepoll*' (all Plautine) occur in corrupt or otherwise suspect passages: thus at *Mil.* 1255, Lindsay prints Skutsch's emendation (entirely without the *edepol* of the manuscripts; see his apparatus, listing no less than four other conjectures); and *Cist.* 510 (tr^7) is bracketed by Lindsay because of its omission from A (and at any rate printed by him as *# non edepol <ego> …*, thereby removing '*edepoll*'). For *# edepol ego …* (ia^6) at *Cas.* 326 (requiring '*edepoll*' in this metrical position): this can be transposed to *# ego edepol …* (as read in J and as followed in modern editions), which not only removes '*edepoll*' but also attractively places *edepol* in the same metrical slot in three successive lines (326–8, see on this point MacCary and Willcock 1976: 137 ad loc.). Finally, at *Mos.* 376, '*edepoll*' in *# quaeso edepol, exsurge*; … (tr^7) can simply be an instance of *edepol* with pre-pausal *brevis in longo* in one of the standard *loci Jacobsohniani*. (On pre-pausal lengthening in *loci Jacobsohniani*, see Fortson 2008: 87–8.) Thus '*edepoll*' has little or no claim to linguistic validity.

As for '*poll*': this may have a somewhat better claim to (some sort of) existence, even if a tenuous one. In two of the three alleged instances, one can appeal to relatively easy emendations: thus for *Mer.* 6 *# quos pol ego credo | humanas querimonias* (ia^6), Ritschl's *# quos edepol …*, which removes both '*poll*' and the hiatus, may be correct; and at *Per.* 788 … *pol*

https://doi.org/10.1017/9781108671132.012 Published online by Cambridge University Press

hic quidem … (in an anapaestic context) can be transposed to … *hic quidem pol* … (Mueller's emendation, printed by Leo and de Melo). Emendation is more difficult for *Truc.* 202 # *tum pol istic est* … (ia^{7}, the reading of A); still, an alternative scansion # *tum pol ĭstic est* … (with iambic shortening) is certainly available, and would again remove '*poll*'. (On iambic shortening in patterns of this type, see Fortson 2008: 196.)

For '*edepoll*' (and presumably, *a fortiori*, for monosyllabic '*poll*'), Questa (2007: 20 n. 6) observes that '[i]l gruppo *-rr* sembra essersi conservato solo nei monosyllabi', citing *ter(r)* 'three times' (*terr*: Pl. *Bac.* 1127) and *cor(r)* 'heart' (*corr*: Pl. *Mil.* 1088). But these unusual metrical treatments arise from phonological archaisms based on assimilated (but unreduced) word-final clusters (*terr* < **tirs* < **tris* (Weiss 2020: 134, 154); *corr* < **cord* (Questa 2007: 20)); as such, forms like '*terr*' and '*corr*' could conceivably have led to a rare analogical treatment '*poll*' for *pol*. If so, this *poll* might in turn have served as the source of an artificial '*edepoll*', if such a form existed at all.

The conclusion to be drawn for our immediate concern is that a form '(-)*poll*' has no relevance for the background of *-pol* (in *edepol*) and *pol*. Depending on the age of the formation, the source is rather the /Pol-/ of the initial syllable of early Latin **Polloŭk-* (so Leumann 1977: 71, 242, 269), or even, possibly, the /Pol-/ of the initial syllable of the still earlier pre-assimilated (but post-syncope) **Poldoŭk-*, probably reflected indirectly in *CIL* I^{2}. 2833 PODLOVQVEIQVE (6th/5th century BC) for *POLDOVCEIQVE. (Most recently on PODLOVQVEIQVE: Facchetti 2016: 279, Lipp 2016: 431.)

10.6 †*edipol*

If Lat. *edepol* developed along the lines sketched above – as an isolated instance of 'shortening with enclisis', based on the early monophthongisation result **dē̆-* of the original vocative **deĭ[ŭe]* (rather than the later development to *dī-*), followed by a pre-Latin shortening of **-dē̆-* to **-dĕ-* – then its formation must have been relatively ancient. In that case, it is worth considering why the outcome *edepol* did not undergo the regular Latin vowel-weakening in open medial syllables, which should have resulted in a form †*edipol* – a question that seems never to have been posed, much less answered. (On the completion of Latin vowel-weakening and the establishment of the classical Latin penultimate accent by c. 300 BC, see e.g. *EDLIL* 10. I here use 'vowel-weakening', more common in works on Latin grammar than the term 'vowel reduction' normally used in the phonological literature.)

One can conceive of ad hoc explanations, perhaps especially involving the word's status as an oath that incorporates a theonym: for example,

https://doi.org/10.1017/9781108671132.012 Published online by Cambridge University Press

speakers might have identified *-dĕ-* as a form of *deus*, and might have continually restored the *e*-vocalism on this basis (though *deus* itself is functionally inappropriate, as we have seen, as opposed to *dīuus/dīus*). Alternatively, or in addition (as a contributing factor): it is tempting to invoke the effect of the '*alacer* rule': as formulated by Weiss, '[a] short vowel in an open medial syllable may retain its original quality if it is identical to that of the vowel of the initial syllable, and if only one consonant separates them' (Weiss 2020: 128–9), as in forms like *alacer* 'lively' (not †*alicer*); *anas*, gen. *anatis* 'duck' (versus *anit-*, very rarely attested); or MERETO(D) 'deservedly' (frequent in republican inscriptions, beside MERITO(D), and generally *meritō* in literary sources). The process applies not only to forms of this kind with resonant in the onset of the second syllable, but also (and indeed more consistently) to those with stop onset, such as *sepeliō*, *sepelīre* 'bury' (not †*sepil-*); *vegetus* 'vigorous' (not †*vegit-*); and 3rd declension *et*-stems (as in *hebes*, gen. *hebetis* 'dull, blunt' (not †*hebit-*); *seges*, gen. *segetis* 'crop' (not †*segit-*); *teges*, gen. *tegetis* 'matting' (not †*tegit-*)).

In a valuable recent discussion of the phenomenon, Sen (2015: 85) refines the basic description of the process in several respects: he observes that although the 'rule' was 'irregular and unpredictable', the data may indicate some regularities, including the following: 'the vowel was almost always /a/ or /e/' (cf. the examples in the previous paragraph); 'there was usually only one consonant separating the vowels, but if two, the first was a liquid' (thus e.g. *farfarus* 'coltsfoot'); some forms show a blockage of expected '*r*-conditioning' (thus *farfarus* for expected †*farferus*); others show a non-application of 'labial conditioning' (e.g. *cannabis* 'hemp' for expected †*cannubis*); and (most important for our purposes) 'the consonant was usually /l/ or a nasal, but if an obstruent was involved, it was either labial or dorsal, not coronal /t d/'. In addition to the standard examples with labial or dorsal stops (cf. above), a form like *pedes*, gen. *peditis* 'foot-soldier; pedestrian' (i.e. not †*pedet-*, like *hebet-* etc.) may seem to support this claim. But this is deceptive (even apart from the fact that, as Sen himself notes, the process is far from being regular): *pedes* may be a compound with second member *-i-* (the zero grade of the root of *eō*, *īre* 'go', thus *'going by foot'), of the type *comes*, gen. *com-i-t-is* 'companion' < *'going together' (thus e.g. Leumann 1977: 275, 372), or may be formed after *eques*, gen. *equitis* 'horseman' (so *DELL* s.v. *pēs*). Either of these eventualities could have supported the maintenance of oblique *ped-it-*. Further, Sen lists among his examples of the process (oblique stem) *Caesar-* (nom. *Caesar*), with coronal /s/, thus one of the forms where '*r*-conditioning' of the vowel-weakening product is apparently blocked (versus expected †*Caeser-*,

https://doi.org/10.1017/9781108671132.012 Published online by Cambridge University Press

e.g. gen. †*Caeseris*); so it seems that at least a coronal fricative (one type of coronal obstruent) is licit. It is unclear, moreover, why a segmental restriction disallowing coronal stops (but allowing coronal fricatives) would be a phonetically natural component of such a process of 'non-local, progressive vowel assimilation' (Sen's term). Thus Sen's proposed restriction is not entirely convincing. The apparent absence of examples with coronal stop may instead result from an accidental gap, now possibly filled by *edepol*.

10.7 Conclusions

The main conclusions of this study of the historical background and development of Lat. *edepol* can be summarised briefly; syllable by syllable:

The initial *e-* most likely derives from **ē-*, the Latin reflex of the PIE asseverative particle **éh₁*. The development **ē-* > *ĕ-* can be attributed to 'shortening with enclisis', as in *tŭquidem* and similar forms (~ *tū quidem* etc.), but as a lexicalised item of the type *quasi* (cf. †*ēdepol*, like unattested †*quāsī*). It seems possible (though it cannot be demonstrated) that a shortened *ĕ-* of the same type underlies the E in the phrases E NOS LASES … E NOS MARMOR in the Carmen Arvale.

The medial syllable *-de-* continues a shortened form (and a trace of the earliest form) of vocative sg. **deiu̯e*, which corresponds functionally to the behaviour of later *dīuus/dīus*. The form underwent either truncation and monophthongisation (**deiu̯e* > **dei̯* > **dē̯*) or monophthongisation, *u̯*-loss, and contraction (**deu̯e* > **dēe* > **dē̯*), and then underwent shortening (**-dē̯* > *-dĕ-*) in the univerbated vocative sequence.

The final syllable *-pol* and the independent form *pol* reflect a hypocoristic shortening to '*Pol*' of *Pollūx*, based either on the (post-syncope and post-assimilation) stage **Pol(lou̯k-)* or the earlier (post-syncope) stage **Pol(dou̯k-)*. There may have been a late analogical variant '*poll*' (of *pol*), whence perhaps '*edepoll*' (if such a form existed), but both forms are doubtful.

For the word as a whole: the lack of medial vowel-weakening in *edepol* can perhaps be attributed, at least in part, to the '*alacer* rule'; and in this case, *edepol* might provide a hitherto missing example of the process with coronal stop.

Finally, it is hoped that this essay may lend support to the truism mentioned at the outset concerning the study of 'marginal' word types: Lat. *edepol* is perhaps not as colourful as 'expletive infixation'; but its background encompasses more than a few features of linguistic interest.
